2. The essentially joyful associations of the wreath are proved by the fact that *mourners did not wear them at funerals*. Xenophon, while sacrificing, heard of the death of his son; in sign of mourning he took off the crown that he was wearing. But when he heard that his son had died like a brave man, he resumed his crown and proceeded with the sacrifice (Val. Max. v. 10). At mournful ceremonies, such as the Spartan Hyacinthia (Athen. iv. 139), the crown was not worn; the Sicyonians used flowers only, instead of wreaths, in sacrificing to the Eumenides at Titane (Paus. ii. xi. 4). Where we see wreaths, fillets, etc., deposited at a tomb, these are brought as offerings to the spirit of the deceased, not as tokens of mourning. Such wreaths the Christians regarded as essentially offerings to a deity, and therefore to be condemned (cf. Justin Mart. *Apol.* i. 24: 'The Christians do not worship the same gods as the heathen, or offer up libations or incense, or bring them crowns or sacrifices'; so, too, Minucius Felix, p. 43, ed. Ouzel, 1652, 'nec mortuos coronamus'). Typical of the Greek custom is the beautiful Attic *lekkythos* (*JHS* xix. [1899] pl. 2), showing a *tania* tied round the tombstone, oil-flasks and wine-jugs, some with wreaths laid over them, ranged on the steps, and a woman bringing a tray full of wreaths and *tania*. Sometimes tombstones were made with a receptacle suited for holding a crown of leaves (*Arch. Zeit.* 1871, pl. 42). The dead body itself was crowned (καταστέφειν τὸν νεκρόν, Eur. *Phoen.* 1632), as part of the last honours, in keeping with the washing and anointing of it, and dressing it for its last journey (Lucian, *de Luctu*, 11). Members of some associations, such as the Iobacchi, were entitled to a crown at their death, provided out of the common funds (E. S. Roberts, *Introd. to Gr. Epigr.* ii. Cambridge, 1905, pp. 91, 180). Inscriptions of the Phrygian Hierapolis often mention the στέφανοῦτικόν, a sum left by the deceased, the interest on which was devoted to the annual renewal of wreaths on his tomb (Humann, etc., *Altortümer v. Hierapolis*, Berlin, 1898, p. 129). At a Roman funeral there

were carried not merely crowns offered by the mourners, but such as the dead might have won by his own deeds. In later times, the idea of the propitiation of the dead gradually dying out, the wreath came to be laid on the tomb merely as a mark of honour; but it would be hard to say where the primitive significance of the usage merged into the modern. By far the greater number of the crowns actually preserved come from tombs; but this is only because the conditions in tombs are more favourable than elsewhere for the preservation of them, as of other antiquities.

3. In ritual the use of wreaths was manifold. They might be used, as *tamiae* were used, to decorate the image of the god (see Schreiber-Anderson, *Atlas of Classical Antiquities*, London, 1894, xiv. 3). They could be worn by those who performed the sacrifice. They could be offered up (Daremberg-Saglio, fig. 1984). They could be used to decorate the victims (Lucian, *de Sacr.* 12); thus was Iphigenia decorated (Eur. *Iph. in Aul.* 1477). The garlands brought by the priest of Zeus at Lystra to Barnabas and Paul (Ac 14th) were either offerings to them or decorations for the oxen which he proposed to sacrifice. Garlands were used to decorate the shrine, the altar, sacred trees, and all sorts of instruments and vessels employed. The whole scene was thus made at once cheerful and solemn, the objects so adorned being brought into intimate relation with the god. Woollen fillets served the same purpose, whether made up into circular form, or merely hung on the victim or object, or used to attach it to the figure of the deity.

The lover's practice of hanging garlands on the door of the object of his affections is explained by Athenaeus (xv. 670d) as inspired by his desire either to honour the beloved one (just as the doors of temples were garlanded), or to honour Eros (the beloved being regarded as his image, and the house therefore as his temple), or, having been robbed of the ornament of his soul, to give to the robber his body's ornament in addition. In speculations such as these we see the idea that these garlands were, at any rate, a semi-religious kind of offering.

Probably the most important crowns from a ritual point of view were the 'priestly coronets' (cf. above, p. 339^b) worn by the officiating persons, whether professional priests or not. When the crowns were made of flowers or leaves, these were usually of the kind sacred to the deity served, although in a very great number of cases the plant used seems to have been laurel. This may have been owing to its purifying property, although in many monuments the appearance of laurel may be due to defective representation. The wreaths worn by priests were sometimes, especially in later days, decorated with medallions appropriate to the cult. A priest of Cybele (relief in Capitoline Museum [Baumeister, *Denkm.*, Munich, 1885-88, p. 801]) wears on a laurel wreath three medallions representing the Idaean Zeus, Attis, and another deity. Domitian, when presiding at the Capitoline Games, wore a crown decorated with images of the Capitoline triad—Juppiter, Juno, and Minerva; the *flamen dialis* and the high priest of the Flavian dynasty, who supported him, had crowns also containing the image of the Emperor himself (Sueton. *Domit.* 4). Recent discoveries have further illustrated this practice. The crowns worn by high priests of the Imperial cultus were not merely of bronze but of even more precious metal, elaborately decorated with busts of the Emperors. In Epictetus (i. 19) the prospective priest of the Augustan cult says, 'I shall wear a golden crown'; and Tertullian speaks of the golden crowns of the provincial priests (*de Idol.* 18, with Oehler's note). Busts of such priests, and an actual bronze crown from Ephesus, as well as representations of such crowns on coins of Tarsus, make this clear, and throw light on such a title as *ἀρχιερεὶς τῶν Σεβαστῶν καὶ σφερανφόρος τοῦ σύμπαντος αὐτῶν οἴκου* (*Jahres-*

hefte d. Oest. Arch. Inst. ii. 245 f.). Another peculiar form of ritual crown is the 'archieratic' crown shown on certain coins of Syrian Antioch (*Brit. Mus. Catal. Coins*, 'Galatia,' etc., p. 167).

So essential was the crown in the cult that *λαβεῖν* (*ἀναδέσασθαι*, etc.) *τὸν τοῦ θεοῦ στέφανον* is equivalent to assuming the priesthood (Dittenberger, *Orientalis Graeci Inscriptiones Selectae*, vol. ii., Leipzig, 1905, no. 787, note 14), and *σφερανφόροι* include all professional priests and all magistrates who in virtue of their office take part in public rites (*ib.* 332, note 24). The right to wear a crown at all public festivals is expressly included in the privileges of the priest of Poseidon Heliconius at Sinope (*στέφανος ἐν ἀπᾶσι τοῖς ἀγῶσι* [Michel, *Recueil*, Brussels, 1896-1900, p. 734]). Such official crowns are to be distinguished from those awarded to priestly officials by their grateful fellow-citizens on their retirement from office or even after their death (Dittenberger, *op. cit.* 470). These are analogous to the crowns awarded to other officials.

4. The wearing of crowns by deities is closely connected, as we have seen, with the custom of offering crowns to them at sacrifices. When special plants were associated with certain deities, a wreath of such a plant was a natural attribute and a convenient means of identification, although the latter feature would appeal less to the ancient worshipper than to the modern archaeologist. The associations of vegetable crowns are in many cases quite clear. Demeter and Persephone wear barley; the Dodonæan Zeus wears oak; Apollo has laurel; Athene, olive (which she wears as a rule round her helmet); Aphrodite, myrtle; Heracles, poplar or styrax; Dionysus and his train wear ivy (seldom, if ever, vine-leaves); Poseidon on coins struck by Antigonos Gonatas or Doson, and on a rare coin of Aradus of 174 B.C. (*Brit. Mus. Catal. Coins*, 'Phoenicia,' pl. iii. 18), has a curious marine plant (*Fucus vesiculosus*?) ; a bust from Puteoli representing a local water-deity is crowned with grapes and vine-leaves (Roscher, *Lex.* i. 1686). But these appropriations are not exclusive; Zeus, for instance, is usually laureate; as we have already seen, the laurel seems to have been the plant most commonly used for wreaths. Various deities are represented in Greek art wearing crowns of a more elaborate kind. That of the Hera of Polycleitus at Argos was decorated with figures of the Graces and Seasons, probably in high relief; and on coins (of Argos, Elis, Croton, etc.) and other works of art Hera is usually shown wearing a somewhat elaborate crown with floral designs in relief. On coins of Mallus, Cronus wears a metal diadem; and Cybele is commonly represented as City-goddess wearing a walled crown (see CITY). The Cyprian Aphrodite, in statues, terra-cottas, and coins of Cyprus, wears a richly decorated crown, obviously meant to be of metal; on some coins of Salamis and on a stone head from Dali she has a peculiar crown made of semicircular plates (*Brit. Mus. Catal. Coins*, 'Cyprus,' p. cxi). Often she seems to be identified with the City (*ib.*). At Paphos she wears a combination of the Oriental *polos*, decorated with palmettes, and the walled crown (*ib.* pl. xxii. 10). On some Cypriot terra-cottas we also find a decoration of palmettes or sphinxes (*Brit. Mus. Catal.*, 'Terra-cottas,' A 275). These rich crowns are characteristic of the Oriental element in her cult; nevertheless the ordinary Greek Aphrodite often wears an elaborate metal crown, and sometimes, 'though descended from the early *polos* of the queen-goddesses, it is in form curiously like a modern royal crown' (*JHS* xxv. [1905] 78). A variety of the metal *στέφανος* worn by various goddesses is known as the *στέφανη*; it rises to a point in front, and narrows as it passes to the back of the head, which it does not completely

surround. One of the most widely distributed forms of crown in art is the crown of rays, which, like the nimbus, represents the divine light emanating from the persons of deities or heroes. But such a halo was probably not represented by a concrete crown until comparatively late times.

5. The giving of crowns as prizes probably had a religious origin. The material rewards offered in heroic times seem to have been replaced at a fairly early date—in the 6th cent. at latest—by crowns of leaves, etc. (Paus. X. vii. 3, of the Pythia; *Marm. Par.* 38=588 B.C.; note that the palm, being unsuitable for a crown, was carried as a branch). The festivals at which crowns were given were under the special patronage of the local deity, and the material for the crown would be gathered from the local sacred enclosure, although in the case of the Pythia the laurel was brought all the way from Tempe (Frazer on Paus. X. vii. 8). It was only in later days that the crown of foliage—olive, laurel, pine, etc.—was replaced by a metal crown, so that in the 2nd and 3rd cents. of our era the decoration carried by the victorious athlete was an elaborate structure more like an urn without a bottom than anything else (Dressel in *CIL* xv. 2, no. 7045). The crowns thus won were often dedicated in the temple; in the case of a tie, which was for this reason called *leptá*, the crown remained the property of the god (*JHS* xxv. 17f.). But the rewards might also be carried away by the winners, and the entry of such a winner into his native city was a solemn function, as when Pausimachus brought home to the Carian Antioch the crown of the Delphic Soteria (Dittenberger, *Or. Gr. Inscr.* 234. 31). At Elæa in Asia Minor, when Attalus III. (138–133 B.C.) was received in state by the citizens, he was met by all the state officials and by the winners in sacred festivals carrying their crowns with them (*ib.* 332. 34).

6. From the use of crowns as rewards in actual athletic and other contests, such as musical or literary (an ordinary term for being victorious with a tragedy is *ορεθαι*, cf. Bacchylides, frag. 33, Jebb), is probably derived their use as marks of honour generally. They could be given as rewards for good service to the community; and decrees of Greek communities rewarding their officials or private members are among the commonest of extant official documents.

Thus the Athenian council and people in 151 B.C. vote a laurel crown to Protagoras the priest of Asklepios for his services to the shrine (Michel, 689); at Lissa in Asia Minor in the 3rd cent. B.C. a similar crown is voted to Menekrates for his general good services to the community (Dittenberger, 57); at Ptolemais in Egypt the artists of the guild of Dionysus and the Brother Gods grant a crown of ivy, to be given at the *Dionysia*, to their life-president Dionysius, son of Musæus (*ib.* 50). At Delphi services to the shrine and State are rewarded with 'a crown of laurel from the god's grove, according to the traditional Delphic custom' (*ib.* 345; *Sylloge*², Leipzig 1898, p. 215). An Athenian decree of 100 A.C. records the crowns conferred on the *ephebi* and their *kometes* by the Council and Assembly, and by the Salaminian *demoi*, and on their *kometes* by the *ephebi* (Roberts, *Epigr.* ii. 65). A list of the eighteen crowns (of gold or laurel) conferred on Cassander, son of Menestheus, was inscribed on a marble slab in the temple of Apollo Smintheus in the Troad (Michel, *Rec.* 1312).

Such honorific crowns were presented not merely to individuals or associations, but to a whole people or their official representatives; thus the Athenian people received crowns from various States, such as Paros, Andros, Cnossus, etc. (*IG* ii. 700, 701). The mural, rostral, and civic crowns of the Romans were special developments of the crown as reward for services to the State.

7. From employing the crown as a reward, it was but a step to presenting it as tribute, often with a sense of favours to come.

Strato, son of Gerostratus, king of the Phœnician Arvad, went to meet Alexander the Great and crowned him with a golden crown, at the same time laying his father's dominions at the conqueror's feet (*Arr. Anab.* ii. 18. 8). Machares, son of Mithradates, offered a crown to Lucullus worth 1000 gold pieces,

begging for an alliance with Rome (*Plut. Lucull.* 24). Simon the Hasmonæan sent a golden crown and palm as tribute to Demetrius of Syria (1 Mac 13³⁷). Plutarch (*Æm. Paul.* 34) says that at the triumph of Æmilius Paullus were carried 400 golden crowns which the conquered States had sent to him as the prize of his victory.

Thus the crown became the symbol of victory, even more than the palm-branch. It is the most common attribute of Victory in art; and Christianity, in spite of certain protests (cf. Tert. *de Cor.*), adopted it whole-heartedly as a symbol of spiritual victory.

8. The crowns received as civic rewards or honours were, like athletic decorations, frequently dedicated at shrines (Rouse, *Gr. Vot. Offerings*, Camb. 1902, p. 266). At Athens those conferred by a foreign State had to be dedicated in the Parthenon, perhaps to prevent *ὄσπρις* (*Æschin. in Ctes.* 46). Crowns of less importance were usually kept by the recipients. When the semi-barbarian princes Spartocus and Parisades of Bosporus were voted golden crowns by the Athenians, the decree laid down the very form of words which was to be inscribed on the crown when dedicated (Hicks, *Gr. Hist. Inscr.*², Oxf. 1901, p. 140). To judge by the lists in inscriptions, vast quantities of such crowns must have been in the temples. Sometimes the lists record the terms of the dedication; e.g. from the Delian treasure-list (Dittenberger, *Syll.*² 588. 102) a golden laurel-crown bearing the inscription 'Publius son of Publius Cornelius consul of the Romans' (i.e. Scipio Africanus, who probably made the dedication in 194 B.C.).

9. The crown, being part of the apparatus of religious service, was worn not only at sacrifices, but also at other ceremonies, such as musical or literary contests, which were under the patronage of a deity. Such were the sacred contests at which Pliny says it was originally the custom to wear crowns of natural leaves (*HN* xxi. 4), the use of crowns variegated with flowers being later, and the use of artificial crowns later still. Demosthenes (*in Mid.* 16) describes golden crowns among the 'sacred vestments' worn by the chorus which he provided at the *Dionysia*. Musicians are often represented wearing crowns (Schreiber-Anderson, *Atlas*, vii. 9, lxxviii. 7; Baumeister, *Denkm.*, fig. 591). The use of crowns at weddings was undoubtedly religious, and therefore condemned by Tertullian (*de Cor.* 13). It is the bridal crown that is carried or worn by Eros and Hymenæus. Religious also must have been the origin of the decoration hung outside the house-door at Athens after the birth of a child: an olive-wreath for a boy, a woollen fillet for a girl. On the other hand, we may well hesitate to see any direct religious significance in the use of crowns at banquets. They were connected especially with drinking, and were probably first used to promote cheerfulness. It may be doubted whether the theory that they mitigated headache (an ancient theory mentioned by Aristotle *ap. Athen.* xv. 874) was more than make-believe. Whatever may have been the original significance of the use of crowns on such occasions, it was doubtless included in the general condemnation of the custom of wearing crowns on the head which was uttered by more than one Christian apologist (Minucius Felix, Tertullian). The Christians used flowers both loose and in garlands, but not on their heads, doubtless because the wearing of them was so intimately associated with pagan cultus.

10. The diadem worn by monarchs, though possibly its resemblance to the *tania* with which the heads of deities were often adorned may have given it a suggestion of Divine significance, was probably not religious in origin. In any case it was adopted by Alexander the Great from the Persian king, so that its original significance must

be sought in the East. The plain round decoration seen, e.g., on the portrait-head in the Louvre called Antiochus the Great (Bevan, *House of Seleucus*, Lond. 1902, frontisp.), or on heads of Seleucus and Philæterus on early Pergamene coins, is probably not a diadem, but a sacred fillet. The laurel crown is rarely, if ever, represented on the portraits of living Greek kings. It is worn by the dead and divinized Philæterus, sometimes intertwined with a diadem, on coins of Pergamum. It was worn by Julius Caesar and by practically all the Emperors from Augustus onwards, while, until the time of Constantine, they eschewed the royal diadem. It was a symbol, despite its origin, of honour, but not of divinity. Even the crown that is being placed on the head of Augustus by a female figure, herself wearing a walled crown and veil, on the famous Vienna cameo (A. Furtwängler, *Ant. Gemmen*, 1900, pl. 56) representing the Emperor's apotheosis, is a sign of honour merely, not of divinization. This crown is of oak leaves. When the early Emperors wished to express divinity by a crown, it took the radiate form. The same thing could be expressed by placing a star over the Emperor's head. On coins struck after his death, Divus Augustus is frequently represented wearing a crown of rays. The use by a king of this radiate crown, properly the head-dress of the sun-god, is found on coins representing Ptolemy III. of Egypt (247-222 B.C.). In Syria it appears first on coins struck by Antiochus Epiphanes (175-164 B.C.), who expressed his godhead thus, as well as by placing a star over his head. It may be doubted whether this radiation, so far, represents any concrete crown, and not merely an imaginary halo. Nero was the first living Roman Emperor to wear it, so far as the evidence of coins goes. But it was not until the time of Caracalla, who introduced a silver coin called the *antoninianus*, on which the Emperor's head is radiate, that the radiate crown became common in representations of monarchs. It was apparently not worn by the Emperors after Constantine the Great, obviously because of its religious significance.

LITERATURE.—Pliny, *HN* xxi. 1 ff.; Athenæus, xv. 671 ff.; Tertullian, *de Corona Militis*; Stephani, 'Nimbus u. Strahlenkranz,' in *Mém. de l'Acad. des Sciences de St.-Petersbourg*, 6th ser. vol. ix. (1859); Egger-Fournier, art. CRUELTY.—See HUMANITARIANISM.

CRUSADES.—I. CAUSES OF THE CRUSADES.

—The Crusades may be defined as the technical name given to certain special events in the long struggle between the Muslim and the Christian. For the immediate or special causes of any particular Crusade, see below. Of general causes, whether political or religious and ethical, the following may be noted.

1. The decay of the Eastern Empire.—The reader even of liberal culture is often ignorant of the fortunes of the great Empire that continued at Constantinople the name and authority of Rome. He fails, therefore, to recognize the debt which the common civilization and Christianity of Europe owe to it (cf. F. Harrison, *Meaning of History*, 1894, chs. 11 and 12). Charles Martel saved the West at Tours (Oct. 732) from the Saracen invaders, but his efforts would have been fruitless

had not Constantinople for centuries presented a secure barrier against all attacks from the side of Asia. The first shock of Muslim conquest had found her unprepared (first Saracen siege of Constantinople, 674-6; 2nd siege, 716-8; deliverance chiefly through 'Greek fire'); but under the great Emperor Leo the Syrian (718, often mistakenly called the Isaurian) and his son Constantine V. (740), the Eastern Empire recovered her strength (J. B. Bury, *Later Roman Empire*, London, 1889, vol. ii. bk. 6). As part of his general programme for driving back the Saracens, Leo endeavoured to abolish the 'eikons,' and tried to develop a strong yeomanry by reforming the land laws and emancipating the serfs. As a result, the Basilian dynasty (867-1057) regained much lost territory in both Asia and Europe, through the conquests especially of John Zimisces (963-75; Antioch recovered, 969).

But, with the close of the 11th cent., the powers of resistance of the Eastern Empire were becoming exhausted. The Iconoclastic controversy and, above all, centuries of pernicious land laws had sapped her vitality. The provinces of Asia Minor consisted of vast domains cultivated by serfs under absentee landlords at Constantinople, or belonging to ecclesiastical corporations exempt from military burdens. The result was inevitable. One by one the provinces which had hitherto stood out against the Muslim succumbed. The respite which Constantinople had provided had been invaluable. The Greek Empire had saved Europe in her hour of weakness. But now missionaries had subdued the barbarians, and under Charles the Great had welded Europe, in idea at least, into one great Christian commonwealth, under one leader of the faithful at Rome (Xmas Day, 800). Whatever its internal weakness, the idea of the Holy Roman Empire was of tremendous power for dealing with a non-Christian foe. The conflict between Crescent and Cross was bound to be renewed under a new form, with a new champion of Christendom, and in a wider arena, no longer as a frontier war, but one of inter-continental character. Thus the Crusades (upon the seven or nine divisions of which stress should not be laid) must be regarded as a new form of the old struggle. A clear recognition of this fact, and not the belief once fashionable that the Crusades were a sort of 12th cent. outbreak of madness or chivalry, lies at the root of a right understanding of history.

2. The rise of the Seljûk Turks.—In the 9th and 10th cents. the powers of resistance of Constantinople had been assisted by the disunion of the Muslim. There were rival Khalifates of East and West (Western Khalifate inaugurated by 'Abd al-Rahmân III. in 929); the struggles of Sunnites and Shi'ites (*qq.v.*), and of the dynasties and sub-dynasties of Umayyads, Abbasids, Fâtimids, Idrisids, etc. (see, for complete lists, S. Lane-Poole, *Mahomedan Dynasties*, 1894); and the revolt of the 'Carmatians' (*q.v.*) at Kûfa under Hamdân ibn Ashaṭ or Qarmat, and the pillage of Mecca by these Mahdists in 929. But, with the rapid rise of the Seljûk Turks, all this was changed, and Constantinople was separated from the Muslim merely by the Dardanelles, and threatened by a Turkish fleet constructed by Greek captives. So, in the spring of 1088, Alexius Comnenus in a letter (*Recueil*, iv. 131 ff.; or, better, Hagenmeyer, *Kreuzzugsbriefe*, Innsbruck, 1901, p. 12) to Robert of Flanders besought the aid of the Latins.¹

In 1039 the Turkomans defeated Mas'ûd, the Ghaznavid, at Damghan, subdued Persia, and elected as their head Abû-Talib-Tughril Beg, the grandson of Seljûk b. Yakâk of Samarqand

¹ For the controversies over the genuineness of this letter, see Bury's *Gibbon*, vi. 251 n., or, more fully, Hagenmeyer, *op. cit.* pp. 10-44. The date is from Hagenmeyer, whose defence of its genuineness (against P. E. D. Riant, *Alex. Com. Ep. Spuria*, Geneva, 1879) may be accepted.

(a pervert, possibly, from Christianity to Islām). In 1055, through his deliverance of Baghdad from the Buysids, Tughril was constituted 'sultan' or captain of the bodyguard of the 'Abbāsid Khalīfa. His son Alp Arslān (1063-72) conquered and ruined the Nestorian kingdom of Armenia (1064) and Georgia, and after three campaigns defeated and captured the Greek Emperor Romanus Diogenes, at Manzikert near Lake Van (26th Aug. 1071);¹ and, as a result of the consequent weakness and dissensions, the Seljūq Sulaimān won Anatolia and Antioch, the seat of the Seljukian dynasty of Rūm being established at Nicaea (1077-1300). Moreover, in 1070-1, Jerusalem had been taken by a lieutenant of Malik Shah, Atsız Ibn Auk the Khwārizmian, from the mild rule of the Fātimid Khalīfs of Egypt, and its Government handed over to the exactions of the Turkoman Örtük b. Aksab (see below).² The Örtükids were expelled 26th Aug. 1098 by the Fātimids, and retired to Edessa.³

3. The pilgrims and the Holy Places.—The influence of the Holy Places upon the Middle Ages was not due to historic—the historic sense was not yet born—but to religious and psychological sentiment. The Middle Ages were powerless to realize an idea without turning it into the concrete. Of Christ and His saints men must have visible images. By a sort of logical inversion they went one step further. Where the image was, there was the spirit. Thus the image, or material realization, became the vehicle of grace, possessing not only sanctity but life, while the spiritual was constantly assuming form and colour. Hence, to the mediæval mind the Holy Places were far more than religious or historical memorials. They were themselves sacramental—an essential part of the spiritual provision of the age. The early origin of pilgrimages to Jerusalem is seen in the journey of Helena in 326, the foundation by her son Constantine of the Church of the Holy Sepulchre (Socrates, *HE* i. 17; Euseb. *Vit. Const.* iii. 30, 34-40), and the record in 333 of the Bordeaux pilgrim (see *Itin. Anon. Burdigalense*, in *CSEL* xxxix. 1 ff.; Eng. tr., A. Stewart [London, 1887]). On the conquest of Jerusalem by Omar (638), the Christians had been assured of their religion; a quarter was assigned to the patriarch and his people; and the Holy Places were left in their hands. The 'Abbāsid Khalīf Harūn al-Rāshid even presented Charles the Great (23rd Dec. 800) with the keys of the Sepulchre (Eginhard, *de Vita Carol. Mag.* ch. 16). On Jerusalem lapsing to the Fātimid Khalīfs of Egypt (969-1076), special concessions were granted to the republic of Amalfi for the transport of pilgrims. But the era of tolerance was changed when the famous Hākim (al-Hākim Abū 'Alī al-Manṣūr), the Fātimid Khalīf (996-1020), burnt the Church of the Resurrection and destroyed the Holy Sepulchre (27th Sept. 1010; for date, see Röhricht, *op. cit.* 9 n.). On his assumption of divinity (1017), in his new hatred of the Muslim, al-Hākim once more granted toleration, and the pilgrimages recommenced, greatly stimulated by the new outburst of piety in Europe which marked the 11th cent., and by the re-opening (see Röhricht, in *Hist. Taschenbuch*, Leipzig, 1875, v. 5), through the conversion of Stephen of Hungary (997-1038), of the old land-route which was followed as early as 333 by the Bordeaux pilgrim. But under the rule of Örtük the cruelties inflicted upon, and the exactions from, pilgrims, hitherto fixed at two gold pieces a head, became excessive (William of Tyre, *Hist.* i. ch. 10; Urban II. at Clermont in Guibert, *Gesta Dei per Francos*, ii. 4 [*Recueil*, iv. 140]). Either a way of redress must be found, or the pilgrimages must cease.⁴

4. The new Europe.—The wrongs of previous

² For date, see Röhricht, *Erst. Kreuz.*, 283 n., from Mujir-al-Din's *Hist. de Jérusalem*, tr. Suvaire, 1876, p. 69 f.

³ For date, see Röhricht, *l.c.*

⁴ There is a comprehensive study of the German pilgrims in R. Röhricht, *Beiträge z. Gesch. d. Kreuz.* vol. II; cf. also P. E. D. Riant, *Expéditions et pèlerinages des Scandinaves en Terre Sainte*, Paris, 1865-9, and H. Raynaud, *Itinéraires à Jérusalem*, Paris, 1877.

ages, including the desecration by al-Hākim, had appealed to a distracted Europe in vain. But, by the close of the 11th cent., a new Europe had arisen, instinct with religious chivalry, conscious of its spiritual unity, no longer distracted by heathen Huns and Northmen. By the recital of the wrongs of the pilgrims 'a nerve was touched of exquisite feeling; and the sensation vibrated to the heart of Europe' (Gibbon, vi. 258). Politically Europe was ready. Gregory VII., as part of his immense plans, first conceived (Dec. 1074) the idea of arming Europe against Asia (*Epp.* ii. 31),¹ and the two expeditions of his Norman ally and protector, Robert Wiscard—who had already conquered Sicily from the Saracens—into Greece (1081-2, 1084) might have established as a preliminary step the Normans at Constantinople, and the Papal supremacy over the Eastern Church, but for the death of Robert at Bundicia in Epirus (17th July 1085), leaving his Eastern dreams to his son Bohemond. The diversion of these into the Crusade was easy and natural, while in the Fourth Crusade we see the reversion to Robert's original plan. Nor must we forget that, in addition to the religious motives—to the strength of which the utmost importance should be attached—the East was to the 11th and 12th cents. what the New World was to the Elizabethan sailors. Motives of commerce, wealth, adventure, and religion were united (cf. the six camel-loads of Tancred's spoils [*Alb. Aq.* vi. 23; *Recueil*, iv. 479], or the letter of Hugh de Reitaste [i.e. Rethel] boasting of the 1500 marks rental he had won [in Guibert, *Gesta Dei per Francos*, vii. 38; *Recueil*, iv. 254]).

The drift of the times is clearly seen in the popularity of the romance *Vita Caroli Magni et Rolandi* (ed. Ciampi, Florence, 1822), assigned to John Tiliplus or Turpinus, Archbishop of Rheims, 778. In this romance, which was accepted everywhere as history, Charles achieves the conquest of the Holy Land. Gaston Paris, *s.v.* 'De Pseudo-Turpin' (in *Hist. Poët. de Charl.*, Paris, 1865; or enlarged, 1905), shows that the first part was composed in the 11th cent. by a Spaniard; the second part c. 1110 by a monk of Vienne. There is an Eng. metrical tr. by T. Rodd, 2 vols., 1812.

5. The system of Penance.—A powerful motive both to the pilgrimages to the Holy Places and to the consequent Crusades may be traced in the current Penitential system of Europe. In the 11th and 12th cents. this system was in full operation. We see the effect when Urban II. at Clermont proclaimed a plenary indulgence to all who enlisted for the Crusade (Mansi, xx. 827; cf. Girald. Camb. *de Princip. Instruct.* 238 [ed. G. F. Warner, in *Rolls Series*, 1891]; see also Röhricht, *Erst. Kreuz.* 21, n. 5). To this should be added the temporal advantages. The *cruce signati* were freed from arrest for debt, and from usury; they were guaranteed justice; the Pope was the guardian of their wives, families, etc. In consequence the crusaders were a mixed company, debtors and criminals abounding.

II. HISTORY OF THE SEVEN CRUSADES.²—I. First Crusade.—To the general causes already detailed no special cause need be added save—though very doubtfully—the preaching of Peter the Hermit.

Peter (b. 1053) of Amiens (Guibert, *Gesta Dei per Francos*, ii. 8), stirred by the wrongs he witnessed in 1090 and 1094 at Jerusalem (*Alb. Aq. Hist.* i. 2-4), on his return to Europe is said, according to the well-known story, to have addressed the Council of Bari and aroused Urban II. to a sense of the need of a Crusade. The last part of this story, to the doubtful character of which von Sybel first drew attention, appears in Albert of Aachen (*Hist.* i. 5; cf. Anna Comnena, *Alex.* x. 284), and is otherwise unknown (cf. Bernard's contemptuous reference, *Ep.* 363. 8). Thence it was copied into the *Chanson d'Antioche* of the pilgrim Richard (a romance without historical value, written c. 1145; first ed. by A. P. Paris, 2 vols., 1848, tr.

¹ Cf. the letter of Sylvester II., May 984 (*Epistolae Gerberti* [ed. J. Havet, Paris, 1889], p. 22), which is, however, of very doubtful value and authenticity.

² Divisions into seven or nine of what was in reality a continuous struggle are arbitrary but useful.

1862). Peter is not mentioned by Guibert or others as present at Clermont. Of Peter's preaching in Picardy and Berry after Clermont there is, however, little doubt (see Guibert, *op. cit.* ii. 8; Anna Comn. l.c.), but Urban II., a disciple of Gregory VII., would use rather than follow his preaching. For Peter, see the critical monograph of Hagenmeyer, *Peter der Eremita* (Leipzig, 1879), which traces the genesis of the myth.

At the Council of Placentia (7th March 1095) the ambassador of Alexius Comnenus pleaded the peril of Constantinople (Mansi, xx. 802; Guibert, *op. cit.* ii. 1), but Urban II. postponed the decision until after a second Council at Clermont (18th-27th Nov. 1095; Mansi, xx. 821 ff.). There, amid cries of 'Deus vult,' the undertaking was commenced, a red cross (hence the title 'Crusade') being sewn on the breast or shoulders.¹ So far as the Muslim world was concerned, the times were opportune, the great Seljûk Empire of Malik Shâh having broken up, at his death (1092), into four warring portions. Egypt had recovered its possessions, and in 1096 the Fatimid vizier Aphdal conquered Jerusalem from Ortuk. While the main expedition was preparing, a vast mob, chiefly from the Rhine districts, under Peter, Walter the Penniless, and Walter de Poissy, with a goose at their head (Alb. Aq. i. 30; Guibert, *op. cit.*; *Recueil*, iv. 251), after massacring (May 1096) the Jews in Spire and Worms (Salomo bar Simeon, in Neubauer and Stern's *Quellen zur Gesch. der Juden in Deutsch.*, Berlin, 1892), crossed Hungary, and, with thinned numbers, arrived at Constantinople (30th July 1096). On crossing into Asia, they were overwhelmed (21st Oct. 1096), near the river Dracon and at Civotit, by Kilij Arslân, the son and successor (1092-1106) of Sulaimân (Anna Comn. *Alex.* x. 274; there is an excellent account of this Crusade in Röhricht, *Erst. Kreuz.* chs. 2, 3, or in Hagenmeyer, *Peter d. Eremita*, chs. 4-6).

The main Crusade was under Godfrey of Bouillon, Hugh of Vermandois, Robert of Normandy, Robert of Flanders, Raymond of St. Gilles and Toulouse, Bohemond, and his nephew Tancred (see lists in Alb. Aq. ii. 22, 3), with a vast host of barons, etc. Marching through Hungary, the various forces converged on Constantinople (Godfrey, 23rd Dec. 1097; Bohemond, c. 10th April 1097), and were carried over the Bosphorus by the anxious Greeks. After Alexius had secured their homage (Alb. Aq. ii. 16-18, 28) and reviewed the hosts (of whom Fulcher of Chartres enumerates nineteen nations, or about 60,000 armed horsemen [see Alb. Aq. ii. 41] plus a vast mob of pilgrims and camp followers), they captured Nicea, the capital of Rûm (19th June 1097), defeated the Turks at Dorylæum (Eski-Shehr, 1st July 1097), crossed the desert in a burning summer, captured Antioch after an exhausting siege of nine months (21st Oct. 1097-3rd June 1098), during the dire famine of which many deserted for home (Alb. Aq. iii. 50-52, iv. 34) until stopped by the discovery of a Holy Lance,² and defeated the vast relief forces of Kerbugha of Mosul (28th June). After ten months' delay, the remnant of the crusaders, reduced now to less than 40,000 all told (Röhricht, *op. cit.* 183 n.), disdaining the proffered terms of the Egyptians, marched on Jerusalem (13th May-6th June 1099), the capture of which (15th July 1099) was followed by the massacre of 70,000 Muslims and Jews, women and children included (Alb. Aq. vi. 20-23). Eight days later Godfrey was elected king (real title, 'advocate of the Holy Sepulchre') of Jerusalem (22nd July 1099; William of Tyre, *op. cit.* ix. chs. 1-12). His overthrow of the Egyptians at Ascalon (12th Aug. 1099) was followed by the disaster of his death (18th July 1100). The two

Baldwins, his brother and cousin, who succeeded him, slowly extended the limits of the kingdom (Tripoli, 1109; Tyre, 1124), which began to decline after 1143.

At its widest extent, the four *sefs* of the kingdom of Jerusalem were: (1) the principality of Jerusalem; (2) the county of Edessa, which fell to Baldwin the brother of Godfrey, who had detached himself from the main host for the purpose in 1097; (3) the principality of Antioch claimed by Bohemond, and always inclined to independence;³ (4) the county of Tripoli.⁴ The settlement of the kingdom on a feudal basis was marked by the gradual compilation (see Bury's Gibbon, vi. App. 16; Stubbs, *Itin. Reg. Ricard.*, Introd. p. xc) of that most interesting code of feudal customs, etc., the 'Assize of Jerusalem,'⁵ as also by the foundation, for its defence, of the various orders of military knights (see below, p. 351).

LITERATURE.—The original sources for the First Crusade are to be found for the most part in the ponderous though incomplete *Recueil des historiens des croisades* [*Hist. occident.*], 6 vols. (Paris, 1844-95)—a collection which supersedes that of J. Bongars, *Gesta Dei per Francos* (Hanover, 1611), used by Gibbon. In vol. I. (1) there is a good itinerary of the various Crusades, by S. Jacobs. Of the sources the following are the most important: (1) *Gesta Francorum*, by an unknown S. Italian knight who took part in the First Crusade. He deposited his book at Jerusalem, possibly in the Holy Sepulchre, where it was frequently consulted by other writers, of several of whom it forms the basis.⁶ (2) Guibert of Nogent (b. 1063), *Gesta Dei per Francos*; almost entirely dependent on (1). Guibert was present at Clermont, and writes down to 1104.⁷ (3) Raymund of Agiles, *Hist. Francorum qui ceperunt Jerusalem*; also dependent on (1): a narrative by a Provençal eyewitness.⁸ (4) Fulcher of Chartres, *Hist. Hierosolymitana*; the only eye-witness of the events in Edessa; continues down to 1127; also depends on (1).⁹ (5) Baldric, Archbishop of Dol, *Hist. Hierosolymitana*, written in 1108; entirely founded on (1).¹⁰ (6) Albert of Aachen, *Hist. Hierosolymitana*—a vivid narrative of the First Crusade, written after 1120; really copied from an unknown crusader from Lorraine, together with use of (1).¹¹ (7) Ralph of Caen, *Gesta Tancredi*; a friend of Tancred, for whose exploits he is of great value.¹² (8) Ekkehard of Aura, near Kissingen (d. 1125), *Hierosolymita*. He went to Palestine in 1101, and was there about six weeks.¹³ (9) Cafaro di Caschifellone, *de Liberatione civitatum Orientis*. The writer (b. 1080) went out in Aug. 1100, returning in July 1101 (see *Recueil*, v., Introd. p. xvii). It is of special value for Genoese matters up to 1109.¹⁴ Other minor sources of no great historical value, including the poem of Gilo of Toucy and Foulk, *Vies Hierosolymitane* (written c. 1125 [see *Recueil*, v., Introd. cxlvi]) are ed. in *Recueil*, vol. v. (10) Of Greek writers, Anna Comnena (b. 1083), owing to her position as daughter of the Emperor Alexius, cannot be neglected, due account being paid to her bias.¹⁵

Of modern works dealing with the First Crusade (see also below) the first critical study was H. v. Sybel, *Gesch. des ersten Kreuzzugs*, Düsseldorf, 1881. Two German historians have since spent a lifetime in the preparation of a series of important monographs: H. Hagenmeyer, *Peter der Eremita*, Leipzig, 1879 (for First Crusade, see chs. 5 and 6), with a good 'Chronology' (1094-1100) in Appendix, and his *Die Kreuzzüge*

¹ For its history, see E. G. Rey, 'Résumé chron. de la hist. d'Antioche,' in *Revue de l'orient latin*, iv. 821 ff., 1896.

² On the limits of these *sefs*, see Jacobs, in *Recueil*, i. [1] Introd. ch. 2; or Lane-Poole, *Saladin*, New York, 1893, p. 261. For tables of kings, dynasties, rulers, etc., see Lane-Poole, *op. cit.*

³ Best ed. by de Beugnot, 2 vols., 1841 and 1843; for a critique, see Gaston Dodu, *Hist. des institutions monarchiques dans le royaume latin de Jérusalem*, Paris, 1894.

⁴ Best ed. by H. Hagenmeyer, Heidelberg, 1890, with introduction and notes; also in *Recueil*, iii. 121 ff.

⁵ In *Recueil*, iv. 119-263.

⁶ See C. Klein, *Raimund v. Aquilars* (Berlin, 1892), and v. Sybel, *Erst. Kreuz.* 15 ff. In *Recueil*, iii. 231-310; Migne, *PL* clv. 591-666.

⁷ See v. Sybel, *op. cit.* 46 ff.; Hagenmeyer, *Gesta Franc.* p. 58 ff.; *Recueil*, iii. 311 ff., or Migne, *PL* clv. 828-942.

⁸ See v. Sybel, *op. cit.* 35 ff.; *Recueil*, iv. 1-111.

⁹ See Hagenmeyer, *op. cit.* 62-68, or B. Kugler, *Albert v. Aachen*, Stuttgart, 1885, who maintains his value as against v. Sybel's doubts; *Recueil*, iv. 265-713.

¹⁰ *Recueil*, iii. 587-716; Migne, *PL* clv. 489-590, or Muratori, *Script. rer. Ital.* v. 286-335. On Ralph, see v. Sybel, *op. cit.* 64; Hagenmeyer, *op. cit.* 69.

¹¹ Best ed. by P. E. D. Kiant, in *Recueil*, v. (1895) 1-40, or, separately, by H. Hagenmeyer (Tübingen, 1877), with valuable introduction. The ed. in Martène (*Amplius. Cœt.*, 1729, vol. v. coll. 613-35) is very defective, and that in Pertz by Waltz (*MGH* vi. 265 ff.) is scarcely complete. For many events Ekkehard is our only source (see *Recueil*, v., Pref. p. vii).

¹² *Recueil*, v. 48-75; or Pertz, *MGH* xviii. 40-8; or, separately, ed. by L. T. Belgrano, Rome, 1890.

¹³ Of her *Alexias* (complete ed. in Migne, *PG* cxxxi., or 2 vols. in *Corpus script. hist. Byz.* [Bonn, 1828-97]; or ed. Reifferscheid [Teubner], 1884), the books dealing with the First Crusade (x.-xiv.) are in the *Recueil des historiens des croisades* [*Historiens grecs*], i. 1-204 (2 vols., Paris, 1875, 1881, with Lat. paraphrase; the 2nd vol. contains annotations only).

¹ For critical examination of this Council, see Röhricht, *Erst. Kreuz.* 235-9. For Urban's other Councils after Clermont, at which also he preached the Crusade, see ib. 22.

² On this incident, see Raymund of Agiles, 'Hist. Francorum,' in *Recueil*, iii.

briefe (1088-1100), Innsbruck, 1901, with complete bibliography of all minor sources, magazines, etc.; R. Röhricht, *Gesch. des erst. Kreuz.*, Innsbruck, 1901 (perhaps the best single work), and *Beiträge z. Gesch. d. Kreuz.*, 2 vols., Berlin, 1874, 1875.

P. E. D. Riant must not be overlooked among those who have done good work (cf. *Recueil*, v.). His *Invent. crit. des lettres* (768-1100), Paris, 1880, is of value for advanced work.

2. Second Crusade.—For many years the Latin kingdom had been threatened by the growing power of the Atabeg amir of Mosul, 'Imād-al-Din Zengi, or Zanghis, twisted by the Latins into *Sanguineus* (1127-14th Sept. 1146),¹ to whom must be attributed the first stemming of the tide of Latin conquest. His capture and massacre of Edessa (25th Dec. 1144)² was followed by the successes of his great son, Nūr-al-Din Mahmūd. The fall of Edessa aroused the West, chiefly through the preaching of St. Bernard (see art. BERNARD, vol. ii. p. 530), first at Vézelay before Louis VII. (31st March 1146), then later in the Rhine valley,³ where the persecution of the Jews which usually attended a Crusade had broken out. As a result of his meeting with Bernard at Spire (27th Dec. 1146), the Emperor Conrad III., with reluctance, took the cross (E. Vacandard, *S. Bernard*, Paris, 1895, ii. 288 ff.). Conrad started from Bamberg (May 1147) by the overland route, with about 100,000 followers, including many women, and, after a disorderly journey, reached Constantinople, followed closely by Louis, who set out from Metz (11th June 1147). An attempt of Conrad to push on was followed by the loss of 30,000 Germans, and he was forced back upon Nicea to await Louis. From there the armies marched, though in two divisions, to Ephesus, whence the wounded Conrad returned, after Christmas, to winter at Constantinople. Louis, however, and a part of the Germans under Otto of Freising, continued their march. Otto's force was cut to pieces near Laodicea, and Louis was disastrously defeated in the defiles of Phrygia (Odo, *op. cit.* vi.: a remarkable story), but managed with diminished forces to reach Antioch (19th March 1148). Meanwhile Conrad set sail from Constantinople (10th March 1148), and reached Acre in April. The two armies mustered at Palma, near Acre (24th June 1148). But the attack on Damascus failed (Bernhardi, *op. cit.* 563-78), and Conrad sailed home (8th Sept. 1148), followed by Louis (Easter, 1149). Bernard and Suger thereupon planned a second expedition, and at a Council at Chartres (7th May 1150)⁴ Bernard was actually elected commander-in-chief—an office which he refused (Bernard, *Ep.* 256). The miserable termination of the crusade led to a reaction of anger against St. Bernard (*de Consid.* ii. 1). As an important episode in the Crusade we may note the undesigned conquest, by an English fleet, of Lisbon from the Moors (Bernhardi, *op. cit.* 579-90).

LITERATURE.—For the Second Crusade the chief sources, in addition to William of Tyre (see below), are Odo de Diogilo (Deuil), *de Protectione Lud. VII.* (in Migne, *PL* clxxxv. 1205 ff.), and two anonymous writers, *Gesta Lud. VII.* and the *Hist. gloriosus Lud.*⁵ For Conrad, see Otto of Freising, *de Gest. Frid. I.* 34-39, 43-46, 58-59 [in Pertz, *MGH* xx.]. Of Greek writers, Nicetas Accuminatus continues the work of Anna Comnena from 1118-1206 with more fairness (see *Recueil* [Hd. grecs], Paris, 1876). Of modern works, B. Kugler, *Analekten z. Gesch. des zweit. Kreuz.*, Tübingen, 1878, 1885, and *Neue Analekten*, Tübingen, 1885; W. Bernhardi, *Conrad III.*, 2 vols., Leipzig, 1888 (esp. pp. 591-684).

3. Third Crusade.—In 1164 and 1167 the Turkish amir Shiracouah (Asad al-Din Abū-l-Ḥarith

Shīrkūh) attacked the Fātimids of Egypt and their Frank allies. But the treacherous designs of the advisers of Amalric of Jerusalem (1162-73) to seize Egypt led the Fātimids to turn to the Turks for help. After the burning of Cairo (i.e. Fustat, 12th Nov. 1168), Amalric was forced to return; but Saladin, at the command of Nūr-al-Din, destroyed the Fātimid dynasty (Sept. 1171), restoring Egypt to the allegiance of the Abbāsid Khalifs of Baghdad (William of Tyre, xix. 5-7, 12-31, xx. 5-12). On the death of Shiracouah (23rd March 1169), his nephew the Kurd Saladin (Salāh-al-Din; b. 1137) without delay (26th March) was recognized as his successor as vizier of Egypt. The disunion due to the death of the Sultan Nūr-al-Din (15th May 1174) was not taken advantage of by the Latins, who allowed Saladin to extend and consolidate his dominions (Syria, 1174-6). The inglorious expedition of Philip of Flanders (Aug. 1177-Easter 1178), and the great defeat of Saladin at Ramleh by 375 knights under Reginald of Châtillon (25th Nov. 1177), led in 1180 to a truce for two years. The violation of the truce by Reginald of Châtillon's seizure of Karak, and subsequent plunder of Arab caravans (1179, 1182, 1186), and the rapid decay of the kingdom of Jerusalem through dissensions, finally issued in a determined attack by Saladin, whose soldiers were now trained in Frank methods. His great victory at Tiberias or Hattin (4th July 1187) was followed by the siege (20th Sept.) and capitulation of Jerusalem on 2nd Oct. 1187.¹ Saladin's siege of Tyre (Nov. and Dec. 1187) was thwarted by Conrad of Montferrat, but the rest of the country was overrun, and a conditional promise was made of the surrender of Antioch if not relieved within seven months.

Meanwhile Europe once more armed, being terrified by the tidings which reached it (end of Oct. 1187 [Girald. Camb. *de Princ. Instr.* 239]) of the loss of Jerusalem. The first to move was the great Emperor, Frederick Barbarossa, who as a young man had taken part in the Second Crusade. Starting from Regensburg (11th May 1189), Frederick crossed Hungary and Bulgaria, and wintered at Adrianople, sore harassed, as usual, by the treachery of the Greeks. Soon after Easter 1190 he crossed the Bosphorus, avoiding Constantinople, and struggled through the deserts of Cilicia. On the death, by drowning, of the great Emperor (10th June 1190) in the Saleph (Geuk Su or Calycadnus, *Itin. Ric.* 55), the Germans made their way, in part, to Antioch (June 21st), in part to Tripoli.

LITERATURE.—For this expedition we have the narrative of two spectators: Tageno of Passau, *Descript. Expediti. Frid. I.* (in M. Freher, *Germ. Rer. Script.* i. 406-16, ed. Struv, Strassburg, 1717), and the anonymous *Exped. Asiatice Frid. I.* (in Canisius, *Lect. Antig.* iii. (2) pp. 498-528, ed. J. Basnage [Amsterdam, 1725]). For modern works, see A. Chroust, *Tageno, Ansbert, und d. Hist. Peregrinorum*, Graz, 1892.

Richard of England (Nov. 1187) and Philip Augustus of France (Jan. 1188) had been the first to take the cross. But, owing to their quarrels, they did not start from Vézelay until June 1190. They journeyed together to Marseilles, and by separate fleets (Genoese and English) to Messina (23rd Sept.), where they wintered. Sailing in the spring, and on the way conquering Cyprus in a fortnight (*Itin. Ric.* 183 ff.), Richard arrived at Acre (8th June 1191), which Guy de Lusignan had sat down to besiege (28th Aug. 1189) and Saladin to defend, both sides passing through the extremes of pestilence and famine. Richard had been preceded by Philip (20th Apr.), and on 3rd July a united assault was made on the town, which surrendered on the 12th of the same month. The quarrels of Philip and Richard were, however,

¹ See Ernoul, in *L'Eistoire de Eracles*, xxiii. 55 ff. (*Recueil*, ii. 82 ff.), for interesting narration. For the events of the years 1187-9, see R. Röhricht, *Beiträge z. Gesch. d. Kreuz* i. 115-208.

¹ For life, see Lane-Poole, *Saladin*, chs. 3 and 4, and J. F. Michaud, *Bib. des croisades* (Paris, 1829), iv. 78 ff.

² For date, see Bernhardi, *Conrad III.* 513 n.; William of Tyre, *op. cit.* xvi. 4.

³ Odo of Deuil, *op. cit.* i. 1; Bouquet, *Recueil*, xii. 91.

⁴ For this Council, which Mabillon, Baronius, and others put in 1146, thus leading to grave error, repeated in most writers, see E. Vacandard, *S. Bernard*, ii. 430 ff.

⁵ A. Duchesne, *Hist. Franc. Script.*, Paris, 1641, iv. 390 ff.; or, better, ed. by A. Molinier, under the title *Vie de Louis le Gros*, Paris, 1887 (written 1163 and 1172).

disastrous, and, on 31st July, Philip set sail home. Richard with 100,000 men marched down the coast to Jaffa, protected by his fleet, and on 7th Sept. inflicted at Arsuf a great defeat upon Saladin (good narrative in *Itin. Ric.* p. 259). After six weeks' delay in re-fortifying Jaffa, Richard twice marched within sight of Jerusalem (Jan. and June 1192), but was forced to fall back on Ascalon. Dissensions, treason, luxury, and immorality (cf. *Itin. Ric.* pp. 284-5) among the crusaders, and trouble at home (*ib.* p. 334), led Richard to come to terms with Saladin (2nd Sept.). The Christians were to retain the coast from Tyre to Jaffa, and to have free access to the Holy Sepulchre. On 9th Oct. 1192, Richard left Palestine. Such small successes as this Crusade had accomplished were wholly due to his marvellous skill and daring (of the latter the most remarkable illustration is in Ralph Coggeshall, *Chron.*, Rolls Ser. 1875, pp. 41-51). On the death of Saladin at Damascus (4th March 1193) his dominions were divided, and the Christians obtained a respite, a great victory being won by German crusaders in 1197, which led to the recovery of the coast towns.

LITERATURE.—For Richard's Crusade the following are the chief sources. (1) The anonymous *Itin. Regis Ricardi* (ed. by W. Stubbs, with valuable introd. in Rolls Ser. 1864). The old ascription (due to Gale's ed. 1687) to Geoffrey Vinsauf is incorrect. Stubbs (introd. *op. cit.* xli ff.) advocates the authorship of Richard, a canon of the Holy Trinity in Aldgate, by whom it was published 1200-20 (*ib.* p. lxx). It is now generally agreed (in spite of Stubbs, *l.c.* p. lvi) that it is a free Latin translation of a French poem of a Norman knight called Ambroise, the minstrel of Richard (ed. by F. Liebermann and R. Pauli in Pertz, *MGH* xxvii, [1885] 532 ff., also ed. Gaston Paris, *L'Estoire de la guerre sainte*, 1897; the poem was discovered in 1873). (2) Sundry references in the *Chronicles* of Roger Hoveden (ed. Stubbs, in Rolls Ser., 4 vols. 1868-71);¹ Matthew of Paris (ed. H. E. Luard in Rolls Ser., 7 vols. 1872-83); and Ralph de Diceto (ed. Stubbs in Rolls Ser., 2 vols. 1876).² (3) Two contemporary narratives: the anonymous *Libellus de expugnatione Terræ Sanctæ* (printed, with the *Chronicle* of Ralph Coggeshall, in Rolls Ser., ed. J. Stevenson, 1875, p. 209 ff.; also in Martène (*Ampliss. Coll.*, v. 544, 1729),¹ and the crusader's journal (Stubbs, *Itin. Ric.*, introd. p. xxxviii) in Benedict of Peterborough's *Gesta Henrici II. et Ric. I.* (ed. Stubbs, in Rolls Ser. 1867).² (4) The great Arabic work of Bohadin (Bahā al-Dīn, b. 1145, d. 1234), the friend of Saladin (ed. with French tr. under title 'La Vie du Sultan Youssef' (i.e. Saladin), in *Recueil des hist. des croisades* [*Hist. orient.*] iii. [Paris, 1884]; also ed. Schultens, Leyden, 1732). The tr. of C. W. Wilson, published by the Palestine Pilgrims Text Society (London, 1897), is said by Lane-Poole to be unscholarly.³ Of modern works, S. Lane-Poole, *Saladin*, New York, 1895, is of special value. Lane-Poole speaks in high terms of F. L. C. Marin's *Hist. de Saladin*, 2 vols., Paris, 1758. G. L. Schlumberger, *Renaud de Châtillon*, Paris, 1898, may also be consulted.

4. Fourth Crusade.—As the so-called Fourth Crusade, in spite of Innocent III.'s intention, never became a Crusade at all, but simply a successful attempt by the Latins to seize Constantinople and the Eastern Empire, for our present purpose it may be dismissed. Note should, however, be taken of the ancient hatred thus accentuated between Greek and Latin; of the evidence the Crusade affords of the fatal dissension between the Eastern and Western Churches, the existence of which was one great cause of the failure of the Crusades (cf. below, p. 350^b); of the indifference of the great trading towns of Italy, especially Venice, to all motives except gain; and of the terrible weakening in powers of defence of Constantinople which the Latin conquest and pillage (12th-13th Apr. 1204) and subsequent Latin rule (1204-61) produced.

From the first, the Crusade, which Innocent III. had preached immediately on his accession, was betrayed by Venice, which had agreed to provide

¹ For the Crusades these works can also be read in the convenient ed. by F. Liebermann and R. Pauli, in Pertz, *MGH* xxvii. (1885).

² The above have been extracted and translated by T. A. Archer, *Crusade of Richard I.* London, 1888 (in 'Eng. Hist. by Contemporary Writers' series).

³ Bohadin's paragon can be corrected by the works of Ibn al-Athir (1160-1233), *History of the Atabegs* (the enemies of Saladin) and *Al-Kāmil*, or the *Perfection of History* (both in *Recueil [Hist. orient.]*, vols. i. II., Paris, 1872-87).

sea-power (March 1201). The ostensible object was Egypt, the centre of Muslim power; but, while the crusaders were assembling at Venice, the Republic concluded a treaty with the Sultan of Egypt (13th May 1202)¹ to divert the Crusade, in return for valuable commercial privileges in Alexandria and Jerusalem (see Bury's *Gibbon*, vi. 385 n., 528). The price the Republic wrung out of the crusaders was four marks a horse, two per man, or £180,000 (Pears, *Fall of Constantinople*, p. 234). As they had nothing wherewith to pay, the crusaders were then disgracefully used by the doge Henry Dandolo, and Boniface of Montferrat, for their own purposes. Until recent investigations, historians, including Gibbon, were successfully misled by the official narrative of Villehardouin, who seems himself to have been in the plot.

LITERATURE.—Of G. de Villehardouin, *Conquête de Constantinople*, the best editions are by N. de Wailly, 3rd ed. (1882), who still maintains V.'s candour, and E. Bouchet, 2 vols., Paris, 1891. Other sources are (1) Gunther's *Historia* (ed. P. E. D. Riant, 1875; also in Canisius, *Antiq. Lect.* iv.); (2) the eye-witness Robert de Clary, *Li estories de chiaus qui conq. Const.* (MS privately possessed by P. E. D. Riant in 1868; ed. by Ch. Hopf, *Chron. græco-rom.*, Berlin, 1873, p. 1 ff.); (3) the anonymous *Devastatio Constantinopolitana* (another recent discovery; ed. in Pertz, *MGH* xvii., and, better, in Hopf, *op. cit.* p. 86 ff.). Of modern writers, E. Pears, *Fall of Constantinople*, London, 1886, should be specially studied for its clear survey; see also G. Finlay, *History of Greece from its Conquest by the Crusaders*, etc., Edinburgh, 1851.

5. Fifth Crusade.—At the Lateran Council (Nov. 1215), Innocent III. unfolded his plans for a new Crusade. The cross was taken, among others, by Andrew II. of Hungary, who arrived at Acre (1217), but accomplished nothing. In May 1218 some Northern crusaders under John de Brienne sailed from Acre to Damietta. After a siege of seventeen months, Damietta was captured (5th Nov. 1219); but, owing to discord, was lost again (8th Sept. 1221).

At his coronation in Rome (Dec. 1220), and on his marriage with Yolande of Jerusalem (Nov. 1225), Frederick II., 'the wonder of the world,' had taken the crusaders' oath. Finally, after excommunication for delay by Gregory IX., Frederick landed at Acre with only 600 knights (7th Sept. 1228); but, owing to his excommunication, the Military Orders refused to serve under him. By treaty, however, with the Sultan al-Kāmil Muhammad (1218-38), but chiefly through the dissensions of the Turks, Frederick obtained (24th Feb. 1229) the cession of Jerusalem (save the Temple), Bethlehem, and Nazareth; and on 18th March 1229 crowned himself in Jerusalem. Hearing that in his absence Gregory IX. had instituted a Crusade against him, Frederick returned from Acre and landed at Brindisi (10th June 1229).

In August 1239, on the appeal of Gregory IX., an abortive French Crusade, under Theobald, king of Navarre, set sail from Marseilles; followed (June 1240) by Richard, earl of Cornwall, who had taken the cross at Winchester (June 1236), and Simon de Montfort. Richard reached Acre on 11th Oct. (Matt. Paris, iv. 71), and by purchase secured the release of many captives (*ib.* iv. 141-3). Nothing, however, was accomplished, and on 3rd May 1241 he returned home (*ib.* iv. 144). In 1243, by negotiation, Jerusalem was once more restored. But the calling in of the Charismians (an Eastern tribe driven from their homes by Genghis Khan) as allies by the Sultan of Egypt led to the annihilation of the Templars and Hospitalers at Gaza (14th Oct. 1244), the sack of Jerusalem, and the massacre of 30,000 of its inhabitants.

LITERATURE.—For the Fifth Crusade, in addition to Ernoul, we have as special sources: (1) James of Vitry, *Hist. Hierosolymitana* (in Bongars, *Gesta Dei*, i. 1047 ff.),² who was an eye-witness of the siege of Damietta (see his *Epistola de captivitate Damiatina* [ed. J. Greuter in his *Horius S. Cruces*, Ingolstadt

¹ The treaty is hinted at by Ernoul (*Recueil*, ii. 250).

² There is an Eng. tr. by A. Stewart, London, 1896.

1610, or in his *Op. Omn.*, vol. 8, Regensburg, 1734); and the continuation of William of Tyre by Bernard the Treasurer (see below, p. 351b). (2) *The Gesta obsidionis Damiatinæ* (Muratori, *Rerum Ital. Script.* viii. 1084 f.). (3) *De Quinto bello Sacro Testimonia Minora* (ed. R. Röhricht, Geneva, 1882, for Soc. de l'Orient lat.). This work contains a most useful collection of all the smaller Belgian, English, French (including Ernoul), German, Italian, Scandinavian, and Spanish sources; also *Quinti belli Sacri Script. Min.* (ed. R. Röhricht, Geneva, 1879-82, for the same Society). (4) For Frederick II. we have Richard de S. Germano, *Chron.* (1189-1248), in Muratori, *op. cit.* vii. 1002-13; Pertz, *MGH* xix. 323 ff. Of modern writers, for the Crusade of Andrew and the capture of Damietta, see R. Röhricht, *Studien zur Gesch. d. Fünften Kreuz.*, Innsbruck, 1891, ch. 2. For Frederick II., Röhricht, *Die Kreuzfahrt Fr. II.*, Berlin, 1872 (printed also in his *Beiträge z. Gesch. d. Kreuz.*, 1874).

6. **Sixth Crusade.**—The fall of Jerusalem before the Charismians led St. Louis IX. to take the cross. He sailed from Aigues-Mortes (25th Aug. 1248) with 1800 ships and at least 50,000 men, wintered in Cyprus, and reached (5th June) Damietta, which the Saracens abandoned. After six months' delay the French pushed on towards Cairo, but were almost annihilated (8th Feb. 1250) at Mansurah (see Oman, *op. cit.* 338-50). Compelled to retreat, Louis was captured (15th Apr.-6th May 1250), but secured his freedom from the Mamluks by a ransom of 400,000 livres and the surrender of Damietta. After four years in Palestine, spent in the fortification of the seaports, Louis departed without having reached Jerusalem, arriving home 11th July 1154.

LITERATURE.—For this Crusade, see the narrative of the eyewitness J. de Joinville, *Hist. de St. Louis IX.* (most convenient ed. is that of Natalis de Wailly with Fr. tr. [1868, 1874], or the Paris ed. of 1761); E. J. Davis, *Invasion of Egypt in 1250* (1897), is a good modern account.

7. **Seventh Crusade.**—In 1263 the sultan Bibars (Baybars al-Bundukdārī) of Egypt began the systematic conquest of Palestine (Arsuf [1265], Safed [1266], Jaffa [1268], and Antioch [12th June 1268]). In July 1270, Louis IX., provoked by the loss of Antioch, set off from Aigues-Mortes with 36,000 troops, but was induced to turn aside to Tunis, in the siege of which he died (25th Aug. 1270). Edward of England (afterwards Edward I.) reached Tunis (9th Oct.), and, after wintering there, reached Acre (9th May 1271) just in time to save the city from the Muslims. Owing to his father's failing health, Edward was driven to patch up a ten years' truce, and return (14th Sept. 1272). Throughout his life he, however, cherished the hope of further Crusades. Meanwhile the growing quarrels of the Military Orders, and the rivalry of Genoese, Venetians, and Pisans, led to renewed disasters, in the strip of the Latin kingdom still left—by the capture of Tripoli (1289), and finally of Acre (18th May 1291), when the massacre of 60,000 Christians closed 'the World's Debate.'

In a sense the Crusades, as the struggle of Muslim and Christian, may be said to have been continued by the slow conquest of Spain from the Moors, by the war of Sigismund with the Turks (1396), by Muhammad II.'s capture of Constantinople (1453), by the great naval victory of Don John at Lepanto (1571), and that of John Sobieski at Vienna (Sept. 1683). But all motive of rescue of the Holy Sepulchre, etc., was now lost, and the sole idea was political—to roll back the invasion of the Turks from Europe.

LITERATURE.—For the Seventh Crusade, the expedition of St. Louis is in William de Nangis (ed. H. Géraud, 2 vols., Paris, 1843). For Edward we have T. Wykes in *Annales Monastici* (Rolls Ser.) ed. Luard, vol. iv., 1869; and the *Chronicon* of Walter Gysburn or Hemingburgh (ed. H. O. Hamilton, 1848, vol. i. pp. 329-37). For the final siege of Acre the anonymous *de Excidio urbis Aconis*, in Martène, *Ampliss. Collect.* v. 767-84; and Abū-l-Fidā's account in *Recueil* (Hist. or.) vol. i.

III. **CAUSES OF FAILURE OF THE CRUSADES.**
—I. **Lack of sea-power.**—This applied especially to the early Crusades. The long march overland from Germany or France through Hungary, the Eastern Empire, then across the deserts and mountains of Asia Minor, would have tried the ability of Alexander or Napoleon at the head of their seasoned legions. It was fatal to Godfrey of Bouillon and Louis VII. and, of course, to the

undisciplined thousands who followed Walter the Penniless.¹ With sea-power, Barbarossa might have won. On the field of battle the crusaders were irresistible. But entangled among mountains and deserts their numbers became their ruin. The lack of sea-power, the possession of which would have led to success, was the effect of a still deeper cause. Sea-power in the Mediterranean was in the hands of the Greeks, or of the cities of Italy—Venice, Genoa, and Pisa. Of these, Venice, once the subject, was now the ally of Constantinople (see Bury's note, Gibbon, vi. 381), and Genoa was chiefly intent on guarding its trade with the Crimea. The sea-power of England and North Europe was used advantageously at Jaffa in 1102 and 1107, but was not available for the transport of the Continental crusaders. After the First Crusade the West woke up to the advantage of a sea-power. But the Greek Empire had now become bitterly antagonistic to all Crusades (see below, § 2), and so sea-power was denied by the Greeks and Venetians, except on exorbitant terms (cf. above, 'Fourth Crusade').

2. **The division of Christendom.**—But the chief cause of failure was undoubtedly the disunion of the crusaders, and the deep hatred between the Greek and Latin Churches. A united Christendom would have been invincible: it recoiled broken and dispirited by its own divisions. The disunion was of a double nature—national and religious. Of the national dissensions the Third Crusade will serve as an example; or, better, the fact that at Acre, when it fell, there were no fewer than seventeen independent commands. From the first the Crusades were a French rather than a German movement; and the Germans—the Empire, in fact—in consequence did little. Of the religious dissensions—largely also national—the antagonism between the Greek and Latin Churches and Empires was even more fatal. The Greeks after the First Crusade rarely did anything to assist the Crusaders, and often secretly thwarted them.

3. **The bad organization of the Latin kingdom.**—The conquests achieved by the First Crusade were organized on a feudal basis. Latin in character, by over-taxation and intolerance it hopelessly estranged the natives (H. G. Prutz, *Kulturgesch. d. Kreuzzüge*, p. 167), especially the native Churches (Nestorians, etc.). There is some evidence that Jerusalem was betrayed to Saladin by Christian Melchites (*Recueil*, ii. 85 n.). One result of the feudal system, when worked in connexion with a country of enervating climate and constant warfare, was the number of heiresses, and, in consequence, of disputed and changing successions.² The only sound element in the country in this matter was the organization of the Military Orders, with their constant succession of new blood from Europe.

IV. **RESULTS OF THE CRUSADES.**—I. **Political.**—The immediate political effects have been dealt with under the several Crusades. Other consequences were:

(1) *Increased importance of the Papacy*, as the embodiment of the unity of Christendom, and the leader in the call to war, in spite of the fact that Urban II. in his summons left out those great ideas of military method and politico-ecclesiastical conquest upon which Gregory had impressed the stamp of his character. But the crusaders were the soldiers of the Pope, who alone could remit their vows. By the 'Saladin tax' a tenth of the revenues of the clergy were poured into the Papal coffers. The increased importance attached to

¹ Oman (*op. cit.* 283) points out the geographical ignorance shown in these land routes.

² See Stubbs, *Itin. Reg. Ric.*, Introd. pp. lxxxix-cxi, for a brilliant analysis of the causes of the fall of the Latin kingdom, and consequent failure of the Crusades.

indulgences through the Crusades, and the effect on the Papacy, must not be overlooked. How completely the Papacy was identified with the conception of Crusades is seen in the disastrous extension of the idea to all the wars engineered or encouraged by the Papacy against its enemies, e.g. the Albigenses; against Frederick II. and Manfred; or against the Hussites. In the long run this power of inaugurating a Crusade told by its misuse against the Papacy, and was one cause of its fall.

(2) *Weakness of the Eastern Empire.*—Unfortunately, one result of the Crusades, especially of the Third Crusade, was the weakening of Constantinople,—this altogether apart from the fatal Fourth Crusade,—and thus of the barrier of Europe against the Muslim (see Pears, *op. cit.* ch. 5). This result—the exact opposite of the intention—was the direct outcome of the religious feud between the Greek and Roman Churches.

(3) *Rise of the Military Orders.*—An important consequence was the foundation of the various Orders of military monks, whose influence and history overleap the narrow limits of the Crusades (see also HOSPITALITY [Christian], MONASTICISM). (a) Of these the oldest, the *Hospital of St. John of Jerusalem*, was in existence as a hospital for pilgrims at an early but unknown date.¹ On the institution of the Templars the hospital was turned into a Military Order. (b) The famous *Order of the Temple* was instituted about 1118. But its real start was not until Bernard at the Synod of Troyes (Jan. 1128) lent it his advocacy. To Bernard was assigned the composition of its Rule, the greater part of which, however, is by a later hand.² (c) The *Teutonic Order of Knights* was founded in 1190 at the siege of Acre. Its vast importance for European history by its conquest of Prussia from the heathen must not be forgotten. (d) There was a fourth Order, *Knights of St. Thomas of Acre*, of interest as almost purely English.³

2. *Commercial and social.*—(1) *Growth of liberty.*—The expenses of the crusaders led to the sale of estates, advowsons, town-rights, manorial rights, etc., to merchants, burgesses, and others; and so, to the growth of liberty. The sales to the Jews led by reaction to an outbreak against them (W. Cunningham, *Growth of Eng. Industry and Commerce*, vol. i. [5th ed., Cambridge, 1910] p. 205). In commerce we see the opening up of the East to the West (H. G. Prutz, *Kulturgesch. d. Kreuz.*), especially to Venice and Genoa (Cunningham, *op. cit.* 147, 198). As the monks did not go on crusade, the sales of estates ministered much to their wealth, and to that of the Church generally.

(2) *Introduction of Aristotle to Europe.*—The contact of East and West led James of Venice to bring back and translate (1124) the books of Aristotle, including the *Physical Works*, previously known only in imperfect translations. The effect of this was one of the causes of the rise of Scholasticism (see H. B. Workman, *Christian Thought to the Reformation*, London, 1911, ch. 9).⁴

3. *Theological.*—Through the realization of the sufferings of the Saviour—powerfully aided by the Crusades (cf. the Crusaders' Hymn, 'Salve, caput cruentatum')—the idea of the historical but dying Jesus was formed side by side with the growing mediæval conception of the sacramental

and eternal Christ. 'The primitive Christian intuitions were restored. The sacred places stirred the imagination, and led it to the Christ of the Gospels' (Harnack, *Hist. Dogma*, Eng. tr. vi. [1899] 9).

LITERATURE.—*ORIGINAL SOURCES.*—The particular sources for the several Crusades have already been noted under each. It remains to add the more general works. The best work covering the whole period is William of Tyre (b. 1127), whose intimate acquaintance with Palestine was supplemented by a knowledge of Arabic. His *Hist. rerum in partibus transmarinis gestarum* (*Recueil* [Hist. occid.], i. [1844]) is one of the great works of mediæval history, and should be studied even by those who cannot afford time for research. Until recent years it was the basis of all histories dealing with the Crusades. Books i.-xv. (to 1144) are indebted to earlier writers, esp. Albert of Aachen; xvi.-xxiii. (to 1184) to his own observation. It was continued in French by Ernoul, who was present at the battle of Hattin and the capitulation of Jerusalem, down to 1229; by Bernard the Treasurer, down to 1231; and by anonymous writers, down to 1277 (see J. M. de Mas Latrie, *Chronique d'Ernoul et de Bernard le Trésorier* [Paris, 1871]; or A. P. Paris, *G. de Tyre et ses continuateurs*, 2 vols. [Paris, 1879-80]). The whole was translated into French before the publication of the continuation (de Beugnot, *Recueil* [Hist. occid.], i. pref. p. xxv) under the absurd title of *L'Etoile de Bracles Empeleur* (i.e. Heraclius), the opening words of the *Historia*; in *Recueil*, vols. i. and ii. For the charters, etc., of the kingdom of Jerusalem, see R. Röhricht, *Regesta regni Hierosolymitani*, Innsbruck, 1898, 1904. Of the general Oriental sources, 'All-Ibn-al-Athir's (b. 1160) history from 1098-1190 will be found in *Recueil* [Hist. occid.], i. 189 ff.

MODERN AUTHORITIES.—Special monographs, including the valuable works of Hagenmeyer and Röhricht, have been indicated under the several Crusades. Of general Histories the following may be noted: E. Gibbon (ed. Bury [new ed. in prep. 1911], with appendices, corrections, and notes by S. Lane-Poole) is valuable for the First Crusade, poor for the others, and misleading for the Fourth, on which, however, when the main idea is corrected, he is full and good. The best summary for the general reader is T. A. Archer and C. L. Kingsford, *The Crusades*, London, 1894, but without notes. Complete surveys are found in Bernard Kugler, *Gesch. der Kreuzzüge*, Berlin, 1880, and L. Bréhier, *L'Eglise et l'Orient au moyen âge*, Paris, 1907. The older F. Wilken, *Gesch. d. Kreuzzüge*, 7 vols., Leipzig, 1807-32, and J. F. Michand, *Hist. des croisades*, 5 or 6 vols. (Paris, 1812-17, 1825-8; also new ed. Brussels, 1857, Eng. tr. in 3 vols. by W. Robson [1852]), may be neglected without much loss. For the kingdom of Jerusalem the most accurate account is in R. Röhricht, *Gesch. d. Königreichs Jerus.*, Innsbruck, 1898. The reader may also consult C. R. Conder, *The Latin Kingdom of Jerusalem*, London, 1897; E. G. Rey, *Les Colonies françaises de Syrie*, Paris, 1883 (social history, etc.). Military matters are dealt with in C. W. Oman, *Hist. of the Art of War*, London, 1898, bk. iv. and v.; the Greek view in G. Finlay, *Hist. of Greece*, 7 vols., ed. H. F. Tozer, Oxford, 1877, vols. ii.-iv. Guy le Strange, *Palestine under the Moslems*, London, 1890; S. Lane-Poole, *Moslems in Spain*, London, 1897; H. G. Prutz, *Kulturgesch. d. Kreuzzüge*, Berlin, 1883 (in many points exaggerated), deal with important side-matters. For the Children's Crusade of 1212, reference may be made to G. Z. Gray, *Children's Crusade*, New York, 1898.

H. B. WORKMAN.

CRYSTAL-GAZING.—'Crystal-gazing' is the current name for the attempt to provoke the appearance of visions by concentrating the gaze on any clear depth—a crystal, a glass ball, water in a vessel, water in a pond, a mirror, a piece of polished basalt, or anything of the kind. With certain subjects it suffices to stare into the darkness of a funnel; in fact, granting the faculty for being hallucinated in the course of gazing fixedly,—say at ink in the palm of the hand, or at ink in an ordinary inkstand—the details are unimportant. In practice the easiest method is to look steadily, for perhaps five minutes, at a glass or crystal ball laid on any dark surface, at the distance from the eyes of a book which the experimenter might be reading. If the gazer has the faculty, he usually sees a kind of mist or a milky obscurity cover the ball, which then seems to become clear and black; pictures then emerge. Sometimes the ball ceases to be present to the consciousness of the gazer, who feels as if he were beholding an actual scene. An Arabian author of the 14th cent., Ibn Khaldūn, describes the experience in similar terms.¹

Any one who is fortunate enough to have the command of leisure and solitude for ten minutes on four or five occasions can discover whether or

¹ *Notices et Extraits des MSS de la Bibl. Nat.* xix. 221 f.; cf. A. Lang, *The Making of Religion*, Lond. 1898, p. 268 f.

¹ See Röhricht, *Erst. Kreuz.* 11 n. *Recueil*, v., Pref. cix., dates about 1080, from William of Tyre, xviii. 4 and 5. W. Heyd, *Gesch. d. Levantehandels im Mittelalter* (2 vols., Stuttgart, 1879, French tr. by F. M. Raynaud, Paris, 1886, i. 103-6), argues against the accepted view that it was founded by merchants of Amalfi (*Recueil*, v. 401).

² See Bouquet, *Recueil*, xiv. 232; Labbe, *Conc.* xxi. 380; *Op. Bernard.* ii. 543, in *PL* clxxxii. 919.

³ For its history, see Stubbs, *Itin. Ric.*, Introd. p. cxli n.

⁴ The influence of the Arab philosophers upon Western thought must not be put down to the Crusades, as it came through Spain.

not he or she has the faculty of seeing 'crystal visions.' The gaze should not be prolonged when the eyes begin to feel fatigued, or if a sense of somnolence appears to be approaching. Solitude is here recommended, because the mind, though it may follow any train of thought, is not the better, in the experiment, for the irresponsible chatter of the frivolous and talkative. In actual life, in the present writer's experience, it is very rare to find any person who has the leisure and the resolution to make *solitary* experiments of the duration of ten minutes on four or five occasions. None the less, in spite of the scarcity of time and the insistent demands of society, it is now admitted, even by a number of orthodox students of experimental psychology, that hallucinations of sight really are provoked in some sane and honourable and educated persons, by gazing into a clear depth. These people see 'crystal visions' representing persons, events, and places, known or unknown, familiar or unfamiliar, to the gazer, and not summoned up by any conscious attempt to 'visualize.'

This set of facts is quite as certainly authentic as the coloured visions of arithmetical figures, which, as Sir F. Galton has convinced science, arise before the 'mind's eye' of many persons on the mention of numbers. In both cases, so far, the 'visions' are attested only by the numbers and personal character of the 'seers.'

A third kind of visionary experience is perhaps less common than we might suppose. Many persons are unacquainted with *illusions hypnagogiques*—the bright and distinct views of faces, places, persons, and landscapes, usually unfamiliar, which flit before the closed eyes in moments between sleeping and waking. These pictures, like those of crystal vision, come unsummoned, and often represent persons or places which we do not remember ever to have seen. People who have no experience of those illusions are apt to disbelieve that other people have it. In short, all kinds of experiences—visions of numerals in the mind's eye, *illusions hypnagogiques*, and crystal visions—are 'automatisms,' and are not produced by the action of the conscious intelligence.

Before the experiments of the Society for Psychological Research, in the matter of crystal-gazing, were made (1890-1910), most persons of sense believed that the faculty for seeing such hallucinations was a mere fable of romance-writers, or a delusion of peasants. But, when many experiments had made it certain that the faculty is far from being very rare among members of both sexes, young or old, in all ranks and all degrees of education, attention was drawn to the use of crystal-gazing in many ages and lands as a form of divination. It was found that the pictures seen by the 'scryer,' or gazer, were supposed to be sent by spirits, and to indicate events distant in space or destined to occur in the future; or they revealed persons guilty of theft or other crimes. Thus crystal-gazing got a bad name, and was associated with invocation of evil spirits, and even now the average man or woman thinks crystal-gazing synonymous with divination. 'Tell me what horse will win the Derby,' says the average man, 'and if you succeed I'll believe that there is something in it.' Another criticism is, 'What is the use of it?' Savage peoples, almost everywhere, and the people of Greece, Rome, Egypt, the subjects of the Incas in South America, and the magicians of the Middle Ages and later thought they found 'the use of it' to be the gaining of knowledge not accessible by any normal means.

Thus, in Polynesia, when any object has been stolen, the priest, after praying, has a hole dug in the floor of the house and filled with water. Then he gazes into the water, over which the god is supposed to place the spirit of the thief. 'The image of the spirit . . . was, according to their account, reflected

in the water, and being perceived by the priest, he named the individual, or the parties, who had committed the theft.'¹ Père Lejeune, S.J., found that among the American Indians of his flock (about 1660), the medicine-men made their patients gaze into deep water, and, if they saw in it visions of anything edible or medicinal, it was 'exhibited' and was supposed to do them good. Captain Bourke of the U.S. cavalry discovered that among the Apache Indians the medicine-men used quartz crystals, by looking into which they could see everything they wanted to see.² Among the Iroquois the phantasm of the person who has bewitched another is looked for in a gourd full of water, in which a crystal is placed.³ The Huilleche of South America gaze 'into a smooth slab of black stone.'⁴ In the 17th cent. the people of Madagascar divined by gazing on crystals, and according to de Flacourt, divined successfully.⁵ The Zulus and the shamans of Siberia gaze into vessels full of water.⁶ The Inca king Yupanqui used a crystal.⁷ Australian savages use crystals or polished stones.⁸ The Romans used water in a vessel of glass.⁹ In Egypt and in India ink is used, whether in a black spot on a piece of paper or in a drop in the palm of the hand. Examples of mediæval and modern practice are collected by 'Miss X.' (Miss Goodrich Freer) in *Proc. of Soc. for Psychical Research*, v. 486.

It is manifest, then, that the production of visual hallucinations by various modes of crystal-gazing is of world-wide diffusion and unknown antiquity; and that the 'use' of the practice has been the discovery of knowledge not otherwise accessible, though knowledge of the future has not perhaps been much sought in this fashion, except in modern Europe, and in a well-known anecdote of the Régent d'Orléans told by Saint Simon.

Miss Goodrich Freer, in her essay already cited, was (after W. Gregory [*Animal Magnetism*, London, 1851], and H. Mayo [*Truths in Popular Superstitions*, Frankfurt, 1849]) the first author to examine seriously the question of crystal-gazing. She herself possesses the faculty, and she analyzed the phenomena in her own experience. She found that the visions represented (1) lost memories which thus arose into her upper consciousness; (2) ideas or images which might or might not be present to her normal consciousness; (3) visions, possibly telepathic or clairvoyant, implying acquisition of knowledge 'by supernatural means.' The examples of this last class which the author gave were not very striking; but the present writer has known her to be much more successful.

It has been the writer's fortune to meet a large number of very normal persons of both sexes, and often of high intelligence and education, who, on making experiments in a subject entirely new to them, exhibited the faculty in various degrees. In its lowest form figures of persons and objects were seen in black and white; not in the colours of nature. Letters in the printed Roman alphabet were also seen. A higher form of the faculty is the beholding of figures in the costumes of various nations, engaged in various ways, some of them romantic; in other cases they appear to represent some unknown incident in history. Personages known or unknown to the gazer very frequently occur. The figures, wearing the colours of nature, move about in a free natural way, and often remain long in view, even when the crystal, after being laid down, has been taken up again. In some well-attested cases two persons see the same crystal-vision simultaneously, or one after the other. But, in the second category, the writer has only once known the vision—novel to the gazer—to be fitted later with a real objective counterpart, discovered

accidentally. What he saw actually existed in all its details, unknown to him and to the writer, who was looking on at the experiment, made in his smoking-room. In 1897, the writer met at St. Andrews a young lady who was visiting the place for the first time and who had never heard of crystal-gazing. Being presented with a glass ball, she made a number of experiments. The method was that any one who pleased (and all were but very recent acquaintances of the gazer) thought of anything or anybody that he or she chose. The lady then looked into the glass ball and described what she saw. A dozen cases of her success (which included seeing persons unheard of by her, in places unknown to her, persons dressed and occupied as inquiry proved that they had been clad and engaged at, or shortly before, the hour of the experiments) are published in the writer's *The Making of Religion*, pp. 90-112, from signed and attested records. Many other successful cases are known to the writer, and, during the course of the experiments already mentioned, it very rarely occurred that the gazer saw nothing, or something not consciously present either to the sitter's mind, or—what is more curious—to the mind of a sceptical looker-on, not the sitter. If telepathy be the cause of such occurrences, they illustrate the casual and incalculable quality of that agency. For example, in some experiments a lady in the south of England was to try to send impressions to a gazer, who had never heard of her, in the north of Scotland. The message, of a very simple kind, did not arrive; what arrived was a vivid picture of certain singular incidents of a private nature which had much impressed the distant communicator, but which she had no intention of transmitting. As fortuitous coincidence could not explain so many successes in the experiments of 1897—the crystal pictures being full of minute details—the writer was reduced to supposing that some unascertained cause, going sometimes beyond telepathy as usually defined, was at work. Many other curious examples of the possession of the faculty, apparently accompanied by telepathy, have occurred in experiments by friends and kinsfolk of the writer—healthy, normal men and women. The gazers have never shown any traces of drowsiness or dissociation, or even any tendency to form theories about their experiences, except in one instance, when experiment destroyed the theory.

In the writer's opinion experiments of the kind described are more trustworthy than investigations into the hallucinations of professional and trained female hysterical patients in French hospitals. Pierre Janet has published such experiments with professional neurotics at the Salpêtrière in his *Névroses et idées fixes* (Paris, 1898). His account of the experiences of Miss Goodrich Freer in her paper, already cited, is of the most fantastic character, as becomes manifest when her narrative is compared with the document which, in addition to his own imagination, is his source. In affairs of this sort few people who have not personal experience of unaccountable successes can be expected to believe in them; while few who have been present at such successes, and have had their own thoughts read (of course without physical contact—'muscle-reading'—between the sitter and the crystal-gazer), can persist in scepticism. It is plain that in most countries and ages crystal-gazing in one form or another has been practised, and successes would greatly increase the hold of priest, or witch, or medicine-man, over his patrons. Fraud would doubtless be used wherever it was possible; knowledge normally acquired would be presented as of supernatural origin. When fraud is excluded, successful crystal-gazing offers a problem even more difficult than success with other automatisms

such as the so-called 'divining-rod' and the tilting table. These automatisms appear to present to the normal consciousness knowledge within the range of the sub-conscious mind, though we cannot tell how the sub-conscious mind in many cases obtains its information.

LITERATURE.—As this subject has attracted attention only in recent years, the literature of it is very scanty, and most of it has been cited by Miss Goodrich Freer (as 'Miss X.') in *Proceedings of the Society for Psychical Research*, vol. v. pp. 488, 521, vol. viii. pp. 458-556, 259, 276; reference should also be made to A. Lang, *The Making of Religion*, London, 1908, and later editions, pp. 90-113; N. W. Thomas, *Crystal Gazing, its History and Practice*, London, 1905; E. W. Lane, *Modern Egyptians*, London, 1860; *Quarterly Review*, vol. lix.; L. de Laborde, *Commentaire*, Paris, 1841; F. W. H. Myers, *Human Personality*, London, 1903.

ANDREW LANG.

CÚCHULAINN CYCLE.—1. Cúchulainn, the chief hero of the Ulster cycle of romance, is regarded as a re-incarnation, or *avatâr*, of Lug Lamhfhada, 'the long-handed,' the solar deity of the ancient Irish; he is considered in his birth-stories sometimes as son of Lug, sometimes as Lug himself re-born. His mother was Dechtire, sister of king Conor (Conchobhar) of Ulster; she and fifty young maidens, her companions, were transformed into a flock of birds who disappeared for three years from the king's court, and were found in the neighbourhood of Brugh on the Boyne, where are tumuli traditionally believed to be the burial-places of the Tuatha Dé Danann deities. Here Dechtire gave birth to a babe; in one version of the tale it is revealed to Dechtire by Lug that he himself is her little child (i.e. that the child is a re-incarnation of himself); in another, Lug is the noble young warrior whom she has espoused.

The idea of re-incarnation is not unfamiliar in Irish literature. In the tale called 'The Wooing of Emer' it is stated that the men of Ulster wished to provide a wife for Cúchulainn, 'knowing that his re-birth would be of himself,' i.e. that only from himself could another such as he have origin; and in the tale of 'The Generation of the Swineherds,' which explains the origin of the Bulls who take part in the great mythological warfare of the *Táin Bó Cuailnge*, we find that these prodigious kine have gone through a series of incarnations before their final appearance as bulls.

Throughout his career, Cúchulainn is watched over by his divine kinsman, Lug, and he points proudly to his connexion with Lug when questioned as to his origin. He has also a father, Sualtach or Sualtam (variously spelt Soaltainn, Soalta, etc.), to whom, according to one of the birth-stories, Dechtire is married by king Conor after her connexion with Lug. The stories are much confused, and there are suggestions in one of them of an incestuous connexion between Dechtire and her brother the king himself. The child is named Setanta by Lug's command. Little is known of Sualtach; though usually regarded as a human being, he is more than once called in Old Irish literature Sualtach *sidhe* or Sualtach *sidhech*, i.e. 'Sualtach of the fairy haunts'; and he is spoken of as possessing through his mother, who was an elf woman, 'the magical might of an elf' (cf. *Book of Leinster* [LL], 58a, 24; *Cóir Anmann, Ir. Teate*, iii. sect. 232). Like all the personages of the cycle, he is clearly regarded as a mythological being. His name has become curiously mixed up with the genealogies of Fionn mac Cumhall (cf. *Brit. Mus. MS. Egerton*, 1782, in which he appears as Fionn's grandfather). In the *Táin Bó Cuailnge* he comes to his son's aid when he is exhausted by the labours of the war, and arouses the hosts of Ulster to his assistance. He is there called 'Sualtach or Sualtam, son of Becaltach (Becfoltach) mac Moraltach, father of Cúchulainn mac Sualtach' (LL 93a). He was killed by falling accidentally upon the rim of his own shield.

Although Cúchulainn is the prime hero of Ulster, and his feats of heroism are performed and his wars undertaken in defence of that province, he is

nevertheless said (in MS Harl. 5280, fol. 53 B, Brit. Mus.) not to 'belong to Ulster'; and, when the whole of the male inhabitants of that province were overtaken by the physical weakness which recurred among them at intervals, and which seems to have been the result of some sort of *geis*, or 'tabu,' Cúchulainn and his father Sualtach were exempt and able to fight. Though usually and officially described as of splendid appearance and with ruddy and golden hair, Cúchulainn is sometimes spoken of as 'a dark sad man' ('Wooring of Emer' [*Arch. Rev.* i. 72]), or a 'little black-browed man' (*Messa Ulad*, p. 29), which would not suggest descent from the Ultonians; in connexion with Cúchulainn's original name, Setanta, Rhys points out that there was a district between the Mersey and Morecambe Bay once inhabited by a people called Setantii, and refers to Ptolemy's mention (II. iii. 2) of a harbour of the Setantii, the position of which corresponds with the mouth of the Ribble (*Celt. Heath.* 455 and note). An obscure Irish poem relating to Cúchulainn alludes to a Setantian stream (*curoch fri sruth Setintí*, 'a coracle against the stream of Setanta') (*Leabhar na hUidhre* [LU] 125b).

2. Cúchulainn's precocity is abnormal; already at the age of seven years he performs his first feats, and can fight with and destroy warriors of renown; his lengthened war of the Táin Bó Cúalnge, sustained single-handed in defence of Ulster against the combined forces of Munster, Leinster, and Connaught, and continued during an entire winter, from before *Samhain*, or Hallowe'en (Oct. 31st), till after St. Bridget's Festival (Feb. 1), is represented as having taken place when the hero was only seventeen and still a beardless youth; and he is said to have died at the age of twenty-seven (*Ann. Tighernach*). Among his feats performed when he was a mere child is that from which he received his heroic title of Cúchulainn. *Cú* (gen. *Con*), 'hound,' was a title often bestowed to denote a hero of renown, in reference to the use of large hounds in battle and the bravery shown by them. Cúchulainn says of himself:

'I was a hound strong for combat,
I was a hound who visited the troops,
I was a hound to guard Emania.'

He received this name from his combat with a fierce dog, said to have been brought from Spain (gloss in *LU*), which guarded the fort of Culann, a smith of Ulster, and which was slain by the boy when he was scarcely six years old. The child himself took the office of the watch-dog until one of the dog's whelps was sufficiently grown to replace him. Henceforth the name *Cú Chulainn*, 'Hound of Culann,' clung to him.

It is said in *Messa Ulad* that a district extending from Umech in Meath northward along the coast to Dún Daigan (Dundalk), and called Conaille Muirtheinne and Cúalnge, belonged personally to Cúchulainn (Todd Lecture Series, 1889, i. 2). It embraced the present county of Louth and parts of Meath and Westmeath. At that time the province of Meath, with its over-kingdom of Tara, had not come into existence, and Ulster extended southward to the Boyne, touching the provinces of Leinster and Munster at the Hill of Umech in Westmeath. This district seems to have been bestowed on the hero by king Conor, and was not his by inheritance. Cúchulainn's own fort was Dún Daigan (now Dundalk).

His wife was Emer, daughter to Forgall the Wily, a landowner near Lusk, in the present county of Dublin. A special tale relates his wooing of Emer. Though she appears to have been his only real wife, she had numerous rivals, of whom the most formidable was Fand, wife of Manánan mac Ler, a goddess who enticed him away for a time into fairy-land.

3. The Red Branch.—Cúchulainn is the central figure of a group of champions commonly known as 'the Champions of the Red Branch,' so called from one of the three halls in the kingly palace of Emain Macha or Emania (now Navan Fort, S.W. of Armagh, where raths remain to the present day). The history and feats of these heroes are described in a series of over a hundred distinct tales. There

are, besides these longer tales, numerous detached episodes which fill up gaps, so that the career of each hero of importance can be traced from birth to death in a very complete manner. They form a connected whole in the mind of the story-teller and reader, much as the originally isolated tales referring to Arthurian knights ultimately came to be formed into a complete cycle of stories. The three most prominent champions, who are frequently exposed to tests of strength or prowess against each other, are Conall *cernach*, 'the Victorious,' *Læghaire biadach*, 'the Triumphant,' and Cúchulainn; but Cúchulainn invariably proves himself to be the greatest hero of the three.

These tales seem to have originated in, and deal largely with, that eastern portion of Ulster which lies between the R. Bann and Lough Neagh on the west and the sea on the east. The capital was Emain Macha, and within this area lay the forts and dwelling-places of most of the chief heroes of the Ulster cycle. The king, who appears in the tales as ruling from Emain Macha, is named Conor (Conchobhar), and his death is synchronized with that of our Lord in Jerusalem. The reign of Conor and the exploits of the heroes are thus traditionally laid in the first century. Though king Conor and all the champions are accepted by R. O'Flaherty (*Ogygia*, Dublin, 1793, pt. iii. c. xlvii.-xlviii.) as historical personages, there is no place found for them in the Annals, though Conor is said, in some versions, to be the son of Fachtna *fathach*, 'the Wise,' who, according to the Annals of the Four Masters, ascended the throne of Ulster in the year of the world 5042 (152 B.C.).

The entry runs:—'A.M. 5042. The first year of Fachtna *fathach* in the sovereignty of Ireland'; and fifteen years later we have the entry of his death: 'A.M. 5057. Fachtna *fathach*, son of Rossa, son of Rudhraigh, after having been sixteen years in the sovereignty of Ireland, was slain by Eochaid *feidhleach* (i.e. the constant sighing).'

But this attempt to connect king Conor with a king of all Ireland was evidently a late one, and is the less to be taken into account as there is no sign in these tales that the central province of Meath, with its capital at Tara, had at this time been erected into a separate division, or that any over-king (called in Ireland *Ardr-Rí*, or 'High King') as yet reigned over Ireland. Ulster is represented as haughtily independent, and each of the other provinces had its own king, who acted with perfect freedom independently of any central authority. The provinces, or 'Four Great Fifths,' of Ireland were, at the time of which we speak, Ulster, Leinster, Connaught, and East and West Munster. Meath, the future central royal province, created for the support of the High Kings of Ireland who ruled from Tara, did not then exist. Nor, considering that Fachtna died 137 B.C., could he have been father to Conor, who reigned in the beginning of the 1st century. Another and probably older version makes king Conor son to the druid and poet Cathbad, by Nessa his wife, a woman warrior.

Though Conor's death is synchronized with the moment of our Lord's crucifixion, the Annals of Tighernach date his death at 48 B.C. O'Flaherty, probably observing some of these inconsistencies, says that 'the king came near committing suicide, but lived fifteen years after.'

We may regard these attempts to fit the career of king Conor and of the Champions of the Red Branch cycle into the actual history of Ireland in much the same light as the connexion of the heroes of the *Nibelungen* with the early history of the Teutonic peoples or of king Arthur's knights with the history of Britain. The tales sprang up at a time when the power of eastern Ulster was still a living tradition among the literary class in Ireland. The raths at many of the sites of the traditional forts, such as Emain Macha (Navan Fort), the king's dwelling in Ulster, and Rath Cruachan or Rathcrogan (Co. Roscommon), the fortress of Queen

Meave of Connaught, show that the legends were connected with known historical sites, but it is unnecessary on that account to consider the actual personages of the cycle or their careers as historical. They are plainly regarded as mythological, and the chief events and wars in which they were engaged bear a mythological interpretation.

The tales have a close relationship to the legends of the race of gods known as the Tuatha Dé Danann; a few of them, indeed, both in style and subject, belong equally to both cycles. Such are 'The Wooing of Etain' and 'The Dispute of the Swineherds.' The pedigrees of the heroes of the Red Branch are all traced up to the Tuatha Dé Danann, although, according to the Annals, there is a lapse of 1500 years between the two epochs. Rudraigh, or Rury, is the head of the house, and from him and from the goddess Maga, daughter of Angus na Brugh, by her marriages with Ross ruadh, 'the Red,' and Cathbad the druid, all the chief heroes are descended (see genealogies in E. Hull's *Cuchullin Saga*, Introd. p. lv). The extraordinary feats and prowess of the champions are supposed to be accounted for by their divine origin. According to this descent, Cúchulainn is grandson of Maga, who is mother to Dechtíre, which brings him within the kingly line of Ulster, and denies the statement that he 'was not of Ulster' (see above). Probably that statement was merely an effort of the story-tellers to explain what they could not otherwise understand, viz. why Cúchulainn and his mortal father Sualtach or Sualtam were exempt from the curse which prostrated the whole male population of Ulster in sickness at a critical moment in the history of their province.

4. *Cúchulainn as a sun-hero.*—Cúchulainn was therefore, on the one side, directly connected with Lug, the sun-god, and, on the maternal side, with Maga, a Tuatha Dé Danann goddess. King Conor also is called a *día talmaide*, or terrestrial god, in *LU* 101b; and Dechtíre, his sister, the mother of Cúchulainn, is called a goddess: Cúchulainn *mac dea Dechtíre*, 'the son of the goddess Dechtíre' (*LL* 123b).

The two marvellous Bulls for the possession of which the great war of the Táin Bó Cúalnge was undertaken were of supernatural origin, and had existed under many different forms before they were re-born as bulls; they had been first swineherds of the gods of the under world, then ravens, warriors, sea-monsters, and insects. Under each of these forms they had lived through vast periods of time; out of them they had come after a terrific struggle which shook the borders of Ireland, only to pass again through some new transformation (*Irish Texts*, III. i. 230-278). These struggles proved to be preludes to the war of the Táin, in which all Ireland was destined to engage, and to the gigantic struggle at its close between the two Bulls themselves, in which both were torn to pieces. The mythological warfare of these Bulls, the *Finn bennach*, or 'White horned,' and the *Donn*, or 'Dark' or 'Brown' Bull, belonging respectively to the East and West of Ireland (Cúalnge in Co. Down, and Rath Cruachan in Connaught), seems to symbolize the struggle between summer and winter or the struggle between day and night. The *Donn* is a terrific creature in strength and in size. On his back fifty little boys could play their games. He moves about accompanied by fifteen (or fifty) heifers. His ferocity and violence are so great that, when he is driven into a narrow pass, he revenges himself by trampling his keeper to death and treading his body thirty feet into the earth. His bellows strike terror into all who hear him, and those who meet him after his final conflict with the *Finn bennach* are trampled and

gored to death. This conflict, which lasted a day and a night, and during which the Bulls traversed the whole of Ireland, was ended by the *Donn* tearing his adversary to pieces and returning, head in air, to his native home in Cúalnge, where, in the madness of his frenzy, he placed his back to a hillock and 'vomited his heart up through his mouth with black mountains of dark-red gore,' and so expired. In like manner Cúchulainn is in every way abnormal. His rapid development and his prodigious strength and powers are everywhere insisted upon. When he is about to perform any special prodigy of valour, his whole person expands and undergoes an extraordinary change; he grows monstrous, terrific, so that his own friends cannot recognize him; he is known as 'The Distorted' (*riastartha*), or 'The Madman' from Emain Macha. When he puts forth his strength, his appearance is so terrific that none can stand before him; his very look destroys his foes, not by twos or threes but by hundreds; a stream like dusky blood, representing his energy, rises upward from his forehead, and over his head his 'bird of valour' hovers (cf. the light over the head of Achilles caused by Athene, *Il.* xviii. 205 [Butcher-Lang's tr. p. 372 f.]). His body gives off a heat which melts the snow around him, or raises to boiling-point three vats of water in which he is successively immersed. Yet this formidable personage is frequently derided by his enemies for the boyishness and insignificance of his usual appearance. Prime heroes, until they experience his hidden powers, refuse to fight with him; Queen Meave is visibly disappointed when she first comes face to face with the champion who has been holding her forces at bay through weeks of combat, and killing them by the hundred merely by his look; on one occasion he has to blacken a moustache with blackberry juice in order to present a more manly appearance.

If we regard Cúchulainn as the sun-hero, these indications of his unimposing appearance at ordinary times, succeeded on occasions by strange distortions and manifestations, seem aptly to represent the impression which might be produced on the savage mind by the contrast between the orb of the sun on ordinary occasions and its appearance in eclipse. Again, the fine poetic simile of the threefold hues of his hair, and the account of his splendour when he appears before the forces of Meave to display his person in its natural beauty, seem designed to illustrate the glory of the full sunshine of summer; so, too, do the heat generated in his person, the energy of his movements, his wandering habits, and the destructive power of his look. We may also note that 'blindness befell all women who loved him'—which may possibly have reference to the difficulty of gazing directly on the sun. It is possible that Cúchulainn's fight, from which he so hardly escaped, with the twenty-seven sons of Calatin, hideous and crooked beings, who formed armies out of puff-balls and out of the foliage of the oak, and came furiously riding on the 'wind's swift clouds,' may symbolize the hiding of the sun's face before the 'armies of the storm,' i.e. the massive clouds, formed, as it might seem, almost out of nothing. (Cf. a similar sort of incantation in 'The Death of Muirchertach mac Erca,' *ECel* xxiii. [1902]; the 'Battle of Kat Godeu,' Skene, *Four Anc. Books of Wales*, i. 277 f., ii. 138; and 'The Mabinogion of Math, son of Mathonwy,' Lady C. Guest's *Matb.*, Lond. 1877, p. 416.) A remarkable 'tabu,' or *geis*, of Cúchulainn was to 'see the horses of Manánnan mac Ler' (i.e. the billows of the ocean-god), which might be a reference to the apparent extinction of the sun's rays when he sinks down at night beneath the ocean waves.

Cúchulainn possesses two magic steeds which rise out of the Grey Loch of Slieve Fuaid and Loch Dubh Sainglenn respectively, and which he tames by springing unawares upon their backs and wrestling with them. For a whole day they career around the circuit of Ireland, the horses endeavouring in vain to throw their rider. Henceforth they are his obedient chariot-horses, a grey and a black, possibly symbolizing day and night. After his death they return into their respective lakes again (G. Henderson, *Feast of Bricriu*, London, 1899, sec. 31, p. 39 f.).

5. The stories relating to Cúchulainn are of different ages, and often vary in different versions, the long tale of the Táin Bó Cúalnge, in particular, having come down to us in two (some critics would say three) main recensions, with considerable variations in arrangement, detail, and literary style. *Táins*, or 'cattle-raids,' form the subject of a number of romances, which arose naturally out of conditions of life in which wealth consisted in the possession, not of land or money, but of flocks and herds, the acquisition of which, by fair means or foul, formed one of the chief objects of every chief or person of position. The long central tale of the *Táin Bó Cúalnge*, or Cattle Spoil of Cúalnge (pron. Cooley), i.e. of Cúchulainn's country in Co. Louth and Down, is preceded by a number of lesser *táins* and short stories describing the efforts of Queen Meave of Connaught to collect cattle and other provisions for her army, or otherwise elucidating special points in the main epic. A brief outline of this composite tale is as follows:

The war was undertaken by the united provinces of Ireland, under the leadership of the Amazonian Queen Meave (Medb) of Connaught, and the guidance of Fergus mac Róy (or Roich), a former king of Ulster, who had been deposed in favour of king Conor, and had gone into exile into Connaught. He consented, out of revenge, to lead the foe against his own people.

The main object of the war was the capture of the *Donna*, or Brown Bull of Cúalnge, which Meave desired to possess, but which had been refused her. The romance takes the form of a number of separate episodes—usually combats undertaken by warriors from Meave's army contending with Cúchulainn, who, alone and single-handed, guards the borders of Ulster during the entire winter. The warriors and men of Ulster are all disabled from fight through a mysterious sickness brought upon them by the curse of Macha, one of the goddesses of war; and it is not until the close of the *Táin* that they arise from their lethargy and come down in force to fight the final battle. Meave is finally defeated and forced to fly in rout across the Shannon at Athlone; but the Bull, though captured by her and driven westward, ends its career by fighting with and killing Meave's own Bull, the *Finn bennach*, and finally returns to its own country, where it dies by its own ferocious energy.

The combat of Cúchulainn and Ferdia at the ford of Ath Ferdia (Ardee) forms a long episode in the story, and is probably in its expanded (*LU*) form a late introduction.

There are a large number of poems in this episode; others are found occasionally in the remaining portions of the *Táin*. Some of the Ulster prose romances contain poems; others do not.

6. Among the more important of the stories relating especially to the career and deeds of the hero Cúchulainn are the following:

(1) *Cúchulainn's Birth Stories*.—Two chief variants exist, contained in *LU* (1100 A.D.) and in Egerton, 1782 B.M. (15th cent.). Considerable differences appear not only in the details of these stories, but in their general meaning. In *LU* a wonderful troop of birds comes one day to devastate the plains of Emain Macha. King Conor (Conchobhar) mounts his chariot with his sister Dechtíre to hunt them. They pursue them till nightfall in a storm of snow, and arrive at an isolated house, inhabited by a man and woman. The woman gives birth to a son, who is carried by Dechtíre to Emain Macha. The child dies, and in a vision by night Lug mac Ethlenn appears to Dechtíre and tells her the child who had died was himself, that it was he who had arranged all that had happened to her, that she will bear a child by him, and that he will be himself her son. Conor bids her marry Sualtam; she becomes whole and well again, and obeys his behest. She then bears a child, Setanta, afterwards called Cúchulainn. In a discussion which follows, the babe is formally handed over to the charge of the chief bard and warriors of Ulster to rear, and to Finnchoem, Dechtíre's sister, to foster.

In the other chief version, Dechtíre has disappeared for three years with fifty maidens; they return as birds to devastate the plain of Emain Macha. Conor and his warriors follow them. They reach a hut, which expands into a noble house, inhabited by a princely young man and woman. They learn that it is the house of Dechtíre, whom they do not recognize. (The young man is evidently Lug.) In the night Dechtíre gives birth to a

boy resembling Conor. He is called Setanta. The house seems to represent one of the tumuli on the Boyne, thought of by the people as fairy haunts or dwellings of the gods. It is in this direction that the birds take flight (Windisch, *Ir. Texte*, i. 134-145, text only; Summary in Nutt, *Voyage of Bran*, ii. 72-74).

(2) *The Courtship of Emer* describes Cúchulainn's wooing of his future wife, and his long apprenticeship to arms under Scathach, the Amazon of Alba or Britain (other versions say 'Scythia, east of the Alps'; Kuno Meyer, *Récol* xi. 442-453, and *Arch. Rev.* i. [1888], revised for E. Hull's *Cúchulainn Saga*, pp. 56-84). There exist separate versions of Cúchulainn's education with Scathach (cf. Whitley Stokes, *Récol* xix. 1908).

(3) *The Tragical Death of Conlaech* relates Cúchulainn's mortal combat with his own son Conlaech, or Conla, born of Aifé in Alba after Cúchulainn's return to Ireland. He had left a ring with Aifé for the boy, with a proviso that he was never to reveal his name to any stranger. He learns only when the youth is dying that it is his own son whom he has killed. The story has a strong resemblance to the Persian tale of Suhrah and Rustam (*Ériu*, vol. i. pt. i. p. 113; O. Brooke, *Reliques of Irish Poetry*, Dublin, 1816, p. 383, metrical version).

(4) *The Stiecked or Wasting Away of Cúchulainn*.—Cúchulainn deserts Emer for Fand, wife of Manannan, who in a series of beautiful poems describes the glories of Magh Mell, 'Plain of Happiness,' the invisible Irish Elysium, and woos him thither. A dramatic episode at the close of the tale describes Emer's attempted revenge and the contest between the two women for his affection. The tone is lofty (Windisch, *Ir. Texte*, i. 197-234 [text only]; O'Curry in *Atlantis*, vols. I. and II.; Leahy, *Old Irish Romances*, i. 61 [Eng. tr.]; Thurneysen, *Sagen aus dem alten Irland*, 81).

(5) *Bricriu's Feast*.—This is a long rambling tale founded on the motif of a contest for priority and for the carving of the 'Champion's Bit' (ed. George Henderson, for Irish Texts Soc., vol. ii., 1899; Windisch, *Ir. Texte*, i. 254-303).

Tales connected with the death of Cúchulainn and the events immediately preceding and succeeding it are: the Great Rout of Magh Muirtheimne (S. H. O'Grady in E. Hull's *Cúchulainn Saga*), Cúchulainn's Death (Whitley Stokes, *Récol* iii. 175-186), the Red Rout of Conall Cernach, the Lay of the Heads, and Emer's Death. The events leading to his death form the subject of the long tale entitled the 'Battle of Rosnaree' (Edmund Hogan, *Roy. Ir. Acad.*, Todd Lectures, vol. iv., 1892).

All accounts agree in making Cúchulainn die young. The *Ann. Tighe* place his age at 17,—the usual account,—but MS H. 3,17, in the Library of Trin. Coll. Dubl., says: 'The year of the Táin was the 59th of Cúchulainn's age from the night of his birth to the night of his death.' The actual beheading of Cúchulainn is variously ascribed to Lugaid, son of Cúroí, whose father Cúchulainn had slain by treachery, with the aid of Cúroí's adulterous wife Blathnait, and to Erc, son of Cairpre, or Cairbre niafer, who had been slain in the battle of Rosnaree. In a poem by Cinaeth O'Hartigan (ob. 975), in the Book of Ballymote, we read: 'Erc's mount, whence is its name?—Erc was son of Cairpre niafer, son of Ros ruadh, king of Laignen (Leinster). It was Erc who cut his head off Cúchulainn.' In revenge for this deed, Conall cernach killed Erc, and brought his head to Tara. It is said that his sister Acaill, who came out of Ulster to lament her brother, grieved so sorely for his death that her heart burst within her. A pathetic lament for her is cited by O'Curry (*MS Mat.*, Appendix, p. 514). The battle of Muirtheimne, in which Cúchulainn fell, was inspired by revenge for the deaths of Calatin, Cúroí mac Daire, king of Munster, and Cairpre. It was led by the sons of the slaughtered men.

The Phantom Chariot of Cúchulainn.—This is a curious piece, in which the old hero is summoned from the dead to testify to the truth of St. Patrick's teaching before Leary, king of Ireland. He appears before the king in his old form and splendour, performing his 'champion feats,' and beseeching the king to receive Christianity (O'Beirne Crowe, *Journ. of the Kilkenny Arch. Soc.*, 4th series, 1870-71).

Among other tales relating directly to Cúchulainn are the following:

(1) *Táin Bó Regamna*, or appearance of the Morrigh, the Irish goddess of war, to the hero before the war of the Táin, to foretell her own intention to take part against him (ed. Windisch, *Ir. Texte*, ii. 241-254 [with tr.]).

(2) *Siege of Howth*, relating the extortions and cruelties practised by Aithairne, chief bard of Ulster, on the Leinster men, and the revenge taken by Leinster in shutting up the defeated remnant of the Ulster warriors on the hill of Howth (ed. Whitley Stokes, in *Récol* viii. 40-63).

(3) *The Intoxication of the Ultonians*, describing a night-raid made by the warriors of Ulster when in a state of intoxication, right across Ireland, into the territory of their enemy Cúroí mac Daire of Tara-Luchra in Kerry, and the efforts of Cúroí to

destroy them by persuading them to enter an Iron house encased in wood, which had beneath it a subterranean chamber fitted with inflammable materials (cf. Branwen, daughter of Llyr, in the *Mabinogion*, and 'the Destruction of Dind Righ' [ed. Whitley Stokes in *ZCP* iii.]). The warriors escape by Cúchulainn's immense strength; he breaks through the walls and lets them out (*Messa Ulad*, ed. W. M. Hennessy, *Roy. Ir. Acad.*, Todd Lecture Series, I, London, 1889).

See, further, artt. CELTS and ETHICS (Celtic).

LITERATURE.—A large number of the tales will be found with text and Eng. or Germ. tr. in Windisch-Stokes, *Irische Texte*, Leipzig, 1880 ff.; the numbers of the *Rcél*; *Atlantis* (ed. by O'Curry), and *Kilkenny Archaeol. Journ.* (which contains some tales edited by O'Beirne Crowe); *Proc. Royal Ir. Acad.*, Irish MSS Series, and Todd Lecture Series; the *ZCP*; *Ériu*, the Journal of the Irish School of Learning; Irish Texts Soc. vol. ii.; *Archæological Review*, vol. i.; Ossianic Soc. vol. v.; *Antec. Ozon.*, Mediaeval and Mod. Series, etc. The *Táin Bó Cúailnge* has been published from the Book of Leinster version by E. Windisch, with Germ. tr., Leipzig, 1905; text (only) of version from the *Fellows Bk. of Leam and Leabhar na hUidhre*, in *Ériu*, vol. i, pta. 2 and 3, ed. by Strachan and O'Keeffe, Dublin, 1904, etc.; tr. (only) from same MSS by L. Winifred Faraday, *The Cattle Raid of Cualnge*, London, 1904; Eng. trs. from Add. MS 18743, Brit. Mus., by S. H. O'Grady in Eleanor Hull's *The Cuchullin Saga*, London, 1898, pp. 110-227.

English trs. of a large number of complete romances will be found in E. Hull's *Cuchullin Saga*, with chart of the tales and references; also A. H. Leahy, *Heroic Romances of Ireland*, 2 vols., 1905, and *The Courtship of Ferb*, London, 1902; German trs. in R. Thurneysen, *Sagen aus dem alten Irland*, Berlin, 1901; French trs. in H. d'Arbois de Jubainville, *Épopée celtique en Irlande*, Paris, 1892. Portions of tales in E. O'Curry, *MS Mat. of anc. Irish History*, Dublin, 1861, and *Manners and Customs of the Ancient Irish*, 3 vols., London, 1873; J. Rhys, *Celtic Heathendom* (Hib. Lect.), London, 1886; Nutt-Meyer, *Voyage of Bran*, 2 vols., London, 1895-97. Lady Gregory gives a free rendering of the stories in her *Cuchullin of Muirthemne*; see also D. Hyde, *The Story of Early Gaelic Lit.*, London, 1895, and *Lit. Hist. of Ireland*, London, 1899; E. Hull, *Text-book of Irish Literature*, 2 vols., Dublin and London, 1906-1908. For manners and customs, see P. W. Joyce, *Social History of Ancient Ireland*, 2 vols., London, 1903, and O'Curry, *Manners and Customs* (see above).

ELEANOR HULL.

CULDEES.—The Culdees belong to the later history of the ancient British Church (see art. CHURCH [British], vol. iii. p. 631), more especially in Ireland and Scotland. The mystery in which they were enveloped has been to a great degree removed through the researches of Dr. William Reeves, published as an essay 'On the Céle dé, commonly called Culdees' (*Trans. Roy. Ir. Acad.* xxiv. [1873]). The term 'Culdee' has grown out of the form *Culdeus*, first coined by Hector Boece in his *Scotorum Historia*, 1526 (for word 'Culdee,' see *OED*, s.v.). The Irish name *céle dé* (mod. Ir. *céile dé*) corresponds with the probably Irish origin of the Culdees. The primary meaning of the common word *céle* is 'companion,' from which secondary meanings are derived, such as 'husband,' 'servant.' *Céle Conchobair*, *céle Conculaind*, found in the texts of the old heroic tales of Ireland, mean 'faithful follower or personal attendant of Conchobhar, or Cúchulainn' (see H. Zimmer, *Celtic Church*, Eng. tr., London, 1902, p. 98 ff.). *Céle dé*, therefore, will mean 'companion or faithful servant of God.' The special difficulty is to account for the restriction of a term having this meaning, and obviously applicable to all monks and anchorites as servants of God, to the comparatively few cases in which it is found.¹

There is no mention of the *céle dé* in the historians Adamnan, Cumin, Eddi, or Bede; and the inference is that the use of the term was unknown to them. Reeves says we may safely regard *céle dé* as the Irish translation of *servus Dei*, which came to be an ordinary term in Church writers for monks, and became known to the Irish through the writings of Gregory the Great, who was a favourite author in Ireland. Skene (*Celtic Scotland*,² 1887, ii. 226 ff.) endeavours to prove that *Deicola* had the express meaning of 'anchorite,' that the *céle dé* were anchorites, and consequently

¹ A striking parallel in Welsh to *céle dé* is the common word for 'hermit'—*meudwy*. *Meu* is from the root *mag*, which appears in Cornish as *max*, 'boy'; *-dwy* is for the older *dau*, genitive of *diu*, modern Welsh *du*, 'God.'

that the Irish name was the direct derivation of *Deicola* or *Colidei*. The objection to both of these theories is the specialized use of the term *céle dé*; had it been applicable to monks and anchorites in general, why is it not found in the pages of the 8th cent. historians, whose concern was with a monastic Church?

There is no contemporary account preserved of the rise of the Culdees; our sources are incidental and of late date.¹ According to the Books of Leinster and Lismore, St. Moling, who founded the monastery of Tech Moling in County Carlow, entered a society of Culdees. He died c. A.D. 700; and, if he was a Culdee, he is, along with St. Mochuda, among the earliest whose names are on record. In the manner of the Iro-Scottish Church, the Culdee societies were often composed of thirteen members—the Prior, or Head (*Cenn*), or Abbot, with twelve others, on the analogy of Christ and His disciples. In very late times we find in Armagh a Prior and five² brethren (probably a diminution in number, due to hostile pressure).

The Culdees, throughout their history, are connected with a few definite localities, although in some cases the evidence is the mere mention of the name in the chartulary of a monastery. At first having the marks of anchorites, they gradually take on the appearance of secular canons. The Rule of Maelruan (died c. 791) bears the description 'Here begins the Rule of the Céle dé.' It is preserved in the *Leabhar Breac*. As it stands, its orthography and grammar prove it to be centuries later than the 8th cent., but its original may go back to Maelruan. During Maelruan's lifetime (in A.D. 747), Chrodegang composed at Metz the Rule which formed his clergy into canons; and this Rule may have been brought into Ireland from Irish establishments on the Continent, such as Honau in Elsass. The Culdees certainly develop the appearance of secular canons; we find them filling a subordinate 'Levitical' position in cathedral establishments, chiefly engaged in the choral parts of the worship; they became especially associated also with charitable care of the sick and poor, and the distribution of alms. The latter seems to have been one of their earliest and most characteristic traits.³ The endowments for these purposes may have proved a means of their later corruption. Their affinity with the regular canons enabled the latter, with the support of powerful patrons, to oust them from their positions. Finally, they disappeared; in St. Andrews, e.g., they are named for the last time in 1332.

The only mention of the Culdees in England is in connexion with Athelstan's visit to York in A.D. 936 (*Colidei*); there is also a possible reference in the *cultores clericis* of a Privilege by King Ethelred granted to Canterbury (Cotton MSS). In Wales they, presumably, appear once in a reference by Giraldus Cambrensis to the 'Coelibes vel Colideos' of the Isle of Bardsey in the 12th cent. (Gir. Camb. vol. vi. p. 124, Rolls Series).

Reeves sees in the Culdees the disappearing Celtic Church; the Culdees are the drooping remnant in which that ancient Church finally succumbs. The present writer prefers to see in them not an inert residue, but a recrudescence, a burst into flame of the old Celtic religion, stimulated.

¹ The earliest known instance of the combination *céle dé* (though not in its technical sense of 'Culdee') is in the gloss to the commentary on the Psalms ascribed to Columba of Bobbio, preserved in the Old Irish Cod. Mediolanensis (about 850 A.D.; ed. Ascoli, *Codices Irlandenses dell' Ambrosiana*, Rome, 1878, fol. 30 c. 5). Here the Vulg. *cuius (Dei) iste est* is first explained as equivalent to 'iste ad illum pertinet,' and is then glossed: *amul ambarar is céle dé in fer hístin*, 'as it is said, "This man is a servant of God."'

² Von Pfugk-Hartung ('Die Culdeer' in *Ztschr. f. Kirchengesch.* xiv. [1894]) erroneously says fifteen.

³ As to this point, see especially Grant, 'The Culdees,' *Scottish Review*, 1888, p. 217 ff.

lated perhaps by conflict with the rival Roman institution. The honourable title *celle de* comes from the people, as its native form shows; and it must have been elicited at the sight of special devotion and piety. A revival of religion at some given period, and not decay, is implied.

LITERATURE.—This is sufficiently indicated throughout the article.

T. JONES PARRY.

CULT, CULTUS.—See RELIGION, WORSHIP.

CULTURE.—To Bacon the world is indebted for the term, as well as for the philosophy of, culture (*Adv. of Learning*, 1605, II. xix. 2). While of itself the notion of culture may be broad enough to express all forms of spiritual life in man,—intellectual, religious, ethical,—it is best understood intensively as humanity's effort to assert its inner and independent being. This effort is observed in a series of contrasts, due to the division of man's functions into intellectual and activistic. The most general contrast is that between nature and spirit, with its dualism of animality and humanity. With the ideal of culture, man is led to live a life of contemplation rather than one of conquest, while his attention is directed towards the remote rather than towards the immediate. Viewed socially, culture is contrasted with industrial occupation, the two differing in their valuation of work. From the social standpoint, again, the culturist inclines towards egoism, as in a 'culte du moi' (Maurice Barrès), instead of towards altruism. In estimating the value of culture, the standard is usually the eudæmonistic one: it is asked whether the life of thinking or the life of doing is better calculated to give man happiness, or to satisfy the desires of the soul. The treatment of the culture-problem is to be conducted in connexion with the culture-consciousness of an individual or a nation, rather than by means of any objective memorial, like an order of architecture, a type of sculpture, or a school of poetry or painting. Such an introverting method is qualified to express the essence of Classicism and Romanticism,—the two types of Western culture-activity,—just as it is sufficient to discern the culture-motive in a man of genius, like Michelangelo or Goethe. That which culture seeks is an acquaintance with the strivings and ideals of a favoured nation and a gifted soul.

I. HISTORY OF CULTURE-CONSCIOUSNESS.—Not until the dawn of modern times was the supremacy of intellectualism called in question, or the problem of culture raised. Brāhmanism postulated enlightenment as the means of salvation; Paganism looked to the intellect to give man happiness; Scholasticism pledged its belief in conceptual doctrines. It is true that the Preacher of the Old Testament bewailed much study and the endless making of books, in the fear that the increase of knowledge was the increase of sorrow (Ec 1¹⁸), while Stoicism sought to turn from dialectics to ethics; nevertheless, humanity waited until the coming of modern times before it directly repudiated its intellectual life. Although the term *modernus* was introduced in the 6th cent. by Cassiodorus (*Variarum*, iv. 51), and used effectively by Roger Bacon (Eucken, *Gesch. der philosoph. Terminologie*, Leipzig, 1879, p. 169), modernness in the form of culture-consciousness was not expressed until Francis Bacon inquired concerning the nature and advantages of letters. His professed aim in the *Advancement of Learning* being to fashion a perfect 'globe of knowledge' (II. xxv.), he prepared the way for this by arguments drawn from sources sacred and secular.

Biblical tradition informs us that the day on which God rested and 'contempered his own works' was blessed above the six days of labour, while the primary work of man in the

Garden of Eden was intellectual, in that it consisted in viewing and naming God's creatures. Moses was praised for his Egyptian learning; Solomon for his wisdom; while the advent of the Saviour witnessed the subduing of ignorance among the doctors of the law; and the descent of the Spirit was expressed by the gift of tongues, 'which are but *vehicula scientiæ*.' With Apostles and Fathers the same intellectualism prevailed (ib. i. vi.). As to human proofs, mythology shows how founders of States were but demi-gods, while inventors of new arts were among the gods themselves; moreover, ancient history reveals the superiority of such thinkers as Socrates, Aristotle, Cicero, over their contemporaries Xenophon, Alexander, Cæsar (ib. vii.).

Bacon's own estimate of culture, while often expressed so as to show the greater 'dignity' of thought, seems to consist of eudæmonism, inasmuch as it extols learning for its power to please—to promote, indeed, the interests of the *suavissima vita* (ib. viii. 2, etc.). The *Novum Organum* (1620) asserts, not 'Knowledge is pleasure,' but '*Scientia est potentia*'; its aim was to indicate man's ability to rule by means of knowledge, so that, instead of emphasizing the æsthetic in culture, it tended to surrender the latter to industrialism. With such a presentation of the culture-problem, and the accompanying emphasis upon the 'work of contemplation,' Bacon, who was a Renaissance thinker, made possible the three-fold development of modern intellectual life in the ages of *Enlightenment* (1625–1789), of *Romanticism* (1781–1857), of *Realism* (1857–present day).

1. The Enlightenment.—On the æsthetic side, the Enlightenment fostered Classicism, although its own rationalistic spirit, political earnestness, and relentless criticism of religion removed it from the influences of the Graces. In its own way, the Enlightenment developed a static system of natural religion (Herbert), of natural rights (Grotius), as also a naturalistic system of ethics (Hobbes) and of knowledge (Locke). Spinoza expressed the spirit of the age when he declared the highest motive in man to be rational and disinterested love of God ('*amor Dei intellectualis*' [*Ethica*, 1677, v. xxxii.]).

This blind rationalism, however, was destined to undergo repudiation, and in the Counter-Enlightenment of Rousseau, Vico, Lessing, and Herder the culture-problem was rehabilitated. Where Bacon had had behind him the free æstheticism of the Renaissance, Rousseau was confronted by the formal culture of Classicism, whose *raffinements* he felt called upon to denounce. Taking a stand at once eudæmonistic and socialistic, he declared that unhappiness and injustice were attributable to man's departure from nature. This was the theme of his *Discours sur les sciences et les arts* (1750), where he discussed the question whether the establishment of culture had been for man's well-being—only to conclude negatively, on the ground that art and science weaken the original virtues of humanity. In his *Discours sur l'origine et les fondements de l'inégalité parmi les hommes* (1753), his view is social rather than eudæmonistic, inasmuch as he attributes injustice to the intellectualistic programme, which, involving the more rapid advance of some beyond others, had brought about inequality even where it had furthered the progress of impersonal science and art. Hence the maxim, 'Retournons à la nature.' *La nouvelle Héloïse* (1761) breathes a yearning for the idyllic condition of man's nature-life, while *Émile* (1762) deduces a system of education which, recognizing that man cannot return to nature and abide there, advises a natural method of mental development, a restoration of nature to man rather than a return of man to nature.

Where Bacon and Rousseau had considered the practical worth of culture for individual happiness and social well-being, Vico and Herder sought to show how essential to humanity is an ever-enlarging mental life which, if based upon nature,

advances beyond it. Vico's *Scienza nuova* (1725)—a work at least half a century in advance of its age—postulated the ideal of a unified humanity, whose organic nature, as conceived by Vico, contrasted strikingly and pleasantly with the mechanical views of society peculiar to the Enlightenment. Vico, who discovered that primitive language and literature are poetical, describes the developing culture-consciousness of the race by distinguishing three periods—mythological, heroic, human—wherein are found three kinds of language, as also three ideals of social life.

Lessing, who barely escaped the rationalism of the Enlightenment, relaxed sufficiently to produce his booklet, *Erziehung des Menschengeschlechts* (1780, tr. Robertson, 1896), wherein the religious consciousness is conceived of as a Divine revelation, unfolding its intellectual nature in such a way as to evince the ideas of God as a unity, and the soul as immortal. While Lessing carries on his discussion in a humanistic fashion, he does not fail to emphasize the rationalistic element embodied in the revelation of God and the soul as *ideas*. Herder's *Ideen zur Philos. der Gesch. der Menschheit* (1790-1792) involves Lessing's ideas of progress and Vico's ideal of humanity as one, while itself isolating the idea of *Humanitäts-Bildung*. The peculiarity of Herder's work is that in it the culture-concept operates in a naturalistic manner, involving the notion of a continuity of, rather than a conflict between, the natural below and the spiritual above, whereby the inner life of humanity is developed from the outer order of things. Herder introduces certain stages of development from nature-peoples to culture-peoples, and thus tends to make his plan more plausible.

The rationalism that had marked the early Enlightenment was reproduced in the ideals of Classicism, although the organization of æsthetical science by Burke and Baumgarten tended to soften its conceptualism. The significance of Classicism was apprehended by Winckelmann, who found in it the exaltation of reason and the idealization of beauty; and, in his mind, classic consciousness expressed the free rather than the characteristic, the static rather than the dynamic. In this spirit, he frames his memorable definition of beauty: 'According to this notion, beauty should be like the purest water, which, the less taste it has, is regarded as the most healthful because it is free from foreign elements' (*Werke*, Dresden, 1808-25, bk. iv. ch. ii. §23). Winckelmann thus seeks to express the classic ideal as a purely intellectual and formal one, which will appear in connexion with two other utterances almost as famous as the above appreciation of the classic. In the one he praises the simplicity of classic beauty as a rare wine drunk from a transparent glass (*ib.* §19); in the other he likens the antique ideal of beauty to a spirit drawn from the material order as by fire (*ib.* §22). Lessing's *Laokoon* (1766)—its very title pledging it to Classicism—exalts the ideal of Apollo by limiting art and culture to the beautiful. This æsthetic reason is given to explain why Laokoon does not scream, although Lessing, in styling his work 'an essay on the limits of poetry and painting,' was aware that in plastic the idea of the temporal and changing is out of place. With the appearance of Kant's *Critique of Pure Reason* (1781) and the French Revolution (1789), the Enlightenment was virtually ended, although its effect did not at once pass away.

2. Romanticism.—The age of culture began as Kant emerged from rationalism, and by means of philosophic criticism transcended the conceptual views of the Enlightenment. In the *Critique*, Kant used the term 'culture' when he said:

'Metaphysics is the completion of the whole culture of reason' (Müller's tr., New York, 1896, p. 730); yet it was the *Critique of Judgment* (1790) which, by means of its new æsthetic norms, was destined to take its place in the history of culture. Kant's theory of beauty and taste, as 'that which pleases universally without requiring a concept' (Bernard's tr. 1892, p. 67), expresses the nature of culture as the intellectual life of man apprehended intuitively. Kant's intellectualism, far more original and valuable than his moralism, is thus expressed in a system of transcendentalism; and it was this transcendental element that affected the romantic school of philosophy and poetry.

Schiller, alive to the intellectualistic in Kant, was not unaffected by his heroic and relentless moralism, which he glorified in his essay *Ueber Anmuth u. Würde* (1793), although here he seeks to transcend both Goethean grace of sense and Kantian dignity of ethics, by means of the ideal of humanity as the 'Zusammenstimung zwischen dem Sittlichen und Sinnlichen' (*Werke*, ed. Hempel, 1868-74, xv. 213). Schiller's use of the term 'Kultur' is confined almost exclusively to the *Briefe über die æsthet. Erziehung des Menschen* (1795), where he comments on the harmonious culture of the Greeks (Let. vi.), distinguishes theoretical, practical, and æsthetical forms (Let. ix.-x.), and discusses the practical value of culture (Let. xxi.). Believing that the end of human existence is to be conceived ethically, and yet realizing that man is by nature a creature of sense, Schiller seeks to account for the culture, or æsthetic education, of mankind by distinguishing three stages—physical, æsthetical, and moral (Let. xxiv.). Thus, in achieving his moral destiny, man uses the æsthetical as the mean and mediator between the extremes of the physical and the ethical, urges Schiller, just as Lessing had sought to account for the rational education of man by means of religion. Schiller's confidence in culture, as expressed in the *Æsthet. Bildung*, seems to abate somewhat in his Essay *Über naive und sentimentalische Dichtung* (1796), where, like Rousseau, whom he mentions approvingly (*Werke*, xv. 506), he signals a return to nature, or the naive—a term of special significance with the French (*ib.* 487). 'Sentimental' is borrowed from the English of Sterne, whom also Schiller does not fail to mention (*ib.* 480). The evils, rather than the benefits, of culture are discussed in this study of culture-types (*ib.* 483), and the whole essay, praising antiquity for its objective *naïveté*, values the sentimental only as it sincerely seeks nature. The distinction between naive and sentimental forms of culture is based upon nature; hence Schiller says: 'The poet either is nature or he seeks her. One makes a naive poet, the other a sentimental one' (*ib.* 492). Genius consists in *naïveté*, and only as the genius is naive can he exist (*ib.* 479). Homer among the ancients and Shakespeare among moderns are esteemed naive poets, because they apprehended nature immediately (*ib.* 488). Upon the cultural basis of naive and sentimental, Schiller distinguishes three forms of poetry—idyllic, satirical, and elegiac. Idyllic poetry is of the naive order, because it expresses the immediate sense of nature in the feeling of joy. 'The poet is satirical when he takes as his subject the alienation of man from nature, and the contradiction between the real and ideal' (*ib.* 497). Where satire is sharp, elegiac poetry is sad, being the poet's lament over the loss of nature in an age of culture. While Schiller seems to condemn culture and modernness, while he appears to postulate paganism as the true life of humanity, he is careful to express the thought that above both naive and sentimental there is a third form of intellectual life to be viewed as ideal culture, which

shall have power to restore to humanity its lost unity (*ib.* 492 f.).

As prophet of the Romantic School, Friedrich Schlegel felt the force of Kant's transcendentalism, but was more inclined to base his culture upon the Ego of Fichte, and, while he appreciated Schiller's æsthetics of the naïve, he himself showed a disposition to adopt the sentimental, or romantic, culture of the infinite. In Schlegel's mind, Goethe's *Wilhelm Meister*, the French Revolution, and Fichte's *Wissenschaftslehre* were the three greatest tendencies of the age (*Jugendschriften*, ed. J. Minor, 1882; *Athenæum*, §216); from them may be traced a triple *Romantik*—poetical, political, philosophical, in form. Fichte himself was an ardent believer in culture; coming after the French Revolution and postulating constructive material culture, he contrasts strikingly with Rousseau. In his *Beiträge zur Berichtigung über die französ. Revolution*, 1793, the term 'Cultur' is of frequent occurrence; it is identified with the inner freedom and rationality of Kantianism. No human sensation or impulse, no action or passion, is esteemed of value unless it makes for culture, or the exercise of all man's powers towards complete freedom as a goal (*Werke*, Leipzig, 1846-47, vi. 86). In the State, the culture of freedom should be the aim, declares Fichte (*ib.* 101), while the true fatherland is that State which is the most highly cultured (*ib.* vii. 212). Such was Fichte's own culture-philosophy. Yet the Fichtean element that appealed to the Romanticist was the Ego, whose free activity was for Fichte the leading principle of all culture. Schlegel, however, develops romantic culture by emphasizing the æsthetical activity of the Ego, whence he derives his doctrine of *Ironie*, the watchword of Romanticism. In essence, *Ironie* consists in a work of self-creation and self-destruction, due to the Ego's striving after an impossible ideal (*Athenæum*, §51). In poetry, this subjectivism is called transcendental where it begins as satire with its contrast between ideal and real, changes to the sadness of elegy, and ends as an idyll which identifies the two (*ib.* §228). Where Schiller used 'sentimental,' Schlegel employs 'transcendental,' of which style he considers Dante the prophet, Shakespeare the centre, and Goethe the climax—'der grosse Dreiklang der modernen Poesie' (*ib.* §247). In thus styling Shakespeare transcendental, Schlegel invests Schiller's 'naïve' and 'sentimental' with the historical sense of ancient and modern—an idea carried out systematically in *Die Griechen und Römer* (1797). Grecian poetry, declares Schlegel, begins with nature and aims to reach beauty through culture (p. 10); modern poetry aims at subjective æsthetical power rather than objective beauty (p. 79), whence arises a striving after the poetical as something transcendental, a 'Sehnsucht' which is destined to remain unsatisfied (p. 103). This type of poetry contrasts strikingly with the compact culture-consciousness of Classicism, wherein 'Kunstpoesie' and 'Naturpoesie' are in complete harmony (*Athenæum*, §252). Thus, as the culture-consciousness of the Enlightenment had arisen in England, that of Romanticism has been seen to have originated in Germany. There was, of course, a French Classicism and a French Romanticism, but perhaps the most direct contribution to culture that France was to make is found in the third period—that of Realism.

3. Realism.—The inception of the Realistic, or Naturalistic, movement may be noted as early as 1831, when Henri Beyle (de Stendhal) produced his *Le Rouge et le noir*. This Naturalism, or 'Beylisme,' as its author styled it, involved a direct egoism and an indirect nihilism, destined to open the modern mind to new views and values in the intellectual world. Beyle was analyzed and

classified by the aid of Taine in 1857, Zola in 1880, and Paul Bourget in 1883 (Huneker, *Egoists*, 1909, p. 4 f.). Another root of this realism is found in Flaubert, whose *Madame Bovary* (1857) resulted in a culture-philosophy called 'Bovaryisme,' or Illusionism, hardly in keeping with the acknowledged realism of Flaubert. Another frank attempt to be realistic appeared with Baudelaire's *Fleurs du mal* (1857) under the head of 'Satanisme.' These three tendencies re-appear in the rhapsodies of the German 'superman,' Nietzsche, who was probably affected no less thoroughly by Max Stirner's *The Ego and his Own* (1845), which delivers its author from both pagan Classicism and Christian Romanticism, while it rivals the early Christians' 'contemptus mundi' by its contempt for spirit and truth (see pp. 464, 478, 484). This egoistic nihilism and activism, involving the transmutation of individualistic and social standards of value, was originally pursued by Nietzsche in the milder form of Romanticism, due to the influence of Wagner's music, which Nietzsche employs to explain the origin of Greek tragedy. Where both Classicism and Romanticism had agreed in regarding Grecian culture in the form of Apollonian calmness, Nietzsche, who was guided by the dynamic ideal of musical art, and who had profited by Schopenhauer's distinction between intellect and will, introduced the idea of a Dionysiac element, in accordance with which the intellectual realm of culture and refinement was set off against the voluntaristic one of barbarism and passion. Nietzsche had carefully noted Schiller's use of 'naïve,' and had also appreciated its significance in the psychology of Classicism; nevertheless, he was anxious to show that the Greeks had achieved the naïve of Apollo only by a mighty conquest over the barbaric and titanic of Dionysus (*Die Geburt der Tragödie*, 1886, § 3). To Schiller's naïve poets, Homer and Shakespeare, he adds the name of the artist Raphael, whose 'Transfiguration' reveals, in art-symbolism, the eternal sorrow and contradiction of the world, expressed as it is on the lower and darker half of the canvas, which portrays the struggles of the possessed, and the vision of peace and intelligence shining in the transfiguration above (*ib.* § 4). But, with his desire to conceive of culture in the activistic fashion peculiar to the art of music, he seems to have approved of the Dionysiac and to have welcomed its entrance into modern culture (*ib.* § 19). Following Nietzsche, Sudermann has elaborated a kind of culture-philosophy which, while attracted by the Grecian sense of harmony, agrees with Schiller in its Apollonian view (see, e.g., *The Joy of Living*, tr. Wharton, 1907, Act i.), but which is perhaps more ready to assert that, after all, the will is so superior to the intellect that the passions are destined to triumph over the spirit in man. This supremacy of the Dionysiac seems to explain the sensuality and irrationalism of man, who accounts for his viciousness by saying, 'Es ist das Heidenthum in uns' (cf. Axelrod, *H. Sudermann, eine Studie*, 1907, p. 63).

The realistic culture that signified a kind of Dionysiac revolt against conventionality was accompanied by the criticism of various nationalities by cultured patriots. In Russia, Turgenieff made ideal war upon society under the romantic banner of 'Nihilism' (*Fathers and Children*, 1861, tr. Hapgood, 1907, ch. v.), and repudiated his country for its lack of ideas:

'Our dear mother,' says he, 'Orthodox Russia, might sink down to the nethermost hell, and not a single tack, not a single pin would be disturbed, . . . because even the samovar, linden-bast slippers, shaft-arch, and the knout—these renowned products of ours—were not invented by us' (*Smoke*, tr. Hapgood, 1907, ch. xiv.).

In Norway, Ibsen used egoism and nihilism to

arouse his country to a sense of intellectual self-respect. In *Brand* (1865) he idealizes the Norwegian; in *Peer Gynt* (1867) he satirizes him; while in *Emperor and Galilean* (1873) he seeks to indicate the coming of a 'third empire' of selfhood, destined to supersede the 'Christian empire of the spirit,' as that had overcome the 'pagan empire of the flesh' (Pt. ii. Act iii. Sc. iv.). In America, where the national consciousness was absorbed by activity and weighed down by Puritanism and Philistinism, the call to culture was sounded long ago by the free spirit of Emerson. His address, *The American Scholar* (1837), contains an ideal programme for the promotion of national culture; and in a spirit at once Athenian and American, he discusses the influences of nature, literature, and activity, which promote the culture of 'Man Thinking,' while he also emphasizes the scholar's duty toward his age, which, in Emerson's mind, was no longer the classic or romantic, but the philosophical one. In far different manner from the Apollonian and Socratic serenity of Emerson, Poe emphasized the Dionysiac in the form of the morbid and mysterious with their inherent sense of contradiction. The significance of Poe was really that of the decadence that later was to repudiate Realism. This was to come about through Baudelaire, but was not to become effectual until the end of the 19th century, with Verlaine, Mallarmé, Villiers de l'Isle-Adam, Huysmans, and Maeterlinck, as well as Swinburne. The culture-consciousness of the decadence, dissatisfied with the limitations of Realism, made use of the morbid, the vicious, and the mysterious in order to sound anew the depths of the soul. By means of symbolism, it sought to find something objective to express the psychological profundity that it affected. In the north, this symbolism was developed systematically by Ibsen.

But by far the most systematic cultist critique of national life was carried on by Matthew Arnold, who was sufficiently nihilistic and egoistic in spirit to entitle his work *Culture and Anarchy* (1869), and who was sufficiently radical to direct it against Protestantism and 'Hebraism.' Arnold's method was that of a free Socratism, in the course of whose application he finds it expedient to praise Plato and St. Paul for their intellectualism (ch. iv.), and Lessing and Herder for their spirit of national culture. Calling himself a 'man without a philosophy,' Arnold was possessed of sufficient conceptualism to treat culture to an analysis of its four-fold root, whence he regards it: (1) as an internal condition of humanity rather than animality; (2) as a growing and becoming rather than a resting and a having; (3) while it was so general as to advance mankind rather than the mere individual, within whom (4) it consisted of an expansion of all his powers, instead of some one in particular, as the religious (ch. i.). This broad humanistic culture Arnold identifies with something suggestive of Schiller's 'grace and dignity,' by calling it 'sweetness and light'—an expression which he borrows from Swift, as Schiller had borrowed from Sterne. In contrast with his nation's 'faith in machinery,' Arnold exercises a faith in culture, by means of which he is led to say that the England of his own day was little in comparison with the England of Elizabeth (*ib.*). This æsthetic reflexion upon the industrial age of coal was accompanied by a critique of the moralistic, or Puritanical, carried on in connexion with the distinction between Hellenism, with its 'spontaneity of consciousness,' and Hebraism, with its 'strictness of conscience'—one the principle of thinking, the other of doing (ch. iv.). Arnold's philosophy of history, observing that Europe has been subjected to a double treatment of culture and civilization, places Hellenism

at the head of spiritual development in the West, while it accounts for its failure to rule by calling it 'premature,' whence Hebraism was enabled to govern the world. With the supremacy of Hebraism, which Arnold treats more kindly than Nietzsche treated Christianity when he saw its 'transvaluation of pagan values,' there comes a Renaissance revival of Hellenism, which, like original Hellenism, so suffered from lax morals that Hebraism, in the form of Puritanism, was again called upon to rule by means of strict obedience (*ib.*). Believing that Hellenic sweetness and light is the one thing needful, Arnold believes also that it may further the cause of Hebraism, which can only gain from an infusion of Socrates' 'disinterested play of consciousness' (ch. v.). Indeed, Hebraism seems never to have relinquished its hold upon Arnold, who, in *Literature and Dogma* (1875), esteemed 'conduct as three-fourths of human life'; hence we may speak of his Hellenizing culture as 'morality touched with sweetness and light.' Without appreciating the strength of Arnold's sentiments, popular culture is now busy with the more entertaining features of science, art, and philosophy, its devotees being organized into groups not without resemblance to the *Frécieuses Ridicules* and the *Femmes Savantes* of three hundred years ago.

II. *THE PROBLEM OF CULTURE*.—As the definition of culture has implied, the contrast between nature and spirit, animality and humanity, activity and contemplation, inner and outer, immediate and remote, contains a problem for the human species which belongs to nature, but which, nevertheless, contemplates a trans-natural or spiritual goal for humanity. The most essential element in the psychology of culture is that which relates to the intellect and the will, with the accompanying contrast between the life of culture and that of activity. With the question presented upon the intellectualistic-voluntaristic basis, the two remaining problems of humanity and happiness will follow in a natural order.

1. *Culture and activity*.—When contrasted with the outer life of activism, the interior and contemplative character of culture assumes the form of an intense problem of values, especially in an age where naturalism is exalted by science and where industrialism deafens the ear to the 'Know thyself' of intellectualism. Hence society has scruples against culture, which, it is urged, unfits man for life in the outer world among men and things. The antinomy between intellect and will has long afflicted the Indo-Germanic consciousness, and as far back as the days of Vedānta philosophy it had sought to reconcile the conflicting claims of the Sāṅkhya of thought and the Yoga of action by declaring that the pursuit of knowledge and the performance of work were both necessary to bring man to the highest spiritual state of workless contemplation (*Bhagavad-Gītā*, ch. v.). With the Greeks, who were both Apollonian and Dionysiac, the ascendant principle was the intellectualistic one; for, while Aristotle based life upon *ἐνέργεια*, he found *εὐδαιμονία* to consist in an energy tempered by moderation and perfected by contemplation (*Nic. Eth.* x. 7). It was in this spirit that Bacon exalted the 'work of contemplation.' Voltaire's attack upon culture was carried on in the same eudæmonistic manner; accordingly his pessimistic *Candide* (1758) urges man to work without thinking, as the only means of rendering life bearable, whence follows, at the conclusion, the familiar maxim, 'Il faut cultiver notre jardin.' In the history of French scepticism, the same advice had been given by Montaigne, who also counsels one to assume the consciousness of a dumb animal in order to find wisdom.—'Il nous faut abestir pour

nous assagir' ('Apologie de Raymond Sebond,' *Essais*, Lyons. 1595, bk. ii. ch. xii.).

But the classic example of the genius who sought peace by harmonizing inner with outer life is Goethe, with his *Torquato Tasso* (1789) and *Faust*. Developed in Italy, where Goethe came into living contact with Hellenism, *Tasso* was submitted to the classic form of treatment, which was hardly fitted for the strivings of the unhappy hero with his Werther temperament. The display of soul-stuff, with its conflict between intellectualism and activism, is carried on in the comparison between Tasso and Antonio, the man of affairs; for, even when crowned with the wreath taken from the bust of Virgil, as a sign of his success in completing his *Jerusalem Delivered*, the poet is envious of the practical man, who has just returned from an important mission. In the course of this drama of the inner culture-consciousness, Goethe takes the opportunity of introducing certain maxims which have become famous. Thus in his jealousy of Antonio, Tasso exclaims, 'I feel myself more than ever of double soul' (Act ii. Sc. i.), referring to the duality of soul embodied in *Faust* (i. 759). The poet's incompleteness is celebrated in the words, 'Talent is formed in solitude, character in the stream of the world' (Act i. Sc. ii.); while it is declared that self-knowledge comes not from within, but rather out in the world among men (Act ii. Sc. iii.). Where the Princess celebrates the poet's sorrow by calling it 'charming' (Act i. Sc. i.), Tasso at last confesses the profundity of his inner contemplative consciousness, in the memorable Goetheanism, 'Some god gave me power to tell how I suffer' (Act v. Sc. v.). This Goethean nostalgia for activity has recently received brilliant recognition in Paul Bourget's *Le Disciple* (1889). *Faust's* sense of two souls within expresses the conflict more profoundly, while it solves the problem more decisively as the victory of the active altruist over the thinking egoist, or the merging of the two in the unity of life, the consciousness of which leads Faust to bid the holy moment stay: 'Verweile doch, du bist so schön' (ii. 6953).

The culturist, however, will object to this activist treatment of the problem, and persist in his contemplation, however painful it may be for him. Moreover, intellectualism claims that action stands in need of the thought-principle, inasmuch as the will comes to consciousness only in ideation, as was confessed by the arch-voluntarist, Schopenhauer, when he made the will-to-live objectify itself as Platonic ideas (*World as Will and Idea*, tr. Haldane and Kemp, 1883-6, §25). Apart from thought, activity defeats its own humanistic aims, for, 'where there is no vision, the people perish' (Pr 29th). The recent egoistic movement in literature reacts favourably upon culture, which is so interior in its nature as to make most difficult any social interpretation of the contemplative. Thus Maurice Barrès stands for a 'culte du moi' in the 'tour d'ivoire' of selfhood (cf. Huneker, *Egoists*, in loc.). In the same spirit, Anatole France, although apparently a believer in collectivism, is not without egoistic and intellectualistic traits. These appear brilliantly in *The Red Lily*, where Paul Vence's opinion of Napoleon seems to express the author's view of activists in general:

'A poet, he knew no poetry but that of action. His great dream of life was earth-bound. . . . His youth, or rather his sublime adolescence, endured to the end, because all the days of his life were powerless to form in him a conscious maturity. Such is the abnormal condition of all men of action. They live entirely for the moment, and their genius is concentrated on one single point. They do not grow. The hours of their lives are not bound together by any chain of grave disinterested reflexion. They do not develop; one condition merely succeeds another in a series of deeds. Thus they have no inner life. The absence of any inner life is particularly noticeable in Napoleon. . . . He lived outside himself' (Stephen's tr., 1903, ch. iii. p. 461.).

Where the culturist grants the validity of activism, he yet sees its limits, if not its dangers; or, as Bergson, a pronounced activist, has expressed it: 'It is presumable that, without language, intelligence would have been riveted to material objects that its interests led it to consider. It would have lived in a state of somnambulism, exterior to itself, hypnotized by its work' (*L'Évolution créatrice*, 1910, p. 172). Such a condition of exteriority, observed by both France and Bergson, would seem to be the unhappy state of mankind, apart from the intellectual deliverance that comes through culture; the man of genius, raised above nature, is enabled to transform the energy of action into the work of contemplation, as Flaubert's principle of violence in art resulted in rhetoric.

2. Culture and humanity.—While it goes without saying that man was meant for humanity, or for the perfection that belongs to the species, it does not follow that this perfection must be intellectualistic. For Bacon it was easy to identify *veritas* with *bonitas* (*Adv. of Learn.* I. viii. 2); but the modern notion of humanity's realization of the good is often elaborated in defiance of the intellectually true. In ancient thought, Plato's *Republic* banished poetry and the drama from the State; but this drastic measure was in the interest of truth as man's chief good (bk. x. 595-605). In modern times, Tolstoi has opposed decadent culture, because, like Rousseau, he thinks that progress in intellectualism has brought about inequality, as also for Plato's reason that art does not yield truth. Tolstoi opposes the notion that art belongs to superior souls alone (*What is Art?* tr. Mande, 1889, ch. viii.). 'Art,' says Tolstoi, 'should unite men with God and with one another'; whence he arraigns, as inimical to this religion of humanity, all art that is superstitious, patriotic, and sensual (*ib.* ch. xvii.). With a condemnation of modern art almost universal, Tolstoi surrenders to the genre and sympathetic, as represented by Dickens, Hugo, Dostoevsky, Millet, Breton, etc. His attack upon Shakespeare was provoked by the perception that the poet slighted the labouring classes. Ernest Crosby having made such a socialistic criticism of Shakespeare, Tolstoi proceeded to criticize his dramas, upon æsthetic and philosophic grounds (*A Critical Essay on Shakespeare*, tr. Tchertkoff, 1906, pt. ii., Crosby's article). In addition to this social scruple against culture, there is also an ethical detent, based upon the thought that intellectual superiority in a nation seems to involve a pyramidal arrangement of the social order, where the enlightened few are supported by the mass of labouring people, whereby injustice arises. The failure of the æsthetic to redeem mankind urged Schopenhauer to put ethics in its place, with the idea that, since not all can be artists, they should all be moralists, and that even in the cultured person the æsthetic moment is so transitory that it necessitates the permanent moral treatment of life in the complete denial of the will-to-live (*World as Will and Idea*, tr. Haldane and Kemp, 1896, §§27, 52; also bks. iii. iv.); culture, however desirable, does not seem to be imperative like morality, activity, and the like; but the argument involved is not really one of physical necessity, but of spiritual value; for, inasmuch as 'the earth is the planet of hunger, or the planet where one eats' (A. France), it might be argued that through necessity food is as important as virtue, and the economic the equal of the ethical. The question is one of values, as also one of psychological fitness; whence the culturist concludes that morality and social life stand in need of the enlightenment and evaluation that can come only when truth and beauty are pursued for their own sake. The most perfect conception of social life seems to have found ex-

pression in ancient times, when it was said, 'Many shall run to and fro, and knowledge shall be increased' (Dn 12^a). In the endeavour to promote the interests of an enlightened State, it is not out of place to commend culture and foster genius, for it must not be forgotten that humanity is in part to be conceived in humanistic fashion, which involves the exaltation of letters and arts, or the 'humanities.'

3. Culture and happiness.—Where culture is challenged by activism and socialism, it is finally criticized by endæmonism, on the ground that it fails to satisfy the soul. Here re-appears the contention of activist and socialist, who will assert that the disinterestedness demanded by culture can result only in diverting man's attention from immediate necessities, which, like eating, drinking, clothing, shelter, are imperative for the 'Sons of Martha' to consider. Both nature and natural society point to the place man is supposed to occupy in the actual world; hence the interior life of culture can only unfit him for his vocation as a living being, so great is the preoccupation which culture demands. Hence, with the physical and social struggle for existence, the contemplator is likely to be left stranded in the onward flux of events, so that all that makes for culture threatens the well-being of man. Modern educational systems have long been realizing this utilitarian principle, with the result that 'humanity' now, instead of connoting culture, stands for social efficiency; while 'culture courses' in the curriculum are included among the non-essentials. To this argument against disinterested enlightenment, the culturist may reply by noting that these practical interests will take care of themselves in connexion with man's instinctive life, just as they will ever assert themselves in human education as demands made by the inquiring interested mind. But the cultural interest in remote ideals may safely be furthered in the life and education of man, who is necessarily predisposed in favour of the immediately useful.

With regard to culture as a means of promoting happiness, the central question is one of the possession or pursuit of knowledge. Classicism, which had culture without the culture-problem, upheld the possession of knowledge as affording the highest enjoyment; hence Aristotle said: 'It is reasonable to suppose that the employment (of wisdom) is more pleasant to those who have mastered it than to those who are yet seeking' (*Nic. Eth. x. vi.*). Mediæval Romanticism relaxed somewhat from this identification of knower and knowledge, as when the Troubadour, or Trouvère (finder), suggested that the search after that which could be found constituted our true happiness. The culture of Modernism is not wanting in instances of representative individuals who have protested that the search after truth is more satisfying than the securing of knowledge itself. Thus it was that the Cartesian, Père Malebranche, said: 'If I held truth captive in the hand, I would open it in order to pursue it again' (Mazure, *Cours de la philosophie*, ii. 20); while Butler declared: 'Knowledge is not our proper happiness . . . it is the gaining, not the having, of it, which is the entertainment of the mind' (*Sermons*, xv.). More brilliantly and more forcefully Lessing said:

'If God were to hold in His right hand all truth, and in His left the single, ever-living impulse to seek for truth, though coupled with the condition of eternal error, and should say to me, "Choose!" I would humbly fall before His left hand, and say, "Father, give! Pure truth is, after all, for Thee alone!"' (Rollston, *Life of Lessing*, 1889, ch. xvii.).

While significant of the remoteness inherent in the culture-ideal, such utterances are not normal expressions of the culture-motive, which is more like the Troubadour, or finder, instinct in the human mind. Finally, our modern psychology, like

that of Wundt, by showing how similar are intellect and volition, tends to do away with the conflict between the idealistic and activistic methods of promoting human happiness, and to postulate a unity of thinking and doing, of inner life and outer existence.

(Leipzig, 1902) 407-55.

CHARLES GRAY SHAW.

CUMBERLAND PRESBYTERIAN CHURCH.—See CONFESSIONS, PRESBYTERIANISM.

CUP- AND RING-MARKINGS.—1. Description.—The name 'cup- and ring-markings' is given to certain signs—they cannot be called drawings or sculptures—which are found on rock-surfaces and articles of use in all parts of the world, from pre-historic times down to the primitive peoples of the present day. Wherever found, they are distinguished by the same characteristics with great variety in details. In all cases there is the central cup, hollow, or depression, surrounded by one or more concentric circles or rings. These rings take many varying forms. Sometimes they are complete circles; sometimes they are only semi-circles at the top or bottom of the cup; sometimes they take the form of spirals. At times—and this is very usual when they are found in any number—sets of cup- and ring-markings are united by lines or ducts making a variety of figures; and again, at times, the outermost circle has a number of rays issuing from it and converging towards the central depression or cup. Wherever they have been observed, they are the work of peoples in the Neolithic stage of culture, whether in the actual Neolithic Age of the pre-historic past, or among peoples who at the present time exist at that stage of culture.

The localities where archaic cup- and ring-markings are now known to exist are world-wide. Some of the finest examples are in the British Islands. It was in the year 1859 that Sir J. Gardner Wilkinson first called attention to them in a paper in the *Journal of the British Archaeological Association*, in the course of which he refers to cup- and ring-markings on the rocks in Northumberland, and claims to have been the first to note such markings as far back as 1835. In 1867, Sir James Simpson published his book entitled *Archaic Sculpturings of Cups, Circles, etc., on Rocks*, in which he described all those that were then known in Scotland, Northumberland, Cumberland, and Yorkshire, and in a series of beautiful plates he illustrated every variety of form which they exhibit.

It is now known that archaic cup- and ring-markings exist in all parts of our own country, not only on scarps of rock, but on the stones of so-called 'Druid' circles, from Inverness-shire to Lancashire, Cumberland, and the Isle of Man; on great stones forming avenues; on cromlechs; on the stones of chambered tumuli in Yorkshire; on stone cists or coffins in Scotland, Ireland, and Dorset; on pre-historic obelisks, or solitary 'standing-stones' in Argyll; on walls in subterranean 'Picts' houses' in the Orkneys and Forfarshire; in pre-historic Scottish forts; near old camps; and

on isolated rocks, scarps, and stones. They are found in the Cheviot Hills, on the moor near Chatton Park in Northumberland; there engraved on the boulders may be seen central cup-like depressions surrounded by incised concentric circles. Some of the finest examples in the British Islands are at or near Ilkley in Yorkshire. In Ireland precisely analogous markings, or 'rock-scribings,' as Wakeman calls them, are found at Mevagh, Co. Donegal, on the sides of Knockmore Cave, near Derrygonnelly, Co. Fermanagh, as well as the magnificent series of double spirals at Newgrange, Dowth, and Lough Crew, Co. Meath, which belong to a somewhat later stage of culture.

Outside the British Islands, other archaic examples, besides those in the Morbihan, may be noted at Malta, where, in the spring of 1910, the writer saw the very fine series—painted, not incised—in the hypogeum at Hal-Safieni. They also occur incised at Hagiar Kim and Mnaidra, in Malta, and in the Giganteja at Gozo; on the rock on which the great Cathedral of Seville is built; on the steps of the Forum at Rome; on the pedestal of a statue from Athens; in Scandinavia, in China, in India, and in North and South America.

Present-day instances in which a precisely similar scheme of ornamentation may be observed are found among the natives of Central Australia (which will be more particularly described when we come to discuss the meaning to be assigned to them), in Fiji, in Easter Island, and other parts of the Pacific Ocean, as well as in certain parts of Africa. Further, among races who tatu, particularly the Maoris of New Zealand, a very similar set of designs may be observed.

2. Theories as to significance.—It is an axiom of Anthropology that primitive man never gave, nor does he give, himself trouble merely for an æsthetic purpose, but always had some practical object in view. Hence the theories proposed in explanation of cup- and ring-markings fall into two groups. The first would explain them by (a) religion, or (b) magic; the second, as (a) primitive star-maps, or (b) rude maps of the neighbourhood, showing the position of hut-circles, or (c) a primitive method of writing, or at least of communicating ideas.

i. (a) Religion.—Sir James Simpson, after mentioning, only to reject, the Swedish archaeologist Nilsson's conjecture that these markings were Phœnician in their origin, came to the conclusion that 'they are archaeological enigmata,' but he went on to suggest that they were 'probably ornamental and possibly religious,' adding that, 'though in the first instance probably decorative,' they were also 'emblems or symbols, connected in some way with the religious thought and doctrines of those who carved them' (*op. cit.* pp. 92, 115, 117).

In 1872, Phené, in a paper read before the British Archaeological Association, argued that the purpose of cup- and ring-markings was a religious one, and that it was connected with sun-worship.

In 1878, Romilly Allen, an acknowledged authority in all that pertains to early Christian art, read before the British Archaeological Association an exhaustive paper on the remarkable series of 'Pre-historic Rock-sculptures at Ilkley.' After giving a list of all the localities in which pre-historic rock-sculptures were then known to exist, followed by a detailed account of those at Ilkley, he proceeded to notice various theories as to their origin and meaning. It may be observed that among the markings at Ilkley there is one set of cups and lines arranged in the form of the *swastika*, a pattern of universal prevalence from the Mycænæan age onwards, which is noted by Schliemann to have been found on a very large number of spindle-whorls discovered at Troy, and is found in India

as a religious symbol, and survives among ourselves as the arms of the Isle of Man. Its occurrence here would seem to carry back its use as a symbol of some sort to pre-historic times. Allen's own theory is that cup- and ring-markings were most probably used as religious symbols, and were connected, as Nilsson suggested, with sun- and Baal-worship. He also thinks, with Nilsson, that the pre-historic sculptures belong to the Bronze Age.

In the following year C. W. Dymond read an interesting paper before the same Association on some rock-markings in the same neighbourhood, with copious reference to Schliemann's discoveries at Troy and Mycænæ. In this he makes a special point of that discoverer's theory that the cups surrounded by complete circles represent the sun, and those surrounded by incomplete or semi-circles, with or without rays, i.e. ducts, represent the rising or setting sun. In this connexion it may be noted that among the rock-paintings of the native Australians described by R. H. Mathews (in *JAI* xxv. [1896] 145) is one which almost certainly represents, along with a figure of two hands joined at the wrist, the sun rising or setting. The significance of this will appear later (see below, p. 366*). Dymond also notes one stone containing a most remarkable arrangement of markings, which he says he at first took for a rude representation of the planetary system, but which he afterwards thought might be an allegorical or symbolical representation of a goose (*Journ. Brit. Arch. Assoc.* xxxvii. 86).

As recently as 1900, H. G. M. Murray-Aynsley, in her book on *Symbolism of the East and West*, describes the cup- and ring-markings which she had observed in the course of her travels in India, and compares them with those known in Europe; and as to their significance she assigns all alike to sun- and star-worship.

In his recent book *Ancient Britain and the Invasions of Julius Caesar* (London, 1907), Rice Holmes ranges himself with those who would see in these markings some religious significance, though he is hopelessly wrong in assigning them, as he does, to the Bronze Age.

Still keeping to the theory of their religious significance, it may be noted that Col. Rivett-Carnac, who has made a special study of the archaic rock-markings of India, particularly as they occur among the Kumaun Hills, suggested that they are connected with *lingam*-worship; the central mark or cup representing the *lingam*, the circle the *yoni*. The rich, he supposed, put up a monument, the poor merely carved a symbol.

In his *Pre-historic Times*⁸, 1900, Lord Avebury comes to the conclusion that 'we have as yet no satisfactory clue to the meaning of these engravings' (p. 158), and he assigns the ruder, and therefore evidently more primitive, engravings, i.e. the simple cup- and ring-marks in all their variety, to the Neolithic Age, or, as we prefer to say, at any rate to the Neolithic stage of culture. As regards the meaning to be attached to the symbols, R. Munro says:

'Although much has been written on the subject, none of the theories advanced to explain their meaning has met with general acceptance. That they had a symbolic meaning in the religious conceptions of the people is evident from the frequency with which they are found on sepulchral monuments, but any interpretation hitherto advanced on the subject, beyond the general religious idea, seems to be pure conjecture' (*Prehistoric Scotland*, p. 217*).

(b) Magic.—In 1892, and again in 1896, Miss Russell propounded, with a wealth of argument and illustration, before the same Association, the theory that simple cups and circles are intended to represent eyes, and that those having a line or duct through them represent eyes transfixed with a

javelin, and that accordingly the solution of the problem as to the meaning of these signs is to be found in regarding them as charms against the Evil Eye. The prevalence of this superstition among primitive races the world over is unquestionable, and it survives to-day, with more intensity than anywhere else among civilized peoples, in Italy, as Elworthy has conclusively shown in his books, *The Evil Eye* (London, 1895), and *Horns of Honour* (London, 1900), so that, had it not been for later discoveries, this might have stood as a good working hypothesis; and it may even be held to have some share in the meaning which we shall assign to them. Magic is not only the science, but it lies at the very root of the religion and social arrangements, of primitive folk, and it may well have its part in the explanation to be advanced for the universal prevalence of these mysterious signs.

ii. (a) It has been held that cup- and ring-markings were connected with astrology and intended for rude maps or plans of the stellar and planetary heavens. This theory need not detain us, as it could not by any possibility apply except to a very few cases, in which the designs may seem to be arranged in some sort of definite order having some resemblance to the position of the constellations in the sky, or some appearance of being intended to represent the sun, moon, and planets.

(b) There is the view that they were intended for maps of the locality, marking the position of the neighbouring raths, or *oppida*, for the benefit of wayfarers, whether the inhabitants themselves or strangers. This theory is associated with the names of Greenwell and Wilkinson in England, and of Graves in Ireland, and was definitely applied by the latter to the Irish examples.

(c) There is also the view that they were a primitive mode of writing, or at least of communicating ideas. This theory was propounded by Rivett-Carnac as an appendage or alternative to his theory that they were connected with *lingam*-worship. In 1903 he read a paper before the Royal Asiatic Society entitled 'Cup-marks as an archaic Form of Inscription,' in which he suggested that they were 'a very ancient form of writing.'

In discussing our own theory we shall see how these two ideas may be combined, by a reference not only to the evidence from Australia, but also to the 'painted pebbles,' with alphabetiform signs, which Piette discovered in the cave of Mas d'Azil in the Pyrenees, and which belong to the Palæolithic Age, and to the similar signs found on and in dolmens in Portugal in the same year, down to the signs which distinguish the work turned out by modern potteries in civilized lands. It may be noted here that Wood-Martin also had already suggested that cup- and ring-markings 'might be the first step made by primitive man towards writing' (*Pagan Ireland*, p. 571). E. Cartailhac had made the same suggestion in 1889 in his *La France préhistorique d'après les sépultures et les monuments* (p. 247).

3. Cup- and ring-markings, in the light thrown upon them by recent research and discoveries among the native races of Northern and Central Australia.—In the year 1899, Spencer-Gillen's epoch-making book on *The Native Tribes of Central Australia* was published. It was followed in 1904 by the same authors' *Northern Tribes of Central Australia*, and in the same year A. W. Howitt's *Native Tribes of South-East Australia* was published. These, with K. Langloh Parker's *The Euahlayi Tribe* (London, 1905), and the researches of R. H. Mathews and other travellers and observers, are our authorities on the tribal and social arrangements and customs of the Australian aborigines.

The characteristic feature of all these tribes is

that society is organized on a basis of totemism (*q.v.*), in relation to which cup- and ring-markings are found to have a living and definite significance.

Some few years ago the theory now under consideration might have been included under those which would give a religious significance to cup- and ring-markings, but recent research has made that impossible.

J. G. Frazer, in his great work on *Totemism and Exogamy* (4 vols., London, 1910), has proved that totemism does not belong to the category of religion, but is altogether of social significance, and this was the opinion of many students before the publication of his book settled the matter for all time. Totemism is not religion, because religion implies reverence and worship, and the totem is never worshipped, though it is treated with respect. It is the brother, never the god, of its human relations.

Before we can exhibit the relationship between cup- and ring-marking and totemism, however, we must first deal, as briefly as possible, with totemism as it exists in Australia, especially among the Arunta.

The Arunta reckon by male descent, but their totemism is special and peculiar in that it is reckoned by locality and not by parentage at all, i.e. every child, no matter what the totem of its parents may be, belongs to the totem of the district in which it may happen to be born. The Arunta system is based on the following beliefs. They hold that each living Arunta is descended from, or rather is the re-incarnation of, an ancestor who lived in what are known as the 'Alcheringa' (*q.v.*) times. Each of these Alcheringa ancestors is represented as carrying about with him or her one of the sacred stones or sticks, which are called by the Arunta *churinga*. Each of these *churinga* is closely associated with the spirit part of some individual. In the place where they originated or stayed, as in the case of some of the Witchetty Grub people, or where they camped in their wanderings, there were found what the natives call *okaniskilla*, i.e. local totem centres. At each of these spots a certain number of the Alcheringa ancestors went into the ground, each carrying his *churinga* with him. His body died, but some natural feature, such as a tree or rock, rose to mark the spot, while his spirit part remained in the *churinga*. Thus the country is dotted over with these *okaniskilla*, each one connected with one totem. The rock or the tree marking the spirit's abode is known as the spirit's *nanya*, and it is this idea of spirit individuals associated with the *churinga*, and resident in certain definite spots, which is at the root of the totemic system of the Arunta tribe. These spirits are ever waiting to be re-born, and consequently they are ever on the look-out for likely women through whom they may receive re-incarnation. Hence arises the most curious feature of Arunta beliefs, and the most marked characteristic of their life. They are entirely ignorant of the meaning and effect of sexual intercourse. According to their belief, it has nothing to do with the actual production of offspring; at best it only prepares the woman for the entry of the spirit-child. Consequently a woman never knows when a spirit-child may enter her womb, and, as a result, whenever she may become aware that she has conceived a child, it belongs to the totem of that locality irrespective of the totem to which she or her husband may belong. Hence, among the Arunta the exogamous classes are totally distinct from the totemic clans. The child inherits the *churinga nanya* of his ancestral spirit, and consequently belongs to his own ancestral totem. In some localities the spirits are particularly active, in others they are more otiose, but the result is the same in all cases—when the spirit-child enters a woman, the *churinga* is dropped. When the child is born, the mother tells the father the position of the tree or rock near to which she supposes the child to have entered her, and he and his friends then search for the dropped *churinga*. This is usually, but not always, supposed to be a stone one marked with the device peculiar to the totem of the spot, and therefore of the new-born child. If it should not be found, as is sometimes the case, a wooden one is made from the tree nearest to the *nanya*, and the device peculiar to the totem is carved upon it.

In each *okaniskilla*, or local totem centre, there is a spot known as the *ernatutunga*. This is the sacred storehouse, usually some cave or crevice in some unfrequented spot among the hills carefully concealed. In it are numbers of the *churinga*, often carefully tied up in bundles. (With this custom and the ideas connected with it, Frazer ('Folklore in the Old Testament,' in *Anthropological Essays presented to E. B. Tylor*, Oxf. 1907) compares the phrase used in 1 S 25²².) The name *churinga*, it should be noted, means a sacred and secret emblem. No woman, under pain of death, may ever say into the secrets of the *ernatutunga*; boys on initiation at puberty are allowed to see and handle their *churinga nanya*; it is part of the ceremony of admission to the mysteries of the tribe—but only a part. Another and very important part is the painting on face and body of the youth who has successfully passed through the ceremonies of initiation, and is considered worthy of the honour, with the device peculiar to his totem, and he is then taken to the *ernatutunga*. The old women know that he has been there, though they know nothing of the ceremonies. To the younger women it is a matter of the deepest mystery, for no woman dare approach the gap in which is the sacred rock-painting, and near to which lies the *ernatutunga*.

The above description of the beliefs and ceremonies of the Arunta was necessary to the full

understanding of our subject, and it has brought us at last to rock-paintings. These are not peculiar to the Arunta; they have been noted all over Australia. But those previously described are not of the special type which concerns our purpose, which are found among the Arunta. These rock-paintings fall into two groups: (a) ordinary rock-drawings similar to those already known, and corresponding with the drawings of the Palæolithic cave-people, the primitive Egyptians, Italians, and others, in many parts of the world, and the Bushmen among modern savages; and (b) certain other drawings which belong to a class of designs called *churinga ilkinia*, and regarded as sacred, or secret, mysteries, because they are associated with the totems. Each local totemic group has certain of these belonging to the group, and preserved on rock surfaces which are strictly tabu to the women, children, and uninitiated men. The designs on these *churinga ilkinia*, as on the *churinga nanja*, are each distinctive of some special totem, and are so understood by the initiated natives. Now these special totemic designs of the Arunta consist of precisely the same patterns as the rock-sculpturings or paintings which are the subject of this article. They may all be classed as cup- and ring-markings. There is the central dot corresponding to the cup, surrounded by concentric circles or semi-circles, and arranged in varying patterns, sometimes joined by lines which run through and connect them, exactly as the ducts do in the sculpturings,¹ and each varying pattern has its own distinctive meaning which the native at once recognizes. One pattern belongs to the Witchetty Grub totem, while others belong to the Emu, Kangaroo, Plum-tree, Snake, Sun, Moon, etc., totems, as the case may be.

Considering, then, that primitive man may be held to have everywhere, though with local modifications, passed through the same or similar stages in his evolution from the lower to the higher plane of social organization, we may hold that we are justified in assuming that in these Arunta drawings and designs, with their well-known and recognized significance, we have, as Wood-Martin suggested (*Pagan Ireland*, p. 47, note), the solution of our problem, and may with confidence assert that the *asal* meaning of cup- and ring-markings, wherever found, whether belonging to pre-historic primitive man in Europe or Asia, or to modern primitive man in Australia, is not religious, but social; that, when first found, they were totemic in their origin, and are connected with magic but not with religion.

Thus these mysterious signs may with justice be said to constitute the 'heraldry of primitive man,' and they would be known and understood by all to whom it might concern, even as the Arunta understand them to-day, just as the followers of a medieval knight, his squires and men-at-arms, recognized the blazon on the shield of their lord, or the crest on his helmet in battle or joust, or the pennon fluttering from his castle keep, and as the flag is recognized among civilized nations at the present day.

It would take us too far to trace the possible connexion between the now discovered totemic significance of cup- and ring-markings and the *lingam*-cult or Nature-worship of a later stage of culture, but we may note the primitive phase of this idea in the Arunta theory of the spirit-child conceived beside some sacred rock or tree. A similar notion meets us, as Rivett-Carnac points out, in Switzerland and Italy, and probably further research would find it elsewhere also. The

spirit-child belongs to the totem of the locality in which it is conceived, and the *churinga*—both the *nanja*, the portable stone or stick, and the *ilkinia*, the rock-drawing, each sacred and secret—is the totem-badge, bearing the special design peculiar to that totem. Here we have its living and present significance. Ancient rocks and stones inscribed with cup- and ring-markings are in many parts of Europe associated with ideas belonging to the worship of the generative powers. Menhirs and monoliths not only have those marks, but are themselves symbolic of the mystery of the reproduction of life. In Switzerland they are still known as 'the babies' stone,' and, bearing this primitive notion in mind, we may see a justification for describing simple cup-markings on standing stones as representing inverted female breasts, as is done in art. CANAANITES (vol. iii. p. 178*). With the same association of ideas in Brittany and other Celtic districts, childless women bring offerings to the menhir, and more than one standing-stone has been christianized by the placing of a cross upon its summit.

Finally, it is quite possible that in cup- and ring-markings we also behold one of the earliest efforts of mankind to convey ideas by means of signs, and that in this sense therefore they are a form of writing. The Arunta read their meaning both in the rock-paintings, the *churinga ilkinia*, and upon the sacred sticks or stones, the *churinga nanja*, and indeed have been known on occasion to employ the latter as 'message-sticks or stones,' although in their case the *churinga* is more in the nature of a safe-conduct, rendering the bearer tabu, than an actual means of conveying ideas. Other tribes, as the Itchimundi, employ real message-sticks, but they are merely a kind of tally to mark the heads of the message, and the markings have no special meaning as conventional signs to convey a definite announcement. Still these signs, and such as the Palæolithic folk inscribed on the pebbles at Mas d'Azil, or such as are found on Neolithic dolmens in Portugal and in certain parts of Scotland, may lie at the root of the alphabets of the Aægean, and form the germ of our European alphabets. But, if cup- and ring-markings are to be taken at all as a method of conveying ideas, i.e. as a method of writing, it can only be of the very rudest, compared with which oghams and runes are finished alphabets. It is better to take them simply as totemic signs, having regard to their Arunta affinity, and to relate them to heraldic tokens and modern potters' marks as being tribal and family badges and marks of ownership.

LITERATURE.—There is a succession of articles in *Journ. Brit. Archaeol. Assoc.*, in the following order: vol. xvi. (1860), Sir J. Gardner Wilkinson, 'On the Rock-basins of Dartmoor'; xxix. (1873), J. S. Phené, 'On the Uniformity of Design and Purpose in the Works and Customs of the earliest Settlers in Britain'; xxxv. (1879), R. Romilly Allen, 'Pre-historic Rock-sculptures at Ilkley'; xxxvi. (1879), C. W. Dymond, 'Cup-Markings on Burley Moor'; xviii. (1892), Helen J. M. Russell, 'A recent Discovery at Rome in Connection with Mythology and Symbolism in Britain', also iii. (1896), 'Some Rock-cuttings in Northumberland'; lvi. (1900), lvii. (1901), lix. (1903), and lx. (1904), a series of articles by the present writer leading up to the conclusions arrived at in this article. The classical book on the subject, for its date, is, of course, Sir J. Y. Simpson, *Archæol. Sculpturings of Cups, Circles, etc., upon Stones and Rocks*, Edinburgh, 1867. As regards the Arunta and other Australian natives, Spencer-Gillen^a (1899), ^b (1904), and Howitt (1904) are the authorities. See also E. S. Rivett-Carnac, 'Cup-marks as an archaic Form of Inscription', *Journ. R. Asiatic Soc.* 1903; Andrew Lang, *Magic and Religion*, London, 1901, with a chapter on "Cup and Ring": 'An old Problem solved,' suggesting a very similar solution to that here put forward, and *The Secret of the Totem*, London, 1905, by the same author; Lord Avebury, *Pre-historic Times*⁶, London, 1900; R. Munro, *Prehistoric Scotland*, Edinburgh, 1899; W. Crooke, *PR2*, Westminster, 1896; M. Hoernes, *Ursprung, der bildenden Kunst in Europa*, Vienna, 1898, also *Der diluviale Mensch in Europa*, Brunswick, 1903; E. B. Tylor, *Prim. Cult.* 4, London, 1903; J. Cooke, *Wakeman's Handbook of Ir. Ant.*, London, 1903; W. G. Wood-Martin, *Pagan Ireland*, London 1892; S. R.

¹ Munro (*op. cit.* p. 219) says, 'The cup-and-ring with gutter channels has not been found outside the British Isles,' but in Austria the line represents the 'gutter channel.'

H. J. DUKINFELD ASTLEY.

CURSING AND BLESSING.—I. Introductory.—Cursing and blessing are perfect opposites, and are therefore appropriately taken together for analysis and description. The preponderance of evil-wishing over good-wishing is obvious, but deserves consideration. Like the preponderance of evil spirits over good spirits in early religions, it points to absence of harmony or failure of adaptation in the relations of man to Nature and of man to man. But this very defect may be a condition of progress, a mark of the struggle.

The habit, in its twofold or polar aspect, is universal both in ordinary social life and in religion, organized and unorganized. It transcends all distinctions of race, and is, in fact, a permanent outcome of the working together of language and thought; for by this double mechanism are expressed wish and will, desire and determination, in that form which is, as it were, midway between psychosis and action. This does not imply that verbal utterance is a stage preceding action; we describe it as intermediate, just because cursing and blessing in their earlier forms have the appearance of being based on an unconscious theory that the word is nearer the end than is the wish, and that the act alone reaches, or rather is, the end. It follows that, in the fluid state of categorical thought which we assume for early culture, it would be both easy and natural to assimilate the spoken wish to the realized fact, by any appropriate means. Such artificial actualizing of the blessing or the curse is typical of all except the higher stages of the evolution. It will be illustrated later on. In passing, we may note that to describe such assimilation as a 'material' or 'concrete' tendency, or to describe the primitive mind as being essentially 'materialistic,' is to draw a false distinction. In view of the very rudimentary analysis of natural laws and of mental categories arrived at by early man, it is better to describe his mental operations by some such term as *holopsychosis*, or 'whole-thinking,' just as his language has been described as *holophrastic*. All the components are there, but they have not yet been resolved. The examples cited below will illustrate this also, besides serving to indicate that some of the earliest cases of human 'expression' are actually less material and less concrete than the latest.

The curse and the blessing are an excellent example of a product of the two powers—thought and word (or *logos*)—and of the inhibition of such a product from becoming fact. The reasons for the inhibition need no description; they are, however, the defining conditions of the curse or blessing as such, though these conditions are always, as it were, about to be transcended. This result is most conspicuous at the highest point of the curve traced by the general habit, and corresponding to a stage when words, as such, possess more *moment* than they do either before or after. As distinguished from desire on the one hand and from actualization (in artificial embodiment) on the other, the curse or the blessing is the spoken word. We may well suppose that the ascription to words of such super-verbal potency as a typical curse involves coincides with a period of mental evolution, and of linguistic evolution, when man became at last completely conscious of the 'power of speech,' of the faculty which he had so laboriously acquired. Then the word was *res*, not *nomen*. The arrival at such a point of realization amounts to a crystallizing out of at least one important category from

the primal fluid of nervous life. It will be noticed that, if terms like 'concrete' and 'material' are employed, we must admit that the half-civilized and highly organized Moor is more 'primitive' than the lowest savage.

It also seems to the writer an unnecessary and illegitimate proceeding to draw a sharp division between the magical and the religious blessing or curse, or to assign priority to the former type. A savage Australian may curse his fellow mentally or verbally, in a form as far removed from magic as profane swearing among civilized men is from religion. Or, again, if he has a god, he may invoke him to execute his spoken wish. On the other hand, we find the higher religions frequently adopting a magical form; and we can sometimes trace the religious form passing into the magical. The distinction, in fact, between magic and religion, as the form of man's relation to his environment, seems to be a matter of temperament rather than of time. Two types certainly exist for cursing and blessing, and they will be fully discussed below; here it is premised that we have no right to assume the priority of the magical type, or even its exclusion, simultaneously, of the religious. There are, moreover, many neutral cases.

2. General character.—A curse or blessing is a wish, expressed in words, that evil or good may befall a certain person. The wish may be expressed by a god or spirit, in which case it is a *fiat*, and is wish, will, and fact in one. It may be expressed for the speaker's own good or ill. It may be, again, a mere wish or will; or an appeal to another (usually a supernatural) person to execute it; or accompanied by, or embodied in, a material object. This may be an image of the result desired; a vehicle of transmission; an object representing the curse or the blessing; or a physical action by the speaker to, or towards the intended person.

For the uttered wish without condition, reference, or assimilative action, we may compare the case vividly described by Turner. The Samoan has a system of organized cursing, but at times he resorts to the natural method, and curses on his own responsibility. Discovering a thief from his garden, he shouts in a loud voice, 'May fire blast the eyes of the person who has stolen my bananas!' The cry 'rang' throughout the adjacent plantations, and made the thief tremble. They dreaded such uttered imprecations.¹ In Luang-Serama, usual curses are: 'Evil shall devour you! Lightning shall strike you!' and so on.² Such is the type of the simple curse or blessing found in all races, and surviving belief in magic and in supernatural sanctions among the unthinking members of the highest civilization.

When accompanied by a material vehicle or embodiment or action, assimilative or assisting or symbolic, the adhesions of the wish become innumerable, for it links itself to the phenomena of every form of tabu, magic, and symbolism. At the back of all these there is the primary connexion with neuro-muscular discharge. Here the wish may be simultaneous with, or subsequent to, the impulsive action, just as will may be not prior to, but accompanying or following, an action of which it is the cerebral echo.

In Melanesia the act of blessing involves the bestowal of *mana* by physical contact. A man will give a boy a start in the world by placing his hand on the boy's head, thus imparting to him a portion of his own mysterious power.³ In the Solomon Islands, inland people are supposed to have more *mana* than coast people. When they go down to the coast, they considerately avoid spreading out their fingers, for to point the fingers at a man is to shoot him with a 'charm.'⁴ Blessing among the Masai consisted of spitting upon the recipient.⁵ Far more common is the use of this vehicle for the curse, or as a symbol of contempt or insult.⁶ So the Masai spit while cursing. 'If a man while cursing spits in his enemy's eye, blindness is supposed to follow.'⁷ The Sakai are believed to be able to do

injury by 'sendings' and 'pointings'.¹ Among the Flort of West Africa, a sale of property becomes complete when the seller has 'blessed' the article sold. He raises his hands to his arm-pits, and throws them out towards the buyer. Then he breathes or blows over the article. This ceremony is called *ku vana mola*, 'giving the breath,' and is equivalent, says Dennett, to a 'God bless thee.'² It seems rather to be a personal imposition of the speaker's good-will upon both buyer and thing bought, without any supernatural reference. There is here as yet no symbolism; the intention is immediate. Examples of symbolism might be multiplied indefinitely. The shaking off of the dust of the feet is a familiar case. In Morocco a suppliant at the *syid* of a saint will call down misfortune upon an enemy by sweeping the floor with his cloak, praying that the enemy may be swept likewise.³ It is hardly necessary to point out that mere impulsive action, deliberate magic, and symbolism shade into each other continually.

Among the Hebrews, a blessing was imparted by the imposition of hands.⁴ In blessing a multitude, the hands were uplifted.⁵ Refinements are inevitable: thus, in the Greek Church the gesture of benediction is made with the right hand, the thumb touching the tip of the ring-finger, the other fingers being erected. In the Latin use, the thumb, fore, and middle fingers are erected, the others being doubled on the palm of the hand. In the Rabbinical blessing, the priest places the fingers of both hands in pairs—the forefinger with the middle, the ring with the little finger, the tips of the thumbs, and the tips of the forefingers, respectively touching one another: thus the ten fingers are in six divisions.

Other components of the wish, as it becomes a rite, may also undergo differentiation. Thus the Talmud holds that the mere power of the spoken word is efficacious.⁶ The priest pronounces the blessing in a loud voice. So, in Islam, an important detail is the audibleness of the benediction. The Talmud also speaks of cursing by an angry look. This needs to be fixed. Such a curse has been described as a 'mental curse.'⁷ The Yasts have a remarkable dualistic personification—the 'cursing Thought' of the Law of Mazda; the 'strong cursing thought of the wise man, opposing foes in the shape of a boar, a sharp-toothed he-boar, a sharp-jawed boar, that kills at one stroke, pursuing, wrathful, with a dripping face, strong and swift to run, and rushing all around.' On the other hand is the personification of 'the pious and good Blessing.' This Blessing (*dfriti*) is twofold—by thought and by words. It is notable that the blessing by words is the more powerful; but the curse (*upamana*) by 'thought is more powerful than that by words.'⁸

The indeterminate character of primitive thought makes interchange easy between thought, idea, word, and act, and also between mechanical, psychical, and verbal force. Thus a curse or blessing may be regarded now as a spirit, now as a thing, now as a word, but in each case it is charged with energy. Or, again, it may be regarded as travelling along a material or psychical conductor, or as embodied in a material object, its energy then being potential, ready to become kinetic when discharged. It is important to note that these early views are held in comparatively late culture, especially in religion, and there show every sign of being living beliefs, not survivals.

When we remember the emphasis laid in all but the latest culture on words and names, we can appreciate the confusion, or rather the shifting, between the material and the verbal notion of a curse or blessing. Thus, in whatever form it is expressed, the curse or blessing, like all expressions of an idea enforced by strong emotion, has a dynamical certainty. Irish folklore has it that a curse once uttered must alight on something; it will float in the air seven years, and may descend any moment on the party it was aimed at; if his guardian angel but forsake him, it takes forthwith the shape of some misfortune, sickness, or temptation, and strikes his devoted head.⁹

'Curses' in old Teutonic proverbs 'operate quickly'; they are 'not to be turned aside.'¹⁰ What Grimm describes as the 'savage heartiness' of the curses which he records is the emotional force which has so much to do with making an impression,

whether in the direction of 'suggestion' to the victim or, generally, of the ascription of 'power' to the word or act. Emotional force as a factor in the making both of magic and of religion deserves recognition. It is well illustrated by blessings and cursings in their growth; when their forms are fixed, naturally the form is everything, and a curse uttered casually and without heat may still be efficacious. To the priestly blessing in the synagogue magical powers were ascribed, and the OT states that the word once pronounced is irrevocable.¹ The Talmud warns against looking at the priest while he is pronouncing the blessing, for 'the glory of God is on him.' It is a natural process of suggestion working through strength of emotion, fear of ill-will and enmity, and reinforced by a complex of associated ideas relating to the essence of words and the energy of souls, that gives to the curse or blessing its independent 'power.' As it is put by Westermarck, this

'purely magical power, independent of any superhuman will . . . is rooted in the close association between the wish, more particularly the spoken wish, and the idea of its fulfilment. The wish is looked upon in the light of energy which may be transferred—by material contact, or by the eye, or by means of speech—to the person concerned, and then becomes a fact. This process, however, is not taken quite as a matter of course; there is always some mystery about it.'²

Just as sin 'is looked upon as a substance charged with injurious energy,' so the curse is 'a baneful substance,'³ like the materially conceived *badi* of the Malays, and the *l-bas* of the Moors. Good and evil in all but the higher stages of thought are constantly 'embodied,' either by analogy, personification, or the much more normal and prevalent mode of mere mental objectification. To illustrate this last we may compare the precisely identical method, used in science, of *conceiving* of a force as a graphic straight line.

This conception is characteristic of the curse and blessing in their social and religious history.

Arabs when being cursed will lie on the ground that the curse may fly over them.⁴ Among the Nandi, 'if a son refuses to obey his father in any serious matter, the father solemnly strikes the son with his fur mantle. This is equivalent to a most serious curse, and is supposed to be fatal to the son unless he obtains forgiveness, which he can only do by sacrificing a goat before his father.'⁵ Berbers strip before taking an oath, to prevent it from clinging to their clothes.⁶ Plato speaks of being 'tainted by a curse.'⁷ Arabs fear 'the magical nature' of an oath.⁸ The 'water of jealousy' was believed by the Hebrews, as causing a curse, to go into the bowels, to make the belly to swell, and the thigh to rot.⁹ The Kachinzes 'bless' their huts by sprinkling them with milk.¹⁰ The Nubians, before eating the tongue of an animal, cut off the tip, believing that 'here is the seat of all curses and evil wishes.'¹¹ Among the islanders of Leti, Mac, and Lakor, a man who has quarrelled with a woman is afraid to go to war lest her curses may bring death.¹²

Hence the recipient of a curse is anxious to neutralize or divert it. In the last case cited the man is at pains to secure forgiveness by making presents to the woman. In Melanesia the curse is an engine of authority. A chief will curse a man by way of a legal 'injunction'; the matter is put right by the method of *toto*, the offering of a gift. On receiving this, the chief sacrifices to the spirit, *lio'a*, on whose power his curse rested.¹³ In Samoa there is the same system, particularly for the enforcement of the rights of property. In a case of theft, the injured party gives the priest a fee of mats. The priest curses the thief; the latter, to avoid the otherwise inevitable result of sickness or death, deposits at the door of the priest an 'equivalent for the stolen property. Then the priest prays over 'the death bowl' that the curse may be reversed.¹⁴ The Maoris employed an elaborate ritual for cursing and its reversal. The latter was *whakakohiri*; the *fohanga* employed to counteract the curse chanted a *karakia* containing such words as these:

Great curse, long curse,
Great curse, binding curse,
Come hither, sacred spell!
Cause the curser to lie low
In gloomy night!¹⁵

¹⁵ E. Shortland, *Maori Religion*, Lond. 1882, p. 85.

The Todas have a curious ceremony for anticipating mischief to the sacred cattle. The point of the rite is that the assistant in the dairy, the *kaltmohk*, is cursed and then the curse is at once removed. The dairy-priest, the *patol*, pours milk and clarified butter into the outstretched hands of the *kaltmohk*, who rubs it over his head and whole body. The *patol* chants a curse: 'Die may he; tiger catch him; snake bite him; steep hill fall down on him; river fall on him; wild boar bite him' etc. Rivers infer that the *kaltmohk* is being made responsible for any offence which may have been committed against the dairies. . . . The *kaltmohk* having been cursed, and so made responsible, the curse is then removed in order to avoid the evil consequences which would befall the boy if this were not done.¹ Toda sorcerers impose diseases by cursing-spells, and remove them with some such formula as, 'May this be well; disease leave!'² Thus a blessing may neutralize a curse. Micah's mother cursed her son for his theft; when he confessed, she rendered the curse ineffective by a blessing.³

Blessings and curses are capable both of descent and of ascent, genealogically. Thus, we find it stated in Sir 23¹¹ that 'the scourge shall not depart from his house'; and in Pr 20⁷ 'a just man that walketh in his integrity, blessed are his children after him.'

The Basutos appear to have the belief in the descent of the curse; Casalis compares it with the case of Noah and Ham.⁴ The Greek conception of the Briaryes laid stress on this; a curse might work down to the grandchildren, and even utterly extirpate a race.⁵ Among the Maoris, 'to bid you go and cook your father would be a great curse, but to tell a person to go and cook his great-grandfather would be far worse, because it included every individual who has sprung from him.'⁶

The energy of a curse may spread. As Irish folklore puts it, it 'must alight on something.' Plato speaks of it tainting everything with which it comes in contact.

The Bedawin will not take an oath within or near the camp, 'because the magical nature of the oath might prove pernicious to the general body of Arabs, were it to take place in their vicinity.'⁷ The Moors hold that it is 'bad even to be present when an oath is taken.'⁸

A remarkable detail is very commonly found, namely, that a curse may return to the man who uttered it. 'Curses, like chickens, come home to roost'; 'they turn home as birds to their nest.'⁹ The Karens have a story to the following effect:

'There was a man who had ten children, and he cursed one of his brethren, who had done him no injury; but the curse did the man no harm, and he did not die. Then the curse returned to the man who sent it, and all his ten children died.'¹⁰

Here there is a moral valuation, but the earlier non-moral conception of the intrinsic energy of the curse constitutes the point of the story. With it may be compared the Roman notion that certain imprecations were so awful that even the utterer suffered as well as his victim.¹¹

As with the force of tabu and similar conceptions, physical contact is the most efficacious means of 'transmission.' If we regard the curse or blessing as being the mental idea of a desired material result, then, like all ideas in an impulsive brain, it produces motor energy in the form both of words and of action. Thus, besides the uttered form, we have, by association, paths of realization by means of sympathetic or symbolic action. Examples have been cited of such 'assisting' of the wish, by gestures, direct or indirect. We have also, by association, the more highly differentiated method of sympathetic or symbolic creation. A material model or symbol of the result is desiderated as a pre-embodiment of it; later this becomes a cause and a guarantee of the result. The simplest form of this method is the use of the 'wax image.' In this, model and symbol shade into one another. The image represents the recipient, and the utterer of the wish either utters it over the image, or works upon the image the material result wished for.

So far, we have cases in which the curse or blessing preserves its mental or verbal character, 'mental' being taken to include artistic materialization, as in sympathetic magic. For the curse or blessing, as such, is distinguished from physical injury or physical benefit precisely because it stops short of physical action by the subject upon the object. But the two were bound to be combined; the mixed type of curse and blessing is as common as the pure, and in certain stages of culture is considered to be the more efficacious. The bestowal of a blessing is more efficacious when the man who confers it touches the man who receives it. When dealing with 'vehicles' and 'media' of curses and blessings, we are not entitled to suppose that even in their highest development the mind is conscious of a process of 'conduction.' To us it appears obvious that, when a suppliant holds one end of a string to the other end of which is attached his protector, each should regard the string as a bridge or a wire for transmission. But it would be more logical to credit them with a correct, than an incorrect, application of a physical law, and to argue that they consider will to be conducted by any part of the ether rather than by the wire. It seems more consistent with the evidence to regard these 'conductors' as being merely the nearest thing to physical contact. The sense of touch is bound up with all direct physical action upon an object, well-doing and ill-doing, and colours all ideas of it. Similarly, when we read of curses acting at a distance—in the case of the Australian sorcerer at a hundred miles—we are not entitled to credit the belief with a reasoned or even unconscious substratum of a quasi-scientific theory of the velocity and displacement of an imprecatory particle. It is quite possible that in the case of 'conductors' of various magical 'forces,' such as food and drink, we have to deal as much with the associational idea of property as with that of kinship, or of contagion. With this proviso, such metaphors may be employed. Westermarck writes:

'The efficacy of a wish or a curse depends not only upon the potency which it possesses from the beginning, owing to certain qualities in the person from whom it originates, but also on the vehicle by which it is conducted—just as the strength of an electric shock depends both on the original intensity of the current and on the condition of the conductor. As particularly efficient conductors are regarded blood, bodily contact, food, and drink.'¹

As early types of the ideas, referred to above, which are connected with that of the fulfilment of a wish, we may cite the following:

A Maori would say to a stone: 'If this were your (his enemy's) brain, how very sweet would be my eating of it.' Or he might call any object by the name of his enemy, and then proceed to strike or insult it. This process was a 'curse,' *tapa tapa*, or *tuku tuku*.² Here is the material for the development of the image-method and the symbol-method. In the Toda curse the recipient apparently has it rubbed into his body with milk and butter. It is quite legitimate to regard this as a case where the sound and the breath 'touch' the food, and hence the recipient. The Moor transmits his 'conditional curse' to the man appealed to for protection by grasping him with his hands, or by touching him with his turban or a fold of his dress, even by grasping his child or his horse. 'In short, he establishes some kind of contact with the other person.'³ Psychologically it is a case of prolepsis rather than the conduction of a curse whose fulfilment is only contingent. Similarly the Moorish suppliant may slay an animal at the door of the man. If the latter steps over the blood, or merely sees it, he incurs a conditional curse. Such a curse may be involved in the food eaten at a meal to seal a compact. The phrase runs that 'the food will repay' him who breaks it. The eaten food 'embodies a conditional curse.'⁴ Conversely, for, as Westermarck puts it, 'the magic wire may conduct imprecations in either direction,' if a Moor gives food or drink to another, 'it is considered dangerous, not only for the recipient to receive it without saying "In the name of God," but also for the giver to give it without uttering the same formula by way of precaution.'⁵ In the case of a stranger receiving milk, it is held that, should he misbehave, 'the drink would cause his knees to swell.'⁶

On similar principles a curse may be applied to something that has belonged to the recipient, or to something that may come in his way.

The aborigines of Victoria 'believe that if an enemy gets possession of anything that has belonged to them, even such things as bones of animals which they have eaten, broken weapons, fashers, portions of dress, pieces of skin, or refuse of any kind, he can employ it as a charm to produce illness in the person to whom it belonged. They are, therefore, very careful to burn up all rubbish or uncleanness before leaving a camping-place. Should anything belonging to an unfriendly tribe be found at any time, it is given to the chief, who preserves it as a means of injuring the enemy. This *wuilon* is lent to any one of the tribe who wishes to vent his spite against any one belonging to the unfriendly tribe. When used as a charm, the *wuilon* is rubbed over with emu fat, mixed with red clay, and tied to the point of a spear-thrower, which is stuck upright in the ground before the camp-fire. The company sit round watching it, but at such a distance that their shadows cannot fall on it. They keep chanting imprecations on the enemy till the spear-thrower turns round and falls in his direction.'¹

This example contains in solution a good many of the principles connected with cursing. There is also the buried curse.

In Tenimber one can make a man ill by burying in his path such objects as sharp stones or thorns, uttering a curse during the burial. These articles are extracted later from the victim's body by the surgeon.² In the neighbouring islands of Leti, Moa, and Lakor, the buried articles are pieces of *sirih* from the victim's own box, or a scrap of his hair. The cursing accompanies the burial, but there is no need to place the 'embodied curse' in the man's path. Burial is enough, for here the object buried is a part of the man.³

Thus we come back to the symbolized result. Again, in connexion with *tabu* upon property, Codrington observes that in Melanesia

'a *tambu* approaches to a curse, when it is a prohibition resting on the invocation of an unseen power; that, namely, of the *tinidalo*.⁴ In Ceram a trespasser incurs the sickness wished or determined by the owner who embodied it in a *tabu*-mark.⁵ In Samoa the 'silent hieroglyphic *taboo*, or *tapui*, contains a curse; thus, the white shark *tabu*, a coco-palm leaf cut to represent a shark, contains the wish, 'May the thief be eaten by a white shark.'⁶

Even before the ethical stage of the curse or blessing is reached, their force varies, chiefly according to the character of the wisher. There is, of course, to begin with, the mere 'power of the word' or of the wish; and the curse of any one, 'however ignorant' he may be, is not to be disregarded.⁷ But, as a rule, superiority of personal power or position increases the power of the blessing or the curse.

Among the Tongans the curses of a superior possessed great efficacy; 'if the party whose curses is considerably lower in rank than the party cursed, the curse had no effect.'⁸ 'Without any dispute the less is blessed of the better.'⁹ The principle of the *whakakohitu* ceremony of the Maoris is that a curse will yield to the *mana* of a man who can summon a more powerful *atua* than that of the original curse.¹⁰

The importance and influence of parents, especially of the father, have an enormous effect.

The Nandi regard a father's curse as being 'most serious.'¹¹ Among the Mpongwe 'there is nothing which a young person so much deprecates as the curse of an aged person, and especially that of a revered father.'¹² The Moorish proverb has it that 'if the saints curse you the parents will cure you, but if the parents curse you the saints will not cure you.'¹³ The Hebrew belief in the inevitable efficacy of a father's blessing or curse was remarkable. The blessing was regarded as an invaluable heritage. 'In deed and word honour thy father, that a blessing may come upon thee from him. For the blessing of the father establisheth the houses of children; but the curse of the mother rooteth out the foundations.'¹⁴ From this passage it has been suggested that 'the reward which in the Fifth Commandment is held out to respectful children was originally a result of parental blessings.'¹⁵ The Scots proverb is similar:

'A fa' her's bleesin' bigs the toun';¹⁶

A mi her's curse can ding it doun'.¹⁶

In Greece such beliefs were no less strong. Plato puts it that 'the curses of parents are, as they ought to be, mighty against their children, as no others are.' And he instances the cursing of their sons by Oedipus, Amyntor, and Theseus. The man

who assaulted his parent was polluted by a curse.¹ According to the Koreans, 'curses and disgrace in this life and the hottest hell in the world hereafter are the penalties of the disobedient or neglectful child.'²

The last two cases show the automatic production of a curse by the sin itself—a notion distinctly tending towards the ethical development of these relations.

The Barea and Kunáma believe that the blessing of the old people is necessary for the success of any undertaking, and that their curse is inevitably efficacious.³ Even elder brothers and sisters among the Greeks had the preponderance in this respect over the younger; 'the Erinyes always follow the elder-born.'⁴

The curse or blessing of the dying is particularly strong.⁵

The Ova-Herero chief, when about to die, 'gives them his benediction,' a wish for 'an abundance of the good things of this world.'⁶ Similarly among the Hebrews and the Arabs.⁷ Among the Bogos the blessing of a father or a master is essential before taking up an employment or relinquishing it, engaging in a business, or contracting a marriage.⁸ The Moors say that 'the curse of a husband is as potent as that of a father.'⁹ Westermarck points out that 'where the father was invested with sacerdotal functions—as was the case among the ancient nations of culture—his blessings and curses would for that reason also be efficacious in an exceptional degree.'¹⁰

Obviously the wishes of one who is professionally in touch with the magical or the supernatural are more efficacious than those of ordinary men.

'The anathemas of a priest,' say the Maoris, is 'a thunderbolt that an enemy cannot escape.'¹¹ A Bráhmán 'may punish his foes by his own power alone,' viz. by his words.¹² A Rájput *rāja*, being cursed by Bráhmans, was 'under a ban of excommunication' even among his friends.¹³ There is a story that the curse of a Bráhmán girl brought a series of disasters on a *rāja* and his kindred.¹⁴ According to the Talmud, the curse of a scholar never fails.¹⁵ The Gallas dread the dying curse of a priest or wizard.¹⁶ In Muhammadan countries the curses of saints or sharifs are particularly feared.¹⁷

The belief in the power of curses and blessings has a striking and widely extended application in the relations of the well-to-do with the poor and needy, and of the host with the guest. In the former case the idea that the blessing of those who have nothing else to give, or the curse of those who have no other remedy, is therefore efficacious, may have some connexion with the belief and practice. In the latter case may perhaps be seen a naturally regardful attitude towards the unknown and therefore mysterious.

'He that giveth unto the poor shall not lack; but he that hideth his eyes shall have many a curse.'¹⁸ 'Turn not away thine eyes from one that asketh of thee, and give none occasion to a man to curse thee; for if he curse thee in the bitterness of his soul, he that made him will hear his supplication.'¹⁹ The Greek beggar had his Erinyes.²⁰ The Damaras 'would not think of eating in the presence of any of their tribe without sharing their meal with all comers, for fear of being visited by a curse from their *Omu-kuru* (or deity) and becoming impoverished.'²¹ In Morocco, itinerant scribes go from house to house, 'receiving presents and invoking blessings' upon the donors. For the latter it is 'a profitable bargain, since they would be tenfold repaid for their gifts through the blessings of the scribes.' A Moor starting on a journey gives a coin to a beggar at the gate 'so as to receive his blessings.'²² The Nayádis of Malabar invoke, in their prayers, blessings upon the higher castes who give them alms.²³ Among the Ova-Herero 'no curse is regarded as heavier than that which one who has been inhospitably treated would hurl at those who have driven him from the hearth.'²⁴ An offended guest 'might burn the house with the flames of his anger.'²⁵ Guests and suppliants had their Erinyes.²⁶ Te

the case of hospitality Westermarck applies the principle of the 'conditional curse,'¹ which will be discussed below.

Parallel with the case of the poor and needy is that of the servant and the wife.

In West Africa 'the authority which a master exercises over a slave is very much modified by his constitutional dread of witchcraft.'² 'Slander not a servant unto his master, lest he curse thee.'³ 'Thou shalt not command [thy man-servant or thy maid-servant] with bitterness of spirit; lest they groan against thee, and wrath be upon thee from God.'⁴ 'In Morocco it is considered even a greater calamity to be cursed by a Shereefa, or female descendant of the Prophet, than to be cursed by a Shereef.'⁵ 'The houses,' says Mannu, 'on which female relations, not being duly honoured, pronounce a curse, perish completely, as if destroyed by magic.'⁶

3. Special applications.—The circumstances in which blessings or curses are uttered, and the persons upon whom they are directed, are obviously both numerous and varied. A few special cases may be cited, which have a bearing upon the nature of the uttered wish. Children, in particular, are the recipients of the blessings of parents.⁷

The blessing of Ephraim and Manasseh by Jacob became among the Jews the regular formula by which parents blessed their children. Among the Malagasy, at a circumcision, the guests present honey and water to the children, and pronounce blessings upon them, such as 'May they prosper!'⁸ Among the Maoris, when a child was a month old, the ceremony of *tua* was celebrated, in which the *tohunga* pronounced a *karakia* of blessing: 'Breathe quick, thy lung, etc.'⁹ Jewish teachers to-day bless their pupils. In Fiji all prayer was concluded with malignant requests against the enemy: 'Let us live, and let our enemies perish!'¹⁰

The curse is particularly the weapon of the wronged and oppressed against their more powerful enemies, and of zealots against their bigoted opponents. In the Bible it is especially forbidden to curse God, parents, authorities, and the helpless deaf.¹¹ To bless God is to praise Him. Yet Orientals have a tendency to curse God, even on the slightest provocation in daily life.¹² Blessing the king is implied or explicit in ceremonies of coronation, and on solemn occasions.

The gods of Egypt bestowed a blessing on the Pharaoh, when they presented him with the symbol of life.¹³ The *abhiyeke* of the rāja included a blessing, embodied in the consecrated water: 'O water, thou art naturally a giver of kingdoms, grant a kingdom to my Yajamāna'; 'O honeyed and divine ones, mix with each other for the strength and vigour of our Yajamāna.'¹⁴ The ceremonies of anointing and the like often involve a blessing.¹⁵ In the last example, the vehicle is personified. A Jewish author records a Roman custom of gagging prisoners, when condemned to death, to prevent them from cursing the king.¹⁶

The connexion of food with the practice is remarkable. The blessing of food came in later Judaism to be a giving of thanks, and the idea was that food received gratefully acts as a blessing.¹⁷ The *bismillah* of Islām has a similar principle behind its use in this connexion. At an earlier stage, no doubt, the blessing, if used, was either positive or negative, removing injurious properties, but in either case simply magical.¹⁸

In the Banks Islands an 'invocation of the dead,' the *tataro*, is celebrated. Food is thrown for the souls of the dead with such words as these: 'They who have charmed your food, have clubbed you . . . drag them away to hell, let them be dead.' In connexion with this is a practice of cursing a man's 'eating'; if an accident befalls the recipient of such a curse, the utterer says: 'My curse in eating has worked upon him, he is dead.'¹⁹ Among the Maoris, what was almost a sense of modesty and a principle of honour grew up about the ideas of food and its preparation. A typical formula for the counter-curse is:

'Let the head of the curse
Be baked in the oven,
Served up for food for me,
Dead, and gone to Night!'²⁰

To curse, *kanga*, was in effect to apply to another man any word which 'had reference to food.' It is recorded that a young man, seeing a chief in a copious perspiration, remarked that 'the vapour rose from his head like steam from an oven, and that this remark caused a tribal war.' The regular term for food, *kai*, was discontinued at Roturua, because it happened to be the name of a chief. To use the term *kai* would in that case have been equivalent to a serious curse against the chief.²¹

Down to a late period in the history of Christianity, marriage was a personal 'arrangement'; the Church only stepped in to pronounce its blessing upon the union. The Hebrews had a benediction both for betrothal and for marriage.²² The old Roman marriage by *confarreatio* included a *benedictio*, formulae for which are extant. When St. Ambrose says that 'marriage is sanctified by the benediction,' he refers to one case only of a general practice, lasting through the Middle Ages, of concluding all private arrangements with a blessing. Thus all sales of goods and property were blessed.

The application of the curse as a protection of property and as a method of punishing theft has been incidentally noted. The early Arabs cursed the thief in order to recover the stolen goods.²³ The method is conspicuous in Samoa. Tabu is 'a prohibition with a curse expressed or implied.'²⁴ The embodiment of the wish in leaf or wooden images is termed in Polynesia *rahui* or *ravi*, but we cannot always infer even the implied wish in prohibitory *tabu*.²⁵ Allied principles inevitably shade into each other. The ancient Babylonian landmarks appear to have been inscribed with curses, such as: 'Upon this man may the great gods Anu, Bēl, Ea, and Nuskū look wrathfully, uproot his foundation, and destroy his offspring.'²⁶ The same practice was followed by the Greeks.²⁷ Deuteronomy refers to the Semitic practice: 'Cursed be he that removeth his neighbour's landmark.'²⁸ Taken over by Christianity, the practice survived, for example, in the English custom of 'beating the bounds,' in which the priest invoked curses on him who transgressed, and blessings on him who regarded the landmarks.²⁹

Some details may be put together which illustrate adhesions and developments. In Melanesia cursing by way of asseveration is common: a man will deny an accusation 'by' his forbidden food, or 'by' a *tindalo*.³⁰ The self-invoked curse, which we shall discuss below, passes in civilization into a conditional blessing, as in the English oath, 'So help me, God.' In practical ethics 'profane swearing' is originally sinful, because of the irresponsible and unofficial use of the Divine name; later its sinfulness is limited to the spirit of resentment with which it is charged. In Melanesia, the practice of *vinag*, or 'sending off,' is instructive for comparison with that found in civilization. A man will say, with a gesture towards a tree, *vawo aru*!—which is equivalent to telling his enemy to be hanged thereon.³¹

The limits of the blessing are well preserved in the Catholic distinctions between *paris benedictus* and *paris consecratus*, and between *benedictio vocativa* and *benedictio constitutiva*. The earlier principle, as we have seen, was to connect blessing and consecration, cursing and execration. It is in accordance with the extension of this principle that the curse is embodied in the 'accursed thing,' and that the transgressor of the

prohibition himself becomes the 'accursed thing' or the curse. This was the case with Achan, and with enemies 'devoted' to destruction.¹ On the same principle a blessed man is a 'blessing.'²

In the OT 'accursed' (AV), *hêrem*, should be 'devoted' (RV)—devoted to God, not accursed from God.³ Similarly with the Greek translation *ἀνάθεμα*. Such a thing is withdrawn from common use, either as 'vowed' to God, or as put under a ban, in which case it has a species of 'holiness.'⁴ As a rule, a thing devoted to destruction is under a curse. In Canon Law the development of *anathema* into excommunication is complete.

Here we arrive at the cursings and blessings of the community. In early culture a headman or body of 'old men' may represent the community in this function.

The State officials of Athens prayed for 'the health and safety of the people.' Greek State-liturgies included a 'commination service,' in which curses were invoked upon offenders.⁵ Medieval and modern Christianity combine a service of commination with the Lenten penance. This has historical connexion with the early Hebrew rite, celebrated on Ebal and Gerizim. Six tribes stood on Mount Ebal to curse those who disobeyed the Law, and six stood on Mount Gerizim to pronounce the corresponding blessings upon those who kept it. The priests and Levites stood in the valley between, and on turning their faces to Gerizim pronounced a blessing, and on turning them to Ebal pronounced a curse.⁶ The Talmudic idea that a curse has special efficacy when pronounced three hours after sunrise is noteworthy in connexion with such formulated conditions as 'in the sight of God and of this congregation.'⁷

Throughout their history, private cursing and blessing preponderate over public, and unofficial over official. As the moralized stage in religion supersedes the magical, the 'mere power of the word' is confined to private practice, and perhaps becomes more sinister with secrecy. The enormous collections of private *diræ* and *imprecations* which have survived from Greek and Roman times, chiefly in the form of leaden tablets or symbolic nails, inscribed with curses consigning an enemy to the infernal powers, testify to the hold retained by the primitive theory of the curse, just as the prevalence of profane swearing in modern civilization shows the convenience of the mere form, emptied of all content except vague resentment, for the satisfaction of a particular emotion. The hold exerted by the simple mystery of magic upon the popular imagination is echoed in literature, and the motive of the efficacious curse is still employed in narrative fiction.

Nothing perhaps more strikingly illustrates the extent of Divine resentment than the cursing of the ground for the sins of man (Gn 3⁷), or the extent of human resentment than the action of a curse beyond the grave.

The Maoris took precautions to prevent enemies from getting possession of their dead relatives' bones, lest they should 'dreadfully desecrate and ill-use them, with many bitter jeers and curses.'⁸ The Banks Islanders watch the grave 'lest some man wronged by him [the dead man] should come at night and beat with a stone upon the grave, cursing him.' Also, 'when a great man died, his friends would not make it known, lest those whom he had oppressed should come and spit at him after his death, or *gogoy* him, stand bickering at him with crooked fingers and drawing in the lips, by way of curse.'⁹ The Greek Erinyes complete in the world beyond the grave the punishment which they began on earth.¹⁰ The Arabs of Southern Morocco 'maintain that there are three classes of persons who are infallibly doomed to hell, namely, those who have been cursed by their parents, those who have been guilty of unlawful homicide, and those who have burned corn. They say that every grain curses him who burns it.'¹¹

The connexion between curses and the belief in punishments after death has been drawn out by Westermarck.¹²

In what may be called the lighter side of cursing, there is a curious set of customs connected with ideas of luck, and perhaps based on the notion that material injury may be discounted or diverted by a verbal or make-believe injury; in other cases, on a notion that the spirits may be stimulated by scolding and abuse; in others, again, it is perhaps evil and obstructive spirits that are being driven away.

Thus the Greek farmer, when sowing cummin, would curse and swear all the time, else the crop would not prosper.¹ Estonian fishermen believe that good luck will attend their fishing if beforehand they are cursed. A fisherman will accordingly play some practical joke on a friend in order to receive his resentment in words. The more he storms and curses, the better the other is pleased; every curse brings at least three fish into his net.² To obviate punishment for ritual sin, or to 'procure abolution,' a Behari man will throw stones into a neighbour's house. The result is the reception of abuse, or even of personal violence.³

4. Conditional cursing and blessing.—What Westermarck terms the 'conditional curse,' which he was the first student to remark, is an important development of the principle of cursing and blessing, and has had considerable influence in the making of morality, especially in the sphere of good faith, honesty, and truthfulness. Put in its lowest terms, the energy of a conditional curse is the supernatural energy of an ordinary curse or of its embodiment, in a latent state. This is discharged by the act, if or when it takes place, against which the curse is directed. The principle applies also to blessings, but this application is less frequent.⁴

The term *l'âr*, Westermarck writes, 'is applied by the Moors to a compulsory relation of a peculiar kind in which one person stands to another. The common expression, *Ana fâr allah u'ârak*, "I am in God's *âr* and your *âr*," implies that a man is bound to help me, or, generally, to grant my request, whatever it may be, as also that if he does not do so his own welfare is at stake. The phrase "In God's *âr*" only serves to give solemnity to the appeal: "I am under the protection of God, and for his sake you are obliged to help me." But the word *l'âr* is also used to denote the act by means of which a person places himself in the said relationship to another. *Hâd l'âr dik*, "This is *âr* on you," is the phrase in common use when an act of this kind is performed. If the person so appealed to is unwilling to grant the request, he answers, *Hâd l'âr yihraê fik*, "May this *âr* recoil upon you." The constraining character of *l'âr* is due to the fact that it implies the transference of a conditional curse:—If you do not do what I wish you to do, then may you die, or may your children die, or may some other evil happen to you. That *l'âr* implicitly contains a conditional curse is expressly stated by the people themselves, although in some cases this notion may be somewhat vague, or possibly have almost faded away.⁵

The various acts which establish *l'âr* all serve as 'outward conductors of conditional curses.' *Âr* may be made by taking the son and giving him to the father, saying, 'This is *âr* for you.' Another method is to present food. If the man accepts, he is bound to do what is asked of him. Refugees enter a tent or merely grasp the tent-pole, saying, 'I am in God's *âr* and your *âr*.'⁶ An injured husband may put *âr* upon the governor, to get redress, by going to him with a piece of his tent-cloth over his head; or he may leave seven tufts of hair on his head, and appeal to another tribe. 'The conditional curse is obviously supposed to be seated in' the tent-cloth or tufts of hair, and 'from there to be transferred to the person' invoked. *Âr* may be made by piling stones. Two men making an appointment, and one failing to appear, the other makes a cairn at the spot, and takes the breaker of faith to it. The latter is then obliged to 'give him a nice entertainment.' Similarly, with ordinary curses the cairn may be used. If a muleteer buys a new mule, his comrades ask him to treat them. If he refuses, they

⁶ *Ib.* 362.

make a cairn, asking God to send misfortune on the mule. By way of revenge upon a niggardly man, scribes make a cairn, and each takes a stone therefrom, and, as he throws it away, says: 'As we dispersed this heap of stones, so may God disperse for him that which makes him happy.' The sacrifice of an animal on the threshold is the most powerful method of making 'dr. To see the blood is sufficient. Over such an animal the *bis-millāh*, 'In the name of God,' is not pronounced; and it cannot be eaten by the sacrificer or the person invoked, but only by the poor.¹ The practice

is resorted to for a variety of purposes: to obtain pardon from the government; or to induce the relatives of a person who has been killed to abstain from taking revenge; or to secure assistance against an enemy or mediation in the case of trouble.² It 'plays a very important part in the social life of the people.'³

It is also employed to put pressure upon *jinn* and dead saints—usually to restrain the former, and compel the assistance of the latter. Making cairns, or tying rags, near a *styid* is 'dr upon the saint. The rag is knotted, and the man says: 'I promised thee an offering, and I will not release thee until thou attendest to my business.'⁴ Here we approach the conditional 'blessing.' Again, a man, invoking revenge, strews burnt corn on the floor of the *styid*, saying: 'I threw, O saint, So-and-so as I threw this corn.' 'This is 'dr on the saint,' as Westermarck points out, 'but at the same time it is an act of symbolic magic.'⁴

Forms of ordeal, and the whole theory of the oath, as well as its practice up to the latest stages of civilization, depend on the principle of the conditional curse, often embodied in symbolic action.

The curse as an engine of law is well exemplified in Samoa. A theft has taken place; the injured party pays the 'priest' to curse the thief and make him sick. If the thief falls ill, he restores the stolen property, and the 'priest' prays for a reversal of the curse. Again, suspected parties are summoned by the chief. Grass is laid on the sacred stone, the village-god, and each person places his hand thereon, saying: 'I lay hand on the stone. If I stole the thing, may I speedily die!' The use of grass is said to refer to the implied curse: 'May grass grow over my house and family!' So, in ordinary disputes, a man will say: 'Touch your eyes if what you say is true.'⁵ In the same way, European boys 'touch wood' as a guarantee of truth.

An oath may be regarded as 'essentially a conditional self-imprecation, a curse by which a person calls down upon himself some evil in the event of what he says not being true.'⁶ All the resources of symbolic magic are drawn upon in the multitudinous examples of this principle.

In Tenimber the swearer prays for his own death if what he says is false, and then drinks his own blood, in which a sword has been dipped.⁷ The Malay drinks water in which daggers, spears, or bullets have been dipped, saying: 'If I turn traitor, may I be eaten up by this dagger or spear!'⁸ The Samaritan oath is still more explicit: 'If what I now declare is truly and really so, may I be freed and cleared from my oath; if what I assert is wittingly false, may my oath be the cause of my destruction!'⁹ The Greek *ἵκος* was, at an early period, the object sworn 'by.' The Ostyaks swear on the nose of a bear, which animal is held to have supernatural power.¹⁰ Hindus swear on the Sanskrit *Harivamsha*, or on water of the Ganges, or touch the legs of a Brahman; Muhammadans, on the Qur'an; Christians, on the Bible.¹¹

The accused person in Calabar drinks a *ju-ju* drink called *mōmān*, and repeats these words: 'If I have been guilty of this crime . . . then, Mbiam, Thou deal with me!'¹² 'Eating the fetish' and 'drinking the water of cursing' are prominent forms of the ordeal in Africa and elsewhere. The Hindu *kapatha* denotes both oath and ordeal. The mediæval 'trial by combat' was preceded by an oath, and thus defeat was tantamount to perjury.¹³ The formula of the ordeal of the Eucharist ran: 'Et si alter est quam dixi et juravi, tunc hoc Domini nostri Jesu Christi corpus non pertranseat guttur meum, sed haerent in

faucibus meis, strangulet me suffocet me ac interficiat me statim in momento.'¹

In the contract and covenant a mutual conditional curse is largely used.

Thus the 'ahd of the Moors is the mutual form of 'dr. Chiefs exchange cloaks or turbans; and 'it is believed that, if any of them should break the covenant, he would be punished with some grave misfortune.'² Reconciliation is effected, among the same people, by joining right hands; the holy man who superintends wraps the hands in his cloak, saying: 'This is 'ahd between you.'³ A common meal also ratifies a covenant. If one party breaks faith, it is said: 'God and the food will repay him.'⁴ In the *pela* rite of Ceram, celebrated to settle a quarrel or to make peace, both parties attend a feast, and eat food into which drops of their blood are let fall and swords dipped. This they alternately eat.⁵ Reconciliation of two men in the islands of Leti, Moa, and Lakor, one man having cursed the other, is effected by the men eating together.⁶ To ratify a bond of fraternity in Madagascar between two parties, a fowl has its head cut off, and is left bleeding during the rite. The parties pronounce a long mutual imprecation over the blood: 'O this miserable fowl! weltering in its blood! Thy liver do we eat. . . Should either of us retract from the terms of this oath, let him instantly become a fool, let him instantly become blind, let this covenant prove a curse to him.'⁷

The mutual conditional curse, it must be noticed, allows the curse proper to be more or less lost in the material symbolism of union. Since, moreover, all these analogous principles pass into one another so inevitably and gradually, we do not seem entitled to press the principle of the curse too far. In reconciliatory ceremonies, for instance, it is possible that the idea of union is sufficient; the idea of the curse may adhere to it, but not essentially.

The oath carries with it the punishment for perjury. According to Roman legal theory, the *sanctio* of a statute is the penalty attached for breaking it. But in ancient States all laws were accompanied by a curse upon the transgressor.⁸ True to its mission of serving where other methods fail, the curse receded as police efficiency increased. In the earliest culture, however, as that of the Australians, the personal efforts of the rulers work together with the impersonal energy of the supernatural engines they employ.

5. The blessing and the curse as invocations. —The distinction between the 'magical' and the 'religious' curse or blessing is not to be over-emphasized. The two forms merge into one another, and either is as 'magical' or 'religious' as the other, while neither is the more efficacious. A god draws together in his own person the various threads of supernatural force. Among these are cursings and blessings. Their inherent mystery of power still depends on the will of the utterer. His invocation of the god to execute for him his heart's expressed desire is rather a long circuiting than a guarantee of the result. The independent force of the wish, in fact, tends to remain even when the wish is merged in prayer. The personal quality of the utterer is still the characteristic of his wish. Psychologically, it is difficult to limit a desire by making it an invocation; to divide the attention between the object of the desire and the expression of the desire on the one hand, and an intervening divinity on the other, is a matter of training. Thus it is rarely the case that, when a man says 'God bless you!' he is conscious of the reference to God, any more than when he says 'Bless you!'

Further, there is the tendency for the principle of the curse, if not of the blessing, to become itself personified. This result is found as far back as the stage of culture represented by the Maoris. The 'cursing thought' is personified in the Avesta; so is the 'pious and good blessing.' The Greeks personified the curse as Erinyes. Behind this there may be the notion 'of a persecuting ghost, whose

⁸ Schrader, *KB* ii. III.

anger or curses in later times were personified as an independent spirit.¹ Allegorical figures of curses were included by painters in pictures of the wicked in hell.² Subsequently the Erinyes became the ministers of Zeus.³ The steps by which a curse or blessing becomes an appeal to a god, a prayer that he will injure or benefit the person intended, are not indistinct. The Melanesian curses in the name of a *lio'a*, a powerful spirit. His connexion with the *lio'a* gives or adds efficacy to his curse.⁴ The efficacy of the mere word naturally is increased, not by the will of the spirit invoked, but by the use of his power. The Talmud and the OT supply examples of 'the ancient idea that the name of the Lord might be used with advantage in any curse.'⁵ Among the Hebrews the 'Name' had peculiar importance. In the next place, the appeal may take the form of a conditional blessing upon the god. In the Yajur Veda we read the formula, addressed to Sūrya: 'Smite such a one, and I will give you an offering.'⁶ This method is clearly more efficacious. *Vagana* in the Banks Islands is the most serious of curses. It consists in procuring the *intervention* of a supernatural power.⁷ The story of Balaam (Nu 22-24) includes a belief that the Divine power can be moved to effect the injury desired. A further step is taken when the moving is in the form of compulsion. As curses may develop into prayers, so prayers may develop into spells or curses. *Brahma* is the energy of the gods, but it is also the prayer, and 'governs them.'⁸ *āpa* is both 'prayer' and 'curse'; so is the Manx word *guee*.⁹ Prayer is often possessed of magical power, just as a Toda spell is in the form of a prayer.¹⁰ Even in Greek religion the deity is constrained to effect a curse or a blessing;¹¹ even the personified curse, the Erinyes, works by a spell-song which binds the victim.¹² Thus the phrases, 'by,' 'for the sake of,' and the like, are but vague expressions of the actual relation between the invoker and the invoked.

In the Banks Islands, cursing by way of asseveration is described in English terms as swearing 'by' a forbidden food, or 'by' some powerful *tindalo*.¹³ The Toda *palol* prays with a gurgling utterance in the throat: 'May it be well' or 'May it be blessed . . . with the buffaloes and calves; may there be no disease; . . . may clouds rise, may grass flourish, may water spring . . . for the sake of' certain 'objects of reverence.' This term, *idāth*, is used in special connexion with the name of a god, and involves the idea of supplication; it is also employed in sorcery.¹⁴

A modern Christian prayer for a blessing 'for Christ's sake' is thus widely different, in the condition appended, from the Toda or Melanesian type. Magic, so to say, has given place to emotion, though itself originating in emotion, of another kind.

6. Connexion with morality.—Law gradually takes over the function of the curse, as a form of retribution; while prayer may still retain its use in cases where human intervention fails, or even as a spiritual replica of human intervention. The moralizing of the curse and the blessing within these limits follows the course of ethical evolution. In the OT the undeserved curse has no effect, or may be turned by God into a blessing.¹⁵ The justice of the wish is left to the decision of God; while it follows that an unjust curse or blessing is a sin against the All-Just. The Greeks modified their theory of the hereditary transmission of a curse by arguing that each generation

commits new sins.¹ At one end of the process we have an invocation to the gods, as in the *Surpu* of the Chaldeans, asking for relief from the effects of a curse, not for forgiveness;² or 'the thief invokes God while he breaks into the house,' the bandit the Virgin.³ At the other, the god rewards or punishes independently of human invocation, and with absolute justice. According to Aquinas,⁴ a *maledictio* is efficacious only when made by God. In the mouth of man, however uttered or however deserved, it is *per se* inefficacious. But, when this stage is reached, cursing or blessing has become a contradiction in terms.

LITERATURE.—The literature has been given fully in the footnotes.

A. E. CRAWLEY.

CUSTOM.—In the course of his discussion on 'Custom and the Moral Life,' Wundt writes as follows (*Ethics*, Eng. tr., i. 131 f., 151: for an unfavourable criticism, see Ladd, *Philosophy of Conduct*, New York, 1902, p. 27 f.):

'A custom is any norm of *voluntary* action that has been developed in a national or tribal community. However rigorously individual conduct may be prescribed by custom, one is still left free to obey or disobey, as one chooses. . . . And it is custom, too, that transfers the principle of freedom, which in the animal consciousness does not extend beyond the realm of habit, to the general consciousness of society. . . . In custom the settled habits of the human race and of its subdivisions still retain the character of consciously operative motives. Instinct is habitual conduct that has become *mechanical*; custom, habitual conduct that has become *generic*. . . . It is true that custom finds its own means of compulsion. But these, like custom itself, are never of the *obligatory* kind. They consist neither in subjective commandments like the moral laws, nor in objective menaces like the laws of the state.'

Custom is closely connected both with habit and with usage, the distinction of each from the other being thus well set forth by Wundt (*op. cit.* p. 150 f.):

'Habit covers all and every form of voluntary action that, for whatever reason, we have made our own. . . . Habit is an individual rule of conduct.'¹ If the acts of the individual accord with the habitual action of the community to which he belongs, habit becomes *usage*. . . . Custom forms a smaller circle within this general field of usage. Custom is habit: it is marked by the regular recurrence of voluntary actions. Custom is usage: it is always the custom of some community. But it has, further, what usage lacks—a *normative* character. Conformity to custom is not, like conformity to usage, a matter of individual choice; custom has the sanction of a *moral* constraint, which the individual cannot disregard without personal disadvantage. . . . While, therefore, individual habit is left absolutely and entirely to choice, provided only that it does not conflict with the more comprehensive rules of social conduct, usage exercises a *practical* compulsion through the example that it sets, and custom raises this compulsion to the dignity of a constraining norm.'

On the other hand, custom, with its social basis, tends to become habit in the individual, producing, it may be, an impression of oddity when he moves in a circle where the custom is different, so that in countless cases custom and habit may stand in sharp antithesis. But if custom, in the main, produces habit, habit in its turn, if the individual possessing it, whether as a result of previous environment or in virtue of personal idiosyncrasy, be strong enough to impress his own particular habit on his fellows, may influence custom, or even give rise to a new custom of greater or less extent (for some interesting specific instances, see *JE* iv. 396; e.g. 'it was the custom of R. Judah b. Illai to bathe his face, hands, and feet in warm water before Sabbath began. This also was adopted by the Jewish community'). This, by the very nature of every social organism, is comparatively rare, and, if custom is thus to arise, it must meet a real, even though perhaps hitherto unfelt, need of society, either in whole or in part. Otherwise we have, not custom in its true sense, but the mere

⁵ If, then, 'custom' is used of individual habit, as in EV of Lk 4¹⁶ (where Gr. has *τὸ εἰσέρχαι αὐτῶν*), it is, strictly speaking, inaccurate.

evanescent 'fashion' or 'vogue.' For custom is concerned with the constant need of a society, and is

'subject to change only with change in conditions of life or theories of living; and, as this change is reflected in the forms of custom, custom is as truly a picture of the moral consciousness of the community as a man's habits are the expression of his individual character. Habits can constantly be formed anew, because new individuals, whose habits they are, are constantly coming into existence. But custom, national habit, endures while the nation endures' (Wundt, *op. cit.* p. 164).

We have seen that custom and habit are mutually interactive. Under conditions now prevailing, even amongst primitive peoples, custom is by far the more potent factor, and yet it would seem that this was not always the case. There must have been a time when no form of organized society existed, and when men were so widely scattered because of the fewness of their numbers that individualism must have prevailed far more than it now does. Then it was that habit, not custom, was the dominant factor; and it would seem that, as individual habit met individual habit, each modifying and being modified by the other, the composite resultant was crystallized as custom; while custom meeting with custom—perhaps even affected now and again by the individual habit of some specially strong individuality—was in its turn blended into an amalgam of custom of wider scope and influence, until at last there was evolved one of the great determinants of society as a whole.¹ At the same time it must be borne in mind that such a reconstruction is entirely hypothetical and incapable of historical proof. Custom is already existent at the earliest historical time and in the most primitive modern social conditions of which we have any knowledge, and, in view of the fact that all members of any primitive society are, and doubtless always were, on approximately the same mental scale, it would seem that, as Wundt says (*op. cit.* p. 161),

one man may contribute one thing to a custom, and another another; but the custom as a whole is a common creation, which cannot be analyzed into individual elements, for the simple reason that the various individual factors are all operative at one and the same time, and that it is consequently impossible for the individual to separate his own particular contribution from the contributions made by others' (cf. Wundt's criticism of this entire scheme of reconstruction, p. 159 ff., summarized thus [p. 164]: 'Custom has, so far as we know, but one course of development, and that is from preceding customs of kindred contents. Usage, fashion, and habits, on the other hand, constitute a mixed medley of new forms and relics of a long dead past. Transformation and new formation are here often enough difficult of discrimination; but there is no such thing as an entirely new custom').

To primitive man, however, the problem of the origin of custom seldom arises. For him it is enough that such and such a custom exists; and his sole explanation, if one be sought from him, is that, as the Kafirs say (Leslie, *Among the Zulus and Amatongas*, Edin. 1875, p. 146), 'it was so done by my fathers,' or, as the Narrinyeri have it, that it was so commanded by Narundere, the 'All-father' (Taplin, in Woods, *Nat. Tribes of S. Australia*, Adelaide, 1879, p. 55). In this connexion it must not be forgotten that a custom may persist after its original cause has ceased to be operative, and that in such a case it may have an entirely different reason and motive assigned it (cf. Wundt, *op. cit.* p. 139 ff.). At the same time, for specially important or striking customs, or for particularly remarkable natural phenomena, ætiological myths may be invented with the most honest intentions imaginable, so that custom comes to be one of the factors, as Lang well points out in his *Custom and Myth*, in the genesis of the myth.

In view of the homogeneity and lack of sharp distinction which characterize the more primitive

stages of the human race, custom may be said there to permeate and to control well-nigh every phase of man's mental and moral activity; and, although impaired in part by the rise (or is it rather the recrudescence?) of individualism, it still exercises this potent power to a very great extent over the most highly civilized peoples. In the domain of religion it is custom which has largely influenced ritual and been in part responsible for the rise of myth; it is custom, in the last resort, that is the chief factor in the evolution of law, which, to primitive man, is inextricably interwoven with, and inseparable from, religion; custom conditions the entire existence of almost every individual, even in the most highly civilized communities, from the hour of his birth to that of his death. Indeed, the most daring radicalism and the most pronounced individualism have their own customs; for without custom there can be no type of human thought or of human activity.

Such being the case, it is but natural that in the earlier stages of civilization custom should be held to be Divinely sanctioned, and that any breach of it should of itself constitute a serious crime, so that the Khonds of India, the Kamchatkans, and the pagan Greenlanders hold the breaking of an old custom to be one of the greatest of sins (Hopkins, *Religions of India*, London, 1895, p. 531; Steller, *Beschreibung von dem Lande Kamtschatka*, Frankfurt, 1774, p. 274; Rink, *Tales and Traditions of the Eskimo*, London, 1875, p. 201 f.); while violation of custom provokes the wrath of the deified ancestors amongst the Basuto (Casalis, *Basutos*, London, 1861, p. 254); disaster and harm follow such infringement amongst the Ewe and Aleuts (Ellis, *Ewe-speaking Peoples*, London, 1890, p. 263; Elliot, *Religions of India and the Seal Islands*, New York, 1886, p. 170); and the Ainu, in such an event, fear the wrath of the gods (Batchelor, *Ainu of Japan*, London, 1892, p. 243 f.). Whether, however, Wundt is right in saying (*op. cit.* p. 134) that 'custom was at first an act of worship,' seems open to question.

With the evolution of a specific concept of law, a distinction may be drawn between law and custom, as when Plautus (*Trin.* 1033, 1037) makes Stasimus say:

'Ambitio iam more sanctaest, liberaest a legibus, . . .'

Mores leges perduxerunt iam in potestatem suam';

and a few lines further on he utters the profound truth, valid even when taken in the cynical spirit of its speaker:

'Leges mori serviunt!'

a phrase which, like the Talmudic maxim, 'Custom always precedes law' (*Soferim*, xiv. 18), might well serve as the motto for almost any treatise on the origin of law; while in like manner Justinian expressly says that 'long prevailing customs, being sanctioned by the consent of those who use them, assume the nature of laws' (*Instit.* i. ii. 9).

When it becomes possible to draw such a distinction between custom and law, infringement of the former, unless distinctly coincident with and protected by law, no longer constitutes an offence of which legal cognizance must be taken, although even so advanced a code as the Jerusalem Talmud (*Pesahim*, iv. 3) authorized the courts to punish transgressors of custom equally with transgressors of law—a survival of some such stage as that of the African Wanika, amongst whom, 'if a man dares to improve the style of his hut, to make a larger doorway than is customary; if he should wear a finer or different style of dress to that of his

¹ The strictly legal distinction between *lex*, *mos*, and *consuetudo* is thus summarized by Isidore of Seville (*Etymol.* v. iii. 21):

'Lex est constitutio scripta. Mos est vetustate probata consuetudo, sive lex non scripta. . . . Consuetudo autem est in quodam moribus institutum, quod pro lege suscipitur, cum deficit lex; nec differt scriptura an ratione consistat quando et legem ratio commendat.'

¹ The theory of Herbert Spencer (*Principles of Sociology* 3, 1893, §§ 529, 693), that custom originated in ancestor-worship, is too biased and one-sided to deserve serious consideration.

fellows, he is instantly fined' (C. New, *Life, Wanderings, and Labours in E. Africa*, London, 1873, p. 110). Yet this failure of modern law normally to give legal protection to custom does not mean that non-observance of custom, whether such infringement be careless, indifferent, unwitting, compulsory, or deliberately intentional, goes scot-free. Any such violation may, and often does, lead to social ostracism of greater or less extent, even when the infringed custom in question may be ethically indifferent.

And yet, the separation between custom and law is by no means complete, even from the legal point of view; for it is custom, as is well known, that forms the basis of the vast body of common law in England, whence it was adopted in N. America.¹ Into the details of the common law distinctions between general and particular customs—the latter category applying only to particular districts or to those engaged in particular occupations, and not recognized, except in a few States, by the common law of the United States—it is unnecessary to enter here. Suffice it to say that a custom, to be enforceable at common law, must be both definite and reasonable, and that it must have been used uninterruptedly and undisputedly 'so long that the memory of man runneth not to the contrary,' this latter phrase being understood to mean from the accession of Richard I. in 1189 (whence the rejection of particular customs in the United States, since none such could there possibly date from such 'time immemorial').

Law, being normally derived from custom, is for the most part in harmony with it; so that in practically every affair of everyday life one avoids all conflict with law if one simply follows custom. At the same time, just as custom may be in sharp contrast with habit, such may be its relation to law. In this case the law in question—whether as being due to the caprice of the ruler or to the more advanced ideas of the governing classes—is not, as is usually the state of affairs, derived from custom, but from the weaker source of individual, class, or other minority requirements. Under these conditions law usually succumbs to custom and remains a dead letter, so that, for instance, 'under the Hindu system of law, clear proof of usage will outweigh the written text of the law' (Mayne, *Treatise on Hindu Law and Usage*, Madras, 1878, p. 41); while the Roman jurists (*Instit.* I. ii. 11; *Digesta*, I. iii. 32) laid down the maxim that a law may be abrogated by desuetude or by contrary usage. Nay, law being even more conservative than custom, the change of custom may be such that a law—even one which initially may have been far in advance of custom—may come to be so much behind and below the altered custom that it is resolved, for this very reason, into a mere dead letter, and must either fall into oblivion or be amended to meet the changed conditions of the social organism. In general it may be postulated that no law can be enforced against the prevailing custom; even chiefs and kings, with the apparently despotic powers that attach to them in primitive society, prove unequal to the task (cf. the examples quoted by Westermarck, *MI* i. 162); and the lamentable failure of many laws designed for the highest benefit to society and drafted by men of unimpeachable ethical character proves—were proof necessary—that custom is really supreme over law in the highest as well as in the lowest stages of civilization.

As has already been noted, custom is subject to the most complete transformations, both in motive and in manifestation. Before the average man has

¹ A similar system of common law formerly prevailed in France, as in the custom of Normandy, of Paris, etc., and the same was true of Germany almost until the close of the Middle Ages.

read many pages of a book dealing, say, with the peoples of Africa or of Polynesia, he will find mention of customs that seem to him ridiculous, disgusting, or immoral—all of which judgments, from the point of view of his own civilization, may be perfectly true. And yet, in the words of Wundt (*op. cit.* p. 264),

'the moral value of the personality is relative; it varies with the stage of development to which moral ideas have attained. . . . Judgment of the moral value, whether of the individual or of society, depends not upon the absolute value of their disposition and action, but upon the relation of these to the stage of moral evolution already achieved.'

It is doubtful whether any custom whatever, no matter how repugnant to our present æsthetic or moral sense it may be, can ever have arisen without some reason which—immoral or foolish though such reason may seem to us—commended itself to the people adopting it as subserving some highly desirable social end. Thus, the killing of an aged parent is rightly a crime of unmitigated turpitude to us, yet from the point of view of many primitive peoples (see artt. ABANDONMENT AND EXPOSURE and OLD AGE; cf. also Westermarck, *op. cit.* p. 386 ff.) there is much to be said in its favour; and in many other cases what seems to us a most immoral act is really due to sentiments which we can only regard as praiseworthy and, in the best sense of the term, as moral. On the other hand, there are to be found amongst every people, side by side with customs regarded as moral (i.e. commending themselves to the best ethical judgment of the highest thinkers of the people in question), customs deemed immoral—in other words, detrimental to the best interests of the society under consideration. All this merely means that, as society develops to a higher and higher ethical stage, customs once justified by specific conditions then existing have no longer such justification, so that they survive only by force of inertia or as pandering to the baser side and the lower strata of a society which, as a whole, has taken a marked step in advance.

Midway between the moral and the immoral custom stands what we may call the *unmoral* or indifferent custom—one whose observance or non-observance is a matter of ethical unconcern and indifference; but it must be noted that the unmoral custom is likely, in course of time, to be regarded as immoral or wrong (although, of course, the reverse frequently happens, so that the custom once held to be unmoral and indifferent evolves into a custom deemed moral and ethically imperative). In point of fact, most unmoral customs have doubtless passed through the moral stage; but custom *qua* custom is, like law, neither moral, immoral, nor unmoral. Nor should it be forgotten that a custom once held to be moral may come to be viewed as unmoral or even immoral, and that still later, with further changes in the status of society, such a custom may again develop, usually through the unmoral stage, into a moral rule. But, though the ultimate basis of every custom is moral and religious, a custom once firmly established tends to become more and more divorced from true ethical and religious considerations and questions, until at last even those most strenuously adhering to a custom may be, as has already been noted, entirely unaware of its real provenance.

A custom almost universally regarded as moral by a given society may be held by some of its members to be immoral, or at best indifferent. Here, as in the case of law, there emerges a marked characteristic of all custom, when once it has gained sway. This characteristic is thus summarized by Westermarck (*op. cit.* p. 160):

'Custom regulates external conduct only. It tolerates all kinds of volitions and opinions if not openly expressed. It does not condemn the heretical mind, but the heretical act. It demands that under certain circumstances certain actions

shall be either performed or omitted, and provided that this demand is fulfilled, it takes no notice of the motive of the agent or ommitter. Again, in case the course of conduct prescribed by custom is not observed, the mental facts connected with the transgression, if regarded at all, are dealt with in a rough and ready manner, according to general rules which hardly admit of individualisation.

This brings up the difficult problem of how far one ought to conform to a custom which he deems not merely unmoral and indifferent, but immoral and wrong. To an indifferent custom no one, unless he be finically hyper-ethical or—as is here more usually the case—wantonly iconoclastic (*i.e.* delighting in flouting custom as custom), should object to accord obedience, at least externally, if for no other reason than merely to avoid disturbing social amenities or to avert unfavourable comment on the score of oddity and ‘crankiness.’ ‘If,’ writes the great Apostle of the Gentiles, ‘meat maketh my brother to stumble, I will eat no flesh for evermore, that I make not my brother to stumble’ (1 Co 8¹³; cf. St. Paul’s admirable discussion of the entire question of the unmoral custom in Ro 14). The case is far different, of course, with regard to customs that are felt to be positively immoral and wrong. This question is more fully discussed in art. CONFORMITY. Here it may be sufficient to point out that the presumption is always that any custom is felt to be moral by the community or social organism within which it prevails. The ‘burden of proof’ must rest on him who ignores or wilfully violates the custom in question. In any final judgment as to obedience or disobedience to a custom, account must be taken of the history and meaning of the particular custom under consideration, and there must be full appreciation of the ethical implications of compliance with or violation of the custom as regards the moral effect of such action both upon self and upon others. Above all, the individual, if he is to be sane in his judgment, must be constantly on his guard against personal idiosyncrasies and the excessive individualism of modern times—the ‘right of private judgment’ run mad.

Law*, ii. iii., London, 1900; Baudouin, *De consuetudine in iure canonico*, Louvain, 1888; Fanning, ‘Custom,’ in *Cath. Encyc.* iv. 576 f.

LOUIS H. GRAY.

CUSTOM (Hindu).—The Sanskrit word is *āchāra*, ‘religious custom,’ ‘established usage.’ The binding force of custom is fully recognized in the Sanskrit lawbooks. Thus it is stated in the Code of Manu (i. 108) that *āchāra* is transcendent law, and that, therefore, a twice-born (*i.e.* high-caste) man should always be careful to follow it. The whole body of the sacred law (*dharma*), according to a favourite scheme, is divided into the three parts—*āchāra* (rules of conduct), *vyavahāra* (rules of government and judicature), and *prāyascchitta* (penance and expiation). The well-known Code of Yājñavalkya comprises the following subjects under the head of *āchāra*: purificatory rites (*śaṃskāra*); rules of conduct for young students of the Veda; marriage and duties of women; the four principal classes and the mixed castes; duties of a Brāhman householder; miscellaneous rules for one who has completed his period of studentship; rules of lawful and forbidden diet; religious purification of things; *śrāddhas*, or oblations to the manes; worship of the deity Ganapati; propitiatory rites for planets; duties of a king. See DHARMA and LAW (Hindu).

CUSTOM (Muslim).—See LAW (Muslim).

CUTTING.—See MUTILATION.

CYBELE (Κυβέλη).—The great Mother Deity of the Phrygians, known also, and especially in the cult language of the Romans, as the Great Mother of the Gods, or the Great Idaean Mother of the Gods (*Magna Deum Mater*, *Mater Deum Magna Idaea*). Her worship had its origin in Asia Minor in pre-historic times, possibly prior to the advent of the Phrygians, which is placed at about 900 B.C.; became prominent in early historic times in Galatia, Lydia, and Phrygia, where the various forms of the Cybele legend agree in localizing the origin of her cult; and was most strongly centralized in Phrygia. Its most sacred seat in the East was at Pessinus, a Galatian city near the borders of Phrygia, but once a part of the great Phrygian Empire, where the symbol of the goddess, a small meteoric stone, was preserved. From Asia Minor the cult spread to Thrace and the islands, and finally to Greece, though it never became popular there owing to its un-Hellenic nature. In 204 B.C., in response to an oracle to the effect that Hannibal could be driven from Italy if the Idaean Mother were brought from Pessinus, the sacred stone was transferred to Rome, and the cult was adopted by the State and located on the Palatine (Livy, xxix. 10-14). It first became of great importance in the Roman world under the Empire, when it spread from Rome as a centre to all the provinces. Like the cults of Mithra and Isis, it was one of the most obstinate antagonists of Christianity, and disappeared only after the long struggle between the two religions which culminated in the victory of Theodosius over Eugenius in A.D. 394.

As the cult of Cybele probably suffered little modification in Greece and Italy, the original character of the goddess may be inferred from what is known of her in Greek and Roman times. She was identified by the Greeks with Rhea, Ge, and Demeter, and by the Romans with Tellus, Ceres, Ops, and Maia. She was known as the universal mother—of gods and men, as well as of the lower creation—though her character as the mother of wild Nature was especially prominent, as was manifested by the orgiastic wildness of her worship, her sanctuaries on the wooded mountains, and her fondness for lions, which are frequently associated with her in art and literature. Her early attendants in legend, the *Korymbantes*, Idaean *Daktyloi*, and sometimes *Kuretes*, were wild demonic beings, probably ithyphallic (Georg Kaibel, *GGN*, 1901, p. 488 ff.).

The priests of Cybele in historic times were eunuchs called *Galloi*, who first appear in Alexandrian literature about the 3rd cent. B.C. Clad in female garb, they wore their hair long and fragrant with ointment, and celebrated rites to the accompaniment of flutes, cymbals, tambourines, and castanets, yelling and dancing themselves into a frenzy until their excitement culminated in self-scourging, self-laceration, and exhaustion. Their consecration to the service of the goddess sometimes consisted in self-emasculation. Priestesses also took part in the cult.

Like Venus and Adonis, Isis and Osiris, etc., Cybele and Attis were usually associated in worship, and formed a duality symbolizing the relations of Mother Earth to her fruitage. The birth, growth, self-castration, and death of Attis, the son and lover of Cybele, signified the springing, growth, and death of plant life (see ATTIS). A celebration corresponding to the annual spring festival at Rome, which extended over the period March 15-27, thus including the equinox, consisted in a kind of sacred drama of Cybele and Attis, and no doubt existed in Phrygia also.

Cybele usually appears in art seated on a throne, draped, with mural crown and veil, accompanied by lions. The tympanum, cymbals, patera, sceptre, garlands, and fruits, and Attis with his attributes, the Phrygian cap, pedom, syrinx, and the pine, also appear with her. The so-called Niobe on Mount Sipylus is a Cybele, and the Cybele of Formia, now in Copenhagen, is one of the best sculptural representations of her. She inspired no piece of art of the first class. In literature no important work except *Catullus* lxiii. is devoted to her, though she is frequently mentioned in the literature of the Empire. Her religious importance lay in her mysticism and in the closeness of her contact with the common people, and was very great in spite of the gross practices which grew up around her cult.

LITERATURE.—See references under artt. GREAT MOTHER and ATTIS. GRANT SHOWERMAN.

CYCLE.—See CALENDAR, ARTHUR, CUCHULAINN CYCLE, etc.

CYCLOPS.—See GIANTS.

CYNICS.—The name is derived from κύων, 'dog,' with which it was connected in several ways. (a) To the east of Athens, beyond the Diomean gate, on a spur of Lycabettus, was a gymnasium known as the *Cynosarges*. Unlike the Academy and Lyceum (schools for youth of free Athenian parentage), it was provided for children of mixed blood. Antisthenes, son of an Athenian of this name by a Thracian slave woman, taught his disciples here after the death of Socrates, his second master. *Κυνόσαργες* is compounded of κύων and ἀργός, lit. 'white dog.' The story ran that the gymnasium stood on or near the site of an ancient sanctuary of Hercules (the Cynic tutelary, cf. Wilamowitz-Möllendorf, *Euripides' Herakles*², Berlin, 1885, i. 102 f., 130), and that, on the first occasion of sacrifice to the hero, a dog rushed in and seized a portion of the offering. The designation refers, possibly, not to the colour of the dog, but to the flash-like effect of its speed upon the spectator. (b) The epithet 'dog' was soon adopted by Cynic teachers—Antisthenes, the 'downright dog,' Diogenes, the 'royal dog'—doubtless as a symbol of their return to the 'simplicity' of animal nature and habits, or of endurance and hardihood (cf. Plato, *Rep.* ii. 375 f., v. 415 f.); it was also applied to them by their opponents for less flattering reasons, connected with displays of audacity, coarseness, and immodesty (cf. Winckelmann, *Antisth. Frag.*, 1842, p. 8 f.). (c) Eventually the epithet became so associated with the sect in the popular mind that the Corinthians placed a marble dog upon the pillar erected by them over the grave of Diogenes.

1. History.—(a) *Personal*.—The Cynics flourished prosperously for about a century after the death of Socrates (399–299 B.C.). As their teaching contemplated a way of life rather than a philosophical system, and as their works are lost, or known only in fragments and by late reports at second-hand, we are not informed in detail about the history of the sect. Indeed, Antisthenes, Diogenes, and Crates excepted, many representatives are little more than names to us.

Antisthenes of Athens (c. 444–374 B.C.), at first a pupil of Gorgias the Sophist, and a 'late learner' (cf. Plato, *Soph.* 251) with Socrates,—Plato implies one too old to learn,—founded the movement. Diogenes of Sinope (c. 412–323) was his most notable, notorious, and popular follower. He appears to have won many disciples, probably at Corinth principally, where he was sold as a slave to Xenades, whose sons he taught. Among them were Monimus, a slave from Syracuse, an admirer of Crates; Onesicritus of Ægina (fl. c. 327), an officer who went to Hindustan with Alexander the Great, and interested himself in a comparative study of the Indian Gymnosophists and the Cynics (cf. G. Grote, *Plato and the Other Companions of*

*Socrates*², 1885, i. 158 f.); his sons, Philiscus and Androsthenes, Menander Drymus, and Hegesæus Clocus of Sinope. More distinguished associates, eminent for other reasons than their mere connexion with Cynicism, were, possibly, Phocion the 'Good' (c. 402–317), the Athenian statesman whom Demosthenes feared, Anaximenes the rhetorician, and, certainly, Stilpo (fl. c. 310), the influential Megarian (see MEGARIANS), whose combination of Cynic moralism with genuine devotion to metaphysics paved the way for Stoicism (q.v.). Finally, we have Crates of Thebes (fl. c. 320), the third leader of the Cynics, who, unlike his predecessor, was a man of some position and wealth. Perhaps Bryson, the Achean, taught him (cf. Diog. Laert. vi. 85). Crates counted among his followers his wife Hipparchia of Maronea, a woman of good family, whose incurable infatuation for the wandering philosopher overcame the opposition of her parents to the unpropitious union; her brother, Metrocles, whose social standing seems to have lent him weight; and his initiates, Theomentus, Cleomenes, Demetrius of Alexandria, Timarchus of Alexandria, Menippus of Sinope (fl. c. 273), a satirist who influenced Varro (82–37), the Roman poet (see NEO-CYNICS); and Meleager of Gadara (cf. Diog. Laert. vi. 99), who may be classed with Menippus. The Ephesian Ecchelus was also of the Crates-Metrocles circle, and he taught Menedemus, a furious ranter, once the pupil of the Epicurean Colotes of Lampascus; Menedemus seems to have been the last of the regular Cynic succession. Thrasyllus (c. 306) is reported as a Cynic acquaintance of Antigonus Cyclops (cf. Plutarch, *de Vitio. Pud.* 631 [ed. Bernardakis, vol. iii. p. 576]; *Rep. et imp. apoph.*; *Ant.* 182 [15] [ed. Bernardakis, vol. ii. p. 23]). Diodorus of Aspendus (fl. c. 300), a belated Pythagorean, who adopted Cynic asceticism, may be placed on the fringes of the sect; he is said to have conventionalized the garb of the mendicant Cynic. Theodorus of Cyrene (fl. c. 300), called the 'atheist,' emphasized the 'theological' radicalism of the later Cynics, while Sodates may have represented the movement under one of the earlier Ptolemys (322–247). Later we find his pupil, the facile witty exhorter, Bion of Borysthenes in Pamphylia (fl. c. 250), who boxed the compass of the rival schools, and furnished ammunition to Horace (cf. R. Heinze, *de Horatio Bionis imitatore*, Bonn, 1889); and Teles (fl. c. 250), the Cynic-Stoic contemporary of Chrysippus, a spouter of hortatory harangues on *ἀδελφότητα* (cf. Wilamowitz-Möllendorf, *Philol. Untersuch.* iv. [1882] 292 f.).

Running over the names, one is compelled to notice the large proportion of Cynics who came from the outskirts of Hellenic culture—Pontus, Thrace, Syria, Pamphylia, Egypt, for example; they were not nurtured in the pure Greek tradition. By the time of Menippus, the Syrian satirist (c. 280–65 B.C.), Cynicism had gone to seed in mere antinomianism and quixotry; not seldom, perhaps, in even less reputable manifestations. Its significant doctrines passed over into Stoicism through Zeno of Citium (336–264), the pupil of Crates; even the attempt of Aristo of Chios (fl. c. 260), Zeno's disciple, to revive the Cynic contempt for science and liberal culture within Stoicism failed, although he taught his famous pupil, Eratosthenes of Cyrene and Alexandria (276–196), the cosmopolitan humanitarianism of Diogenes. No doubt, Cynicism survived sporadically, almost as a 'mendicant order' in all likelihood,—often of sorry scoundrels,—till its re-appearance, in Roman Imperial times (cf. J. Bernays, *Lukian u. d. Kyniker*, Berlin, 1879), with Demetrius, the contemporary of Seneca, and others (see NEO-CYNICS). But its essential contribution had been absorbed into Stoicism, which always retained traces of Cynic tendencies, as may be noted even so late as Epictetus (cf. *Diss.* iii. 19–22; R. D. Hicks, *Stoic and Epicurean*, London, 1910, p. 95 f.).

(b) *Socio-philosophical origins*.—Greek reflexion originated in the desire to know for the sake of knowledge; and, in this sense, philosophy became a life. Thus, the problems of knowledge and of conduct never lay far apart. But, as aspects of one whole, they struggled for mastery, with varying fortune. The Cynics represent an extreme phase, in which science and culture had ceased to be held as of any value that was not pragmatic, and 'philosophy' had been reduced to the most beggarly elements of paradoxical utilitarian practice. This issue was one natural result of the historical antecedents of the Greek municipal societies, and of the reaction upon their conventions after the displacements due to the Persian war

(490-45 B.C.). The difficulty was to adjust the *πολιτεία* to empire, the particularism of the Greek citizen to the universalism of mankind; and it took shape in the lengthy controversy about νόμος and φύσις (see CASUSTRY), in which the Cynics played the most partisan rôle (cf. Dewey-Tufts, *Ethics*, 1908, pt. I. ch. vii.). Very briefly, the development of the Hellenic municipal societies had been as follows. The corporate family was an outgrowth of ancient religion, and appealed to religious sanctions (cf. Solon, frag. 12). Thus, domestic law and the rule of the family-group were integral parts of the 'Divine favouring fate' within a man (cf. Pindar, *Ol.* ii. 94, ix. 28, 100, 110, xiii. 13; *Nem.* vii. 30, viii. 35). The wider civic law and municipal government were evolved gradually on this basis (cf. Fustel de Coulanges, *La Cité antique*¹⁴, Paris, 1895, bk. iii. ch. xviii.; bk. v. ch. i.). Local customs, conventions, and laws thus acquired great authority, and overflowed private life to such an extent that it hardly existed in the modern sense. The State claimed the citizen's time, intelligence, service,—his whole life even,—in return for the inestimable advantages bestowed, inestimable because only when endowed with them could a man enjoy a worthy human career (cf. S. H. Butcher, *Some Aspects of the Greek Genius*¹⁵, 1904, p. 47 f.). Accordingly, individual independence did not flourish—the man had not emerged from the citizen. So the opposition between old norms and new experiences remained latent, more or less, till the Sophists (*q.v.*) broached it with their pupils, and Aristophanes and Euripides, each in his characteristic way, ventilated it before the public at large. The theoretical side of the controversy most probably reached the Cynics through the influence of Gorgias upon Antisthenes; the practical or social deductions through Socrates, to whom, in his last years, Antisthenes resorted. But the Cynics were 'imperfect' Socratics, who interpreted the Athenian sage in a fashion of their own, and it must be confessed that Socratic 'irony' and contemporary socio-political changes gave colour to their anarchism.

The social conditions are perplexing, because they oscillated in a twofold movement. On the one hand, and *negatively*, the decay of age-old beliefs (cf. Aristophanes, *Nub.* 396 f., 1060 f., 1420 f.; Plato, *Rep.* ii. 358-65) sapped confidence in the adequacy of national institutions. Could the State justify its pervasive interference with the individual, by rendering sufficient return? This question—its terms becoming clearer gradually—provoked inquiry; the sequel was reflective ethics. And, as reflexion bodes search for a stable principle, the possibility that this had not been found was implied. Hence a critical movement in theory. The Peloponnesian War (431-405) forced similar issues upon the average man in daily life (cf. Thucyd. iii. 40-44, 82, v. 89). The generous assurance of high vocation that nurtured Pindar, Themistocles, Aeschylus, Sophocles, Pericles, and, as a glorious consummation, Plato, beat feebler and feebler. On the other hand, and *positively*, new men broke into the ancient State, bringing new associations. Traditional civic usages bore less meaning for them, because they did not share the compensation to the full. Necessarily, they felt other aspirations, and gravitated towards other standards. The straits of war drove the rural population upon Athens, just as, during prosperous peace, strangers had flocked to her gates. Inaction and demoralization bred a proletariat, neither citizen nor slave, which strained the ordinary resources of government. In addition, the many-rebellious instances of individual development, the glory of the Periclean epoch, set a potent example. And the energies and personalized

aims here manifested had to find fresh channels. Pericles could say: 'We [Athenians] alone regard a man who takes no interest in public affairs, not as a harmless, but as a useless, member of society' (Thucyd. ii. 40). But, political autonomy shrunk or gone, this socialized unity lost its power to charm. Accordingly, what more natural than that 'social reform' should attract many? What more natural than that they should concentrate upon the personal ideal, *αὐτάρκεια* (cf. Gomperz, *Gr. Denker*, 1903 [Eng. tr. 1905], vol. ii. bk. iv. chs. i.-iii.)? 'The honest man is Nature's noble' (Eurip. frag. 336). But, what may 'honest' mean? The Cynics were to extract their answer from Socrates (*q.v.*).

Plato makes Socrates speak as follows, in his famous speech of defence:

'If you say to me, "Socrates, this time . . . we will let you off, but upon one condition, that you are not to inquire and speculate in this way any more." . . . I should reply: "Men of Athens, I honour and love you; but I shall obey God rather than you, and, while I have life and strength, I shall never cease from the practice and teaching of philosophy, exhorting any one whom I meet after my manner, and convincing him, saying: "O my friend, why do you, who are a citizen of the great and mighty and wise city of Athens, care so much about laying up the greatest amount of money and honour and reputation, and so little about wisdom and truth and the greatest improvement of the soul, which you never regard or heed at all? Are you not ashamed of this?"' (Apol. 29).

This represents the Socratic spirit admirably. But Socrates left no methodical system, nor did he prescribe specifics for social ills. Devotion to the Athenian State, and respect for the higher personal life, were the poles of his character and teaching. He could say of the State:

'Our country is . . . higher and holier far than mother or father. . . . When we are punished by her . . . the punishment is to be endured in silence. . . . Whether in battle or in a court of law, or in any other place, he [the citizen] must do what his city and his country order him. . . . This is the voice which I seem to hear murmuring in my ears, like the sound of the flute in the ears of the mystic' (Plato, *Crito*, 51, 54; cf. J. Adam, *Crito*, 1888, Introd. p. xiv f.).

That is, Socrates preserved intact the old Greek consecration to the *ἦθος* of the City-State, with its subordination of the individual to the community as the will of the gods, and as the most valuable (useful) relation for the citizen. In practice, he identified himself completely with Athens, whose vicinity he seldom left (cf. Plato, *Crito*, 52). But, at the same time, touched by the ampler experience of the new age, he strove to universalize the individual. 'Whether the individual is a part of a wider teleological system or no, becomes thus for Socrates a secondary question; and what he is mainly interested to maintain is that each man for himself should work out such a system in his own life' (E. Caird, *Evolution of Theology in the Gr. Philosophers*, 1904, i. 70). Socrates could, therefore, declare to Antiphon: 'To have no wants at all is, to my mind, an attribute of godhead; to have as few wants as possible, the nearest approach to godhead' (Xenoph. *Mem.* i. 6). That is, his asceticism was no end in itself, but accessory to the desire to secure due scope for the higher activities of manhood. The positive purpose thus involved a negative element. Now Socrates lived all this, but left no authoritative exposition of it. Accordingly, his 'imperfect' followers seized upon one or other aspect of his personality, and pushed it, to the exclusion of the compensating factors. 'The Cynics so enforced this negative moment that they placed freedom in actual renunciation of so-called superfluities' (Hegel, *Werke*, 1842, xiv. 139, Eng. tr. *Hist. of Phil.*, 1892, i. 480-81). Historical circumstances occasioned their revolt from the communal ideas of the City-State. The 'wise man' will not govern himself according to enacted laws, but by the law of virtue (Antisthenes *ap. Diog. Laert.* vi. 11). The sole authentic citizenship is citizenship of the world (Diogenes, *ib.* vi.

63). In short, under stress of social exigency, the Cynics abstracted Socratic independence from the conditions whence it drew its strength and relevance, and identified virtue with unbridled protest against social relations. 'Bury me on my face,' said Diogenes to Xenaiades, 'for, ere long, everything will be turned upside down' (Diog. Laert. vi. 31-32). The Cynics lost recollection that the Socratic dialectic was an incidental means to disclosure of the fundamental principles of morality. They could 'think only of the barefooted old man, indefatigably disputing in the open streets, and setting himself against society' (Grant, *Ethics of Aristotle*², 1874, i. 171). Thus minded, they turned upon contemporary norms and, holding nothing holy, flouted human ties scornfully, violently, and coarsely.

2. Teaching.—(a) *Theoretical*.—Avowedly, the Cynics were bent upon a practical end. Indeed, it is often asserted that they repudiated scientific training and mental culture, with no little ostentation. This is probably an over-statement. It would be nearer the mark to say that they subordinated scientific inquiries to the attainment of virtue, regarding intellectual discipline as indifferent in itself. Thus, while they combated men of the Plato type, and held aloof from the constructive schools, they could not, and did not, escape the theoretical problems of their age. Logic and epistemology, it is true, had not reached clear definition; this had to await Aristotle. Nevertheless, with the Sophists, if not earlier, the question of the relation between language and thought had asserted itself, sometimes in logomachies that seem trifling to us. And, in this connexion, a distinct negative or critical movement became manifest. The contemporary Megarians, for example (cf. K. Prantl, *Gesch. d. Logik*, Leipzig, 1855, i. 33 f.; G. Grote, *op. cit.* i. 122 f.), with whom the Cynics had some affiliations, revelled in 'eristic' gymnastics. The Cynic leaders, Antisthenes and, probably, Diogenes, evinced kindred tendencies, as their fragmentary remains, scattered references in Plato and Aristotle, and the reports of later writers indicate. Possibly the same was true of Crates, Monimus, and their followers. In other words, ere the ethico-political doctrines of the sect had sunk to the level of a social mannerism,

'Whose dog-like carriage and effrontery,
Despising infamy, outca'd disgrace,'

the Cynics partook in theoretical discussions of the day, occupying a position akin, apparently, to that of the Megarians (*q.v.*), and one not far removed, in ultimate principle, at least, from the Cyrenaics (*q.v.*).

Thus, Epictetus (*Diss.* i. 17, 12) attributes to Antisthenes the saying, 'The examination of terms is the beginning of education.' Similarly, Plato (*Euthyd.* 277 E, cf. *Crat.* 384) records that, according to Prodicus, 'a right use of terms is the beginning of knowledge' (cf. *Protag.* 337). Unfortunately, owing to the loss of Antisthenes' treatise *On Words*, we are unaware how these statements should be interpreted. Conceivably, they imply no more than Plato (*Theat.* 201 E) and Aristotle (*Met.* viii. 3) assert. On the other hand, it is certain that, through the peculiar notions about evidence entertained in their law-courts, committees of the popular assembly (cf. R. J. Bonner, *Evidence in Athenian Courts*, Chicago, 1905), the Athenians had long been familiar with forensic dialectic, as Æschylus' *Orestes* (458 B.C.) suffices to show. Furthermore, at the time when the other Greek arts reached their zenith (c. 440 B.C.), rhetoric, the *τέχνη* of words, had flourished for a generation in Sicily, under Corax of Syracuse (c. 465 B.C.); and Gorgias, accompanied by one of his chief exponents, Tisias,

had impressed the Athenians with it, on the occasion of the Leontine embassy (427 B.C.), when Antisthenes was a lad of seventeen. The future Cynic leader became a pupil of Gorgias, and then taught rhetoric before joining the Socratic circle. And, while it is likely that the epideictic 'display,' entitled the *Controversy between Ajax and Odysseus for the Arms of Achilles*, belongs to a later period, the list of the writings of Antisthenes preserved by Diog. Laert. (vi. 15 f.) proves that he was a practitioner, not only of rhetoric, but also of dialectic, with its more or less subtle and verbal treatment of terms. In addition, one must recall that Greek oratory as a practical art, employing both rhetoric and dialectic, dates from Gorgias (cf. F. Blass, *Die attische Beredsamkeit v. Gorgias bis zu Lysias*, Leipzig, 1868, p. 1 f.), and that, as a result of the development of their polity, which made him who 'is master of the stone on the Pnyx' master of Athens (cf. E. A. Freeman, *Historical Essays*, 2nd series, 1873, p. 128 f.), rhetoric and dialectic came to be of extreme utilitarian consequence to the Athenians (cf. Isocrates' review of his life-work, *Or.* xv. 295 f.). Language was now a potent weapon, and the study of terms indispensable. Accordingly, we are forced to conclude that, whatever slight Antisthenes and his fellows may have put upon 'science,' 'learning,' and 'culture' at a later time, when engaged upon their ethical 'mission,' the founder of the Cynic movement was educated in a 'scientific' atmosphere, and knew the necessity for technical discipline in the 'art of words.' No doubt, the studies of Protagoras, Prodicus, and Hippias, in etymology, synonymy, and the like, were little more than beginnings in the abstractions of grammar; and, obviously, the science of Logic was even less advanced, the nature of negative propositions especially offering insoluble problems, whence the vogue of the Sophistic *elenchus*. Yet the Sophistic influence upon the 'imperfect' Socratics is so pervasive that, before he repaired to Socrates at last, Antisthenes must have been carried away by it. The jibes of Plato (*Phædo*, 101 D f. (?); *Rep.* ii. 372 D, v. 454 A (?); *Theæt.* 155 E; *Soph.* 251 B, 230 D; *Phileb.* 14 D (?), Aristotle (*Met.* iii. 2 (?), iv. 29, vii. 3; *Top.* i. 11), and others (e.g. Cicero, *ad Attic.* xii. 38) would seem to indicate that Antisthenes and the rest either relapsed into 'sophistical' quibbling in theory, or failed to keep step with the contemporary advance of scientific inquiry. For, even if Xenophon's testimony to the acquirements of Antisthenes (*Symp.* iv. 41 f.) be suspect on account of his evident Cynic leanings, the references of Plato (*Cratyl.* 389 f. (?); *Phileb.* 44 C; cf. K. Barlen, *Antisthenes u. Platon*, 1881; K. Urban, *Ueber d. Erwähnungen d. Philos. d. Antisthenes in d. platon. Schriften*, 1882; F. Dümmeler, *Akademika*, Giessen, 1889, p. 148 f.), the partial admission of Aristotle (*Met.* v. 29), his serious refutations (*de Soph. El.* xx.; *Rhet.* ii. 24), and the remark of Cicero (*de Nat. Deor.* i. 13) warrant the probable inference that, while Antisthenes had once known better, and still posed as a disciple of Socrates (this would be Plato's view), he had reverted to the empiricism of Gorgias, and had fallen thence into theoretical scepticism, regarding 'science' as negligible except for purposes of direct utility, as with Hippias—had become, in short, a 'barbarian.' In a word, although they started from the Socratic insistence upon definition, the Cynics never reached theoretical solutions; in fact, they regarded them as impossible, perhaps even as worthless.

Remembering, then, that Logic had no independent existence, the little that we know of Cynic logic may be traced to Socrates for its primary impulse, and to the Sophists, especially Gorgias and Hippias, for its content. The effort of Socrates

to define the ideal Good, to replace a physical or cosmological by a logical *φύσις*, had not reached complete success (cf. Xenoph. *Mem.* iii. 9, 14, iii. 8, 3, i. 3, 2). It was an aspiration rather than a final achievement. The problems therefore were: (1) to formulate a definition carrying universal validity; (2) to state its content; (3) to explain how man might realize it in life. Such fragments of Cynic logic as we have are remnants of a theoretical effort connected with the first problem; Cynic ethics, a practical reply to the second and third. The former represents a reversion to the Sophists; the latter follows mainly from undue emphasis upon, and isolation of, one aspect of the person of Socrates, filled out probably, as regards its inconsistent universalism (cosmopolitanism), by elements drawn chiefly from the teaching of Hippias.

Turning to the logical side, then, we find that for Antisthenes a satisfactory definition must be the statement of the essence of a thing. But, seeing that things consist of parts, the only definition practicable would be a description of these parts as actual components of a whole (cf. Plato, *Soph.* 251 f.). Accordingly, the thing itself, being simple, is indefinable; it may be named, but the name tells nothing of the essential reality (cf. Aristotle, *Met.* i. 3). Diogenes is reported to have said, when Plato was talking to him about 'ideas' and using the terms 'tableness' and 'cupness,' 'I see a table and a cup, but I see no "tableness" or "cupness"' (Diog. Laert. vi. 55; cf. Plato, *Parmen.* 132 B). That is, according to Cynic epistemology, general ideas exist solely in the mind, individual things alone are real. This is the earliest distinct expression of Nominalism. Logically, it results in the conclusion that no judgments are permissible except judgments of identity. 'Man' and 'good' are different from one another. You cannot predicate 'good' of 'man'; you can say merely, 'man is man,' 'good is good' (cf. Plato [?], *Hyp. Maj.* 304 A; Grote, *op. cit.* ii. 47). This led immediately to the assertion, put into the mouth of Dionysodorus by Plato (*Euthyd.* 286 B), that contradiction (or error) cannot occur. If so, the paradox issues that false and contradictory propositions are impossible, which implies, in turn, that all propositions are equally true. As the question of logical 'form,' to which such reasoning might apply, in the sense that 'form' does not guarantee truth, had not yet been considered independently, the Cynics meant, probably, that predicates, because applicable to many subjects, could not be attached more exclusively to one than to another. But we are able only to conjecture as to this (cf. Plutarch, *adv. Colot.* 1119 Cf. [ed. Bernardakis, vol. v. p. 45 f.]; Plato, *Parmen.* 130 f.). In any event, however, it is evident that the conclusion of the matter is in the Sophistic vein. Objects, when 'composed' of single factors, may be defined. Simple objects ('ultimates'), being perceptible only to sense, are susceptible of nomenclature, but are unknowable as such. The distinction here raised—really between percepts and concepts—is valid enough. But the inference of Verbalism, instead of carrying out a logical and epistemological analysis, leads back to Sophistic scepticism which, once more, is hardly distinguishable from Sensationalism (cf. Aristotle, *Met.* iii. 5). The Cynics thus seize the negative element in the Socratic dialectic process towards definition, but omit the positive. As a consequence, they entangle themselves in a paradoxical inquiry such as that typified by Alfred de Musset's question—'Le cœur humain de qui, le cœur humain de quoi?' (cf. A. Ed. Chaignet, *Hist. de la psych. des Grecs*, i., Paris, 1887, p. 189 f., note 4; Grote, *op. cit.* i. 168 f., note 1).

(b) *Practical.*—The ethical doctrines of the

Cynics may be traced to the coalescence of several elements; and very probably this is more evident now than it was to the Cynics themselves in their period of transition. But the numerous stories related about their leaders (for the sake of the story), and the scantiness of the documentary evidence, render a dispassionate account very difficult. Still the following constituent factors, at least, can be traced with some certainty: (1) Socrates, the plain, 'common' man, sturdy and independent; (2) the Eleaticism of Antisthenes' teacher, Gorgias; (3) the 'return to nature' of Hippias and Euripides; and (4) the momentary exigencies of daily life in Athens and in Hellas.

(1) The Cynics descend from the Xenophontic, not the Platonic, Socrates (cf. S. Ribbing, *Ueber d. Verhältnis zwischen d. Xenoph. u. Platon. Berichten üb. d. Persönlichkeit u. d. Lehre d. Sokrates*, Upsala, 1870; F. Dümmler, *loc. cit.*, and *Antisthenica*, Halle, 1882). This is the Socrates who, as we saw above, made independence an attribute of godhead (cf. Xenoph. *Mem.* i. 6). Yet, for him, asceticism was a means to an end (cf. Xenoph. *Cyn.* xiii.), not an end in itself, as it became with the Cynics. The endurance which he praised was no unusual or new thing; it related to ordinary life, and, naturally, had been accentuated by the early 'proverbial' moralists (e.g. Hesiod, *Opp. Di.* 287 f., 411 f.). Quickened by moral sincerity, Socrates protested against the indignity put on labour; as a 'friend of the common folk' (Xenoph. *Mem.* i. 2), he held work to be more honourable than idleness (*ib.* iii. 8, 9, 10). It was this side of his character that attracted Antisthenes, and produced in the disciple a parody of the master's temperate protest against the enervating habits of the luxurious city.

(2) But, alongside of this moralized 'common sense,' a distinct theoretical element operated, of which the Cynics were, in a way, unconscious. Socrates had taught that virtue is a 'science' (Aristotle, *Eth. Nic.* iii. 8, 6), meaning thereby that virtue was communicable. Now, although Gorgias dismissed metaphysical speculations about Being, and thus showed that the 'science' could not be concerned with 'nature,' he hinted, by implication, at an internal (rational) One. That is, his *argumenta ad hominem* emphasized the *homo*. Accordingly, although he denied what he held to be an unconditional object out of relation to self, he still left self as the One, even the unexplored One. This survival of Eleatic doctrine reappeared in the Cynic interpretation of the positive side of Socratic teaching: courage, justice, wisdom are identical—they are knowledge; or, as Antisthenes put it theologically, the gods are many *κατὰ νόμον*, they are One *κατὰ φύσιν*. Reason, the organ of this knowledge, is the prerogative, not of men, but of mankind (cf. Diog. Laert. vi. 105; Xenoph. *Mem.* i. 2, 19; Plato, *Meno*, 71; Aristotle, *Pol.* i. xiii. 10). Reason bestows the power *ἐαυτῷ διδάσκειν*. If incommunicable theoretically, at all events by means of the current education, it can be recognized and liberated in practical activity. In short, Will becomes the content of the 'science' of the sole Good—virtue. As against Platonic absolutism, with its aristocratic tendencies, which separate men from each other, the Cynics assert a democratic unity. They admit a pragmatic universal in the shape of a plan of life. Thus *αὐκείος λόγος* came by essential content, despite nominalistic logic (cf. Diog. Laert. vi. 12, 103). No matter what the theory, essence could be exhibited—in overt conduct.

(3) The Cynics preached a 'return to nature' as an escape from social convention with its ills. Here they stood in line with Hippias and Euripides. Man ought to be self-sufficient. They meant by

this that there is a human 'nature,' beyond the accidents of citizenship, language, and even race (Eurip. frag. 1050), and that civil institutions are unjustifiable because they interfere with the cultivation of this common possession. As Hippias said: 'All of you who are here present I reckon to be kinsmen and friends and fellow-citizens by nature, and not by law; for by nature like is akin to like, whereas law is the tyrant of mankind, and often compels us to do many things which are against nature' (Plato, *Protag.* 337); or, as Isocrates put it: 'Athens . . . has brought it to pass that the name "Greek" should be thought no longer a matter of race but a matter of intelligence' (*Or.* iv. 50). Hence Cynic cosmopolitanism. The Cynics proposed to realize this unitary 'nature' by denuding themselves of wants, by eschewing obligation to the 'resources of civilization.' Simplicity, temperance, ability to fend for self, were to be the means to this end. Hence their anarchism.

(4) Even before the Peloponnesian War, the Hellenic world had grown conscious of new displacements, and the course of the struggle accentuated this condition. The *politeia* lacked the flexibility needed to meet the transition. Consequently, men became aware increasingly of a separation between the organized State and transient society (cf. G. A. and W. H. Simcox, *Demosthenes and Aeschines 'On the Crown,'* 1872, p. lxxvii.). As has been said above, the citizen no longer found absorbing vocation in his citizenship: loyalty was on the wane. Besides, the war produced special effects of its own. The unity of Hellas and the independence of the rival cities proved to be incompatible ideals; the gulf between rich and poor yawned wider; the itch for personal recognition brought disregard of social responsibility; and numerous men 'without a country' roamed over all Greece (cf. Isocrates, *Ep.* ix. 10). The system of education had forfeited the confidence of many (cf. Isocrates, *Or.* xiii. 292 f., xi. 230 f., x. 208 f., xv. 84 f., 259 f.), while, on the other hand, the people were untouched by the things of the spirit (cf. Isocrates, *Or.* xi. 230, ii. 23 f., viii. 161 f., xv. 168 f.), as, indeed, Aristotle asserted later (*Eth. Nic.* i. 5. 3). Every one was finding fault with his neighbour; the efficiency of democratic government was in doubt. These grave matters were at once the incentives to, and the immediate objects of, the Cynic 'mission.' Unfortunately, hindered doubtless by the temper of the time, the Cynics, who surpassed all in fearlessness, appear to have employed no weapon more potent than contentious abuse, and to have prescribed no remedy more practicable than an impossible renunciation. Better known to the masses than any other teachers, their extravagance and licence rendered them easy marks for ridicule and resentment, so that the seriousness of the evils which they attacked legitimately was overshadowed by the bizarre conduct of the critics. Few, if any, constructive results were accomplished in the 4th cent., as the state of affairs under Eubulus (354-338 B.C.) serves to show (cf. Isocrates [c. 353 B.C.], *Or.* xv. 270 f.; J. Beloch, *Die attische Politik seit Perikles*, Leipzig, 1884, p. 173 f.). These influences, then, probably along with others, now irrecoverable, moulded the Cynic ethics.

Although the Sophist was a *τεχνολόγος*, the teacher of a practical 'art'—and Gorgias belonged very distinctly to this type—a man of Antisthenes' quality, when deflected by Socrates, could easily pick holes in Sophistic practice (cf. Plato, *Soph.* 250 A); he and, more emphatically, his follower, Diogenes, might retain portions of the Gorgian method (cf. Aristotle, *Rhet.* iii. 17. 7), the temper

never. Seeking reputation and gain, the Sophists could not be entirely disinterested (cf. Xenoph. *Cyn.* xiii.). Perforce they had to adapt themselves to popular tastes; and Gorgias, conspicuously, seems to have conformed himself to current prejudices; in like manner, Hippias' ideal of a union between the Greek States, just because it was not original with him, serves to illustrate a similar tendency. Such pliability, amounting often to hollowness, revolted Antisthenes, when contact with Socrates had converted him. The times appeared to call for sterner stuff. It was not enough to suggest moral notions by elegant discourses; proselytes must be secured. Independence was needed above all else; and this could be justified on condition that a man found his ideal purposes within himself (cf. Eurip. *Troad.* 988; Plato, *Rep.* ii. 366 E). Thus the Cynics came to regard virtue, not as good, but as the Good, and this as an implicit quality inherent in manhood, made explicit in the 'wise man' (i.e. Socrates universalized by Cynic pragmatism); for without a universal there could be no philosophy (cf. Plato, *Parmen.* 136). No matter at what cost, the 'sage' must develop and guard this possession (cf. Cicero, *de Off.* i. 41), for on it depended the one great issue of life—self-sufficiency. Everything must be sacrificed for it; indeed, this complete sacrifice was regarded as the essence of virtue. On the other hand, vice was the sole evil; and the intermediate values of life, high or low, positive or negative,—wealth, position, health, poverty, shame, sickness, even death,—were wholly indifferent. Thus self-control implied, not the moralizing of human relations, but their total eradication, because they are invitations to weakness or to submission (cf. Diog. Laert. vi. 93). So the Cynics came to 'exceed' the nature at which they had arrived; the subjective tendency overpowered them. And there are signs that, like the Stoics afterwards, they wavered here (cf. Diog. Laert. vi. 2, 6, 13, 30, 31, 63, 72); yet their professed ideal was to possess no home, no city, to be beggars and wanderers (cf. *ib.* vi. 38). For man comprehends by nature what is just and true (cf. *ib.* vii. 53), and this internal nature is to be set free as against the law or convention of society. The declaration of Hippias (Plato, *Protag.* 357 D), transmuted now into a *φύσις ἀνθρωπίνη*, is elevated into the single principle capable of moral authority. The insight of the 'wise man,' won by renunciation, becomes the supreme test; and, according to its judgment, all laws, institutions, and arrangements of society are found arbitrary and harmful. They hamper and enslave true manhood; for, morally viewed, men are free, and therefore equal, just because they possess a specific virtuous nature in their own individual right. Consequently, man is able to realize the Good only if he renounces them. Society is the great Sophist (cf. Plato, *Rep.* 492 A); it renders evil absolute; therefore it is infinitely better to be an uneducated beggar than an educated echo of 'civilization.' Thus the Cynics desert their theoretical Nominalism, and fall into the old paradoxes resultant upon the clash between personal ideal and social opportunity. Casuistry (their species of sophistry) marks them for its own, and antitheses displace reasoning. As always, their anarchism ends in communism, for, without fraternity, liberty and equality are but barren words. The socio-political indecision and helplessness of Hellas led to this extreme conclusion. An ulterior principle, the innate prerogative of simple manhood, came to be viewed as the only escape from contemporary evils. This indifference of the Cynics to political, social, and domestic obligations led

course, to antinomianism (cf. Diog. Laert. vi. 12). Curiously enough, however, they did not advocate quietism (cf. F. W. Bussell, *Marcus Aurelius and the Later Stoics*, 1910, p. 51 f.) as a result of their nonconformity and repudiation. The Cynic 'missionary' became a familiar figure, and he lived in face of the public. Like Crates, he was a 'door-opener' (Diog. Laert. vi. 86), but he seems, as a rule, to have been taken more jocularly than seriously. Nor is this wonderful. Strange as it may appear, the besetting sins of Athenian character—vanity and self-sufficiency—found a new incarnation in the censoriousness and self-advertisement of some Cynics. As a matter of fact, they had not investigated morality with due care, and so they could not deliver themselves from paradox. For, after all, consistent Cynicism is tantamount to a confession of failure. Deny the existence of the problem, as the Cynics did in relation to Athenian economic conditions, for example, and—you have solved it! 'Vanity of vanities,' saith the preacher, 'all is vanity'; whereas the greatest of vanities is apt to be the preacher himself.

It is possible, and too easy perhaps, to judge Cynicism as the temporary exaggeration of a clique. But, after all, it dealt with the immortal things of life, and in later times left its mark upon ancient thought; Epictetus could idealize even Diogenes (*Diss.* iii. 24). An overwhelming personality like Socrates transmutes the fluid tendencies of his epoch, and outpaces the average man. Nevertheless, Socrates was of his age, and could not escape its limitations. Antisthenes and his followers started from this temporary factor, and, by confining the Socratic doctrine to it, impressed the ordinary mind. Rudely enough, perhaps, they proved that Greece still had a conscience. They exercised the magisterial and reproving function (cf. Epictetus, *Diss.* ii. 21), emphasizing the force and conviction, though not the dignity and sublimity, of the master; yet this very bias freed them from the sordid passions of self-interest which so afflicted their contemporaries (cf. Diog. Laert. vi. 85 f.; Xenoph. *Symp.* iv. 34 f.). As their denunciation of slavery showed, they had a glimpse of a sublime idea, and were enabled consequently to enter a splendid protest against the otiose compromises and superficial conformities of the day. And, if their zeal outran discretion, or even decency, it must be recalled that they were bred of a society which lived in *paris naturalibus* to a degree incomprehensible by us; that, by insistence upon the moral significance of much that had been deemed non-moral, they aired questions to which otherwise Aristotle's saving common sense might never have been applied (cf. e.g. *Eth. Nic.* x. 6). As a result, they paved the way for the conclusion that virtue is not a theory, but a spiritual state—it is dynamic over against the trivial. Their defence of a thesis doubtless blurred their vision of the seminal personality of the 'wise man.' Notwithstanding, they did make the 'sage' the moral norm, and thus gave the first hint that 'the "Return to nature,"' so far from implying reversion to animalism, and the reduction of man's needs to the level of the beasts, was found to involve fundamental differentiation of reasoning man from the unreason of the brute or the inertia of matter, to place man on a unique spiritual plane, and eventually to summon him from individual isolation to conscious brotherhood with kind' (G. H. Rendall, *Marcus Aurelius Antoninus to Himself*, 1898, p. xlv). Driven by a theory which spelt failure, the Cynics could not perceive these great issues; but ideals, whose end is not yet, originated with them.

LITERATURE (In addition to the works mentioned in the text).—Ueberweg-Heintze, *Grundriss d. Gesch. d. Philos.* 1.¹⁰ (1910), gives a complete summary of the technical literature: see § 7, for the primary and secondary sources for the history of Greek philosophy; § 8, for literature on the pre-philosophical period of Greek culture; § 37, for literature on the Cynics specifically. For the English reader the best work is still E. Zeller, *Socrates and the Socratic Schools*, Eng. tr., London, 1888, and successive reprints; W. Windelband, *Hist. of Ana. Philosophy*, Eng. tr., London, 1898, is also very valuable; the most brilliant and readable account of the Cynics is to be found in Th. Gomperz, *Greek Thinkers*, Eng. tr. vol. II, London, 1906. With special reference, the following works may be added: T. C. Finlayson, *Sways, Addresses, and Lyrical Translations*, London, 1898, p. 194 f.; P. Girard, *L'École athén. au IV^e et au V^e siècle avant Jésus-Christ*, Paris, 1891; O. Apelt, *Beitr. z. Gesch. d. gr. Phil.*, Leipzig, 1891 (the essay on Cosmopolitanism in Antiquity); R. E. Hammond, *Polit. Institutions of the Ana. Greeks*, London, 1895; A. Croiset, *Hist. de la litt. grecque*, tom. IV. [Paris, 1900] pp. 861, 240 f.; P. Decharme, *La critique des traditions religieuses chez les Grecs*, etc., Paris, 1904, p. 217 f.; R. Hirzel, *Der Dialog: ein literarhist. Versuch*, I, Leipzig, 1895; M. Clerc, *Les Métèques athéniens: Étude sur la condition légale, la situation morale et le rôle social et économique des étrangers domiciliés à Athènes*, Paris, 1898; H. Francotte, *De la Condition des étrangers dans les villes grecques*, Louvain and Paris, 1908; H. Sidgwick, *Lectures on the Philos. of Kant*, etc., London, 1906 (the essay on the Sophists); Ed. Schwartz, *Charakterköpfe d. antiken Lit.* 2nd series, Leipzig, 1910, p. 14. R. M. WENLEY.

CYRENAICS.—The name given to a school of thinkers founded at Cyrene, a Greek colony on the northern coast of Africa, towards the beginning of the 4th century B.C. It is one of the earliest attempts—and perhaps the most thorough-going—to base the conduct of life on the pursuit of the individual's pleasure. The founder of the school was Aristippus. He came to Athens to hear Socrates, whom he revered to the end of his life (Diog. ii. 65, 76), and whose scholar, in spite of the differences between them, he always avowed himself to be (*ib.* 74). Socrates would never really have accepted the pursuit of mere personal pleasure as the end of life; indeed, in the *Memorabilia* (ii. 1), Xenophon gives us an account of a keen dispute between him and Aristippus on this very point. Yet the 'pupil' might fairly have claimed to teach nothing inconsistent with his master's fundamental principles. Socrates, in fact, while claiming that man's rational life lay in the search after what was truly good, had yet left undetermined what this true good might be (see Sidgwick, *History of Ethics*, pp. 24, 31). The Cyrenaics argued that it could be found in nothing but pleasure, which was the one thing manifestly desirable, and which all creatures, unless perverted, did desire and choose (Diog. ii. 87, 88, 89).

This ethical doctrine seems to have been closely connected with their general view—derived probably from Protagoras—that the individual was limited to a knowledge of his own sensations. A man could know only what appeared to him, not what things were in themselves, nor even what they appeared to others; and there was thus apparently no possibility of a rational assertion that anything was noble or not in itself. All we could know of 'goodness' was what was pleasurable to us (Diog. ii. 92, 93; Sext. *Empir. adv. Math.* vii. 191–200). There was thus no room for the Cyrenaics to admit fundamental differences of quality in pleasure; and this, it would seem, they fully realized. One pleasure was no whit better than another (Diog. ii. 87), nor could the source from which it sprang, however base that might be called, make any difference to its worth (*ib.* 88). In this they were profoundly at variance with Plato and Aristotle, who both argued for absolute standards of value and of truth, standards going beyond the mere opinions of individual men (e.g. Plato, *Repub.* bk. vi. *ad fin.*; Arist. *Metaph.* bk. iii. c. 5. 1009a, *Eth. Nic.* bk. i. c. 8. 1099a). The famous discussion in the *Philebus* (36 C f.) as to the possibility of a distinction between true and false

pleasures, parallel to that between true and false opinions, is in all probability written with an eye to the Cyrenaic position. It is of great interest also to note that this initial scepticism of theirs led the Cyrenaics to turn aside from scientific inquiry into Nature, as from useless speculation (Diog. ii. 92).

The anecdotes told of Aristippus and his biting wit give a vivid commentary on his theory. His seems to have been one of 'the great experiments in life' that the Greek philosophers were not afraid to make. Resolute, daring, and self-controlled, on one side it recalls the great Socratic tradition of unswerving obedience in practice 'to that argument which seemed the best,' and even the Socratic scorn for non-essentials; 'it was better to be a beggar than a dunce; if the first had no money, the second had no manhood' (ib. 70). But there is a sinister side as well. Aristippus will take anything he can get from Dionysius, the tyrant of Syracuse. 'I went to Socrates when I wanted knowledge, I come to you when I want money' (ib. 78). He does not demand constancy from his mistresses; what did it matter to him if others sailed in his ship (ib. 74)? Money and what money could get are not to be shunned, but used, and used freely. The evil lies in being bound by our pleasures, not in enjoying them (ib. 75; Stobæus, *Floril.* 17, 18). Let them be as vivid as possible—the 'calm' so near indifference, afterwards advocated by the Epicureans, is scorned as nothing better than sleep (Diog. ii. 89)—but let them not defeat their own object by fettering the mind (ib. 66, 67). The 'smooth motion' of the Cyrenaic pleasure was always motion, but the rippling motion of a great sea which should never be roused into storm. Though circumstances may prevent the wise man from obtaining this always, yet he will be able to attain more of it, and in a more intense form, than any one else (ib. 90, 91). Aristippus himself was always famous for his easy mastery over all circumstances, prosperous and adverse alike; and the line of Horace (*Ep.* i. xvii. 24) that pictures him 'at peace in the present, yet striving for greater things' ('*Tentantem maiora, fere presentibus æquum*'), gives us Cyrenaicism at its best.

The pressure of the practical problem, how to attain the maximum of individual pleasure, is shown in the divergencies of his successors. Hegesias felt the inevitable pain of life so keenly as to disbelieve in the possibility of anything deserving the name of happiness (Diog. ii. 94). The most that could be hoped for by the wise man, acting for his own interest alone, as a wise man should, was to escape from suffering, and this could be attained best by indifference to external things (ib. 95, 96). Here we reach a strange likeness to the Stoics and Cynics, and, stranger still, we find this leader of what purported to be the school of vivid per-

sonal life called by the name of 'Death's Advocate,' and accused of luring men to suicide (ib. 96 *Cic. Tusc.* i. 83).

Annikeris, at the cost of consistency, gave a gentler tone to the whole system. It is plain that the question between what might be called individualistic and altruistic hedonism, between the pleasure of oneself and the pleasure of others, was coming to the front and pressing for solution. According to Annikeris, there were such things of genuine worth as friendship and patriotism (which Hegesias had denied). The wise man would suffer for his country and still be equally happy, although he got little pleasure from it, and pleasure alone was the end. The happiness of another was not a reasonable object of choice, yet the wise man would endure for the sake of his friend (Diog. ii. 96, 97).

Theodorus, called 'the Atheist,' seems to have been the closest, both in keenness of intellect and in hardness of temper, to the original founder. Friendship he dispensed with; the foolish could not use friends, and the wise man had no need of them (ib. 98). There was nothing to be ashamed of in theft and adultery and sacrilege, provided one escaped the penalties (ib. 99). He seems to have differed slightly from Aristippus in that he felt the need of laying more stress on the attitude of the mind, and less on the external goods of chance as necessary for the well-being of man. Thus he was led to say that the vital matters were not 'pleasure' and 'pain,' these in themselves being indifferent, but 'joy' and 'grief,' which in their turn depended on prudence and folly. This at least is the interpretation suggested by Zeller for a somewhat obscure passage in Diog. ii. 98, and it is certainly probable.

About the time of the later Cyrenaics, Epicurus was developing a more subtle and elaborate form of the doctrine, and after the 3rd cent. B.C. we do not hear of Cyrenaics as distinguished from Epicureans. See also artt. HEDONISM and PHILOSOPHY (Greek).

LITERATURE.—No writings, other than fragmentary, of the Cyrenaics themselves are in existence. The chief ancient authorities are: Diogenes Laertius, *de Clarorum Philosophorum Vita*, bk. ii. 65-104, c. 8, 'Aristippus' [for the ethical doctrines of the school and the character of Aristippus], Paris, 1878; Sextus Empiricus, *adversus Mathematicos*, bk. vii. 190-200 [for the metaphysical position], Leipzig, 1840. See also F. W. A. Mullach, *Fragmenta Philosophorum Graecorum*, ii. 397 ff., Paris, 1867; H. Ritter and L. Preller, *Historia Philosophiae Graecae*, 'Cyrenaici,' 204-213 B, Gotha, 1888; F. Ueberweg, *Grundriss der Gesch. der Philos.*, Berlin, 1894-98, i. 95 ff.; E. Zeller, *Socrates and the Socratic Schools* (tr. Reichel), ch. xiv. [very clear and thorough, with copious quotations and references], London, 1868; J. E. Erdmann, *Grundriss der Gesch. der Philos.*, Berlin, 1895-96 (Eng. tr., London, 1890), i. 89 ff.; H. Sidgwick, *History of Ethics*, i. c. ii. §§ 2-4 (brief, but illuminating), London, 1896; G. W. F. Hegel, *Geschichte der Philosophie*, ii. 1. c. 2. C. 2 [the work of a master], Berlin, 1853. W. Pater, in *Marius the Epicurean*, London, 1885, gives incidentally a vivid though somewhat rose-coloured sketch of the system.

F. M. STAWELL.

D

DACOITY.—This term, which is derived from Hindi *dakait*, 'robbery belonging to an armed band,' probably from *dakna*, 'to shout,' is now usually employed as an equivalent for brigandage (or, technically, the conspiracy of five or more men to engage in an act of robbery, or the actual commission of such an offence) arising from, or at least existing in, an unsettled condition of some of the administrative districts in India. It is in this sense that it is used with regard to Burma.

Originally, however, it referred to a much more definite and curious condition of society, in which robbery with violence was not only an occupation but a religious and caste duty. Robbery was a hereditary profession, although the ranks of the Dacoits were continually augmented from the outside. The system reached its greatest development in the Native State of Oudh (shortly before its incorporation within the British Dominion in India), owing to the incapacity of its native rulers.

But it was also prevalent in nearly every Native State, and was encouraged by the rulers, who shared in the proceeds of the robberies as the price of their toleration. The Dacoits rarely committed their depredations near their native haunts, or even within the State which harboured them. As their victims were usually strangers, the Dacoits were not the objects of fear and hatred on the part of their neighbours, who were not, therefore, anxious to betray them to the authorities. Their raids were carefully planned, and the members of an expedition made their way to their rendezvous singly or in small bands, disguised as pilgrims or as holy water-carriers or as bullock-drivers. After carrying out their plans, they made their way back to their jungle fastnesses with almost incredible rapidity. As a rule, they preferred to avoid bloodshed, but on occasion they did not scruple to take life.

The Dacoits were usually of low caste, and their social and religious customs were of a totemistic character, exogamous marriage being the practice. Their raids were undertaken only when the omens were favourable, and after the exercises of religion. The deities of most of the Dacoit clans or septs were Kālī or Devī (an axe sacred to her being carried by Dacoit leaders in Central India) and Sorruj Deota (the sun-god).

The British authorities in India made great efforts in the decades preceding the middle of last century to stamp out the practice, but, as it was rooted in religion and social custom as well as encouraged by misrule in Native States, the task was very severe; and the evil came to life again when it had been apparently stamped out. But, with the final annexation of Oudh, its great stronghold no longer proved a shelter for the robber clans, and Dacoity since the Mutiny has been indistinguishable from local brigandage, to the suppression of which the police are adequate.

The attitude of the British authorities to Dacoity, as in the similar cases of Thuggee (see THAGS), affords an instance of interference with native religions and customs; but it brings out clearly the rationale of such action in that the custom must be recognizably of an anti-social and criminal character.

LITERATURE.—J. Hutton, *Popular Account of the Thugs and Dacoits*, London, 1867; E. Balfour, *Cyclopædia of India*, London, 1886, I. 874. See also the literature under THAGS.

JOHN DAVIDSON.

DADU, DADUPANTHIS.—1. Dādū (A.D. 1544 to 1603) was born in Ahmadābād, of Brāhman parents. His father, Lodi Rām, had left his Shāstras and temple services for trade with foreign parts. About the time of the Reformation in Europe and a little before Dādū's birth, a Reformation of Hinduism had spread over all northern India, from Bengal to the Panjāb, and south towards Bombay. Kabir, the founder of the Kabirpanthis (q.v.), had very thoroughly done a reformer's work round Benares. Nānak, from whom, under his ninth successor, came the Sikhs, had fought idolatry and superstition in the Panjāb. The influence of these two spread far and wide, and hundreds of earnest souls were protesting against the grosser abuses in Hinduism.

Dādū was early affected, and his religious convictions led him to spend his life in preaching the Reformation doctrines over the midlands, between Ahmadābād and Delhi. He lived for a time in Sāmbar, where his monument is, and where his coat and sandals are kept as relics and worshipped. Amber, the old capital of Jaipur, was Dādū's home for a time, where a house of his followers still flourishes, and in the modern capital we have the headquarters of the Nāgās. Dādū visited Delhi, and had an interview with the famous Akbar.

Thereafter he turned his face towards the south, making new disciples and strengthening his old ones, among whom were some nobles. After a year in Amber he went to Naraīnā, a village about 40 miles S.W. from the capital and 8 from Sāmbar, and there died in A.D. 1603.

Dādū left 162 disciples to continue the work among his many followers. His teachings are embodied in the *Bānī*, a poetic work of 5000 verses. In its 37 chapters various religious subjects are treated, such as: The Divine Teacher, Remembrance, Separation, The Meeting, The Mind, Truth, The Good, Faith, Prayer. The Hymns appended are set to music, and are suitable for public and private worship.

2. From the *Bānī* it appears that Dādū condemned and rejected much that was new and false in Hinduism, and that he re-discovered and taught much truth about God, man, and salvation.

He rejected: (1) The *Vedas* and *Qur'ān* as ultimate truth; (2) the *Vedāntic* philosophy; (3) ritualism and formalism; (4) the corrupt priesthood; (5) caste and caste marks; (6) idolatry; (7) the use of the rosary; (8) pilgrimages and ceremonial ablutions. (9) He threw new light on the transmigration of the soul, holding that all possible re-births happen in man's one life on earth. The moods of mind and the quality of actions give the soul the birth of a fox, a goose, a pig, an ass, and such like. (10) He held that the gods Śiva, Viṣṇu, and Brāhmā were only men who had been canonized. Their pictures and statues had been made and preserved as object-lessons, to teach men their history. (11) *Māyā*, the world, matter, was not evil in itself. The bad man made it evil by allowing it to lead his mind away from God. Worldliness, and not the world, is evil. (12) He again and again says: 'I am not a Hindu, nor a Musalmān. I belong to none of the six schools of philosophy. I love the merciful God.'

His doctrines about God, man, and salvation included the following.

'Forsake not the One God. Forsake all evil.' 'I have found that God is the unchangeable, the immortal, the fearless, the joy-giving, the best, the self-existent, the almighty, the beautiful, the glory-of-all, the pure, the unimagined, the unseen, the incomprehensible, the infinite, the kingly One.' 'He is brightness, effulgence, light, illumination, perfection.' 'I have made all things teach me of God, and I know that He is immanent in the universe with all its properties and elements.'

God is the *Creator*.

'So powerful is the Lord, that by one word He created all.' 'His works are wonderful, and cannot be fully understood.' 'He alone does all and gives power to all. He blesses all His servants and is not proud.' 'He created us after a model He had formed: of His plans, His wisdom, His works, no man can see the limit.' 'Where nothing was, He made all; and when He wills it becomes nothing. Become as nothing before Him, and love Him alone.'

God is the *Preserver* of all.

'I meditate on Him, who preserves all.' 'I adore the *Para-brhma*, the unsurpassable. My God is the Holy One. I worship the pure and unimagined one.'

Man is a creature, and made to worship God.

'Who is so wretched as the man who persuades you to serve other gods?' 'Not for a moment even let God's name depart from your heart.' 'My soul, if now thou knowest not that God's name is the chief good, thou shalt repent and say, "What a fool I was!"' 'The world is an ocean of pain, God is an ocean of joy. Go to this ocean and forsake the useless world.'

Conscience spoke clearly in Dādū.

'I have done very wickedly; be not angry, O Lord. Thou art the God of patience. To Thy servant all the blame belongs.' 'I have forsaken Thy service. I am a sinful servant. There is no other like me so vile.' 'I sin in every action. I am unjust in everything. I sin against Thee every moment. O God, forgive my sin.' 'I am the only great sinner in the whole world. My sins are infinite and countless.' 'From the beginning to the end of my life I have done no good; ignorance, the love of the world, false pleasure, and forgetfulness have held me.' 'I have lived in lust, anger, suspicion, and have not called on Thy name. I have spent my life in hypocrisy and the sins of the senses.' 'I am bound by many fetters. My soul is helpless. I cannot deliver myself. My beloved alone can.' 'I am a prisoner. Thou art my deliverer. Save me, O God most merciful.' 'The evil is in my soul, my heart is full of passion; reveal Thyself and slay all

mine enemies.' 'My soul is sorely afflicted, because I have forgotten Thee, O God. I cannot endure the pain; deliver me.'

Dādū knows that it is sin which separates the soul from God. The longest poem in the *Bānī* is called 'Separation.' It is the wail of a woman sick of love and maddened by the pain of separation.

'I am full of love. I greatly desire Thee. O Lord, my beloved, come and meet me; now is my time.' 'The wife, separated from her husband, calls day and night, and is sad. I call my God, my God, vehemently thirsting.' 'My whole soul calls as the *Chātrag*.¹ My beloved, my beloved, I thirst for Thee, I long to see Thee. Fulfill my desire.' 'O *Chātrag*! Thy voice is sweet. Why is Thy body so black? I am consumed of love. I call day and night, O Thou, O Thou.' 'To whom shall the wife tell her pain? By whom send news to her absent one? Watching his return, her grief turns her hair white. As the opium-eater longs for his opium, the hero for war, the poor for wealth, so longs my soul for God.'

Dādū had cast aside the *Vedas*, the gods, and all that men hold to be the means of salvation. He found nothing in the past or in the present, and so he rushes into the future and says:

'When will He come? When will He come? My beloved, when will He reveal Himself? Sweet will He be to me. I will embrace Him. Without Him I must die. Body and soul will find joy when God reveals Himself.'

Dādū knows from his wants what 'the meeting' ought to be and what ought to be revealed to him, and so he calls on God to come as 'the Divine Teacher,' 'the Deliverer.'

3. Dādū's disciples are called *Dādūpanthis* ('they of the path of Dādū'). They exist in considerable numbers and in two divisions.

(a) The Laymen, 'the Faithful,' 'the Servants.' These may marry, and follow any respectable trade or profession. In theory they are supposed to have given up Hinduism. They ought to store their minds with the *Bānī*, and use their creed and prayers. Discipline is lax, however, and so in practice there are various stages of attainment. At times the connexion becomes very slender indeed, for a dole to a begging *sādhu* is sufficient to maintain it.

(b) The Priests, 'the Esoteric,' 'the Masters.' These are all monks, and keep up their ranks by adoption from the better castes. They devote themselves to a religious life and to teaching the *Bānī*; but this does not prevent them from bearing arms, practising medicine, lending money, or from agricultural pursuits. Only 52 of Dādū's original disciples opened, mainly in Rājputānā, 'doors of Dādū' (*Dādūvāras*) and adopted successors. Some of these 'seats' have prospered in wealth and learning, and some have almost passed away. They produced a good deal of what, in relation to Hinduism, may be called Protestant Literature, written in verse, and in the common tongue (*Bhāṣā*). Probably much of this has been lost, for it has never been collected, printed, or translated.

The present distinctions arise not from difference in belief, but from locality and modes of life of the *Dādūpanthis*.

(1) The *Khālsas* ('the pure, ruling').—The 'seat' of these is Narainā (Jaipur). Here Dādū died, and here lives his successor, the head of all the *Dādūpanthis*. They all contribute something to keep up the dignity of their head; and here, once a year, a great gathering (*Melā*) is held.

(2) The *Nāgās* (soldier monks).—Their name, from *nagna* ('naked'), refers to the simplicity of their dress when they go to war. Their founder was Sandra Dās, a Rājput of Bikanir, who, seeing the value of the sword, before the Pax Britannica filled the land, trained his followers to serve as mercenaries. There are at present about 20,000 of them, in 9 camps, near the Jaipur borders, which they defend. They have fallen far behind in the modern accomplishments of the soldier in drill and arms. They have only the sword, the shield, and the match-lock. They were faithful to England

¹ A bird supposed to drink only the rain from heaven.

in the Mutiny. They are a fine class of men, and their training to read the *Bānī* and to arms prevents them from falling into dissipation.

(3) The *Utrādis*.—These have come from a great and prosperous 'school' in the Panjāb. The founder was Bābā Banwāri Dās. These *Dādūpanthis* take to medicine and money-lending, and many of them are very rich.

(4) The *Virādis*.—These may not touch money, but have to live on the alms they get. They wear salmon-coloured clothes and devote themselves to study. They seldom stay long in any place, but are guided by 'grain and water' (i.e. food) in their movements. 'The Master' has with him from one; or two to many disciples—boys whom he has adopted and whom he trains. The present writer has seen them travel about in as large a 'school' as 150. They teach not only the *Bānī*, but also difficult Sanskrit books relating to Literature, Philosophy, and Religion.

(5) The *Khākis* ('ashes-covered').—These *Dādūpanthis* accentuate austerities, wear few clothes, have long coiled hair, and smear themselves with ashes. They usually go about in small companies, and believe that, like the stream, they keep pure by constant movement.

4. The present condition of the *Dādūpanthis*.—Hinduism, against which Dādū protested, has, in a modified form, found its way amongst them again. It has come in by way of the intellect, and many are Vedāntists. It has also come in by way of the heart, and many use the rosary, worship the *Bānī* as an idol, and prostrate themselves before the sandals and old clothes of Dādū.

JOHN TRAILL.

DAGAN, DAGON.—1. The Babylonian Dagan. —In Bab. and Assy. texts a god appears whose name is written with the syllabic signs *DA-GAN*. The objections of Jensen (*Kosmologie*, 449 ff.) to the phonetic reading of these signs have been set aside by the discovery of new texts in which *gan* receives a phonetic complement, e.g. *Da-gan-na* (*Vorderas. Bibl. I.* [1907] 231), and in the Tell el-Amarna letters (Winckler, 1896, nos. 215, 216), *Da-ga-an* (without the determinative for 'god'). We meet also *Da-gan-ni*, with a different sign for *gan* (Jensen, *op. cit.* 449; Jastrow, *Rel. Bab.* 137); and in one case *Da-gu-na* (Bezold, *Catalogue*, 1889-99, iv. 1482).

In Babylonia, Dagan first appears in personal names on the obelisk of Manishtusu (c. 2400 B.C., Meyer), namely, *Karib* (?) *Dagān* (A. v. 8), *Gimit-Dagān* (A. xi. 15), and *Iti-Dagān* (C. xvi. 7). The 37th year of Dungi, king of Ur, took its name from the building of the temple of Dagan (*Vorderas. Bibl. i.* 231). A king of Isin (2145 B.C., Meyer) bore the name of *Idin-Dagān*, and his son was *Ishmē-Dagān*. In the prologue to the Code of Hammurabi (iv. 27 f.) the king describes himself as 'warrior of Dagan, his begetter.' Dagan is mentioned in several other early Bab. inscriptions (Jensen, *op. cit.* 449). A seal-cylinder published by de Clercq (*Cylindres orientaux*, 1888, no. 245) bears the inscription 'Dagān-abī, son of *Ibt-Dagān*, servant of Dagan,' and in the Ira-myth he is mentioned along with Anu (*KTB* vi. [1900] 60, line 25).

In Assyria this god first appears in the name of the king *Ishmē-Dagān* (c. 1900 B.C.). Itti-Marduk-balaṭu, an Assyrian ruler whose date cannot be determined, calls himself 'the chosen of Anu and *Dagān*' (Winckler, *Unters.*, 1889, p. 139). Ashur-

naširpal (885-860 B.C.) calls himself 'darling of Anu and Dagan' (Layard, Pl. I, line 1; *WAI* xvii. 10-11). The eponym for the year 879 B.C. was named *Dagān-bēl-nāšir* (*KIB* i. [1889] 204). Shamshi-Adad (825-812 B.C.) and Sargon (722-705 B.C.) also mention Dagan in connexion with Anu (*KIB* i. 175, ii. [1890] 39, 41). Dagan is not found in personal names after the 9th cent., and his worship seems to have died out in the later days of the Assyrian empire. Sargon's reference to him is an archaism.

In tablets from the kingdom of Hana, on the upper Euphrates near Sāhiḫeh, Dagan is mentioned in oaths along with Shamash (*PSBA* xxix. [1907] 177 ff., xxxi. [1910] 292; Ungnad, *BASS* vi. [1909] 5, p. 28; *Vorderas. Schriftdenkmäler*, vii. [1909] 204), and in one of these the personal name *Yashshuh-Dagan* occurs. In a tablet from the capital of this kingdom, Shamshi-Adad, *patesi* of Assyria, styles himself 'worshipper of Dagan, builder of the temple of Dagan in the city of Tirqa' (*ZA* xxi. [1908] 247; *OLZ* xi. [1908] col. 193). In a tablet of Hana published by Thureau-Dangin (*JA* xiv. [1909] 149) several priests of Dagan are mentioned, and the name *Isra'-Dagan* occurs. In the Cappadocian tablets also the name *Iti-Dagan* is found (Sayce, *Babyloniaca*, i. [1907]). Finally, the Canaanite writer of two of the Tell el-Amarna letters bears the name *Da-ga-an-takala* (Winckler, nos. 215, 216). It appears, accordingly, that the cult of Dagan extended all the way from Babylonia to the shores of the Mediterranean.

On the basis of a derivation of Dagan from *dag*, 'fish,' many writers have assumed that he was a fish-god, and have appealed to the legend narrated by Berossus (Müller, *FHG* ii. [1885] 496 ff.; Lenormant, *Fragments cosmogoniques*, 1872, p. 6f.; Hrozný, *MVG* viii. [1903] 252 ff.), that seven beings, half-fish and half-man, came out of the Persian Gulf and taught the primitive inhabitants of Babylonia the arts of civilization. The first of these was called Oánnēs; the second, Annēdōtos; and the last, Odákōn. The last is supposed to be the same as Dagan; and, on the strength of this identification, the numerous fish-men depicted in Bab.-Assyr. art (Ward, *Seal-Cylinders*, 1910, pp. 217, 282, 355 f., 385, 410) have been supposed to be representations of Dagan (e.g. Layard, *Nineveh*, 1849, ii. 353 and pl. at end of book; Schrader, *KAT*², 1882, p. 182; and in Riehm, *HWB*¹, 1874, p. 250; Menant, *RHR* xi. [1885] 295 ff.; and most of the popular handbooks). Odákōn, however, has nothing to do with Dagan, but is the Sumerian fish-god *U-ki-di-a*, or *U-di-a-ki*, who is associated with the fish-god *Han-ni*, the prototype of Oánnēs (Reisner, *Hymn.*, 1896, pp. 91, 137; Hrozný, *MVG* viii. [1903] 258). The fish-men in Bab. art represent Ea, the god of the sea, and his attendants; but with these Dagan is never identified (Jensen, *op. cit.* 451; Zimmern, *KAT*², p. 358; Hrozný, *op. cit.* 261; A. Jeremias, *Das AT im Lichte d. alt. Orients*², p. 470). On the contrary, Dagan is constantly equated with En-il, or Bēl, the god of the earth. In the passages cited above he is associated with Anu, the sky-god, in the manner in which Bēl is ordinarily associated, and in *WAI* (i. 4, no. 16, line 6 ff., iii. 68, 21 *cd*) the identity of the older Bēl of Nippur with Dagan is asserted (see *BAAL* in vol. ii. p. 286; Jastrow, *Rel. Bab.* 137, 142, 145, 219).

2. The Canaanite Dagon.—In the OT Dagon appears as a god of the Philistines who had a temple at Gaza, and a temple and image at Ashdod (Jg 16^{23st}, 1 S 5²⁻⁷, 1 Mac 10^{3st}, 11⁴). Jerome in his com. on Is 46¹ (where some Gr. texts read 'Dagon' instead of 'Nebo') says: 'Dagon est idolum Ascalonia, Gazae et reliquarum urbium Philistim.'

The Philistines were a non-Semitic people who

came from Caphtor (prob. Crete). They are first mentioned as invading Palestine in the 8th year of Ramses III. (1190 B.C.). They seem not to have brought Dagon with them, but to have adopted him from the Canaanites among whom they settled, since he is found in place-names that are older than the time of their conquest and that lie outside of their territory. *Bayti-Duquna* appears in a list of the Egyptian king Ramses III., which is copied from an earlier original of the XVIIIth or XIXth dynasty (Müller, *Egypt. Researches*, 1906, p. 49). It seems to be identical with Bēth-Dagōn (Jos 15⁴¹)—which is either the modern *Beit-Dejan*, 6 miles S.E. from Jaffa, or *Dājān*, 1½ miles farther S.—and with *Bit-Daganna* of Sennacherib (*Prism-Insc.* ii. 65 = *KIB* ii. 92). There was another *Bēth-Dagōn* in Asher (Jos 19²⁷). Jerome knows a *Kepher-Dagōn* (*OS*, ed. Lagarde² [1887], 104¹⁸, 235¹⁴) between Diospolis and Jamnia. There is also a modern *Beit-Dejan*, S.E. of Nablus. All these are doubtless survivals of ancient place-names, and indicate a wide diffusion of the cult of Dagon in Canaan before the Philistine conquest. A borrowing of Dagon by the Philistines is not surprising, since they adopted the Canaanite 'Ashtart (1 S 31¹⁰) and the Syrian Atargatis (see ATARGATIS in vol. ii. p. 165). Whether Marnas (Aram. *Marnā*, 'our Lord'), a deity of the Philistines at the beginning of our era, is the same as Dagon is unknown (see Baethgen, *Beitr.*, 1888, p. 65 f.).

Dagon seems also to have been a god of the Phoenicians, either through survival from primitive Canaanite religion, or through adoption from the Philistines (cf. Philo Byblius in Müller, *FHG* iii. [1885] 567 f.). The *Etym. magn.* says that Bētāgōn (Bēth-Dagōn) is Kronos among the Phoenicians. Sayce (*Higher Criticism*, p. 327) reports a seal bearing in Phoenician letters the inscription 'Ba'al-Dagōn,' and the inscription of Eshmunazar, king of Sidon, contains the words 𐤁𐤏𐤋 𐤔𐤓𐤕, which may mean 'land of Dagon,' or merely 'corn-land.'

The theory that Dagon is derived from *dag*, 'fish,' and that the image of Dagon was half-man, half-fish, is not found in old Jewish sources such as the Targum and Talmud, or in Josephus; it first appears in Jerome, who interprets Dagon as compounded of 𐤔 and 𐤓𐤕, and renders it *piscis tristitiae* (*OS*, ed. Lagarde², 32; cf. 189¹⁴). This theory was adopted by Jewish commentators of the Middle Ages, from whom it has been inherited by modern scholars. It is still defended by Cumont (in Pauly-Wissowa, *RE*, iv. [1909]), Baethgen (*Beitr.* 65), Lagrange (*Rel. sem.* 131), A. Jeremias (*op. cit.* 470). In support of this view it is urged (1) that Dagon is derived from 𐤔, 'fish'; but it may come equally well from 𐤓𐤕, 'corn,' and may be a foreign word for which no Heb. etymology is to be sought. (2) In 1 S 5⁴, after the account of how Dagon's head and hands were broken off, the Heb. text reads 𐤔𐤓𐤕 𐤔𐤓𐤕 𐤔𐤓𐤕 𐤔𐤓𐤕, 'only Dagon was left upon him,' which David Kimḫi translates 'only the form of a fish was left.' Wellhausen (*Text Sam.*, 1871, p. 59) reads 𐤔𐤓𐤕 instead of 𐤔𐤓𐤕, and translates 'only his fishy part was left'; but Lagarde (*Proph. Chald.*, 1872, p. li), with more probability, reads 𐤔𐤓𐤕, 'his body,' or, with the LXX, we may suppose that 'his has fallen out of the text before 𐤔𐤓𐤕. In any case this does not prove, as Kimḫi says, that 'from his navel down Dagon had the form of a fish, and from his navel up the form of a man.' (3) Derketo, or Atargatis, at Askalon had a fish's tail (see ATARGATIS in vol. ii. p. 166), and she was possibly the consort of Dagon. But, even granting that the two were consorts, which is not known, there is no reason why Dagon should have had the same form as his spouse. The Sumerian fish-god Uduki has as wife the corn-goddess Nisaba (*MVG* viii. [1903]

263), and similarly the fish-goddess Atargatis may have had as consort the corn-god Dagon. (4) Coins of Arados and of Askalon dating from about 350 B.C. depict a triton-like figure holding a trident in his right hand and a fish in his left (Head, *Hist. Num.*, 1887, p. 666; Hoffmann, *ZA* xi. [1896] 279 f.; Lagrange, *Rel. sem.* 131). These are supposed to be Dagon, but there is no proof. They are in pure Greek style, and far more probably depict Neptune. Accordingly, there is no better evidence that Dagon was a fish-god than there is in the case of Dagān. From the seal referred to above we learn that he was one of the *bē'ālīm*, who in Canaan were predominating agricultural deities (Hos 27⁹), and on this seal an ear of corn is depicted. According to 1 S 6⁸, Dagon was discomfited by Jahweh's sending mice which destroyed the crops. This looks like an agricultural divinity. Dagon must also have been a warder-off of disease, since he was attacked by Jahweh's sending tumours upon the Philistines (1 S 56¹). He was also the leader of his people in war, who delivered their enemy into their hand (Jg 16²⁰), and in whose presence they set the ark as a trophy (1 S 5³). He was worshipped in joyous festivals with athletic sports (Jg 16²³). The one rite of his cult that is known to us is his priests' avoidance of treading upon the threshold of his sanctuary (1 S 5⁵, Zeph 1⁹).

3. The identity of Dagon and Dagān.—This is doubted by Jensen (*Kosmol.* 449 ff.) and by Moore (*EBi* i. 985), but is accepted by Schrader, Baethgen, Baudissin, Sayce, Bezold, Zimmern, Jastrow, Hrozný, and Lagrange. It is probable for the following reasons:—(1) The two names are precise etymological equivalents. Heb. *ō* is a modification of an original *d*, and is represented in Assy. either by *d* or by *ā*: e.g. *Ammōn*, Assy. *Ammānu*; *Ashkelōn*, Assy. *Iskalūna*. Hence Heb. *Dagōn* is rightly reproduced by Assy. *Dagān*, or *Dagūna* (Bezold, *Catalogue*, iv. 1482). The occurrence of the two forms shows that the resemblance is not accidental. (2) The Canaanite *Dagān-takala* in the Amarna letters (Winckler, 215 f.) must have been a worshipper of Dagon. (There can be no doubt that this is the name of a god, in spite of the lack of determinative.) (3) The Heb. name *Bēth-Dagōn* appears in the annals of Sennacherib as *Bēth-Daganna*. (4) The combination *Dagōn-Baal* on the seal referred to above is analogous to the combination *Bēth-Dagān* in Babylonia. (5) The statement of Philo Byblius (*FHG* iii. 567 f.) that Dagon was the son of Ouranos and Gē points to his identity with Bēth-Dagān, the earth-god of the Bab. triad. (6) The character of Dagon, so far as we know it, as a national god of agriculture and of war, corresponds to the character of the Bab. Dagān.

4. The origin of Dagān-Dagōn.—Schrader (*KAT*², p. 181 f.), Delitzsch (*Wo lag das Paradies?*, 1881, p. 139), Sayce (*Higher Crit.* i. p. 325), on the basis of the association with Anu, regard Dagān as a Sumerian deity whose cult was adopted by the Semitic Babylonians, and by them passed on to Mesopotamia and Palestine; but his name never occurs before 2500 B.C., and then only in the inscriptions of Semitic kings. All the personal names compounded with Dagān are Semitic, and many of them show the West Semitic type that is frequent in the period of the dynasty of Hammurabi. Now that it is known that Babylonia was invaded by the Amorites about 2500 B.C., and that the first dynasty of Babylon was Amorite (Meyer, *Gesch.*² i. [1909] 463 ff.), the theory has become exceedingly probable that Dagān was a god of the Amorites, whose worship was brought by them from their original home into both Babylonia and Palestine: so Bezold (*ZA* xxi. [1908] 254), Meyer (*op. cit.* 467), Jastrow (*Rel. Bab.* 220), Clay (*Amurru*,

p. 147), Cook (*Rel. Anc. Palestine*, 1908, p. 92). This theory is favoured by the fact that Hammurabi in the prologue to his *Code* (iv. 28) speaks as though Dagān were the ancestral god of his race.

If Dagān-Dagōn was originally the god of a people speaking a language similar to Hebrew, then the most probable etymology for his name is the one given by Philo Byblius (*FHG* iii. 567), and suggested as an alternate by Jerome, that it is the same as Can.-Heb. *ḥṣ*, 'corn.' This agrees with the facts noted above, that both in Babylonia and in Canaan he was a god of the earth and of agriculture, and that on a seal he is called *baal* and has the emblem of an ear of corn (so Movers, L. Müller, Schröder, Pietschmann, Wellhausen). Jensen in Baudissin (*PRE*² iv. 426) suggests a derivation from Arab. *dagn*, 'copious rain.'

LITERATURE.—See the bibliographies under BAAL, CANAANITES; and, for the older literature, Baudissin, art. 'Dagon,' in *PRE*² iv. (1898); also Menant, 'Le Mythe de Dagon,' in *RHR* xi. (1885) 295 ff.; Jensen, *Kosmologie der Babylonier*, 1890, p. 449 ff.; Sayce, *Higher Crit. and Mon.*, 1894, p. 325 ff.; Moore, art. 'Dagon,' in *EBi* i. (1899); Theinus-Labar, *Comm. on Sam.*, 1598, p. 30; H. P. Smith, *Comm. on Sam.*, 1899, p. 33; Camont, art. 'Dagon,' in Pauly-Wissowa, *RE*, 1909; Jastrow, *Religion Bab. und Assy.* i. (1905) 210 f.; Hrozný, 'Oannes, Dagon, und Dagon,' in *MVG* viii. (1903) 94-106; Zimmern, *KAT*², 1903, p. 368; Lagrange, *Études sur les rel. sem.* 2, 1905, p. 181; A. Jeremias, *Das AT im Lichte des alten Orients*², 1906, p. 470; Clay, *Amurru, the Home of the Northern Semites*, 1909, p. 146. LEWIS BAYLES PATON.

DAIBUTSU ('Great Buddha').—The name given to several colossal images found in Japan. These vary in size, posture, material, etc.; some indeed are not much larger than the ordinary size of the human body, and scarcely deserve the title of *daibutsu* popularly assigned to them. Some of them are of wood, but the majority are of bronze; some are in a sitting posture, others in a standing one; recumbent figures, such as are seen in Ceylon or Burma, are never found in Japan. The Buddhas represented are Vairocana, Amitābha, Avalokiteśvara (Kwannon), Kṣitigarbha (Jizō), and Śākyamuni, but there are also representations of other Buddhas and Bodhisattvas. For the purposes of this article, three *daibutsu* only will be considered, viz. those at Nara, Kyoto, and Kamakura. These are the *daibutsu* that are properly so called.

1. Daibutsu at Nara.—This was erected under the auspices of the Emperor Shōmu Tennō (A.D. 724-748), the most zealous, perhaps, of all the Buddhist Emperors of the country. It is of especial interest to the student of the religious history of Japan, as being connected with Shōmu's audacious but successful plan of planting Buddhism firmly on the soil of Japan by proclaiming its essential identity with the Shintoism indigenous to the country. In this plan the Emperor was ably assisted by a Korean priest of the name of Gyōgi, who must be considered as the true parent of the *Ryōbu*, or amalgamated Buddho-Shintoism, which continued in force until the Meiji era. Gyōgi's plan was to impress the native mind with the dignity of Buddhism by the erection of a colossal statue of Buddha set up in a temple architecturally worthy to be the religious centre of the country, and then to absorb into the organized system thus established the whole of the native cults which were then, as now, bound up with the life and worship of the nation. This could not be done without the sanction of the Shinto priesthood, and the instruments chosen to

¹ Gyōgi, the descendant of a Korean king, was born in A.D. 698 in Japan, where his family had been domiciled for some time. Ordained to the priesthood at 18, he soon distinguished himself by his practical schemes for the improvement of the country—road-building, etc. He became spiritual adviser to the Emperor Shōmu and his consort Kōmyō, and inaugurated the movement for the amalgamation of the two religions then existing in Japan—undoubtedly with the best of intentions. He died in 740, just before the completion of the *daibutsu*.

secure their assent were Gyogi himself and the Udaijin Tachibana no Moroye. According to the *Daibutsu-engi*, Gyogi was sent to Ise, nominally for the purpose of prayer, but actually, it would seem, to confer with the authorities at the Ise shrines. A similar messenger was dispatched to the Hachiman shrine at Usa in Kyūshū. The results of these preliminary meetings having been found satisfactory, a formal embassy was sent, with Tachibana no Moroye at its head, to propitiate the Sun-goddess, and the result was a formal reply, conveyed first in a dream to Shōmu, and then in a definite message, that the Great Sun-goddess was pleased to identify herself with *Dainichi* ('great sun') *Nyorai*, whose true essence was the great Buddha Vairochana. Thus was laid the foundation of that great system which taught the Japanese to see in the gods of Shinto manifestations of the deities of Buddhism, and enabled them to become Buddhists without ceasing to be Shintoists. This was in 743. The colossal image was the perpetual memorial of the alliance thus cemented. The casting was completed in 749, the inauguration ceremony was held forthwith, and the whole work was finished in 751. The statue, which is in a sitting posture, is 53 ft. in height, 7 ft. higher than the similar image at Kamakura. It stands in the *Daibutsu den*, or 'Hall of the Daibutsu,' in the Todaiji Temple at Nara, the building in which it is enclosed serving to some extent to conceal the magnificence of its proportions.

It was the desire of the Emperor and Empress to have Gyogi perform the ceremony of inauguration. But he did not live to see the completion of the statue. At the New Year's festivities in A.D. 749, Shōmu and Kōnyō had received from Gyogi the vows of the Bodhisattva, and had retired from the world, abdicating in favour of their daughter Kōken. Gyogi, feeling the approach of death, then designated a fit person to take his place—an Indian monk of the name of Bodhisena, known in Japan as Baramon Sōjo, or the Brahman archbishop. (Japan was at the time feeling the effects of the Muhammadan upheaval. Refugees from India, Persia, and Central Europe, gathering at the court of the Tang in Singanfu, had continued their wanderings as far as Japan, and in the reigns of Shōmu and Kōken we find not only Buddhist monks from India, but Manichæans, and even a Nestorian Christian doctor, at the court of Nara.)

When the day for the inauguration of the statue came, Bodhisena mounted the platform and 'opened its eyes' with a brush dipped in water. The whole congregation had its part in the ceremony, for a long string, fastened to the brush, passed among them for those who would to take in their hands. The congregation comprised the ex-Emperor Shōmu and his Empress, the reigning Empress Kōken, and all the magnates of the court. It was an imposing congregation in another sense, for, in the parlance of the day, Shōmu was an incarnation of Kwannon; Ryōben, who was considered to be the founder of the temple, was looked upon as an incarnation of Maitreya; Gyogi, of Mañjuśrī; and Bodhisena, of Samantabhadra. The Buddhist doctrines that were at that time uppermost in the mind of Japan were those known as *Kegon*, contained in the mystic Scriptures of the *Avatamsaka*.

The Nara *daibutsu* has experienced many vicissitudes. In 855 its head fell off and was with difficulty restored to its position; in 1180, during the civil wars, the temple was burned, and the head melted. The image remained headless until 1195, when it was restored, through the efforts mainly of Jūgen, a disciple of Hōnen, who had been in

China, and who travelled through Japan on a wheelbarrow collecting money. In 1567, the temple was burnt, but the *daibutsu* remained uninjured. Time, however, has necessitated many repairs from generation to generation. Very little, probably, of the original material now remains, yet the *daibutsu* has retained its identity throughout all its changes.

2. *Daibutsu at Kyoto*.—We have seen that the temple enclosing the *daibutsu* at Nara was burnt during the civil troubles in 1567. The temple remained in a ruinous condition for many years, and this suggested to Hideyoshi, who became Kwampaku in 1585, the idea of reconstructing it on some other site, and of placing in it a colossal image which should be more magnificent even than the one at Nara, and which should also be a perpetual memorial of himself. In 1586 he selected a site on the Amida-zaka at Kyoto, and commenced the erection of his temple. It did not seem as though Heaven were propitious to his designs. The first temple, built of wood brought from the districts of Tosa, Kii, and Kiso, and containing a wooden *daibutsu* (of Lochana-Buddha), 160 ft. in height, was destroyed by an earthquake in 1596. Nothing daunted, Hideyoshi set to work again on a more substantial structure. On Jan. 15, 1603, the casting of the bronze *daibutsu* having been completed up to the neck, the building and scaffolding caught fire and were destroyed, and, Hideyoshi being by this time dead, no immediate attempt was made to repair the disaster.

A year or two later, however, Tokugawa Iyeyasu, being anxious to reduce the family of Hideyoshi to impotence, suggested to Hideyori that the completion of the *daibutsu* and temple would form a very fitting tribute to the memory of his great father. Hideyori and his mother fell into the trap, and ruined themselves financially with the carrying out of Hideyoshi's magnificent but extravagant design. Hideyoshi's structure was 150 ft. in height, 272 ft. in length, 167½ ft. in depth. The roof was supported by 92 pillars, with an average diameter of 5 ft., and the sitting figure of Lochana-Buddha was 58½ ft. in height. When the whole was finished, Iyeyasu picked a quarrel with Hideyori over an insult, real or pretended, supposed to be conveyed to him in the inscriptions on the bells. The dedication ceremonies were postponed, and it was not long before Iyeyasu took up arms against the family of Hideyoshi and crushed it for ever.

Hideyori's *daibutsu* was destroyed by earthquake in 1662, and the copper used for coinage. No interest attaches to its successors. The present Kyoto *daibutsu* dates from 1801.

3. *Daibutsu at Kamakura*.—This image, though smaller than the one at Nara, is much better known. It stands in the open, amidst beautiful surroundings, and is constantly being photographed. No illustrated description of Japan would be complete without it. It is an image of Amida, 49 ft. 7 in. in height, and may be taken as marking an era in Japanese Buddhism. The *daibutsu* at Kyoto had no real spiritual significance: it was erected by men devoid of religious faith, for purposes of self-glorification. That at Nara symbolizes that union of Buddhism and Shintoism which was made possible by an acceptance of the peculiar tenets of the Kegon school, with Vairochana as its chief Buddha. The Kamakura *daibutsu* is an image of Amida, and marks the period when Vairochana was going out of fashion, and Amitābha, with the sects devoted to his worship, was coming to the front.

It is said that the idea of having a *daibutsu* at Kamakura first occurred to Minamoto Yoritomo in A.D. 1195, when he was assisting at the cere-

monies of the re-dedication of the Nara image after its restoration. Yoritomo, dying in 1195, did not live to see the completion of his design. It was not, however, suffered to fall to the ground, Ita no Tsubone, one of the ladies of Yoritomo's court, undertaking to collect funds for the purpose. Ita no Tsubone's efforts were supplemented by a priest named Jōkō, who was also active in collecting contributions. A wooden image was erected in 1241, the bronze one in 1252. The first was dedicated to Amida, the second apparently to Śākyamuni. But the present image, representing Amida, is said to be the very image erected in 1252, in which case we have an image with a double dedication—to Śākyamuni and to Amida. This, however, presents no difficulty. *Ni son ichi* ('two blessed ones with one personality') is a common doctrine of the Jōdo sects, Śākyamuni and Amitābha being looked upon as identical in essence whilst distinct in personality and name. Like the *daibutsu* at Nara, this image was originally enclosed within a temple. But the temple was destroyed by tidal waves in the year 1369 and again in the year 1494, and no attempt has been made since the last catastrophe to rebuild it. Strange to say, the metal does not seem to have suffered at all from the inclemencies of the weather.

A. LLOYD.

DAITYA.—The word *daitya*, the formation of which is explained by Pāṇini (iv. 1, 85), etymologically means 'descendant of Diti,' just like *Daiteya* and *Ditiya*; it occurs in classical Sanskrit literature from the Epics downwards, and is there synonymous with *Asura* and *Dānava*, which are already found in Vedic literature. This article must, therefore, treat of all three—Asuras, Dānavas, and Daityas—as denoting one kind of demons or enemies of the gods.

The word *asura* originally had not an altogether evil meaning, and it is still used in the R̥gveda as an epithet of the higher gods, especially of Varuṇa;¹ but even there it has in other places the meaning 'inimical to the gods.' In the Brāhmaṇas and Upaniṣads the latter meaning is exclusively given to the word *asura*, which is there the common name of demons as enemies of the gods. Both the Asuras and the gods are descendants of Prajāpati. According to the *Satopatha Brāhmaṇa*, the Asuras were created from the downward breathing of Prajāpati, and entered the earth;² they had darkness and magic (*māyā*) assigned to them by him,³ and held to untruth.⁴ Originally they had divided the world with the gods,⁵ and once built three strongholds, one in each world. But they continually contended against the gods, and, though they were more numerous or more powerful than the latter,⁶ they were in the end always defeated by them. Frequently they were put to flight by Indra, with or without the assistance of Bṛhaspati. Thus at last they were driven from the earth and the regions above.⁷

From these statements it appears that the authors of the Brāhmaṇas and Upaniṣads regarded the Asuras as the pre-eminently evil ones; once⁸ it is even said that their alleged battles with the gods are fictitious, and that they became degraded through their own wickedness. It is, however, to be noted that they are enemies only of gods, not of men; some peoples (the Easterns and others) are even said to be of Asura-nature, and it is added that they make their burial-places round and line

them with stones.¹ This seems to imply that some peoples were supposed to worship Asuras.²

As regards the second synonym of Daitya, mentioned above, viz. *Dānava*, we find this word, as well as *dānu*, from which it is derived, used in the R̥gveda very much in the same sense as the later *asura*. A female *dānu* is mentioned (i. xxxii. 9) as the mother of Vṛtra (*vṛtraputrā*). She came in later times to be regarded as the mother of the Dānavas; for *dānava* might be taken as a metonymic from *dānu*, and mythologists, of course, gladly availed themselves of this etymology in drawing up their legendary genealogies. The Daityas are derived from Diti, as the Dānavas from *Dānu*; but there is this difference, that *dānava* was an ancient name for demons which gave rise to a myth of their descent, while *daitya* is a name derived, after the Vedic period, from a somewhat ill-defined and evidently not popular deity, Diti. She is mentioned thrice in the R̥gveda³ and several times in the Atharvaveda, almost always in conjunction with the well-known great goddess Aditi, apparently as her sister, to whom she may be said to owe her existence, through a popular etymology which regarded *aditi* as formed by a privative and *diti*, just as *asura* was derived from *sura*. Diti, a product of priestly speculation, would scarcely have given rise to the popular name Daitya; but the latter was apparently formed as a 'pendant' of *Aditya*—a name which already in the R̥gveda denoted a class of deities including some of the highest gods, and at the same time had been regarded as a metonymic from Aditi. So, to match it, the foes of the Adityas—the Asuras—were named, by another metonymic, Daitya, after Diti, though this goddess had scarcely any hold on the imagination of the people.

The only myth related of Diti in the *Rāmāyaṇa* (i. 46) and the *Purāṇas*⁴ betrays a similar tendency. It is to the following effect:

In the battle between the gods and the Daityas, which ensued on the churning of the ocean, the latter were worsted and slain. Diti then performed austerities, and asked Kaśyapa for a boon, viz. that she might give birth to a son who should vanquish Indra. Kaśyapa granted the boon on condition that she should remain entirely pure for a thousand years. During her pregnancy Indra watched her closely, and at last found her in an impure position. Thereupon he entered her womb, and divided the embryo into seven parts, which became the seven lords of the Maruts, or winds.

The present writer is of opinion that this myth was invented in order to explain that the Daityas are the elder brothers of the gods. For *marut* is also used, at least in classical Sanskrit, as a synonym of *deva*, 'god.' The motive of the myth lies, obviously, in an etymology which derives *diti* from the root *dā*, 'to cut.'⁵ The myth itself is evidently not an old one, for it rests on the assumption that the Daityas are the children of Diti, and that they were killed in battle by the gods.

In epic and classical Sanskrit literature, where *Asura*, *Dānava*, and *Daitya* are interchangeable terms, these beings continue to be regarded as rivals, and, occasionally, as deadly foes, of the gods; but the attitude of the writers has decidedly changed since the composition of the Brāhmaṇas. Thus, the great epic contains several stories in which the Asuras—Vṛtra, Bali, Śambara, Namuchi, and others—are spoken of as virtuous and wise;

¹ *Satopatha Brāhmaṇa*, xiii. 8. 1. 5, xiii. 8. 2. 1.

² It may be remarked, as illustrative of the godless character of the Asuras, that the secondary word *sura*, 'god,' was formed from *asura*, the latter being wrongly understood to be *a-sura*, 'non-god.'

³ According to Böttlingk-Roth (*Skr. Wörterb.*, St. Petersburg, 1875, s.v. 'Diti'), the Diti of the R̥gveda is different from the Diti of the Atharvaveda.

⁴ Cf. Wilson, *Viṣṇu Purāṇa*, ii. 79, note 1.

⁵ It may be mentioned that the *Mahābhārata* (ix. 38. 32 ff.) contains an entirely different account of the origin of the Maruts; they were formed from the vital seed of the god Mahakapaka falling into the river Sarasvatī.

¹ *Asurya* (adj. and subst.) in the R̥gveda refers to gods, and not to demons.

² xl. 1. 6, 8.

³ ix. 5. 1, 12 ff.

⁴ *Bṛhad Āraṇyaka*, i. 3. 1.

⁵ *Satopatha Brāhmaṇa*, xiii. 8. 1. 5.

⁶ *Ib.* xl. 1. 6, 9.

⁷ ii. 4. 2, 5.

⁸ i. 2. 5, 1 ff.

and some Asurās are acknowledged by gods as their friends and protégés, e.g. Prahrāda by Viṣṇu, and Bāna by Śiva. Moreover, they were not believed to lead a life of wickedness, but to conform to the precepts of the Veda. They had a teacher and priest of their own, a *purohita*, in the person of Śukra, otherwise called Kaśyapa Ūśanas, a descendant of the great ṛṣi Bhr̥gu.¹

Finally, the abode of the Asuras, Pātāla, is described not as a dwelling-place of demons, but as equalling, and even surpassing, the heavenly regions in beauty and splendour. In popular literature, also, the Asuras seem to have been looked upon with a decided sympathy, for bk. viii. of the *Kathāsarisatsāgara* contains the story of Śūryaprabha, apparently the subject of a romantic epic, the hero of which is an Asura who is held up to our admiration. People seem to have cherished a similar feeling towards the Asuras as towards the Nāgas, who shared the Pātāla regions with them. On the other hand, whenever the contention of the Asuras with the gods becomes the subject of the writers, they are at one with the Vedic authors, and describe the Daityas as demons given to deeds of violence, skilled in sorcery and magic power, and able to make themselves invisible or to assume any shape at will.²

The *Mahābhārata* and the *Purāṇas* contain accounts of the origin and genealogy of the Asuras, which, however, differ considerably in details. Marichi, one of the six mental sons of Brah̥mā, produced by his will a son, Kaśyapa, a *prajāpati*, or secondary creator. He married thirteen daughters (*putrikās*) of Dakṣa, who was also a *prajāpati*. The first place in the list of these thirteen daughters of Dakṣa is always given to Aditi, and the second to Diti; but the latter was the eldest, as is expressly stated in *Mahāb.* xii. 207, 20. Diti had but one son, Hiranyakaśipu, the ruler of the Asuras. He had five sons, Prahrāda, etc.; Prahrāda had three sons, Virochana, etc.; Virochana's son was Bali, whose son was Bāna. These Asuras and their progeny³ are, properly speaking, the Daityas; but popular usage takes no account of this genealogy, and regards all enemies of the gods as sons of Diti. By Dānu, another daughter of Dakṣa, Kaśyapa had 33 or 40 sons, among whom are enumerated the most famous Asuras. The sons and grandsons of these are said to be countless; they are the Dānavas proper, but the above remark about the Daityas applies also to them. Kaśyapa's son by the fourth daughter of Dakṣa, Simhikā, is the famous Asura Rāhu, whose head was cut off by Viṣṇu, and who ever since persecutes sun and moon, and occasionally swallows them (mythological cause of eclipses). Danāyus, the fifth wife of Kaśyapa, became the mother of Bala and Vṛtra, the Asuras who were killed by Indra; and Kālā, the sixth wife of Kaśyapa, gave birth to the Kālakeyas, a class of Asuras. Accordingly, the *Mahābhārata* (I. 65) derives the whole race of Asuras from five daughters of Dakṣa.

According to the *Viṣṇu Purāṇa*,⁴ Simhikā was the sister of Hiranyakaśipu, and wife of Vipracitti, a son of Dānu, and, as the same source does not mention the above-named wives of Kaśyapa, or at least does not make them the ancestresses of separate Asura families, there are practically only two races of Asuras acknowledged by the *Purāṇas*, viz. Daityas and Dānavas. There are variations

in other *Purāṇas* which need not be detailed here.⁵

The *Purāṇas*, however, have another account of the origin of the Asuras at the first creation of the world:⁶

'Brah̥mā, being desirous of creating the four orders of beings termed gods, demons, progenitors, and men, collected his mind into itself. Whilst thus concentrated, the quality of darkness pervaded his body, and thence the Asuras were first born, issuing from his thigh. Brah̥mā then abandoned that form which was composed of the rudiment of darkness, and which, being deserted by him, became night.'

Wilson says in a note: 'These reiterated, and not always very congruous, accounts of the creation are explained by the *Purāṇas* as referring to different *kalpas*, or renovations of the world, and therefore involving no incompatibility. A better reason for their appearance is the probability that they have been borrowed from different original authorities.'

As regards the origin of the Asuras, it is probable that the myth quoted above has been developed from the statement in the *Brāhmaṇas* mentioned at the beginning of this article. The genealogy of the Asuras is of later growth, and introduces a new element of confusion into the accounts of them. How, for instance, could Hiranyakaśipu, the first-born of all Daityas and Dānavas, rule over the whole race of Daityas and Dānavas, who, according to the Pauranic theory, sprang from his children and grandchildren?

It has been said above that the Asuras reside in Pātāla, and the *Satapatha Brāhmaṇa* already states that they entered the earth. Yet they are not restricted to Pātāla, but may own towns and fortresses on earth, in air, and in heaven. Thus the three sons of Tāraka possessed three towns, which, united into one, became the famous Tripura, which Śiva reduced to ashes with his mystical arrow. The Panolamas and Kalakāñjas inhabited the flying town Hiranyapura, which was destroyed by Arjuna (*Mahāb.* viii. 33 f., iii. 173). Another tribe of the Dānavas, the Nivātakavachas, live on the shore of the ocean, where Arjuna vanquishes them (*ib.* iii. 168 ff.). In most stories about Asuras, the scene is laid in the upper regions, where they acquire power even over the three worlds, till some god slays them.

The belief that the Asuras dwell in the regions below has been common to all Indian sects. Thus, according to the Northern Buddhists, the world of the Asuras, who, besides the Daityas, comprise the Rākṣasas, Yakṣas, and similar demons, is the uppermost of the four *Apāyalokas*, or worlds of suffering; and it is situated exactly as far below the surface of the earth as the world of Indra is above it. Among the Asuras the foremost rank is held by Rāhu, the demon who causes eclipses of the sun and moon.⁷ The Jains reckon the Asuras, or, as they call them, the Asurakumāras, as the lowest class of the Bhavanavāsins or Bhaumeyaka gods, and assign them the uppermost part of *Ratnaprabhā*, the highest hell-region, as their residence.⁸

A great many names of Asuras are given in epic and classical Sanskrit literature, some of which have already been mentioned. We add the names of a few more who are frequently mentioned in connexion with the god who slew or overcame them: Bala, Vṛtra, Namuchi, Trisiras, Jambha, and Pāka were slain by Indra; Madhu, Kaitabha, Bali, Mura, and Naraka by Viṣṇu (who is thence called *Daityāri*, foe of the Daityas) or Kṛṣṇa; Pralamba by Balarāma; Sambara by Pradyumna; Andhaka by Śiva, who also destroyed Tripura; Sumbha, Nisumbha, and Mahiṣa by Devī; Tāraka and Bāna by Kārtikeya; and Ilvala and Vātāpi by Agastya.

¹ Wilson, *op. cit.*, in his notes to pp. 26, 69 ff. It may be mentioned that the *Vāyu Purāṇa* gives the progeny of Danāyusa (ii. 7, 30 ff.).

² Wilson, *op. cit.* I. 971.

³ Kern, *Manual of Indian Buddhism* (GIAP iii. 8), 1896; and the works quoted there, p. 57, n. 7.

⁴ *Taittirīyārthadigama Sūtra*, iv. 11, tr. in *ZDMG* lx. 819

⁵ It may be mentioned in this connexion that Indra, by killing Vṛtra, incurred the sin of *brahmahatya*, or murder of a Brahman, and in consequence lost his celestial kingdom (*Mahābhārata*, iii. 101, v. 10, xii. 281, 842). Still, Vṛtra is but an Asura and an enemy of the gods.

⁶ Cf. V. Fausbøll, *Indian Mythology, according to the Mahābhārata*, London, 1903, p. 3 ff.

⁷ Not enumerated in the *Viṣṇu Purāṇa*, but in some others, e.g. *Vāyu Purāṇa* (*Bibl. Ind.*, II. 74 f.).

⁸ See Wilson, *op. cit.* II. 69.

The Asuras (Daityas, Dānavas) constitute the highest class of demons; they are the enemies of the gods, and not of mankind; indeed, men seem, as a rule, excluded from their sphere of action. This is the principal point in which they differ from the remaining classes of demons, such as Rākṣasas, Yakṣas, Nāgas, etc., who sustain hostile or friendly relations with men. See art. BRAHMANISM.

In conclusion, an opinion must be noticed which has been put forward by some writers—most recently by the Danish scholar V. Fausbøll¹—viz. that the wars of the Suras and Asuras are but a mythological account of what originally was a strife between the Aryans and the aboriginal inhabitants of India. Fausbøll includes among the Asuras other classes of demons, Rākṣasas, Yakṣas, Nāgas, etc.—a course which, as has just been pointed out, cannot be admitted. As regards the Asuras proper, with whom alone we are concerned in this article, his theory is without foundation, and is quite unnecessary. The Indians had at least two war-gods—Indra, and, in later times, Kārtikeya. Warlike gods presuppose, in India as elsewhere, enemies with whom to wage war, and those enemies were the Asuras, Dānavas, or Daityas.

LITERATURE.—This has been sufficiently indicated in the course of the article. HERMANN JACOBI.

DAKHMA.—See DEATH AND DISPOSAL OF THE DEAD (Parsi).

DANAIDS.—The Danaids (*Δαναίδες*) were the daughters of Danaus. Their number is variously given: Hecataeus (schol. on Eurip. *Orest.* 872) enumerates twenty, and Hesiod (*ap.* Hecataeus, *loc. cit.*) fifty; the latter figure has won general acceptance. Their fame is enshrined in two legends—the one telling how they murdered their bridegrooms during their wedding night; the other how, after death, they were condemned to pour water into vessels full of holes.

1. The standard form of the first legend is that given to it by Æschylus; it forms the basis of the story as found in the *Bibliotheca* of Apollodorus, ii. 12 ff. (cf. schol. on Homer, *Il.* i. 42), and Hyginus's *Fabula*, 168 (cf. schol. on Stat. *Theb.* ii. 222; schol. Stroz. on German. *Aratea*, p. 172, ed. Breysig). We find part of it in the extant *Triceries* of Æschylus—the first portion of his Danaid-tetralogy—and the entire myth in the prophecy of Prometheus in *Prom. Vinc.* 853 ff. The story is as follows. The fifty Danaids flee, under their father's direction, from Egypt to Argos, in order to escape from the unwelcome suit of their cousins, the fifty sons of Ægyptus. The youths, however, set out after them, and, by mere superiority of force, compel the maidens to marry them. Danaus, however, commands his daughters to kill their respective husbands, and all of them obey save one, Hypermnestra, who spares Lynkeus out of love. Hypermnestra, saved from her father's vengeance, and at length reconciled to him, continues the lineage of the family, and by inheritance secures for her acknowledged husband the over-lordship of Argos.

The scene of the myth is thus Argos, and, indeed, the mere name of the father and his daughters indicates this locality, as in Homer the Argives are most frequently referred to as *Δαναοί*. Since the publication of Preller's *Griechische Mythologie* (cf. ii.² [Berlin, 1861] 45 ff.) the myth has been commonly interpreted as relating to the scarcity of water in 'thirsty Argos'; the slaying of the bridegrooms is taken to mean the drying up of the springs. This hypothesis is still adhered to by Ed. Meyer (*Forschungen zur alten Gesch.* i. [Halle, 1892] 74) and Waser (*in* Pauly-Wissowa, iv. 2039),

¹ *Op. cit.* p. 41 f.

but its lack of evidence is on a level with its failure in lucidity (cf. P. Friedländer, *Argolica*, Berlin, 1905, p. 24). It is certainly true that the full, though not identical, lists of the Danaids given by Apollodorus, ii. 16, and Hyginus, *Fab.* 170, contain at least one name, Amymone, which is also the name of a fountain in Argos; and, while there may be another here and there which could be appositely applied to a spring, this cannot be said of the majority. Amymone, moreover, is the subject of a special myth, which bears no resemblance to that of the others: she yields herself to Poseidon, who in return reveals to her the springs of Lerna; and she bears to him a son named Nauplius (Apollod. ii. 14 and 23; Hygin. *Fab.* 169). The purport of this story is, in fact, the direct opposite of the Danaid myth; the latter really implies that the maidens, in order to preserve their virginity, do not shrink from slaying even their bridegrooms. It is true that this aspect is not made explicit in the story as related by Æschylus, who lays stress on the Danaids' hatred of the Ægyptiads only, not of men in general, and speaks of their timidity of character. His reason for making this alteration is revealed in the only passage of any length that now remains of the third portion of his Danaid-tetralogy (fr. 44), in which Aphrodite extols the might of love, and so vindicates Hypermnestra and her disobedience to her father's cruel command. The Æschylean rendering, however, is really a transformation of the original myth, as appears from the following considerations. (1) The slaying of men by the Danaids has always formed the kernel of the myth. (2) Their fruitless labour of water-drawing after death, as will be shown below (§ 2), is an indication of the fact that they were never married. (3) The only extant fragment of the epic *Δαναίδες* represents them as beings of Amazon-like nature. From this epic, which, according to the Borgia tablet (Jahn-Michaelis, *Griech. Bilderchroniken*, Bonn, 1873, p. 76, K²), contained 6500 lines, or about half the number in the *Iliad*, Clement of Alexandria (*Strom.* iv. 120-124), when giving examples of brave women, cites the cases not only of Leaina and Telesilla, but also of the Danaids, and in support thereof quotes from the epic as follows: 'And then the daughters of Danaus armed themselves quickly by the wide-flowing stream of the lord Nile.' We may, therefore, infer that the characterization of the Danaids in this epic was quite unlike that given by Æschylus. Amazons have no occasion for a father's care, or for an admonition to guard their virginity; and, in point of fact, Danaus himself, as has been long recognized (cf. Ed. Meyer, *op. cit.* p. 73), is a mere phantasm, having neither a cult nor a special myth of his own.

The story of the Danaids as slayers of men and adepts in the use of arms must, accordingly, be brought into line with the Amazonian myths. These have been admirably dealt with by J. Töpffer (Pauly-Wissowa, i. 1754; cf. also the same writer's *Attische Genealogie*, Berlin, 1889, p. 191 ff.; Kretschmer in *Glotta*, ii. [1908] 201 ff.; O. Braunstein, *Die politische Stellung der griech. Frau*, Leipzig, 1911, p. 69 ff.). In the myths of the Amazons, Töpffer sees fragmentary reminiscences of a pre-Hellenic 'gynaikocratic' race which survived for a considerable period in Asia Minor, but had at one time been spread over Greece proper and the Archipelago. The Danaid myth finds a parallel in the story of the women of Lemnos who slew their husbands, and it is perhaps more than a coincidence that Hypsipyle, one of these Lemnian women, should appear in Argos, associated with the legend regarding the institution of the Nemean Games by the seven Argive heroes who marched against Thebes. It is also worthy of note that Bellerophon,

the earliest traditional antagonist of the Amazons in Lycia, came originally from Argos (*Il.* vi. 186). Now, as we find Amazon-like women—the Danaids, namely—in Argos, it is natural to infer that they had made the same journey as Bellerophon—had come, that is, from Argos to Lycia. As a matter of fact, the Danaids bear the name of a pre-Hellenic tribe. For, since the Canaanite Philistines have been identified with the *Palisatu* mentioned in the documents of Ramses III. (1200–1175 B.C.)—one of the tribes which worshipped Minos and brought their civilization to its highest development in Crete during the 2nd cent. B.C. (cf. Bethe, in *Rhein. Mus.* lxx. [1910] 200 ff., with lit. and proofs)—we can no longer doubt that the Argive *Danaoi* and the *Danuna* mentioned in Egyptian documents as early as the 14th cent. B.C. were one and the same people (Ed. Meyer, *Gesch. d. Alterthums*, i.² [Stuttgart, 1909] 226).

A word or two must be added regarding Hypermnestra, the only one of the Danaids who spared her bridegroom, and the mother of the royal race of Argos. Her story, even more than that of Amy-mone, runs directly counter to the specific bearing of the Danaid myth. Account must also be taken of two additional facts. (1) Of all the Danaids, Hypermnestra alone had a cult in Argos (cf. Hygin. *Fab.* 168=schol. Stroz. on German. *Aratea* [172, ed. Breysig], who speaks of a 'fanum,' while Pausan. ii. 21. 2, refers to the tomb of Hypermnestra and her husband in the city of Argos). (2) Lynkeus, again, is a standing figure in Peloponnesian legend, while the other sons of Ægyptus are but empty names. We may, therefore, assume that Hypermnestra, like Amy-mone, was a later addition to the group of the Danaids, designed to bring each of them into the imposing genealogical fabric of Argive mythology. This is confirmed by the legend that Lynkeus killed his sisters-in-law and their father (schol. on Eurip. *Hekuba*, 886). According to Archilochos (fr. 150, in Malalas, *Chronogr.* iv. 68), Lynkeus was depicted as a conqueror who robbed Danaus of both his dominion and his daughter.

The process of reducing the originally Amazon-like Danaids to human proportions, as we find it already consummated in Æschylus, led at length to the complete obliteration of their characteristic quality of hostility to men. After the murder of the Ægyptiads they all marry again. Their father gives them, without a price, as rewards to the victors in the games (Pindar, *Pyth.* ix. 112 f.)—a story which had originally no connexion with the Danaids (P. Friedländer, *op. cit.* p. 17).

The scene of the man-slaying was laid among the streams of Lerna (Pausan. ii. 24. 2; *Paræmiographi*, i. 108), but also in Argos itself—on the acropolis, where, as noted by Pausanias (*loc. cit.*), there stood some memorial of the sons of Ægyptus.

2. The earliest literary record of the tradition that after death the Danaids were doomed to the endless and aimless labour of pouring water into vessels with holes is found in the pseudo-Platonic *Asiochus* (3rd cent. B.C.), 371 E. In the 5th cent. B.C., Polygnotus, in his pictures of the under world, had portrayed men and women—characterized as 'unconsecrated'—engaged in a like task (Pausan. x. 31. 9; cf. Plato, *Gorgias*, 493 B, *Rep.* 363 D). Accordingly, Wilamowitz-Möllendorf (*Homer. Untersuchungen*, Berlin, 1884, p. 202) and Rohde (*Psyche*, Tübingen, 1891–94, pp. 292–297) have advanced the hypothesis that this penalty of fruitless labour forms a later accretion of the Danaid myth. But Rohde's assertion that the Danaids were *ἀρεταί*, i.e. that they had not attained their *τελός* by marriage, suggests that the conception of the Danaids as aimless water-drawers in Hades may possibly be older than he believes.

This drudgery, in fact, was regarded among the Greeks, and is regarded even to-day, e.g., in the Tyrol, as the lot of the unmarried in the under world (Waser in Pauly-Wissowa, iv. 2087, 60 ff.; P. Friedländer, *op. cit.* p. 28).

The relative antiquity of this element in the story is likewise borne out by a further remark of Rohde, viz. that the Danaids could be associated with the task of drawing water only at a time when they were still thought of as unmarried. Even in Pindar's day (*Pyth.* ix. 112), however, this was no longer the case; while, according to Æschylus, at least two of them, Amy-mone and Hypermnestra, yield to the power of love. For that form of the myth which, as made known to us by the surviving verse of the epic *Danaides*, represented the Danaids as Amazon-like women hostile to men, we are thus brought to a date not later than the 6th cent. B.C. It must, therefore, have been about that time that the lot of the unmarried in Hades—the unending labour of drawing water—was first ascribed to the Danaids.

Once this feature had been added to their story, however, and had become effectually grafted upon it, the Danaids would come quite naturally to be regarded as drawers of water even in their lifetime. In this way they would then be brought into connexion with Lerna in Argos—perhaps originally the district haunted by their ghosts—and at length the water-nymph Amy-mone would be numbered with them. It accords with all this that Danaus was extolled as the hero who provided Argos with water: so Hesiod, fr. 24 [ed. Rzsch], a verse given by Strabo, viii. 370, and again (371) in a simpler rendering, which, however, is of special interest, as it states that it was not Danaus, but the Danaids, who 'made Argos, once waterless, a well-watered land.'

DANCING.—See PROCESSIONS AND DANCES.

DANDĪS.—See YOGIS.

DĀNGĪ ('highlanders,' Hindi *dāng*, 'a hill').—A tribe of Dravidian origin, which at the Census of 1901 numbered 97,422, almost entirely confined to Central India, Rājputāna, and the Central Provinces, in which last they are described as originally robbers and freebooters, whose home was in the Vindhyan range. They are doubtless ethnologically connected with the Gond and Bhil tribes which occupy the adjoining hills; but they are rapidly becoming Hinduized, and have now gone so far as to call themselves Rājputs, and to claim descent from a mythical Rājā Dāng of the Raghubansi sept. In the Jhānsi District, from which we have the most complete account of the religion of the tribe, they rank as low-caste Hindus; they cremate their adult dead, and perform the *śrāddha*, or mind-rite, through Brāhmins. Like all castes on their promotion to a higher social rank, they are particularly careful to avoid ceremonial pollution. This results in its most serious form from the killing of a cow. In this case the offender, in order to procure restoration to caste rights, must make a pilgrimage to the Ganges, feed his tribesmen and Brāhmins, or perform the mock marriage of the *sālagrāma* ammonite, representing Viṣṇu, with the *tulsi*, or holy basil tree. This rite, of course, necessitates the payment of liberal fees to Brāhmins. If the offender prefers to do so, he may purchase restoration to caste by paying the marriage expenses of two poor children of the

tribe. They now worship the ordinary Hindu deities, Rāmachandra, Kṛṣṇa, Śiva, Durgā, and others. Special regard is paid to the minor gods of the village, especially to those who cause and remove disease, such as Sitalā, the goddess of smallpox, and Hardaul Lalā, the deified hero who controls cholera (Croke, *Popular Religion*², 1896, i. 138 f.). Bhūmīyā, the god of the soil, is represented by an old snake, which is worshipped in June-July. At marriages they perform a rite to propitiate the sainted dead, known as *deva pitra* ('ancestor gods'); but they have no definite idea of their nature or functions. Their sacred trees are the pipal (*Ficus religiosa*) and the chhonkar (*Prosopis spicigera*). The cows of the household, as emblems of Lakṣmī (goddess of good fortune), are worshipped at the Divālī, or feast of lamps; and horses at the Dasahra.

DANTE.—

1. Life.—Dante Alighieri was born at Florence, some time between May 18 and June 17, 1265, of an old Florentine family of supposed Roman descent. His father, Alighiero di Bellincione Alighieri, was a notary who adhered to the Guelph faction, for which his ancestors had fought. Cacciaguیدا, Alighieri's great-grandfather, who appears in the *Paradiso* as the founder of the house, is mentioned in a recently discovered document of 1131 as 'Cacciaguیدا, filius Adami.' The poet was the only child of his father's first marriage, but had a step-brother and two step-sisters (one of whom appears in the *Vita Nuova*) younger than himself. Two episodes chiefly colour his early life: his romantic love for Beatrice (probably the daughter of Folco Portinari and wife of Simone de' Bardi), whom he first saw at the end of his ninth year, and who died on June 8, 1290; and his friendship (gained by his first sonnet, written in 1283) with the older poet, Guido Cavalcanti, who died in August 1300. At an early age he fell under the influence of the Florentine philosopher and statesman, Brunetto Latini. Recent research tends to confirm the statement of his early biographers concerning his studying at the university of Bologna; a sonnet, now generally accepted as his, shows that he was in that city shortly before 1287. Dante served in the Florentine cavalry at the battle of Campaldino on June 11, 1289. After the death of Beatrice, he lapsed into a mode of life which he afterwards recognized as morally unworthy, and seems to have had relations with several women, the exact nature of which is uncertain. To this epoch belongs a series of satirical sonnets interchanged between him and Forese Donati (cf. *Purg.* xxiii. 115-119). About 1296 he married Gemma di Manetto Donati, a lady of a noble Guelph house, by whom he had four children. He entered public life in 1295, with a speech in the General Council of the Commune in support of modifications in the 'Ordinances of Justice,' the enactments by which nobles were excluded from the administration of the Republic. In May 1300, he acted as Florentine ambassador to the Commune of San Gimignano, and in the same year, from June 15 to August 15 (two months being the statutory term of office), he sat by election in the Signoria, the chief magistracy of the Republic, as one of the six priors. In this year, the Guelph party, which then swayed Florentine politics, split into the rival factions of Bianchi and Neri, 'Whites' and 'Blacks.' The former (to which Dante himself and Guido Cavalcanti belonged) was, in the main, the constitutional party, supported by the burghers of the city; the latter, led by Corso Donati, the brother of Forese and kinsman of the poet's wife, was more aristocratic and turbulent, looking to the Pope, Boniface VIII., and relying upon the favour of the populace. As prior, Dante probably played a leading part in opposing the interference of the Pope and his legate, the Franciscan cardinal, Matteo d'Acquasparta, in the affairs of the Republic, and in confining the leaders of both factions (including Guido Cavalcanti and Corso Donati) within bounds: in the following year, 1301, we find him, though no longer in office, still supporting an anti-Papal policy by his votes and speeches in the various councils of the State. On November 1, 1301, Charles of Valois, with French troops, entered Florence as Papal 'peacemaker,' and, with every circumstance of treachery and licence, restored the Neri to power. It is uncertain whether Dante was in Florence when this occurred, or in Rome on an embassy from the Bianchi to the Pope (as asserted by Boccaccio and Leonardo Bruni, but disputed by later writers). In any case, a charge of malversation in office and hostility to the Church was trumped up against him: he was sentenced to confiscation of his goods, two years' exile, and perpetual exclusion from public office (January 27, 1302), and finally to be burned to death (March 10, 1302), if he should ever come into the power of the Commune.

The rest of Dante's life was passed in exile, in the latter part of which he was joined by his two sons and one of his daughters, though he seems never to have seen his wife again. In the *Convivio* (l. 3) he speaks of himself as having 'gone through well-nigh all the regions to which this (Italian) language extends; a pilgrim, almost a beggar, showing, against my will, the wound

of fortune, which is wont unjustly to be oftentimes reputed to the wounded.' Until the summer of 1308, he made common cause with his fellow-exiles at Siena, Arezzo, Forlì, and elsewhere, in attempting to return to Florence by force of arms and with Ghibelline aid, but ultimately broke with them, and found it 'for his fair fame to have made a party for himself' (*Par.* xvii. 69). Between the latter part of 1303 and the end of 1306 we find him at Verona at the court of Bartolommeo della Scala; at Bologna, where he may have made a more lengthy stay; possibly at Padua (though the document once regarded as attesting his presence there in August 1306 is now disputed); certainly in Lunigiana, with the Marquis Franceschino Malaspina (October 1306). We now lose sight of him for several years, during which he is said to have left Italy and gone to Paris.

In September 1310, the newly elected Emperor, Henry VII., entered Italy, with the avowed object of restoring the claims of the Holy Roman Empire, and healing the wounds of the country. Dante, recognizing in him the new 'Lamb of God' to take away the sins of the world, threw himself heart and soul into his enterprise. We find him, in the spring of 1311, paying homage to the Emperor in person at Milan, and writing terrible and eloquent letters to him and against the Florentines from the Casentino, whither he had, perhaps, been sent on an Imperial mission. By a decree of September 2, the Florentine government included the poet in the list of exiles to be excluded from amnesty. In April 1312, Dante was with the Emperor at Pisa, and there Petrarch, a little boy of seven, saw his great predecessor for the first and only time. Although he had urged Henry to lay Florence low, reverence for his fatherland (so Leonardo Bruni writes) kept Dante from accompanying the Imperial army which ineffectually besieged the city during the autumn of this year. Henry's death (August 24, 1313) annihilated the poet's hopes. His movements again become uncertain. It is possible that he retired for a while to the convent of Santa Croce di Fonte Avellana, in the Apennines, and afterwards sought the protection of Ugucolone della Faggiuola, the great Ghibelline, at Lucca. By a decree of November 6, 1316, Dante with his sons, Pietro and Jacopo, was placed under the ban of the Florentine Republic, and sentenced to be beheaded if taken. The poet was further and finally excluded from amnesty by a provision of June 2, 1316. His famous letter to a Florentine friend, preserved to us by Boccaccio, refusing to accept recall to Florence under dishonourable conditions, probably belongs to this year. It is most likely that, in 1315 or 1316, Dante went again to Verona, attracted by the fame of Can Grande della Scala, upon whom he based what remained of his hopes for the salvation of Italy. About 1317 he finally settled at Ravenna, at the invitation of its Guelph ruler, Guido Novello da Polenta. There with his children, surrounded by a little group of friends and disciples, he passed the last years of his life. A curious process for sorcery held at Avignon in 1320 against Matteo and Galeazzo Visconti, in which Dante's name is mentioned, suggests that the poet visited Piacenza in that or the preceding year, and, if the *Questio de Aqua et Terra* is authentic, he went to Mantua and again to Verona about the same time. In August 1321, he was sent on an embassy from Guido da Polenta to Venice, to avert an imminent war, and, returning to Ravenna sick with fever, he died there on September 14 of that year. He was buried with much pomp in the church of the Friars Minor, crowned with laurel, 'in the garb of a poet and of a great philosopher.'

2. Works.—Dante's works fall into three periods: (a) the period of his youthful love and enthusiasm, finding expression in the poetry and prose of the *Vita Nuova*; (b) the period of the *Rime*, his later lyrics, his linguistic and philosophical studies and researches, bearing fruit in the Italian prose of the *Convivio*, the Latin prose of the *de Vulgari Eloquentia*, and his passionately developing political creed and ideals, represented by the *de Monarchia* and certain of his Latin letters; (c) the period of turning, for the reformation of the present, to the contemplation of another world, 'to the divine from the human, to the eternal from time' (*Par.* xxxi. 37, 38), in the *Divina Commedia*, with which are associated the prose Latin epistle to Can Grande della Scala, and the revival of the pastoral muse of Vergil in the two Latin Eclogues.

(1) The *Vita Nuova*, Dante's first book, which is dedicated to Guido Cavalcanti, tells the story of his love for Beatrice in thirty-one lyrical poems, symmetrically arranged, and connected by a prose narrative. The lyrics (twenty-five sonnets, one *ballata*, three *canzoni*, and two shorter poems in the *canzone* mould), written from 1283 to 1292, cover a period of nine years, while the prose commentary, composed between 1292 and 1295, weaves the whole into unity. Its earlier chapters, in particular, show the influence of the Provençal troubadours, together with the philosophical re-handling of their theme of chivalrous love which we find in

the poetry of Guido Guinizelli of Bologna, whom Dante elsewhere claims as his father in the use of 'sweet and gracious rhymes of love' (*Purg.* xxvi. 99). The first of the three *canzoni*, 'Donne ch'avete intelletto d'amore,' marks an epoch in Italian poetry. The later portions of the book are already strongly coloured with the Christian mysticism which inspires the *Divina Commedia*. There is much sheer allegory in the details and episodes, but the work as a whole is not to be taken in an allegorical sense. It is a mystical reconstruction of the poet's early life, in which earthly love becomes spiritual, but, being thus exalted above itself, falls to earth again when its sustenance and inspiration are removed, only to rise once more in repentance and humility to a clearer vision and a larger hope, with the resolution to turn to the daily work of life until such time as the soul may become less unworthy to attain the ideal which it has discerned.

(2) Besides the pieces inserted in the *Vita Nuova*, there exists a large body of lyrical poetry from Dante's hand, known collectively as the *Rime* (or, less correctly, the *Canzoniere*). It consists of (a) occasional poems in the *ballata* and sonnet form, composed at various times in Dante's life, which have not yet been satisfactorily collected or freed from spurious pieces; (b) a series of fifteen *canzoni*, which Boccaccio, probably following the poet's intention, arranged in a definite order to form a complete work. Two of these *canzoni* seem to belong to the period of the *Vita Nuova*; the rest represent the period in Dante's life between the death of Beatrice and the inception of the *Divina Commedia*. They give variety, dignity, and technical perfection to the metrical form which the early Italians had received and developed from the Provençals, and introduce, partly from the Provençal, two entirely new varieties to Italian poetry. Their subject-matter is partly philosophical love, in which the seeker after wisdom depicts his quest with all the imagery of an earthly lover's pursuit of an adored woman; partly, it would seem, more tangible human passion; partly, ethical and didactic themes. One of the noblest of the series is the *canzone* of the three ladies: 'Tre donne intorno al cor mi son venute' (probably written c. 1304); in this the legend told by Thomas of Celano and St. Bonaventura, of the apparition of Poverty and her two companions to St. Francis, is transformed into an allegory of Dante's own impassioned worship of Justice, which contains the *Divina Commedia* in germ.

(3) The *Convivio*, Dante's chief work in Italian prose, is an attempt to put the general reader of the epoch into possession of an abstract of the entire field of human learning, as attainable at the beginning of the 14th cent., in the form of an allegorical commentary upon fourteen of the poet's own *canzoni*. Its basis is the saying attributed to Pythagoras, to the effect that the philosopher should not be called the wise man, but the lover of wisdom—a conception which Dante elaborates in the terms of the chivalrous love poetry of his age, personifying Philosophy as a noble lady whose soul is love and whose body is wisdom, and identifying love with the study which is 'the application of the enamoured mind to that thing of which it is enamoured.' The work shows the influence of the *de Consolatione Philosophiæ* of Boethius (its professed starting-point), Isidore of Seville, the *Didascalion* of Hugh of St. Victor, the *Tresor* of Brunetto Latini, and the Aristotelian treatises and *Summa contra Gentiles* of St. Thomas Aquinas. Dante's aim is to make the mediæval encyclopædia a thing of artistic beauty, by wedding it to the highest poetry, and to show the world that the Italian vernacular was no less efficient than Latin

as a literary medium. At the same time, it was to be his *apologia pro vita sua*, justifying his own conduct as a man and as a citizen, and, incidentally, explaining certain of his poems of earthly love as inspired purely by philosophical devotion. Internal evidence shows that it was composed between 1306 and 1308. It was left unfinished, only the introductory treatise and the commentaries upon three *canzoni* having been written.

(4) The *de Vulgari Eloquentia*, the earliest of Dante's Latin works, seems to have been begun shortly before the *Convivio* (probably in 1304 or 1305). Like the *Convivio*, it was left unfinished, only two of the projected four books having been written. In the first book, starting from the origin of language, Dante considers the rival claims for pre-eminence of the three romance vernaculars—French, Provençal, and Italian—and proceeds to examine in detail all the various dialects of the last, none of which he finds identical with the ideal language of Italy:

'The illustrious, cardinal, courtly, and curial vulgar tongue in Italy is that which belongs to every Italian city, and yet seems to belong to none, and by which all the local dialects of the Italians are measured, weighed, and compared.'

As Mazzini well said, Dante's purpose here is 'to found a language common to all Italy, to create a form worthy of representing the national idea'—the purpose which he was ultimately to fulfil by writing the *Divina Commedia*. In the second book, he defines the highest form of Italian lyrical poetry, the *canzone*; distinguishes the three subjects alone worthy of treatment therein—Arms, Love, and Virtue; and elaborates the poetical art of its construction, from the practice of the Provençal troubadours (Bertran de Born, Arnaut Daniel, Giraut de Bornel, Folquet of Marseilles, Aimeric de Belenoi, Aimeric de Pegulhan, together with the French poet, king Thibaut of Navarre), the poets of the Sicilian school (Guido delle Colonne and Rinaldo d'Aquino), and the poets of the *dolce stil nuovo* (Guido Guinizelli, Guido Cavalcanti, Cino da Pistoia, and himself). Dante refers to his own *canzoni* as those of 'the friend of Cino da Pistoia,' and it is possible that he intended to dedicate the work, when completed, to Cino, as he had done the *Vita Nuova* to Cavalcanti.

(5) The election of Henry of Luxemburg to the Empire, in November 1308, drew the poet back from these philosophical and linguistic studies to the political strife that was about to convulse Italy. Confronted with this new situation, of apparently unlimited possibilities for his native land, he felt that all that he had hitherto written was fruitless and insignificant. It was probably about 1309, in anticipation of Henry's coming to Italy, that Dante composed the *de Monarchia*, fearing lest he 'should one day be convicted of the charge of the buried talent.' For Dante, the purpose of temporal monarchy or empire, the single principedom over men in temporal things, is to establish liberty and universal peace, in order that the whole of the potentialities of the human race, for thought and for action, may be realized. In the first book he shows that this universal monarchy, thus conceived, is necessary for the well-being of the world; in the second he attempts to prove, first from arguments based on reason and then from arguments based on Christian faith, that the Roman people acquired the dignity of empire by Divine right. It is a cardinal point in Dante's reading of history that the history of the Jews and the history of the Romans reveal the Divine plan on parallel lines, the one race being entrusted with the preparation for the Gospel, the other with the promulgation of Roman law. For him, as for mediæval political theorists in general, the Emperor of his own day, when duly elected and

crowned, is the successor of Julius and Augustus no less than of Charlemagne and Otho. The third book proves that the authority of such an Emperor does not come to him from the Pope (the coronation of Charlemagne being an act of usurpation on the part of the latter), but depends immediately upon God, 'descending upon him without any mean, from the fountain of universal authority.' Divine Providence has ordained man for two ends: blessedness of this life, which consists in the exercise of his natural powers, and is figured in the Earthly Paradise; and blessedness of life eternal, which consists in the fruition of the Beatific Vision in the Celestial Paradise. To these two diverse ends, indicated by reason and revelation respectively, man must come by the diverse means of philosophy and spiritual teaching, and, because of human cupidity, he must be checked and directed:

'Wherefore man had need of a twofold directive power according to his twofold goal: the Sovereign Pontiff, to lead the human race to eternal life in accordance with things revealed; and the Emperor, to direct the human race to temporal felicity in accordance with philosophical teaching.'

This, then, is the purpose of Church and State, each independent in its own field, a certain superiority pertaining to the former in that mortal felicity is ordained for immortal felicity. We here find 'in its full maturity the general conception of the nature of man, of government, and of human destiny, which was afterwards transfigured, without being transformed, into the framework of the Sacred Poem' (Wicksteed).

(6) Dante's political letters are a pendant to the *de Monarchia*, but coloured by the realities, and finally embittered by the circumstances of the Emperor's expedition. From the Messianic fervour of his appeal on Henry's behalf to the princes and peoples of Italy (*Ep. v.* ['Oxford Dante'], written in 1310), we pass to the prophetic fury and *sava indignatio* of his address to 'the most wicked Florentines within' (*Ep. vi.*, March 31, 1311), and his rebuke to the Emperor himself (*Ep. vii.*, April 16, 1311), when the former were organizing the national resistance to the Imperial power, and the latter seemed to tarry. To the latter part of 1314 belongs the eloquent letter to the Italian cardinals in conclave at Carpentras after the death of Clement V. (*Ep. viii.*), urging the election of an Italian Pope to return to Rome and reform the Church. Of Dante's private and personal correspondence, the only specimen that can be unhesitatingly accepted as authentic is the famous letter to a Florentine friend refusing the amnesty in 1316 (*Ep. ix.*); but two others, apparently accompanying two of his lyrical poems, addressed to Cino da Pistoia (*Ep. iii.*, c. 1305) and Moroello Malaspina (*Ep. iv.*, c. 1306 or 1311), are probably genuine.

(7) The authenticity of the letter to Can Grande della Scala, though much disputed, is gradually becoming generally recognized. Written apparently between 1318 and 1320, it dedicates the *Paradiso* to Can Grande, interprets the opening lines of its first canto, and explains the allegory, subject, and purpose of the whole poem. It is the starting-point for the study of the mystical aspect of the *Divina Commedia*, alike in its appeal to the authority of St. Augustine, St. Bernard, and Richard of St. Victor for the power of the human intellect to be so exalted in this life as to transcend the measure of humanity, and in its unmistakable claim for the poet himself that he has been the personal recipient of a religious experience too sublime and overwhelming to be adequately expressed in words.

(8) Dante's first *Eclogue*, a pastoral poem in Latin hexameters, was written about 1319, in

answer to a Latin poem from Giovanni del Virgilio, a lecturer at Bologna, who had urged him to write a Latin poem and come to that city to receive the laurel crown. It is a beautiful and gracious poem, in which the Vergilian eclogue becomes a picture of the poet's own life at Ravenna in the comparative peace and calm of his latest years. A second *Eclogue* in the same spirit, sent to Giovanni del Virgilio by Dante's sons after the poet's death, is somewhat inferior, and was, perhaps, only in part actually composed by him.

(9) The *Questio de Aqua et Terra* professes to be a philosophical question concerning the relative position of water and earth on the surface of the globe, publicly discussed by Dante at Verona on January 20, 1320. Its authenticity has of late found several able defenders, but must still be regarded as highly problematical.

(10) It is impossible to decide at what date the *Divina Commedia* was actually begun. According to Boccaccio, the first seven cantos of the *Inferno* were composed before the poet's exile, and he was induced to take up the work again in consequence of his recovery of the manuscript in 1306 or 1307. Although this seems contradicted by internal evidence, there are some indications that these cantos were originally conceived on a different plan from that ultimately adopted in the poem. It is possible that the poem, as we now have it, was begun about 1308, interrupted by the Italian enterprise of Henry of Luxemburg, and resumed in the years after the latter's death. While there are no certain and definite allusions in the *Purgatorio* to events later than 1308, there are references in the *Inferno*, by way of prophecy, to occurrences of 1312, and possibly (though this is more open to question) of 1314, while the *Paradiso* (xii. 120) contains what appears to be an echo of a Papal bull of 1318. An allusion in the first *Eclogue* shows that, by 1319, the *Inferno* and the *Purgatorio* ('*infera regna*') were completed and, so to speak, published, but that Dante was still engaged upon the *Paradiso* ('*mundi circumflua corpora astricoleque*'); and we learn from Boccaccio that the last thirteen cantos had not yet been made known to the world at the time of the poet's death. In any case, it seems clear that the *Divina Commedia* as a whole, whenever it may have been begun, although the action is relegated by a poetic fiction to the assumed date of 1300, should be regarded as the work of the last period of the poet's career, when the failure of his earthly hopes with Henry of Luxemburg had transferred his gaze from time to eternity, and, himself purified in the fires of experience and adversity, he might lawfully come forward as *vir prædicans justitiam*, 'to remove those living in this life from their state of misery, and to lead them to the state of felicity.'

Dante's primary source of inspiration for the *Divina Commedia* is the actual life of his own times which he saw around him, interpreted by the story of his own inner life. His aim is to reform the world by a poem which should present man and Nature in the mirror of eternity. But he has, inevitably, his literary sources. While the sixth book of the *Æneid* may be called his starting-point, Dante was probably acquainted with some of the many mediæval accounts of visits of a living man, 'whether in the body or out of the body,' to the other world, the *immortale seculo*, which, beginning with the *Visio Sancti Pauli* and those recorded in the *Dialogues* of St. Gregory the Great, became especially abundant in the latter part of the 12th cent.; though the only one that has left notable traces in the *Divina Commedia* is the *Visio Tnugdali* of the Irish Benedictine Marcus (1149). Of the Latin poets, next to Vergil,

he was most influenced by Lucan, while Ovid and Statius are his main sources for classical mythology, and Livy and Orosius for classical history. Cicero was familiar to him from his early manhood; but he shows surprisingly little acquaintance with Terence and Horace. The Latin versions of Aristotle, the Vulgate, and the works of St. Augustine permeate the poem with their influence. He knew no Plato at first hand (he was almost completely ignorant of Greek), save, perhaps, the *Timæus* in the Latin version of Chalcidius, but there is a strong vein of Neo-Platonism in the poem, derived in part directly from the pseudo-Aristotelian *de Causis* and the Dionysian writings (either in the translation of Scotus Erigena or through the medium of Aquinas). Certain elements in his thought came from Boethius and St. Gregory the Great, while, of later mediæval writers, the influence of St. Peter Damian (esp. his *de Abdicatione Episcopatus*), of St. Bernard, and of Richard of St. Victor is especially marked. Indeed, the mystical psychology of the whole poem is largely based upon the *de Preparatione animi ad Contemplationem* and the *de Contemplatione* of the last-named writer. Of the poet's own contemporaries, Albertus Magnus and St. Bonaventura impressed him less than did St. Thomas Aquinas, the influence of whose Aristotelian treatises, his *Summa contra Gentiles*, and *Summa Theologiae*, is profound and all-pervading. Recent investigation points to Dante's acquaintance with the mystical treatises of Mechtild of Magdeburg and Mechtild of Hackeborn, though it is questionable whether either of them can be identified with the Matelda of the Earthly Paradise. There is a certain element of Joachimism in the *Divina Commedia*, but Dante was probably acquainted with the doctrines of the Abbot of Flora only at second hand, in the *Arbor Vitæ Crucifixæ* of Ubertino da Casale (1305), which is chronologically the last of the sources of the poem, and from which (together with the life of the Seraphic Father by St. Bonaventura, and, perhaps, the earlier legend by Thomas of Celano) he derived his conception of the life and work of St. Francis in the *Paradiso*.

The *Divina Commedia* is an allegory of human life and human destiny, in the form of a vision of the 'state of souls after death'; it is likewise, in the mystical sense, a figurative representation of the soul's ascent, while still in the flesh, by the three ways of purgation, illumination, and union, to the fruition of the Absolute in that 'half-hour during which there is silence in Heaven.'

Above and around the material universe is the celestial rose of Divine Beauty, flowering in the rays of the sun of Divine Love, still to be completed by man's correspondence with Divine Grace; while on earth—the threshing-floor of mortality—by use or abuse of free-will, character is formed, and human drama is played out. The dual scheme of the *de Monarchia* is transplanted from the sphere of Church and Empire to the field of the individual soul. Man, in the person of Dante, vainly attempts to escape from the dark wood of alienation from truth, and is barred by his own vices from the ascent of the delectable mountain (felicity, or, perhaps, knowledge of self); but Vergil, representing human philosophy inspired by reason, guides him through the nine circles of Hell (realization of the nature and effects of sin), and up the seven terraces of Purgatory (setting love, the soul's natural tendency to what is apprehended as good, in order, and purifying the soul from the stains still left after conversion) to the Earthly Paradise, which in one sense is the happy state of a good conscience, and in another the life of Eden regained by the purgatorial pains. This life is personified

in Matelda, the realization of Leah, who, in the mystical system of Richard of St. Victor, symbolizes 'affection inflamed by Divine inspiration, and composing herself to the norm of justice.' Then the soul can rightly comprehend the history of Church and State, as represented in the allegorical pageant, and is prepared for a further illumination. Beatrice, symbolizing the Divine Science as possessing Revelation, thence uplifts the poet through the nine moving heavens of successive preparation, corresponding to the nine angelic orders, into the true Paradise, the timeless and spaceless empyrean heaven of heavens, where her place is taken by St. Bernard, type of the loving contemplation in which the eternal life of the soul consists; and, after the impassioned hymn to the Blessed Virgin placed upon Bernard's lips, the poem closes in the momentary actualizing of the soul's entire capacity of knowing and loving, when desire and will move in harmony with 'the Love that moves the sun and the other stars,' in an anticipation of the Beatific Vision of the Divine Essence.

In describing the 'spiritual lives' of Hell, Purgatory, and Paradise, Dante has given a summary, illumined by imagination and kindled by passion, of all that is permanently significant in the life and thought of the Middle Ages. He is throughout harking back to a primitive ideal of Christianity, freed from the corruptions and accretions of the subsequent centuries. Under the tree of an Empire renovated by the power of the Cross, Revelation is seated on the bare ground as guardian of the chariot of the Church, with no attendants save the theological and moral virtues, who bear nought save the seven gifts of the Holy Spirit. But the ideal is never realized, because, side by side with the conquest of the world by Christianity, had come the conquest of the Church by the world. The alleged donation by Constantine of wealth and territory to the Papacy is for Dante the turning-point in history, and the primal cause of the failure of Christianity, which was bearing such bitter fruit in the corruption of mankind. The supremely significant event of his own century is thus the rise of St. Francis, and his marriage with Lady Poverty, as the first attempted return to the ideal of Christianity that Christ had left. This, in its turn, having proved but a passing episode, the poet can only look forward to the coming of the deliverer, the mysterious *Veltro*, the 'Five Hundred Ten and Five,' to be sent from God to renovate the Empire and to reform the Church by other methods. For the rest, men at all times 'are masters of their fate,' through the supreme gift of free-will, to put violence upon which, as Richard of St. Victor had said, 'neither befits the Creator nor is in the power of the creature.' The soul of man works out its own salvation or damnation; and the tragic fact consists simply in the soul's deliberate choice of evil. The *Inferno* departs less than the other two canticles from mediæval tradition in its structure and machinery; but it is here that the dramatic side of Dante's genius is especially displayed. The tragic impression is intensified, on the one hand, by the wasted virtues of the lost (the patriotism of Farinata degli Uberti, the fidelity of Piero delle Vigne, the scientific devotion of Brunetto Latini, the high conception of man's origin and nature that impels Ulysses to his last voyage); and, on the other, by frequent and effective use of dramatic contrasts between the souls in Hell and those in Purgatory or Paradise (Francesca da Rimini and Piccarda Donati; St. Peter Celestine and King Manfred; Guido and Buonconte da Montefeltro). In the *Purgatorio*, with its sunsets and starshine, its angel ministers, its allegorical quest of liberty,

in which the souls find the very purgatorial pains a solace to be willingly undergone, Dante breaks almost completely from legend and theological tradition, and presents a conception of the second realm which is entirely his own. The *Purgatorio* depends less than the *Inferno* upon the splendour of certain episodes, though many of these are among the most beautiful in the poem. It is in its sustained harmony and all-pervading tenderness that it makes immediate and universal appeal to heart and mind. The noblest passages of the *Paradiso* are lyrical rather than dramatic, and there is naturally less action and less individualization of character. With the exception of St. Bernard, who is a singularly vivid character, the human aspect of the souls in bliss is somewhat lost in the glory of their state since they have become 'sempiternal flames'—the suggestion of humanity being held in abeyance after the third sphere (where the stretch of the earth's shadow is passed), until it reappears in celestial splendour in the tenth heaven. Notwithstanding this, we are sensible of no monotony in the passage through the higher spheres; for it is part of the poet's conception, worked out alike in the allegorical imagery and in the spoken narratives of each sphere, that, although each soul partakes supremely of the Beatific Vision, which is one and the same in all, yet there are not only grades, but subtle differences in the possession of it, in which the previous life has been a factor. As Wicksteed puts it, 'the tone and colour, so to speak, of the heavenly fruition of the blessed is affected by the nature of the moral warfare through which they rose to spiritual victory.' The human interest in the *Paradiso* seems concentrated in such episodes as the appearance of Piccarda Donati and Dante's colloquy with Cacciaguida, or the exquisite passage where Beatrice, her allegorical office completed, resumes her place, in the unveiled glory of her human personality, in the celestial rose. The mystical poetry of the *Paradiso* is unsurpassable: above all, in the closing canto it reaches a height of spiritual ecstasy for which it would be hard to find a parallel elsewhere in modern literature. Shelley wrote of the *Paradiso* that it is 'a perpetual hymn of everlasting love'; and Manning, 'Post Dantis paradisum nihil restat nisi visio Dei.'

The metre in which the *Divina Commedia* is written, the *terza rima*, seems to have been created by Dante from the *sirventese*, the Italian form of the Provençal *sirventes*, employed by the troubadours for political or satirical compositions in contrast to the stately *canço*, or *canzone*, of love. His style has the highest qualities of terseness, condensation, variety of intonation, passion, vividness. The closely packed imagery is hardly ever introduced for its own sake, but to exemplify and clarify his meaning. Even at the heights of the *Paradiso*, he does not shrink from uncompromising realism in his similes and images. The beauty and fidelity of his transcripts from Nature are likewise unapproachable. He can render a complete scene in a few lines, sometimes in a single line, whether it be the flight of birds, the trembling of the sea at dawn, or the first appearance of the stars at the approach of evening. 'Dante's eye was free and open to external nature in a degree new among poets. . . . But light in general is his special and chosen source of poetic beauty' (Church, *Dante*, 1901, pp. 149, 163). Dante's fidelity to Nature has been well compared with that of Wordsworth. And, when he turns from Nature to the mind of man, 'his haunt, and the main region of his song,' no such revealer of the hidden things of the spirit, save Shakespeare, has ever found utterance in poetry.

3. Position and character.—Dante is the last poet of the Middle Ages, and the first of the modern world. He has given perfect poetical utterance to what would otherwise have been artistically silent, and has proved the most influential interpreter of mediæval thought to the present day. If it can no longer be said, without considerable reservation, that he created the Italian language, or that he founded Italian literature, it is certain that he first showed that modern literature in general could produce a work to rival the masterpieces of antiquity, and he first gave to Italy a national consciousness. His character is reflected in his works: profoundly reverent to what he deemed Divinely ordained authority, but no less enkindled with prophetic fire against the abuse and corruption of that authority, whether in Church or State, and absolutely fearless in his reforming zeal; relentless in his hatred of baseness and wickedness, above all in high places, but with a capacity for boundless tenderness and compassion; liable to be carried to excess, both in speech and in action, by his impassioned hunger and thirst after righteousness; conscious of his own greatness, but ever struggling against pride, and exalting humility above all other virtues; listening for a while to the song of the *antica strega*, the siren of the flesh (*Purg.* xix. 58), but borne up 'even to the sphere of fire' by the eagle of the spirit (*Purg.* ix. 30). The visionary experience, upon which the whole *Divina Commedia* is based, was, it would seem, a sudden realization of the hideousness of vice and the beauty of virtue, the universality and omnipotence of love, so intense and overwhelming that it came upon him with the force of a personal and special revelation; but this was not all; we gather from the letter to Can Grande that the poet himself experienced one of those contacts with the Divine attributed to the great saints and mystics of all creeds—in which, as George Tyrrell puts it, the mind touches the smooth sphere of the infinite, but is unable to lay hold of it.

LITERATURE.—I. BIOGRAPHY.—Our earliest sources for the life of Dante, in addition to his own works and a few extant documents, are a chapter in the *Lettere Fiorentine* of Giovanni Villani (1348), the *Vita di Dante* of Boccaccio (1376), the insignificant sketch by Filippo Villani (c. 1405), the more authoritative and critical treatise of Leonardo Bruni (1444), and the first commentators. There are ten 14th cent. commentators upon part or the whole of the *Divina Commedia*, including both Dante's sons and the author of the so-called *Optimo Commento*, who professes to have known the poet personally. The most important is Benvenuto Rambaldi da Imola (1379–1410), edited by Vernon and Lacaita (Florence, 1887). Among recent publications should be especially mentioned: G. Biagi-Perissinelli, *Codice diplomatico dantesco* (documents, in course of publication); C. Ricci, *L'ultimo rifugio di Dante Alighieri*, Milan, 1891; M. Scherillo, *Alcuni capitoli della biografia di Dante*, Turin, 1896; various volumes of Isidoro del Lungo; Paget Toynbee, *A Dante Dictionary*, Oxford, 1898, also *Dante Alighieri, his Life and Works*, London, 1910; N. Zingarelli, *Dante*, Milan, 1903 (a work on an exhaustive scale with full bibliographies). For the disputed story of the letter of Frate Ilario, cf. Wicksteed-Gardner, *Dante and Giovanni del Virgilio*, London, 1902; Rajna, in *Dante e la Lunigiana*, Milan, 1909; V. Biagi, *Un episodio celebre nella Vita di Dante*, Modena, 1910.

II. MINOR WORKS.—A critical edition is gradually being produced by the Società Dantesca Italiana, of which the *de Vulgari Eloquentia* (ed. Rajna, Florence, 1896) and *Vita Nuova* (ed. Barbi, Florence, 1907) have appeared. The *Rime* are incomplete and unsatisfactory even in E. Moore's *Tutte le Opere di Dante*, 1894 (the 'Oxford Dante', which is of the highest authority for the text of all the other works). A more recent edition, *Vita Nuova and Canzoniere*, by Wicksteed-Okey, is in the Temple Classics. Michele Barbi's long-promised edition of the *Rime* is much needed. There are critical editions of the *Elegia* by Wicksteed (in *Dante and Giovanni del Virgilio*) and Albini, Florence, 1903. The translations of the Latin Works (Howell and Wicksteed) and of the *Convivio* (Wicksteed) in the Temple Classics are provided with full critical commentaries; a more recent version of the *Convivio* is by W. W. Jackson (Oxford, 1909). For the problem of the *de Aqua et Terra*, see Moore, *Studies in Dante* (second series, Oxf. 1899), and V. Biagi's ed., Modena, 1907.

III. DIVINA COMMEDIA.—The best Italian editions with commentaries are those of Scartazzini (epoch-making, but now a little out of date), Casini, and Torraca; of the text with English translations and notes, by A. J. Butler, the Temple Classics

editors (Wicksteed, Oelsner, Okey), and W. W. Vernon (*Readings . . . chiefly based on the Commentary of Benvenuto da Imola, new ed. Lond. 1908-09*).

IV. *SUBSIDIARY LITERATURE*.—The reader must be referred to Toynbee's *Dante Dictionary* and the bibliographies included in Zingarelli. Dante literature has, especially of late years, assumed colossal proportions. Among English works stand out pre-eminently the three volumes of Moore's *Studies in Dante*, Toynbee's *Dante Studies and Researches*, Lond. 1902, and *Dante in English Literature*, Lond. 1909. Church's well-known essay still holds its place as the most suggestive of introductions to the divine poet. The Florentine quarterly publication, *Il Bullettino della Società Danteica Italiana*, is indispensable to students.

EDMUND G. GARDNER.

DAPHLĀ (Dafflā, Daplā, Dophlā).¹—A tribe occupying a section of the Himālaya lying N. of the Darrang and Lakhimpur Districts, Eastern Bengal, and Assam. They numbered 954 at the Census of 1901; but the greater part of the tribe is found in independent territory beyond the British frontier, whence, driven by famine or the oppression of the Abors, they have recently shown a tendency to migrate into the Darrang and Lakhimpur Districts. They call themselves Niso, Nising, or Bangni, the last name meaning 'men.' According to Mackenzie (*Hist. of the Relations of the Government with the Hill Tribes on the N.E. Frontier of Bengal*, 541), Miri, Daphlā, and Abor (see ABOR, vol. i. p. 33) are names given by the Assamese to three sections of the same tribe inhabiting the mountains between Assam and Tibet.

Their principal crops are summer rice and mustard, maize, and cotton, sown in clearances made by the axe or hoe in the forest or in the jungle of reeds. Their villages, usually placed on or near the banks of rivers, consist of a few houses built on platforms raised above the naked surface of the plain, presenting a strong contrast to the ordinary Assamese village. . . . Under the houses live the fowls and pigs which furnish out the village feasts, and the more prosperous villages keep herds of buffaloes also, though these people, like so many of the non-Aryan races of Assam, eschew milk as an unclean thing' (Mackenzie, *op. cit.* 541).

1. *Ethnology*.—The Daphlās are probably connected with the great Bodo (*q.v.*) or Barā race, which includes the Kāchāri, Rabhā, Mech, Garo, and Tipperā tribes, and they are by origin Tibeto-Burmans, who followed the Mon-Anam from N.W. China between the waters of the Yang-tse-kiang and the Ho-ang-ho (*Census Report Assam*, 1901, i. 120). Their language is closely related to that of the Aka, Abor-Miri, and Mishmi tribes.

'We know a good deal about Abor-Miri and Dafflā. Robinson [*JRASB*, 1861, p. 181] gave us grammars and vocabularies of both in the middle of the last century, and, to omit mention of less important notices, in later times Mr. Needham has given us a grammar of the former, and Mr. Hamilton one of the latter' (G. A. Grierson, *Census Report India*, 1901, i. 262 f.; and see E. A. Gait, *Assam Census Report*, 1891, i. 184).

2. *Relations with the British Government*.—The independent portion of the tribe has long been accustomed to make raids in British territory. Even in 1910 it was found necessary to send an expedition against them. This is due not so much to friction with the British authorities as to quarrels between the independent and the settled branches of the tribe. In 1872-3 one of these outbreaks occurred because the men of the hills claimed compensation for losses of life believed to have been caused by infection introduced from the plains. On this being refused, they raided British territory and captured several slaves (Mackenzie, 31).

3. *Religious beliefs*.—Much information regarding their religion has been collected since, in 1872, E. T. Dalton gave the first account of them (*Descriptive Ethnology of Bengal*, 36):

'I never heard of Dophla priests, but Robinson says they have priests who pretend to a knowledge of divination, and by inspection of chickens' entrails and eggs declare the nature of the sacrifice to be offered by the sufferer and the spirit to whom it is to be offered. The office, however, is not hereditary, and it is taken up or laid aside at pleasure. So it resolves itself into this, that every man can, when occasion requires it, become a priest. Their religion consists of invocations to the spirits for protection of themselves, their cattle, and their crops, and sacrifices and thank-offerings of pigs and fowls. They acknow-

ledge, but do not worship, one Supreme Being, which, I conceive, means that they have been told of such a Being, but know nothing about him.'

During the Census of 1881 (*Report*, § 150 ff.; Mackenzie, 543 ff.) it was ascertained that the Mikirs and Daphlās worship Yāpum and Orom, the latter the malignant spirits of the dead, the former a sylvan deity or demon, who suffices for the needs of everyday life, though in critical conjunctures some great god has to be gained over by the sacrifice of a *mithan* or *gayāl* (*Bos frontalis*).

'A hill Miri told me how he had once, while a boy, actually seen a Yāpum. The character of this god is that he lives in trees, and all the beasts of the forest obey him. My informant was throwing stones in a thicket by the edge of a pool, and suddenly became aware that he had hit the Yāpum, who was sitting at the foot of a tree in the guise of an old grey-bearded man. A dangerous illness was the consequence, from which the boy was saved by an offering of a dog and four fowls made by his parents to the offended Yāpum, who has since visited him in dreams' (Mackenzie, 543).

They also count the Sun among their deities; but their great god, who must be propitiated by the sacrifice of a *mithan*, is Ui or Wī, of whom no Daphlā cares to speak much for fear of incurring his displeasure. His character may be guessed from the Assamese equivalent of his name, Yom or Yama, the Hindu god of death (*ib.* 544). E. A. Gait (*Census Report Assam*, 1891, i. 223) adds:

'The general name for God is Ui, but there are also special names for each particular deity. Most of their gods are inimical to men, and have to be propitiated by sacrifices. The chief gods are Sonolē, the god of heaven; Siki, who presides over the delivery of women; Voglē and Lungtē, who hurt men; and Yenpu, who injures children. Then there is Yāpum, the god of trees, who frightens to madness people who go into the forest; Chilli, the god of water; From, the god of diseases; Solu, the god of dumbness; and numerous others. There are a few beneficent deities, such as Pehkong, the god of breath, and Yechu, the goddess of wealth. To all these gods, sacrifices are offered. When a person is ill, a sorcerer (*deondio*) is called in, and chants an incantation in a loud singsong voice, which he sometimes keeps up till he works himself up into a frenzy of excitement. The Dafflās believe in a future life, but cannot say much about it, except that they expect to cultivate and hunt there. The dead are buried in a sitting position, and a small shed is put up over the grave; in it rice and drink are placed, and a fire is kept burning for five days. The mourners sacrifice fowls, pigs, and sometimes mithun, the blood of which is sprinkled over the grave; the flesh they eat themselves.'

B. C. Allen (*Census Report Assam*, 1901, i. 46 ff.) gives an account of similar beliefs among the allied tribes of this group—the creation legends of the Mikirs and Garos, and the conception of the other world held by the Miris, Mikirs, and Garos.

LITERATURE.—E. T. Dalton, *Descriptive Ethnology of Bengal*, Calcutta, 1872; A. Mackenzie, *Hist. of the Relations of the Government with the Hill Tribes on the N.E. Frontier of Bengal*, Calcutta, 1884; *Reports of the Census of Assam*, 1881, 1891, 1901; E. C. Allen, *Gazetteers of the Lakhimpur and Darrang Districts*, Calcutta, 1905.

W. CROOKE.

DARDS.—The Dards are an Aryan race inhabiting the country round Gilgit, between Kashmir and the Hindū Kush, and down the course of the Indus to near where it debouches on the plains. Colonies of the tribe are also found farther east in Baltistan, where they are known as *Brokpas*, or Highlanders. Along with the Khōs of Chitral and the Hindū Kush Kāfirs of Kāfiristan, Dards are classed by the present writer as descendants of the *Pisāchas*, or *Πισάχοι* of Sanskrit writers. This is not accepted by all scholars, but no alternative has hitherto been suggested. Although of Aryan origin, their language cannot be classed as either Indian or Iranian, having issued from the parent stock after the former branch had emigrated towards the Kābul Valley, but before the typical characteristics of Iranian speech had become fully developed. They are mentioned by Herodotus (iii. 102-105), though not referred to by their present name. On the other hand, Sanskrit writers knew them as *Daradas*, and they are the *Dardai* of Megasthenes and Strabo, the *Daradrai* of Ptolemy, and the *Dardae* of Pliny and Nonnus. Most of the Dards belong to the tribe of Shins, whose headquarters may be taken as Gilgit, and their

¹ The origin of the name, which, as pronounced in the Lakhimpur District, would be written *Domphlā*, is unknown.

language is either Shīnā or some closely allied form of speech. By religion, the Dards of the present day are nearly all Musalmāns, but the Brokpa colonies in Bāltistān profess the Buddhist faith of their neighbours. It is not known at what period the Muhammadan Dards were converted to Islām, but, down to the middle of last century, when a reformation was carried out by Nathū Shāh, the Governor of Gilgit, on behalf of the Sikhs, it held but a nominal sway. Even after Nathū Shāh's time remains of the old pre-Islāmic beliefs have survived, so that many Dard practices are very different from those enjoined on the followers of the Qur'ān. For instance, until about eighty years ago the dead were burnt and not buried, and this custom lingered on sporadically down to the last recorded instance in 1877. A memory of it still survives in the lighting of a fire by the grave after burial. Instead of considering the dog as unclean, they are as fond of the friend of man as any Englishman. The marriage of first cousins, which is frequent among true Musalmāns, is looked upon with horror by the purer tribes of Shīns as an incestuous union. Although the Muhammadan lunar calendar has been introduced, an ancient solar computation, based on the signs of the zodiac, still exists. According to Biddulph, 'Islām has not yet [1880] brought about the seclusion of women, who mix freely with the men on all occasions. Young men and maidens of different families eat and converse together without restraint.' The levirate custom has a strong hold, and this often leads to two sisters being the wives of the same man simultaneously, though such a practice is forbidden by Muhammadan law.

The Dards received Muhammadanism from three directions. From the south (i.e. Afghanistan) came the Sunnis, and that branch of Islām is now prevalent in Chilas. From the Pāmirs in the north came the Maulāī sect (famous for its wine-bibbers), and this doctrine is now commonly held north of Gilgit. On the other hand, the people round Gilgit and to the south are mostly Shī'ahs converted from Bāltistān.

On the Buddhist Dards, or Brokpas, of East Bāltistān their nominal religion sits even more lightly than on their Musalmān fellow-tribesmen to the west. The only essential Tibetan practices which they have adopted seem to be the dress of the men and the custom of polyandry. The religious ideas of the Brokpas were examined by Shaw in 1876, and of late years by A. H. Francke, whose researches into the ancient customs and religion of the neighbouring Ladakh are well known. The information gathered from these two sources agrees closely with the traces of the ancient Shīnā religion observable in other portions of the Dard area, and from the whole we get a fairly clear, if incomplete, idea of its general character.

According to Francke, the origin of the world is believed by the Brokpas to be as follows:¹ 'Out of the Ocean grew a meadow. On the meadow grew three mountains. One of them is called "the White-jewel Hill," the second "the Red-jewel Hill," and the third "the Blue-jewel Hill." On the three mountains three trees grew. The first is called "the White Sandal-tree," the second "the Red Sandal-tree," and the third "the Blue Sandal-tree." On each of the trees grew a bird,— "the Wild King of Birds," "the House-hen," and "the Black Bird," respectively.'

Francke adds: 'As regards the system of colours, we are decidedly reminded of the *g'ling chos*, or pre-Buddhist religion of Tibet (see *g'ling chos*). I am inclined to believe that the three mountains were thought to exist one on the top of the other; the lowest being the blue mountain and tree forming the Under-world, the red mountain and tree being in the middle and representing the Earth, and the uppermost being the white

mountain and tree forming the Land of the Gods. But in other respects the story of the origin of the world is at variance with the *g'ling chos*, according to which the world is framed out of the body of a giant, while here it grows out of the water, as in Indian legends.'

Nothing like this cosmogony has been noted in other Shīn tracts, and it may be that it has been partly borrowed from Tibet. At the same time it may be noted that the *Klumo* or *Nāginis*, who are prominent characters in the *g'ling chos*, are also met, under the form of snakes, in Gilgit tradition, and, according to Leitner, the earth is there known as the 'Serpent World.'²

From the hymn from which Francke has culled the preceding information he also extracts the following two names of deities, *Yandring* and *Mandēde Mandēschen*. These names are, at any rate, not Tibetan, and are therefore probably Dard. In another prayer, the name *Zhūni* occurs as that of a house-god. *Mūmmo*, which properly means 'uncle,' stands in the collection of hymns for the 'uncle of the past,' i.e. the 'forefather' or Adam of the race, who is also honoured almost like a god.

Francke mentions water, milk, butter, and flower offerings as sacrifices, and also burnt offerings of the pencil-cedar (see below). Sheep and goats are also offered to the gods, and in one song—that of the ibex hunter—the hunter carries all the necessities for the offerings along with him when following his quarry, and after the lucky shot they are at once offered to the gods.

Farther west, we also come across traces of Buddhism. A rock-cut figure of the Buddha is still to be seen in a defile near Gilgit, and throughout the Gilgit and Astor valleys, as well as elsewhere, there can be found ruined *chortens* (q.v.), whose forms can even now be distinctly traced. One of the Shīn festivals, the *Taleni*, which commemorates the destruction of an ancient king who devoured his subjects,³ seems to have a connexion with a similar festival among the Iranian fire-worshippers of the Pāmirs. In neither case, however, can we consider such remains as part of the true ancient Dard religion. They are just as exotic as Islām.

The practical side of Dard religion, as distinct from speculative theories regarding cosmogony and the like, is best described by Shaw in his account of the Brokpas (p. 29 ff.), which fully agrees with the information derived from other sources. The real worship is that of local spirits or demons, much like the cult of similar beings in the neighbouring Ladakh. Closely connected with this worship is a kind of cedar or juniper tree (*Juniperus excelsa*), called in Shīnā *chili*, and by the Brokpas *shukpa*. In every village in which Shīns are in a majority there is a sacred *chili* stone, dedicated to the tree, which is still more or less the object of reverence. Each village has its own name for the stone, and an oath taken or an engagement made over it is often more binding than when the Qur'ān is used. Shaw's account of the local Brokpa goddess of the village of Dah may be taken as a sample:

'Her name is *Shiring-mo*. A certain family in the village supplies the hereditary officiating priest. This person has to purify himself for the annual ceremony by washings and fastings for the space of seven days, during which he sits apart, not even members of his own family being allowed to approach him, although they are compelled during the same period to abstain from onions, salt, *chang* (a sort of beer), and other unholly food. At the end of this period he goes up alone to the rocky point above the village, and, after worshipping in the name of the community the deity who dwells there in a small cairn, he renews the branches of the "shukpa" (*Juniperus excelsa*) which were placed there the previous year, the old branches being carefully stowed away under a rock and covered up with stones.'

'... Formerly the priest used to be occasionally possessed

¹ Leitner, *Dardistan in 1866, 1886, and 1895*, p. 50.

² It is an interesting fact that all over the *Piśācha* region there are traditions pointing to ancient cannibal customs which were put a stop to by some hero or god. The Sanskrit word *Piśācha* means 'eater of raw flesh.'

³ Quoted from a private communication.

by the demon, and in that state to dance a devil-dance, giving forth inspired oracles at the same time; but these manifestations have ceased for the last twelve or fifteen years [written in 1876]. The worship is now simply one of propitiation inspired by fear, the demon seeming to be regarded as an impersonation of the forces of nature adverse to man in this wild mountainous country. Sacrifices of goats (not sheep) are occasionally offered at all seasons below the rock, by the priest only, on behalf of pious donors. They talk of the existence of the demon as a misfortune attaching to their tribe, and do not regard her with any loyalty as a protecting or tutelary deity. In each house the fireplace consists of three upright stones of which the one at the back of the hearth is the largest, 18 inches or 2 feet in height. On this stone they place an offering to the demon from every dish cooked there, before they eat of it. They also place there the firstfruits of the harvest. Such is their household worship.'

This belief in demons is universal over the Dard area. They are called *Yach*. They are of gigantic size, have each only one eye, in the centre of the forehead, and, when they assume human shape, may be recognized by the fact that their feet are turned backwards.¹ They can walk only by night, and used to rule over the mountains and oppose the cultivation of the soil by man. They often dragged people away into their recesses, but, since the adoption of the Muhammadan religion, they have relinquished their possessions, and only occasionally trouble the believers. Their oath is by the sun and moon, and they are not invariably malevolent. On the occasion of their weddings they borrow the property of mankind for their rejoicings, and restore it faithfully, without the lender being aware of the loan. On such occasions they have kindly feelings towards the human race. The shadow of a demon falling on a person causes madness.

Fairies, known as *Barai*, are also common. They are as handsome as the demons are hideous, and are stronger than they. They have a castle of crystal on the top of the mighty mountain of Nanga Parbat, which has a garden containing only one tree composed entirely of pearls and coral. Although they are capable of forming love-attachments with men, like Lohengrin they have a secret, and they never forgive the human being who discovers it. Death is the only possible recompense for the indiscreet curiosity. They sometimes take the form of serpents (*Nāgas* or, feminine, *Nāginis*).

While the shadow of a demon causes madness, that of a fairy confers the gift of prophecy. Divination is still practised, in spite of Muhammadanism. The diviner, or *Dainyal*, is one on whom the shadow of a fairy has fallen in sleep. When performing his or her office, the diviner is made to inhale the smoke of burning juniper wood till he is insensible. When he revives, the neck of a newly slaughtered goat is presented to him, and he sucks the blood till not a drop remains. He then rushes about in a state of ecstasy, uttering unintelligible sounds. The fairy appears and sings to him, he alone being able to hear. He then explains her words in a song to one of the attendant musicians, who translates its meaning to the crowd of spectators.

Amongst miscellaneous customs, we must first of all mention the remarkable abhorrence entertained for everything connected with a cow (we have already remarked the fondness for dogs). The touch of the animal contaminates, and, though they are obliged to employ bullocks in ploughing, the Dards scarcely handle them at all. They employ a forked stick to remove a calf from its mother. They will not drink milk or touch any of its products in any form, and believe that to do so causes madness. There is nothing of reverence in this. They look upon the cow as bad, not good, and base their abhorrence on the will of the local

gods. Marriages are celebrated with much ceremony, for an account of which the reader is referred to Biddulph (p. 78 ff.). We trace a survival of marriage by capture in the bridegroom setting out for the bride's house, surrounded by his friends and equipped with bow, arrow, and battle-axe. An essential part of the dress of a Shin bride is a fillet of cowrie shells bound round her head. When the bride and bridegroom take their first meal together, there is a scramble for the first morsel, as whichever eats this will have the mastery during the future wedded life. After the birth of a child the mother is unclean for seven days, and no one will eat from her hand during that period. Ordeal by fire is still practised. Seven paces are measured, and a red-hot axe-head is placed on the open palm of the accused, on which a green leaf has first been spread. He must then deposit the hot iron at the place appointed seven paces distant, and, should any mark of a burn remain on his hand, it is a proof of guilt. Magic has a prominent place in Dard ideas, and written charms are in great request. They are even attached to the mane and forelock of a horse. They confer courage and invulnerability. Certain springs are supposed to have the power of causing tempests if anything impure, such as a cowskin, is cast into them.

The principal festivals are as follows :—

(1) The *Nōs*, in celebration of the winter solstice. The word means 'fattening,' and refers to the slaughtering of the cattle, fat after the grazing on the pastures, which takes place. This is necessary because the pastures have become covered with snow, and only sufficient fodder is stored to keep a few animals alive through the winter. On the second day the *Tulmi*, already mentioned, is celebrated.

(2) The *Bazoni*, in celebration of the commencement of spring. The sacrifice is a sheep, which must be lean and miserable. The word means 'leanness.'

(3) The *Aibot*, which took place in the first week in March has now fallen into desuetude. It was said to mark the time for pruning vines and the first budding of the apricot trees. In some respects it resembled the Indian *Holi*. Prominent features were mock fighting amongst the men, and the licensed cudgelling of men by women. Its cessation is due to the Musalman reform movement of Nathū Shāh.

(4) The *Ganoni* celebrated the commencement of the wheat harvest, and is still kept up. At dusk on the evening before the festival, a member of each household gathers a handful of ears of corn. This is supposed to be done secretly. A few of the ears are hung over the door of the house, and the rest are roasted next morning and eaten steeped in milk. The Dards of the Indus Valley below Sazin do not observe this festival.

(5) The last festival of the year, and the most important, is the *Chili*, which formerly celebrated the worship of the juniper tree, and marked the commencement of wheat-sowing. Within the last eighty years the rites connected with the tree-worship have ceased, but the ceremonies connected with sowing are still maintained. Bonfires of *chili* wood are, however, still lit, and the quantity of wheat to be used in the next day's sowing is held over the smoke.

It will have been observed how frequently the sacred *chili*, or juniper tree, has been referred to in the foregoing pages. In former years the worship of this tree was performed with much ceremony, and hymns were sung in its honour. In prayers to it for the fulfilment of any desire, it was addressed as 'The Dreadful King, son of the fairies, who has come from far.' The *chili* stone, at the entrance of every Shin village, has already been mentioned. On its offerings to the *chili* were placed, and from it omens were deduced. A full account of the ceremonies connected with its worship will be found in Biddulph (p. 106 ff.).

To sum up. The present writer has met in none of the authorities on the Dard religion any reference to a Supreme Deity, corresponding to the *Kāfir Imrā*. In translations from Christian scriptures, the Musalman word *Ḥudā* has to be used for 'God.' The centre of the worship seems to be the *chili* tree, a mighty son of the fairies; and the whole mountain region in which the Dards dwell is peopled by spirits, some benevolent, and some malevolent, probably personifications of the powers of Nature, who exercise a constant influence on the lives of the human beings who dwindle under

¹ So also in India. Compare the hoots of the European devil and the *Diablo boiteux*. Whitley Stokes tells of an Irish legend, according to which the devil could not kneel to pray, as his knees were turned the wrong way.

their sway. Most of the worship is in the form of propitiation of the malevolent spirits, though we occasionally find prayers addressed to the benevolent *chili*. Over the whole is spread a complex mist. We see traces of the Magian religion of Irān; of Buddhism, left behind on its way to Central Asia; and, in modern times, Islām, in strong possession. The pure Dard religion has nothing in common with any of them. Attempts have been made, but in the opinion of the present writer entirely without any justification, to connect it with the religions of India, and (with better reason) with the ancient *gling chos* religion of Tibet. It is a pure Nature-religion of an agricultural and pastoral people, dwelling in a barren land, amidst the highest mountain ranges in the world. The languages of the *Pisācha* people, of which the Dard languages form an important group, are, as has been stated, something between Indian and Iranian, and one of their most characteristic marks is the wonderful way in which they have preserved ancient Aryan forms of speech almost unchanged down to the present day. The same may be said of the Dard religion. It retains many of the characteristics of the oldest form of Aryan religion with which we are acquainted. There is the same adoration of a special plant (in the Vēdas the *sōma*, and amongst the Dards the *chili*), and the same worship, mixed with terror, of the personified powers of Nature.

DARKNESS.—See LIGHT AND DARKNESS.

DARSANA.—The term *darsana*, the literal meaning of which is 'seeing,' 'sight,' is more usually employed in Sanskrit literature with a derivative or metaphorical significance, as 'insight,' 'perception,' i.e. mental or spiritual vision. It is thus at once expressive of one of the most characteristic and fundamental thoughts of Indian philosophy—the meditative and mystical attitude of mind which frames for itself an idealistic conception of the universe; e.g. Manu, vi. 74:

'He who is possessed of true insight (*darsanasampanna*) is not bound by deeds,

But the man destitute of insight (*darsanena vihina*) is involved in the cycle of existence.'

The word is also used of the vision of sleep, a dream or dreaming,¹ wherein the mind perceives and learns independently of the exercise of the bodily senses.

Thus *darsana* is thought, perception in general, the application of the mental faculties to abstract conditions and problems; and ultimately denotes thought as crystallized and formulated in doctrine or teaching—the formal and authoritative utterance of the results to which the mind has attained.² In this sense it is practically equivalent to *sāstra*.

As a technical term, *darsana* is applied to the six recognized systems of Indian philosophy, which give many-sided expression to Indian thought in its widest and most far-reaching developments. These form the six *darsanas*, systems of thought and doctrine properly so called, viz. the *Pūrva* and *Uttara-mīmāṃsā* (the latter more usually known as the *Vedānta*); the *Sāṅkhya* and *Yoga*; the *Nyāya* and *Vaiśeṣika*. Of these, the first consists mainly of explanation and comment on the ritual texts of the Veda, while the second expounds the widely known speculative and idealistic philo-

¹ e.g. Hariv. 1285.

² e.g. *Mahābhārata*, xii. 11045. *Sāstradarśin* is one who has insight into, intuitive perception of, the meaning of the *sāstras*.

sophy of India. The third and fourth are nearly related to one another; and of these the ancient *Sāṅkhya* formulates a materialistic theory of the universe, which the *Yoga*—in its essential elements equally ancient—then takes up and interprets in a theistic sense. The *Nyāya* and *Vaiśeṣika* are not systems of philosophy at all in the ordinary acceptation of the term; the former treats of logic and literary criticism, the latter of natural philosophy and the physical constitution of the universe. The precise date at which these systems originated or were first reduced to order and writing is unknown; they represent, however, the outcome and final residue of Indian thought and speculation, extending probably over many centuries.

There is no reason to believe that the six *darsanas* contain all that the mind of ancient India conceived, or to which these early thinkers endeavoured to give expression. It would seem probable, however, that, while much has been lost, and the extant treatises are often fragmentary, enigmatic, highly figurative, and difficult of interpretation, there has been preserved in the *darsanas*, and in the traditional and literary sources upon which they have drawn, the best that India had to give of speculation and thought upon the problems and conditions of life.¹

A somewhat similar word is *tarka*, 'investigation,' 'inquiry,' 'discussion,' which also in course of time was used to denote the science or system which was its outcome and fruit. It was then later employed in the same manner as *darsana*, specifically of the recognized philosophical systems. The former term, however, seems never to have obtained the same degree of acceptance or currency as the latter, which in the usage of writers of all periods was the ordinary and appropriate designation of the six systems to which alone orthodox rights and authority were secured.

A. S. GEDEN.

DARWINISM.—It has become customary to give the title of 'Darwinism' to that particular development of the doctrine of evolution which is associated with the name of Darwin (1809-1882), and which began, in 1859, with the publication in England of his *Origin of Species*. The central feature of this development of thought has been the conception of evolution as the result of Natural Selection in the struggle for existence. It has caused so great a change in the general tendencies of knowledge that Romanes probably did not exaggerate the effects when he described them to be without parallel in the past history of mankind. Nearly all the departments of thought related to the subject of religion and ethics have felt the effects of the revolution.

At first sight the *Origin of Species* accomplished nothing in itself very remarkable. The theory of evolution had long been in the air. While the conception of continuous development in the universe had come down to us from the Greeks, the modernized and scientific theory of it had become a commonplace of knowledge by the middle of the 19th century. Kant's nebular hypothesis, further developed by Laplace and Herschel, had familiarized the world with the idea of development as applied to the physical universe. In Geology, workers like Murchison and Lyell had brought home to men's minds the same conception in connexion with the history of the earth. Even in the biological sciences the idea of continuous development by the modification of existing types was strongly represented by Lamarck and many other distinguished scientists. But before Darwin all these separate developments lacked vitality. In the last resort they rested largely on theory.

¹ For the literature and detailed expositions of the six systems see the separate articles *VEDĀNTA*, etc.

In particular, the idea of the evolution of life by gradual modification was unsupported by any convincing argument drawn from facts and evidence furnished by the existing conditions of life. The most characteristic position was that which had been reached in Biology. Controversy turned upon the meaning of species. These were held to be permanent and immutable. While it was admitted that there might be a certain amount of small variation of forms, species were considered to represent special acts of creation at various times in the past history of the earth. Among the leading representatives of the biological sciences, permanence of species was the accepted view. Down to the publication of the *Origin of Species*, said Darwin,

'All the most eminent living naturalists and geologists disbelieved in the mutability of species. . . . I occasionally sounded not a few naturalists, and never happened to come across a single one who seemed to doubt about the permanence of species (*Life and Letters*, ch. ii. [vol. i. p. 87 in 1887 ed.]).

Lamarck's theory, by which he accounted for divergence of types by the accumulation of the inherited effects of use and disuse of organs, was ridiculed. Cuvier had become the representative of prevailing opinion, according to which the past history of life was one of constant cataclysms and of constantly recurring creations. Finally, this scientific view was powerfully reinforced by all the indefinite authority of general and popular opinion, which took its stand on a literal interpretation of the Hebrew account of creation in six days, contained in the first chapter of Genesis.

It was into these intellectual conditions that the doctrine of organic evolution by Natural Selection was launched by Darwin in 1859. The distinctive feature of the doctrine of development which it put forward was that it accounted for the evolution of life by the agency of causes of exactly the same kind as are still in progress. It exhibited modification and progress in life as the result of the process of discrimination always going on in the struggle for existence. It was by formulating the conception of this kind of 'Natural' Selection as the mechanism by which the transmutation of species is effected, and then by supplying in the *Origin of Species* an enormous and well-organized body of facts and evidence in support of it, that Darwin instantly converted scientific opinion and succeeded in carrying the doctrine of evolution towards a new horizon.

The theory of the mechanism of Natural Selection formulated by Darwin was extremely simple.

'There is,' he said, 'no exception to the rule that every organic being naturally increases at so high a rate, that, if not destroyed, the earth would soon be covered by the progeny of a single pair' (*Origin of Species*, ch. iii. [p. 79 in 1909 ed.]).

This tendency to increase beyond the conditions of existence is accompanied by an inherent tendency in every part, organ, and function of life to vary.

'As many more individuals of each species are born than can possibly survive, and as, consequently, there is a frequently recurring struggle for existence, it follows that any being, if it vary . . . in any manner profitable to itself, under the complex and sometimes varying conditions of life, will have a better chance of surviving, and thus be *naturally selected*. From the strong principle of inheritance, any selected variety will tend to propagate its new and modified form' (*ib.*, Introd. [p. 6 in 1909 ed.]).

This is the Darwinian doctrine of the survival of the fittest. It presented the whole succession of life as a theory of descent from simpler forms, under the stress of the process of competition for the conditions of existence.

The far-reaching effect produced by the publication of the *Origin of Species* and by Darwin's theory of Natural Selection was undoubtedly due to two main causes. The first of these was the immediate illumination which it threw on some of the most difficult problems of the special sciences which were most closely concerned. This has been often discussed, and its character and tendencies are now well understood. The second cause was the

character of the impression which the doctrines produced on the general mind. The nature of this impression is much less clearly understood. It is, however, in this second relationship that the full and more lasting significance of Darwinism has to be appreciated.

The general mind almost from the beginning perceived with sure instinct, and far more distinctly than the representatives of the special sciences concerned, the reach of the theories to the establishment of which Darwin had brought such a convincing array of evidence. It appeared to many at first as if the whole scheme of order and progress in the world was now presented as the result of a purely mechanical process. The interposition of mind or of Divine agency appeared to be excluded. Man himself seemed to be deposed from the place he had occupied in all previous schemes of creation. It was true, indeed, as has been pointed out, that before Darwin the idea of a continuous development in the physical and biological worlds alike had inspired speculations in many quarters; but this conception, being rejected by current opinion, had left no permanent impression on the general mind. It was not until Darwin's work appeared, Sir William Huggins affirmed in his Presidential address to the Royal Society in 1905, that the new evidence was perceived by scientific opinion to be overwhelming in favour of the view that man is not an independent being, but is the outcome of a general and orderly evolution.

At the first presentation, therefore, of Darwin's theories popular attention became fixed, with an extraordinary degree of concentration, on the nature of the destructive changes which the doctrine seemed to involve in the ideas which had hitherto been closely associated with prevailing religious beliefs. The most familiar ideas of the system of religion which had for generations held the Western mind seemed to have had their foundation removed. Instead of a world created for man in six days of twenty-four hours each, men saw a history of development stretching away back for ages and æons into the past. Instead of a being standing, by special creation, independent and alone, as he had previously been conceived, man was presented now as but the last link in a process of evolution. With Lyell's extension of the conception of time in geology and Darwin's extension of the conception of evolution, the old order in thought seemed to have been swept away. Sir William Huggins (*loc. cit.*) graphically describes the revolution as it appeared to a contemporary from the standpoint of science:

'The accumulated tension of scientific progress burst upon the mind, not only of the nation, but of the whole intelligent world, with a suddenness and an overwhelming force for which the strongest material metaphors are poor and inadequate. Twice the bolt fell, and twice, in a way to which history furnishes no parallel, the opinions of mankind may be said to have been changed in a day. Changed, not on some minor points standing alone, but each time on a fundamental position which, like a keystone, brought down with it an arch of connected beliefs resting on long-cherished ideas and prejudices. What took place was not merely the acceptance by mankind of new opinions, but complete inversions of former beliefs, involving the rejection of views which had grown sacred by long inheritance.'

The new doctrine seemed, in short, to gather up into a focus the meaning of a number of developments long in progress and revolutionary in their nature, the recognition of which in their due place and importance had long been resisted in Western thought. It seemed to give cumulative expression to intellectual tendencies which, since the period of the Renaissance, had struggled against the overpowering weight of accepted and often intolerant religious beliefs. The first condition, therefore, was a kind of intellectual Saturnalia. The effects were felt far and wide, at almost every centre of learning, and in almost every department of thought.

philosophy, and religion. Huxley in England, Renan in France, Haeckel in Germany, were representatives of one aspect of a movement of which Darwin in biology, Tyndall in physics, and Grant Allen in popular science represented another. Most extravagant conceptions became current even in circles of sober and reasoned opinion. Religious beliefs were said to have been so far shaken that their future survival was assumed as the object of pious hope rather than of reasoned judgment. They were, according to Renan, destined to die slowly out, undermined by primary instruction and by the predominance of a scientific over a literary education, or, more certainly still, according to Grant Allen, to be entirely discredited as grotesque fungoid growths which had clustered round the thread of primitive ancestor-worship.

The deepest effects of the movement were felt in England and the United States, and this for reasons to which still other causes contributed. When Darwin published the *Origin of Species*, the resemblance which the doctrine of Natural Selection, making for progress through the struggle for existence, bore to the doctrines which had come to prevail in business and political life was recognized. Almost every argument of the *Origin of Species* appeared to present a generalized conception of the far-reaching effectiveness of competition. Darwin lifted the veil from life and disclosed to the gaze of his time, as prevailing throughout Nature, a picture of the self-centred struggle of the individual, ruthlessly pursuing his own interests to the exclusion in his own mind of all other interests; and yet unconsciously so pursuing them—as it was the teaching of the economies of the day that the individual pursued them in business—not only to his own well-being, but to the progress and order of the world.

It soon became apparent that the crudities of conception which prevailed in such inflamed and excited conditions of thought were carrying men altogether beyond the positions which the doctrine of evolution involved. It also became gradually evident, as these first impressions were lived through, that the acceptance of the evolutionary faith implied conclusions which were not only different in kind, but more significant, more striking, and even more revolutionary—although in quite a different sense—than those which the first Darwinians contemplated.

Those who had realized the depth and reality of the spiritual hold of religion on the human mind, perceived from the beginning how superficial were judgments like that quoted from Renan, to the effect that religious systems had no place in the future development of the race. But it was when the subject came to be approached in the light of the evolutionary doctrine itself that the true nature of the situation became apparent.

The Darwinian doctrine of biological evolution had centred in the principle of utility. Every part, organ, and function had its meaning in the stress out of which types and races had come. Nothing had come into existence by chance, or without correspondence with environment. The consistent labour of all the first Darwinians had been to give prominence to the necessity for the establishment and reinforcement of this—the central arch of the doctrine of evolution by Natural Selection. It was evident, therefore, that while, on the one hand, the sanctions of faith and experience must remain exactly what they had always been for the religious life, the concept of revolutionary nature was the explanation which the doctrine of evolution would be itself bound to give of the phenomenon of religion in the light of its own central principle. What was the meaning of these systems of religious belief which had filled

such a commanding place in the social evolution of man? To dismiss the phenomena as merely meaningless and functionless was, the present writer pointed out, impossible and futile, in the face of the teaching of the doctrine of evolution. They must have some significance to correspond with the magnitude and the universality of the scale on which they were represented.

As observation was carried from primitive man to the most advanced civilization, the importance of the subject was not diminished but increased. The history of social development in its highest phases was largely the history of a group of Western peoples who have been for many centuries the most active and progressive nations of the world. The civilization of these peoples was the most important manifestation of life known to us, first in effects on the nations included in it, and now, to an increasing degree, through its influence on the development of other peoples in the world. This group of Western peoples had been held for thousands of years in a system of belief giving rise to ideas which have profoundly modified their social consciousness, and the influence of which has saturated every detail of their lives. These ideas had affected the development of the Western nations at every point, and had filled their history with the intellectual and political conflicts to which they had given rise. They had deeply influenced standards of conduct, habits, ideas, social institutions, and laws. They had created the distinctive ethos of Western civilization, and they had given direction to most of the leading tendencies which are now recognized to be characteristic of it (cf. CIVILIZATION). How could it be possible to dismiss from consideration the enormous phase of human history of which this was an example, as if evolutionists had no concern with the causes which had produced it (cf. Kidd, *Social Evolution*, ch. i.)?

Further consideration, therefore, made it evident that, if the theory of organic evolution by Natural Selection was to be accepted in human society, it would have to be accepted, like any other principle in Nature, without any reservation whatever. It would be necessary, accordingly, to seek for the function of religious belief in the evolution of society on a scale proportionate to the magnitude of its manifestations.

Throughout the forms of life below human society, the stress through which Natural Selection operated was that of the struggle for existence between individuals. But in human history the fact upon which attention had to be concentrated was that we were watching the integration of a social type. It was the more organic social type which was always winning. The central feature of the process was that it rested ultimately upon mind, and implied the subordination of the individual, over long tracts of time, to ends which fell far beyond the limits of the individual's own consciousness. Correspondence with environment in the case of human evolution, therefore, involved projected efficiency. It was a process of mind. If we were to hold the process of evolution as a mechanical one with no spiritual meaning in it, there would be no rational sanction whatever for the individual to subordinate himself to it. The race was destined, therefore, under the process of Natural Selection, to grow more and more religious. The ethical, philosophical, religious, and spiritual conceptions which were subordinating man to the larger meaning of his own evolution constituted the principal feature of the world's history, to which all others stood in subordinate relationship.

As the early Darwinians have continued to struggle with the laws and principles of the stress

of existence between individuals enunciated in the *Origin of Species*, and as it has become increasingly evident that the application of the law of Natural Selection to human society involves a first-hand consideration of all the problems of mind and philosophy, a remarkable feature of the situation has presented itself. This has consisted in the extremely limited number of minds of sufficient scope of view and training to enable them to deal with the new and larger problems that have arisen. The exponents of philosophy, untrained in the methods of science and largely unacquainted with its details, have necessarily continued to be without a fully reasoned perception of the enormous importance of the Darwinian principles of evolution in their own subject. The biologists, on the other hand, continuing to be immersed in the facts of the struggle for existence between animals, have in consequence, on their part, remained largely unacquainted with the principles of social efficiency in the evolution of human society. The dualism which has been opened in the human mind in the evolution of this efficiency has, in the religious and ethical systems of the race, a phenomenology of its own, stupendous in extent, and absolutely characteristic of the social process. But it remains a closed book to the biologist, and the study of it he is often apt to consider as entirely meaningless. The position has, therefore, most unusual features.

Darwin made no systematic study of human society. But, where he approached the subject in the *Origin of Species*, it was to disclose the bewilderment produced on his mind in attempting to apply the principles of the individual struggle for existence to social evolution. He seemed to think that Natural Selection must be suspended in civilization:

'We civilized men,' he said, 'do our utmost to check the process of elimination [of the weak in body and mind]; we build asylums for the imbecile, the maimed, and the sick; we institute poor laws; and our medical men exert their utmost skill to save the life of every one to the last moment' (*Descent of Man*, ch. v. [p. 168 in 1871 ed.]).

Darwin thus exhibited no perception of the fact that this sense of responsibility to life, which is so characteristic of advanced civilization, is itself part of the phenomenology of a larger principle of Natural Selection. That the deepening of the social consciousness, of which this developing spiritual sense of responsibility to our fellow-creatures is one of the outward marks, is of immense significance as characteristic of the higher organic efficiency of the social type in the struggle for existence was a meaning which seemed to escape him.

Alfred Russel Wallace, in approaching the study of human society in his book *Darwinism* (1889), displayed the same inability to distinguish that it is in relation to the capital problems with which the human mind has struggled in philosophy, ethics, and religion that we have the phenomena of Natural Selection in social evolution. The qualities with which priests and philosophers are concerned, he asserted, were altogether removed from utility in the struggle for existence; and he even mistakenly used the suggestion as an argument in support of religion. Here also the fact in evidence was that the naturalist, with his mind fixed on the details of the individual struggle for existence as it takes place between plants and animals, has been altogether at a disadvantage, both by training and equipment, in attempting to deal with the laws and principles of social efficiency. Huxley reached an almost equally characteristic contradiction in the Romanes lecture delivered at Oxford in 1893, in which he attempted to make a distinction in principle and meaning between the social process and the cosmic process, the lesson of evolution, like the lesson of religion,

being, of course, that they are one and the same. Sir Francis Galton, one of the last and greatest of Darwin's contemporaries, recently also exhibited this characteristic standpoint of all the early Darwinians. He put forward claims for a new science, 'Eugenics,' which he has defined as a science which would deal with all the influences that improve the inborn qualities of the race, and would develop them to the utmost advantage by 'scientific breeding.' The list of qualities which Galton proposed to breed from included health, energy, ability, manliness, and the special aptitudes required by various professions and occupations. Morals he proposed to leave out of the question altogether 'as involving too many hopeless difficulties.' Here once more we see the difficulty with which the naturalist is confronted in attempting to apply to human society the merely stud-book principles of the individual struggle for existence as it is waged among plants and animals. The entire range of the problems of morality and mind are necessarily ignored. The higher qualities of our social evolution, with all the absolutely characteristic phenomena contributing to the highest organic social efficiency, remain outside his vision.

We are as yet only at the beginning of this phase of knowledge. The present remarkable situation, here of necessity only lightly referred to, in which the biologists and the philosophers remain organized in isolated camps, each with the most restricted conception of the nature and importance of the work done by the other and of the bearing on its own conclusions, cannot be expected to continue. One of the most urgent needs of the present time is a class of minds of sufficient scope and training to be able to cover the relations of the conclusions of each of these sets of workers to those of the other and to the larger science of society. See also art. EVOLUTION.

DAWŪD B. 'ALĪ B. KHALAF.—Dāwūd b. 'Alī b. Khalaf, called al-Zāhiri (with the *kunya* Abū Sulaimān), a jurist celebrated as the originator of the Zāhiriyya school in Muslim theology, was born in Kūfa, A.H. 200 [=A.D. 815] (or, according to other authorities, A.H. 202 [=A.D. 817]), of a family belonging to Iṣfahān. Among the many eminent teachers under whom he studied in his youthful travels were two of the leading theologians of Islām, viz. Iṣḥāq b. Rāhawaih (†A.H. 233 [=A.D. 847]) of Nisābūr, with whom he enjoyed personal relations of the most intimate character, and Abū Thaur (Ibrāhīm b. Khālid) of Baghdād (†A.H. 240 [=A.D. 854]). Having completed his career of study, he settled in Baghdād, where he soon established a great reputation, and began to attract pupils in large numbers. His audience, in fact, commonly numbered about 400, and included even scholars of established repute. At this time Baghdād possessed another teacher of renown, Ahmad b. Ḥanbal (†A.H. 241 [=A.D. 855]), the Nestor of ultra-conservative orthodoxy, whose name is borne by the Hanbalitic party. Dāwūd sought to come into friendly relations with Ahmad, but all his advances were repelled, as he lay under the suspicion of having affirmed, while at Nisābūr, that the Qur'ān was a created work—a doctrine which Ahmad had attacked with great vigour and at heavy personal cost. It was even said that Dāwūd had been punished for his error by Iṣḥāq b. Rāhawaih. Though Dāwūd met

these allegations with a distinct denial, Ahmad still refused to receive him; nor was the strain relieved by the fact that the system promulgated by Dawūd coincided in many respects with that of Ahmad, and was even fitted to lend it support.

Although Dawūd, in his travels as a student, had applied himself eagerly to the study of the *Ḥadīth*, 'prophetic tradition,' he has no outstanding reputation as an authority on that subject. In point of fact, he is said to have given currency to only one prophetic dictum of note, which came to be associated with his name through the instrumentality of his son, Abū Bakr Muḥammad, a well-known *bel esprit* of his day. The saying is as follows: 'He who loves and pines and hides (his torment), and dies thereof, is to be regarded as a martyr.' As a teacher of jurisprudence, on the other hand, Dawūd's influence was enormous, and here he ranks as the founder of a distinct school. He allied himself with the system of the Imām, al-Shāfi'i, for whom he manifested an extraordinary reverence, and to whose high qualities (*manāqib*) he devoted two of his books. But, while Dawūd found his starting-point in the system of Shāfi'i, he at length developed a new method in the deduction of sacred law—a method which, in its results, diverged from that of his master in the most pronounced way, and at the same time brought its author into collision with the universally received views of Muslim jurisprudence. According to the prevailing doctrine, the bases of juristic deduction were (1) the ordinances attested by the Qur'ān; (2) those which had the support of tradition; (3) the *consensus* ('*ijmā'*) of recognized authorities; and (4) the conclusions established by speculative reasoning from analogies (*qiyās*), and by deduction of the *ratio legis* ('*illat al-shar'*) from given ordinances. In cases where positive injunctions derived from the first three sources proved inadequate, the reflective insight (*ra'y*, *opinio prudentium*) involved in the fourth was regarded as valid ground for juristic reasoning. Dawūd, however, denied the legitimacy of this last-mentioned source, i.e. the *ra'y*, and all that it implied, as also of all inquiry into the reasons of the Divine laws and the analogical arguments founded thereon. The only sources of juristic deduction which he recognized were the positive, or, as he calls them, the 'evident' (*ẓāhir*), i.e. the Qur'ān and Tradition. As for the *consensus*, he restricted it to the demonstrable 'agreement of the companions of the prophet' ('*ijmā' al-ṣaḥāba*'), assigning no more precise limits to the scope of this factor. In thus running counter to the procedure of the dominant schools, Dawūd found himself in alliance with the extreme section of the party known as the *aṣḥāb al-ḥadīth* ('traditionalists')—in contrast to the *aṣḥāb al-ra'y* ('speculative jurists'),—and became the founder of the Zāhiriyya school, which is accordingly also called the *madhhab Dawūd*. It is true that he brought himself to the point of conceding the admissibility of the 'obvious analogy' (*qiyās ḥalī*) plainly indicated by positive injunctions, but only as a last resource. As a preliminary of delivering judgment, moreover, he demanded an independent investigation of tradition, and deprecated a mechanical adherence to the established doctrine of a master or a school (*taqlīd*). 'The automatic repetition of the teachings of one who is not infallible is pernicious, and shows blindness of judgment.' 'Out upon him who, having a torch (i.e. tradition) wherewith he may light his own way, extinguishes his torch, and moves only by another's help.' Men should not blindly follow any human authority, but should examine the sources for themselves.

Of Dawūd's writings, a list of which is given in the *Kitāb al-Fihrist*, nothing is now extant, but

it would be possible to reconstruct his doctrines from quotations in later literature. Biographical writers are at one in extolling the piety and sincerity of his character, and his abstemious mode of life. His fame spread far beyond the confines of his domicile, and from the furthest limits of the Muhammadan world those who were perplexed with theological problems came to him for light. He died in Baghdad in A.H. 270 [= A.D. 883]. Vast as his influence was, however, his system, which, owing to its limited scope, did not adequately meet the requirements of juristic practice, failed to gain a firm footing in public life. Numerous Muslim scholars associated themselves with it, but their adherence was largely personal and theoretical, and, except in a single instance, the system never attained an authoritative position in the official administration of justice. Its solitary success in this respect was achieved in the empire of the Almohads in Spain and North-West Africa, the founders of which, repudiating all adherence (*taqlīd*) to particular schools, held that the appeal to the traditional sources was the only permissible procedure. The history of Muslim learning down to the 9th cent. A.H. contains the names of famous adherents of the Zāhiristic principle in many different countries. The most important, and, in a literary sense, the most eminent, of these was the valiant Andalusian, Ibn Ḥazm, 'Alī b. Ahmad, who expounded the Zāhiristic method in his works, and applied it not only to the jurisprudence of Islām, but to its dogmatic theology as well.

DEÆ MATRES.—The *Deæ Matres* are divinities of uncertain character and function, whose worship is found chiefly in the Celtic and German provinces of the Roman Empire (cf. art. CELTS, vol. III. pp. 280, 286, and *passim*). How far they are to be identified or associated with so-called 'Mother-goddesses' among other peoples is a matter of dispute and will be discussed later. But there is evidence on Celtic and Germanic territory, and to some extent outside these limits, of a fairly definite cult of goddesses called usually *Matres* or *Matronæ*, and depicted in accordance with well-established conventions. Knowledge of them is derived entirely from inscriptions and monuments, of which a large number (over four hundred inscriptions) have been preserved; apparent survivals of their worship have been detected in the beliefs and traditions of the Celts and Germans of later ages; but no certain reference to them has been found in ancient literature. There is no reason for applying to them, as is sometimes done, a passage cited from Varro in the *de Civ. Dei* of St. Augustine (vii. 3, 'Unde dicit etiam ipse Varro, quod diis quibusdam patribus et deabus matribus, sicut hominibus, ignobilitas accidisset'). Varro's reference is probably general, and certainly the context in St. Augustine does not suggest an application to the particular divinities in question.

The inscriptions discovered up to the year 1887 were published and classified by Ihm in his very important monograph on the *Matronenkultus* (cited here by this short title; for exact references, see the Literature at end of article). Additional material

was included in Ihm's art. in Roscher (s.v. 'Matres'), and later discoveries will be taken account of, together with the results of later discussion, in the course of this article.

The name of the divinities appears in three forms in the inscriptions: *Matres*, *Matronæ*, and **Matræ* (the last being the nominative case inferred from the datives *Matris* and *Matrabus*). A fourth form **Mairæ* is held by some scholars to be preserved in five inscriptions, but the evidence for it is in no case clear. Three of the inscriptions in question are lost, and in the other two—a stone altar at Dijon and a relief at Metz—the readings are very uncertain.¹ The form **Matræ* may be due to Celtic influence, an old Celtic nominative singular **Matar* having been latinized as **Matra* and a dative plural **Matrabus* developed from it, perhaps with the aid of Celtic datives in *b* (cf. *Matronenkultus*, p. 10). But, in view of such analogous Latin forms as *nymphabus*, *fatibus*, *filibus*, *natabus*, etc., the Celtic explanation cannot be deemed necessary.² In the case of the dative plural *Matris*, the parallel formation *heredis* (= *heredibus*) has been similarly used as evidence against the theory of Celtic influence.³ Whatever be the explanation of the Latin words in question, there is one inscription which is generally held to show a Celtic (Gaulish) form of the name. This is preserved in the Museum at Nîmes and reads, in Greek letters, *Ματρεβο Ναιμαυκαβο βαρπουε*. The epithet *Ναιμαυκαβο* is almost certainly local = 'to the Nemausan Mothers'; but the tr. of *βαρπουε* is more doubtful. If it contains the root of the Ir. *bráth*, 'judgment,' it may well mean *ex iudicio*, and be equivalent to the common formula *ex imperio*.⁴

Matres and *Matronæ* appear to be synonymous, though their geographical distribution, as will be seen later, is somewhat different. They even occur as equivalents on a single inscription: 'Matribus sive Matronis Aufaniabus domesticis' (*Matronenkultus*, no. 207); and the same epithet is sometimes found in combination with both terms (cf. 'Matribus [V]acall[ti]neis' [*ib.* no. 215] with 'Matronis Vacal[ti]neis' [*ib.* nos. 224, 225, 227]). But such close association of the two is exceptional, and certain distinctions have been pointed out in their use. Ihm (Roscher, p. 2466) shows that *Matres* is accompanied by epithets of greater veneration ('*augustae*', '*deae*'). Hild (Daremberg-Saglio, iii. 1636) tries to make out a difference in the fact that men pray oftener to *Matres*, and women to *Matronæ*; but his figures can hardly be regarded as significant. Roach-Smith (in his *Collectanea Antiqua*, vii. [1878-80] 213) argues that the *Matronæ* were concerned primarily with the feminine principle in Nature, with maternity and offspring, while the *Matres* presided over the fruits of the earth and, in general, over public and private business. None of these distinctions, however, is really established as valid. It is perhaps a significant fact, which is pointed out by Haverfield (*Arch. Æl.* xv. 320), that *Matronæ* does not occur in any land where the cult is demonstrably imported; and the name may be really the Celtic *Matróna*, which survives in the French *Marne* and a few other names of places, rather than the Lat. *Matróna*. Since there is no evidence outside of

inscriptions, the quantity of the *o* must be regarded as uncertain; and, if it was pronounced long, as is likely enough, this might simply mean that the familiar Latin word had been substituted for the Celtic. The substitution would have been entirely natural, and the two words would have come to be regarded as identical. The fact that *Matróna* appears regularly in the singular, whereas the *Matronæ* are named in the plural and depicted in groups, might show a divergent development of the two cults, but would not preclude a common origin. Moreover, there is some doubt, as will be shown later, whether the *Matres* or *Matrónæ* were not sometimes conceived and represented singly. Even if the identification of *Matrónæ* with *Matróna* should be accepted, it would not become any easier to make a distinction between *Matres* and *Matrónæ*, for the Celtic (or possibly pre-Celtic) *Matrona*, like the Latin, appears to be a derivative of the simple word for 'mother.' The character of the divinities bearing the name *Matróna* is also quite uncertain.¹ On the whole, then, *Matres* and *Matronæ* seem to be equivalent in sense, and neither of them is probably Roman in origin. In the following discussion the two words will be used interchangeably, except where a distinction is explicitly made between them.

The dates of the monuments to the *Matres* or *Matronæ* range all the way from the time of Caligula (*Matronenkultus*, no. 35) to that of Gordianus (*ib.* no. 361). They are found chiefly in Cisalpine Gaul, Gallia Narbonensis, Gaul proper, and Lower Germany, and to a limited extent at Rome itself, in Britain, and in Spain.² Those at Rome and in Britain are apparently due to soldiers or tradesmen, and do not prove the local existence of the cult; and the same may be true of the few inscriptions preserved on the Spanish peninsula. The latter, however, are taken by d'Arbois de Jubainville as evidence that the Celtiberi had the worship in common with the Gauls; and the epithet 'Gallaicis' favours the supposition.³ Still more remote provinces are brought into relation with the cult by the inscriptions, 'Matres Pannoniorum et Delmatarum,' preserved at Lyons (*Matronenkultus*, no. 394), and 'Matres Afræ Italæ Gallæ,' preserved at York (*ib.* no. 348). But no inscription to *Matres* or *Matronæ* has yet been found in either Africa or the Illyrian provinces south of the Danube, and it seems probable that the names indicate simply military service in those regions on the part of the dedicants or of their soldiers.⁴ Monuments are commonest on the west bank of the Rhine and in the vicinity of Lyons; and the tribes among whom the worship chiefly flourished appear to have been the Vocontii, Arecomici, Allobroges, Sequani, Lingones, and Ubii. There are almost no traces of it in Aquitania or western Narbonensis, and few in the region east of the Rhine.⁵ The geographical distribution of the names is, in general, as follows: *Matronæ* seems to be the only form in Cisalpine Gaul, though some abbreviations are doubtful, and it is the prevailing form in Germany; **Matræ* occurs chiefly near Lyons

¹ The comparison between *Matrónæ* and *Matróna* is old. See, for example, Pictet in *Rcel* ii. 8. On the occurrences of *Matróna*, see Holder, *Altcelt. Sprachschatz*, s.v. For the view that it is Ligurian, not Celtic, compare H. d'Arbois de Jubainville, *Premiers habitants de l'Europe* 2, Paris, 1880, ii. 169, and G. Dottin, *Manuel pour servir à l'étude de l'antiquité celtique*, Paris, 1906, p. 240.

² For a map showing their distribution, see Haverfield's art. in *Arch. Æl.* xiv. [1893] 876; also J. Leite de Vasconcellos, *Religiões de Lusitania*, ii. [1905] 176 ff.

³ See Ihm, *Bonner Jahrb.* xcii. [1892] 258, and *Matronenkultus*, p. 120 ff., for inscriptions to 'Campestres,' 'Triviae,' etc., in Africa and the Danube provinces.

⁴ On certain evidences recently pointed out for such worship in the Palatinate, see Grunewald, *Westdeutsche Zeitschrift*, 1906, p. 239 ff.

¹ In support of **Mairæ*, see Hirschfeld, *CIL* xiii. no. 5473; against it, Ihm, *Matronenkultus*, p. 12 ff.

² See Haverfield, *Archæol. Æliana*, xv. [1892] 32. Sommer, *Handbuch der lateinischen Laut- u. Formenlehre*, Heidelberg, 1902, p. 380, explains such forms by the analogy of *deabus*. *Matronabus* also occurs (see *Notizie degli schiavi*, 1897, p. 6).

³ See Siebourg, *Westdeutsche Zeitschrift*, 1888, p. 115, and *Bonner Jahrbücher*, cv. [1901] 66.

⁴ See Thurneysen, *Handbuch des Alt-Irischen*, Heidelberg, 1900, p. 190, and Rhys, 'Celt. Inscr. of France and Italy,' *Proc. Brit. Acad.* ii. [1905-6] 291. It should be said that some scholars do not hold the inscription to be Celtic. D'Arbois de Jubainville (*Rcel*, 1890, p. 250) explains it as Latin; and Bréal (*RA* xxxi. [1897] 104) as Italic. The latter scholar translates *βαρπουε* by *merito de*, comparing Oscan *brateis*.

and in Gallia Narbonensis; and *Matres* is common in Gaul proper and in Britain.

So far as we have direct evidence, then, concerning the worship, it belongs to the Celtic and Germanic provinces of the Roman Empire, the chief points of radiation being Gaul and Lower Germany. With regard to its origin and early history there is difference of opinion. The theory that it was a general Indo-Germanic institution (set forth most fully by Becker, Kuhn's *Beiträge*, iv. [1868] 146 ff.) is rejected by most recent investigators, though the relation of this to other cults of Mother-goddesses among various peoples presents obscure problems which are not by any means to be summarily dismissed. This subject will receive further mention, but in the meantime clearness will be undoubtedly served by confining the discussion, as Ihm has wisely done, to the narrower range of forms which are evidently related. These are common to Celts and Germans, and both peoples have been held to be the original possessors of the worship. The probabilities are rather in favour of the view that the Celts first developed it and that the Germans borrowed it from them. The oldest dated monument (*Matronenkultus*, no. 35, of the age of Caligula) has been found in northern Italy, and the cult was undoubtedly native also to southern Gaul. It is unlikely that the Celtic population of either of those regions derived it from the Germans, and all that is known of the relations of Germans and Celts down to the beginning of the Christian era favours the theory that the Germans, in such matters, were the borrowers or imitators.¹ It is possible, of course, that both peoples possessed the worship equally from the beginning (cf. Siebourg, *op. cit.* p. 97; also Much, *ZDA* xxxv. 315 ff.), or that they derived it independently from older populations which preceded them in the occupation of western Europe. Attention has already been called to the uncertainty concerning the history of the names *Matres* and *Matronæ* themselves.

The Mother-goddesses, in the restricted sense in which they are now being considered, were apparently conceived in triads. Only one inscription ('*Matribus tribus Campestribus*,' *CIL* vii. 510, preserved in Britain) designates the number; but the goddesses are often depicted in groups of three, and no monument representing a different number is definitely associated with them by an inscription. The position and arrangement of the *Matres* vary somewhat on different monuments, the prevailing type showing three draped figures, seated beneath a canopy or arch, wearing round head-dresses like a nimbus, and holding baskets of fruit on their knee. The middle goddess is usually distinguished from the others in some fashion, either by the size and position of her figure or by a difference in head-dress. On one monument she is seated while the others stand, and on another she stands while the others sit. It is hardly to be supposed, however, that there was any distinction of rank or function among the divinities. Such variations in the type were doubtless purely artistic in purpose.² On a very few monuments, notably the Metz relief (*Matronenkultus*, p. 43, fig. 7), the three goddesses are represented as standing.

¹ Cf. *Matronenkultus*, p. 57 ff.; and C. de la Saussaye, *Relig. of the Teutons*, 1902, p. 88 ff. See also, on the early relations of Celts and Germans, d'Arbois de Jubainville, *Premiers habitants*, ii. 323 ff.; Kluge, in Paul's *Grundriss*, i.² [1901] 324 ff.; Bremer, *ib. iii.*² [1904] 787 ff.; R. Much, *Deutsche Stammeskunde*, Leipzig, 1900, p. 41 ff. Kauffmann, in *Ztschr. des Ver. für Volksk.* ii. [1892] 24 ff., disputes the adoption of Mother-worship by the Germans, except when they had practically abandoned their nationality. But there is considerable evidence on the other side. See Siebourg, *Bonner Jahrb.* cv. [1900] 95 ff.

² Cf. *Matronenkultus*, pp. 47-48, and Siebourg, *Bonner Jahrb.* cv. 100. For an attempt to connect the type with Gr. representations of the Mother of the Gods, see Loeschke, *Bonner Jahrb.* xov. [1894] 261.

It is doubtful how far monuments representing groups larger or smaller than three are to be associated with the worship of the *Matres*. Five dancing women on a relief at Avigiana probably do not themselves represent the goddesses, though the monument is inscribed '*Matronis*' (see *Matronenkultus*, p. 48). A group of two figures on a relief at Poitiers, holding cornucopias and baskets of fruit, has also been taken to represent *Matres*. But the existence of other goddesses known to have been worshipped in pairs renders the identification extremely doubtful.¹ The single figures of a goddess riding a horse, often referred to in the past as an 'equestrian *Matrona*,'² are now held to be *Epona*, a divinity of distinct character, whose worship appears, however, in the same regions as that of the *Matres*.³ Occasionally, in fact, *Epona* and the Mother-goddesses are associated on the same monument.⁴ It is, of course, possible that *Epona* was originally, as Renel (*Les Religions de la Gaule avant le christianisme*, Paris, 1906, p. 281) suggests, only a *Matrona* with specialized function (*mère spécialisée*).

Of dubious connexion with the *Matres*, likewise, are numerous statuettes of single figures, without names, more or less resembling the inscribed representations of the goddesses. Some of these figures carry fruit or cornucopias, and have the same head-dress as appears on the larger monuments; others represent women with babes—a conception in itself suitable enough to *Matres* or *Matronæ*, though not in accordance with the usual convention. Ihm rejects all such figures, insisting upon the triadic group as characteristic of the cult (*Matronenkultus*, p. 53 ff.); and the existence of statuettes of the regular triad rather counts in his favour, making it more difficult, as Siebourg has argued, to identify single figures as *Matronæ*.⁵ It is even doubted whether the numerous statuettes of women with babes or fruits represent goddesses at all. They may be merely votive offerings or talismanic images; but in the case of many of them the symbolism appears to indicate local or personal divinities similar in function to the *Matres*. The most reasonable conclusion, perhaps, is to recognize the probable existence of many related forms of worship, and at the same time to restrict the names *Matres* and *Matronæ* to monuments actually so inscribed or exhibiting the customary figures of the three divinities. The geographical limits already laid down for the cult were made up on this basis, and it does not seem wise to extend them by the inclusion of doubtful monuments.⁶ The term 'Mother-goddesses,' which is applied, especially by French archaeologists, to a great number of these statuettes of various types, is sometimes used very

¹ Cf., for example, the inscription, '*Deabus Vercanae et Medunae*,' at Trèves; and see, for other references, *Matronenkultus*, p. 53 ff., and Siebourg, *Bonner Jahrb.* cv. 98 ff.

² Becker's '*reitende Matrona*,' *Bonner Jahrb.* xxvi. [1858] 91 ff.

³ See *Matronenkultus*, p. 55 ff.; S. Reinach, *RA*, 1895, p. 163 ff. Reinach gives a map of the distribution of *Epona* monuments, which may be compared with Haverfield's map for the Mother-goddesses. For some modification of Reinach's statements, cf. Dangebaud, *Revue des études anciennes*, vii. [1906] 236 ff.

⁴ See Domaszewski, *Rel. des rom. Héres*, Trèves, 1895, p. 50.

⁵ See the *Bonner Jahrb.* cv. 98; also Monceaux, *Revue historique*, xxxv. [1887] 256.

⁶ On the statuettes of the types under consideration there is an extensive literature. See esp. *Matronenkultus*, p. 53; Tudot, *Figurines de l'époque gallo-romaine*, Paris, 1860; Vallentin, in *RCel* iv. [1879] 28; Monceaux, *Revue historique* xxxv. [1887] 256 ff.; Ohauvet, *Hypothèse sur une statuette antique*, Angoulême, 1901; A. Blanchet, '*Figurines en terre-cuite de la Gaule romaine*,' *Mém. Soc. Ant.*, 6th series, i. [1890] 65 ff., x. [1901] 189 ff.; Baillet, *Mém. de la Soc. archéol. et historique de l'Orléanais*, xxix. [1905] 399 ff.; Gassies, *Revue des études anciennes*, viii. [1906] 55 ff.; and A. J. Reinach, *Pro Alisia*, iii. [1908-9] 426 ff. For a map of Gaul showing the distribution of Mother-worship in the more inclusive sense, see Renel, *Les Religions*, p. 286.

loosely. Thus Gassies, pleading against the restriction of the Mother-worship to Gaul and Germany, cites Venus, Juno, and Demeter as *déeses mères*; and other writers (see, for example, A. Wirth, *Danae*, Vienna and Prague, 1892, p. 95) have compared the *Matres* with the Semitic 'Ašdōrā. Statuettes, moreover, of the sort just referred to have been found in widely separate regions outside of Gaul: for example, in Greece, Italy, and Northern Africa.¹

The difficulty, if not the impossibility, of keeping the worship of *Matres* and *Matronæ* distinct from all other cults is hardly less apparent in the case of inscribed than in that of uninscribed monuments. For the ancients themselves associated, and doubtless to some extent identified, these divinities with others. Just as in the case of several of the more important individual gods of the Celts and Germans, so with regard to the *Matres*, the modern investigator is puzzled by the uncertain meaning of the *interpretatio Romana*. Roman conquerors and romanized provincials alike were eager to identify the gods of the northern barbarians with those of the old classical pantheon, and the resulting equations are neither consistent with themselves nor easy to understand.² The *Matres*, in this way, are sometimes associated with the *Parcae*, on the evidence of a few inscriptions 'Matribus Parcis.' But it is not clear that an identification of the two groups was intended by the dedicants in question. Moreover, the modes of representing the *Matres* and the *Parcae* are quite different, and their fundamental characters appear to have been dissimilar (see below, p. 410^a, and cf. *Matronenkultus*, p. 66 ff., and Haverfield, *Arch. Æl.* xv. 326). The association of the Fates with the *Matres* is also doubtful, and finds no positive support in the inscriptions.³ In the case of the *Nymphæ*, whom some investigators have brought into relation with the *Matres*, there is little reason for the comparison, beyond the fact that both kinds of divinities have numerous monuments inscribed with local epithets.⁴ Evidence is slightly better, as Ihm has shown, for connecting the *Matres* with the goddesses of the cross-roads (*q.v.*) named on various monuments as 'Bivivæ,' 'Trivivæ,' and 'Quadrivivæ,' though the matter is by no means certain.⁵ But the divinities who may with most probability be identified with the *Matres* are those who were called 'Campestres,' 'Junones,' and 'Suleviæ.' All these names appear both independently and in combination with *Matres* or *Matronæ*, and it is hard to say whether they stand for goddesses originally distinct and later identified with the *Matres*, or whether they were originally mere epithets of the *Matres* and afterwards came to be used independently. At all events the divinities concerned were closely associated in the end with the Mother-goddesses. The *Junones*, in the sense now under consideration, should probably be distinguished from the Roman *Junones*, conceived as the geniuses of women. They are very likely only *Matronæ* worshipped under another name, and the chief seat of their cult appears to have been Cisalpine Gaul.⁶ The

Campestres have sometimes been described as goddesses of the fields, but it is more probable that they were the special protectors of the military camp, or rather that their name was the epithet applied to the *Matronæ* when conceived as exercising this function.¹ In the case of the *Suleviæ* it is more probable that we have divinities originally distinct from the *Matres*, though of closely similar character and function. Inscriptions to them are far less numerous than those to the *Matres* or *Matronæ*, but their geographical distribution is similar. The origin and meaning of the name *Suleviæ* is unknown, though it is tempting to compare the British *Dea Sul*, worshipped at Bath (*Aquæ Sulis*), and to seek an etymology in the Celtic root *sul* (O. Ir. *síil*, 'eye'). If this theory is right, the meaning of the word would be similar to that of *Tutelæ*.²

In the absence of all ancient literary treatment of the Mother-goddesses, the only evidences of their divine functions are those furnished by the artistic representations of the divinities, and by the epithets applied to them. The customary figures of the *Matres* have been described already. The epithets, though numerous, contribute very little new information. Many of them are simply general terms of veneration, such as 'augustæ,' 'deæ,' 'divæ,' 'sanctæ,' perhaps also 'dominæ,' though the application of this to the *Matres* is not certain.³ 'Nemetiales' is possibly equivalent to 'sanctæ,' but seems rather to be connected with the tribal name of the *Nemetes* or with some locality (see Rhys, p. 102; *Matronenkultus*, p. 16). Other epithets denote the special protective relation of the goddesses to individual dedicants or their families; for example, 'mææ,' 'suæ,' 'paternæ,' 'maternæ,' 'domesticæ,' 'trivivæ,' 'conservatriciæ,' 'indulgentiæ.' By far the greater number contain the names of nations, tribes, or localities, such as 'Afriæ Italæ Gallæ,' 'Italæ Gallæ Germanæ Britannæ,' 'Omnium gentium,' 'Noriciæ,' 'Treveræ,' Ναρασιοναβιο, and the numerous non-Latin or half-latinized names which, though largely unexplained, are held to belong chiefly to this class. A few of the latter have been brought into relation with definite place-names like 'Julinehiæ,' 'Albiahenæ,' 'Nersihenæ,' 'Mahlinehæ,' connected respectively with Jülich, Elvenich, Neersen, and Mecheln; but the great majority seem to go back to pre-Roman names, since displaced and lost.⁴ The names *Afims*, *Saithamims*, and *Vatruims*—over against the latinized forms *Afiabus*, *Saithamiabus*, and *Vatruibus*—which are of special interest as exhibiting very archaic forms of the Germanic dative plural ending, are also presumably of local significance.⁵ The only native epithet which seems to have reference to function is 'Gabiæ,' with its compounds 'Ollogabiæ' (on two inscriptions at Mainz), and 'Alagabiæ' (on an inscription at Bürgel). Even this is not beyond dispute, and its meaning is not particularly individualizing at best. It is usually translated the 'Givers,' the 'All-Givers' (cf. *Pandora*)—a name which is quite consistent with the representations of the goddesses. The etymology is easy in Germanic (cf. *geben*, 'give,' etc.), where

¹ See Sieburg, *de Sulevis Campestribus Fatis*, Bonn, 1886; Ihm, *Matronenkultus*, p. 76 ff.; and Roscher, s.v. 'Matres,' p. 2475.

² See Sieburg, *de Sulevis*, etc., and *Bonner Jahrb.* cv. [1900] 89 ff.; and Ihm, *Matronenkultus*, p. 78 ff.

³ See *Matronenkultus*, p. 98, and Rhys, *Celtic Heathendom*, 1892, p. 102 ff., the latter comparing the Gaulish *Comedove*.

⁴ On this class of epithets, see particularly von Grienberger, in *Erano Vindobonensis*, Vienna, 1893, p. 253 ff., and Sieburg, *Bonner Jahrb.* cv. 79 ff. A wholly different theory, connecting epithets in *-nhus* with *Nha*, the name of a hot spring at Dex, and explaining them as Iberian or Ligurian, was proposed by O. Jullian, *Revue des études anc.* III. [1901] 212. See also his *Hist. de Gaulle*, II. 131.

⁵ See Kaufmann, *op. cit.* II. 44, and Sieburg, *Bonner Jahrb.* cv. 94-95.

¹ Cf. S. Reinach, *Bronzes figurés*, p. 15, and Blanchet, *Mém. de la Soc. des Antiquaires*, vi. [1901] 10, p. 197 ff.).

⁴ See *Matronenkultus*, p. 98 ff. The old comparison has been recently repeated by J. Leite de Vasconcellos, *Religiões de Lusitania*, II. 198.

⁵ With *Matronenkultus*, p. 87 ff., cf. Ihm's later remarks in the *Bonner Jahrb.* xdv. [1898] 165, and Haverfield in the *Arch. Æl.* xv. 326.

⁶ See particularly Ihm's art. 'Junones II.' in Roscher. The *Procuæ*, sometimes identified with the *Matres*, seem to correspond rather to the regular Roman *Junones* (cf. *Matronenkultus*, p. 97).

several other divine names are perhaps to be derived from the same root; but in the Celtic languages, in which the root *gab* usually means 'take,' rather than 'give,' the explanation is more difficult. It is possible, therefore, that the epithet is Germanic in origin, and that the form 'Ollogabiae,' in which the prefix has a Celtic appearance, is simply a case of the Celtic adoption of the Germanic 'Alagabiae.'¹ The interpretation proposed for *Gabie* is supported by several divine names in Lithuanian ('Matergabia,' 'Polengabia') which have similar form and meaning.²

With regard to the nature and function of the goddesses, various theories have been held. According to older views, now generally abandoned, they were deified druidesses of the ancient Celts, or prophetesses of the Germans, or symbols of the three Gauls or of the three seasons.³ The occasional association of the *Matres* with the *Parcae* has led to their interpretation as divinities of destiny; but the evidence for this has already (p. 409*) been shown to be slight. And the representations of the goddesses, together with the few epithets that seem to bear on the question ('Indulgentes,' 'Gabie,' etc.), indicate that they were primarily friendly local divinities of wealth and fruitfulness. As such, their functions would resemble those of Fortuna or Pomona rather than those of the Fates, though the two conceptions would be naturally associated, and occasional equations between *Matres* and *Parcae* might be expected to appear. Ihm, in defining them as 'gütige Schicksalsgöttinnen,' combines the two characters, and his definition may be allowed to stand, if it is understood not to imply too large an element of Fate or too close an approximation to the classical conception of the *Parcae*. At the same time, the sphere of the goddesses should not, on the evidence of the reliefs, be too narrowly restricted to the care of lands and flocks. The conventional representation of them, which was doubtless of classical origin, may have been purely artistic in purpose and in no sense a complete expression of the cult. Even the number three, which is also characteristic of monuments of *Proxuma*, *Parca*, and *Nymphæ*, may be a formal device for representing the plural and have no literal significance. Certainly the distribution of the worship, the occasional association of the *Matres* with *Mars*, and such epithets as 'campestres' and 'victrices,' all connecting the goddesses with the military camp, suggest a considerable extension of their powers in one direction; and various dedications by women imply their influence over still other phases of life. Their functions were doubtless vaguely conceived by their worshippers, and ought not to be narrowly defined. As the tutelary genies of tribes or localities, they presided over all the interests of the people, and gave success to all kinds of undertakings. They belong, in short, to a stage of religion in which 'departmental' deities were scarcely conceived, and their cult doubtless survived, with slight alteration, even after the development of gods with specialized functions.⁴

Although the cult of the *Matres* was wide-spread and in a sense influential, as is shown by the numerous monuments and also by occasional

¹ Cf. Kern, *Verlagten en Mededeelingen der K. Akademie van Wetenschappen*, Amsterdam, 1872, II. 304 ff.; Ihm, *Matronenkultus*, p. 48; Siebourg, *Bonner Jahrb.* cv. 98; and Much, *Festgabe für R. Heinzel*, p. 262. The possibility of Celtic *Gabie* in the sense of 'Givers,' is by no means to be denied. See Stokes, *Irish Celtic Language*, s.v. 'Gab,' in Fick's *Vergleichendes Wörterbuch der indogerm. Sprachen*, 1894, II. 106.

² Cf. Schrader, *Reallexicon*, Strassburg, 1901, p. 680, and von Grienberger, *Archiv für slav. Philol.* xviii. [1896] 52-65.

³ For references to these explanations, see *Matronenkultus*, p. 65 f.

⁴ Cf. Siebourg, *Bonner Jahrb.* cv. 87; Anwyl, *Celtic Religion*, London, 1906, p. 42, and *CsR* III. [1906] 26 ff.

temples of the goddesses, yet in the Roman period, from which our evidence comes, it does not appear to have belonged to the higher social classes. All the dedicants, so far as can be determined, are persons of low rank, except perhaps the *tribunus militum* of a single inscription (*Matronenkultus*, no. 394), and it is possible that he is offering on behalf of his soldiers. The fact, too, that the worship is not mentioned in literature is further evidence that it belonged mainly to the humbler people.¹

So popular a worship can hardly have failed to leave traces of itself in later ages in the regions where it flourished, and apparent survivals of the ancient cult have been detected in the beliefs of both Celts and Germans in mediæval and modern times. There can be little doubt that the fairies of western European folk-lore, particularly in the Celtic countries, correspond in part to the *Matres*. It is hard to speak precisely of the history of the lower mythology, which is far from precise in its own distinctions; and one cannot expect to keep by themselves the descendants of a single group of minor divinities. The modern fairies undoubtedly derive some of their characteristics from the ancient Fates, as their name itself implies. But the *Matres* also, in their character of divinities of wealth and good fortune, have much in common with the benignant fairy; they were associated in antiquity, as has been seen, with the *Parcae*; and they must be allowed to share with the goddesses of destiny in the later development of fairy mythology.² The identification of *Matres* and fairies, moreover, is occasionally supported by definite evidence, such as the existence of an ancient inscribed monument in the neighbourhood of a fairy mound or dwelling.³ Possibly, too, one of the modern Welsh names of the fairies, *Y Mamau* ('The Mothers'), may point back to the old relation.⁴

In some peculiar instances the worship of the Mother-goddesses appears to have survived in a quasi-Christian form. The representations of the *Matres* at Metz are said to have been venerated until the 18th century as the 'three Marys' (*Matronenkultus*, no. 385, p. 162, also p. 74 ff.). Similarly, at Thumb, near Nideggen, the worship of three maidens representing Faith, Hope, and Charity has been brought into connexion with traces of the Mother-worship; and the same explanation has been proposed to account for the 'Drei Merjen,' Bellmarie, Schwellmarie, and Krieschmarie, who are worshipped at Dürboslar, near Jülich, as protectors of infants.⁵ It is possible that the images of the *Matres* may have started such cults even after the actual worship of the goddesses had been entirely forgotten. Thus various local dedications to the Madonna are probably due to the discovery of old statues which were conceived by the worshippers as being in some sense miraculous images; but these statues, in so far as they represent single figures, have been seen to be of doubtful connexion with the cult of the *Matres* in the restricted sense of the present discussion.⁶

One conspicuous modern literary reference to

¹ On temples of the *Matres*, see *Matronenkultus*, p. 51; Rauffmann, *op. cit.* II. [1892] 36; Grünwald, *Westdeutsche Zeitschrift*, 1906, p. 239 ff. On the dedicants, *Matronenkultus*, p. 62 ff. and Index; Rhys, *Celtic Heathendom*, 103; Siebourg, *Bonner Jahrb.* cv. 91 ff.; and Lehner, *ib.* cxix. 301 ff.

² Cf. T. Wright, *The Celtic, the Roman, and the Saxon*, ed. 1876, p. 338 ff., and A. Maury, *Croyances et légendes du moyen âge*, ed. 1896, p. 1 ff., both of whom, perhaps, go too far in identifying *Matres* and the Fates.

³ On an instance at St. Romain-en-Gal, see Vallentin, *RCel* iv. [1879] 33.

⁴ Cf. Rhys, *Celtic Folklore*, 1901, p. 174.

⁵ See A. Schoop, *Bonner Jahrb.* cx. [1903] 384.

⁶ See Rhys, *Celtic Heathendom*, 102, and Baillet *Mém. de la Soc. archéol. et hist. de l'Orléanaise*, xxix. [1905] 403.

Mother-goddesses, the familiar passage on 'Die Mütter' in the second part of Goethe's *Faust*, has been sometimes associated with the Celtic and Germanic divinities in question. But Eckermann (*Gespräche mit Goethe*, Jan. 10, 1830) testifies that Goethe himself acknowledged no source except a passage in Plutarch which said that the ancient Greeks spoke of 'Mothers' as divinities. The reference seems to be to Plutarch's *Marcellus*, cap. 20, where the Sicilian *Μητρές*, worshipped at Engyion, are mentioned. Very little is known of their cult or nature, and that little does not indicate any close resemblance between them and the *Matres* of the Celts and Germans.¹

LITERATURE.—The most important treatise on the subject is Max Ihm's 'Der Mütter- oder Matronenkultus und seine Denkmäler' (*Bonner Jahrbücher*, lxxiii. [1887] 1-200). An earlier work by J. de Wal, *De Moeder Goddinnen*, Leyden, 1846, is superseded by Ihm's investigations. The principal contributions since the *Matronenkultus* are: Ihm, art. 'Matres,' in *Roscher*, ii. 2, p. 2464 ff.; J. A. Hild, art. 'Matres,' in *Daremberg-Saglio*, iii. 1636 ff.; F. Haverfield, in *Ztsch. d. Ethnol.*, *Äthna*, xv. [1892] 314 ff.; R. Much, in *ZDA* xxiii. [1891] 315 ff.; F. Kanuffmann, in *Ztschr. des Ver. für Volkskunde*, ii. (1892) 24 ff.; Th. von Grienberger, in *Brav. Vindobonensis*, 1893, p. 253 ff.; M. Siebourg, in *Bonner Jahrbücher*, cv. (1900) 78 ff.; H. Lehner, ib. cxix. [1891] 301 ff. Valuable collections of references are given in Holder's *Altelt. Sprachschatz*, Leipzig, 1896, under 'Matres,' 'Matres,' 'Matronae,' and under the various epithets; and many illustrations of the monuments are to be found in the *Recueil général des bas-reliefs de la Gaule romaine*, in process of publication by E. Espérandieu (Paris, 1907 ff.). For references on statuettes, see p. 408^b above. F. N. ROBINSON.

I. Introductory.—The horror of death is universal among mankind. It depends not so much on the pain that often accompanies dissolution as upon the mystery of it and the results to the subject and to the survivors—the cessation of the old familiar relations between them, and the decomposition of the body. This horror has given rise to an obstinate disbelief in the necessity of death, and to attempts, continually repeated in spite of invariably disastrous experience of failure, to escape it. Even the most natural and inevitable decrease is persistently ascribed to causes not beyond human control; and, on the other hand, legends of the origin of death are familiar and wide-spread. The picture thus presented of the desperate refusal of mankind to accept a cardinal condition of existence is one of the most pathetic in the history of the race.

II. Origin of death.—The best-known type of the story of the origin of death is that contained in Gn 3. There it is represented as the result of disobedience to the Divine command to abstain from the fruit of a certain tree. Disobedience is not a very uncommon cause of death in stories elsewhere.

Among various tribes of New South Wales it is said that the people were meant to live for ever. But they were forbidden to approach a certain hollow tree. The wild bees made a nest in the tree, and the women coveted the honey. In spite of warnings by the men, a woman attacked the tree with her tomahawk, and out flew a huge bat. The bat was Death, which was henceforth free to roam the world and claim all that it could touch with its wings (K. Langloh Parker, *The Euahlayi Tribe*, London, 1905, p. 98; R. Brough Smyth, *The Aborigines of Victoria*, London, 1878, i. 428). The story told by the Baganda of Central Africa is to the effect that Kintu, the first man, after undergoing various tests well known in folk-tales, is allowed to marry Nambi, one of the daughters of Mugulu (Heaven, or the Above). Her father sends them down to the earth with gifts, which include a hen, telling them to hurry lest they meet with Nambi's brother Warumbe (Death), at the moment absent, and forbidding them to return to fetch anything that they may have forgotten. On the way Nambi remembers that it is time to feed the hen, and consents to Kintu's immediate return for the millet she has forgotten. Mugulu is angry at the disobedience, and the result is that Warumbe claims to go with Kintu. It is vain to object. Warumbe accordingly goes and dwells with Kintu and Nambi on the earth. Nambi gives birth to three children. Warumbe asks for one, but Kintu puts him off. In course of time many more children are born; but, when Warumbe repeats his request, Kintu again temporizes. Out of patience, he threatens to carry them all off; and the children begin to die. On appeal to Mugulu, another of his sons, Kalkuzi (the Digger), is sent to bring back Warumbe. Warumbe, however, sinks into the earth. General silence is proclaimed, and Kalkuzi goes into the earth to pursue him. He forces Warumbe out, but there are some children feeding goats at the place, and on seeing him they cry out. The cries break the spell; Warumbe returns into the ground, and by Mugulu's command he is allowed to stay (Johnston, *Uganda Prot.*, Lond. 1902, ii. 700). According to the Masai of the Uganda Protectorate, a superior being or demigode directed a Masai, when a child died, to throw away the body, uttering a spell: 'Man, die and come back again; moon, die, and remain away.' But, when a child that was not his died, the Masai disobeyed and reversed the spell. Afterwards, when he tried the spell on one of his own children, he found it had lost its effect; and now, when the moon dies, it comes back, but man does not return (Hollis, *Masai*, Oxford, 1906, p. 271).

In the legends of some peoples, death is the result of a god's curse unconnected with an act of disobedience.

The Bataks of Palawan in the Philippine Islands relate that their god used to raise the dead to life again. But they deceived him once with a shark wrapped up like a corpse. When he discovered the trick, he cursed them to remain for ever subject to suffering and death (*Ethnol. Survey, Phil. Islands*, ii. [1905] 188). More poetical is the Japanese tale of Prince Ninighi, who fell in love with Princess Flourishing-like-the-Flowers. Her father, the god of the Great Mountain, consented to her marriage, and sent with her her elder sister, Long-as-the-Rocks. This

¹ Cf. *Matronenkultus*, p. 58 ff.

lady, however, was frightfully ugly, and the bridegroom sent her back. Thereupon the god cursed his son-in-law, declaring that his posterity should be frail as the flowers (*RHR* liv. [1906] 169). A Haida story accounts for death by the fact that men were formed of grass and salmon-berry bushes. But the Haida have another legend, according to which men were made by the Raven, who decreed that they should never die. The decision was changed at the instance of the Wren, that he might have a place of resort under their grave-scaffolds (*Esqu. Exped.* v. [1905] 210, 238). Among the Quinault Indians of British Columbia, where Eagle and Raven are the joint authors of things as they now are, Eagle proposes that when men die they shall come to life again. Raven, however, opposes this, and has his way. He regrets it when his own daughter dies and cannot be revived, but it is then too late (*op. cit.* li. 111).

The enmity or the slackness of one of the lower animals is regarded by many people as the cause of death.

A story very wide-spread in Africa among Negroes, Bantu, and Hottentots alike, is found in two forms. The Hottentot version is that the hare was charged by the moon with the message to men: 'Like as I die and rise to life again, so you also shall die and rise to life again.' But the hare conveyed the message thus: 'Like as I die and do not rise to life again, so you also shall die and not rise to life again.' The angry moon split the hare's lip with a blow; but the mischief was done and was irremediable. Hence the hare is a tabued animal to the Hottentots. Among the Bantu the chameleon is made the messenger. But he is a slow creature, and after his departure the Superior Being changed his mind and dispatched the lizard with the message of death. The lizard overtook the chameleon and arrived first. When afterwards the chameleon delivered his message, it was too late: the irrevocable decree had been conveyed (Bleek, *Reynard the Fox*, Lond. 1864, pp. 71, 74). In Calabar a dog and a sheep are the rival delegates; and it is through the fault of the dog that we die (*Journ. Afr. Soc.* x. [1906] 194). The ill-will of the antelope is alleged by a tribe on the Ivory Coast as the reason for death. A man was sent to the great fetish of Cavalla for a charm against death. He was given a stone to block the path by which it came. But the antelope, offering to assist, maliciously sang a spell which rooted the stone to the spot (*Journ. Afr. Soc.* vi. [1907] 77).

The Melanesians of New Pomerania tell the story of the message wrongly transmitted. The Wise Spirit ordained that snakes should die, but men should slough their skins and live for ever. His brother, the Churl, reversed the decree (*ARW* x. [1907] 308). In the Shortland Islands the people (also Melanesians) relate that the great foremother of the race sloughed her skin at intervals and remained eternally young. The catastrophe of her death occurred because she was once disturbed in the operation by the screaming of her child, who was unluckily allowed to witness it. This was the way death came into the world (*FL* xvi. [1905] 115). A similar story is told by the Baluba, on the borders of the Congo State; but there the operation is interrupted by the woman's fellow-wife (*Globus*, lxxxvii. [1905] 193). According to the Hupa of California, people used to renew their youth, when they grew old, by sleeping in the sweat-house. But this happy condition came to an end, we learn from a ceremonial formula, because a certain mythological personage was unfaithful to his two wives, who in revenge took the two children they had borne him and buried them alive. When the children came up again they put them back, declaring that thenceforward every one should do that way (Goddard, *Hupa Texts*, Univ. California Pub. i. [1903-4] 75, 366). The Eskimo of Greenland relate that the first woman brought death by saying: 'Let these die to make room for their posterity' (Crantz, *Greenland*, Lond. 1820, i. 204).

In these stories, death is the result of curse or spell. Another Eskimo tale accounts for it as the issue of a dispute between two men, one of whom desires men to be immortal, the other to be mortal: their words are probably also spells (Rink, *Tales*, Edin. 1875, p. 41, citing Egede). A tale widely known in North America relates that, when the first death occurred, an attempt was made to bring the soul back from the land of the dead. But some prohibition was broken, the returned soul was greeted too soon, and it vanished: wherefore there is no return for mankind from the spirit-land (the

Cherokee stories [*19 RBEW*, 1900, pp. 252, 436]) may be taken as typical).

Similar to the Eskimo stories just cited are some Australian stories. The Kaithish and Unmatjera say that formerly, when men were buried, they came to life again in three days; and the Kaithish declare that permanent death is due to an old man who was displeased with this arrangement and wanted men to die once for all. He secured this effect by kicking into the sea the body of one who had just died and been temporarily buried (Spencer-Gillens, 613). So also the Wotjobaluk story runs that, when people died, the moon used to say, 'You up-again'; but an old man said, 'Let them remain dead,' and since then none has ever come to life again except the moon (Howitt, 429).

The phases of the moon naturally suggest death and restoration to life. It is, therefore, not wonderful to find that among the Australians, as among the Hottentots, the moon plays a considerable part in the legends. We have space to mention only one more.

The Arunta relate that, before there was any moon in the sky, a man died and was buried. Shortly afterwards he rose from the grave in the form of a boy. When the people ran away for fear, he followed them, shouting that if they fled they would die altogether, while he would die but rise again in the sky. He failed to induce them to return. When he died, he re-appeared as the moon, periodically dying and coming to life again; but the people who ran away died altogether (Spencer-Gillens, 564). The Chams of Further India see a female figure in the moon. She was a goddess who raised all the dead to life, until the great sky-god, tired of this interference with the eternal laws, transported her to the moon (Chabaton, *Nouvelles Recherches sur les Chams*, Paris, 1901, p. 19). Many other nations connect the moon with death.

Once more. The Todas of the Nilgiri Hills say that at first no Todas died. After a time a man died, and the people, weeping bitterly, were taking the body to the funeral place when the goddess Teikirzi took pity on them and came to bring him back to life. But she found that, though some of the people wept, others seemed quite happy. She therefore changed her mind, and, instead of raising the dead man, ordained the funeral ceremonies (Rivers, *Todas*, Lond. 1906, p. 400). When in the Scandinavian mythology Baldr was slain, the goddess Hel promised to release him if all things wept for his death. This too, though not in its present form an etiological story, possibly arose to account for the permanence of death.

The foregoing are but specimens of the sagas told in the lower culture concerning the origin of death. They exhibit the universal incredulity of mankind as to its naturalness and necessity.

III. Death believed to be unnatural.—1. *The escape of the soul.*—In practice, among the races of the lower culture, death, if not caused by violence, is generally ascribed to the action of supernatural beings, as gods or spirits, or to witchcraft. In a few cases, as among the Wadjagga of Central Africa, the weakness of old age may be reckoned among its causes (*Globus*, lxxxix. [1906] 198). Sometimes sickness and death are ascribed to the escape of the soul from the body. Thus, among the Hareskins of Canada, sickness is believed to be due to this cause, and it is the task of the medicine-men to capture the errant soul and oblige Etsuine, a supernatural being who is perhaps a personification of death, to enter the patient for the purpose of replacing it (Petitot, *Trad. ind.*, Paris, 1886, p. 278, cf. p. 434). The details of the belief in the soul, its escape and restoration, cannot here be discussed. It will be sufficient to say that from Siberia to Australia, from Puget Sound to the islands of the Eastern Archipelago, means are taken to prevent the soul from wandering, and to bring it back if from any cause it departs; for the permanent loss of the soul means nothing less than death.

Some peoples have developed the theory that the soul is not single but multiple, and that some, or one only, of these souls reside in or about the body.

Thus, according to the Balong of the Cameroons, one soul is housed in the body of the man himself, a second may be embodied in an elephant, a third in a wild hog, a fourth in a

leopard, and so on. This seems to multiply a man's chances of personal misfortune. For every mishap suffered by one of the secondary souls—more strictly of the body in which it is immured—reacts on the person concerned, and is able to draw after it disease and death. If, for example, any one comes home from hunting, or from the field in the evening, and says: 'I shall soon die,' and if death really occurs, it is clear that one of his 'outside souls' has been killed by a hunter through the slaughter of a wild hog or a leopard or some other animal in which the soul was incarnate, and that the man's death is the natural consequence (*Globus*, lxi. [1896] 277).

2. *The act of a supernatural being.*—The act of a god or of the spirits of the dead is also a cause of death known widely in the lower culture. Death by lightning is an obvious instance of the former. But it is by no means the only one. Death by accident is due either to a supernatural being or to witchcraft.

On the island of Keisar, one of the Moluccas, sickness is sometimes ascribed to the malignant spirit *Limsirwali*, or to the god who dwells in the sky or the sun (the latter from anger at neglect of some old custom), or to the spirits of the dead who have not been duly honoured (*Riedel, De sluik-en kroesharige rassen*, Hague, 1886, p. 419). The aborigines of Kola and Koboor (also in the Moluccas) hold that the *nitu*, or spirits of ancestors, kill the living to feed on their souls (*ib.* p. 271). The Navahos attribute a death to the direct action of *Chinde*, described as the devil—probably a malignant spirit (*J. REEVE* [1881] 122). Among the causes assigned by various tribes of Negroes for a death, the act of a fetish and that of a deceased relative are enumerated (*Clozel and Villamur, Coutumes indigènes de la Côte d'Ivoire*, Paris, 1902, p. 383; *Spieth, Ewe-Stämme*, Berlin, 1906, p. 255). The Andamanese attribute 'almost all deaths, sickness, and calamities' to the machination of spirits; and all sudden deaths are ascribed to the malign influence of the evil spirit of the woods, or to that of the evil spirit of the sea (*JAL* xi. [1882] 288, 289). In the north-west of Australia every illness is ascribed to the *djuno*, an evil spirit otherwise known as *warruga* or *warrunga* (*Internat. Archiv.*, xvi. [1904] 8).

3. *Witchcraft.*—But by far the most usual cause assigned for a death is witchcraft—the malicious act of some open or secret foe, performed not by the obvious means of violence, but by the subtle and mystical arts of magic. This does not exclude the action of angry or envious spirits, for they are frequently held to inspire the evil-doer; or his ill intentions may be accomplished by their aid. The Mission Indians of California, indeed, in their legend of the origin of death, attribute the first death in the world to witchcraft. No one had died before; but, with the success of the first practitioners of witchcraft, death came into the world (*JAFI* xix. [1906] 55). Witchcraft, in fact, is the ordinary reason given by savage and barbarous peoples for a death. On such an occasion, one of the foremost duties of the survivors is to discover the exact cause of death, and to ascertain and punish the author of the mischief. For this purpose the ancient Gauls used to put widows to the question like slaves; if detected, the unfortunate wretches were executed with fire and all sorts of torture (*Cæsar, de Bell. Gall.* vi. 19). Peoples as far apart as the Balong already mentioned and the Koryaks of Siberia make a *post-mortem* examination. In the Wimmera district of Victoria (Australia) the clever old men and relatives of the deceased watch the corpse through the night. They see the wraith of the slayer approaching with stealthy steps to view the result of its machinations. Having apparently satisfied itself, it disappears in the direction of the hunting grounds of its own people, and the relatives of the deceased know what tribe to retaliate on. In New South Wales the Tharumba repeatedly rub the body with a mixture of burnt bark and grease. Some of the old men scrape a portion of it off when dry, and throw a few pinches of it on the embers of a fire kindled for the purpose. By the way the smoke rises they judge the direction of the murderer's camp. A party is sent out to avenge the death. After identifying the murderer by a repetition of the process, this is accomplished, not by violence, but by incantations and by terrifying the victim, so that he really believes he must die (*Mathews, Ethnol. Notes*, 1905, pp. 145, 72).

Among the Warramunga the divination is accomplished differently. A little mound of earth is raised on the exact spot where a man has died. A ceremonial visit is paid to it within a day or two after the occurrence, and a search is made for tracks of any living creature. According to the tracks found, conclusions are drawn as to the totem of the guilty person. The Warramunga commit the body not to the earth but to a tree. Similar ceremonial visits are paid to the tree for the discovery of some indication of the person who has caused the death. If unable to identify the person or his tribe, the relatives may at least find a beetle of a kind supposed to resemble a man, and by killing it may ensure the death of the enemy, whoever he may be. When everything else fails, they pay a further visit and thrust a fire-stick into the body, with certain ceremonies. Then, returning hurriedly to the camp, they sit down quietly for two days, abstaining from all food and drink. After this period has passed, each of the persons who has taken part in the rite imbibes a mouthful of water and spits it out secretly in various directions. This is regarded as sufficient to cause retribution to fall on the author of the crime, and they expect to hear his death-cry (*Spencer-Gillen*), 526 ff.).

Sometimes the dead man takes a more active part in the indication of the cause of death. This is common among the Negroes. Various branches of the Ewe-stock go to the house of the *tró* (fetish, god) and there inquire through the priest, who answers, speaking from an inner room, in an assumed voice believed to be that of the ghost (*Spieth, Ewe-Stämme*, 258, 260, 286, 492, 636, 752). So in Europe it has been believed, up to quite recent times, that the ghost of a murdered man (though not through the medium of priest or religious rites) will communicate the fact of his murder and call for vengeance on the slayer.

Other Negroes draw the information from the corpse. The Agni of Indéné cause it to be carried through the village on the heads of two men, who are made by the priest to run and turn round in all directions, until by some movement or arrest of the bearers it points out the guilty person. The ceremony practised by the Ngoulango is not so laborious. Three stakes are fixed in the earth, one representing the fetish (god), another a deceased relative, and the third a living inhabitant of the village, presumably suspected beforehand. If the corpse touch the stake representing the fetish or the deceased relative, a sacrifice of a few fowls is offered, and there is an end of the matter. If, on the other hand, the suspected man is indicated, he is immediately seized and put to an ordeal; or, in case of avowal, he is led away into the bush to execution (*Clozel and Villamur, op. cit.* 157, 362).

In Africa the ordeal is usually by means of some sort of poison, and frequently, in the case of chiefs and important persons, all the relations are compelled to undergo the test. Among the Wadjagga, a Bantu people on the Eastern side of the continent, however, it takes the form of an oath upon the ashes of the fire at which the funeral feast is cooked (*Globus*, lxxxix. 198). Ordeals, it need hardly be said, were for ages applied to persons in Europe accused of causing death and other evils by means of witchcraft. A common method was that of the ordeal by water, reported, so early as the 3rd cent. B.C., by Phylarchus, of the Thebi or Thibii, a tribe occupying the country about Trebizond (see ORDEALS, WITCHCRAFT).

Elsewhere it is deemed enough to convey to a 'wise man' some relics of the deceased.

Among the Siusi of the north-west of Brazil on the occasion of a death not long ago, some articles of clothing, together with the alleged 'poison' conjured by the witch-doctor out of the body of the patient, were sent after his death to a distant tribe, which included practitioners of renown. They inquired into the matter, performed their conjurations over the relics, calling the murderer, and solemnly burnt the 'poison.' It was believed, according to a well-known principle of witchcraft, that at the instant the 'poison' fell into ashes the enemy, whoever he was, died (*Globus*, xc. [1906] 323).

In general, throughout South America, it would

seem that it is the duty of the medicine-man to put himself into communication with the spirit-world and discover the culprit, who, at all events among some tribes, is thereupon put to death, and burnt with all his family and goods. If this were omitted the deceased would himself avenge his death on his relatives (*Internat. Archiv*, xiii. [1900], Suppl. 70; *Anthropos*, i. [1906] 880).

In old Tahiti, people were held to be killed by the gods (*atua*), either of their own motion or because they had been bribed by an enemy. It was the business of the priest to ascertain to which of these alternatives the death was to be attributed. He took a canoe and paddled slowly near the house in which the corpse lay, watching for the flight of the soul, which it was believed he could see. From the shape assumed by the soul in departing he judged of the cause of death (*Ellis, Polyn. Res.*, Lond. 1832, i. 398).

IV. Abandonment and premature burial.—1. Abandonment of the dying.—Among many savage peoples it is customary to abandon the dying to their fate.

The Yerikla-mining of Australia, when death approaches, leave the dying person alone, as comfortably as possible, near a fire, and quit the neighbourhood, not returning for a considerable time (Howitt, 450). The Baumanas of the French Sudan with loud cries abandon a dying man, for fear that he may drag one of them into the grave with him (Steinmetz, *Rechtsverhältnisse*, Berlin, 1903, p. 161). The fear lest the eyes of the dying man will fasten on them, and his ghost then molest and even kill them, causes similar conduct among some of the Ho in German Togo (Spieth, 632). The Selung of the Mergui Archipelago, off the coast of Burma, take the patient across to a desert island, and there leave him (*L'Anthropologie*, xv. [1904] 434). The Dorachos of Central America led a dying person to the woods, and left him, with some cake or ears of corn and a gourd of water, to his fate (*RBEW* 116).

2. Burial before death.—As an alternative to leaving the sick or the aged to die, they may be buried while still living.

The Indians of the Paraguayan Chaco, oppressed by the feeling of helplessness and by superstition, when hope of recovery is gone, neglect the patient and deny him food; and, lest he should die in the village during the night, he is removed to a distance, and there left to die in solitude, or death is hastened by premature burial (Grubb, *Among the Indians of the Par. Chaco*, 1904, pp. 41, 45). The tribes of Navitilevu, Fiji, place the dying man in the grave, with food and water. As long as he can make use of them, the grave remains open; when he ceases to do so, the earth is filled in and the grave closed (*JAI* x. [1881] 144). In the Gazelle Peninsula of New Pomerania, one who is too long in dying is wrapped in pandanus leaves and carried out to the dead-house (*JAKW* x. [1907] 309). Among the Northern Maldu, persons who were long sick were securely tied up, in a squatting position, in a bear-skin, with small objects of personal use (the usual way of preparing a body for the grave), and buried before death (*Bull. Am. Mus. Nat. Hist.* xvi. [1905] 245). The Hottentots used either to bury old and superannuated persons alive, or to carry them away to a cleft in the mountains, and leave them with provisions for a few days, to be starved to death or devoured by some wild beast (Thunberg, *Travels*, Lond. 1795-6, ii. 194). So the various Bantu tribes of South Africa either abandoned the dying or buried them before death (Campbell, *Trav.*, Lond. 1815, pp. 428, 515; Kidd, *Essential Kafir*, Lond. 1904, p. 247).

Practices like these may have had more than one origin. Economic causes doubtless played their part. The care of the living was more imperative than that of the dying; and, where conflict arose between these two duties (as it often must in savagery), customs would grow up out of sad necessity, which would be continued when the necessity had ceased. Such causes would be aided by the beliefs current in the lower stages of culture. In West Africa it is not uncommon that a protracted sickness wearies the attendants.

They decide that the body, though mumbling inarticulate words and aimlessly fingering with its arms, is no longer occupied by its personal soul; that has emerged. "He is dead"; and they proceed to bury him alive. Yet they deny that they have done so. They insist that he was not alive; only his body was "moving" (*Nassau, Fetichism in W. Africa*, Lond. 1904, p. 54).

More potent, perhaps, is the universal dread of death and horror of a corpse. This horror is very lively in the Yakuts. Among them old people burdened with years or disease often begged their children to put an end to their life. The funeral feast was held for three days; neighbours and friends were invited to it, and the dying person received the place of honour and the choicest

morsels. Then he was led out into the forest, thrust into a grave dug beforehand, and buried alive, with his arms, utensils, provisions, and horses (*RHR* xlv. [1902] 212).

3. Removal from house or bed.—Where it is not customary to go to the length of burial alive, horror of the corpse leads very generally to the removal of the dying from among the living.

It is a common practice, e.g., of the North American tribes to carry a dying person out of the house or camp (*RBEW* 123, 154, 167, 201; *RBEW* [1898] 487). The Sinhalese frequently take a person dangerously ill from the house and place him in an adjoining temporary building, in order that, if he dies, the house may escape pollution (Davy, *Ceylon*, Lond. 1821, p. 289). The Kamtchadales are reported to have had the custom of abandoning the cabin where death had taken place, because they believed that the judge of the subterranean world paid a visit to it, and caused all whom he found there to die. But, as the construction of a new cabin gave much trouble to people who had neither axes nor mattocks, they took care to transport the sick out of their cabins, for fear that death would surprise them there when it was too late (Georgi, *Description de . . . Russie*, St. Petersburg, 1777, iii. 91). In the island of Luzon, among the Serranos, when a sick person does not show signs of recovery, a family council is held and a fixed sum voted for his cure. When this is spent, the patient is removed from his bed and laid upon a hide on the ground outside the house. A child is posted to fan him and keep off the flies, and only water is given him until he dies (Sawyer, *Inhab. of the Philippines*, Lond. 1900, p. 277). Among the Basuto, when death is seen to be at hand, the patient is taken out of the hut to a screen, because it is said the *manes* (*melimo*) obtain easier access to the latter than to the interior of the hut. In fact, a hole is cut in the screen to enable them to enter, as they cannot do so through the doorway of mortals. There the patient dies, often not without the active assistance of the two old women who are set to watch him (*FL* xv. [1904] 256).

The motive of the procedure in all these cases would seem to be the same—the horror of the corpse and the fear of pollution of the dwelling by its presence. A description is given in the Report of the Palestine Exploration Fund for 1902 of a Samaritan assembly to celebrate the Feast of the Passover in 1898, at which a woman became very ill and a cry was raised to remove her to a tent outside the camp, lest the camp should be defiled by a dead body—a ritual ban perhaps derived from some passages in the Hebrew law. In this case the defilement would extend to the whole congregation.

There are, however, some cases of removal the motive of which is different. In the Reef Islands there are certain houses called 'holy houses,' which, if we may trust the report, seem to be connected with the cult of, or at all events with the belief in, superior beings. These houses are empty. If a man is sick and does not die quickly, he is put into one of these 'that he may die quickly' (*JAI* xxxiv. [1904] 230). Among the Warundi of German East Africa the dying are carried out and placed on an *ikitabo* (a sacred circle, either public or belonging to the family). There the priests recite a sort of litany consisting entirely of conjectures as to the origin of the sick man's malady, which appears to be ascribed to the deceased father or other *manes* of the family (van der Burgt, *Warundi*, 1904, art. 'Temple'). With these we may compare a remedy prescribed by the Ottoman Jews for one in *extremis*. It is to carry him to the cemetery and lay him down there for twenty-four hours. 'He may die there; but, if he has the good luck to live, he will quickly make a complete recovery' (*Méluine*, viii. [1896-7] 278).

In Europe a very wide-spread custom is to take a dying man out of bed, and to lay him on the earth or on straw. This is practised from Ireland to the Caspian Sea. In the Malay Peninsula a dying man's mosquito-curtains are opened, 'and in some cases, at all events,' he is taken out of his bed and laid upon the floor (Skeat, *Malay Magic*, 1900, p. 398 n.). A Nambütiri Brahman in Malabar is placed on a bed of *kusa*-grass in the verandah, or some convenient place outside the foundations of the house (E. Thurston, *Castes and Tribes*, Madras,

1909, v. 214). In Cochín a Nayar 'is removed to the bare ground floor, as it is considered sacrilegious to allow the last breath to escape while lying on a bed and in a room with a ceiling, which last is supposed to obstruct the free passage of the breath' (*Rep. Census of India*, xx. [1901] 162).

The reason alleged by those who practise this removal in Europe is that a man cannot die on feathers (sometimes game-feathers, sometimes those of domestic fowls), and consequently that to lie on them adds to his agonies and makes his death 'hard,' or 'unlucky.' The Cheremiss of Kozmodemjansk declare that, if he were allowed to die on a feather-bed or a felt coverlet, he would be forced in the other world to count the feathers, or the hairs of the felt (Smirnov, *Pop. finnoises*, Paris, 1898, i. 137). These reasons, however, seem to be invented to account for a practice of which the real origin has been forgotten. Alb. Dieterich (*Mutter Erde*, 1905, p. 27) has endeavoured to explain it as an attempt to bring the dying man into touch with the earth, so that the soul may pass without delay into the realm of the dead beneath. Monsieur (*RHR* liii. [1906] 204, 301), comparing it with other usages relative to the earth, attributes it simply to a survival of the custom of lying on the earth at a time when such luxuries as bedsteads and feathers were unknown. These reasons, however, do not account for the requirement, found in Germany, Sweden, and elsewhere, to place the moribund person on straw, and afterwards to burn the straw. So the Wends in the Spreewald lay him on fresh straw spread on the ground, 'else no one would be willing to lie in the bed afterwards.' The straw is subsequently burnt in the open field, and the water wherewith the corpse has been washed is thrown over the spot where the fire was made. Any one who passes across that spot before the birds have flown over it a few times becomes withered up (von Schulenburg, *Wendisches Volksthum*, 1882, p. 110). There can be little doubt that the real object of the custom is to avoid the death-pollution upon the bed. It is probably a survival of the practice of removing the patient from the house before death. It has naturally the effect sometimes of hastening death; and it is performed in Europe avowedly for that purpose, in the belief that it abridges the sufferings of the dying and is therefore an act of kindness. The same purpose is assigned for the removal of the pillow, which is an obvious attenuation of the practice of removing the patient from bed.

V. Separation of soul and body.—The usual theory of the process of death is the separation of the soul from the body. The soul may, however, separate from the body before death, as in dreams. Sickness is frequently held to be such a separation. The distinction between such a separation and that of death is that the latter is final. Occasionally it is requisite that the soul be caught as it escapes. The population of Nias believe that the chief of a village, especially if rich and possessed of descendants, has more souls than one, of which one is an hereditary essence called the *ehéha*. This must be received in his mouth by the son of the dying man, if there be a son; if not, it is received in a purse for the purpose of securing that the deceased will watch over the family money (Modigliani, *Viaggio a Nias*, Milan, 1890, p. 277). So among the Greeks the nearest relative received the last breath of the dying man in a kiss.

Efforts are often made to recall the soul, not merely as a remedy for sickness, but to restore one dead. They may consist in simple cries to the soul to come back, as among some Tongking tribes (Lunet de Lajonquière, *Ethnog. du Tonkin sept.*, Paris, 1906, pp. 263, 274); or they may

be the regular incantations of an expert, similar to those in use during sickness, as among the Dayaks of Borneo (Furness, *Home-Life of Borneo Head-hunters*, Philad. 1902, p. 50). A survival of some such custom may be found in Europe, on the death of a Pope or of a king of Spain. In these cases a high official of the court calls with a loud voice three times the name of the deceased, and, receiving no reply, he certifies the death.

VI. Before the funeral.—Death having occurred, a number of significant customs are observed, only some of which can be enumerated here. Others will be reserved for a subsequent section.

1. *Opening of doors and windows.*—In the British Islands and all over Europe it is usual to open all doors and windows. Nor is the practice confined entirely to the uneducated classes. It was reported about twenty years ago (30th Aug. 1890) to have been performed at the death of a dignitary of the Church of England (*NQ*, 7th ser., x. [1890] 170). In France, Germany, and Switzerland it is not uncommon to take a tile off the roof. This is sometimes done before death, with the object of easing the departure of the soul. For the soul cannot escape unless the way be made open to it. Often, however, the window is permitted to remain open only for an instant, the return of the soul being feared (*Ztschr. des Vereins für Volkskunde* [= *ZVV*] xi. [1901] 267). In China a hole is made in the roof (Tyler, *Prim. Culture*, 1871, i. 409; *JAI* xxxiii. [1903] 103); and this used to be the practice of the Basuto wherever a man died within the hut (*Journ. Afr. Soc.* iv. [1905] 204).

2. *Observances in the house.*—Throughout Europe it is a common practice to stop all clocks in the house, and to cover all mirrors, or to turn them with their faces to the wall, immediately after a death. It may be conjectured that the latter was done to avoid puzzling and misleading the ghost in its efforts to quit the house. All water-vessels are emptied. Various reasons are assigned for this custom, the most usual being perhaps a desire to prevent the ghost from drowning itself. The ghost is certainly conceived in many places as thirsty or needing a bath; and a special jar or bowl of water is provided for its use. In Greece, bread and water are placed in the death-chamber (*JAI* xxiii. [1894] 37). In some parts of France a jar of water is placed beside the corpse (*RTP* xiv [1899] 245). The Wends of the Spreewald place a dish filled with water under the bench on which the corpse is laid out, for which a sanitary reason is now given (von Schulenburg, *op. cit.* 112). The Mordvins put a cup of water on the window-sill of a dying man's house, for, on quitting its corporeal envelope, the spirit must wash (Smirnov, i. 357). Hindu rites require the heir (but apparently not until after cremation) to place in the habitation of the deceased a small vessel full of water, over which he ties a thread to the ceiling, and lets it hang down as a sort of ladder for the *prana* (life-breath, spirit) to descend and slake its thirst during the ten days following; and a handful of rice is placed as food every morning beside the vessel (Dubois-Beauchamp, *Hindu Manners*, Oxf. 1906, p. 488). It is probable, therefore, that the object of throwing away water standing in any vessels for household use is to prevent the death-pollution conceived as contamination by the touch of the ghost. This is confirmed by the practice in some districts of the Landes in the south-west of France where, after the death of the father or mother, for a whole year the cooking vessels are covered with a cloth and their previous order reversed, though 'the reason now alleged for the practice is to recall the memory of the deceased and renew the grief (Cuzacq, *Naissance, mariage*.

et *décès*, 1902, p. 162). See also §§ VI. 9 and XVII. 1 below.

3. *Telling the bees.*—Another custom is that of 'telling the bees.' When a Dayak dies, as soon as the body is removed the head of the household calls over the names of all the children and other members of the household, to prevent the soul of the dead from alluring their souls away, in which case they would die. This ceremony is repeated on the return from the funeral (*Int. Arch.* ii. [1889] 182). The catastrophe to be prevented here is exactly that which it is desired to prevent by the practice common in Europe of telling the bees of the death of their owner. Some one goes to the hive, knocks, and whispers the fact to the tenants, sometimes also informing them who their new owner is. A humming heard inside the hive is taken as an indication that they will remain. If the ceremony be not performed, they will all die or go away. Sometimes they are put into mourning by attaching a piece of crape to the hive, or the hive is turned round or removed, or a piece of turf laid on it. These are all expedients against the attempt of the ghost to lure the bees away, though other interpretations have been given by the people who practise them and who have lost the real reason. The precaution is by no means confined to bees. In Cornwall the bird-cages and indoor plants are put into black. In various parts of France all the domestic animals must be informed, crape must be attached to the pigsties and to the cat. Even the trees must be told, and sometimes put into mourning. Elsewhere similar customs obtain (*Choice Notes, FL*, 1859, pp. 65, 90, 180, 210; Sébillot, *Folk-lore de France*, Paris, 1904-7, iii. 103, 375; Lloyd, *Peas. Life in Sweden*, Lond. 1870, p. 131). Among the Cheremiss the people even avoid watching a funeral procession from the window, for fear that the dead man may take them with him (Smirnov, i. 137). The prohibition against watching a funeral procession from a window is not uncommon.

4. *Wailing and dirges.*—The custom of wailing is universal. The wail frequently begins before death, as among the Hottentots, who are said to surround a dying person, and 'set up such a terrible howling as were enough, one would think, to fright the soul out of the body.' But this is nothing to what succeeds the death. 'The kraal shakes under the raging din; you hear them miles off' (P. Kolben, *Present State of the Cape*, Lond. 1731, p. 312). Where the funeral does not take place the same day, the wailing often breaks out with fresh force on that occasion; and it is kept up for periods of varying length among different peoples—from a few hours to months, or even years. Naturally, in the latter case it is only certain relatives (chiefly widows of the deceased) who indulge in it, and only at stated times of the day. Widows and other relatives, among many peoples, go to wail at the grave. The wailing is renewed at certain intervals of time—on the anniversary of death, or at certain feasts, or on the occasion of the exhumation of the bones. Elsewhere, among the Kafirs, a son away at a distance, when his father dies, must wail on his return every time he enters the kraal during the next six months (Kidd, 250 f.). In many cases the men join in the wailing, while in others, perhaps among related peoples, it is left chiefly or entirely to women. It may be accompanied (at first, at all events) by the wildest demonstrations of grief, amounting to temporary insanity.

At a stage less than that, Dr. Junker describes the conduct of the women and slaves of a ruler of the A-Sandé of the Sudan. Sixty or seventy women went round the *seriba* wailing, turning somersaults, rolling in the dust, pretending to search in every corner, crying out, 'O my lord! Where is Fadl! Allah? Lie! Lie!' They crawled about on hands and knees under the projecting roofs, constantly howling and lamenting. In the even-

ing, with music and dance, the men joined in the wailing, which lasted all night. The next day a *raïd* was made upon the wardrobe of the deceased, and every woman who could get hold of an article of his costume put it on, and went round in procession, until the ceremony appeared like a fancy-dress ball. All their heads were strewn with ashes, that covered with dirt their faces and bodies as they rolled and tumbled in the dust. The proceedings lasted for fifteen days, becoming gradually less and less an exhibition of sorrow, and more and more the subject of evident enjoyment, until they finally degenerated into a festival of music and dancing (Frobenius, *Heiden-Neger d. ägypt. Sudan*, Berlin, 1893, p. 408).

In the Aaru Archipelago, when a member of the family dies, all the women leave the house with hair hanging loose, to wail upon the shore, tumbling head over heels, and smearing their bodies with dirt and mud (Riedel, *Stuk-en kroesharige rassen*, 268). Even in a much higher civilization, the conduct of the mourners is characterized by excess. At the death of a Maltese, two or three women, called *neuviehe*, were hired. Dressed in long mourning cloaks, they entered the house singing a dirge. After damaging and destroying certain parts of the property of the deceased, they threw themselves on their knees before the coffin, singing the praises of the dead, and cutting off handfuls of their hair, which they spread over the coffin (Busuttil, *Holiday Cust. in Malta*, 1894, p. 128).

It is obvious that the wailing, though doubtless originating in emotions common to humanity, has everywhere taken on more or less of a ritual character. This is seen alike in the excesses, in the fact that it is emphasized almost everywhere for men, in the prescriptions of time and place when and where it is to be repeated, and in the more measured forms into which it tends to pass. Among the latter are the dirges equally familiar in all quarters of the globe. There is little difference in the substance of dirges.

'Ah, ah me! Why hast thou died? Was there lacking to thee food or drink? Why then hast thou died? Ah, ah me! Hadst thou not a beautiful wife? Why then hast thou died?' and so on, runs the lament in the Ruthenian tongue of the ancient pagan Prussians (*FL* xii. [1901] 300). The Hereros of German S.W. Africa cry: 'Now he is dead, he who always was so good; always he slaughtered cattle; always did he say, "Take only, take only"' (*S. Afr. FL Journ.* i. [1879] 53). For one killed in war the Mundurucús of South America chant: 'Thou art dead; we will avenge thee. For that we are in the world, to avenge our own who fall in fight. Our enemies are not braver or more men than we are. My brother, my son, we come to bury thee. Thou art dead; to this end wast thou born. Thou art dead in war because thou wast brave; to that end our fathers and mothers brought us into the world. We must not have fear of enemies. Who dies in war, dies with honour—not like one who dies of sickness.' And reply is made by women in the name of the dead: 'My mother, my wife, you will die in your hammock; I died in war because I was brave' (*Int. Arch.* xiii. Suppl. 114).

Probably these specimens fairly represent the general matter of the dirges: a gentle reproach to the deceased for dying, and thus leaving those who were dear to him; praise of him—sometimes, as in the Irish 'keens,' in great detail; and vows to avenge him. In the more rudimentary cultures, dirges have not developed; the wailing, so far as it is articulate, is confined to a few words or phrases.

The ritual character of the wailing is expressed very clearly, not only in the dirges, but also in the practice of hiring mourners to wail.

Among the Gros Ventres and Mandans of Dakota, 'those who mourn are always paid for it in some way by the other friends of the deceased, and those who mourn the longest are paid the most' (*IREW* 161). The Chiriguano of South America caused their dead to be bewailed thrice a day—morning, noon, and evening—for several months at the grave by women hired for the purpose (*Int. Arch.* xiii. Suppl. 106). In Malta, as we have seen, and throughout the Nearer East, hired wailers are universally employed. Among the Bedul of Abyssinia it is the prostitutes who act in this capacity (Munzinger, *Ostafri. Stud.* 3, Basel, 1883, p. 150). In Calabria, so necessary is wailing deemed that, if a stranger dies, women are hired to attend his funeral and wail over the dead (Ramage, *Wanderings*, 1868, p. 73).

The reasons for the rite have been a subject of much discussion. There may be more reasons than one. In the first place, there can be little doubt

that excessive demonstrations of grief may, in some cases, be traced to the desire to avoid suspicion of having been accessory to the death. Bentley expressly asserts that in the Congo basin, where the belief in witchcraft is so powerful and so cruel, an ostentatious exhibition of grief is to avoid the charge of witchcraft (*Pioneering on the Congo*, Lond. 1900, ii. 259). In Angola, however, the noise is supposed 'to drive away the spirits' (*JAFI* ix. [1896] 16). Similarly, it is believed by the Klamath Indians of the north-west coast of the United States that for three days during the funeral ceremonies the soul is in danger from the *O-mah-a*, or demon. 'To preserve it from this peril, a fire is kept up at the grave, and the friends of the deceased howl around it to scare away the demon' (*IRBEW* 107). The Basuto hold that the spirits (we may assume that the ancestral spirits, including perhaps the immediately deceased, are meant) become enraged with any one who is so heartless as not to cry at the funeral of friend or relation, and punish him with some terrible sickness (Martin, *Basutoland*, 1903, p. 92). In some of the Moluccas the wailing is intended to affect the departed, to bring the spirit to its senses, or to render it conscious of its new condition (Riedel, *op. cit.* 465).

That the wailing is meant to affect the departed in some way seems to follow from the contents of the dirges, and from the fact that they are in many cases (perhaps usually) addressed directly to him. The sorrow expressed, the praises, the appeals to return, cannot but be supposed to have an effect on the spirit, which is believed to be hovering near and to partake in the ceremonies performed. A wide and careful comparison of the customs of the South American Indians has led Theodor Koch to infer that the native is fully convinced that the dirges are understood by the deceased; and he suggests that the chief motive is conciliation—the placation of one whose natural disposition would be hostile (*Int. Arch.* xiii., Suppl. 114, 117). That this motive does operate seems certain. A striking example is furnished by the Ja-Luo of East Africa. When a person dies, the whole village wails with great fervour for days, if not for months, and at stated intervals, according to the conventions laid down for the case. When a barren woman dies, the wailing is commenced in the usual way. The brothers and sisters of the deceased hasten to the place; and the first who arrives takes a sharp acacia-thorn, sticks it into the sole of the corpse's foot, and breaks it off. Immediately all wailing ceases, and it is never renewed (*JAI* xxxiii. 344). Hobley, who reports this ceremony, could obtain no account of its object. There cannot, however, be much doubt that the thorn is intended to prevent the deceased from walking after death and troubling the survivors. (A similar case is reported from the Moluccas by Riedel, *op. cit.* 81; see also § XI. 2 below.) A childless woman would naturally be envious and malicious, and would have no descendants over whose well-being she might be supposed to watch. Released, therefore, from the fear that she would leave the grave for hostile purposes, they would have no further motive for conciliating her.

But it cannot be admitted that fear is the only reason for wailing. There is abundant evidence that the dead are believed to regard their surviving relatives—in particular, their descendants—with a measure of affection (at least of friendly interest), not unmixed indeed with caprice, that they are often dependent on them for the sacrifices and other means of rendering comfortable their existence in the world of the departed, and that they grant them favours and good fortune if satisfied with their treatment and general conduct. In these circumstances, it seems inevitable to con-

clude that the wailing is, in part at all events, a genuine expression of affection, and is intended to call forth corresponding feelings in the deceased.

5. *Toilet of the corpse*.—Among the earliest cares after a death is the toilet of the corpse. The Yakuts perform this ceremony before death, in order doubtless to avoid embarrassment to the relatives by the defilement of death (*RHR* xlv. 208). The body is usually washed. In the lower stages of civilization it is often merely painted. Whether washed or not, it is in these stages painted. The colour varies, but in the vast majority of cases recorded it is red. The bones of Neolithic dead in Europe are frequently found painted with red. Some of the Australian tribes rub off the outside skin, leaving the white under-skin exposed—a practice not unconnected with the belief that the dead return white, as ghosts or white men (cf., e.g., Parker, *Euahyayi*, 91). The eyes are carefully closed, and the eyelids weighted to keep them shut. The uncanny look of a corpse with staring eyes accounts, partly, but not fully, for the universality of this practice. The ghost has not yet wholly deserted his mortal tenement, and the reason given by the Nicobar Islanders is probably not far wrong, namely, that it is to prevent the ghost from seeing (*Ind. Cens.* 1901, iii. 208). At least it prevents the eerie feeling of the survivors that they are being watched. The best clothes of the deceased are commonly put on the body. Very often, relatives and friends contribute new clothes for the purpose. Among many peoples, as among the Chinese, and, indeed, among European peoples, the deceased has in life prepared special clothes, for the dead must enter the spirit-world in their best array. Sometimes, as in various districts of Germany, they are buried in their wedding-clothes. Ornaments, jewels, and particularly amulets, are not omitted. By a parsimony easy to understand, some peoples remove the most valuable clothing and ornaments before cremation or burial, but they are more usually left. Where shoes are worn, the deceased is shod, for he has a long journey to take. Such, for example, is the custom in many parts of Europe; and it extends in Great Britain as far back at least as the Late Celtic period. The toilet is concluded by binding the corpse in the attitude in which it is to be buried or otherwise disposed of. This attitude in all the lower planes of culture is very generally squatting, as we find among the pre-historic dead of Europe. It is often explained as that of the infant in its mother's womb; more probably it is that of natural rest. If necessary, the sinews, as among the Basuto (*Journ. Afr. Soc.* v. 357), or even the backbone, as among the Bechuana (*JAI* xxxv. [1905] 308), may be cut to admit of the body being bound in the proper position. Among the Slavic populations of Germany, as well as among the Masurs, it is customary to throw out the water used for washing the corpse, together with the vessel containing it, after the coffin as the funeral leaves the house, by way of precaution against haunting. In Silesia the water and water-vessel are buried where no one will step over them, else they will cause a wasting disease. The Wends scatter millet upon the poured-out water, for this will prevent the birds from eating it when afterwards sown (Tetzner, *Slaven in Deutschland*, Brunswick, 1902, p. 375; Töppen, *Aberglauben aus Masuren*², Dantzig, 1867, p. 108; *ZVV* iii. [1893] 150; von Schulenburg, *op. cit.* p. 110). The Negroes in Jamaica throw out the water after the hearse or upon the grave (*FL* xv. 206, 88). On the other hand, it is said to be the custom in Oleai, one of the Caroline Islands, to drink the water in which dead children have been washed (*Globus*, lxxxviii.

[1905] 20). Possibly this is a means of securing that the children shall be born again.

6. *Mummification*.—The process of mummifying, or drying up the body, either with or without embalmment, is widely practised.

In Australia the Ughi occasionally dry the body in the smoke of a fire made with green boughs of a species of sandalwood, and then carry it about to visit the places frequented by the deceased during his life. The Kabiabara also dry the body of a man of note, and carry it about for six months (Howitt, 467, 469). The same rough-and-ready way of preparing a corpse is found more or less throughout the west of Africa. It is thus that a Nianniam chief in the Upper Nile basin, and a king of the Warundi in German East Africa, are prepared for burial (Frobenius, *op. cit.* 409; van der Burgt, 40). Some of the tribes of British Central Africa attain the result by repeatedly rubbing the corpse with boiled maize (Werner, *Brit. Cent. Afr.*, Lond. 1906, p. 163; *Journ. Afr. Soc.* v. 484). The body of the king of the Baganda was squeezed dry, the viscera being first removed, butter rubbed into it, and the viscera then replaced (*JAL* xxxii. [1902] 44). The Baoule of the Ivory Coast take out the intestines, wash them with palm-wine or European alcohol, introduce into the cavity alcohol and salt, afterwards replacing the intestines and sewing up the body. These and other preparations, however, do not entirely prevent corruption; but it comes to an end in about three weeks, giving way to desiccation, and the body ultimately presents the appearance of an Egyptian mummy (Clozel and Villamur, 115). Some Philippine tribes dry the corpse by fire, while among the Betsileo and Antankarana of Madagascar, as frequently in the South Seas, it is dried in the air, the fluids being assisted to escape. By this process, in Erub and the Murray Islands, it is described by Haddon as becoming almost as light as *papier mâché* (Sawyer, *Philippines*, 268, 277; *Madagascar au début du xix^e siècle*, 1902, pp. 282, 286; Haddon, *Torres Str. Exped.* vi. [1903] 136, *Head-Hunters*, Lond. 1901, p. 91). The bodies of chiefs in the Society Islands were dried in the sun, the more corruptible parts removed, the moisture extracted, and a species of embalmment practised with fragrant oils (Ellis, *Polyn. Res.* i. 400). A number of tribes in America, both North and South, practise desiccation, usually by fire. Some of the former inhabitants of Virginia and the more southerly Atlantic States used to perform a very elaborate process in the case of their kings and other important men, disembowelling them and filling the cavity with beads, celts, and so forth, or, in some cases, removing the flesh altogether and preserving it separately or not at all (*1 RBEW* 131, 132; *Int. Arch.* xiii. Suppl. 55, 56, 62, 79, 81, 88, 93, 103). The practice of desiccation is very ancient. Not only are buried mummified bodies constantly found in the seats of the older civilizations of South America; they have also been found in pre-historic graves in North America.

The object of mummifying is in many cases, as it was in ancient Egypt, to preserve the body as a permanent habitation, or at least as a place of resort, for the soul. It is not unconnected with the cult of the dead (see ANCESTOR-WORSHIP [*Egypt.*], vol. i. p. 440, and 'Egyptian' art. below, p. 458). Where other peoples set up images of the deceased, those who practised desiccation or embalmment were enabled to keep the bodies themselves without difficulty.

Thus, the ancient Macrobiot put the body, after drying it, covering it with plaster and painting it like the living man, into a hollow block of crystal, set it up in the house for a year, and offered sacrifices to it, afterwards removing it and setting it up, with similar blocks, round the city (Herod. iii. 24). The aborigines of Virginia and Carolina placed the bodies of their kings and rulers in a large hut under the care of priests or medicine-men, apparently for a similar purpose (*1 RBEW* 131).

Elsewhere, as among the Bangala of the Upper Congo (*JAL* xxxix. [1909] 451) and other African tribes, and in the South Sea Islands, mummification is a means of preserving the body until a convenient time for the funeral, which is frequently postponed, for one reason or another, over months or even years. But this object does not of necessity exclude the former.

7. *Feeding the dead*.—Many other observances take place, which we need not describe here. Two, however, may be referred to. The sitting in state of the dead, in the Aaru Archipelago of the Moluccas, has already been mentioned. While he so sits, food is offered him by the members of his family. Offerings of food and drink to the dead before burial are frequent in the lower culture; sometimes, as among the Thô of Northern Tongking, they are even placed in his mouth. These offerings are found in both hemispheres. Even in modern Europe they are not unknown.

In the Department of Loir-et-Cher, France, everything in the house that is eatable is thrown into the death-chamber (*RTP*

xv. [1900] 583). De la Martinière reports, in the 17th cent., that in Russia, after death, it was usual to bring a basin of holy water for the soul to bathe, and to place a piece of bread on the corpse's head, that he might not die of hunger on the long journey before him (*ZVV* xi. 435). On account of the possibility that the ghost will put his finger in it to taste it, the watchers of the corpse about Königsberg, in the east of Prussia, avoid drinking brandy (*Am Urquell*, ii. [1891] 80).

A different precaution was taken in the north-east of Scotland, where, 'immediately on death, a piece of iron, such as a knitting-wire or a nail, was stuck into whatever meat, butter, cheese, flesh, or whisky [was] in the house, to prevent death from entering them' (Gregor, *Folk-Lore of N.E. Scot.* 1881, p. 206). Although in recent times it was believed that corruption followed the omission of this precaution, it is probable that at an earlier period it was believed that the ghost partook of them. Iron is a well-known preservative against the attacks of supernatural beings.

8. *The wake*.—A formal announcement of the death, and an invitation to the kindred and others whom it may concern to come and perform the funeral rites, are given by messenger or by drum, or, at the present day in many communities in low civilization, by firing guns. During the interval between the toilet of the corpse and its final disposal it is watched—a ceremony known in this country as the *wake*, because it involves one or more all-night sittings.

The corpse of an Australian of the Wimmera district of Victoria is watched by the clever old men and relatives, for the purpose of gaining a hint where to look for the slayer by witchcraft (Mathews, *Ethnol. Notes*, 145). Elsewhere in Australia the object is to guard the corpse 'from the spirits' (Parker, *op. cit.* 85). In this they agree with the Sabobas of California, who hold that until burial the soul hovers near the corpse, and a certain demon is on the watch to seize it; and this is prevented only by the vigilance of the survivors (*JALF* xvi. [1903] 159). Among the Garos of Assam the watchers are kept awake by the young men of the village, who dress up as wild beasts and enter the house, 'to frighten the women with their howls and antics.' More probably, the real reason is to frighten away the ghost or other evil-disposed spirits (Playfair, *The Garos*, Lond. 1909, p. 107). The Koryaks, who practise cremation and burn the body on the day of the death, or a day or two after, allow no one to sleep while the corpse is in the house. The deceased is considered still a member of the family, and, to entertain him, they even play cards on his body (*Jesup Exped.* vi. [1908] 110). Cards are, of course, a modern introduction from the Russians; but they, no doubt, replace some other mode of amusement necessary to keep the watchers awake. So in some of the Moluccas, while children watch the dead in a separate apartment, smoking and drinking go on, and cards are played, the night before the corpse is prepared for burial. In others of the islands the corpse is watched until it is put into the coffin, and the watchers ask riddles and play games to keep awake. Two days and nights it sits in state, clothed and adorned with corals, gold, and silver. The soul remains in the house the first night; and, if any one in the house sleeps, he is liable to encounter the soul in dreams, and to sicken in consequence. In other islands, again, the soul is held to be confused and stunned immediately after death, like a man who has fallen from a tree; and the kinsmen watch through the night, until it may be supposed to have recovered its senses (Riedel, 80, 267, 210).

The wakes of Europe are founded upon similar beliefs to these, and follow much the same course. The Wends awaken every one, that none may fall into the sleep of death (the soul of the deceased may perhaps entice them away, as among the Dayaks [*Int. Arch.* ii. 182]), and even the cattle are roused and the seed-corn handled (Tetzner, 875; von Schulenburg, 110). Among the Bulgarians in Hungary, only the nearest relations actually watch beside the dead. They relieve the tedium by games, among others divining by card-playing whether the soul of the deceased is saved (*Globus*, xc. 140). In the Landes the neighbours watch the body, making copious libations to the memory of the departed (Ouzacq, 159). Irish wakes have long been a byword of extravagant merrymaking and debauchery; and English wakes used to be little, if any, better (cf. Croker, *Researches*, 1824, p. 170; Aubrey, *Remaines*, Lond. 1881, p. 30). It would seem as if they thought, as the Glyaks do, that silence in the house of the dead is sin. For that reason, among the latter, so long as the corpse remains in the house, custom requires amusements, laughing, and joking to be kept up (*ARW* viii. [1905] 472).

9. *Tabu at death*.—The horror of the dead has already been mentioned. Everywhere, contact with a corpse entails a condition for the adequate expression of which we must have recourse to the Polynesian word *tapu*, or the Gr. word *ἀσβεπία*. In English the word usually employed is 'pollution' or 'defilement.' Since, however, neither of these words, nor any other in the language, conveys the full force of the Polynesian or the Greek, we have in modern times been fain to borrow the word *tapu* or *tabu* from the former tongue, for the condition

of a person or thing set apart and shunned for a religious or quasi-religious reason, including not only objects to which we should attribute sanctity and invest with terror on that account (as the Ark among the ancient Hebrews), but also such as excite (at least in our minds) horror, disgust, and execration. A corpse is always tabu. And, as one of the most remarkable characteristics of tabu is its excessive contagiousness, the greatest care is needed in approaching or dealing with a corpse. It is not quite clear whether the corpse is feared in and for itself as a dead body, or as the vehicle of death, or whether it is feared owing to its connexion with the disembodied spirit. The rule observed among widely sundered peoples, that every one who kills another—even a warrior who has slain an enemy in battle—must undergo purification, perhaps points to the last alternative. In any case, from the contagious nature of tabu, the prohibitions consequent on a death reach far beyond the persons who have been compelled to perform the last offices about a corpse. They extend to the whole house, the whole family, the whole clan, the whole village, nay, to the very fields, and even sometimes to the heavens.

An unburied body fills the Yakuts with horror and fear. All Nature, indeed, feels uneasiness: violent winds arise, storms howl, fires break out, strange noises, mysterious cries, are heard; and, if it be a shaman who is dead, these manifestations acquire fabulous proportions (*RHR* xlv. 211). The result of this mysterious sympathy of the various elements is that no work can be done until the body is disposed of. All labour in the entire settlement used to be stopped when a Koryak died, until his cremation. No one went hunting or sealing, nobody went to fetch wood, and the women did no sewing (*Jesup Exped.* vi. 104). Among the Central Eskimo, singing and dancing are forbidden during the first days after a death. Moreover, for three days no one is allowed to work on iron, wood, bone, stone, ice, snow, leather, to empty the oil-drippings from lamps, or to clean lamps; women may not comb their hair or wash their faces; and all sexual intercourse is forbidden. It is believed that the soul stays with the body for three days after death. During that time any violation of the tabu affects it so much with pain that by way of retaliation it brings heavy snowfalls, sickness, and death (Boas, *Eskimo of Baffin Land*, 1901, pp. 131, 144). Among the Barea and Kunama of Abyssinia there is neither ploughing, nor sowing, nor grinding until the corpse is buried (Munzinger, *op. cit.* 528). In many of the Molucca Islands all work is forbidden in a village while the corpse is unburied (Riedel, 168, 197, 223, 341, 414).

At Athens, according to Cicero, after the burial the grave was sown or planted as a kind of expiation, that the fruits might be rendered to the living. The statement seems to imply that the earth was put under a ban or tabu, either by the death or by the burial (see the passage discussed in *A.W.H.* ii. 1; Farnell, *Cults Gr. States*, 1896-1907, iii. 28). Among the Bambala, a Bantu people of the Congo basin, the inhabitants of a village where a death has occurred forsake it during the period of mourning, and sleep in the open (*JAI* xxxv. 417). It is customary on the continent of Europe to put up on the house a cross of wood or straw, or in Holland and Flanders to pile trusses of straw before the house (*Bull. de Fl.* ii. [1893-95] 346). The ancient Romans hung up a branch of cypress or pine. This practice is probably to be traced to an intention to give notice of the state of tabu. The hatchments on houses in Great Britain seem to owe their existence to the same cause.

The prohibitions are naturally emphasized when the person dying is a king or a chief. When a Kafir headman or man of importance dies, all the people of the kraal shave their heads and are unclean. They may not drink milk or transact business with other kraals until the witch-doctor has cleansed them (Kidd, *Essential Kafir*, 1904, pp. 247, 249; *Cape Rep. Nat. Laws Com.*, App. 21). Among the Nilotic Kavirondo, the villagers do not cultivate the fields for three days after the death of any one of importance. But, if it is a chief who has died, no one cultivates the fields for ten days (Hobley, *op. cit.* 28). In Tibet, on the demise of the Dalai or the Tashi Lama, the work in all the public and private offices, all business and market gatherings, are suspended for seven days. For thirty days women are forbidden to put on their jewellery, and neither men nor women may wear new apparel. All classes refrain from amusements and festivities, and from going into groves for pleasure, sports, or love-making. Rich and respectable men, when their parents die, abstain for a year from taking part in marriage ceremonies and festivities, and undertake no journeys to a distance (Chandra Das, *Journey to Lhasa*, 1902, p. 256). We may suspect our own analogous customs on the death of any near relation, or important person in the neighbourhood or the State, to be due to the same origin as those on the death of a Kafir headman or the Dalai Lama. See also §§ VI. 2; XVII. 2.

VII. Disposal of the corpse.—1. *Object of rites.*—The chief objects of the proper disposal of the

corpse and the fulfilment of all the rites and customs in connexion therewith are to free the living from the defilement of death and to give rest to the deceased. Until they are all ended, the soul is not finally dismissed to its place in the other world, it is not united to the company of the fathers, it is not elevated to its due position in the household or tribal cult, and it continues to haunt the survivors unpleasantly. This belief is little short of universal in the lower culture, and might be illustrated from all quarters of the globe. The significance of the funeral ceremonies among the ancient Greeks and Egyptians is a commonplace of anthropology. In modern Europe the prejudice in favour of Christian burial in consecrated earth, with the full rites of the Church, may be traced to the same cause.

2. *Denial of rites.*—Yet for special reasons these rites are everywhere denied to certain classes of the dead.

(a) *Babes and children under the age of puberty, or uninitiated in the tribal rites.*—

In India, where the practice of burning the dead is prevalent, children are generally buried. In some cases at least, and possibly in all, this is done with a view to securing their rebirth, for the common practice is to bury in or quite close to the house, often under the threshold. Similar practices for the same reason prevail among many other peoples of the Old and New Worlds (Hartland, *Prim. Pat.*, 1906-10, i. 227). Funeral honours are denied by the Thô of Tongking to children under eighteen years of age and unmarried women. They are simply put into the bier and taken by the priest alone to the grave (Lunet, *op. cit.* 163). Among the Negroes of West Africa and some of the Bantu and Nilotic peoples, where burial is the ordinary practice, rites are denied to children, who are, indeed, often thrown out into the bush: the Wadjagga bury them in the ditch that serves as the village latrine, subsequently digging up their bones and throwing them away (Leonard, *Lower Niger*, 1906, p. 163; *Globus*, lxxii. [1897] 43, lxxix. [1906] 199; Cunningham, *Uganda*, 1906, p. 344). In civilized Europe unburied children are commonly buried without rites.

(b) *Slaves and common people.*—

Among the Haida in Masset, slaves are thrown into the sea (*Jesup Exped.* v. [1905-9] 54). In Oregon they were thrown out into the woods or left wherever convenient (*Mem. Am. Anthr. Assoc.* i. [1906] 170). Very widely in Africa ordinary and especially poor persons and slaves are simply flung out and left to the wild beasts. Common people in the Marshall Islands used to be sewed into a mat and put into the sea (Steinmetz, *op. cit.* 438). The Ahts of Vancouver Island wrap old women and men and boys of no rank in the tribe in old blankets and leave them on the ground (Sproat, *Scenes and Studies of Savage Life*, London, 1883, p. 259). A worthless fellow is buried without rites in the New Hebrides (*Rep. Austr. Assoc.* iv. [1892] 730). The Wadjagga throw childless men and women into the forest (*Globus*, lxxix. 200).

The foregoing classes are probably regarded as impotent for good or ill after death, just as they have been during life, and therefore needing no consideration. In other cases, however, this reason will not apply.

(c) *Those who die a 'bad death.'*—The manner of death frequently determines the death rites to be performed, because it determines the fate of the deceased in the other world. The list of deaths regarded as 'bad' is not identical all over the world, but a wholesome horror of suicide generally prevails. Christian Europe agrees with pagan Africa in performing only maimed rites, or denying them altogether, in the case of such as have taken their own life.

Suicides are held by the Ewhe of Togoland to have been driven mad, either by rage or ill-treatment, or by some angry ghost, malignant spirit, or god. A suicide defiles the land and hinders the due rainfall. The relatives of the deceased must therefore be fined. A stake is driven through the body, which is dragged into the bush and there huddled into a hastily excavated hole. The subsequent solemnities are few and meagre. No drum is heard, no dances are executed, no fire is lighted in the street, no sacrifice is slain for him. A few bananas and pig-nuts and a little maize are laid beside the grave, two guns are fired, and the obsequies are over (Spieth, *op. cit.* 276, 274). The Choctaws of North America dispose of their dead on scaffolds, and afterwards collect the bones with great ceremony. But they bury at once without the usual obsequies any one who commits suicide (*I RBEW* 168).

Death by lightning is also widely attributed to the direct action of a god.

Among the Bechuana, if a thunderbolt kills a man, no one complains, none weeps; all unite in saying that the Lord has done right. They suppose the victim to have been guilty of some crime, probably stealing, for which the judgment of Heaven has fallen on him. The beliefs of their neighbours, the Basuto, Zulus, and Baronga, are similar (Arboussset, *Exploratory Tour*, Cape Town, 1846, p. 225; Cassalis, *Basutos*, Lond. 1861, p. 242; Callaway, *Rel. Syst.*, Lond. 1870, pp. 60, 118; Junod, *Les Baronga*, Neuchâtel, 1898, p. 422. As to the meaning of 'Lord' and 'Heaven,' see art. BANTU, vol. II, p. 364).

Divine anger may be manifested, indeed, in any accidental death: the attack by a wild beast, the bite of a snake, drowning, a fall from a tree.

The Dayaks of South-East Borneo do not bury such as die by accident; they are carried into the forest and laid on the ground (*Int. Arch.* ii. 181). The Malays of the Patani States inter in a waste place or cast out to the dogs and vultures 'those who die of being killed,' as they phrase it—that is to say, in any violent, sudden, or unusual way (*Pase. Mal. II.* [1904] 77).

Death by drowning is often regarded as the seizure by the water-spirit of a victim; hence no effort is made to save him.

Persons drowned, or shot, killed by wild beasts or by falling from a tree, are held in the Bahar Archipelago to be slain by the messengers of Rarawai, the war-spirit, in order that he may feed on their souls. Their bodies may not be laid out in the house or seen by children; they are left naked. They are put on scaffolds, with merely a piece of red linen thrown over them. Sacrifices of pigs are offered to Upulero, who is invoked on behalf of their souls. The pigs are not as a rule eaten, for fear of misfortune. Ultimately the body is laid on the ground in a spot set apart for such as have been slain by Rarawai (Riedel, 361). In the northern peninsula of Halmahera no funeral feast is solemnized for those who are unlucky enough to die away from the *kampung*, nor are their souls worshipped, unless they fall in battle (*Int. Arch.* ii. 209).

Everywhere those who die from the effects of the poison-ordeal, so commonly administered in Africa to discover a witch, are held to be slain by the 'fetish.' The body is usually denied sepulture, and is thrown into the bush. To die of certain diseases is to be struck by a god, or at all events tabued. Such diseases are cholera and smallpox commonly in India, smallpox or leprosy in the island of Nossi-Bé near Madagascar (Steinmetz, 378), consumption in Cochinchina (Aymonier, *Excursions et Reconnaissances*, xvi. [1883] 171). Among the Agni of the Ivory Coast, when by means of divination (§ III. 3) the corpse obstinately refuses to disclose whose witchcraft has caused the death, it is concluded that the deceased has offended some spirit, and he is denied burial as a punishment for the offence (Clozel and Villamur, *op. cit.* p. 120), or perhaps, we may conjecture, for fear of the enraged spirit. In ancient Greece executed criminals, though buried, were denied the customary rites; traitors and those guilty of sacrilege were refused burial at home (Rohde, *Psyche*², Freib. 1898, i. 217). On Nossi-Bé executed criminals and outcasts from the family are not buried in the family grave; wherefore in the other world they are condemned to find no rest (Steinmetz, *loc. cit.*); and the Ewhe bury them without rites (*Globus*, lxxii. 42). Down to quite modern times, in Europe it used to be the fate of certain classes of executed criminals to have their remains exposed on gateways and other places of public resort, until they rotted away. Repulsion, horror, dread, whether caused by the infringement of some tabu or by the *anathema* of supernatural beings, are doubtless the cause in all these cases of exceptional treatment and denial of the customary rites.

(d) Persons held in reverence are also under *anathema* or tabu. Their sacred qualities set them apart from mankind.

The Masai, whose reason for not burying ordinary persons is said to be that the bodies would poison the soil, bury their medicine-men and rich men (Hollis, 305). The inhabitants of Corisco Island, off the West Coast of Africa, lay their great men and twins (see art. TWINS) under a sacred tree (Nassau, 41). The Sea Dayaks expose their priests on a raised platform—a privilege, however, which others may share, if they desire. The rest are buried, except such as die in battle, who are left where they fall, surrounded with a paling to keep away the wild

hogs (*TES*, new ser., II. [1863] 236). By way of special honour the Paharias of the Santa Parganas do not bury their priests, but lay them under the shade of a banyan (Bradley-Birt, *Indian Upland*, 1906, p. 308). The Caddoes of North America leave unburied the warrior slain in battle (*RBEW* 103). Some African tribes, as the Latuka and the Wadjagga, also leave the slain warrior unburied. But among the Wadjagga the reason is said to be that to bury him would draw a similar fate on others (Frobenius, 461; Cunningham, 370; *Globus*, lxxix. 199).

(e) Women dying in childbed are buried in Africa, both East and West, apart, and deprived of ordinary rites. The belief that a woman thus dying is under a curse, and becomes a malignant ghost or vampire, is widely distributed. Special precautions are, therefore, taken against her depredations. A special rite in the shape of a sacrifice is sometimes performed to keep her quiet, as in Yunnan (Anderson, *Report on Exped. to W. Yunnan*, Calcutta, 1871, p. 131). A different expedient is mentioned below (§ XI. 2).

(f) Lastly, in the progress of civilization it has been held that burial cannot be accorded to the corpse of a man who has died in debt, until his creditors have been satisfied. This barbarous denial of rites necessary to future happiness seems to have been the law in mediæval Europe. A corpse was arrested for debt in the neighbourhood of Shoreditch as lately as 1811; and, though damages were recovered against the creditors by the representatives of the deceased, the fact witnesses to the late survival in England of the belief that the corpse of a debtor could legally be deprived of rites (*NQ*, 8th ser. ix. [1896] 241; cf. *ib.* 356 and x. 63). Even yet in many places—the island of Celebes and West Africa, for example (*L'Anthropologie*, iv. [1893] 626; *Globus*, lxxii. 42; Dennett, *Black Man's Mind*, 1906, p. 46)—the dead cannot be buried until his debts are paid; and among the Fantis, at all events, he who has the temerity to bury a man becomes liable for his debts (Cruikshank, *Eighteen Years on the Gold Coast*, Lond. 1853, ii. 221). The incident is the foundation of a number of folk-tales, from India to Ireland, and has repeatedly formed part of a literary plot.

3. *Mode of disposal.*—The modes of disposing of the corpse may be enumerated as (a) cannibalism, (b) sub-aerial deposit, (c) cave deposit, (d) water burial, (e) earth burial, (f) preservation in hut, (g) cremation.

(a) Cannibalism.—See art. CANNIBALISM, vol. iii. p. 194, and below, § XV.

(b) Sub-aerial deposit.—To leave the body on the ground was probably the earliest, as it is the simplest and most savage, form of disposal of the dead. Ordinary people are still by many tribes, as we have seen, simply flung aside. Among the Masai, burial is a special honour conferred only on a man of wealth or a medicine-man. All medicine-men are descendants of one family of supernatural origin. We may conjecture that the meaning of the tradition of supernatural origin is that their ancestor was a stranger belonging to a tribe on a somewhat higher level of civilization, where burial was customary (Hollis, 305, 325). Burial is, however, not necessarily a mark of advancing civilization. The Seri of the Californian Gulf, who are among the lowest of known savages, bury their dead (*RBEW* 288*). On the other hand, the religion of Zoroaster seems to have imposed the rite of exposure of the corpse, to be devoured by dogs and vultures, in comparatively civilized times on a reluctant people, who were previously in the habit of burying their dead. It appears, in contrast with the rite of the Masai medicine-men, to have been at first only the practice of the sacred caste, and to have been enforced by them on all believers under the most awful sanctions, both temporal and spiritual. A thousand stripes are denounced in the *Zend-Avesta* on him who shall bury in the earth the corpse of a dog or of a man, and not disinter

it before the end of the second year; but, if he delay beyond that time, there is no atonement for ever and ever. Death and damnation are his fate. Indeed, merely to omit the exposure of the corpse within a year, though other parts of the ritual may have been complied with, is to be liable to the same penalty as the murder of one of the faithful (*SB* IV. xlv. 8, 31, 52). We may perhaps measure the difficulty of securing uniformity by the violence of the language and the terror of the threatened penalties. It must have been almost as uncomfortable to be a heretic in Persia as in mediæval and post-mediæval Europe. Nor have the Parsis of India, in spite of their high civilization, abandoned this distinguishing characteristic of their faith. See 'Parsi' art. on present subject (p. 502).

The Veddas of Ceylon, like the ancient Chinese, simply lay the corpse in the jungle, covered with leaves and brushwood (Tennent, *Ceylon*, Lond. 1859, ii. 442; Davy, *An Account of the Interior of Ceylon*, Lond. 1821, p. 117; de Groot, *Rel. Syst. China*, Leyden, 1892 ff., ii. 368).

Among the Australian tribes and those of Tasmania the most varied methods of disposal are found—exposure, cannibalism, burial, cremation.

Where exposure was practised, it was usually on a rude platform of boughs, or in the branches of a tree. The latter is regarded by the Unmatjera as an honour denied to the very old and infirm, and to such as have violated tribal customs (Brough Smyth, I. 108-121; Howitt, 456-474; Spencer-Gillen^b, 506-545; *Int. Arch.* xvi. [1904] 8; Roth, *Abor. of Tasmania*, Lond. 1890, pp. 128-134). The same honour is also paid by the Andamanes to those esteemed worthy (*Ind. Chin. Rep.*, 1901, iii. 65). In fact the exposure of the dead on stages, or by suspension from the branches of a tree, or from cross-bars supported on poles, is very widely spread in the Eastern Archipelago, and is practised by some of the tribes of Assam.

On the American continent, deposit on scaffolds, or in the boughs of trees, was extensively practised. In the interior of North America it was the common mode of disposal, the object being to keep the body out of the way of carnivorous beasts and to facilitate desiccation.

The Hurons and some other tribes put the corpse into a coffin or box of bark or wood (often a hollowed log)—a custom also followed in British Columbia, where the 'grave-box' was frequently deposited on the ground and covered with leaves (*1 RBEW* 168-164, 166, 168, 169; *5 RBEW* [1887] 111. The various Reports on the N.-W. Tribes in the *Brit. Assoc. Reports* describe the customs of the Indians of Brit. Columbia. See also *Journ. Exped.* v. 54, x. [1903] 142). Buter than this was the custom of the Blackfeet. "They think it a horrible practice to expose the body to the worms and vermin that live in the ground." So they leave it in the wild beasts and birds, above ground, on a hill-top or in a tree (*B.A. Rep.*, 1887, p. 192; Pettit, *Trad. Ind. du Canada Nord-ouest*, Paris, 1886, p. 492). The Eskimo often leave the dead on the ground, though some of them have learnt to use 'grave-boxes' (*11 RBEW*, 175, 193; *18 RBEW* [1899] 312). The Kamchadals used to throw away their dead to be devoured by dogs. The Chukchi, Gilyaks, and other Siberian tribes followed the same practice, or else disposed of the corpse by cremation; the Yakuts, however, used to put them in boxes and suspend them from the trees or put them on rough scaffolds in the forest (*Journ. Exped.* vi. 104; *RBEW* xlv. 211; *Amer. Anthr.* viii. [1906] 286). In New Caledonia the dead are placed on the summit of a cliff, on a bed of leaves or dried grass (*L'Anthrop.* xiii. [1902] 547).

The necessity of sub-aerial deposit either on the ground or on scaffolds or in the branches of trees has been, in some at least of these cases, forced upon the survivors by the condition of the soil. In the higher latitudes of the Northern Hemisphere the ground is often frozen for months, and it is impossible during that period (especially with the rude tools available) to dig. Even with the appliances of an advanced civilization this is found impracticable in Canada. Canadian settlers often have to content themselves during the winter with placing their dead above ground in a mortuary, and leaving them there until the spring. They only follow the example of some of their aboriginal predecessors and neighbours.

The Naskopies still 'suspend their dead from the branches of trees, if the ground be frozen too hard to excavate, and endeavour to return in the following summer and inter the body' (*11 RBEW* 272).

(c) Cave burial.—An archaic and widely distributed mode of burial is in caves.

Human bones, remains of sepulture of the Neolithic people formerly inhabiting Liguria, have been found in caves at various points along the Riviera, notably under stalagmitic floors in the Bas-Moullins cave at Monaco (*L'Anthrop.* xii. [1901] 7). Among examples of a much more recent date, but still very ancient, is that of the Hebrews (e.g. the cave of Machpelah, Gn 23:19 25:9 35:27ff. 50:13), and the custom is not yet wholly extinct in Palestine. In the Moluccas, the Philippines, the Sandwich Islands, as well as in the coral islands of the South Seas (both Melanesian and Polynesian), where caves abound, the practice prevailed of depositing the bodies, or, after desiccation, the bones, in caves and clefts of the rock often all but inaccessible. In some of the islands the custom is now restricted to the remains of chiefs, and the motive is said to be to prevent desecration by enemies, though probably it was at one time more general (Ellis, *Polyn. Res.* i. 406; *JAI* x. 141). Similarly, among the Betsileo of Madagascar the chiefs are deposited in caverns (*Mad. au xix siècle*, 290, 291). In Africa it is found sporadically from north to south; it was the common practice of the Hottentots and the special privilege of the kings of Quissanga and Quiteve (Kolben, 318; *Rec. S.E. Africa*, vii. [1901] 378, 382). On the western side of the North American continent it has been recorded of many tribes from Alaska to Mexico, as well as in the Aleutian and West Indian Islands. Among some of the Pueblo peoples of Arizona and New Mexico the practice seems a relic of the former habitation of the caves. When they were occupied as dwellings, the dead were frequently buried in the furthest recesses; and the same caverns or other clefts and shelters of the rocks have been retained by a very natural conservatism as the appropriate dwelling-places of the dead (*15 RBEW* 348, 355; *Am. Anthr.* vi. new ser., 656).

This method of disposing of the corpse, rude as it seems, has been capable, as in ancient Egypt, of developing grandiose sepulchres, by artificial excavation and the provision of pompous doorways, and thus of influencing the development of a national architecture. Even where, as in Sicily, such a result was not attained, artificial excavation was frequently practised. Enormous numbers of such tombs, attributed to the Siculi, have been explored in the mountain of Pantalica near Syracuse (*L'Anthrop.* xii. 190). It is obvious that cave burial, whether in natural or in artificial hollows, can be adopted only in rocky or mountainous regions, and then only where the geological formation is suitable. A mode of burial widely extended in Africa and found in other parts of the globe is that of sinking a perpendicular shaft in the soil and excavating, at or near the bottom, a side-vault in which the body is placed. These graves have lent themselves to the suggestion that their form is derived from a previous practice of cave burial. They are actually found in some of the Fiji Islands concurrently with burial in caves (*JAI* x. 144). Ordinary chamber-tombs excavated in the rock are found in Crete, as on the mainland of Greece. Side by side with them at Knossos and belonging to the same period, classed by Evans as the Third Late-Minoan Period, have been found also excavated in the soft rotten limestone both simple pit-graves and graves consisting of a shaft and side-vault; as though all three types of grave had diverged from one common original, and that original a natural cave. The conclusion, so far as regards the last-named type, is perhaps rendered all the more probable by its recurrence elsewhere around the Mediterranean, where burial in natural or artificial caves was practised (*Archæologia*, lix. [1905] 391 ff.).

(d) Water burial.—To fling a body into the sea or a river is one of the easiest ways of getting rid of it. That doubtless is the reason for thus disposing of the corpses of slaves or common people (see above, VII. 2 (b)), in various places. But it does not account for every case of water burial. Where the object is not merely to get rid of the body, but to prevent the deceased from returning to plague survivors, probably few more effectual means are known to peoples in the lower culture than to throw the corpse into the water; for water is usually esteemed a barrier

to maleficent spirits, and particularly to the dead.

The corpses of pregnant and barren women (who are naturally evil-disposed), and of lepers, are regarded in Tibet as specially taboo. They are, accordingly, either thrown beyond nine hills and dales, or packed in horse- or ox-skins and thrown into the waters of the great Tsang-po River (Chandra Das, *op. cit.* 255). The Guayakis of Paraguay and the Cherokees commit their dead to the waters of the nearest river; the Gosh-Ute of Utah sink them in springs, possibly for fear of the departed spirit (*L'Anthrop.* xiii. 658; *1 RBEW* 180).

This may have been one of the reasons for the occasional practice of water burial found in various parts of the world, as among the sect of Bhagar Panthis in the Panjab (*Rep. Cens. Ind.*, 1901, xvii. 168), or some of the West African tribes (Nassau, 233). On the other hand, water burial is sometimes regarded as an honour.

One who is specially beloved or beautiful is, in the Bismarck Archipelago, not buried but laid in a boat pulled far out to sea, and there the boat and its contents are sunk (Thilenius, *Ethnogr. Ergéb. aus Melanesien*, ii. [1903] 230). To fling the dead into the sea was quite common in Polynesia. The Chibchas of New Granada were reported by Oviedo to lay their chiefs in golden coffins and sink them in the water (*Int. Arch.* xiii., Suppl. 56). The corpse of the slain Baldr, with his wife and steed, and the gift of Odin's ring Draupnir, was laid in his ship upon a funeral pyre and launched forth blazing on the sea. Myth as it is, this tradition doubtless records the striking spectacle of many a Viking's funeral.

In various parts of the world earth burial or sub-aerial deposit in canoes is found—a relic perhaps of earlier exposure to the waves. Thus it was not infrequent for a Viking to be laid in his ship and the howe heaped over it.

(e) Inhumation.—The position of the grave is determined by various considerations. Among some peoples there is no fixed rule; and it seems that the dead may be buried anywhere, according to convenience or the caprice of the survivors. This is said to be the case with some of the Bantu tribes, as the Matabele and the Barotse. The latter, however, bury in secret, from which we may probably infer that the object is to leave no clue to the burial-place lest it be violated by wizards (*JAI* xxiii. 84; Béguin, *Ma-Rotse*, 1903, p. 115). In some of the Moluccas, graves are scattered everywhere outside the villages (Riedel, 81, 225). The Chilcotin are said to bury wherever the death occurs (*Jesup Exped.* ii. [1900-8] 788). Among the Chinese and other nations in the Extreme East the situation of the grave is determined by diviners, whose art is called in Chinese *fung-shui*, defined by de Groot (ii. 935) as 'a quasi-scientific system, supposed to teach men where and how to build graves, temples, and dwellings, in order that the dead, the gods, and the living may be located therein exclusively, or as far as possible, under the auspicious influences of Nature.' The practice is, therefore, founded on the conviction that the dead dwell in the grave exactly as the living dwell in a house. This conviction is by no means confined to China and the surrounding countries; it is explicit or implicit everywhere in the lower culture. The imagination clings to it; and mankind has found it extremely difficult to get rid of the notion, though it has continually come into collision with the teachings of the higher philosophies and religions. Accordingly, the dying man's own wishes are often consulted as to the place of his burial, or it is determined after his death, as in the Babar Archipelago (Riedel, 359), by supposed movements of the coffin in answer to questions put to the corpse. This is, of course, a species of divination. It is more commonly decided by the manner in which the dead are regarded, that is to say, whether fear, on the one hand, or affection and hope for future benefits, on the other hand, predominate in the minds of the survivors. But see § XIX.

(i.) Children.—As an illustration of the latter motive may be taken the wide-spread custom of

burying children in, or at the door of, their mother's hut. A comparison of the reasons alleged for so doing, and of other practices and beliefs, leads to the conclusion that the object is to obtain a re-birth of the child.

The custom is found in Africa East and West, in the Panjab, and among some of the Naga tribes of Assam, in Java, in the Andaman Islands, among the Karo-bataks, the Creeks, the Seminoles, the Chols of Southern Mexico, and in several of the Molucca Islands. On the island of Keisar it is suggestive that children are buried under their parents' sleeping-places, while in the Aaru Archipelago they are not buried, but hung up in the house above their parents' beds. In Tibet a new-born child who dies is kept in the house or on the roof. The ancient Italians buried their dead children under the eaves of the house; and to this day the Russian peasant buries a still-born child under the floor (Harland, *Prim. Paternity*, i. 227; *JAI* xxvi. [1897] 200; *1 RBEW* 116; Starr, *Notes Ethnogr. S. Mexico*, ii. [1902] 74; Riedel, 421, 267; Chandra Das, 220).

(ii.) Others than young children.—Burial or sub-aerial deposit at a distance prevails among the Australian tribes and among the Negroes and Bantu.

It is, however, far from being the universal practice among either the Negroes or the Bantu. Among both these races the head of the household is frequently buried within his own settlement or compound, or, as among the Kaffirs of South Africa, in the cattle kraal. Various tribes of Negroes bury in or near the village. On the Ivory Coast several bury under the hut (Ciozel and Villamur, i. 18, 157, 321, 336, 410, 467). With some of these, as well as the West African Bantu, burial under the floor of the house, or in the kitchen-garden adjoining, is a distinction reserved for a chief, or a specially beloved relative. In others the custom seems more general, and the head of the household at least is usually buried in his own house (Nassau, 61; Leonard, 159; Spieth, 250, 634, 702, 752; *JAFLE* ix. 17). The same rule applies to the Nilotic and Bantu tribes on the other side of the continent (Johnston, 554, 652, 693, 716, 748, 779, 793, 880; Cassidi, *Ten Years in Equatoria*, Lond. and N.Y., 1891, i. 303; Gessi, *Seven Years in the Soudan*, Lond. 1899, p. 32; *JAI* xxxii. 265; van der Burgt, *op. cit.*, art. 'Enterrement'; Werner, 157, 163, 165).

In Madagascar the practice differs with the tribe. The Betsimisarakas, Sakalava, and other tribes bury at a distance in solitary places, and their graves are greatly feared, while the Betsileo and Hovas bury on the roadside and even between the dwellings (*Mad. au x^e siècle*, 278).

A similar diversity is found among the forest and pampas tribes of South America, some of which bury under the hut. The Uananas bury on small islands in the river (water is notoriously difficult for the dead to cross) or else in the hut occupied by the deceased. But in the latter case the hut is deserted (*Int. Arch.* xiii., Suppl. 85). The motive in both is obviously fear. In North America, tribes like the Huron, Wichita, Nez Percés, Shawap and Thompson Indians, to mention no more, laid their dead near the village or encampment. Some, like the Creeks and Seminoles, buried them under the house. Others, such as the Nomlaki of California, buried them at a distance. The Zuñis, who, like other Pueblo tribes, probably in former times buried their dead in their cave-dwellings, still pursue the practice in their modern houses on the mesas (*15 RBEW* 386, 345, 346, 365). Many of the islanders of the Eastern Archipelago and the Pacific Ocean bury in the dwelling of the deceased; but there is no uniform practice. In the interior of Viti Levu (Fiji), for instance, in the province of Ra, many persons were buried before the threshold of the house, or in case of men under the clan dormitory; elsewhere the dead are buried at a distance because they are feared (*Anthropos*, iv. [1909] 83, 96). In Assam the grave is dug in front of the house (*JAI* xxvi. [1906] 96). In ancient Assyria and Babylonia the ordinary dead were buried under the floor of the house (*JAFLE* ix. 105). What looks like a relic of the same custom is found among the Lolos of Western China: the day after the funeral a hole is dug in the death-chamber, and a formal prayer offered that the star of the deceased will descend and be buried in that hole. It is believed that if this were not done the star would fall and possibly hurt some one (*JAI* xxiii. 103).

The burial-place is frequently in a grove or thicket, afterwards shunned as sacred. Chiefs or medicine-men, like Bantu monarchs and Buriat shamans, are, in particular, recipients of this honour. Chiefs and priests on the island of Rotuma are buried on the hill-tops (*JAI* xxvii. [1898] 431, 432). On a hill or a headland a noble Norseman loved to have his howe or barrow. The Arapahos, the Wichita, and other North American tribes lay their dead commonly on hills or bluffs.

Among many peoples each family or each clan has its own place of burial, whether the mode of disposal of the dead be by cave burial, in-

humation, sub-aerial deposit, or cremation. This was the custom of the ancient Greeks (Rohde, I. 229) as well as of the ancient Hebrews; and it is continued to this day in the Holy Land (Wilson, *Peasant Life*, 168). Nor is it confined to a comparatively high stage of civilization. It is a natural and by no means uncommon outgrowth of the feeling of kinship; and, where ancestor-worship exists in a developed form, it adds strength to it by concentrating the cult about one spot.

The Chinese custom dates from barbarism; and the practice of *jung-shui* has never necessitated its abandonment (de Groot, II. 826). Every clan of the Baganda, and even of the Muhammadanized Swahili, has its burial-place (*JAI* xxxii. 51; Velten, *Sitten und Gebräuche*, 1903, p. 259). Every family of the Chechens in the Caucasus and of the Barea and Kunama in Abyssinia has its vault (*Anthropos*, III. 1908) 734; Munzinger, 528). On the Gold Coast, among the Tania of Madagascar, the Nicobarese, and some of the British Columbian tribes the families have common burial grounds (*JAI* xxvii. 138; *Globus*, lxxxix. 361; *Int. Arch.* vi. 24; *Jesup Exped.* I. 336, v. 64). The Uralis of Southern India have a common burial-ground at Nirgundi, in which all are finally laid to rest; but each sept has its own burial-ground close to its village, where the preliminary obsequies are celebrated (Thurston, *Castes and Tribes*, vii. 256). The Chams of Further India and the Khasis of Assam practise cremation; their ashes are deposited in the family sepulchre (Cabaton, *Chams*, 48; Gordon, *Khasis*, 1907, pp. 132, 140). As society becomes more highly organized, the custom contributes materially to the family pride, and it becomes emphasized by kings and nobles. The kings of ancient Sycotians and modern Kaifirs, Tongan chiefs and English peers, agreed in displaying the same vanity.

Where, strictly speaking, there is no family sepulchre, sometimes, at least, the body is buried upon the property of the deceased or his family.

The ancient Norseman's howe was upon his own land. The Quiché of Central America buried in their maize fields (*Int. Arch.* I. [1889], Suppl. 71). The Buquidones of the Philippines and the Mossi of West Africa are laid in their own cultivated fields (Sawyer, 347; *L'Anthrop.* xv. [1904] 687); and the Chams have their family cemetery close to their richest corn-field (Cabaton, *l.c.*). In these cases probably the deceased is thought to guard the fields and enhance their fertility. Among the Igroets, however, where the dead man is buried in his own cleared land, unless he has selected some other spot, the place is abandoned (Sawyer, 313). The modern Corsicans lay their dead in the earth or in a little building called a chapel on their own property (*RTP* xii. [1897] 523).

Other distinctions, as has already been noted, are often made between the dead. On the island of Keisar, one of the Moluccas, a great nunu-tree stands in an open square in the centre of every village. Beneath that tree the forefathers sleep, and the dead of rank are still buried around them. It is thus a sacred place, and feasts are held there (Riedel, 422). The same character attaches to the Men's House, or Bachelors' House, necessary to a village in other islands of the East Indies; and often there, if not every man, at least every important man, is buried, and his bones are preserved after the final rites (cf. *Globus*, xciv. [1908] 166, 168).

(f) Preservation in house.—Many peoples preserve the body above ground in the house, either with or without previous desiccation or mummification. This practice originates in a rude and archaic condition of society, and is frequently abandoned, as civilization progresses, in favour of temporary or permanent burial.

Thus in Tahiti, a native tradition, which doubtless represents something like the real sequence of custom, speaks of a period when the dead were allowed to remain on a kind of stage in the house in which they had lived, and which continued to be occupied by the survivors. But by and by separate houses were built for the dead—small temporary buildings, where they were laid, and whence they were drawn out to be exposed to the rays of the sun. The corpse was visited from time to time by the relatives, and was rubbed every day with aromatic oils. The bones were ultimately deposited in the family *marae*, or temple, or else buried, except the skull, which was wrapped in native cloth and preserved, often suspended from the roof of the dwelling-house (Ellis, *op. cit.* I. 404).

Notwithstanding all reverence for the dead, and all precautions in the shape of desiccation and perfumes, the custom of keeping the body in the dwelling during the process of decay must have been found intolerable. Tribes to which immediate burial was repugnant therefore usually adopted one

of two courses: they abandoned the hut to the corpse, or they removed the corpse until dissolution had been carried far enough to render it no longer offensive.

So the Wagogo of East Africa keep the corpse of a man of rank in the hut until it putrefies, while they mourn and drink pombe. It is then placed on a scaffold in the open air until only the bones are left, when they at last are buried (Steinmetz, 211). The Atti-wandarons, or Neutral, of North America kept the body in the house 'until the stench became intolerable.' It was then placed on a scaffold in the open air, that the work of decay might be there completed. The remaining flesh being scraped from the bones, the latter were afterwards arranged on the sides of the cabins in full view of the inmates until the Feast of the Dead, the great day of general interment periodically held (Hale, *Book of Rites*, 1883, p. 72). The Muong or Mon of Tongking kept the corpse in a coffin for three years in the house, before the altar of ancestors; but they palliated the results of dissolution to some extent by fixing a bamboo tube in the lid of the coffin and carrying it up through the roof to permit the foul gases to escape (Lunet, 352). In West Africa the Baoulé embalm and preserve the corpse in the hut for months or years. In spite of embalment, the odour for three weeks is horrible. It then gradually diminishes, and by the end of two months the corpse presents the appearance of an Egyptian mummy. In this state it is kept until the convenient time for the final rites, with which it is laid in a grave under the hut (Clozel and Villamur, 115, 118). The Yumbos of South America also mummify their dead, and hang them up in the house under the thatch (*Int. Arch.* xiii., Suppl. 79). In the Gilbert Islands the body of a king or warrior is often wrapt in mats and preserved on one of the cross-beams of the hut (*ib. l.c.* 43). On the other hand, the Saccha of South America lay out their dead in the house, pull down the house over him, and abandon it to him (*Int. Arch.* xiii., Suppl. 85). The practice of abandoning the hut to the dead is followed in many other places. Its motive is fear—whether of the death-pollution or of the ghost is probably no more than a question of terminology. See §§ IV. 3, VI. 9, XVIII., XIX.

(g) Cremation is a mode of disposal of the dead that has been adopted from time to time by nations widely scattered over the earth. It is the ordinary mode in India among the aboriginal peoples, as well as among the Hindus; it extends through Further India to Tongking, and has obtained a footing by Hindu influence on some of the East Indian islands. It is practised by many tribes of Siberia and of the Pacific slope of North America. In ancient times it was also practised widely (though perhaps not exclusively) by the tribes of the North American plains and of the Mississippi basin and Atlantic shores. It is customary among some of the northern tribes of South America, and among the Melanesians of North New Mecklenburg and New Hanover, two of the islands of the Bismarck Archipelago. The funeral mounds of Europe witness to its use in pre-historic times, from the south of Russia to the British Isles. The practice seems to have begun on the Continent in the Neolithic age. It became general during the Age of Bronze, and was continued right down to the Christian era, and among many tribes probably down to their conversion to Christianity. To the northern invaders who founded the dynasties and the polity predominant during the Homeric age of Greece we may with some confidence attribute the introduction into the Eastern Mediterranean of cremation, foreign as it was to the usages and beliefs of the Mycenaean age. From Greece, or directly across the Alps, it spread to Italy; and, though among the Romans it never succeeded in entirely ousting the prior practice of inhumation, it became throughout the Roman Empire the fashionable mode of disposing of the dead among the official and wealthier classes. It is sporadic or occasional in many other parts of the world.

More than one reason may have conduced to the practice of cremation:

(i.) Tribes without a settled abode may have found it convenient, if they desired to carry about the remains of their dead, or to remove such remains beyond the possibility of desecration by their enemies.

Some such motives perhaps operated in the case of the Cocopa Indians, who occupy the lower valley of the Colorado River. By the annual floods of the river they are driven from the bottom lands to the higher grounds. 'The annual irrigations are of

great regularity, and have affected the habits of the tribes in various ways.' On the death of an adult, his effects are collected for distribution among others than his relatives. The body is laid on a pyre beside his hut; and, after all the claimants have been satisfied, the corpse and the rest of his goods are burnt, together with the hut and any neighbouring huts belonging to the clan that may happen to catch fire. The survivors then abandon the site (*Amer. Anthropol.* iv., new ser. [1902], 480). The Man Océ are an immigrant people of Northern Tongking; and, though they have been settled as cultivators of the soil in the mountainous region of that country for many generations, their villages are still constantly removed from place to place, to suit their rudimentary method of agriculture. They formerly burnt their dead, and carried the ashes with them in their migrations. But the custom has been generally given up, because the accumulated ashes of generations became an intolerable burden. It continues, however, in the west of the Red River basin, where the bones, after incineration, are placed in earthen jars (Lunet, 246). The Northern Maidu cremated only those who died far from home; and in such cases the ashes were taken home and there buried (*Bull. Am. Mus. Nat. Hist.* xvii. 242). A similar practice was recorded among the Algonquins (Charlevoix, vi. [1744] 109), among the Haida of Masset (*Jesup Exped.* v. 54), and other tribes.

Many peoples hold that it is possible to work witchcraft by means of the bodies of the dead. It is probable that this may have been at least a contributory cause, inducing migratory tribes to burn their corpses.

(ii.) Another very powerful motive for cremation is the desire to be quit of the ghost. Various means are adopted for this purpose (see XI.). Cremation is only one of these, but it is not the least potent. This is best observed where cremation is exceptional, as on the continent of Africa.

Among the Yaos and Mang'anja a woman who was accused of witchcraft, and who refused the poison-ordal, was burnt (Macdonald, *Africana*, 1889, i. 104). In West Africa burning is especially the mode of disposing of bodies of criminals, by which are meant persons accused of witchcraft, some of whom are also burnt to death (Nassau, 234). The Wakulwe and other tribes in the neighbourhood of Lake Tanganyika believe that a month or two after death the process of decomposition brings back the bones to life. A mysterious being called Nkua animates them; and by means of the new body thus formed it sets about torturing, and even killing, some other member of the family of the deceased. In order to prevent this, the corpse is dug up and burnt to ashes. Not a bone must be left, for even the smallest would suffice to give shelter to the Nkua. A witch-doctor, or diviner, presides at the ceremony, while an assistant asperges the body with a sort of holy water, saying, 'Sleep in peace, sleep in peace' (*L'Athropol.* xvi. [1905] 375). The Nkua thus roughly corresponds with the Vampire of Europe, whose misdeeds were often stopped by a similar process of burning. But there is this difference that, whereas in Europe only some persons were credited with becoming vampires, among the African tribes in question all corpses are exhumed and cremated.

We have already seen that persons who die an evil death are denied the ordinary rites. Among such persons are usually reckoned those who die of smallpox, in childhood, by murder or suicide. In Siam the corpses of these persons are treated precisely like the corpses of the Wakulwe. It is alleged that if this were not done the spirits of the departed would return and torment their friends (*Globus*, xiv. [1868] 27). The Chingpaws of Burma bury; but burning is simulated in the case of those who die of smallpox or by violent deaths (Anderson, p. 181). Among the Kols of Chotā Nāgpur, where cremation is the ordinary mode of disposing of the corpse, the body is burnt, and the remains of the bones are picked out and put into an earthen pot. This is carefully closed, taken home, and hung on a post until the final ceremony, which does not take place until the *hārbār* feast. We are expressly told that this way the deceased is prevented from entering his former dwelling (Hahn, *Einführung in das Gebiet der Kolmission*, 1907, p. 85). The same fear of the ghost is visible in the ceremonies at the cremation of the former kings of Kandy. Some of the calcined bones were collected and put into an earthenware pot, which was closed and sealed. The remaining ashes were buried. The pot was placed on the head of a man, who was masked and covered all over with black, and was carried by him to the *mahavelle-ganga*. At the ferry the masked bearer was put in two canoes lashed together and covered with boughs in the form of a bower. These canoes were drawn to mid-stream by two men swimming, who when they reached that point pushed them forward and hastily swam back. The masked man then took a sword in one hand and the urn in the other, cut the urn in two, and at the same moment plunged into the stream. Diving under, he came up as far down stream as possible, swam to the opposite side, and disappeared. The canoes were allowed to float away (Davy, 162).

It has already been mentioned that the ancient Pueblo tribes of the south-west of the United States buried their dead in their cave-dwellings. Concurrent with this custom, however, there was another, by which the dead were cremated. The co-existence of these two customs was held by

Cushing, one of the most careful and acute of observers, to be due to the coalescence of two peoples—namely, of Yuman and Piman tribes of the lower Colorado region—who practised cremation, with the true Pueblo tribes, who practised cave burial. The Zuni have now abandoned cremation, if they ever practised it. 'They insist that, should they incinerate the bodies, there would be no rain, for their dead are the *wuannami* (rain-makers). Incineration, they believe, would annihilate the being' (13 *RBEW* 365; 22 *RBEW* [1904] 175; 23 *RBEW* [1904] 305).

(iii.) Thus cremation is an effectual protection of the survivors against haunting and injury by the dead. It is more than this: it thoroughly frees the ghost from the bonds of this life, and fits it for union with the society of the departed in the life beyond.

The Wayans of French Guiana burn their dead, 'that the soul may fly up to heaven on the smoke' (*Int. Arch.* xiii., Suppl. 87). Among the Laotians of Further India the higher classes are cremated encased in a puppet representing a mythical bird called Hatsuiling. It is said that, in order to obtain Nirvana, the bird must be killed. Accordingly, a woman ceremonially shoots an arrow at it; and then the fire is lighted. There is, of course, a mythological tale of the slaughter of the bird in the first instance by a heroine who was an incarnation of a goddess; and the woman who shoots the ceremonial arrow pretends to be a descendant of the goddess. But there can be little doubt that Hubert's conjecture is correct, that the myth is of secondary formation, and that the bamboo bird really conveys to the other world the soul when released, together with it, by burning (*L'Année Soc. ix.* [1906] 238). In this case the shooting would be the ritual slaughter of the bird, in order to put it into the same condition as the deceased. Among the Haida of Masset, persons killed in battle or by any violent means, were believed to go, after death, to the abode of a supernatural being named *Tixet*, which was suspended in the air. To enable them to do this their bodies were burnt; otherwise they would be refused admission. The precaution, however, seems to have been neglected with regard to friends killed in war at a distance from home—contrary to their practice in other cases. The practical difficulties were probably too great, and the custom may have been in decay (*Jesup Exped.* v. 54). The king of the Batutsi in East Africa was never buried. His body was exposed in his hut until putrefaction had advanced so far as to show the first worm. The hut was then set on fire, and was burnt with all its contents. When the conflagration came to an end and nothing was left, it was believed that the king had returned to heaven, whence, according to the tribal legends, his ancestors had been exiled, and whither this was the prescribed method of returning (*Anthropos*, iii. 6).

But the ghost is often conceived of as inhering in the calcined bones, and not completely disposed of until some further ceremony has been performed. The rites at the cremation of the king of Kandy are an example of this. Indeed, it is common among the tribes of India which have been influenced by Brahmanism to throw the ashes into some sacred water, as a means of uniting the dead with the fathers. Elsewhere they are put into an urn or other receptacle, and buried, or kept in the house. This custom is familiar to us among the classic nations of antiquity. The covers of the urns were sometimes removable, in order to placate the spirit of the dead by periodically pouring libations upon his ashes.

VIII. The grave.—1. *Shape of the grave.*—On this subject something has been said above in dealing with cave burial. The grave is the residence of the departed; and efforts are not wanting in various parts of the world to render it as comfortable as circumstances permit. As already pointed out, the Chinese practice of *fung-shui* is traceable to this motive. It is possible also that the widespread practice of abandoning the hut to the dead, whether buried beneath it or exposed above ground, may have the same motive, in addition to that of escaping the infection of death. The destruction of the hut above the corpse, which frequently takes place, need not preclude it, since it is a common principle that things intended to be of service to the dead must themselves be killed by breakage, or even burning. Where burial does not take place in the hut, a hut or shelter is often erected over the grave.

This is the practice in lands as far apart as South America and the Philippines, or New Guinea (*Int. Arch.* xiii., Suppl. 79; Sawyer, 203, 355; Chalmers, *Pioneer Life*, 1895, pp. 53, 110, 210); while, among the Baganda and other tribes of East Central Africa, kings and chiefs at least are thus honoured (*JAI* xxvii 44, 92; Cunningham, 81, 224; van der Burgt, art. 'Enterre

ment'); and this hut, as the abode of the deceased, becomes his shrine or temple, where his spirit is invoked. In this district of Africa miniature huts or shelters over the graves of lesser persons are not uncommon. By the Lendu the miniature hut is erected explicitly as a shelter for the spirit, which is supposed to remain seated on the grave for two months after burial (Cunningham, 387). Elsewhere, as in New Guinea, the shelter is as much for the convenience of the mourners, who go thither to weep, as of the departed (Chalmers, 110).

The underground resting-places of the dead are also provided with regard to their comfort, often to magnificence.

The Ewe of West Africa bury beneath their huts. Rich people are buried deeper than poor, and the cavity prepared for them is as large as a room (Spieth, 634). The pre-historic graves of Crete, circular chambers of stones covered with mounds or domes, are modelled on the huts of the living (*ARW* vii, [1904] 265, viii, 520). The same intention is apparent in Etruscan tombs. So far, indeed, was it carried that, when cremation was adopted, the urns in which the ashes were placed were miniature huts. But the most striking and splendid examples of tombs as the dwelling-places of the dead are found among the ancient Egyptians (see § VII. 3 (9)).

Externally the shape of the grave has varied as much as its internal arrangements. In Europe the pre-historic dead of rank and importance were buried beneath round or elliptical barrows, frequently of huge dimensions—a custom found in many other parts of the world. These barrows are raised of stones or earth, and enclose cists of large slabs, within which the bodies were deposited. And they are generally surrounded with a trench from which the earth for the barrow has been taken, sometimes also with circles of stones. Where an elaborate structure of this kind is not made, it is quite common to cover the grave with a heap of stones, or with a simple mound of earth. Where, as among many tribes, the grave is shallow, the stones, or often (according to the nature of the country) a pile of branches, may be intended chiefly to defend the body against wild carnivora. Against human beings they are more often defended by fences, or smoothed and levelled down so as to remove the traces of burial, as is the practice of various South American tribes (*Int. Arch.* xiii., Suppl. 92, 97; *Globus*, xc. 305). Where mounds or huts are erected over graves, they become, with growing civilization, pyramids of wrought stone and mausolea.

2. *Position of the corpse.*—It is a very general custom in the lower culture to bury the dead in a crouching or squatting position. This is the natural position of rest during life for peoples who have not the civilized appliances of chairs, tables, and bedsteads. It is accentuated in the case of the dead by binding the body, sometimes even breaking the bones for that purpose. The body thus prepared is usually laid on one side in the grave, just as the skeletons in Neolithic and later graves in this country are found. Sometimes, however, it is placed seated or lying on the back.

Examples of both have been described among the West Australian natives (Calvert, 41, 42). Extended burials (lying at full length) are not so common. At Knossos, bodies have been found both flexed and extended. Extended burials were customary among the pagan Anglo-Saxons. The Wichita of North America (Dorsey, *Wichita*, 1904, p. 13), the Brignans of the Ivory Coast (Clozel and Villamur, 467), and the Yanadis of Southern India bury in the same attitude, but the last with the face downwards (Thurston, vii. 426).

The direction in which the body lies in the grave differs among different peoples, and even among the same people. In the pre-historic graves of this country, as well as of other countries, skeletons have been found quite differently orientated, though sometimes in the same barrow; and the explanation of the variations is still to seek. The Wotjobuluk of what is now the Wimmera district of Victoria, in the Commonwealth of Australia, had an elaborate system by which everything in the world was supposed to be divided among the totem-clans. Every totem had its own point of the compass; and a man was buried with his head towards the point of the compass appropriate to

his totem (Howitt, 453). This arrangement is extremely rare, if not unique. More usually the direction is determined by either the rising or the setting sun.

Thus the Ngumba of New South Wales bury with the head towards sunrise (Mathews, 72); the Awemba of Central Africa (*JAI* xxxvi. 157), the Maidu of California (*Bull. Am. Mus. Nat. Hist.* xvii. 243), and the Wichita bury with the head turned to the east. On the other hand, the Lilloet (*Jesup Exped.* ii. 269), the Mancagnas of Senegambia (*L'Anthrop.* xvi. 68), and the Brignans (Clozel and Villamur, l.c.), agree with the Christian populations of Europe in burying in the reverse direction. The Solomon Islanders bury with the feet turned inland (Codrington, *Melanesians*, Oxford, 1891, p. 254). Tribes which preserve a tradition of migration to their present habitat, frequently bury with reference to the direction from which they believe their ancestors to have come. For this reason some of the Bantu tribes of South Africa bury so as to face the North (Dannert, 3; Kidd, 248). This practice seems to be connected with a belief that after death the soul journeys back, as among the Miao of the Chinese province of Kwei-chow (*Anthropos*, iii. 409), to the ancestral seats of the race. Among the Wanyamwezi of East Africa a man who dies in a strange place is buried with his face to his mother's village (Burton, *Lake Regions of C. Afr.* Lond. 1860, ii. 25). Muhammadan peoples bury so that the dead may face Mecca.

3. *Coffins.*—The corpse is further defended against external influences by a case or coffin. In the early stages of culture a coffin is wanting; and, if it is deemed desirable to protect the body from the earth, this is done by means of the niche or recess at the bottom of the grave-shaft so common in Africa, or a covering of boughs is laid over it before the earth is thrown in. Even yet some peoples in a comparatively high stage of civilization reject a coffin. Wood is the usual material for a coffin. Originally, probably, a hollowed tree-trunk, as still among the Niamniam (Frobenius, 410), it has evolved into elaborate forms, painted, as among the Ibouzo on the Niger (*Anthropos*, ii. [1907] 102), or carved, as among the Eskimo and Indian tribes of the North-West of America, and the Dayaks of Borneo. These carved coffins or grave-boxes, however, are not intended to be put under ground. In this connexion the richly carved sarcophagi of late Roman and early mediæval times will be recalled.

A very general custom prevails in South America, where the art of pottery is developed, of putting the dead into large urns. In pre-historic Crete it was a well-known practice to enclose the body in a terra-cotta chest called a *larnax* (*Archæologia*, lix. 396-400). In Japan, bodies were often buried in sarcophagi of wood, stone, or terra-cotta (*Archæologia*, iv. [1897] 474). The Chinese, when, as often happens, especially among the rich, the dead are disinterred to be buried elsewhere in accordance with the demands of *fung-shui*, place the bones in large earthen jars (de Groot, iii. 1058; Lunet, 90). The Tagbanuas of the Philippines bury children in jars (Sawyer, 313). Under the floors of pre-historic temples in Palestine numerous remains of new-born children have been found buried in jars (Frazer, *Adonis*?, 1907, p. 82). The Balearic Islanders, according to Diodorus, cut up the corpse, put the pieces into an urn, and erected a cairn of stones over it (Diod. Sic. v. 18). The bones, after being denuded of their flesh, were buried in urns by many of the tribes inhabiting what is now the United States (*Amer. Anthr.* vi., new ser. [1904], 660). A similar practice is recorded by a Chinese traveller in Tibet (*ZVRW* xx. [1907] 115). And the Kukis of Assam, after the body has undergone preliminary decomposition, clean and preserve the bones in a vase, 'which they open on all important occasions, pretending that in thus consulting the bones they are following the wishes of their deceased relative' (*ARW* xii. [1909] 448).

The burial of cremated bones in urns has been common wherever cremation was practised by peoples acquainted with the art of pottery. Burial in ships or boats has already been referred to. Sometimes, as among the Siusi of north-western Brazil, a coffin is fashioned out of the canoe of the deceased by cutting it in two and placing the body between the two halves (*Globus*, xc. 327). Lighter materials are often employed for the coffin. On the Gold Coast it is made of wicker-work, reeds, or bark (*Journ. Afr. Soc.* vii. [1908] 202). On the other hand, more than one coffin is sometimes employed in the case of a wealthy or important personage. In this wasteful practice African barbarians agree with the cultured peoples of Europe.

Nor is the object of a coffin always, or entirely, to protect the body. Possibly its original intention was to protect the living from the visits of the dead.

This was expressly alleged to Nelson by one of the western Eskimo as the reason for the grave-boxes in which the dead are deposited on the shores of Bering Strait. 'It was better,' Le said, 'to keep the dead in grave-boxes, for it kept their shades from wandering about, as they used to do; besides, it was bad to have the dogs eat the bodies' (*IS REW* 312). The latter thus appears a mere subsidiary reason or after-thought.

Although, however, we may suspect the desire of imprisoning the deceased to have been a primary motive in the provision of a coffin, the desire to provide for his comfort in the grave was probably also—perhaps equally—present. That the intention of a coffin is not always to bottle up the soul with the body is clear in such cases as that of the Siusi just referred to, where a hole is left expressly to enable the ghost to go and come, and thus preserve its temporary connexion with the bones until the time for final severance arrives.

IX. Funeral ceremonies.—1. *Time of funeral.*—The length of time required to elapse between death and the funeral varies from a few hours to many months. Sometimes, as in the west of Africa and the Solomon Islands, it may extend for years, while the preparations for duly honouring the deceased slowly proceed. At length, however, the time comes when the solemn ceremony which is to sever the dead from the living is appointed to take place. The night is not infrequently reckoned the appropriate time.

The Hopi of North America conduct their funerals at night (*Aethn. Ethn.* xxxvii. [1905] 634), the Dayaks of Sarawak at early dawn (*Anthropos*, i. 169). The Manansa of South Africa and the Negroes of the Lower Niger bury in the evening (Holub, *Seven Years in S. Africa*, Lond. 1881, ii. 240; Leonard, 159); while the Basuto dig the grave after dark, but defer the actual burial until just before dawn. It must be performed before the children wake, for they must not see the body (Martin, 90; *Journ. Afr. Soc.* v. [1906] 357).

The reason for the selection of the darkness as the season for burial seems to be that the survivors then cast no shadow, which is often confused with the soul, and hence that the deceased, or any evil-disposed spirit, would have more difficulty in capturing and retaining souls. The souls of children are particularly liable to attack. In the Southern Nicobar Islands, burial takes place at sundown, before midnight or early dawn, expressly in order to prevent the shadows—that is, the souls—of the attendants from falling into the grave and being buried with the corpse (*Ind. Cens.* 1901, iii. 209).

2. *Touching the dead.*—Throughout the rites and observances attendant on death, two motives—two principles—are found struggling for the mastery. On the one hand, there is the fear of death and of the dead, which produces the horror of the corpse, the fear of defilement, and the overwhelming desire to ban the ghost. On the other hand, there is the affection, real or simulated, for the deceased, which bewails his departure and is unwilling to let him go. Thus, though the touch or even the neighbourhood of the corpse causes defilement, there are not wanting peoples with whom it is a ritual necessity for mourners to touch the corpse.

The islanders of Mabuig, Torres Straits, and the Negroes of Jamaica agree with the people of the British Isles and the neighbouring Continent in this requirement. In Europe the reason usually alleged is that it prevents being haunted by the deceased. The German-speaking population of Iglau in the hills between Bohemia and Moravia kiss the foot of the corpse that they may not be afraid, which we may interpret the same sense (*ZVV* vi. [1896] 403); while in Montenegro every one who attends a funeral must kiss the corpse (*JAI* xxxix. 94). Among the Bulgarians all relatives kiss the right hand of the corpse, saying, 'Forgive me.' In addition, each of them who was born in the same month bends over it breast to breast and touches its head with his own thrice (Strauss, *Die Bulgaren*, Leipzig. 1898, p. 460).

3. *Circumambulation.*—Another ceremony is that of walking round the corpse.

When the Argonauts in the poem of Apollonius Rhodius buried their dead comrade Mopsus, they marched round him thrice, in their warrior-gear. So among the populations of India which practise cremation, the son or other relative who lights the pyre first walks thrice round it. The custom of walking round the corpse, or the grave after burial, is recorded of peoples as far apart in space and in culture as the Central Eskimo, the Russian Lapps, the Buriats, the Shans, and the Arawaks of British Guiana. It has even been recorded as solemnly performed around the coffin of a clergyman's wife in Oxfordshire no longer ago than 1799 (*NQ* xi, 8th ser. [1897], 428). At Beauquesne in the Department of Somme (France), after placing the coffin in the grave the mourners go thrice round the grave backwards (*RTP* xv. 154).

The direction of the procession is probably sunwise, though it is rarely recorded; and it is usually performed thrice. There can be little doubt that the rite is magical, intended to keep the dead in the grave and prevent him from disturbing the survivors. Cf. art. CIRCUMAMBULATION.

4. *Carrying out the corpse.*—More widely spread still is the custom of taking the corpse out of the house by some other way than the ordinary door. Among peoples in the lower culture, from South Africa to Greenland, from Alaska to the farthest limits of Asia, the East Indian Archipelago and the isles of the Southern Ocean, where the huts are not provided with windows the dead are taken out by the smoke-hole, or a hole in the roof or side of the hut specially broken for the purpose, or, as among the Koryaks, by raising a corner of the tent. Where a window exists it is often utilized for the purpose. The hole is closed immediately after the passage of the corpse, the object being to prevent the deceased from finding his way back. As civilization progresses, the custom is gradually confined to the corpses of those that have died evil deaths.

A Norseman who, by his character or the circumstances of his death, was deemed, like Thorolf in the Eyrbyggja Saga, likely to give trouble after death was carried out in this fashion. On the Continent of Europe suicides are frequently thus carried out; and it would seem that the practice is not unknown in England (*NQ* iv., 8th ser. [1893], 189). Of the earlier and more general custom a relic has lately been discovered by H. F. Feilberg in Jutland, in a bricked-up doorway existing in some farmhouses and called the 'corpse-door' (*FL* xviii. [1907] 364). The Matse tribe of Ewe carry out the body of a priest through a hole in the roof (Spieth, 756). The Wadjagga remove the corpse of a childless woman through a hole in the side of the hut opposite to the door (*Globus*, lxxix. 200). On the island of Nias the same course is taken with a woman dying in childbirth; while the Toba-bataks break up the floor of the house (the houses being all built upon piles) and throw down the corpse of such a woman, with imprecations to men who are waiting beneath to tie it up fast. On the other hand, they take the corpse of an important man out through the wall (Kruijt, *Anisimise*, Hague, 1906, pp. 264, 252). All these deeds are formidable, either from the manner of death or from character and position.

Among the Masurs of East Prussia and in Bulgaria, when parents lose a succession of children, the last to die is taken out through the window (Töppen, *Abergl. aus Masuren*³, 112; *ZVV* xi. 268). Here, perhaps, the successive children dying are regarded as the same child returned and re-born (Hartland, *Prim. Pat.* i. 200). In that case the object is to prevent access by the dead infant to its mother, that she may not bear it again.

5. *Other precautions against return.*—To prevent the return of the dead, it is not enough to take out the corpse by an unusual way. The dead man must be prevented from seeing the way back. It is for this reason that the body is carried out feet foremost—a practice shared by the civilized nations of Europe with the savages of Mabuig in Torres Straits (*Torres Str. Exped.* v. 248). Or he must be confused and puzzled.

The Christian Indians of Tumupasa agree with the Basuto in changing the place of the door of the hut (*Int. Arch.* xiii, Suppl. 92; Martin, 91). The Atonga swing the corpse to and fro (Werner, 161). The Siamese not only break an opening through the house-wall, but having got the body out they hurry it at full speed thrice round the house (Tylor, *Prim. Cult.* ii. 23). The Chams turn the bier about from time to time, and by marching obliquely they cause the corpse to take the most diverse positions, in order to bewilder the soul and hinder it from returning home (*Cabaton*, 47). Analogous

practices are found in Europe. In Letrim the longest possible road is taken to the churchyard (*FL* vii. [1896] 181); and it is probably for the same reason that both in Ireland and in Germany the corpse is carried thrice round the church.

In various places in Europe a number of precautions are observed. The chairs or benches on which the coffin has rested are thrown down (East Prussia; Iglau). The coffin is lifted thrice over the threshold and thrice rested upon it—an indication to the deceased that this is a solemn and final farewell (Styria; Wends; Mordvins). An axe is laid on the threshold or hung over the door as soon as the corpse has passed (East Prussia; Sweden).

Water (in some places the water used in washing the corpse) is thrown out, with or without the vessel containing it, after the funeral procession (East Prussia; Poland; various parts of Germany). In Greece not only is water thus poured out and the vessel broken, but also all the water stored in houses along the route is thrown out after the procession has passed (*JAI* xxiii. 35, 41; Rodd, *Cust. Mod. Greece*, Lond. 1892, p. 124). More than one motive has probably gone to form this custom. Purification may be intended; but the object also is to prevent the return of the dead, for they, like other supernatural beings, have a difficulty in crossing water. In Greece, indeed, the custom of flinging out water is said to ease the burning pains of the dead—a later and probably Christian interpretation.

In Brittany the dead of the commune of Plouguél are carried across a small arm of the sea called the Passage d'Enfer, instead of being taken by land (a much shorter route) to the cemetery (*RTP* xv. 681). In the same way the Haida carry a shaman to his burial by water, even though the burial-place can be reached more easily by land. It is said that they do not fear a dead shaman like other dead people, but they want 'to handle his things,' and hence, we may conjecture, to pack him off so that he cannot return to interfere with them (*Jesup Exped.* v. 53). In Sweden, linseed is strewn outside the house to prevent the deceased from appearing as a 'wandering spirit.' It is a common belief that supernatural beings must in such a case count the seeds—a task that will occupy them until daylight. The practice of strewing seeds is, in fact, another attempt to puzzle and confuse the ghost. So the Swedes also strew hay-seed on the road and about the grave, believing 'that Satan is thereby deprived of his power over the deceased'—which may be a Christianized form of the superstition (Lloyd, 131, 134). Among the Iban of Sarawak, ashes are strewn over the footprints of the bearers to prevent the soul of the dead man from finding its way back to the house to haunt the living (*Anthropos*, i. 109). The practice would appear to be not unknown in some parts of Europe. A few years ago at Budapest a woman who was supposed to have died in hospital returned home. She was taken for a ghost. The doors were slammed against her, ashes were strewn on the ground, and her husband refused her access (*Daily Chron.*, 30 Aug. 1904). The barefooted dwellers on the Congo strew thorns along the path from the house to the grave (*ZVP* xi. 266). In the Solomon Islands 'the return from the funeral is by another road than that along which the corpse was carried, lest the ghost should follow' (Coddington, 254)—a practice likewise followed in Corfu (Rodd, 124). Many peoples erect barriers against the ghost in returning. Thus the Koryaks (who cremate the body) strew twigs around the pyre, representing a dense forest which is supposed to surround the burning-place. An attempt is made to obscure the tracks of the officiant, and a line is drawn across the road, over which the mourners jump and shake themselves. This line is supposed to represent a river. The Chukchi customs are similar. A small cup and a bunch of grass used in washing the corpse are hidden separately on the path: the one will transform itself into a sea and the other into a dense forest (*Jesup Exped.* vi. 112, vii. [1904-9] 528). It should be pointed out that it is by such means that the hero or heroine escapes in stories, including the incident of the Magical Flight from the pursuit of the Ogre, and that the Chukchis and Koryaks are only making use of means of defence familiar to them in their traditions.

These specimens of the various methods of preventing the return of the dead will suffice for the present. Reference will be made to others below.

6. *Reluctance of the corpse.*—The dead man is often supposed to be reluctant to quit his home. Among the Nawâr, or Eastern Gypsies, as well as among other Arab tribes, he goes the length of forcible resistance, compelling the bearers even to return and leave him for two or three days unburied—to the great detriment of the public health

(Jausen, *Costumes des Arabes au pays de Moab*, Paris, 1908, pp. 100, 105). The Negroes of Jamaica aver that, when a dead body wishes to go forward, it is easily carried; when it does not wish to go, it gives great trouble (*FL* xv. 453).

A ceremony is performed on Car Nicobar which is perhaps a dramatic representation of the unwillingness of the dead to be buried. The funeral procession is met by another band of men who drive the bearers back by force, struggling over the corpse, some dragging it towards the grave and others towards the village, until it often falls to the ground. An eye-witness on one occasion tells us that the women and children, who stood at a distance, began to cry out for fear lest the corpse should forcibly enter the village. In the end, however, it was picked up and thrown into the grave in a heap, and then the usual sacrifices were offered (*JAI* xxxii. 218, 221). 'The ceremony was said to be performed only in the case of men of the highest repute' (*ib.* 222).

7. *Farewell speeches.*—Men, however, have not been content with such broad hints to the dead and defences against their return as described in previous paragraphs. They have told them in plain terms that they are not to come back, that the separation is definitive; and a considerable part of the funeral ceremony is often devoted to this purpose, enforced both by speech and symbol.

Among the Bataks of Sumatra, prior to the burial the *begu* (soul or individuality of the deceased) is made to understand by a Shamanistic ceremony that it belongs no more to the living, and must not consort with them. Then, after a dance, a vessel filled with *djerango* (a specific against the *begu*) is carried round it. Some parts of the body are rubbed with a piece of it, and it is thrown on the corpse with the words: 'Thy younger brother (or mother, or other relative) will converse with thee no more' (*ARV* vii. 503). During cremation among the Chamé a man who bears the significant title of Master of Regrets, is left behind at the house. His business is to curse it and then to adjure the deceased not to come back to torment his family (Cabaton, 48). The Muong or Mon of Northern Tongking perform an elaborate series of rites with this object. They begin on the night following the death. The witch-doctor comes and recites invocations, accompanied by a bell to drive away evil spirits. He advises the soul of the departed to go to the other world and find relatives who have preceded him thither. In order to guide him in his journey he enumerates these relatives by name, pointing with his finger towards the spots where they have been buried. Then he casts lots to ascertain whether the dead man has understood him. If the lots be unfavourable, he begins again as many times as may be necessary. The second night a ceremony is performed in honour of the ancestors, and also of the tutelary spirit of witch-doctors. These are prayed to show the deceased the way to the dwelling of the superior genii, with whom he will find help; and the witch-doctor again casts lots to ascertain if he has been understood. The third night the ceremonies and offerings are specially in honour of the tutelary spirit or genius of witch-doctors, who is requested to conduct the soul to the grave where the body will lie, and which has been dug during the day. Before the procession starts for the grave, the witch-doctor again casts lots to satisfy himself that the soul knows the way to the tomb. At the grave two altars have been improvised, one in honour of the *manes* of the deceased, and the other dedicated to the genius of the earth. Amid the wailing, the witch-doctor prays the former not to torment the survivors, and the genius of the earth to keep him in peace (Lunet, 350).

The Lolos of Western China give the deceased specific instructions as to the route he is to take. On the way to the grave 'the priest recites the *Jo-mo*, or Road Ritual, and he accompanies the coffin a hundred paces from the house. This ritual begins by stating that, as in life the father teaches the son, and the husband the wife, it is only the priest who can teach the dead man the road that his soul must travel after death. The threshold of the house is first mentioned, then the various places on the road to the grave, and, beyond that, all the towns and rivers and mountains that must be traversed by the soul till it reaches the Taliang mountain, the home of the Lolo race. Here the priest says that he himself must return, and entreats the dead man to pursue his way beyond the grave alone. The dead man then enters Hades, and stands beside the Thought Tree and the Tree of Talk, and there he thinks of the dear ones left behind and weeps bitterly. After this ritual is read, the priest returns to the house, and the coffin goes on to the grave' (*JAI* xxxiii. 103). On the island of Serang, in the Moluccas, the priest prays the previously dead to do no harm to the soul, but cordially to receive it, winding up with a prayer to the Lord Heaven and the Lord Earth to let all sicknesses go away from the commune with the soul of the deceased (Riedel, 141). On the Western Continent similar intimations are given to the departed. Before the body of a Hupa was lowered into the grave, he was addressed: 'Don't be lonesome for what you have left. While you were living your time came. May it be well with the people where you used to live!' This, we are told, is to prevent the ghost's return and consequent misfortune to the family (Goddard, 70). More coarsely among the Greenlanders a woman waves a lighted

chip to and fro behind the corpse when it is taken out of the house or tent, crying: 'There is nothing more to be had here!' (Orantz, i. 237). In Central Africa, likewise, as among the Awemba, a speech is made over a man's grave, promising that the survivors will take care of his wife and children, and expressing the hope that he will become a good spirit in the next world (*JAI* xxvi. 157; cf. *Journ. Afr. Soc.* v. 436).

8. *Death at a distance from home.*—The desire to find one's last resting-place at home, among one's kindred and friends, is natural to man; and it has been translated into a number of ceremonial prescriptions which emphasize the necessity of such a burial.

Sometimes, as among the Ildlooct of British Columbia, the deceased is buried in a temporary manner where he dies, and the following year his bones are brought home to be buried with his kindred. If this is impossible, the body is burnt and the ashes carried home (*Jesup Exped.* ii. 270). Sometimes only a single bone is brought home, as in the case of Roman soldiers. Among the Ho of Togoland, when a man of importance is killed in war, he is buried on the spot; but later the grave is opened, his bones, hair, and nails are taken out, put into a coffin, and carried home, or at least his brothers on the maternal side must bring home his finger- and toe-nails and his hair (Spieth, 277). A large proportion of the modern Albanians (at least of the men) die away from home, owing to their migratory habits. Their bones are collected and sent home; or at any rate the skull or a single bone is brought back (Kodd, *op. cit.* 127). When a Spartan king was killed in war an image was buried in his place (Herod. vi. 58). In some of the villages around Cosenza an image is made of a member of the family dying away from home, and laid on his bed, and the rest of the family standing around bewail him (Dorsa, *Uti e nelle credenze pop.*, 1884, p. 93). At Ouessant in Brittany, when a sailor died at sea, a cross was taken to the house and made to represent the corpse. In the Isle of Sein his portrait was laid on it, or, in default, some object that had belonged to him. The clergy attended, and a funeral procession and service took place over this representative of the body (*RTP* vi. [1891] 156, xiv. 346). When a man belonging to the Man Tien of Northern Tongking dies at a distance from his home, the priest calls back his souls (for a Man Tien is endowed with a plurality of souls), and causes them to enter a doll made for the purpose, to which funeral honours are then accorded (Lunet, 258). In Montenegro a dummy body is made with the clothing of the deceased; walling and all other rites except actual burial are performed over it (*JAI* xxxix. 92). Among the Basoga a few of the relations go a little way from home, cut a twig, wrap it up in bark-cloth and treat it in all respects as the corpse, all the ceremonies being performed upon it, including burial (Cunningham, 118).

Proceedings like these are doubtless much more than mere make-believe to the people who indulge in them. Probably in the first instance a relief to the feelings of the survivors, they must be held to be of real value and importance to the deceased, who attains by their means his due place in the other world and the rest which can come only by means of the proper ceremonies. See, further, § XI.

X. *Grave furniture and food.*—The dead must be gratified with food, and with some or all of his most cherished worldly possessions. The practice of depositing these, either in the grave or upon it, is literally world-wide. Both fear of the dead and affection for him have occurred to carry it very often to extravagant lengths. Few examples will be required of a rite so well known.

1. *Food and drink.*—

In Tanenbar and Timorlaut, two of the Moluccas, when children under two years of age die, the mother milks her breast into their mouths before burial (Riedel, 906). So, when an Urali of the Dimbhum jungles is about to be buried, a cow buffalo is brought near the car on the burial-ground, and a little milk drawn and poured three times into the mouth of the corpse (Thurston, vii. 256). The practice of placing food and water on the grave is recorded of several of the Australian tribes; it is sometimes continued for many days (Howitt, pp. 448, 455, 467, 474). Among some of the Hill Tribes of Assam, these offerings to the dead are kept up for a year (*ARW* xii. 453). Some of the Papuan tribes plant taro beside the grave (*ZVRW* xix. 163). The Iroquois, who practise sub-aerial burial, deposit with their dead a sack of flour, flesh-meat, his spoon, and generally whatever may be necessary for one who has to take a long journey (*1 BBEW* 140, quoting de la Potherie). The Achomawi Indians of California placed with the body quantities of food consisting of dried fish, roots, herbs, etc. (*ib.* 151). In Guatemala, provisions of maize and flesh were given (Stoll, *Die Ethnologie der Indianerstämme von Guatemala*, Leyden, 1889, p. 71). The Warraos of Guiana laid round the body bread, fruits, and dried fish (*Int. Arch.* xiii., Suppl. 55). And it may be said generally that similar practices are recorded of all the tribes on the American continent.

The Agni of West Africa provide the deceased with blood (reminding us of the incidents recorded by Homer, *Od.* xi.), food, and drink (Clotel and Villamur, 25). Of drink, brandy, pombe, or rum is commonly given among the Negroes. On the Lower Niger, two casks of rum or palm-wine are poured over the grave to supply the departed with spirit to entertain his friends in the next world (Leonard, 166). These customs are followed not only by the Negroes, but by most of the branches of the wide-spread Bantu race. The Kafir tribes in the south slaughter an ox and lay a portion of its entrails on the grave. The Baganda in the north bring food and pour beer over the grave.

But it is not only in the islands of the Indian and Pacific Oceans, and among the ruder peoples of Asia, Africa, and America that the practice of providing the dead with food and drink obtains. The civilized Koreans agree with the Mannans, one of the Hill Tribes of Travancore, in putting into the mouth of the corpse a quantity of rice (*JAI* xxv. [1896] 347); *Ind. Cens. Rep.* 1901, xxvi. 349). The carcases of sheep and oxen, with jars of honey and oil, were among the gifts added by Achilles to the pyre of Patroclus (*Il.* xxiii. 166); and remains of the funeral banquet have been found carefully placed in graves of the prehistoric population of Greece. Nor has the custom of giving food to the dead ceased even yet in the south-east of Europe among populations of Greek tradition. In Bulgaria, for three days after a burial, women go every morning to the grave, kindle tapers, fumigate it with incense, and pour over it wine and water. On the fortieth day a woman goes with a priest carrying a cake, some *kolliva* (a funeral food made of boiled grain, sugar, almonds, sesame, parsley, and pomegranate seeds), and a bottle of wine, all of which she places on the grave, 'that the earth may be cleared from the eyes of the departed.' The priest repeats prayers, fumigates and levels the grave, digging a hole in it, into which he pours water and buries some of the food. Nor is this all. On every commemorative festival for the dead, the women go to the grave with their tapers and incense, and pour wine or water over it. Moreover, fruit (formerly also other food) is often laid on the grave. Widows whose deceased husbands were much addicted to coffee have been known to pour black coffee daily into an opening in the grave-mound (Strauss, *Die Bulgaren*, 1898, pp. 451-53). In Macedonia, an apple, a quince, or some other fruit is thrust between the feet of the corpse before the funeral (Abbott, *Macedonian FL*, 1903, p. 197). In Montenegro, apples are thrown into the grave; and, in some parts, oranges and bits of bread are among the objects hung on a young tree planted at the head of the grave (*JAI* xxxix. 93). Elsewhere, some of the *kolliva* cakes baked for the commemorative festivals are broken up over the grave, the rest being consumed by the mourners or given away (Kodd, 128). Amélineau, the distinguished Egyptian scholar, reports that at Chateaudun, in France, he has known a widow place a cup of chocolate on her husband's grave every day, for more than a year (*RHR* lii. [1905] 10 n.). The Wends and Kashubs, Slav populations of North Germany and Prussia, put a lemon into the hand of the corpse; and, among the Wends, children are said to be supplied with eggs and apples; while men addicted to drink are given pipe and brandy-flask, otherwise they will have no rest in the grave (Tetzner, *Die Slaven in Deutschland*, 1902, p. 462; von Schulenburg, *Wend. Volkst.*, pp. 113, 110). In Croatia there is a wide-spread custom of setting eggs, apples, and bread on the newly made grave for the hungry soul, and offerings of food are brought at every Halloween (*Globus*, lxxv. [1904] 39).

The Bulgarian priest, as we have seen, digs a hole in the grave, more conveniently to pour down the water and bury the food. At Itrous, in ancient Phocia, was the grave of the hero-founder, who was daily worshipped with sacrifices; and there was a permanent hole communicating with the interior of the tomb, through which the blood of the victims was poured, while the worshippers consumed the flesh on the spot (Paus. x. iv. 7). Frazer, commenting on the passage, has adduced a number of cases of Greek and Roman tombs in which a permanent passage for food and libations has been found, and parallels from various parts of Africa, Peru, the East and West Indies, and elsewhere.

These examples might without difficulty be added to; but a more or less permanent communication between the living world and the interior of the grave was sometimes, as we shall find hereafter, made for other purposes than the supply of food.

2. *Wives and dependents.*—Another custom, almost too well known to need illustration, is that of killing, or burying alive with the corpse, his wives, his slaves, and other dependents or friends. This custom attains its greatest extension, of course, at the funeral of a chief or king. Its object is to provide for his comfort and his dignity in the other world, by giving him suitable companions and retinue. The best-known example is that of *sati* (*q.v.*), by which the Hindu widow was burnt alive on her husband's pyre—a rite abolished in British India in 1829, but still surviving in the native State of Nepal. The rite was probably common to Aryan-speaking peoples while in a state of savagery, but abandoned as they progressed in

civilization, and re-introduced, after centuries of disuse, among the Aryan conquerors of Upper India, for reasons that can now only be the subject of conjecture, and perpetuated under the ecclesiastical influence of the Brahmins. Several of the non-Aryan tribes of India practised, until quite recent times, the analogous rite of burying alive slaves, or making a raid for heads to adorn the tomb (Crooke, *Things Indian*, Lond. 1906, p. 446, also *Anthropos*, iv. 473).

We need not follow the custom throughout the world. But, as showing that it prevailed among Aryan-speaking peoples, it may be of interest to recall that it is recorded by Caesar and Mela of the Gauls, who practised cremation (Ces. *Bell. Gall.* vi. 19; Mela, iii. 2), and the Thracians (Mela, ii. 2); that it is known in the Irish legends (O'Curry, *Manners and Cust.*, Dublin, 1873, i. cccxx.); and that the slaughter and cremation by Achilles of the twelve valiant Trojans on the pyre of Patroclus are only to be thus explained, though the fashion had changed before Homer's day. Among the Bulgarians of the Volga it was found by the Arab traveller, Ibn Fadhlān, in the year 921 or 922, when he witnessed the immolation, on a young chief's funeral pyre, of a girl, who seems to have been formally wedded to the dead youth before being thus sacrificed (*RHR* lii. [1905] 325). The old Slavs appear likewise to have put to death wives, companions, and slaves at the funeral of a person of importance; and, when they buried an unmarried man or woman, a wedding scene was enacted during the ceremonies—an obvious relic of such incidents as that recorded by Ibn Fadhlān.

Such relics are found elsewhere. Among the Bavenda in the Transvaal, if a virgin boy dies, a girl is sent after him into the other world to be his wife there. She is not now actually put to death; the witch-doctor knows of a ceremony which is quite as effectual for the benefit of the dead boy as her death (*JAI* xxxv. 381). Among the Wadjjaga, or Wachaga, a Bantu tribe of Central Africa, another series of ceremonies is appointed for each of the widows, whereby 'she frees herself from death'—possibly here the contagion (*Globus*, lxxxix. 198). The Toloktins of Oregon, with whom cremation is the rule, force the widow on the funeral pile; but, though they scorch her more or less severely, they do not burn her to death (*IREWE* 145).

It is, for obvious reasons, rarer to find a husband put to death with a wife than the converse. But probably the story told in the *Arabian Nights* of Sinbad, who was buried alive with his dead wife, was founded on a barbarous custom really practised by some tribe in the East.

The husband of a woman of the blood-royal of the Natchez was required to submit to this rule (*IREWE* 187). In Ashanti, with the king's permission, any of his sisters may marry a man who is pre-eminently handsome, no matter how low his rank and position may be. But a man of low rank who may have thus married one of the king's sisters is expected to commit suicide when his wife dies, or upon the death of an only male child; and any attempt to evade compliance is promptly defeated (Ellis, *Tshi-speaking Peoples*, Lond. 1887, 287).

After the abandonment of the custom of putting to death relatives and dependents, its relics continue to exist often for ages. Centuries ago it was abolished in Japan, China, and Korea; but the living slaves once sacrificed were for long, and indeed still are in places, represented by figures in permanent or perishable material, according to the wealth or lavishness of the survivors. To the same origin are due the statues and statuettes of servants and family found in Egyptian tombs. The Man Quāng Trang, of the province of Hung-Hoa in Northern Tongking, build a small hut beside the barrow, and place near it a doll representing a man or a woman, to be the companion of the deceased. Striking the doll, they bid it look well after him (Lunet, *op. cit.* 275).

It is perhaps necessary to add that many of our accounts of the immolation of human victims on the occasion of a death represent some, at all events, of the victims as dying willingly, or even committing suicide. It is conceivable that voluntary deaths may, in a certain number of cases, be the result of intense grief. The vast number, however, of deaths apparently voluntary are, as in the case of the Hindu widow or the dependents of a Gaulish chief, constrained by custom and the knowledge that refusal, while it destroys the religious merit of the act, will entail compulsion, or at least that life will be speedily rendered intolerable.

3. *Property*.—It is probable that in the begin-

nings of human civilization, when a man died, his entire property was destroyed, or left with the body, whether buried or simply exposed. This, in fact, is still done by many tribes in various parts of the world (see § XIX.). Its primitive purpose may have been to escape the death-pollution which would attach to everything closely associated with the deceased. His meagre property would be in a sense identified with him, and must therefore be put away from among the living. Such a practice, it is obvious, if everywhere persisted in, must have prevented that accumulation of wealth which has rendered progress in the arts of life possible. Consequently, most peoples have learnt to cut it down to comparatively small dimensions, giving only a selection from the goods left behind by the deceased, or reducing their gifts to a mere symbol.

(a) *Domestic animals*.—In a comparatively early stage, domesticated animals are often the chief wealth. Such animals are slaughtered not merely as food, but to accompany their owner into the other world. When a Herero dies, certain of his favourite cattle are at once killed, expressly in order to prevent the ghost from returning and molesting the survivors. On the following day the rest of his favourite cattle are slain as a sacrifice to the dead, and the horns are arranged on a tree adjacent to the grave (Dannert, 46). The Abipones of South America, who bury with their dead their entire property, or burn it in a bonfire, when a chief or a notable warrior dies, ceremonially stab the horses that were dearest to him, and fix them on stakes around the grave (*Int. Arch.* xiii. Suppl. 61). The Tangkhuls of Manipur kill a buffalo, in order that the creature may go with the dead into the next world and butt open the gates of heaven, which are kept shut against him (*JAI* xxxi. 807). Here the buffalo officiates as psychopomp; in other countries it is the dog. Whether it was in this capacity that some of the Lillooet hunters' dogs were killed does not appear. Their bodies were suspended from the four poles usually erected over the grave to sustain the ornaments, weapons, tools, and other valuables of the deceased, or such of these objects as were not buried with him (*Jesup Exped.* ii. 269). In pre-historic barrows of England, animal bones are frequently found. Where they are not of accidental occurrence, however, they are usually the remains of food deposited with the dead. But in one Late Celtic interment, at least, the skeletons of horses have been found with the remains of a chariot (Greenwell, *Brit. Barrows*, Oxf. 1877, p. 456). In Prussia, in graves of the Neolithic age, the war-horse has been found buried with the warrior. In Russia, what are called Scythian barrows and *kurgans* (pre-historic grave-mounds) frequently yield the remains of horses; and similar relics are recorded of Frankish graves on the Rhine, as well as of Magyar and Polish graves dating from heathendom, and of the various heathen tribes of Siberia. Some, like the Poles, buried also the falcon and the dog with their master (*Int. Arch.* i. [1888] 53). In all these cases the animals appear to have been designed not by way of food, but in order to accompany the deceased for use or state in the life after death.

(b) *Goods*.—Only a few of the more interesting examples can here be enumerated of a custom practically universal from the remotest times of which either history or archaeology yields any record. The Negroes of Jamaica, when they think a man has been killed by witchcraft, bury him fully armed and equipped to take vengeance on his slayer (*FL* xv. 88). When a Tangkhul is killed by a tiger, a hunting-dog, a sharpened thorn, and a strong spear are put into the grave, that the deceased may have a helper and weapons to defend himself if he chance to meet a spirit-tiger on his way to heaven (*JAI* xxxi. 306). The Alsea Indians of Oregon placed goods of all kinds with the corpse, because the bodies were animated, and moved about at night if they so willed. Easy exit from the graves was afforded, and the things deposited were for use of the dead in such a manner (*Amer. Anthr.* iii. new ser. [1901, 241]. Pre-historic burials in the Aleutian Islands have been found, in which the corpse has been mummified in a lifelike posture, dressed, armed, and provided with implements, as if engaged in hunting, fishing, sewing, etc. With these burials have been found effigies of the animals that the deceased was supposed to be pursuing, also religious masks and paraphernalia, all the objects, however, being models in carved wood (*Contr. N. Amer. Ethn.* i. [1877] 90). Among the objects put into the grave by the Thompson Indians was the medicine-bag or guardian-spirit of the deceased (*Jesup Exped.* i. [1900] 328).

In Europe the corpse is often provided with corresponding gifts. In some districts of France, if the deceased could read, his Book of Hours was put between his hands; if he could not, it was enough to put the rosary over his arm. A twig of box blessed on Palm Sunday was often placed between his fingers; and, both in France and in Spain, it is believed that this branch will blossom every spring in the tomb if he be found worthy of entering heaven (Laisnel de la Salle, *Croyances et légendes du centre de la France*, Paris, 1875, ii. 72). Among the Wends of the Spree Valley and Lusatia, among the Masurs, and in Pomerania, a hymn-book is put into the coffin (von Schulenburg, 110; Töppen², 108; Knoop, *Volksagen*, . . . aus dem östl. Hinterpommern, Posen, 1885, p. 164). In the 17th cent. it seems to

have been not unusual, in various places, to put a knotted cord either into the hands of the corpse or upon the grave. The object of doing so, it may be conjectured, was to enable the dead to perform a penitential exercise neglected during life, or to deceive the powers of the other world into the belief that he was an assiduous penitent. However that may be, the practice was condemned as superstitious by the Synod of Ferrara in 1612, but with so little effect in France that Thiers, in his *Traité des superstitions*² (1697), thought it necessary to repeat the prohibition (Liebrecht, *Gero. Tüb.*, 1856, p. 226). In the same century a French physician and traveller found among the Russian Lapps the custom of putting into the corpse's hand a purse with money, to pay for entrance into Paradise, and a passport addressed to Saint Peter and signed by a priest. A variant custom was to put a number of kopecks, or other small coins, in the mouth of the corpse, and in its hand a testimonial to the character of the deceased, addressed to Saint Nicholas by the bishop of the locality (*ZVV* xi. 434, 435). The anxiety shown in Europe to provide the dead with every comfort sometimes goes beyond the verge of grotesqueness. The Prussian Lithuanians, when the coffin has been put into the grave, open it, put a few coins under the corpse's head, a piece of earth on either shoulder, adding some of the small treasures of the deceased, and, if he were a magistrate, his whip (Tetzner, 85). In Voigtland, where the objects which the departed most delighted in are assiduously laid in his grave, his umbrella and goloshes have been known to be included (Köhler, *Volksbrauch im Voigtlande*, 1867, p. 441). In some ancient graves in Württemberg, attributed to the Alamanni, is found on either side of a body a wooden foot in the form of a last. It is conjectured that these artificial limbs are intended as toll to the ferryman, or to the keeper of the bridge of the dead, or the porter of the under world, in redemption of the real limb (*ZVV* xi. 457). But they may be intended to supply the place of a limb lost by accident in the long journey from this world to the place of the dead.

Perhaps the most pathetic of all objects found in graves are the toys buried with children. They are found almost all over the world, not less in Europe than elsewhere. The sarcophagus of a child named Crepereia Tryphæna, of the time of the Antonines, found at Rome in 1889 and now in the museum of the Capitol, contains, besides her betrothal ring, her jewels and her doll. The Masurs lay nosegays and gilded apples in the hands of children, so that when they reach Paradise they may be able to play on the great meadow provided for that purpose (Töppen², *l.c.*). The Wends give eggs and apples to their dead children (von Schulenburg, *l.c.*). The sterner Bosnians consign them to the other world with their school copy-books and slates (*ZVV* x. [1900] 119).

To women, who frequently own no property except their toilet utensils and personal adornments, household implements and those of their daily occupations are given. But all the objects buried with the dead are by no means his property. It is a widely spread custom for the survivors to add contributions, sometimes of large amount—a custom practised in all stages of civilization, equally by some of the Australian tribes and by the Bulgarians of Europe, who throw money into the grave before it is filled up (Strausz, *Bulgaren*, 450).

The tendency to economy in these deposits begins with the accumulation of property, though its operation is sporadic and uncertain. It may be said in general terms that among most peoples the entire property of the deceased is not buried or destroyed at his death. The greatest sacrifices of property would, as a rule, be on the death of a king or great chief. And even in those cases a part would be given for the whole, or a symbol for the reality. In burials of the Late Bronze or Early Iron age at Hallstatt and in Schleswig, rude images of oxen have been found (*ARW* v. [1902] 5); and Capt. Lyon found a decayed model of a canoe under a cairn beside an old Eskimo grave on Southampton Island (Boas, *Eskimo of Baffin Land*, p. 61). The models of boats, granaries, houses, and so forth, recovered from Egyptian graves, were doubtless all intended to do service in the other world for the originals. Gaulish warriors were buried sometimes in their chariots with their horses; but often enough, both in England and in France, excavations reveal the fact that no more than the wheels had ever been placed in Late

Celtic graves (Greenwell, 455 ff.). The coin so frequently put into the mouth of the corpse, from the far east of Asia to the Atlantic Ocean, is usually interpreted as an obolus for the ghostly ferryman or the porter of the other world. This may be its use; but it is probably only an economic survival of the practice of giving a larger amount of property as an outfit for the other world and for the journey thither. Sometimes only old and worthless things are given; sometimes merely a pretence of giving is made. Both customs are illustrated in funerals of the natives of the Tami Islands, to the north-east of New Guinea. The ancient practice was to set the body afloat on the ocean in a canoe. Those of them who cling to the practice provide an old and miserable canoe, with mast, rudder, and sails equally bad, often merely indicated. The valuables of the deceased are laid on the platform of the canoe, with a couple of coconuts, but taken away again before the canoe is pushed into the sea (*ARW* iv. [1901] 344). In some parts of the Tyrol the convenient theory is held that the dead man cannot be happy if buried with any money or rings about his person. Careful search is therefore made, and these objects are removed to avoid any such misfortune (Zingler, *Sitten des Tir. Volkes*, Innsbruck, 1871, p. 49).

The objects buried or left on the grave are often broken and rendered useless. This is said to have been done in order to prevent stealing. Thus, among the natives of British Central Africa, ivory and beads are first ground to powder, in order, we are told, to make them useless to witches and robbers (Werner, *Natives of Brit. Cent. Afr.*, 159). The real reason for this widely diffused custom lies deeper. In the eyes of the people who practise it the breaking of the object is the equivalent of the death of the human being to whose service it is dedicated. It is thus killed in order that its ghost may follow the ghost of the dead into the spirit-world, there to serve the purposes which it served in this world when whole. Thus the Ho of Togoland lay broken cooking-pots on the grave, expressly to serve the deceased for cooking-pots in the other world (Spieth, 634). The Hupa of California lay in the grave, with the corpse, his clothing, weapons, and other property, shell-money and dance-regalia—all first destroyed by breaking. On the grave are placed dishes and utensils, four large burden-baskets, each with a hole burnt in the bottom and a stake driven through it. Clothes, torn into strips, are hung on the poles laid across the grave. The reason for destroying the articles buried is said to be to prevent grave-robbery. But the same people tell us that all the objects accompany the spirit to the under world (Goddard, 71). We are, doubtless, justified in believing that the prevention of grave-robbery is a secondary reason.

An interesting case is reported from Lincolnshire, in which a widow put her husband's mug and jug on his grave, having first broken them. She told the rector: 'I was that moidered with crying that I clean forgot to put 'em in t' coffin. . . . So I goes and does t' next best. I deads 'em both over his grave, and says I to myself, My old man, he set a vast of store, he did, by yon mug and jug, and when their ghoastes gets over on yon side I'll hoiler out, "Yon's mine, hand 'em over to me," and I'd like to see them as would stop him a-having of them an' all' (*FL* ix. [1898] 187). Thus the anxiety to provide the dead with an outfit for the other world, which is the real intention of the customs just passed in review, whatever secondary motives may have come to be mixed up with it, lingered in England down to the last quarter of the 19th cent., and perhaps lingers even yet in remote districts.

4. *Objects used in the funeral rites.*—We have now reached a class of objects put in, or upon, the grave for a different reason. They are not necessarily the property of the dead; but, having been used in the funeral rites, they are contaminated with death, and are no longer fit for the service of the living, lest they spread the infection further.

Hence the Yakuts break and throw on the grave-mound the shovels, the sledges, the stakes—in a word, everything used in the funeral (*RHR* xvi. 211). The Apache also leave the shovel on the grave (*Am. Anthr.*, new ser., vii, [1905] 493); the Melanesians of Efate throw it into the sea (*Rep. Austr. Ass.* iv. 727). The Warundi, in Central Africa, throw on the tomb the door of the hut, and the basket with which the earth has been taken out of the grave (van der Burgt, 39). Among the Baganda, all who have taken part in the burial must wash their hands with moist plantain fibre, and the fibre thus used is put on the grave (*JAI* xxxii. 47). The Negroes in Jamaica, as we have seen, often throw on the grave the water in which the corpse was washed (§ VI. 5). In Europe similar practices are found. In France the bowl which has contained the holy water used for aspersion during the ceremonies is thrown into the tomb; and formerly in Brittany the incense brazier was buried with the coffin (*Laisnel de la Salle*, il. 79). In Central Silesia everything used for the toilet of the corpse—the comb, sponge, rag, soap, and so forth—is put into the coffin. Even the needle and thread used for sewing the shroud must not be removed, but left hanging to it (*ZVFF* iii. 151). But economy sometimes prevails. In some parts of Brunswick the bier and tools remain only for a few days on the grave (*ib.* viii. [1898] 437). It is as if the infection were then at an end. Another motive may, however, be present: they may be placed there to keep the dead man down as long as there is any chance of his returning, and be removed when this is over. The author cited adduces in favour of this suggestion the fear of the dead betrayed in the haste with which the relatives left behind in the house, when the funeral procession has started, shut the door in order that the dead may not fetch any one else. But this is a wide-spread custom.

5. *Blood and hair.*—Among many peoples, the delirium of grief, or more often perhaps (in accordance with well-established custom) the desire to divert suspicion of having caused the death by witchcraft, and the fear of the deceased himself, lead the mourners frantically to cut and wound, and even to mutilate, themselves.

The practice was forbidden to the ancient Hebrews by the Deuteronomical legislation (14); hence we may conclude that it had been previously in use among them, as well as among their neighbours. It is universal among the Australian Black-fellows, and is reported from Polynesia, Melanesia, the East Indian islands, and from North and South America. In very many of these cases the custom is to let the blood drip over the corpse. Of Australian tribes, we are definitely informed that after the body was placed in the ground the mourners stood or knelt over it in turn, and were struck by a large boomerang on the head until the blood flowed over the corpse. In other cases the blood drips upon the grave after it has been filled in (*JAI* xiv. [1895] 137; *Curr. Austr. Race*, Melbourne and Lond. 1886-87, ii. 178; Spencer-Gillen^a, 507, 509; *FL* xiv. [1903] 336). Among the Orang Sakai of Sumatra the kindred, making a cross-cut with a knife on their foreheads, drop the blood on the face of the corpse (Wilken, *Haaropfer . . . bei den Völkern Indonesiens*, Amsterdam, 1886-1887, p. 19). Four North American Indians from Montana, who were executed for murder at Helena, on the head-waters of the Missouri, in December 1890, were mourned by two squaws. One of the squaws cut off two of her fingers and threw them into the grave. The other gashed her face. Both caused the blood to flow into the grave (Letourneau, *L'Es. rel.*, Paris, 1892, p. 137).

We may assume, without much risk of mistake, that the rite in its complete and undegraded form included the dropping of the blood upon the dead body, and where this is not done the rite is in decay. Probably also it is only persons standing in certain specific relations with the dead who are commonly expected to perform it. This is certainly the rule with some of the Australian tribes. We may suspect it of other peoples also. If it has not been recorded, that may be because the point would be likely to escape not merely the casual traveller, but any one whose attention has not been specially drawn to it. But it is by no means invariable (e.g. the Arawaks mentioned below, § XVII. 1). The meaning of the rite has been the subject of much discussion. It is not merely a propitiatory offering; it may be this, but it is much more. A comparison of the blood-covenant and other blood-rites renders it almost certain that one object, at least, is that of effecting a corporal union with the dead. But is that the only object? First of all, there can be no question that the intention is to cause suffering to the survivors. This will be better discussed when we come to the section on 'Mourning' (§ XVII.). Further, human blood is frequently given for medical purposes, or to strengthen the recipient (Strack, *Das Blut*, 1900,

27 ff.; Spencer-Gillen^a, 461). It is, therefore, not impossible that the object of letting the mourners' blood drip over the corpse may be to strengthen the dead man for his life in the next world. This would be quite consistent with the avowed intention of expressing sorrow or pity (*Torres Str. Exped.* vi. [1908] 154). But there is, so far as the present writer is aware, no evidence pointing decisively to this interpretation. Moreover, it is always necessary to remember that rites different in intention are often similar in expression—a fact which makes their interpretation a matter of peculiar difficulty.

Parallel with the rite of dropping blood on the corpse is another mourning rite—that of cutting or tearing the hair and burying it with the corpse, or dedicating it at the grave. It is even more widely diffused than the former.

At the cremation of Patroclus his comrades cut off their hair and heaped it on the body; and Achilles, cutting off the golden lock that his father had vowed to offer at his return home to the river Spercheios, put it into the dead hands to bear away (*Il.* xxiii. 135-141). So the mourners among the Sioux cut locks of their hair and fling them on the body; and these locks are bound up with it, and with the dead man's valuables, before it is put into the grave-box or coffin (*IREW* 169). Locks of human hair have been found with mummies in the ancient cemetery on the bay of Chacota, in southern Peru, and a large lock of soft human hair was found beneath the head of an infant (*Rep. Peabody Mus.* xi. [1878] 285 ff.). Arab women cut their hair on the death of a husband, or of a father, or other near relation, and spread the tresses on the tomb, or hang them on stakes or cords above it (Janssen, 94; Hartland, *LP* ii. 220); while among the Rājī of the United Provinces of India 'the children of the deceased and his younger brothers get their heads, beards, and moustaches shaved, and the hair is thrown on the grave' (Orooke, *TC* iv. 213). Among the Chechenes of the Caucasus the long queue of hair of the widow of the deceased is cut off and thrown into the grave; down to the middle of the 18th cent., it is said, her ear used to be thus sacrificed (*Anthropos*, iii. 735). The practice is not yet obsolete in modern Europe among the Montenegrin women. Not very long ago, indeed, when the men habitually shaved their heads and suffered only one long crown-lock to grow, that was cut off and thrown into the grave (*JAI* xxxix. 98).

But, as with the dropping of blood, it is by no means everywhere that the hair is dedicated in this way. It is often burnt.

The Bilqua of British Columbia, and some of the Central Tribes of Australia, e.g., dispose of it thus (*Brit. Assoc. Report*, 1891, p. 419; Spencer-Gillen^b, 507, 520). The latter, indeed, sometimes mix it with some of the hair of the deceased and make it up into a girdle, which is worn by the avenger of the dead during the punitive expedition (Spencer-Gillen^b, 543; cf. 514).

More usually, however, we are not told what is done with the hair. In some instances this may be due to omission to observe, or forgetfulness to record, on the part of the reporter, a portion of the rite that is of importance. In the majority of cases we are probably right in assuming that the disposal of the hair is not an integral portion of the rite—that, in fact, the rite has ended with the cutting of the hair. Whether the dedication of the locks at or in the grave, or by burning, has in such cases ceased by ritual decay, or whether the dedication never took place, it is difficult to say. One object, at all events, of the dedication of the hair is, like that of the blood, to form a bond of union with the dead. The converse rite of taking a lock of hair of the dead may be said to be world-wide. Nor is it confined to a lock of hair: it extends in some cases to the nails and pieces of the garments. In the West Indian island of St. Croix the persons who wash the corpse prior to burial always take a lock of hair, a garment, or at least a fragment of a garment, in order to prevent the spirit from molesting them (Hartland, *LP* ii. 319). It must be borne in mind that, according to the theory of sympathetic magic, any portion of a human being, such as hair, nails, skin, bones, and so forth, which has become detached, is still, in spite of separation, in effective sympathetic union with the body of which it once formed part; for the personality inheres in every part of the body. The doctrine extended to the effigy, the

clothes, the property, and even to the personal name; so that anything done to any of these objects affects the owner as if it were done directly to him. He is in a sense present in each of them. Not only, therefore, if I take a lock of a dead man's hair do I establish effective union with him so as to prevent him from inflicting any harm upon me; but, conversely, if I give him a lock of mine or a drop of my blood, we are bound together by a similar bond. It is sometimes suggested that, as in the case perhaps of the dripping of blood, the throwing of hair on, or giving it to, the corpse is an attempt to endow the dead with some of the vital strength of the survivors. This is, according to savage theory, not impossible; but there is no direct evidence in support of it. Another suggestion is that it is a relic of human sacrifice to the dead—the gift of a part for the whole, or a mere symbol. Human sacrifices, as we have seen, are common enough. Evidence, however, of the intention of a gift of hair, as a commutation of the practice of human sacrifice, does not, so far as we know, exist. It would seem more likely in the gift of blood or of severed members, such as those of the Montana squaws above cited; but even there proof is wanting. On the other hand, there is evidence that sometimes where the rite is not completed by giving the hair to the corpse the intention is merely purification, as where the hair is cut at the end of the mourning.

Before leaving the subject it may be added that, while among many savage peoples there is weeping as well as blood-letting over the corpse, in Europe it is believed that tears ought not to be allowed to fall on the body. Even to weep overmuch, apart from the corpse, is wrong, because it prevents the dead from resting in the grave. There are many stories in European folklore of the dead who have appeared to survivors to reproach them with their excessive grief, and have exhibited their shrouds wet with their tears. Further, it is most important not to allow anything worn by a survivor to be buried with the corpse, or put into the grave. To do so means decline and death to the person to whom the article belongs; hence it is sometimes done maliciously, and is reckoned witchcraft.

6. *Fire*.—In the lower culture it is not unusual to light a fire at or on the grave—a practice common in Australia, where the reason assigned is to warm the ghost. The tribes about Maryborough add a further reason: to keep away the spirits of dead blacks of other tribes, or of bad men of their own tribe (Howitt, 470).

These fires at or on the graves are maintained for varying periods, according to the tribe, or the amount of affection for the deceased; and sometimes several are lighted. The same custom is found on the Melanesian Islands and those of the East Indian Archipelago (*J. Anthropol.* xiii. 775; *JAI* xxxiii. 120; *Rep. Austr. Ass.* iv. 71; *Anthropos*, i. 23, iv. 465; Haddon, *Torres Str. Rep.* v. 249, 260; Riedel, 142, 143; Kruifit, 310), among various peoples of Further India and Assam (Lunet, 330; *JAI* xxxii. 135, xxvi. 200), among the insular Caribs and tribes of South America (*Int. Arch.* xii., Suppl. 57, 59, 81). In North America, the Tarahumares of Mexico, who bury in caves, light a fire the first night after burial. All their burial-caves are consequently blackened with smoke (Lumholtz, *Unknown Mexico*, N.Y. 1903, i. 70, 888). The Seminoles of Florida make a fire at each end of the grave and keep it up for three days, while after nightfall torches are waved in the air, that the bad birds of the night may not get at the dead man (*5 REEW* 521). The practice of lighting fires at the grave is reported of the Hupa (Goddard, 70, 72) and the Yurok on the other side of the continent in California (Powers, *Contrib. N. Am. Ethnol.* iii. [1877] 53). The latter believe the fire is necessary to light the spirit of the departed on its perilous journey to the other world. The same belief and consequent practice were known to the Algonquins; and the Klamath of the North-West keep up a fire for the three days which are occupied with the funeral ceremonies, holding that, until they are finished, the soul of the dead is in danger from O-mah-ah, said to mean the devil. In addition to lighting the fire, the survivors howl around the grave in order to scare away the demon (*1 REEW* 107).

From the numerous remains of fires in the pre-historic burial-mounds of the United States there seems reason to conjecture

that at one time the practice of lighting fires at the grave extended over a wide area, of which the modern instances cited may be the survival (*5 REEW* 17, 25, 47, 71, 78).

More than one reason, as we have seen, is alleged for the custom. On the one hand, it is to warm the ghost, and to light and comfort it on its way to the other world; on the other hand, it is to drive away evil-disposed beings. The use of fire and lights for the latter purpose is widely extended. It is, beyond reasonable doubt, the origin of the European practice of the lights in the death chamber, of the candles sometimes put into the dying hands, of the consecrated tapers that surround the coffin at the funeral. Similarly, lights are kept burning in the chamber with a new-born child and its mother, as a protection against witches and fairies; and they are used for the like purpose on many other occasions. But there is another reason equally potent, namely, to keep away the dead man himself. This reason may not be operative in all cases, as in Australia where it is definitely believed that the ghost haunts the fire on the grave, or among the Yurok where it is required to light the ghost in its perilous passage of a greasy pole across the chasm to the other world. But in other cases it is clear that the fire is a defence against the dead man himself.

One Australian tribe is said to go the length of cutting off the corpse's head and roasting it in the fire made upon the grave. When the head is thoroughly charred, it is broken up into little bits, which are left among the hot coals of the dying fire. 'The theory is that the spirit, rising from the grave to follow the tribe, misses its head and goes groping about to find it; but, being bereft of its head, it is, of course, blind, and therefore, not being able to see the fire, gets burnt. This frightens it so terribly that it retires into the grave with all expedition, and never again presumes to attempt a renewal of social intercourse with the human denizens of this world' (*JAI* xiv. [1886] 88). We have already seen that among the Eskimo of Greenland a lighted chip is waved behind the corpse when it is taken out of the house, with a clear intimation to the dead to be gone (§ IX. 7). In the Southern Nicobars a fire is made, even before the burial, at the entrance of the hut, out of chips from the bier and coco-nut husks, on purpose to bar the ghost; while, before the grave is filled in, the spirits of those present are waved out of it by a torch, thus rendering unmistakable the intention to place a barrier of fire between the living and the dead (*Ind. Cens. Rep.* 1901, iii. 209). So, too, among the Ewhe of Togoland, who bury under the hut, a fire is maintained during the whole period of mourning, and strongly smelling herbs are burnt in it to keep the ghost at a distance (*Globus*, lxxxii. [1902] 190). The same motive may account for the practice in some districts of Europe of burning on the road from the house to the cemetery, after the funeral procession has passed, the straw on which the corpse has lain (*Am. Urquell*, vi. [1896] 21).

XI. *Precautions against haunting*.—1. *Burying the soul*.—Ceremonies of the kind referred to in § IX. 8 seem to be directed to securing the soul, in default of the body, and performing over it the funeral rites. This was expressly the case in China (de Groot, iii. 847). But it is not only where the body is not obtainable that the soul is buried.

Several of the tribes of Northern Tongking collect the souls of the deceased and bury them, either with the body or apart in a separate grave (*Lunet*, 163, 244, 274). The mixed Melanesian and Polynesian population of Savu Island stand in great fear of the *aitu*, the spirit of the departed. Their injunction to a dying man is: 'If you leave us, go altogether.' At the burial, heavy stones are thrown upon the grave to keep the *aitu* down. Prior to the burial they spread a piece of white bark-cloth beside the body, and the insect that first crawls upon it is carefully wrapped up and buried with the body; it is the *mo'ut*, the soul. Further, a dome of concrete is made over the grave to prevent the ghost from rising (Thompson, *Savage Island*, Lond. 1902, p. 52; *JAI* xxxi. [1901] 139). So the inhabitants of the Nicobar Islands bury beneath the body a cloth carefully wrapped up, which is believed to contain the soul (*Int. Arch.* vi. [1893] 24). Among some of the Ewhe of Togoland, when one has been fatally bitten by a snake (one of the kinds of evil death), on the ninth day after burial the witch-doctor starts before dawn for the place in the bush where the deceased was bitten. His object is to fetch the soul. He takes only one man with him, so as not to frighten it. He performs incantations, summons the soul, and addresses soothing words to it. Presently he is joined by the young men of the village, who unite in endeavouring to console the ghost. They dig up the earth from the spot where the fatal wound was given, and put it in a jar, which is bound with some white fabric. The jar is put on the head of somebody who has previously met with the same accident, but has recovered; and with the firing of guns the procession returns to the house. Thence, accompanied by those

who have remained at home, they proceed to the place in the bush where the unfortunate man has been buried. They set the jar upside down on the grave and leave it there: it contains the soul (Spieth, 290; cf. 756, 760). Among the Brassmen of the Lower Niger a man who dies with unhealed sores (therefore 'a bad death') is buried apart from the ordinary burial-place. But his soul is afterwards evoked, and with an elaborate ceremony embodied in a wooden figure and buried in the proper place (Leonard, 168).

2. *Binding and mutilating the body.*—The intention of burying the soul is to prevent its wandering about, haunting the survivors, and perchance causing them misfortune or death. This is, of course, by no means the only precaution. We have already met with many, and there are some others which must be noticed here. The binding of the body in the attitude proper to burial (see § VIII. 2) has this at least for one of its objects. It is indeed often expressly reported as the object (e.g. *JAI* x. 145). It is said in Lincolnshire that 'when the corpse is placed in the coffin you must never forget to tie the feet, else the dead may return, or some other spirit may take possession of the body for his own purposes' (Gutch and Peacock, *Lincs. County FL*, 1908, p. 240). The practice of tying the feet, or at least the great toes together, is, in fact, not uncommon in Europe.

But binding is not enough. We saw that the sinews and the backbone were sometimes cut.

The Basuto and Bechuana are not alone in these practices; they are found in other African peoples. The customs of Australia are even more revolting. The Herbert River tribes beat the corpse with a club, often so violently as to break the bones; and incisions are made in the stomach, on the shoulders, and in the lungs, and are filled with stones (Howitt, p. 474). A tribe in Western Australia, as has been mentioned, burns the head and breaks up the charred bones, for the express purpose of preventing the deceased from haunting the survivors. It is said that certain of the Negroes of Bahia break all the long bones and twist the neck of the corpse (Rodrigues, *L'Annuaire fitchite des nègres de Bahia*, 1900, p. 119). When one has been killed by lightning, the Omaha of North America are accustomed to bury the body on the very spot where the death occurred, face downwards, and the soles of the feet previously slit (*AFL* ii. [1889] 190). The practice in Europe, though not literally identical, has been parallel down to within the lifetime of the present generation. It is not very long since suicides were buried at cross-roads with a stake through the body. Another way of dealing with them was to cut off the head and place it between the legs. A mediæval corpse which had suffered this mutilation was found a few years ago in a stone coffin in Royston Church, near Barnsey (*FL* xii. 101). Bodies have been found with the same mutilation in a cemetery in Albania, dating probably from the 4th or 5th cent. A.D. (*L'Anthrop.* xii. 668); it was well known throughout Europe in the Middle Ages, and was practised as lately as the year 1892 among the Lithuanian population of Somenishki in the Government of Kovno (*Am Urquell*, v. [1894] 87), in the latter case avowedly that the deceased might not be in a condition to 'walk' and injure the fields; for suicides are believed to 'walk' in the shape of Germans, or else as he-goats, to mislead wayfarers, or with the weapon or cord in their hands with which they have taken their lives. They injure the fields by causing hail and storms; and the touch of their bodies blights the earth: hence they are buried in waste places (*Am Urquell*, iii. [1892] 50, 52, 53).

The cremation of vampires has already been mentioned (§ VII. 3 (g)). A dead man who gave trouble among the ancient Norse by haunting was often taken up and burnt. Sometimes milder measures were successful, as in the case of Thorolf Halk-foot, who was removed to another grave with a wall so high that none but fowl flying could cross it (Morris, *Ere-dwellers*, 1892, p. 92). The fencing of graves is by no means always to protect the dead; probably it is quite as much for the protection of the living. Thus the Cheremiss fence the grave with stakes that the dead may not get out and walk the fields (Smirnov, *Pop. finnoises*, i. 138). Many of the South American tribes with the same object stamp down the earth upon the corpse; and the Achaos even cover the grave with mortar and carefully fill up every morning any cracks that may have taken place (*Int. Arch.* xii., Suppl. 93, 96). Cists, urns, coffins, and grave-boxes also serve the purpose of shutting in the dead, that they may not torment the survivors; and perhaps this was their original intention. Among the natives of South Australia it seems to have been the custom to stop and fasten up all the orifices of the body, doubtless to keep the ghost within (*JAI* viii. [1879] 893)—a practice adopted by the Malays (Skeat, *Malay Magic*, p. 401). The inhabitants of Nias bind not only the fingers and toes, but also the jaws, and put stoppers in the nostrils to keep in the soul (Modigliani, *Nias*, 1890, p. 238). A more barbarous precaution is practised in Bulgaria, where sometimes a needle is stuck into the navel of the corpse (Strausz, *Bulgaren*, 454). On the islands of Ambon and Ulisse, in the Molucces, this form of protection is used only in the case of women dying in child-bed. In such a case thorns and pins are stuck between

the joints of the fingers and toes, in the knees, shoulders, and elbows, eggs of hens or ducks are laid under the chin and armpits, and a portion of the corpse's hair is brought outwards and nailed fast between the coffin and its lid. These elaborate precautions are intended to prevent the deceased from getting out of the coffin and flying away in the form of a bird, to plague men and pregnant women. Even if she succeeded in getting out, it is believed that she would not forsake the eggs (Riedel, 81).

It should, however, be said that the corpse is sometimes wounded with quite a different intention from that just mentioned. The Puri of South America open the breast to let out the soul (*Int. Arch.* xii., Suppl. 87). Another South American tribe, the Lengua of the Paraguayan Chaco, in accordance with a well-known principle of sympathetic magic, cut open the stomach of one whose death they attribute to witchcraft, and insert a stone and some charred bones. This is supposed to revenge the death by killing the wizard (*JAI* xxxi. 298; cf. Hartland, *LP* ii. 109). Some of the Naga tribes of Assam wound the corpse on the head, that the deceased may be received as a warrior with distinction in the other world (*JAI* xxvi. 198; *ARW* xii. 454).

XII. *Return from the funeral.*—The deceased being thus comfortably provided for and admonished by word and deed to stay where he has been put, or to go into the other world, and in any case not to meddle with the living, the mourners return from the grave. What they have to dread is that, in spite of these and other precautions, the ghost may attach himself to them and thus succeed in getting home again. For, as is obvious from what has already been said, the dead man is regarded as by no means willing to be deprived of the society to which he has been accustomed. Accordingly the burial is often conducted with the greatest haste.

Thus among the Bontoc Igorot of Luzon, when the corpse has been put into the coffin, it is hustled away with the help of many willing hands; no time is wasted at the graveside; the filling up of the grave is done in the shortest possible time—probably, in the case witnessed by Jenks, not over one minute and a half; and away the mourners hurry, most of them at a dog-trot, to wash themselves in the river (A. E. Jenks, *Bontoc Igorot*, 1905, p. 78). On the other hand, so deeply defiled are the members of the family considered by the Papuan tribes, and so impossible is it for them at once to get rid of the ghost, that they erect a hut on the grave and there camp for six weeks or more, the widows in particular huddled in one corner away from the rest, invisible and unwashed (*ARW* iv. 345). The Ojibwa widow springs over the grave and then runs zigzag behind the trees, as if she were fleeing from some one. She thus dodges the ghost of her husband, that it may not haunt her (Jones, *Ojebway Indians*, 1861, p. 99).

Specimens of the obstacles put in the way of the ghost have already been given. Without going over the same ground, a few examples may here be noted of the methods of preventing the ghost from attaching itself to those who have taken part in the last rites.

The Batak priest, as the grave is being closed, beats the air with a stick to drive away the souls of the living men (*ARW* vii. 504). In the Southern Nicobar Islands the family return to the hut, where they sleep. The next day it is purified by brushing and washing, the mourners bathe and are anointed on the head and shoulder by a priest, and a lighted torch is waved 'to drive away the spirits' (*Ind. Cens. Rep.*, 1901, iii. 200). In North-Eastern Rhodesia all spit on the grave when it is filled up, and return to the village without looking back. This is now said to be a precaution against giving a clue to some watchful hyæna to dig up the body; it is more likely that the custom originated in a precaution of a different sort (*Journ. Afr. Soc.* v. 436). The Masura of Eastern Prussia hold that the deceased accompanies the first bearer home, whereupon the latter asks him: 'Have I made thy bed properly? If not, I will make it better.' Only then is the ghost appeased and goes back to the grave (Töppenz, 110). The Mordvin mourners stop a little distance from the graveyard, and one of the gravediggers, with the same tool that he has used to dig the grave, draws a circle round them. This is repeated twice. When they reach the house, the oldest woman of the family throws in their way a log and a cutlass, over which they step. The intention of the cutlass is to frighten the deceased, who, according to popular belief, is at their heels (Smirnov, i. 864). In the Babar Archipelago four stakes with cross-beams are set up over the grave and a piece of coarse red cotton stuff stretched across them in the form of a canopy. A piece of rotan is fastened to one of the stakes, and one end of it is held by the villagers present. The rotan being held taut, the head of the household, counting from one to seven, cuts it in two with one blow of his parang. The end left in the hands of the survivors is brought back by one of the kin to the house of the departed, as a symbol that all intercourse with the departed is broken off, and that he now belongs to the kindred in the other world (Riedel, 859). The firing of guns and beating of drums, so usual at a funeral in various parts of Africa, is probably intended to drive away the ghost. Elsewhere, as in Melanesia, it is avowedly hunted away.

XIII. Lingering of the soul.—The unwillingness of the soul to sever its earthly ties is not easily overcome. So far from retiring into the other world when the last breath has left the body, it habitually lingers at the place of death, or with the corpse.

The Huron ghost walks in front of the funeral procession, and remains in the cemetery until the feast of the dead; by night, however, it stalks through the village and eats the leavings of the food of the living (Le Jeune, *Journal Rel.* x. [1636] 43). In a Negro funeral in Jamaica the ghost sits on the coffin (*FL* xv. [1904] 208). The Korean ghost, more luxurious, rides in a sedan chair (*JAI* xxv. 351). About Königsberg, if you look through the gravedigger's arm when the coffin is being let down into the grave, you can see the ghost (*Am Urquell*, ii. 80).

In the belief of peoples in every part of the world it haunts the grave for a period variously stated from a few days to many months, or even an indefinite period. Indeed, as already indicated, the grave is often conceived as the permanent residence not merely of the body, but of the soul. Where the belief in a world of the dead is developed, the ghost usually departs at latest after the performance of certain rites to be discussed hereafter (§ XXI.). Meanwhile it is necessary to attend to its wants by the placing of food and sometimes a shelter on the grave. The tribes of Central Nigeria considerably leave a small hole in the grave-mound, where it may go in and out (L. Desplagnes, *Le Plateau central nigérien*, Paris, 1907, pp. 249, 257, 262). It even sets at defiance the precautions taken to prevent it from returning to its earthly home.

A common superstition in Europe is that a mother who dies leaving a suckling returns for six weeks after the funeral to suckle her little one. According to the Bulgarians, the ghost lingers for forty days in the house, and returns again on the first Easter Day until the first Whit Sunday after the funeral (Strauss, 451, 468). The Minangkabau Malays of the Padang Highlands keep the seat and bed of the deceased clean and tidy for a hundred days, lest the ghost be offended; for it haunts the house during that period (*Bijdragen tot de Taal-Land-en Volkenkunde van Nederlandsch-Indië*, xxxix. [1890] 70). Among the Yakuts the ghost wanders round the body, visits the places the dead man frequented in his lifetime, and tries to complete any work he has left unfinished. In the silence of the night the ghosts of men attend to the cattle and meddle with the harness, while the ghosts of women may be heard washing up the dishes, sweeping the rooms, tidying the granary or the chests, sighing and whispering the while. The survivors may sometimes even see them sitting tranquilly in the firelight or walking about the fields (*RHR* xlv. [1902] 224).

XIV. Purification of the survivors.—When the funeral is ended, all who have taken part in it must commonly be purified. As the necessity for purification attaches also to all mourners, and is sometimes deferred until, or perhaps more frequently repeated after, the completion of the death rites, the examples following are, in order to avoid repetition, not confined to the immediate return from the funeral. The most usual methods of purification are by fumigation and bathing.

The Euahlayi of New South Wales fumigate themselves beside the grave at and after a burial. A widow covers herself with mud and sleeps beside a smouldering fire all night. Three days afterwards she and her sisters (who might have been her husband's wives) are chased down to the creek, where a fire has previously been lighted. She catches hold of the smoking bush; putting it under her arm she jumps into the creek with it and extinguishes it in the water. As it goes out, she drinks some of the smoky water. On emerging she is smoked at the fire and calls to her husband, who is supposed to answer her. Not until then is she allowed to speak; the only utterances permitted to her up to that time have been lamentations. On her return to the camp another fumigation, apparently of the entire population, is made, and she continues to wear mourning for many months (K. Langloh Parker, *Euahlayi Tribe*, pp. 86, 88, 93). Among the Northern Tribes of Central Australia the women are released from their ban of silence by a ceremony, of which the chief item consists in their brushing themselves all over with burning twigs taken from a fire they have lighted for the purpose (Spencer-Gillien, 564). Yakut gravediggers, on returning from the cemetery, purify themselves at a fire made of chips of the coffin, before they enter the *yurt* (*RHR* xlv. 211). When a Bechuana widower is married, both he and his new bride must undergo an elaborate fumigation (*JAI* xxxv. 307); among the Bangala one who touches a dead body is placed in a circle of fire for purification (*JAI* xxxix. 114). The Manganja mourners not only bathe, but rub themselves with 'medicine-water' (Rattray, *Some Folk-lore Stories*

and *Songs in Chinyanja*, 1907, p. 94). The ancient Hebrews accounted every one who touched a dead body or a grave, or who came into the tent where a corpse lay, unclean for seven days; and he was excluded from the community and from all religious rites. He was sprinkled on the third and again on the seventh day with the 'water of separation,' in which were mingled the ashes of the sin-offering. So contagious was his uncleanness or tabu that it attached to everything he touched, and even to the clean person who sprinkled him. Moreover, the unclean man after the sprinkling on the seventh day was required to bathe, and both he and the clean person who sprinkled him had to wash their clothes; nor was either of them reckoned clean until the evening (Nu 19:13-22, 51). Among the Bontoc Igorot of Luzon all who take part in the burial hurry to the river to wash (Jenks, 79). Among the Indians of the Paraguayan Chaco they drink hot water and then bathe in hot water. The near relatives are considered unclean for a time and are excluded from the village. Before re-entering it they purify themselves by washing in hot water and putting aside the tokens of their mourning (Grubb, *Among the Indians*, p. 44). The Lilloets of British Columbia hold the funeral feast immediately on returning from the grave. The members of the household of the deceased pass the next four days in fasting, lamentations, and ceremonial ablutions. Their hair is then cut, they are painted and oiled, the hair is tied up, and they hold a second feast with more cheerful countenances. A young widower often goes into the forest alone for a year, builds himself a sweat-house, and drives the 'bad medicine' of his dead wife out of his body by repeated sweating or hot baths. A young widow during the whole period of mourning undergoes continuous ceremonial washings or cleansings, for the double purpose of lengthening her own life and rendering herself innocuous to her next husband, who would otherwise be short-lived (*JAI* xxxv. 137 ff.). Among the Thompson Indians the widow or widower, immediately after the death, goes out and passes through a patch of rose bushes four times. Among other ceremonies, a widow washes in the creek and cleans herself with fresh fir-twigs morning and evening for a year. It is significant that any grass or branches on which a widow or widower sits or lies down will wither up (*Jesup Exped.* i. 382, 383).

The meaning of these ceremonies is probably expressed in the belief of the Pima of California, who hold that ghosts are uncanny things to have about; they are liable to touch sleeping persons, which is a summons to accompany the ghost back to the shades (§6 *RBEW* [1908] 194). Hence the Lilloet widow must free herself from the ghost, both for her own sake and for that of her next husband. And the contagious character of the death-pollution is shown by the custom of the Hupa which requires every one who has touched a corpse to cover his head until purification, 'lest the world be spoiled' (Goddard, *Hupa Texts*, 1904, p. 224 n.).

In Europe similar beliefs and practices have prevailed throughout historic times.

The ancient Greeks put at the door of the death-chamber a vessel full of pure water obtained from another house, so that all who came out might purify themselves (Rohde, *Psyche*, i. 219). It is still a very wide-spread custom on the Continent to meet the funeral party, on returning to the house, with water and towel, that all who have taken part may wash their hands before entering. In Istria the water is poured over a firebrand (*Globe*, xcii. [1907] 88). In Central France, two generations ago, the members of the funeral party used to hasten to the nearest brook or pool. In some of the villages so contagious was the pollution held that, if the funeral procession passed any clothes hanging out to dry, the clothes were always washed again (Laisnel de la Salle, ii. 79, 80). In the Tyrol all inhabitants of the house are assembled and fumigated by the house-father before the corpse leaves the house; to be absent from this ceremony is to run the risk of a speedy death. In another district when a dead body is carried out, every one must forthwith wash his clothes, otherwise a second corpse will soon be borne out (von Zingler, pp. 49, 50).

XV. Funeral feasts.—A feast is usually (in the lower culture invariably) a part of the funeral rites. Frequently, indeed, a feast is partaken of in the presence of the corpse, another (sometimes kept up for days, or repeated at stated intervals) on the return from the funeral, and a third when the rites are closed by the second funeral, or re-burial of the bones (§ XXI.), and the mourning comes to an end.

1. Before the funeral.

Among the Gilbert Islanders, when the corpse's toilet is completed, the wailing begins. In the meantime a feast with dancing and songs is prepared outside the hut where the body lies; and every one in turn, after his wailing is over, goes and joins the feast, which lasts for three days before the interment takes place (*Int. Arch.* ii. [1889] 42). In the Cauca Valley, Colombia, the dried corpse was kept in the house for two months before burial, and during the whole of that period

drinking-bouts, dirges, and singing-contests took place in honour of the departed (*Globus*, xc. 805). The relatives and friends of a deceased Araucanian sit round the corpse on the bare ground and weep for a while. Others, weeping, bring food and drink, of which all partake (*Int. Arch.* xlii, Suppl. 105). At the death of an Ainu, a large cup of food or a cake of millet, and water or *sake*, are placed by the head of the corpse after it has been laid out. The corpse is addressed in a farewell speech, and invited to partake, before he quite leaves the survivors, of food and drink such as he loved, 'for this is our good-bye feast made specially for you.' After the food has remained by the corpse for some time, it is taken and reverently divided among the nearest relations. Millet cakes and *sake* are also brought into the hut and handed round to all present, every one, before drinking, offering two or three drops to the spirit of the dead. Part of the millet cake is eaten, and the remainder buried in the ashes of the hearth, a little piece by each person. After the burial these pieces are collected and carried out of the hut to the domestic shrine (Batchelor, *Ainu and their Folk*, Lond. 1901, p. 556). Among the ancient pagan Prussians the body was dressed and placed upright on a bench. The nearest relations then sat down beside it, carousing with beer and wailing (*EL* xli. 800; Tetzner, 28). The ceremony among the Masurs is more elaborate. A messenger is sent through the village to summon to the burial, and the company is usually numerous. On one side of the room where the corpse lies is a long table, the middle of which is occupied by the corpse, while all around it are seats for the men. The women sit at another long table on the other side of the room. After two tedious funeral songs have been sung, schnapps and curd-cakes are served. The schnapps for the men is served in bottles with one glass, out of which all drink in turn; for the women it is served in a bowl with a spoon, and every woman takes a spoonful or two as the spoon and bowl pass round the table. The curd-cakes are handed round in a white apron or a basket (Töppen², 103).

The custom of eating and drinking in the presence of the dead is wide-spread in Europe as elsewhere; further examples will be adduced hereafter.

2. After the funeral.—A feast follows the disposal of the body.

The Ainu mourners return to the hut; the men make sacred willow emblems, called *tnao*, pray, eat, drink, and get helplessly intoxicated (Batchelor, 559). Among the Uriya of Orissa the feast occupies several days (Rice, *Occasional Essays*, Lond. 1901, p. 56). So the pagan Norsemen feasted for three nights. The Masurs, whose ceremony prior to the burial has just been described, on returning find the tables and benches so arranged that men and women, who had previously sat apart, can sit together; and the schnapps is mixed with honey and served in bottles. Sometimes it is burnt before being mixed, and is then called by a special name. At noon a meal of flesh-meat, fish, and groats thickened with honey is served. All day the men remain in the house comforting the bereaved, and likewise comforting themselves with the remains of the food and with drink; nor do they separate until the evening (Töppen², 104). In some places the corpse, before removal, is covered with a table-cloth, and the same table-cloth is put on the table at the subsequent funeral meal (*ib.* 111). In *Ille-et-Vilaine* neither wine, nor cider, nor coffee, nor liqueur appears at the table; the conversation is carried on in a low tone; as the guests finish they retire (A. Orsain, *Ille-et-Vilaine*, ii. [1898] 294). A great contrast is afforded by the Frisian population of the marshes on the right bank of the lower Weser. They hurry from the church to the house, where piles of cakes, long rows of wine-bottles, clay pipes, plates of tobacco, matches, and cigars await the guests, and the feast begins. Hitherto stillness and whispering have reigned in the house. Now eating and drinking know no bounds; soon the tobacco-smoke fills the house, until it is impossible to see three paces ahead; all tongues are loosened; chattering and jesting, laughing and drinking, the clinking of glasses and the general good humour increase from hour to hour (*ZVV* ix. [1899] 65). In various parts of Europe it has been found necessary to put a limit by statute or local regulation to the expenditure on the funeral feast and the other abuses connected with it.

Among many peoples the feast is held at, or even upon, the grave.

The Gijbwaw, who deposit their dead on the ground and cover them with a light roofing of poles and mats, as soon as this is finished, sit in a circle at the head of the grave and present an offering to the dead of meat, soup, or 'fire-water.' This, except a certain quantity kept for a burnt-offering, is consumed by the mourners (P. Jones, *loc. cit.*). In the Nicobar Islands, the day after the funeral a feast is held at the grave 'in the presence of the dead,' at which the relatives and friends bind themselves, according to their degree of kindred with the departed, to abstain from certain food, drink, and enjoyment for a longer or shorter period, the longest terminating with the great feast of the dead, when all the ceremonies are concluded (*Int. Arch.* vi. 25). The Gilyaks burn their dead. When the cremation has been accomplished, they sit round and partake of the flesh of dogs, killed there and then at the burning-place to accompany the soul of the deceased. They eat a portion of it and throw the rest about in all directions, probably for the deceased, afterwards adjoining to the *yurt*, where further refreshments are provided (*ARW* viii. 473). The ancient

Romans used to offer to the *manes* on the ninth day after the funeral at the grave; and the meal was taken there. The funeral meal is still, or was quite lately, taken in the cemetery at Argentière in the Department of the Hautes Alpes, France; and the curé and the family of the deceased sat at a table placed upon the grave itself. As soon as the meal was over, every one, led by the next-of-kin, drank to the health of the departed (*Laisnel de la Salle*, ii. 81). The custom is not merely wide-spread; it descends demonstrably from a great antiquity. Neolithic graves are often found containing remnants of a feast, in the shape of broken bones of animals and traces of a fire.

As already mentioned, the feast following the funeral is by no means always concluded at one sitting.

The ancient Norse were, and the Uriyas are, however, quite abstemious in this respect compared with some other peoples. In the Moluccas, on the island of Keisar, the kinsmen ordinarily feast for twenty days in the house of the dead, and, after enjoying all sorts of delicacies, wind up the solemnity with dog's flesh. The Tanembar and Timorlaut Islanders enjoy from ten to a hundred days' festivities (Riedel, 421, 306). The Lepers Islanders go on 'eating the death' for a hundred days (Codrington, 287); while the Malagasy outdo them all. The length and brilliancy of their feasts are, of course, proportioned to the wealth of the deceased. Rum flows without stint from morning to night; and every one present is more or less plunged in drunkenness. So long as there is anything to eat and drink the feast goes on, and nobody thinks of going away. The funeral feasts of high and noble persons have been known to last for months (*Mad. au xix^e siècle*, 284). Or, on the other hand, the feast may be renewed at stated intervals. The ancient Prussians held their funeral meals on the third, sixth, ninth, and fortieth days (Töppen², 111 n.). The Muhammadan Malays feast on the day of the funeral, and on the third, seventh, and fourteenth days (Skeat, *Malay Magic*, 407). The Chinese of Northern Tongking feast every seven days for a month (Lunet, 89). On the death of a Buriat shaman the funeral feast is held at the burning-place, and repeated on the third day, when his created bones are collected and deposited in a hole hewn in the trunk of a big fir, and the rites are at an end for the time (*JAI* xxiv. 135). This simplicity may be contrasted with the Fijian custom, which requires that wailing proceed in the house for four days after the death. On the fourth day a feast is held, and it is followed by others on the tenth, thirtieth or fortieth (when the tomb is dressed), and the hundredth days (*Anthropos*, ii. 74). Among the Patagonians the wailing lasts for fifteen days after a death. It is accompanied with feasting on horseflesh and drinking-bouts, and is renewed every month under the same stimulating influences, and closed at the end of a year with a three days' celebration (*Int. Arch.* xlii, Suppl. 103).

A feast is often held at the completion of the funeral ceremonies or of the period of mourning (see § XXI.).

3. *Object of funeral feasts.*—The object of these feasts is not simply hospitality to the invited guests; they indeed very often contribute their full share in kind. Nor is the object merely the enjoyment of those who partake, or a natural reaction from sorrow, or ostentation on the part of those who provide them. Doubtless some or all of these impulses do enter into the motives for the frequently repeated and usually extravagant displays, and the gluttony and carousing inseparable from them. But there are deeper reasons for the observance. The above reasons would be insufficient of themselves to account for the practice, shared by civilized Europeans with savage Ainu, of holding the first formal meal in the presence of the corpse, or on the grave, if they would not indeed positively repel it. Moreover, the ceremonial of such a meal is not always that of abandonment to the pleasures of the table and of social intercourse; and, finally, the deceased is himself, even after cremation or burial, regarded as one of the convives. The belief that the dead man is present and joins in the feast is very wide-spread, and is evidenced in more ways than one.

In the German districts of Prussia a seat is left for the dead man, and food and drink are placed for him. The old Prussians used to throw the food and drink destined for him under the table (Töppen², 111 n.). The Thlinket of British Columbia are divided into two intermarrying classes, descendible exclusively through women. When a man dies, his body is carried out by members of his wife's class, and the members of his own class give them a feast. Before distributing the food the name of the dead is pronounced, and a little of the food is put into the fire. By this means he is believed to receive it (§§ RBEW 481; cf. 462). The utterance of the name is a call to its owner to come and receive his portion. In various Melanesian islands, when the name is pronounced, the chief mourner with some

of the food in his hand says expressly, 'This is for you,' and throws or puts it aside for the deceased (Codrington, 271, 282, 284). Among the Chinai or Chinyungwe, on the Zambezi, a portion of the drink and the blood of the slaughtered sheep are poured into the grave, through a hole made for the purpose (*JAI* xlii. 421). The Veddas make an offering to the newly dead, and afterwards consume it themselves (*Rep. Oxford Cong. Hist. Rel.* i. 62). On some of the Moluccas the soul after burial is believed to haunt the neighbourhood of the house. On the fifth day a wooden image of the deceased is prepared, the soul is enticed into it, and a meal of rice, pork, and chicken is presented. The mouth of the image is daubed with some of the food, and the deceased is addressed: 'Eat, drink, and watch over us, that no sickness arise.' After the deceased has finished, the feast of the survivors begins, and lasts all night (Riedel, 395). It is not quite clear from the report whether they partake of the identical food that has been placed before the image; but probably they do. The Cheremiss, on the fortieth day, go to the cemetery to invite the dead man to join the feast and to bring him back. In one district one of the convives impersonates him dressed in his best clothes. He is seated in the place of honour, and is treated as the master; the widow of the deceased addresses him as husband, the children as father. All night he eats, drinks, and dances with the rest. In the intervals of the dances he relates his life in the other world and his pleasure at meeting again those who have predeceased him; he begs them not to sorrow on his account—rather let them oftener repeat the feast of commemoration (Smirnov, i. 143). So, the Kols of Chota Nāgpur provide a meal in the dead man's house, to which they summon a man from the Mahali, a neighbouring mongrel tribe with whom they never otherwise eat. He comes to the banquet, and there represents the deceased. Until he has done this, no meal can be eaten in the house. When the meal is finished he departs, and the house is thenceforward pure, and no longer haunted by the dead man (Hahn, *Kolsmission*, 84). There is a similar practice among some of the North American tribes (*M. A. Owen, Folk. of Musquakie Indians*, Lond. 1904, p. 83).

The ritual character of the meal is rendered obvious also by the fact that very often it consists, wholly or in part, of a special kind of food. Pulse was partaken of by the Romans, and it figures prominently in the funeral feasts of many parts of modern Europe. Cakes and biscuits of various kinds are also used, from Wales to the Volga and the Greek islands. It is probable that this ritual food represents the flesh of the corpse, and is a long-descended relic of funeral cannibalism. The Abbé Dubois, describing the ceremonies attending the cremation of the king of Tanjore, who died in 1801, and two of his wives, informs us that some of the bones which had escaped complete destruction were ground to powder, mixed with boiled rice, and eaten by twelve Brahmans. The object of this rite was the expiation of the sins of the deceased; for these sins, according to popular opinion, were transmitted into the bodies of those who ate the ashes (Dubois-Beauchamp, 366). This is precisely parallel to the old Welsh custom of 'sin-eating,' whereby, when the corpse was brought out of the house and laid on the bier, a man was found whose profession it was to perform the ceremony. A loaf of bread was handed to him over the corpse before the funeral procession started, and a mazar-bowl full of beer with a piece of money (in John Aubrey's time sixpence), 'in consideration whereof he took upon him (*ipso facto*) all the Sins of the Defunct, and freed him (or her) from walking after they were dead' (Aubrey, *Remaines*, ed. 1881, p. 35). In the Bavarian Highlands a different interpretation was put upon a similar practice. Formerly, when the corpse had been laid on the bier and the room carefully washed and cleaned, the housewife prepared the *Leichen-nudeln*, or corpse-cakes. Having kneaded the dough, she placed it to rise on the dead body before baking. Cakes so prepared were believed to contain the virtues and advantages of the departed, and to transmit to the kinsmen who consumed them his living strength, which thus was retained within the kin (*Am Urquell*, ii. 101). Perhaps we may interpret in the same way an obscure rite at the funeral feast of the Man Cóc in Tongking. Before the meal begins, the priest presents to all the relatives in turn a piece of flesh to be smelt. At the meal each of the guests

receives a piece of flesh, and the priest is paid with a leg of pork (Lunet, 245).

Similarly, in a MS of the 18th cent., preserved in the British Museum, it is related of the tribes about Delagoa Bay that they 'generally kill some beast in proportion to the ability of the deceased, and, digging a round hole, they lay the deceased at his full length; when, opening the beast, they take out the paunch yet reeking, and lay it upon the face of the deceased, and, after dancing round the corpse, tear this paunch to pieces and tumultuously eat it. This done, they bend the corpse round while warm and lay him in the hole, casting in some part of the guts (of the slaughtered beast), and closing the hole up; ending this odd funeral with dancing' (*Res. S.E. Africa*, ii. [1898] 460).

Ritual food with another meaning is found among the Baganda, where fowls are, as a rule, tabu to women. The reason they assign for this tabu is that death came into the world by the disobedience of a woman, who insisted on returning to heaven for food for a fowl (see § II.). But at the death of a man a fowl is cooked, and each of his widows eats of it prior to the distribution of his widows and effects (*JAI* xxxii. 48).

The distribution of articles of food to persons, whether relatives, friends, or the poor, who do not share in a formal meal is an extension of the feast.

In Sardinia, on the seventh or ninth day after death savoury cakes are prepared and sent hot from the oven to all the relatives and neighbours, and to all who have joined in the funeral ceremonies; but the funeral supper is confined to the immediate family (*Rivista Trad. Pop. Ital.* i. [1893] 959). At Gainsborough, penny loaves used to be given away at funerals to all who asked for them (*Ant.* xxxi. 331). In Bulgaria the villagers bring fruit for the departed, or for the previously dead, and it is distributed among the children at the funeral (Strausz, 446). Among the Uriyas, on the death of a rich man, copper coins and fried rice are scattered as the funeral procession passes (*Idic.* 55). On the island of Mobila a heap of food is piled up close to the platform on which the body lies, and afterwards divided among those present. Again, a few days afterwards, when the skull has been removed and cleaned and is handed over to the relatives, another quantity of food is provided by the mourners, and distributed to those who have assisted at the funeral. In both cases it seems to be consumed at home (*Torres Str. Rep.* v. 250, 251).

The money doles given to the poor in our own country are probably a commutation of the distribution of food (see Brand and Ellis, ii. 192). The analogous customs in India and elsewhere may be set down to the same cause. Doubtless, however, all have been affected by ecclesiastical influences. The fact that the gifts frequently include lavish doles and entertainments to ecclesiastics, both in Europe and in Asia, is evidence very difficult to gainsay.

Often the feast is merely a farewell banquet—a send-off of one who is unwilling to go—at the termination of which the deceased is formally but firmly shown the door.

Thus about Königsberg, in Prussia, a place is set for the dead man at the feast, in order that he may share it; and, when it is over, the bearers open all doors, that the ghost may depart (*Am Urquell*, ii. 80). The ancient Prussians used to drive the ghost out, saying: 'Be off! you have eaten and drunk' (Tetzner, 23). Among some of the Brazilian tribes, at the end of the feast, the widow, accompanied by the other women, and weeping, used ceremoniously to thank the men for their presence and help, and in the name of the deceased to call for a parting drink, that he might forthwith enter on his journey; for he could not set out while his friends tarried with him (*Int. Arch.* xiii. Suppl. 112). The Tarahumares of Mexico hold three feasts for a man, and four for a woman (see § XVII.). These begin within a fortnight after the death and are increasingly elaborate, each lasting a day and a night. All the mourners talk to the departed. He is told to take away all they have given him, and not to come and disturb the survivors. The second feast is given half a year after the first, the third and largest later still. The sacred cactus, *hikuli*, is thought to be very powerful in chasing away the dead, driving them to the end of the world, where they join the other departed. Hence it is steeped in water and the water sprinkled over the people; and *hikuli*-dancing and singing always play a prominent part in all festivities. At these feasts for the dead other dances also take place; *tesvino*, the national stimulant, is drunk; and the survivors drink with the dead. At the third feast a large earthen bowl full of water is the subject of a ceremony by the shaman, at which he finally lifts it up and throws it in the air. It falls shattered to pieces, and the people dance and trample on the fragments. The function concludes with races by the young people. 'The men have their ball, and as they run they scatter ashes to the four cardinal points to

cover the tracks of the dead. They return rejoicing, manifesting their delight by throwing up their blankets, tunics, and hats, because now the dead is at last chased off.' Not until after the last function will a widower or a widow marry again, 'being more afraid of the dead than are other relatives' (Lumholtz, *Unknown Mexico*, i. 384 ff.).

Elsewhere the motive is stated to be the rest or the happiness of the deceased—often, however, with somewhat more than a hint at the benefit of the survivors.

Thus, among the Bulgarians of Hungary, before the burial a meal takes place, at which every one receives a loaf of bread and a taper wound with a cloth. The tapers are kindled in the house, and then extinguished. The bread is then eaten, and it is believed that the soul is now saved. In a room adjoining that where the corpse is being waked another meal goes forward, 'for the well-being of those who are left behind and that he may slumber for ever' (*Globus*, xc. 140). The Igorot dead in Luzon is admonished not to come and make the survivors sick, but to protect them from other *anito* (*manes*); he is reminded that, when they make a feast and invite him, they want him to come, but that, if another *anito* kills off all his relatives, there will be no more houses for him to enter for feasts. The Igorot are very fond of feasts; it is assumed that death makes no difference in this respect; consequently this last argument is considered very weighty (Jenks, 79). Among the Yakuts the horses or cattle killed for the feast are ridden or driven by the dead to the other world, and so add to his comfort or his state (*JETH* xlv. 208). The Barotsse take the same view. They no longer kill slaves, but they kill and eat the oxen, which will secure to the dead a favourable reception at the hands of his ancestors (Béguin, *Les Ma-Rotse*, 116). So, again, the Melanesian population of Aurora think that, if they do not kill many pigs, 'the dead man has no proper existence, but hangs on tangled creepers, and to hang on creepers they think a miserable thing. That is the real reason why they kill pigs for a man who has died; there is no other reason for it but that.' The deceased and the ghosts of others who have previously died are believed to come back to earth to attend his funeral feast (Codrington, 282, quoting a native account). In Angola it is held that the condition of the dead in the other world will depend upon the amount of food and drink consumed in their *tanbo*, or mourning, which lasts from one to four weeks; and during that period wallings alternate with feasting and merrymaking (*JETH* ix. 16). The same idea may perhaps underlie the pathetic Silesian custom of adorning the house with garlands and green boughs at the funeral of an unmarried, especially of a betrothed, person, and of rendering the funeral meal a complete marriage-feast, to which others than the immediate relatives, mourners, and bearers are invited (*ZVV* iii. 152). Sometimes a more direct spiritual and unselfish motive is expressed. In Bulgaria at the meal taken before the funeral, every one, before drinking, pours a few drops of wine on the ground before the corpse and says: 'God forgive the sins of N.N.' After the burial the priest incenses the room, and then takes his place at the top of the table, saying: 'God forgive N.N.' During the meal, as the guests sit round the table, he from time to time says: 'Eat and drink and say "God forgive N.N."; and the guests accordingly respond in chorus (Strausz, 450, 451). So, in the Lebanon, among the Christian population, a ritual food of boiled wheat, flavoured with spices, almonds, hazel-nuts, walnuts, or pine-seed, is distributed among the relatives, and especially to priests, often at the exit-door of the church. As they take it in passing, they say: 'May God bless him for whom we eat this now.' The same formula is used when it is eaten in the house of mourning (*EL* ix. 8).

XVI. Funeral games and dances.—Funeral games, familiar to us in classic literature, are of very wide distribution. They cannot be separated from dances, for there is no hard and fast line between the two. Many dances are mimic contests, and the ceremonies are by some observers reported as dances and by others as games. Whether dances or games, however, it would appear that the object is the same, viz. to drive away either the dead or the evil spirits to whose influence death is due, and to free the living from the resulting fear—a purpose which in process of decay first becomes divination as to the state of the deceased, and then is explained more simply as for the mere amusement of the deceased or the survivors. Naturally this object is not clear in every reported instance. Insufficient attention on the part of the reporter is sometimes the reason for this; but perhaps quite as often the decay of the ceremonies themselves, and the loss by those who practise them of their real meaning, are as much to blame.

Among the Bongo of the Egyptian Sudan a large heap of stones is erected over a grave, and upon it a number of votive poles are erected, adorned with notches and incisions, with their

forked tops made to resemble horns. The meaning of these poles or stakes is said to have passed from the memory of the inhabitants; at all events Schweinfurth (*Heart of Africa*, Lond. 1874, i. 304), during his twelve months' stay in the country, failed to obtain any information on the subject. However, there is no doubt as to what is done. The entire village takes part in the digging of the grave, in covering it, and in planting the votive poles; and, when this is finished, they all equally shoot at the poles with arrows, which are left where they strike. The Yānādis of Southern India perform, on the sixteenth or some later day after death, a ceremony called *peddadinamu*. A handful of clay is squeezed into a conical mass representing the soul of the deceased, and stuck up on a platform, where the eldest son spreads cooked rice before it, lights a lamp, and burns incense. It is then taken with the rest of the cooked rice to a tank. There the recumbent effigy of a man is made close to the water with the feet to the north. This effigy is anointed with *shikai* (fruit of the *Acacia concinna*) and red powder. The conical image is set up at its head; the rice, made into four balls, is placed near its hands and feet, together with betel and money, and the son salutes it. The agnates then seat themselves in a row between the effigy and the water, with their hands behind their backs so as to reach it. In this way they slowly move it towards the water, into which it finally falls and becomes disintegrated (Thurston, vii. 428). These two customs of widely differing peoples are manifestly directed against the deceased.

A Sioux practice known as the 'ghost-gamble' presents the deceased as engaged in the contest. His effects are divided into many small piles. A man is selected to represent the ghost, and he plays for these piles of goods against all the other players. The playing is with wild plum-stones, which are marked like dice. When the deceased is a man, only men play; when a woman, only women play (*REBEW* 195). Of the real meaning of a contest of this kind we get a glimpse in the custom of the Bulgarians of Hungary, who while away the tedious hours of the wake with games, among others with card-playing to divine whether the soul of the departed is saved or not. At an earlier stage it probably did not merely divine, but determined, the fate of the soul, or its relations with the survivors (*Globus*, xc. 140). In the south of Ireland, formerly, on a similar occasion songs and stories, blind-man's buff, hunt the slipper, and dancing were among the amusements. We are told also that 'four or five young men will sometimes, for the diversion of the party, blacken their faces and go through a regular series of gestures with sticks, not unlike those of the English morris-dancers.' This disguise and these evolutions in the presence or immediate neighbourhood of the corpse, there can be little doubt, were more than mere diversion. Comparison with other customs suggests that the players represented supernatural personages—ghosts or devils (Croker, *Researches*, 170).

This is certainly the case with savage dances in which masked and disguised figures appear. The assumption of the disguise is, according to the almost universal view of savage peoples, enough to cause the performer not merely to represent, but actually to be for the time, the supernatural being represented; and the appearance of such figures is quite common at death-dances.

Thus in the western islands of Torres Straits the performers personify the ghosts of persons recently dead, and they mimic in the dance the characteristic gait and actions of the persons so personified. 'The idea,' writes Haddon, 'evidently was to convey to the mourners the assurance that the ghost was alive, and that in the person of the dancer he visited his friends; the assurance of his life after death comforted the bereaved ones.'

(*Torres Str. Rep.* v. 256). In conformity, probably, with this object, a buffoon is provided, also disguised, whose antics as he follows the other performers are provocative of mirth. But the object is not the same in all savage death-dances. Among the Batak the dance seems to be performed by the *guru* alone. The *guru* in such cases is a woman; it is her business to protect the living against ghosts. She dances both before and after the burial. As the grave is filled in, she lays about her with a stick, not, however, to drive away the ghost, but the souls of living persons—obviously to prevent their getting into the grave, or into the undesirable society of the dead (*ARW* vii. 508).

Among the Beni Amer of Abyssinia, in spite of Islām, women occupy a privileged and almost a sacred position. It is the women who perform the funeral-dance; and one of the sisters of the deceased, having dressed her hair in masculine fashion, parades with his sword and shield while his praise is sung (Munzinger, 327). The act of the performer renders it probable that the object of the dance is prophylactic, and the appearance of a personification of the deceased is intended to do more than give assurance to the relatives of his continued life: it is to mollify him by singing his praise, so that he may do no harm to the survivors. So to ward off evil influences (probably to drive away the ghost) is the object of the dance practised by the Damaras and performed backward and forward over the grave (Kidd, *Ess. Kafir*, 261). On the burial of a chief among the Ibouzo on the Niger the last ceremony is called *i'kwa ota*, 'bending the bow.' The young men, clad in short drawers and wearing caps of monkey-skin, scour the town, brandishing shields and cullasses, as if they were starting on a warlike expedition. With an urgent air and panting as they go they utter a ferocious chant. Advancing in serried ranks they brandish the cullasses over one another's heads, and the clash of the weapons is heard from afar. From time to time they strike their shields and leap to right and left as they chase the evil spirits before them (*Anthropos*, ii. 106).

But there is another kind of dance sometimes performed on these occasions, of which we have had a glimpse in some of the foregoing—the comic or burlesque.

Among the Indians of the Paraguayan Chaco a woman who has lost a child joins in a procession in circuit round a fire made outside the house. Young men appear dressed up as dragonflies, and 'flit to and fro, provoking laughter by their antics and the capital imitation of the insect they present' (Grubb, 45). We are not told here the nature of the pranks played; but in many cases they are certainly of a priapic and what we should call obscene character. The description of the funeral of a king of Loango in the ninth decade of the 18th century reports performances of this kind carried out by players who were clad in feathers and masked with the heads of spoonbills. Similar dances are performed on the island of Yap on various (not necessarily funeral) occasions, especially on the death of a young girl (*Globus*, lxxxvi. [1904] 361); and in the Aaru Archipelago they are presented at the termination of the mourning, as an intimation to the widow that she is now at liberty to marry again, and as an incitement to her to do so (Riedel, 268).

It was such a dance as this that was imputed by legend to Baubo when Demeter was plunged in grief for the loss of Kore; and we may conjecture that it was an archaic Greek funeral rite. Its meaning probably was to drive away death, evil spirits, and mourning by the exhibition of the instruments of life, which are widely used as amulets, and of the process of reproduction. It was not that these called up pleasurable thoughts and memories, and thus operated to banish the unpleasant and sorrowful thoughts. They had a magical force of their own that conquered death and evil. But the burlesque nature of the dance, if not obvious from its inception, must have tended to grow, because it was meant to relieve sorrow as well as to expel death. Any burlesque, therefore, that produced laughter would be dragged in to assist, with the natural result that among many peoples the priapic ceremonies were gradually forgotten and entirely superseded by merely comic antics, or ceased at any rate to play more than a subordinate part in funeral ceremonies.

XVII. Mourning.—Reference has already been frequently made to the state of tabu induced by the occurrence of a death. It remains to consider a little more closely the effect upon survivors connected with the deceased by neighbourhood or kinship.

The whole village or settlement is in the lower culture often attainted by the occurrence of a death. The rule among the Kaffirs of South Africa has already (§ VI. 9) been mentioned, and

it may stand as a type of many others. But it is more particularly the near relatives and those who have been brought into contact with the corpse who are affected by the death-pollution, most of all the widow or widower. Moreover, the period of mourning, and therefore of tabu, varies among different peoples, and according to the relationship of the mourners to the deceased, or his rank, from a few days to many months and even years.

1. Practices.—

On Teste Island, off the coast of New Guinea, death lays the whole settlement under tabu. Dancing is forbidden, and no traveller may enter. A circuitous path must be taken through the surrounding bush in silence (Chalmers, 41). Among the Manganja, on the occurrence of a death, strict continence is required of the chief mourners and the elders of the village (Rattray, 95). On the island of Aurora the wives and parents of the deceased abstain from going out as usual for a hundred days. The restriction is particularly severe on female mourners, who are forbidden to go into the open; their faces may not be seen; they stay indoors and in the dark, and cover themselves with a large mat reaching to the ground. The widow, however, goes out thus covered morning and evening to weep at the grave. All who are in mourning refrain from certain food; the immediate relatives may not eat any cultivated food. They are restricted to gigantic caladium, bread-fruit, coconuts, mallow, and other things which must be sought in the bush where they grow wild. A cord is worn round the neck to indicate mourning and abstinence from 'good food' (Coddington, 231). In the Nicobar Islands the mourning begins from the feast at the grave 'in the presence of the dead.' Two degrees of mourning are distinguished: the lighter, in which all relations and friends abstain until the torch-feast, three months later, from singing, gambling, dancing, adornment of the person, and in the house of mourning from certain food; and the deeper, which concerns the immediate relations (especially the husband or wife), and extends over a longer period until the great feast of the dead, and in which, in addition to avoiding the enjoyments just mentioned, they must abstain from certain foods, from smoking and betel-chewing (*Int. Arch.* vi. 25). The ancient Hurons likewise observed two degrees of mourning: the greater lasted for ten days. During that time the mourners remained lying on their mats with their faces to the earth without speaking, and replying with no more than a simple exclamation to those who came to visit them. They went out only at night for necessary purposes; they did not warm themselves in the winter, or eat warm food. A lock was cut from the back of the head as a sign of the deepest sorrow. The lesser mourning lasted all the year. Visiting was permitted during this period, but no salutations, nor the greasing of the hair. But women, although they might neither do these things nor go to a feast, might order their daughters to do either. Neither wife nor husband married again during the year, 'else they would cause themselves to be talked about in the country' (*GREW* 111, translating *Jesuit Rel.*). Among the Arawaks of South America the nearest relations of the deceased cut his widows' hair short, and the widows laid aside their clothing. Some months later a drinking-feast was held, at which all the men of the village assembled and scourged one another with whips made of the fibres of a climbing plant, until the blood ran in streams, and strips of skin and muscle hung down. Those who participated often died of their wounds (*Int. Arch.* xiii, Suppl. 77, 78). Among the Charruns the widow and the married daughters and sisters of a man each cut a finger-joint off and inflict other wounds on themselves. They also remain shut up alone in their dwellings for two full months, fasting and lamenting. The husband, on the other hand, does not mourn for his wife, nor the father for his child. Grown-up sons, however, remain for two days entirely naked in their huts, and almost without food. Then, having suffered the infliction of certain painful wounds on the arm, the mourner goes forth quite naked into the wilderness, where he rests all night up to the breast in a hole previously dug in the earth, over which he builds himself a little hut, and stays there for two days without eating or drinking. On the third day his friends bring him food and lay it down, hastening away without speaking a word. It is only after the expiration of ten or twelve days that he may return to the village (*Int. Arch.* xiii, Suppl. 72).

In South America, as in many other places, the women especially were made to bear the weight of the mourning observances. In Guiana, mourners laid aside all clothing and adornments (among some tribes even the women went stark naked) and retired into solitude. The women in particular concealed themselves, and ventured out only early in the morning and late in the evening to weep at the grave. Among the Mbayas and Guaycurú the women and slaves were forbidden to speak for three or four months. Among the former they were allowed only a vegetable diet; among the latter general fasting and abstinence were the rule on the death of a chief (*ib.* 73, 75, 76). The Warramunga women in Central Australia fight with one another and cut one another's scalps; and all who stand in any near relation to the deceased, reckoned according to the classificatory system, cut their own scalps open with yam-sticks besides, the actual widows even searing the wound with a red-hot fire-stick. A strict ban of silence is also imposed on women who reckon as wives, mothers, sisters, daughters, or

mothers-in-law of the deceased. They are not released from this ban until the final mourning ceremonies have been completely enacted—a period which may cover one or even two years (Spencer-Gillen¹, 621, 625). Among the Ewhe of Togoland the mourning lasts for six months, that being the time taken by the deceased to reach the kingdom of the dead. He is buried beneath the hut; and for the first six weeks of mourning a widow must remain in the same hut concealed, only leaving it to bathe and for other absolutely necessary purposes. When she goes out she goes entirely naked, with bowed head, eyes bent down, and arms crossed over her breast, 'that no mischief may befall her from the dead man.' In fact, she has nothing so much to fear as the deceased. She carries a club to drive him away, for he may wish to renew marital relations with her, and that would be death. For greater security she sleeps upon the club. She must not answer any call. Beans, flesh, fish, palm-wine, and rum are forbidden to her; and the food and drink that she is allowed must be sprinkled with ashes, to prevent her deceased husband from sharing the meal, in which case she would die. By way of further protection, on the charcoal fire that burns by night in the hut she strews a powder consisting of peppermint-leaves dried and rubbed down, mingled with red pepper. This produces a smoke such as the dead man is naturally averse to encountering. A man undergoes similar seclusion on the death of his wife, but only for seven or eight days. In Agué the widows are not let out of the dead-hut until after six months; and even then they must submit to tedious purification ceremonies before they are quite free (*Globus*, lxxii, 22, lxxxi, 190).

Among the Matsé tribe of Ewhe the mourning for the oldest man or woman in the family lasts from five to seven months, for others one to two months. The entire period does not last beyond a year, unless in case of mourning by a spouse who lived happily with the deceased, and who may choose to mourn for another year. For a widow the restrictions are very severe. She must sleep on the mat on which the deceased lay until his burial; she must remain in a dark part of the hut; instead of on a stool she must sit on a stone; the clothing must be made of similar stuff to that in which the corpse was buried; she may not put on any other clothes at midday or evening; she may greet nobody; she may talk with nobody; she may not walk through the main street of the village; if she has occasion to go to see any one she must steal round by a path on the outskirts of the village; she must stay in the hut, and is not allowed to leave it often; when she goes out she must put a maize-cob (?) between her toes; lastly, if she has things to sell she must not haggle over the price, for if the wares she has for sale remain on her hands it will be unlucky, and, when her mourning comes to an end and she wants to sell anything, nobody will buy. It is said that if a widow omits to observe all these customs strictly the mourning will stick to her and eat her up, with the consequence that she will go crazy and never cease chattering. A prospect so terrifying causes the tabu to be strictly observed (Spieth, 754).

We have referred in an earlier section (§ VI. g) to the restrictions on cultivation, hunting, and other kinds of labour.

In Europe, death tabu has been and still are practised. Among the ancient Romans the touching of the corpse entailed pollution, and the near relatives and the house itself were deemed impure, requiring ceremonies of purification. In the south of Italy in modern times the impurity is not such as to prevent friends from paying visits of condolence, which indeed they are required by etiquette to do. But they must be received by the mourners seated on the bare floor. No fire can be lighted in the house for several days; hence the mourners are dependent on their friends for food. A lamp, however, is kept alight in the death-chamber, probably for reasons already considered. The men do not shave their beards for a month (*Ramagge, Nooks and By-ways of Italy, Liverpool, 1863, p. 72*). In Malta no fire used to be lighted for three days; when dinner was kindly sent by some relative or friend, the mourners ate it sitting cross-legged on the floor; they were debarred from the ordinary use of the furniture. Women were secluded in the house for forty days, but men went out on the seventh day with their faces unshaven (*Busuttil, Holiday Customs in Malta, 181*). In ancient Athens all relatives who were reckoned within the *oikos* were affected by the defilement of carrying out a corpse and assisting at a funeral; and after the funeral the house could not be entered again by the dead naturally thus polluted, at any rate not by women (*Seebohm, Gr. Tribal Soc., Lond. 1895, p. 79*). Although this particular prohibition does not seem to be observed in Greece now, there are others pointing to the same region of ideas. After a death the house is kept unswep for three days, and it is imperative that the broom then used be burnt immediately. The men allow the beard to grow; and during mourning the sweetmeats usually brought in before the coffee to entertain visitors are omitted. In Maina the men scratch their faces with their nails, and the women cut off locks of hair to fling into the grave. In Northern Greece the women dress in white and keep the head uncovered, with the hair hanging down (*Rodd, 126*). In Bulgaria, on returning from the funeral and before the funeral meal is set, the chips caused in making the coffin are collected and burnt, in order to burn the sickness remaining in the house—a ceremony of purification. For forty days the men neither shave nor cut their hair; the women neither oil their hair nor dance the *Boro* for a year. Before the burial and the day after it no one in the house works, on peril of having chapped hands (*Strausz, 451, 452*). In various parts of Germany nothing must be lent or given out of the house before the funeral, and only the most necessary work

must be done. For some time after the funeral there must be no washing in the house, and the mourning clothes must not be changed on a Sunday (*Wuttke², 461, 467*). In the North Riding of Yorkshire the fire was put out at the moment of death and not lighted again until the body was carried forth. In Cleveland, however, this seems to have been disregarded in favour of the requirement to keep a fire lighted for purposes referred to above (§ X. 6) (*Gutch, FL Yorkshire, 1901, p. 800*).

2. *Garb*.—Everywhere mourning garb is an essential part of the observances. Primarily it seems intended to distinguish those who are under the tabu. For this reason it is usually the reverse of the garb of ordinary life. Peoples who wear their hair long cut or shave it; those who habitually cut or shave it allow it to grow. Those who paint omit the painting. Those who braid their hair unbind it and wear it loose. Those who wear clothing go naked, or wear scanty, coarse, or old worn-out clothes. Ornaments are laid aside or covered up. Those who habitually dress in gay clothing put on colourless—black or white—garments. Ainu mourners at a funeral wear their coats inside out or upside down (*Batchelor, 106*). Among the Bangala a man sometimes wears a woman's dress in token of sorrow (*JAI xxxix, 453*). Peoples who ordinarily cover their heads uncover them, and *vice versa*. Women, especially widows, cover themselves with a veil, and hide in the house—a practice pointing probably to the contagiousness of the tabu. But mourning garb is more than merely distinctive: it is, like other mourning rites, intended to express sympathy for the deceased and grief at his loss; it is intended to call forth pity, to avert the suspicion of foul play on the part of the mourner, and to deprecate the anger or ill-humour of the deceased at his separation. It has sometimes been suggested that there is a further motive, namely, the desire to escape by means of disguise the persecution of the deceased. A careful examination fails, however, to disclose sufficient evidence in favour of this interpretation. Protection is often held to be needed; but it usually takes a different form. The Charrua mourner is armed with a stick, the Ewhe widow with a club. And various other means are taken—fires or lights, incense and foul smells, exorcism—to drive off the ghost or to hold it at arm's length. In short, open war rather than guile is the favourite defence. But so protean are human motives that it is impossible to aver that in no case is disguise the intention.

3. *Duration*.—The death of a member of the community inflicts a wound not merely on the individual relatives and friends, but on the community as a whole. His place knows him no more; and time is required to fill the void thus created and to heal the wound. As we have seen, he is regarded as still in a sense living, and even active, though his activities are uncanny. They are at first likely to cause injury to the survivors, from his bewilderment and resentment at being cut off from the relations he has hitherto sustained with the society of which he has been part. The efforts of the survivors are, therefore, directed to soothing him, to guiding his footsteps to the permanent home of the dead, and smoothing his reception there. There he will find those who have gone before, he will be admitted to their society, the counterpart in the unseen world of the earthly community he has left. But the home of the dead and his place in it are not reached all at once. Until he is admitted, he is not at peace, and the survivors are subject to the risk of visits from him. Rather, he hangs about them, the contagion of death is upon them more or less heavily, according as they were more or less nearly connected with him in his lifetime, or according to the length of time that has elapsed since the death. The length of the period of tabu thus set up varies among different peoples. Our records

are very imperfect, and accurate statistics are not available. All that can here be done is to note a few examples showing how it is reckoned in some typical cases.

In the Babar Archipelago mourning lasts to the next new moon, and is brought to an end by bathing in the sea (Riedel, 363). Among the Lengua of Paraguay the relatives cut their hair, and the mourning lasts until it has grown again (*Int. Arch.* xiii., Suppl. 76). Among the Musquies it lasts for thirty days. At the end of that time the mourners wash and paint themselves, relinquishing the old torn garments they have been wearing for whole ones, and a feast is set. The deceased is summoned, and a representative appears, who joins in the festivity. He is called the 'ghost-carrier.' When sunset is near he departs toward the west with an escort of young men. It is believed that he carries the ghost to the Happy Hunting Ground, and on his return he is called by the name of the dead man whom he has represented (Owen, *FL of Musquies Indians*, 80). In the New Hebrides the mourning lasts for 100 days (Codrington, 281). A year is supposed to be the period of mourning among the Agni of Baoulé on the Ivory Coast; but very often it is reduced to 6 or even 3 months, except for the widows, who must always mourn the full year. Although funeral ceremonies are proceeding during this period, the actual burial may be postponed for years (Clozel and Villamur, 116). In Korea the length of mourning depends on the degree of kinship. For father, mother, husband, adoptive parents, or first-born son, it is 27 months, though nominally 3 years; for relatives under 19 years of age it may be as little as 3 months (*JAI* xxv. 342). Among the Ewhe the survivors mourn in the hut for eight months. A feast is then held, the remains of the food when it is finished are thrown away, and the mourning is over: 'they say they have to-day sent the dead to his brethren—those who have gone before' (Spieth, 258). Among the Dayaks all the kindred are 'unclean' for a short period, from 3 to 7 days; they can pay no visits, and are restricted in diet, and so forth. The house also is 'unclean.' Then fowls are slaughtered, the mourners and the entrances of the house are daubed with the blood, and so purified. But for the immediate relatives—husband, wife, and children—the tabu lasts much longer; nor are they released until they have held the *tiwah*, or final feast of the dead, which gives the soul of the deceased admittance into the city of the dead, and is a costly solemnity to be provided for out of his estate. During that period they must wear mourning garb, and neither widow nor widower can marry again; hence the *tiwah* is held as quickly as possible (*Int. Arch.* ii. 182). The Warramunga mourn until the body has decayed away, and left nothing but bones—a process extending over a year, or even two years. The bones are then taken down from their temporary resting-place in a tree and, with one exception, put into an ant-hill as a permanent burial-place. The one exception is the radius of one of the arms. It is brought to the camp, where wailing and gashing of the limbs are repeated. After certain ceremonies the bone is solemnly smashed and the fragments buried and covered with a stone. As soon as this has been done, the spirit of the dead goes back to the camp of ancestral spirits of its totem, and there awaits its turn for re-incarnation. The mourning is over (Spencer-Gillen^b, 530 ff.). Among the Dieri, who hold that the deceased haunts the grave, when his footsteps are no longer to be traced the surviving spouse washes away the ochre from his or her countenance, smears it with a fresh mixture of ochre and fat, and is free to marry again (*Globus*, xevii. [1910] 57).

4. *No mourning.*—Attention has been drawn to the common rule that the mourning tabus weigh more heavily on the women than on the men. The necessity of the labour and vigilance demanded from the latter for the provision of food, and for protection from wild animals and human foes, may probably form at least an excuse for their comparative exemption. Instances of total exemption are not quite unknown. In ancient Greece it is said the men of Keos wore no mourning garb (Rohde, *Psyche*, i. 257 n.); and the same statement is made of the inhabitants of some of the Moluccas (Riedel, 395). Where there are no outward signs there is probably (not certainly) no tabu. In the district of Kita (French Sudan), however, we are told, mourning is almost unknown for either sex. When a married woman dies, her sister is offered to the widower, even before the funeral is over; and the widower often marries again in eight days, though some wait longer—a month or two months; while others take a concubine at once. If a man dies, his widow may marry as soon as she likes, unless she is pregnant, when she must wait until the child is born (Steinmetz, 156). In Seguela, on the Ivory Coast, the burial and funeral dance take place the same day, and there is an end of the matter: mourn-

ing is quite unknown (Clozel and Villamur, 337). Among the Meo of Northern Tongking the funeral rites last for three days, during which the only sign of mourning is that the hair is untied and allowed to hang down upon the shoulders. There are no other mourning customs and apparently no tabus. For a day or two some food is laid on the grave for the deceased, and then he is forgotten (Lunet, 318).

XVIII. Purification of house and village.—In spite of the elaborate precautions to prevent the dead man from returning (§§ IX. 5; XI., XII.), he is often thought to be present in the dwelling after the actual disposal of the corpse (§ XIII.). Accordingly, either after the body has been removed or at the completion of the ceremonies (which may be long subsequent), measures must be taken to purify the place and remove the tabu. This is accomplished by driving away the ghost.

At the last of the funeral feasts of the Tarahumares the deceased, as we have seen, is driven away. Three feasts are required to get rid of a man, but four to get rid of a woman, because she cannot run so fast, and it is therefore harder to chase her off (Lumboltz, i. 387). Noise is a potent means of driving away ghosts, and indeed all inconvenient and hostile spirits. For, though often dangerous, they are all fortunately not only easily deceived, but possessed of very weak nerves. In these ceremonies there is often no clear distinction drawn between the different kinds of spirits, all alike being liable to be bluffed and tricked and frightened by the same means. It is impossible to say whether the guns universally fired in West Africa at Negro funerals are directed against the ghost or against other spirits. In South America the Macusi fire before the hut in which the corpse is lying, to scare off both the ghost and the evil spirit that has caused the death (*Int. Arch.* xiii., Suppl. 88). Drums, trumpets, musical instruments of all kinds, shouts, and yells are all very commonly employed. Among the ancient Greeks, brass was beaten to drive away spirits (Rohde, *Psyche*, ii. 77). In the Tyrol an approved method to banish a ghost is for the householder to collect his keys and jingle them. He can thus drive the ghost to the boundary of his property. Over the boundary, however, he must not step on peril of being torn to pieces (Zingerle, 57). Many of the funeral dances, as already mentioned, have the same intent.

In various parts of Europe, especially among Slav populations, the house is solemnly swept out after the funeral. Among the Dayaks, after the *tiwah*, or final feast of the dead, the priests take a besom made of the leaves of certain plants, moisten it with blood and rice-water, and asperse all who have taken part in the feast and everything in the house, 'to sweep away the pollution.' The priests then start in procession for the river. As they set out, the others beat the walls and floor, and the priests invite all causes of ill-luck to mount on them; they pretend to totter beneath the weight; and arrived at the river they load little floats with the misfortunes thus cleared out, and send them to the great black ship in the middle of the sea, where the king of the small-pox dwells (*Int. Arch.* ii. 201). When a death among the Thompson Indians of British Columbia took place in a winter house, it was purified with water in which tobacco and juniper had been soaked, fresh fir-boughs were spread on the floor every morning, and tobacco and juniper placed in various parts of the house. But, if more than one death took place in the house, or if a death took place in a summer house, then the house was burnt (*Jeune Exped.* i. 331). The ancient Greeks employed black hellebore in the purification of their houses and flocks (Rohde, ii. 73). An 'evil death' requires special ceremonies of purification, as among the Ewhe, where the whole village is defiled by a suicide, and the kindred are called upon to pay special compensation for the defilement and the risk of drought (Spieth, 274, 276; see § VII. 2 (c)).

XIX. Destruction or abandonment of house and property.—The purification of house and village presupposes a settled life and a certain advance in civilization. At a lower stratum of culture, where the huts are of little value and easily erected, or where economic, defensive, or sentimental reasons have not as yet rooted the population to one spot,

the house is destroyed or abandoned, or the whole settlement may be quitted and a new site chosen. In many of such cases, it may be noted, the deceased is either buried beneath the hut, or left unburied within it.

The Australian natives commonly remove the camp when a death occurs. Among the Bantu it is usual only to burn or pull down the hut of an ordinary person; but if a chief dies the entire kraal is quitted, at all events for a time; among some tribes it is burnt down. The reason given by the Ngoni for abandoning the house is not that the ghost of the deceased always lives there, but that it may return to its former haunts (Elmslie, *Among the Wild Ngoni*, Edinb. and Lond. 1899, p. 71). The coast is therefore left clear for it. Similar customs are reported of various tribes of Negroes, North and South American Indians, the Andaman Islanders, the Karens, the Yakuts, the Kamtchadales, of many of the peoples inhabiting the great Eastern Archipelago and the Melanesian Islands, the Central Eskimo, and others. The Ainu assert that it was customary when the oldest woman of a family died to burn down the hut, because they feared the ghost would return malignant and bring evil upon them. She is now given a tiny hut to herself, and when she dies it is burnt (Batchelor, 190). In earlier times at the death of a Japanese sovereign the capital was removed to a fresh site (Aston, *Shinto*, 1905, p. 252).

A relic of the custom of destroying the house is found in some of the Nicobar Islands, where the supporting post is cut through, or so severely notched that it requires renewal (*Ind. Cens. Rep.*, 1901, iii, 209). The Chereemis, more economical still, when the coffin is placed on the cart, pray the dead man not to take away his house, but to leave it to his heirs (Smirnov, I, 137). A relic of the abandonment of the house may perhaps be found in the modern Roman custom by which 'the family, if they can find refuge anywhere else, abandon the house and remain away a week' (Hare and Baddeley, *Walks in Rome*, 1909, p. 433, quoting Story).

At an early stage of culture all the property of the deceased was buried with him or destroyed at his death. Either the custom or relics of it are reported from every quarter of the globe. Its object seems to have been not merely to give the property over to the deceased, that he might enter the spirit-world with all his earthly possessions and state, but to prevent his haunting them to the discomfort of the survivors. Originally, no doubt, it was to get rid of the death-pollution, for the practice often extends beyond his property to all objects associated with him. On the Melanesian island of Bougainville a man's work and its produce are regarded as the supreme manifestations of his personality, inseparably linked with their author (*ZVRW* xxiii, [1910] 351). Doubtless the same view was taken elsewhere; and it accounts for the destruction of his crops and fruit-trees so constantly reported from the East Indies and Melanesia. Naturally his garments and bedding, where such things are in use, are impregnated with his personality, are indeed a part of himself. The superstitions connected with witchcraft afford abundant evidence of this.

In Europe the Votiks throw away in the forest or into a lake all the clothing of the deceased (*RTF* xiii, [1898] 254). In Worcestershire it is ominously said: 'The clothes of the dead will not wear long' (*FL* xx, [1909] 346). In Lincolnshire it is believed that, even though they be put away, they will rot as the body decays in the grave (*Antiquary*, xxxi, [1895] 332). In the French Department of Ille-et-Vilaine it is believed that everything belonging to the departed will soon disappear: his clothes, despite all that can be done to preserve them, will be promptly eaten by maggots; his cattle will die by accident or disease, if not sold to the butcher (Orain, i, 299). From the Hebrides to the Caucasus the bed on which death took place is burnt or thrown away (see § IV, 3).

A custom so hostile to the growth of civilization and to the individual greed of survivors could not maintain its ground. Hence all sorts of compromises to satisfy the consciences, the fears, the affection, and the avarice of the survivors.

Among the Hareskins of North America part of the clothing is distributed among the relations, part interred with the body, and the rest tabued and burnt, or thrown into the water or to the winds (Petitot, 272). In some of the villages of Serang a part of the sago-plantation of the deceased is destroyed; in others a tabu is merely laid upon it, redeemable by a third person on payment of a large gong, a sarong, and ten dishes. He thus appropriates it, and afterwards gives it back to the blood-relations (Riedel, 142, 143). In others of the Moluccas the dead man is allotted a share of the trees of various kinds in his plantation, and these are cut down; the rest remain to the survivors (*ib.* 380, 394). A similar practice prevails on the Tami

Islands. There the canoes are too valuable to be destroyed; accordingly a few chips are cut off them, and a figure-head detached (*ZVRW* xiv, [1900] 337). The same principle is applied in Malta, where the hair is cut off the tail of every horse in the stable. The hired mourners cut away branches of such vines as form arbours in the courts, disturb the furniture in the house, overturn the flower-pots in the windows, break some of the ornamental furniture, and, carrying the fragments to a retired spot, throw them into a cauldron of boiling water, in which they mix soot and ashes, afterwards staining all the doors in the house with the liquid (Busuttil, 130, 128). Among the Kirghiz no one will mount the steed of a dead man without first reversing the saddle, with the object, no doubt, of unhorsing his former owner (*ZVY* xii, [1902] 16). The Sioux used to gamble away the effects of the dead in a ceremony called the 'ghost-gamble,' in which the dead man himself was conceived to take part (*IRBEW* 195); or his effects were given away among those who took part in the funeral rites, even though the family might be left destitute; and one or more of his horses was shot and placed under the burial-scaffold (*ib.* 159, 164). The Nicobarese, before appropriating anything belonging to one who has died, require it to be purified by the conjurations of a *minloen* (priest or sorcerer) (Featherman, *Races of Mankind*, II, [1887] 250).

Many peoples, however, consider it sufficient to delay the appropriation and division of the goods for such a period as is requisite to elapse before the departed attains his final destination in the land of the dead—a period often coinciding with the completion of the mourning rites. During this time the property, like the widows, remains under tabu.

In New Georgia the final rites are performed and the bones disposed of at the end of 100 days. Not until then can the property be touched (*JAI* xxvi, 408). Among various Bantu tribes nothing is touched until the mourning is at an end. Among the Minangkabau Malays of the Padang Highlands in Sumatra, where the husband goes to reside with his wife in her village, his goods are divided the day after his burial, because his soul at once goes back to his own family village. When the wife dies, on the other hand, the husband has the right to remain in the house for 100 days. During that time the marriage-bond is deemed not to be entirely sundered, and he has common use with his wife of her property. On the 100th day she departs for good to the land of souls. The property can then be disposed of (*Bijdragen*, xxxix, [1890] 71). The Thompson Indians of British Columbia placed a portion of the property of the deceased in or near his grave. Such as was not so given up to him was divided among his relatives. But no one could with impunity take possession of his bow and arrows, leggings, or moccasins; nor was it safe for any one who had not a strong guardian-spirit to smoke his pipe. Clothing taken was washed or put for some time in running water, and afterwards hung out for several days; while the traps and snares of the deceased were hung up in a tree a considerable distance from human habitation or graveyard, for a long time before being used (*Jesup Exped.* I, 331). In Europe, among the Sorbs of the Spree Valley deep mourning lasts for four weeks. The inheritance remains untouched until it comes to an end; though the nearest relations are mourned for a year (Tetzner, 325).

XX. Tabu of name.—Many peoples avoid mentioning the dead by name, or even prohibit it. In some cases the intention seems to be to forget the deceased. This is expressly stated of the Arawak, Salivas, and other South American tribes. But the intention to forget probably arises from fear.

The Insular Caribs feared the souls of their forefathers as evil spirits, and never named them. The Guaycurús and Lenguas not only never mentioned the name of the deceased, but on the occasion of a death the survivors changed their own names so as to baffle the dead man (or death, or the evil spirit which had caused the death) when he came again to find them. Among the Guaycurús, if the name of the dead was mentioned in the family but the penalty was death, or at least a heavy fine (*Int. Arch.* xiii, Suppl. 99). The Yabim of New Guinea avoid mentioning the names of the dead, lest their ghosts may be disturbed at their occupation in the forest of eating otherwise uneatable fruits, and their anger be thus incurred (*ZVRW* xiv, 336). Among the Lilloet the name of a dead person must not be uttered for a year or more, 'not so much out of regard to the feelings of the surviving relatives, as on account of the mystic connection which is supposed to exist between names and their owners. To utter or use the name of a dead person is to affect and disturb his ghost or spirit, and draw it back to its earthly haunts. This is inimical both to the ghost itself and to the person using the name, and thus attracting the ghostly influence.' But time removes the danger (*JAI* xxxv, 138).

It should be observed, however, that this widely spread tabu is not inconsistent with the cult of the dead. On the islands of Nossi-Bé and Mayotte near Madagascar a king at his death becomes sacred; he is believed to have taken his place among the gods; yet no one in the district dares henceforth to utter his name (Steinmetz, 383). So

among many Bantu tribes, where ancestor-worship is the religion, the name of the dead and all similar sounds are tabued—a custom that frequently leads to considerable, though usually not permanent, changes in the vocabulary. This extension of the rule of avoidance is not confined to the Bantu: it is found in other parts of the world.

The tabu of the name of the dead is very well known, and need not be further illustrated here. If widely spread, it is not universal. Among the ancient Egyptians the opposite rule prevailed. The great desire of an Egyptian was to continue his ghostly existence. To be remembered by the living was one means to this. Accordingly the statue of a high official under Psammetichus I., in the Museum at Berlin, bears the following remarkable sentences in the course of its inscription: 'May the gods of this temple recompense you if you pronounce my name! He whose name is pronounced lives; and if another see that you act thus towards me, he will do the same for you' (*RHR* lix. [1909] 185). There is in the contemplation of many peoples more than a mystical connexion between the name and its owner; the name is part of its owner, and while it lives the owner too survives.

XXI. Second funeral. Ossuaries.—Among a very large number of peoples who practise earth-burial in one form or another, the ceremonies are not completed until the bones have been taken up, cleaned, and put into a place of final deposit. In many of the cases of sub-aerial deposit, also, the bones are collected at the end of a certain period and put into the tribal or local ossuary. Until this rite has been performed, the dead man is not at rest, and in many cases the mourning is not at an end.

1. Decay or destruction of the flesh.—Not merely is the journey of the soul often long and difficult: it is bound to the body until the process of decay is complete. Indeed, so refined a conception as that of the soul immaterial and independent of the body is beyond the imagination of the lower culture.

A Wonkatjerri man told a missionary in South Australia that in the grave the flesh separates from the bones; the bones that remain are the *kutchi*, the ghost; while the flesh goes as *mingara*, the soul, to heaven, where it reveals itself as still living, by thunder and lightning (*Globus*, xvii. 56). So at the other end of the world the Hurons called the bones of the dead *atsiken* (souls), believing 'that we have two souls, both divisible and material, and yet both rational; one leaves the body at death, but remains, however, in the cemetery until the feast of the dead [see below], after which either it is changed into a turtle-dove, or, according to the more general belief, it goes immediately to the village of souls. The other soul is attached to the body; it marks the corpse, as it were, and remains in the grave after the feast, never to leave it unless it be born again.' 'This is why they call the bones of the dead *atsiken*. "the souls"' (*S RBEW* 114, translating *Jesuit Rel.* 1636). The Toradjas of Celebes hold that the soul cannot enter the village of the dead so long as the body stinks, that is, until the soft parts have perished. 'So long as the soul [*sic*] stinks it is still a human being (*Mensch*), and the dwellers in the land of souls will not admit it into their territory' (Kruif, 328). The Caribs likewise were persuaded that the dead did not go to the land of souls so long as the flesh remained. Rites performed by the Betaleo of Madagascar are intended to facilitate putrefaction and the transformation or re-incarnation of the dead in a snake called the *fanany*, supposed to issue from the decaying corpse (van Gennep, *Rites de passage*, 1909, p. 213, *Tabou et totémisme à Madagascar*, 1904, p. 277). In the Aaru Archipelago all the possessions of the deceased are collected on his grave, and his relatives must lay food there every day, until all the flesh has rotted away from his bones and they can be ceremonially transferred to the family burial-place. The transfer is preceded by a feast, and the ceremony already referred to which gives formal authority to the widow to marry again (Riedel, 187, 288). It is obvious that, until the flesh has perished, the soul is still within reach; it has not yet entered its final home; it clings to its property and must be duly fed like a living man. So, too, the Greek Church in its burial service prays that the body may 'be dissolved into its component elements.' Three years after burial the body is disinterred, and, if found thoroughly decomposed so that the bones can be removed to the ossuary, it is looked upon by the people as a certain proof that the soul of the dead is at rest. Partial or total absence of decomposition indicates, on the other hand, the sinfulness and sad plight of

the departed. A common curse accordingly is 'May the earth not consume your body!' (Abbott, *Maced. Folk.*, 210; Rodd, 127). This is in curious contrast to the belief in the Western Church, as well as among the Chinese and other nations of the East, that total absence of decomposition is an infallible mark of saintship. Such contrasts are, however, by no means uncommon in all kinds of superstition.

The process of decomposition is, therefore, frequently assisted by artificial means. Some examples of this have already been incidentally given (§ VI. 6). Thus the deceased is the more speedily dismissed to his final destination, alike to his comfort and that of the survivors. A different motive, however, sometimes underlies the practice. In the Solomon Islands the souls of chiefs and others who are held to have *saka* (to be hot with spiritual power) become ghosts of power. At Saa, on the island of Malanta, common people are buried in a common burial-place, and their flesh is allowed to decay in a natural way. But it is believed that even a ghost of power is weak so long as the corpse continues to smell. Hence water used to be, and still is in some places, poured over it to hasten decay. Exposure, sinking in the sea, and cremation—all of them occasionally practised—probably owe their use to the same motive. For, by taking the skull, hair, or nails of the corpse, the wonder-working power—what elsewhere is called the *mana*—of the ghost is then secured for the benefit of the survivors (Coddington, 260 ff.).

Nor is it only by such indirect means that the final ceremony is accelerated. Some of the South American tribes wait no more than ten to fourteen days. After the lapse of that time they disinter the body, strip the flesh from the bones, and after an elaborate ceremony re-bury the latter (von den Steinen, 458, 505; *JALFL* xv. [1902] 290). The Choctaws were said to have 'a set of venerable old gentlemen, with very long nails, whose business it was to tear the flesh off the bones and burn it with the entrails preparatory to the final deposit of the bones in the bone-house' (*RBEW* 168, 169). So in South Teteon, on the island of Timor, a few days after the death of a king the bones are separated from the flesh and other soft parts of the body; and not until nothing but the skeleton remains does the wailing begin, 'for it is only then that the dead is dead indeed.' The skeleton is accorded a funeral suitable to the rank of the deceased; the flesh is simply thrust into a hole (Kruif, 580).

Where the decay of the flesh is left to natural means, the length of delay before the bones are finally disposed of differs very widely among different peoples in different climates.

The Kukis of Manipur are satisfied with the decomposition of 'a month or so': they wrap what remains in a new cloth and bury it (*JALFL* xxii. 305). 'Fifty or a hundred days' suffice in the Banks Islands (Coddington, 287). Few tribes elsewhere exhumate their friends in less than a year. Many wait two years or more. The Chinese of Tongking after three years take the bones from the coffin, enclose them in jars, and re-bury them in the grave, over which a small mausoleum is erected, or in columbaria on the hillsides (Lunet, 90). There is some evidence that a similar custom was formerly followed in China itself (de Groot, iii. 1070). Among the Bulgarians the parents of a dead child after three—in some districts, after as long as nine—years dig up the bones, wash them with wine, and let them lie for a whole year in the church before they are again buried (Strausz, 458). Throughout Europe it was customary during the Middle Ages and later to dig up the bones after a certain period and place them in a charnel-house. This custom is usually ascribed to want of room in the churchyard. The explanation is hardly sufficient: the origin of the custom is more likely due to causes considered here.

2. Feast of the Dead.—The tendency to postpone the final ceremony, where it involves exhumation or the collection of exposed bones or of ashes, is accentuated among small but closely organized communities by making a common ceremony, often called the Feast of the Dead, for a number of the departed. Even among the Bororo of Brazil, where the exhumation is so speedy, the relics of one person cannot be disposed of alone: one dead man must wait for a second, and the two leave the village in company (von den Steinen, 510). In these cases there is usually a common grave or place of deposit. The stock example is that of the Hurons, who every twelve years used to dig up the bones of those who had died since the last Feast of the Dead. The bones were first of all cleaned. If corruption had not finished its work, all the remaining flesh was stripped off and burned, unless the body was so newly buried as to be practically whole. The bones were then wrapped in sacks or blankets, covered with rich robes of beaver-skin, taken severally into the cabins, and mourned over. They were afterwards brought together, and a feast was held in their presence, with funeral games. On a subsequent day they were taken to a large pit, where they were all buried together, with much

ceremony and the distribution of gifts (5 *RBEW* 112). We need not determine whether these rites are more elaborate than those of other nations, or whether they are only more vividly described. It is certain that similar rites take place elsewhere. The Khasis, who burn their dead, deposit the ashes in small cairns. Thence they remove them to larger bone repositories, of which one belongs to every branch of a clan. The contents of these repositories are periodically, after the settlement of all outstanding disputes between the members of the clan, removed, with sacrifices, dancing, and other rites, to the common sepulchre of the clan, a massive stone building, where the remains of all the departed members of the clan eventually rest (Gurdon, 140). Corresponding ceremonies are observed elsewhere in India, and are common in the East Indian islands. They economize the energies of the survivors, and concentrate them on one occasion; but their chief value is to bring home to the members of the clan or community their common life, with its common sorrows and joys—in a word, their unity among themselves and with their dead.

3. *Destination of the remains.*—The final destination of the remains, like the preliminary disposal, is by no means the same everywhere. This will have been inferred from the examples just cited.

Various Australian tribes, after carrying the bodies or the bones about with them for a time, either bury or deposit them in the branches of trees (Howitt, 467, 470, 471). The Choctaws of Carolina had a common bone-house (1 *RBEW* 169), which doubtless was regarded as a sacred building. The name of temple is expressly given by older writers to the repositories of the dead Indians of Louisiana and Virginia, where religious rites were constantly performed, at all events to departed chiefs (1 *RBEW* 124). Of the natives of Sofala, in S.E. Africa, it was reported by the old Portuguese writer, João de Barros: 'After the flesh of the body is consumed they take the bones of their ancestors or descendants, or of the wife who bore many children, and keep them, with signs to denote whom they belonged to, and every seven days in the place where they keep these bones, as in a garden, they spread cloths and lay a table with bread and boiled meat, as if they were offering food to the dead, to whom they pray,' afterwards eating the food thus offered (*Rec. S.E. Afr.* vi. [1900] 113, 269). The Caribbuns hung the cleaned bones in a basket from the rafters of their dwellings (Boyle, *Archæol. Rep.*, 1903, 142); and in the Banks Islands, while the bones of a favourite son were hidden in the bush, some of them would be hung up in the house (Coddington, 267). Among the Andaman Islanders the relatives weep over the bones, each of them taking a bone, and the nearest relative taking the skull and lower jaw, and carrying them about for months suspended from the neck. Sometimes the bones are bound to posts of the hut (*Trans. Ethnol. Soc.*, new ser., ii. [1898] 37).

4. *Object of the practices.*—The rite of exhuming or collecting the bones and making a permanent disposition of them is thus generally connected with, or has for its object, the definitive severance of the dead from the society of the living, and their union with the fathers in the life beyond. The ceremonies for this purpose, however, are not always concerned with the bodily remains.

On the Timorlaut and Tanembar Islands, ten days after the burial of a warrior who has fallen in battle, the people of the village assemble on the shore, the men armed and the women in festival array. An old woman calls back the soul with wailing. A bamboo with all its leaves is then erected in the ground, a loin-girdle on the top. This bamboo is regarded as a ladder, up which the soul climbs to its destination. The *sermitu* (a sort of priest or shaman) pronounces a eulogy on the deceased, punctuated by the applause of the audience. When from the movement of the bamboo it is judged that the soul has climbed to the top, the bamboo is severed in two and the loin-girdle burnt, to prevent the soul from subsequently wandering about or causing mischief. A dish containing rice and an egg, previously provided for the ceremony, is also broken to pieces. Appeased in this way, the soul betakes itself to the little island of Nusniti, off the north-west coast of Seelu, one of the islands of the group which is believed to be the dwelling-place of souls. The bones, it would seem, are disposed of at a later time (Riedel, 307). The Chechenes of the Caucasus hold what is called a Bed-memorial-feast a short time after the funeral. It is believed that the deceased has then reached the other world, but lies in bed there and cannot rise until this feast has been celebrated. It is therefore held as soon as possible and consists of funeral games—chiefly shooting and horse-racing—followed by eating and drinking. The honour done to the deceased is measured by the drunkenness. Before it is over the four best horses which have taken part are consecrated—the horse which has won the first

prize to the deceased in whose honour the feast is held, and the others to three of his ancestors by name. This consecration does not involve the entire loss of the animals by their owners, but only permission to the dead to whom they are consecrated 'to ride them whither they will.' The final or great memorial-feast is, however, not held for two years, when it is given by the widow. She then lays aside her mourning, and may marry the brother or some other relative of the deceased (*Anthropos*, iii. 786).

As to the races and other contests at the Bed-memorial-feast, see § XVI. They are expressly intended to affect the condition of the deceased in the other world. Pre-historic remains in various parts of both the Old World and the New point to the great antiquity of practices of exhumation and re-burial of the bones comparable with those discussed above.

5. *Disposal of the skull.*—Among the practices which we have just considered, special mention has several times been made of the skull of the deceased. The skull is sometimes worn or carried about for a time, most frequently that of a man by his widow. In such a case it is perhaps merely a dear memorial of the deceased, or at most an amulet. Thus in the Andaman Islands, where the bones are broken up and made into ornaments, and the skull is 'worn down the back tied round the neck, usually, but not always, by the widow, widower, or nearest relative,' not only is great importance attached to them as mementoes, but 'they are believed to stop pain and cure diseases by simple application to the diseased part' (*Ind. Cens. Rep.*, 1901, iii. 65). But amulets are on their way to become objects of cult. Accordingly, wherever we find bones, especially skulls, preserved in the house or in a special shrine, whether common or not to other similar relics of the family, or clan, or even of a larger community, we may suspect a more or less developed cult, though it may not be expressly recorded by our authorities. In many instances, however, this cult is recorded.

Folk-tales of the western islands of Torres Straits, in accord with the practices which obtain in those islands, describe the hero picking scented leaves, with some of which he rubs the skulls of his father and mother, and on others of which he beds them. They describe his telling the skulls his adventures, and inquiring as to the future. They tell the responses made to him by the skulls in his sleep, and the success which attended his following their directions and observing their warnings (*Torres Str. Rep.* v. 41 ff., 47; cf. 260, 261, 267, 268, 269, 282). In the Solomon Islands the skull is regarded as hot with spiritual power, and by its means the help of the ghost can be obtained. At Santa Cruz it is kept in the house in a chest, and food is set before it, for 'this is the man himself' (Coddington, 262, 264). Similarly, a Fan chief in West Africa keeps in a chest the heads of his ancestors, and invokes its contents on the eve of great events, such as war or the chase (Roche, *Au Pays des Pahouins*, 1904, p. 91).

It is this belief in the spiritual power associated with the head even of an enemy that forms the foundation of the practice, common in the East Indies, of head-hunting. The head is not a mere trophy; 'it is an object of heart-felt veneration, an earnest of blessing to the whole community.' 'Those who were once our enemies hereby become our guardians, our friends, our benefactors' (Furness, *op. cit.* 66, 59). They are addressed, soothed, and propitiated on all proper occasions; and it is to them that the happy owner ascribes his plentiful harvests, and his immunity from sickness and pain.

XXII. *Effigies of the deceased.*—Many peoples complete their funeral ceremonies by the erection of an effigy of the dead. Thus the Kāfirs of the Hindu Kush, one year after the death of an adult, set up a coarsely carved wooden statue, and inaugurate it with a feast (Robertson, p. 645). The Thompson Indians of British Columbia erect on the grave a wooden figure, carved and painted as nearly as possible in the likeness of the deceased—a practice of considerable antiquity, since posts carved with human faces are found on ancient graves, the ownership of which has passed out of memory (*Jesup Exped.* i. 329, 335, 405). In such cases the

effigies are, so far as our reports go, simple memorials. In other cases they seem to be something more than that.

'When a respected Ostiak dies, his nearest relations make a figure of him, which is kept in the tent of the deceased, and enjoys the same honour as himself when alive. At every meal the figure is brought in; every evening it is undressed and put to bed; every morning it is dressed and set in the usual seat of the deceased. The figure is honoured in this way for three or four years and then thrown into the grave' (Abercromby, *Finns*, Lond. 1898, I. 169). An Ojibwa widow ties up a bundle of clothes in the form of an infant; she lies with it and carries it about for twelve months, 'as a memorial of her departed husband.' Then she discards it with her mourning, and is free to marry again (Jones, *Ojeb. Ind.* p. 101). Among the Maidu in California a periodical burning of gifts in honour of the dead of the tribe or village takes place. On the first such occasion after the death of a person an image representing him is often made of skins, stuffed, and burnt, along with the gifts (*Bull. Am. Mus. Nat. Hist.* xvii. [1902] 36). In a certain Turkish tribe a wooden image of every dead man is laid in his grave (*ARW* v. 31). How far effigies like these may be identified with the departed may be questioned. In any case, they are only of temporary use, or entitled to respect for a very limited period. Elsewhere, however, images are expressly made as an embodiment for the spirit. Among the Bantu people of Bondel, on the east coast of Africa, when the head of a house dies he is washed and shaved by his maternal uncle. His hair, finger-nails, and toe-nails are taken and incorporated in an earthen image, which thereupon becomes a *minimu*, the object of religious rites paid to the dead (*JAI* xxv. 236). On the islands of Leti, Moa, and Lakor, in the Moluccas, there are men who carve statues of a special sort of wood for funeral purposes. On the fifth day after burial one of these statues is procured, and the soul of the deceased is, by means of an offering of food, enticed into it for a temporary sojourn. It is implored to eat and drink, and to watch over the survivors that no sickness may befall them. A general feast of the family follows (Riedel, 395). Among the Lolo of Northern Tongking, with a stalk of a kind of orchid and some wisps of paper a figure of the deceased, about 10 centimetres high, is made. It is placed in the house between the wall and the roof, or fastened to one of the partition-walls, and serves the purpose of an ancestral tablet, such as the Chinese dedicate (Lunet, 331). Examples might be multiplied, for the practice is wide-spread. But at this point funeral ceremonies merge into cult of the dead (see ANCESTOR-WORSHIP).

LITERATURE.—On death and death rites in general, see E. B. Tylor, *Primitive Culture*, London, 1871 (41903), vol. i. ch. xi., vol. ii. ch. xii.; J. G. Frazer, 'On certain Burial Customs as illustrative of the Primitive Theory of the Soul,' in *JAI* xv. [1886] 64-104; R. Hertz, 'Contribution à une étude sur la représentation collective de la mort,' in *ASoc* x. [1905-6] 48-137; A. van Gennep, *Les Rites de passage*, Paris, 1909, ch. viii.; E. S. Hartland, *Legend of Perseus*, ii. (London, 1895) ch. xiii. The death rites of a particular people and its ideas on the subject of death must ordinarily be studied in the ethnographical accounts of that people. Many have been cited in the foregoing article. Detailed studies relating to special areas have been made by Theodor Koch, 'Zur Animismus der südamerikanischen Indianer,' forming the Supplement to *Internat. Archiv für Ethnographie*, xii. [1900], and William Crooke, 'Death Rites among the Dravidian and other Non-Aryan Tribes of India,' in *Anthropos*, iv. [1909]. See also the following series of articles.

E. SIDNEY HARTLAND.

DEATH AND DISPOSAL OF THE DEAD (Babylonian).—In common with other Semitic races, the Babylonians regarded the present life as incomparably superior to that beyond the grave. It is not likely that the Sumerians, whose religion forms the principal element in the religious ideas of the Babylonians, differed from this pessimistic view of death so universal in antiquity. For the Sumerian period we have no direct statement concerning the life beyond the grave; but the evidence concerning their burial customs, their sacrifices to the dead, their communion meals with the souls of the dead, etc., is abundant. The word employed by them for the soul is *zid*, lit. 'the rush of wind,' and is translated into Bab. by *napištu*, 'breath,' which may also mean 'throat and organs of respiration.' The dread of death is revealed in the expressions for dying. In Sumerian the word is *dig*, lit. 'to seize away.' The early Bab. expression is, 'his god has gathered him' (*ilu-su itter-su*), as yet found only for women in the phrase, 'when her god gathers her' (see *Cuneiform Texts of the Br. Mus.*¹, ii. 24, 27; viii. 5a, 17; 12c, 18; 17c, 18; Meissner, *Assyr. Stud.* iii. [Berlin, 1905] 53; Schorr, *Altbab. Rechtsurkunden*, i. [Vienna, 1907]

¹ Hereafter cited as C.T.

85, who compares Gn 25⁶), or 'she has gone to her fate' (*ana šināti-sa illiku* [C.T. vi. 47b, 13 f.]; *ana šimtim ittalak* [Code of Hammurabi, viii. 5 f. and *passim*]), or 'fate has carried him away' (*šimtu ubbil-šu*). Ashurbanipal, describing the death of Tarḫū, says that 'the fate of his night came upon him.'

The life of man is fleeting and determined by the decrees of the gods of the lower world, says the poet:

'Build we an house for ever? seal we (our tablets) for ever?
Do brothers divide their inheritance for ever?
Shall hatred exist in the land for ever?
Doth the river rise bringing floods for ever?

He that sleepeth, he that dieth when together (they lie),
In death they preserve not their (solid) form.
When the *gallū*¹ and the guardsman have greeted them,
The Anunnaki, the great gods, assemble.
Mammit, fashioner of destiny, with them fixes destiny.
Death and life they arrange.

But of death the day they make not known.'²

Thus man, whose destiny at birth had already been fixed by Mammit, identical with Bau, goddess of childbirth, must pass a second ordeal before the same goddess and the judges of Arallū.³

After mortal dissolution the soul descended to Arallū, 'the desolate land,' to pass at best a dreary existence, in the dust and shadows of Hades. The body, in which the departed soul had still a lively interest, was either buried or burned, and the kinsmen supplied it with food, drink, clothing, and the implements which characterized the occupation of the person on earth. Cremation and body-burial existed side by side from the earliest times. In cases of cremation, the ashes were gathered carefully in an urn, in which jars of drink (beer in the early period, water in the later), bread, etc., were placed, to provide for the immediate needs of the soul. At Nippur funeral-urns of this kind were found in the court of the stage-tower in the earliest period (before 3000 B.C.). Two vast fire-necropolises have been partly excavated near Lagash, at modern Surghul and el-Hibba. Here the bodies were placed in narrow clay casings upon a brick platform, wrapped with inflammable material and covered with soft clay. The body was reduced to ashes by burning wood over the clay casing. After the fire was extinguished, a small hole was opened in the clay casing, which was now baked and quite imperishable, and the results of the cremation were examined. In cases where the heat reduced the body to ashes, these were removed, placed in an urn, and buried in the family plot. If, however, the heat did not reduce the body to ashes, the clay casing became the tomb and was left *in situ*. The more important families owned vaults, or rather narrow brick rooms, in which the urns of the family were placed, the pavement being drained by tile sewers descending to the water level. [These sewers were wrongly taken for wells by certain archaeologists.]

Cremation appears to have been the rule in certain parts of ancient Sumer and Akkad, as in the region south of Lagash; but in other parts interment in coffins and vaults is more frequent. In the case of those burials in which bodies were committed directly to the earth (as represented on the Vulture Stele, c. 3200 B.C., where soldiers are buried in a huge pile, being covered with earth simply), every vestige has long since disappeared. Preservation of the body seems to have been a sentimental rather than an essential matter; never-

¹ A conductor of the shades to the lower world (cf. Craig, *Assyr. and Bab. Religious Texts*, Leipzig, 1895, lxxix. 9, and Langdon, *Sumer. Bab. Poems*, Paris, 1909, pp. 314, 26).

² KB vi. 1, 228.

³ Nergal, god of Arallū, is called 'the god of investigation, and of judgment' (C.T. xxiv. 41, 67 f.); and as a star he appears as the *ḫakkab šipti mūtati*, 'star of the judgment of the dead' (ii. R. 49, no. 3, 40).

theless both Sumerian and Semite exercised much care in this respect. At Ur brick vaults of considerable size containing several skeletons were excavated by Taylor. Ordinarily each skeleton is accompanied by jars, platters for bread and food, the deceased's seal, combs, and, in case of women, even brushes (for colouring the eyes?). The cheaper method of interment consisted in placing the body upon a slightly raised platform of bricks, which was first covered with a reed mat. Over the body was fitted a large cover, made of one or two pieces of baked clay, and large enough to admit both the body and the articles of food and raiment. Taylor found round platforms, in which case the body lay with knees drawn towards the chest.¹ A still more economical method of burial consisted of a clay or porcelain coffin of capsule form, made by fitting together two huge bowls. Bodies were even mutilated and crushed into a huge vase, accompanied in all cases by food and drink. Common in later times is the bath-tub-shaped coffin, deep but not long, in which the body sits upright, with the back against one end, and the limbs stretched out along the bottom, the whole being, of course, protected with a clay covering. The flask-shaped coffin, bulging towards the base, is common in the late period. The excavators of Aššur found many elaborate stone family-vaults, probably of kings and priestly families. To each of these an opening at the west end, closed by a stone not too difficult to be moved, made access to the vault possible. Stone staircases led down to these openings. At the east end the vaults at Aššur generally contain a small niche for a lamp. The Assyrians employed such vaults both for body burials, the skeletons being found in orderly rows side by side on the pavement, and for cinerary urns. The latter are cone-shaped and made of baked clay.

Thus we see that cremation was practised at all periods—probably for sanitary reasons. The earliest graves are found in the temple courts, but these sacred spots must have proved altogether inadequate for the vast populations of Sumer, Babylonia, and Assyria. The only practical method would be to set aside certain parts of the city (as at Ur), or whole districts (as at Surghul).

The Sumerian word for the departed soul is *gidim*, 'creation of darkness' (*gid-dim*), which, by apocopation of the initial letter, became *idim*, *edim*, and passed into Semitic as *edimmu*.² There is no doubt that the Babylonians regarded the souls of the dead as minor deities, capable of interfering for good and evil in the affairs of men. Whether, in fact, the entire conception of divinity rests ultimately upon the notion of ancestor-worship cannot be determined from our sources. We can no longer doubt that the Bab. conception of the devils, spirits of disease and misfortune, rests absolutely upon the notion of evil ghosts which rise from hell to torment humanity. See DEMONS AND SPIRITS (Assyr.-Bab.).

Although the souls of those whose bodies were improperly buried, or whose memories were not cherished at the *parentalia*, return to the earth and must be driven back to the nether world by incantation and ritual, yet the vast majority of souls lead a shadowy existence in the dreary land of the dead. See STATE OF THE DEAD (Assyr.-Bab.).

We come now to that significant part of Bab. religion—the communion with the souls of the dead. We have seen that the kinsmen of the dead provided the soul with food and raiment in the grave. These are remnants of an ancient belief that the

soul actually consumed the elements and wore the raiment left for his use. Although the Sumerians and the Babylonians continued to deposit these symbols of the material needs of man in the graves of the dead, they soon rose to a more spiritual interpretation, in which, behind the symbolic bread and drink, lay the mystery of communion with the deified souls and with Divine life itself. Each family seems to have made monthly offerings to the shades of its ancestors, which consisted in a communion meal at which images of the departed were present. In official accounts of the early period we find frequent reference to offerings made to the statues of deceased persons.³ A list of official sacrifices in the period of Sargon of Agade mentions a lamb offered to the statue of an ancient Sumerian king, Entemena;⁴ and Gudea, a later priest-king (c. 2400 B.C.), prays for his own statue that it may receive mortuary sacrifice.⁵ Entries in official documents occur, stating the items of the monthly sacrifice for the souls of deceased persons whose service to the State had been great. This is especially true of kings and priests. More frequently the documents mention the mortuary sacrifices for all the souls who have died, a Feast of All Souls, occurring monthly and performed by the priests in various temples. The word ordinarily employed in the ancient inscriptions is *kianag*, 'place where one gives to drink'; but the notion of 'place' is often lost, and the idea of drinking is made to cover sacrifices of animals, bread, cakes, etc., as well as of liquors. That these sacrifices really consisted in a communion meal is made evident from one inscription which states expressly that the *kianag* was eaten.

Another word—also Sumerian, and employed for the *parentalia* less frequently in the early period, but ordinarily by the Semites—is *kisig*, 'breaking of bread,' where the emphasis is laid upon the eating of bread at a common meal (*kispa kasāpu*). The word occurs in the most ancient name of the fourth month as *sig-ba*, and later as *kisig-ninazu*, or month of the breaking of bread to Ninazu, god of the lower world. This month was followed (in the calendar of Nippur) by the month of the feast of Ninazu. These two months correspond with our December and January, or the period of greatest darkness, when the gods of the under world, as deities of the shades, whither the sun-god and the god of vegetation had descended, were particularly honoured. We fortunately possess a letter from Ammiditana, a king of the first Semitic dynasty, concerning the feast of the breaking of bread for the fourth month (December):

'Unto Šumma-Il, son of Idin-Marduk, say, Thus saith Ammiditana: "Milk and butter for the *kisigga* of the month Neneš are withheld. As soon as thou receivest this tablet, may thy superintendent take 30 cows and 60 *ka* of butter and come to Babylon. Until the *kisigga* is finished, may he supply milk."

Here we have direct evidence for a communion meal, 'breaking of bread,' for the souls of the dead, permanently adopted by the Semites at an early period. At Eski Harran an inscription has recently been found containing the autobiography of the high priest of the temple of the moon-god of Harran. In col. iii. he refers to the monthly sacrifices which he performed for the souls of the departed. After a reference to the raiment which he wore for the service he says:

'Fat sheep, breads, date wine, cypress oil, fruit of the garden . . . I broke⁴ unto them. As incense offering, the choice incense as a regular offering I fixed for them and placed before them.'

The high priest here performs for the kinsmen

⁴ *akassap-sunuti*.

¹ The coffins in which the body lay in a cramped position appear to have been called *napsišchu* (v. R. 16, 44).

² Possibly connected with *idim*, 'oppressed,' 'weak and miserable' (see Langdon, *Sumer. Gram.*, Paris, 1911, p. 221).

the sacred ceremony of breaking bread for the souls of the dead. The expression 'placing incense before them' refers to the statues of the departed, whose souls are thus represented at the communion meal, and whose portion is the incense. In an incantation service against evil souls, stools are brought for the souls that they may sit at the service of breaking of bread.¹ Ashurbanipal restored the memorial services for the souls of his royal predecessors, of which he says: 'The regulations for the breaking of bread and the pouring of water for the souls of the kings who preceded me I arranged for.'² The king himself was supposed to perform this ceremony, as appears from another passage: 'The regulations of the day of offerings the king gave not, but the high priest gave.'³ The practice of pouring water to the soul in connexion with the common meal gave rise to the title 'pouer of water,' applied to one's nearest kinsman. This appears in the terrible curse so common in the Semitic period, 'May God deprive him of an heir and a pouer of water!'⁴

The repose of the soul, we may say even its immortality, depends upon the communion sacrifice performed monthly for it by its kinsmen. Real immortality consists, therefore, in leaving male descendants; and the prayers of kings seldom fail to plead with the god for male lineage. In actual practice the family paid the priests for performing the ceremony of the breaking of bread, and consequently separate temples, called *é-kisigga*, or *bit kasap kispi*, were built for this purpose.⁵ It is highly probable that the State had a regular fund to provide for the Feast of All Souls, for we find official accounts containing entries for this fund at all periods.

Concerning the *wailing for the dead* our sources are meagre. In an ancient Sumerian inscription there is a probable reference to an official wailer, whose pay is mentioned along with the food placed in the tomb.⁶ Wailings at the death of a king are described in a letter of the period of Ashurbanipal. The chief great men clothe themselves in garments of mourning, and wear rings of gold, and the official singer sings.⁷ The burial of an official (?) is reported to the king in the following manner:

'The tomb we made; he and the woman of his palace rest in peace; the psalms (?) are ended; they have wept at the grave; a burnt-offering has been burnt; the anointings (?) are all performed; rites of loosing in the house of washing and the house of baptism, ceremonies of incantation, penitential psalms . . . they have finished.'⁸

Gilgamesh wailed for his departed comrade Eabani six days and nights.⁹ When the mother of Nabonidus, last king of Babylon, died, the king's son and all his troops put on mourning and wailed three days. The following month was entirely devoted to official mourning for the king's mother.¹⁰

Traces of embalming have not been found, but Herodotus says that the Babylonians embalmed in honey,¹¹ and a text has been cited which mentions embalming with cedar oil.¹² At any rate, embalming is not characteristic of Bab. burials, and the custom may be due to Egyptian influence.

DEATH AND DISPOSAL OF THE DEAD

(Buddhist).—1. Death inevitable and painful.—There are certain questions that have no absolute and definite answer (*ekāmsavyākaranāt*). As a type of these the commentators cite: 'Will all beings (*sattva*) die? Buddha said: "Short, O monks, is the life of man . . . we must do good; it is impossible that what is born should not die."¹ In other words, 'Life, indeed, ends in death.'² 'All men fear death.'³ For death is accompanied by physical and moral suffering; the formulæ of dependent origination enumerate 'sorrow, lamentation, misery, grief, despair' as the companions of death.⁴ For death is only the beginning of a new existence for the punishment of sins: death and punishment (*danda*) are almost synonymous. It is in order to avoid death, and the consequent second death—in order to gain immortality—that the Hindus practise the religious life, the holy behaviour (*brahmacharya*) which enables one to pass above the sun, which is death (*Brāhmaṇas*).

If death inspires fear, it also generates that salutary emotion (*samvega*) which ends in a distaste for pleasure and existence. Death must be thought of.⁵ Visits to the 'cemetery,' the place of cremation, or the place where dead bodies are left, and meditation upon the corpse and the various aspects of decomposition, play an important part in the spiritual hygiene of the Buddhist monk, be he a beginner (*navaka*), a more advanced disciple (*sāṅka*), or a perfect disciple. They even become absorbing for some, who are called 'cemetery monks' (see *TANTRAS*). We find a number of details regarding the treatment of the dead⁶ in the Buddhist texts.

To know that 'life ends in death,' and to be resigned to this law, is, as we learn from several conversion-stories, to know the essentials of Buddhist doctrine and to escape from the fear and the control of death. To detach oneself from the things of which death will deprive one, to detach oneself from the body itself, is to abolish pain: thus a man suffers when he sees a woman whom he loves in the possession of another man; he ceases to suffer

whenever he ceases to love (*Majjhima*, ii. 223). Thus the saint (*arhat*) has no fear of death (*Angutara*, ii. 173); he awaits his time without desire and without fear (*Therīgāthā*, 196, 703; see art. SUICIDE [Bud.]), for he is freed from desire, he knows that this existence is the last existence for him (*Therīgāthā*, 705; *Dhammapada*, 39). For others death is only a passing; for the saint it is 'interruption' or 'annihilation' (*samucchheda*).¹

If death is hateful to men, it is not less so to the gods (*devas*), though certain texts say that the gods are perfectly happy (*Angutara*, v. 291). It is not that death for them is accompanied by the sufferings of human death, for they usually die without suffering (*A.K.V.*, fol. 264b). But, the greater the enjoyments of the gods, the more painful it is for them to give them up; death for them is not 'suffering consisting in suffering,' 'suffering of death' (*Mahāyāgapaṭṭi*, § 112, 4), but it causes 'suffering consisting in the change' to be accomplished at death (see H. O. Warren, *Buddhism*, Cambridge, Mass., 1896, p. 181).² The Brāhminic views are all alike, or very similar (see, e.g., *Viṣṇu Purāṇa*, vi. 5, in Wilson, *Works*, London, 1870, x. 208).

2. Definition of death.—The Buddhist doctrine is opposed to that of the 'unbelievers' (deniers [of the other life]), according to whom the intellect (*viññāna*) scatters into the ether, while the material elements (*bhūta*) of the body return to the mass of the earth, sea, etc. (cf. *Dīgha*, i. 55; *Saṃyutta*, iii. 207); it is also opposed to the popular idea of the transmigration of the soul, well expressed by comparison with a bird flitting from tree to tree (*Sumāṅgala-vilāsinī*, p. 114; S. Hardy, *Manual of Buddhism*, London, 1860, p. 390). Death is the end of life—the end of a life or of an existence (see below, § 3); or, more exactly, death is the dissociation of the organism constituted at birth to experience the fruits of a certain set of actions. This organism, both material and mental, does not contain a single stable principle; it continues to renew itself moment by moment; in other words, it undergoes an 'incessant death' (cf. Warren, *Buddhism*, p. 252; *Madhyamakavṛtti*, p. 174, n. 4); but death marks the end of this homogeneous renewing: it is the separation of the constituent elements of the pseudo-individual, the dissociation of the elements (*skandha*), i.e. of the gross elements (*mahābhūta*, *rūpakāya*) and of the *viññāna*, or intellect.³

We must consider for a little this idea of *viññāna*. There is nothing permanent or individual in the complex union of the *skandhas*, which lasts from birth to death. Men were led, however, to regard it as 'individualized,' like a town with the *viññāna* as master. The later works of Abhidhamma teach that, from the origin of an existence, the first thought, the thought which gives rise to the formation of the new being in the matrix (*pratisamdhivijñāna*, 'conception-intellect'), gives birth to certain thought, which is the master part of the existence, and is called *bhavāṅga*, or *bhavāṅga-santati*, 'existence-limb,' 'existence-limb-series,' because it is the limb of existence.⁴ This thought evolves into an uninterrupted and relatively homogeneous mental series, like the flow of a river. To look at it in a somewhat different way, this thought constitutes what we might call the foundation of the soul, the support and origin of particular thoughts, which interrupt it. At the end of life, at death, it disappears by being transformed into 'thought in a dying state,' 'dying thought,' 'falling or emigrating thought.' Existence, i.e. one existence in the series of existences, is ended

at the disappearance of the *bhavāṅga*; a new existence commences, in a new status, since the 'thought in a dying state' is reflected (we dare not say continued)⁵ in a 'thought in a state of being born.' Death, then, is the transformation of this 'fundamental thought' called *bhavāṅga*, 'limb of existence,' into 'emigrating thought' (*chryutichitta*).⁶

'When the dead man is laid out upon his bed of death, the sinful action for which he is responsible, or the motive (or sign) of this action, presents itself at the door of his spirit. Then there is inaugurated the series of rapid intellectual operations (*javana*—'swiftness') which ends in absorption with this object (action or motive) (*adārammaṇa*).⁷ and there is further produced the "emigrating thought" depending upon the *bhavāṅga* (*bhavāṅga-viṣayaṃ dhammanam katva*). When that disappears, the "thought in a state of being born" is produced; and this, because of that action (or that motive for action) which presents itself before the spirit, moved by uninterrupted passion, belongs to an evil destiny.'⁸

On the other hand, death is often regarded as the end of a particular organ or sense, the *jīvitendriya*, the vital sense. Life, the activity of the organs, 'the persistence, subsistence, going on . . . of the bodily and mental functions or states' presupposes a 'vital organ'⁹ supporting the living complex as the water supports the lotus, and playing a part analogous to that assigned by the Vedānta school to the 'principal breath' (or 'breath in the mouth,' *mukhya prāṇa*).¹⁰ Death, therefore, will be 'the interruption of the series [of evolution] of the vital organ corresponding to a given existence' (*Netippakkaraṇa*, p. 29).¹¹

Leaving out of consideration the schools which pay little attention to the 'vital sense,' some schools do not make it die at death. The theologians who admit an 'intermediate state' (*antarābhava*) between two existences properly so called assign a special rôle to the 'vital sense' in the mechanism of transmigration. 'Life' would then be prolonged from existence to existence, as long as these continue to be existences belonging to the same category (*nikāya-sabhāga*) (after *A.K.V.*, Burnouf MS. 68a).

The schools are not agreed as to the nature of the *jīvitendriya*, as may be seen from *Kāthāvatthū*, viii. 10. Pāli theology appears to regard it as the eighteenth term of the *rūpakhaṇḍa* (S. Hardy, *Manual*, p. 399). But the *Dhammasaṅgāsi* treats it successively as mental and as material (*ripa*). The *Abhidharma-kosa* makes it an *arūpa chittaviprayukta*, 'immaterial, having no connexion with thought' (see *Dhammasaṅgāsi*, p. 69), as do also the Yogichāras (see *Mūlāra*, vi. 1105f. 178 L).

It must not be forgotten that 'life' is attributed to the body (*A.K.V.* 312a: 'The body lives when it is endowed with sense (*sēndriya*), i.e. life is of the body endowed with sense, and not of a soul (*ātman*); and it is the body [and not a soul] which, when robbed of sense, is called "dead"'). By 'sense' or 'senses' must be understood either the organs of sense which depend upon the *jīvitendriya*, or the *jīvitendriya*, which is just the same as the *kāyendriya*, 'body-sense.' The working and persistence of the intellect (*viññāna*) depend upon the *kāyendriya*, which, at death, perishes in various parts of the body according to the state in which re-birth is to take place: in the feet for a future damned soul, in the navel for a future man, in the heart for a future god . . . (*A.K.V.* 254a; cf. and cf. Beal, *Catena of Buddhist Scriptures*, London, 1871, p. 41; see also Rhys Davids, *Buddhist India*, p. 254; Oldenberg, *Buddha*, p. 265).

Instead of *jīvita*, *jīvitendriya*, we sometimes find the terms *āyus*, 'life,' and *usman*, 'heat'—a popular conception of life.¹² 'What is the ground of persistence or continuity of the five senses?'—'Life'—'And of life?'—'Heat'—'And of heat?'—'Life.' (Just so the radiance of a lamp depends on its flame, and vice versa [*Majjhima*, i. 295].) Similarly, death is defined as the disappearance

¹ We read, however, in *A.K.V.* 213a: 'the "conceptual" state (at conception), *upapattibhava*, forms a series with the "mortal" state (at death).'

² There is no death without 'emigrating thought,' therefore trance or rapture is an obstacle to death (cf. *Dhammapada*, ed. Fausbøll, Copenhagen, 1865, p. 299).

of heat (*Mahāvūtpatti*, § 245, 53). An ancient stanza associates the intellect (*viññāna*) with *āyus* and *uṣman*.¹ The Dignāga school defines death as the 'destruction of the *viññāna*, of the organ, and of life,' and claims authority from this definition to deny (in opposition to the Jains) that trees 'die.'

In the old version of the 'last days of the Buddha' (*Digha*, II. 106; *SBE* xi. 44), it is said: 'The Blessed One rejected the *āyusamkharā*' (according to Rhys Davids = 'the rest of his allotted sum of life'). In the Sanskrit sources (*Dīpāvadāna*, p. 203; *Mahāvūtpatti*, § 235, 52) we have: 'The Blessed One enters such concentration of thought as to control his "vitality-virtualities" (*jīvitasaṃskārān adhiṣṭhaya*), and he begins to reject his "life-virtualities" (*āyūṣaṃskārān*). The plural "virtualities," co-efficients of life" indicates, according to a commentator, that life is not one thing but a collectivity. The Sautrāntikas say that *āyus*, 'life,' means the multiple *saṃskārā* which co-exist (having for nature the four or five *skandhā*s) and is nothing beyond these *saṃskārā*s (A.K.V., fol. 74). The *Majjhima* (i. 296) enumerates the *āyusamkharā*s as follows: *āyus*, heat, and intact senses, which disappear at death, but persist in life even when plunged into the deepest ecstasies (see Warren, p. 389).

As to the vital breath (*prāṇa*), it is a wind (*vāyu*) which depends on both the body and the thought—for it disappears during the so-called 'cessation-stance' ecstasy (Sarvāstivādin *Abhidharmaśāstra*, quoted A.K.V. 312; see Rhys Davids, *Dialogues of the Buddha*, i. 71, London, 1899-1910 [= *Sacred Books of the Buddhists*, vol. ii.]). Although the Buddhists deny the existence of a *prāṇin*, *anima*, 'being endowed with breath,' they use this expression; but, for them, to kill a *prāṇin* is only to stop the future production of the *prāṇa*.

3. Duration of life.—What is meant by an existence, *ātmabhāva*, and why is the eternal transmigration divided into this succession of fragments called lives or existences? Actions are by nature very variable, and very different actions are performed by the same person; in strict language—for Buddhism does not admit of the existence of a person, of an author of actions—actions very different from each other are 'caused' in one and the same series of states of consciousness, and must be rewarded in the same series. It is necessary, then, that the agent (to use a convenient expression) should pass through varying conditions,—god, man, animal, damned,—for it is not the nature of actions to get their reward in any state whatever. And, by a mechanism which will be explained in art. KARMA, a certain existence (*ātmabhāva*) falls to the lot of the agent, as the reward for a certain set of actions,² and this existence will be followed by another determined in the same way. Death marks the moment of the exhaustion of the actions called to 'ripen,' to fructify in some one existence, and of the maturity of actions called to ripen in the next existence.

In certain states of existence the length of life is fixed; the number of actions to be rewarded in the course of a divine existence of a certain class always corresponds exactly with the normal length of life of the gods of this class (see COSMOGONY AND COSMOLOGY [Buddhist]); the god will die at the exhaustion of the meritorious actions to be rewarded and the exhaustion of life. But it may happen that a life ends by the exhaustion of the actions, before the normal time; if, e.g., a certain good action has caused a certain divine existence, and is not good enough to prolong this existence against the influence of evil actions striving to ripen. It is also possible to die by the exhaustion of life, without the merit being exhausted: in this case, re-birth takes place into a condition similar to that just left. Lastly, if one commits one of the sins demanding immediate retribution (*ānantarya*) and immediate dispatch into hell, one dies without the exhaustion of the vital forces: the retribution of

the set of actions, begun at birth, is interrupted by an 'action cutting off [the fruit of] action.'³

Death is called 'timely' (*kālamaraṇa*) when it occurs at the end of a life of normal duration (see AGES OF THE WORLD [Bud.], vol. i. p. 189). It may be caused by a trouble of the bile (the essential fire-element of the body), of the phlegm (water-element), or the wind, either singly or all together: there are, therefore, four illnesses; for every class of illness, there are 100 deaths 'before the time' (*akālamrtyu*)⁴ and one timely death: or else there are 404 illnesses causing death (*Bodhicaryāvatārapañjikā*, ii. 55; A.K.V. 254b). A kindred expression to *akālamrtyu* is *antarāmṛtyu* or *antarēṇa kālakriyā*, 'death during the time, during the course of the normal duration of life': a death, which, according to certain sources, occurs even in the *āruppa*, and in all stages of existence, except among the Uttarakurus (*Abhidharma-kośa*). According to the Sautrāntikas (A.K.V., fol. 218), it is a mistake to explain the phrase *antarāparinirvāyin* with certain (Pāli) scholars as meaning 'a saint who attains to *nirvāṇa*, by *antarāmṛtyu*, during the course of a heavenly existence, and before the close of this existence.' The reference is to a saint who attains *nirvāṇa* in the intermediate period between two existences (*antarābhava*).

The Buddhists believed that, just as the saint can abandon the 'co-efficients of life' (see preceding column), so he can also stop them (*sthāpayaṭi*). According to the Vaibhāṣikas (A.K.V., Burnouf MS, fol. 74), the saint says: 'May [the action] that is to ripen for me in enjoyment ripen in life! By its nature, life (or the vital organ) is 'ripening' (*vipākā*), and it can replace any enjoyment which, normally, ought to ripen from a former merit, and which the saint no longer desires and has escaped by his sainthood. By this process, 'vanquishing death,' the Buddha prolonged his life three months for the salvation of men, and the disciples employ this to assure the duration of the law.

This term of three months seems to be given as a maximum, and as the mark of the victory of the Buddha over *Mṛtyumāra*, 'Māra' = death, Satan, who is death.' The 'dominion of death,' which is a 'dominion of life' (*Mahāvūtpatti*, § 27, 1), is much more powerful in the *Mahāparinibbāna* (*Digha*, ii. 103 = *SBE* xi. 42), and in *Śikṣasamuccaya*, p. 189, where the Bodhisattvas enjoy a life of almost infinite length by the protection of the Buddhas and 'deities' (*devatā*s).

4. The last thought and re-birth.—Most of the Hindu theologians teach that the last thought, the thought of the dying, is of prime importance with regard to the future lot.⁵ This doctrine is particularly dear to the devout sects: thinking of Kṛṣṇa on the death-bed assures salvation. The Brahmins everywhere believe as a rule that the Lord (*īśvara*) establishes the moral balance-sheet of the whole life, in order that the agent may be re-born into the world at the proper stage. In conformity with their psychology and their metaphysics, the Buddhists have to assign capital importance to the last thought. For not only do they refuse to admit a Lord, judge of all the

¹ See *Abhidhammasaṅgaha*, v. 12 (JPTS, 1884, p. 25); *Vissuddhimagga*, in Warren, p. 252; *Sumaṅgalavilāsinī*, p. 110.

² The Śālvite Buddhists have made a deity of 'premature death' (Wilson, *Works*, ii. 24).

³ See, e.g., *Bhagavad-Gītā*, viii. 5 f. (A. Barth, *Religions of India*, London, 1891, p. 227; R. Garbe, *Bhagavadgītā* übersetzt . . . Leipzig, 1905, p. 52): 'Remembering whatever form of being he in the end leaves this body, into that same form he ever passes, assimilated to its being' (Thibaut, *Vedāntasūtras*, iv. 1, 12 = *SBE* xxviii. 352); 'Whatsoever being a man at his end in leaving the body remembers, to that same he always goes, inspired to being therein' (L. D. Barnett, *The Lord's Song*, London, 1905). See also the sources cited in *Vedāntasūtras*, loc. cit., and Cowell, tr. of *Aphorisms of Śaṅḍilya*, Calcutta, 1878, § 81; for the Jain sect, see *Majjhima*, i. 376. Folk-lore is abundant on this subject; see, e.g., *Katha-saritsāgara*, tr. Tawney, 1880, i. 242 and passim. Thya Davids compares Plato, *Phaedo*, 69 (*Indian Buddhism*, London, 1881, App. viii., *Dialogues of the Buddha*, i. 298).

⁴ *Samyutta*, iii. 143; and A.K.V., Burnouf MS, 453b.

⁵ Cf. the *āyusakarmān* of the Jains (*SBE* xiv. 165, 192).

actions of a life, but they do not even admit of a permanent soul which would be responsible for all the actions. At the time of death, all that exists is the 'dying thought' (*chyutichitta*) and the 'skandhas' (dispositions, etc.), which come to an end at death.¹ The 're-birth thought' (*pratisamdhī*, *upapattichitta*)—and the *skandhas* associated with it—can be determined only by the 'dying thought', which it continues. Hence it follows that, if the mental state at death is good, a pleasant birth will take place; if it is bad, an unpleasant one. The agent will be re-born into the spheres of desire, matter, non-matter (see COSMOGONY, etc. [Bud.], according to the *fulcrum* (*ālambana*) of the last thought (*Abhidhamma-saṅgaha*, v. 12-13 [JPTS, 1884, p. 25]); and 'to die with the thought fixed on space [or the void]' is to obtain *nirvāṇa* (*Madhyamakavṛtti*, p. 53).

But, if the last thought (or last action) is, according to the principle of the Buddhist system, the sole determining cause of the future life, good sense and equity require that the previous thoughts (or merit) should come into account in the retribution. Buddha was very categorical on this point. The conclusion arrived at will be that, if the last thought, in the quality of act 'close at hand' (*āsanna*), determines the future life, the latter may be conditioned by other acts, important from other points of view.

The difficulty or contradiction may be resolved by affirming that the last thought is the resultant of the life or of a former act which, by its importance or repetition, has to be rewarded in the next existence:

'It is at the moment of death (*chryuti*, 'fall of thought') and of re-birth that the thoughts are enabled to ripen' (*A.K.V.*, Burnouf MS, fol. 112b). 'The Karma remembered at death springs up in re-birth' and is therefore named 'close at hand.'

At death the mental working is weak and dull; therefore any passion which has been intense or habitual during life enters upon a state of activity (*A.K.V.* 249a). In short, the treatises of Abhidharma teach that the object of the last thought is either present (*pachchupanna*) or past (*atīta*), being determined both by the life that is completed, and by the state in which it is proper (by reason of this life or of even earlier merits) for the new life to be passed. It is, therefore, by the 'force of the merit' that there presents itself to the spirit of the dying either the action (accomplished previously by him) which is to determine the re-birth² (and above all others the 'heavy' action, *guru*, the reward of which comes before all others [*A.K.V.*, Burnouf MS, fol. 482]), or the object (sensation, etc.) experienced at the time of performing the action, or the motive or means of the action, or, lastly, the picture of the state about to be reached by the re-birth, the sign of the future lot.³

But this theory, that the last thought is the resultant of the life, is discouraging to piety. It is certainly the opinion of the Buddhist that we should not wait for death to become 'converted,' for the agonies and suffering of the last moment make thought very feeble (*Bodhicaryāvatāra*); the good thoughts of the last hour are by nature very weak: they may procure a little of paradise,

¹ See *Madhyamakavṛtti*, p. 228 f., and sources cited.

² See *Sūtrāṅgamavāṇī* quoted from the Chinese by Beal, *Catena*, p. 43: 'At the end of life, before losing animal heat, the good and the evil deeds are summoned up, as it were, in a moment.' Then the dying one thinks of his sin and of his good action, and, by a process well described by Nāgaseṇa (*Milinda*, p. 297, tr. Rhys Davids, *SBE* xxxvi. 156), becomes absorbed into the sin committed, even while regretting it.

³ Augst and C. Rhys Davids, *op. cit.* p. 149. See *Avatamsaka-sūtra*, quoted by Beal, *op. cit.* 44: 'If he possesses a bad karma, he beholds all the miseries attending a birth in hell . . . he sees the infernal horrors.' Of the 'death of the sinner' in the *Bodhicaryāvatāra* of Śāntideva, l. 41 (Poussin's tr., *Introd.* à la pratique des futurs Bouddhas, Paris, 1907, p. 41; L. D. Barnett's tr., *Path of Light*, London, 1906, p. 42).

but they cannot prevent a fall back into hell immediately after, if it is merited (Spence Hardy, *Manual*, p. 489). But numerous writings show that the last thought is not always determined beforehand, that it is possible to prepare oneself and others for death, and to make sure of a good re-birth by helping the 'production of good dispositions.'

We may quote some examples. *Milinda* says: 'Your people [Buddhists] say . . . that, though a man should have lived a hundred years an evil life, yet if, at the moment of death, thoughts of the Buddha should enter his mind, he will be re-born among the gods. . . . And thus do they also say: "By one case of destruction of life a man may be re-born in purgatory." When asked if this was not a contradiction, Nāgārjuna replies: "Would even a tiny stone float on the water without a boat? . . . Would not a hundred cart-loads of stone float on the water if they were loaded in a boat? . . . Well, good deeds are like the boat" (*Milinda*, p. 80, tr. Rhys Davids, *SBE* xxxv 123 f.).

Mahāmoggallāna sees a poor wretch, condemned to death, to whom the compassionate Sulasā has just given some cakes. He thinks: 'This man, with no merits, a sinner, will be re-born in hell; if he gives me these cakes, he will be re-born among the terrestrial deities.' He presents himself before the condemned man, who thinks, 'What is the good of eating these cakes? If I give them away, they will serve me as a viaticum for the other world.' But, as he thinks also with affection of Sulasā: 'It is through Sulasā's kindness that I was in possession of this alms,' his thought, purified by the gift to the saint and soiled by this affection, causes him to be re-born as a tree-deity (inferior deity) (*Petavathu, Commentary*, p. 6).

The deities of the gardens, the woods, the trees, and plants crowd around the master of the house, Chitta, who is very ill: 'Make your resolution, utter your prayer: "May I be a cakravartin king in a next existence!"' (*Saṃyutta*, iv. 302; cf. Rhys Davids, *Early Buddhism*, London, 1906, p. 77).

A man is stained (*āṅgaṇa*); he acknowledges his stain and does his utmost by prayer, effort, and exertion to wipe it out: he will die free from attachment, from hate, from error, and from stain, with pure thought. A man is free from stain; he knows it; he then conceives complacency, and, through this, attachment enters into his thought; he will die re-clothed in attachment, hate, error, stain, with impure thought (*Majjhima*, i. 26).

The Buddhists began early to think of preparation for death. Aśoka grants three days for this purpose to the damned (*Pillar-Edict*, iv.; see V. A. Smith, *Aśoka*, Oxford, 1901, p. 165). The *Mahāvagga* commands the monks to attend, even during the rainy season, at the bed of a sick layman (iii. 5, 9 = *SBE* xiii. 304). The *Visuddhimagga* (xvii. line 1190) explains the ceremonies performed for the dying. The friends say to him: 'We are about to perform the *pūjā* (cult) of Buddha for you, quiet your spirit [in Buddha]. The *pūjā* includes flowers, etc. (*riipa*, 'form' or 'colour'). 'See this offering we are making for you,' they say to the sick man—the recitation of texts and music (*sadda*, 'sound') . . . perfumes (*gandha*, 'smell'), honey, etc. (*rasa*, 'taste'), and cloths (*potṭhabba*, 'tangible')—'Touch this offering.' Thus by the five senses the impressions penetrate which will be the object of the last thought.

Spence Hardy (*Manual*, 489) tells the story of a fisher who is made to recite the five precepts by a monk ('I renounce murder' . . .), and this wins a heavenly re-birth for him; and, when he recites them again in his last moments, he obtains re-birth among the higher gods.

Tantrism substitutes formulae in abracadabra for the 'thought of the Buddha' and the repetition of precepts: the *om namo padme hūṃ* plays a great part (see C. F. Köppen, *Die Religion des Buddha*, pt. II. 'Die lamaische Hierarchie,' Berlin, 1889, p. 59); the cults of Amitābha substitute the repetition of ejaculatory invocations to Avalokiteśvara or Amita: 'Whosoever shall have heard the name of Buddha Bhaisajyaguru, to him will eight Bodhisattvas come at the moment of death to show him the way [to paradise]' (*Śikṣasāmuchoyana*, p. 176). In *Karavāṇayāna* (Calcutta, 1873), pp. 23, 95, twelve Buddhas surround the dying; in *Sukkhāvatīyika* (Oxford, 1883), p. 47 (= *SBE* xlii. 46), Amitābha himself appears surrounded by [magic] monks. Seeing Bhagavat, their thought is quieted, and, falling from this world, they are born in Paradise' (cf. *Samādhirāja*, iv., at the end). In *Saṃyutta*, iv. 302, it is the forest-deities who care for the dying man and suggest to him the wish for such and such a re-birth.¹

LITERATURE.—This is given throughout the article.

L. DE LA VALLÉE POUSSIN.

¹ We need not spend time over the acts and ceremonies for the benefit of the dead. Some bibliographical indications may be useful. Pali sources (gifts for the dead): *Anguttara*, v. 296, *Petavathu*, i. 5 (*Paramatthadipani*, pt. iii. pp. 22, 36),

DEATH AND DISPOSAL OF THE DEAD (Chinese).—The Chinese discriminate between premature death and the inevitable ending of the term of natural life. The pictogram for untimely death is composed of the radical denoting 'evil' (originally depicting the cutting up of bones) and that for 'man,' the combination being interpreted by S. Wells Williams (*Syllabic Dict.*, Shanghai, 1889, p. 836) as 'the evil which parts men.' The character thus formed is explained as conveying the idea of 'the running out of the vital issues,' 'the emptying out of the breath'; whilst that for normal death, i.e. in old age, represents the end of a cocoon or ball of silk. The express mention of death is generally avoided, the Chinese preferring to employ some euphemistic phrase such as 'passed away,' 'returned to Heaven,' 'no more,' etc., or sometimes an expressive gesture—the hands tightly clenched, and the head thrown slightly back.

The customs which prevail in different parts of China in connexion with the treatment of the dying and the disposal of the dead are so dissimilar that a complete statement of them would be impossible; it will be sufficient to describe the observances which may be regarded as fairly characteristic. The details which follow do not apply in the case of children and unmarried persons. In these instances the dead are disposed of with as little ceremony as possible; in many cases the bodies of infants are simply rolled up in a coarse wrapper of matting, and deposited in a convenient spot of open ground, perhaps in a 'baby tower' specially intended for the purpose.

The conduct of funeral rites is described as early as the Chow dynasty (1122–255 B.C.), and it is evident that *burial*¹ has always been the mode adopted for the disposal of the dead. In the Chinese sense this does not consist in the lowering of the remains into a dug-out grave, but in the placing of them in a sarcophagus upon the surface of the ground, and the piling up of earth in the form of a mound, as a result of the annual visits to the place of interment. It was usual in early times to place in the coffin certain articles which the deceased valued during life; and specimens of jade, chess-men, etc., are frequently discovered in ancient tombs. In the case of kings it was often difficult to ascertain where the royal corpse was actually buried, as sometimes a number of separate coffins were interred in different places, each nominally containing the 'remains' of the late monarch, in order to render more remote the possibility of rifling the tomb.

The custom of immolating a number of slaves or relatives of the deceased was sometimes practised in China. Cases are quoted as early as the 10th cent. B.C., as, e.g., that of the Duke Muh, at whose funeral some 177 persons were buried alive. References to the practice are found in the time of Confucius (551–478 B.C.), and even as late as the present dynasty an instance is quoted in connexion with the Emperor Shun-che (A.D. 1644–1661). The burning of paper effigies of servants and attendants

at the present day may be a survival of this barbarous custom.

1. Importance of the subject.—The importance of the subject will at once be evident when we consider that there is, perhaps, no event in the 'pilgrimage' of the 'Chinaman' which demands so great attention, such scrupulous observance of immemorial custom, and such lavish expenditure of labour and capital, as the carrying out of a 'decent funeral.'

2. The dictum of Confucius.—Confucius lays down no rules with regard to the treatment of the dead, beyond the admonition that all things should be done 'decently and in order'; that the family circumstances should be taken into account, and that the various classes of society should be guided by the precedents which obtain in each class. The tradesman should not seek to emulate the official, and so forth; but Confucius enunciates one general principle which should govern the conduct of the entire affair: 'In mourning it is better to be sorrowful than punctilious.'

It is hardly necessary to say that the observance of the conventional funeral customs is inseparably connected with the extraordinary development of the idea of filial piety, and the ancestral worship of which it is the inspiration and the key.

3. Treatment of the dying.—When all remedies have failed to retain the departing spirit, the dying man is prepared for entering the presence chamber of the gods, before whom he must appear: the god of the local temple, the god of the city walls and moats, and the god of Hades. His head is shaved; his body and extremities are washed; the nails of his hands and feet are cut, the parings being carefully preserved; and his underclothing is changed. When *in articulo mortis* he is supported in a sitting posture, it being believed that the soul makes its escape from a recumbent figure by the lower part of the body, and, as a result, on re-incarnation will be gross and stupid; whilst from the upright body it flies aloft through the mouth, and re-appears eventually, by transmigration, in a highly developed condition. Tinsel money and charms are burnt before him, and the ashes are collected, wrapped in paper, and placed in his hand, whilst he is informed that the expenses of the journey have all been provided. Sometimes a small lantern, obtained from a Buddhist temple, and already used in the worship of Heaven, is placed in his hand, and he is advised to hold it fast, as the way before him will be dark. If the family can afford it, a sedan-chair with two bearers, all of paper and bamboo, is purchased. To die in the early morning is in some places considered felicitous, because there are three meals left for the dead man's posterity to enjoy; but to die after the consumption of the evening meal is considered to be ill-omened, for then, by implication, there is nothing left for his successors. It is important that the sons of the dying man and other relatives should be present to attend the death-bed; and, as they weep, they call upon him not to leave them but to awaken from his sleep. The cries of daughters are considered to have special virtue in opening Heaven's gate, and a man who does not possess a daughter or two is much to be pitied—contrary to a prevailing but very erroneous idea current among Europeans.

4. First duties of mourners.—As soon as death takes place, an elder conducts the proceedings, and orders the queues of the sons to be unravelled, and candles to be lighted before the ancestral shrine and the god of the hearth; because the warrant for the capture of the departed soul is supposed to have arrived from the god of Hades, and it must be countersigned by the ancestral spirits, or their representatives, and by the god of the hearth.

¹ The practice of cremation is repugnant to the Chinese view of the necessity of preserving the body intact as far as possible, and is employed only in the case of Buddhist monks and nuns, though historical references may be cited in proof of its frequency in certain periods, probably as a result of foreign influences.

5. The dread messengers.—The messengers of the god of Hades are said to be two, viz. the living *Wu-ch'ang* and the dead *Wu-ch'ang*, the word *wu-ch'ang* meaning 'uncertain,' and being explained by the uncertainty of the summons of death. The living *Wu-ch'ang* is not a demon, but the soul of a living man who is employed by the *Wu-ch'ang* to guide him to the house of his victim. The true 'Uncertain,' as coming from the hidden world, is unable to find his way in the light of day, and requires a mortal spirit to guide him. Some say that these two characters represent, not individual agents of the god of Hades, but only the two souls (the animal and the spiritual, i.e. the *psyche* and the *pneuma*)—the *hun* and the *p'o*, as they are called in Chinese. The first of these is written in Chinese with a character which means 'black' attached to the word for 'spirit' or 'demon,' and hence represents 'black spirit,' and the other has the character which stands for 'white' prefixed to the same word meaning 'spirit,' and hence represents 'white spirit.' These have been personified, by the ignorant, as the lictors who come to carry off the soul; whereas they themselves are the essential parts of the soul which of its own accord is about to leave its tenement. The *hun*, in conformity with its nature, soars aloft and is dissipated; the *p'o* descends into the element of earth and haunts its old neighbourhood.

6. Post-mortem lustration.—The matting on which the deceased is lying is given a pull, with the idea that this will prevent a lingering illness in the next incarnation. The chief mourner, generally the eldest son, invests himself in the clothes which are eventually to be put upon the corpse, and, holding a bucket in one hand and a bundle of incense in the other, walks, or, in the case of an infant, is carried, to the waterside, an umbrella being held over his head all the time, as he is impersonating the dead and must be screened from the eye of heaven. In some cases he is escorted with music and fireworks. Paper money of different kinds is burnt; a coin, with a large nail fastened in the centre, is thrown into the water; and the water is thus supposed to be bought, and is drawn up and taken to the house. Here it is warmed, and a few rubs are given to the chest of the corpse by way of a bath. The hair of the dead man is next combed by the daughters and daughters-in-law, each taking a turn, kneeling and weeping at the same time; and then it is rolled up into a kind of knot on the top of the head, somewhat like the top-knot worn by the Chinese of the Ming dynasty, thus exemplifying the popular proverb, 'The living submit [to the Manchus], the dead do not.' After this perfunctory washing the dead man is removed from his bed and supported on a chair; and the matting and straw on which he has been lying are burned in the open street. It is of the utmost importance that the feet of the corpse should not touch the ground, and they are generally covered with a cotton cloth, and supported in the lap of the daughter-in-law. A small table is spread before the body, holding two bowls—one of rice, and the other containing vegetables with long stalks, to represent and bespeak a long life and firm root in the next stage of existence.

7. Announcement of the death.—The sons of the deceased, with the braid removed from their queues, wearing white gowns, aprons, and white fillets round their heads, and shod with straw sandals, take candles and paper money of two kinds, and proceed to the temple of the god of agriculture. On arrival at the temple, the eldest son, as chief mourner, lights the candles, makes his prostrations, and burns the paper money; this

money is supposed to act as a guerdon to the god of agriculture, who is represented as the agent of the god of Hades in the arrest of the soul, and hence requires remuneration. The whole process is described as *pu t'ang*, or 'strewing the hall'—a phrase applied in real life to 'squaring' the officials at a Yamen in order to be assured of 'justice'; and it is fairly inferred that the officials in the nether world are equally amenable to a 'consideration.'

8. Removal of the corpse.—On returning to the house, they make arrangements for removing the dead to the middle hall, which is reserved for special occasions, and which also contains the ancestral shrine. The position of the corpse is first reversed, indicating the hope that the dead man may return from the hidden world, and this is illustrated by the transposition of the fetus before birth. A meal is laid out on a large sieve and placed before the dead, with wine and candles, and is then carried in procession to the front of the house and laid outside the door; the members of the family, in white clothing, kneel on a piece of coir matting, weeping and prostrating themselves alternately. The body is next carefully secured to a chair by broad bands, and four strong men are selected to convey it to the state apartment; the head is supported by the eldest son, and the feet by the daughter-in-law. The burden must on no account be laid down until its destination is reached; a fall would be considered a frightful calamity. An umbrella is held over the chair as it moves, to hide one who is now a denizen of the shades from the light of heaven, and handfuls of rice are thrown upon it, with the idea of expelling all evil influences. The corpse is then placed on the bed and a coverlet spread over it. A sheet of white paper is laid upon the face, and the feet are placed close together and propped in position; to allow them to fall apart would involve the death of the nuptial partner shortly after.

9. The public announcement.—A messenger is then sent to a Taoist priest to inform him of the date of the deceased's first attack of illness, the time of his death, and the number of his years. The priest writes a large sheet of yellow paper mentioning these particulars, and the date on which the spirit may be expected to return, together with the classes of persons, born under certain auspices, whose presence at the coffin is contra-indicated. On obtaining this information, which is sometimes pasted up diagonally on the wall of the house, the family is able to prepare for the return of the departed spirit and his attendant.

A large sheet is hung to screen the body from the observation of people passing the door, and a rude lamp, consisting of a bowl of oil with a wick in it, contained in a basket of lime, is kept constantly alight, day and night, so that the deceased may have 'a lamp to his feet' wherever he journeys.

10. Ceremonies connected with death in old age.—If the deceased happens to be aged, say seventy years old or more, the curtain at the foot of the bed is red in colour, to show that death, in his case, should not be considered an occasion of sorrow; and no word of consolation is spoken or sign of grief shown by the visitors; on the contrary, nothing but compliments are heard that such a happy consummation has been reached, full of years and in the midst of a numerous posterity. Wine-drinking, the 'Morra,' etc., are all the rule, and any one would be laughed at who insinuated that there was any occasion for grief. It is to be noted that, until the actual coffin takes place, the candles used are of the usual red variety; white candles are not employed until all hope of revival has departed, and the body is about to be placed in the coffin. The head and feet of the corpse are

supported on specially-made pillows of yellow cotton, stuffed with paper waste, or, in country districts where cotton is manufactured, a reel on which cotton is wound is used instead.

11. Notifying the relatives.—A swift messenger is dispatched to inform the relatives, who are expected to send gifts to the bereaved family. The presents consist of small quilts, about three feet long and a little more than a foot wide, which are carefully marked and reserved for placing in the coffin in due course; they are thus marked to ensure that those furnished by important members of the family shall have a first place.

12. Visits to the house of mourning.—Notice of the arrival of visitors is given by the gateman, who beats three times on a drum; a trumpet is sounded and a hand-cannon discharged. The musicians then strike up, and the mourners are warned of the approach. The chief mourner kneels at the side of the spirit table; the stewards escort the visitor to the curtain, where he kneels four times and bows four times.

13. Coffins.—The style of the coffin varies throughout the empire. In some places it represents the trunk of a tree; in the north the lid projects considerably over the head. The quality is determined by the circumstances of the family. Wealthy people prefer to buy their own coffins beforehand and keep them stored either in an out-house or in a temple. Some buy the planks, keep them till seasoned, and then employ carpenters to make the coffin when required; whilst others buy theirs from a coffin-shop or from one of the Charitable Societies. At the end of the coffin a lotus flower is carved, expressing the hope that the deceased may become a Buddha and take his stand on a lotus, as Buddha is represented doing.

14. The process of coffining.—The time for coffining in some places is at full tide, and preferably after dinner, so that the deceased may not be put hungry to his 'narrow bed'; but in others it must be before daylight in the morning, or in the dark of evening, or on a day bearing an odd number, 3, 5, 7, etc., for fear of another death taking place if an even day should be selected. The floor of the coffin is covered with a layer of fine sifted lime or charcoal; then five large squares of coarse paper; upon these a narrow strip of matting, sometimes manufactured of special material like lamp-wick, is placed, and upon the top of all a cotton mattress. The garments for the dead are specially made for the occasion, if the family can afford it, and are fashioned after the pattern of the old Chinese costume, like that of the present Koreans; no buttons or knots are permitted—the Chinese word for 'knot' being pronounced like that meaning 'difficulty' or 'trouble,' and all such difficulties must be prevented from accompanying the traveller. The son now divests himself of the clothes he has assumed, taking them all off in one movement, without separating the several garments; and they are suspended over the backs of two chairs and perfumed or aired, by means of a brazier, containing fragrant herbs, placed underneath. Furs and leather of any kind whatever are carefully excluded, lest the dead should be turned into an animal in his next re-incarnation. The clothes are laid out on the inverted lid of the coffin, and the dead man is carefully placed in position for convenience of dressing; his arms are drawn through the sleeves; a long cord, which runs through the sleeves, is then fastened in a 'lucky' knot, and the clothes are carefully smoothed into position. The hands are placed crosswise over the lower part of the body, the left hand uppermost in the case of males, and the right in the case of females. A pair of cheap shoes are placed on his feet; and an official hat with a red tassel is put on his head. In upper-

class families a winding sheet of deep red is used, sometimes of satin and elaborately embroidered, forming a sort of large bag like a sleeping-bag, in which all but the head is enclosed, and it is fastened at one side with tapes. A satchel containing paper money, a piece of silver, and the Taoist placard is put on his shoulder; and a piece of silver is placed under his tongue. A small pearl, called 'tranquillizing the heart pearl,' is placed on his breast; and, in the case of a woman, a small pearl is inserted in the toe of each shoe.

The corpse is now lifted and placed carefully in the coffin, the son supporting the head and the daughter-in-law the feet, with others assisting at the sides. It is important that it should rest exactly in the centre. Small bags of lime are then inserted to keep the head and feet in position; the pipe, fan, and handkerchief of the deceased are also inserted, and five small bags of different colours, containing nail-parings, old teeth which have fallen out from time to time, tea, and rice; a small casket containing a rosary, and the undress cap and 'riding-jacket' are also added; for the garments which the dead is at present wearing are his ceremonial clothes, required for his audience with the gods; these others he will wear on his journey. Then each person present takes from his breast a small piece of cotton wool, called 'warm the heart cotton,' and, rolling it up into a small ball, throws it into the coffin; the relatives are invited to take a last look, and care must be taken that no tears are allowed to drop in, lest the corpse should be found in another existence with marks or stripes on his face. Then the various coverlets are laid on in regular order, those presented by near relatives being given first place, and so on in order of precedence, until the coffin is quite full; whatever quilts are unable to find a place inside the coffin are burned. Before the lid is put on, all who are regarded as representing astral influences inimical to the deceased are requested to withdraw, and are allowed to return only when the lid has been put in place. The lid is smeared with crude varnish, to make it air-tight, or sometimes a cement made of rice, vinegar, and flour is used. Usually four large nails are employed to fasten the lid; but sometimes a sort of double wedge, fitting into a socket in the lid above and another in the side of the coffin, is used instead. The nails are driven in by a senior, the sons and, in some cases, the daughters meanwhile crouching under the trestles on which the coffin rests, lest the eyes of the departed should start out at the hammering.

15. Preparation for removal.—When the lid is fixed in position, the mourners are allowed to plait their queues with hemp-cord, and wear coarse shoes instead of the straw sandals they have been wearing, and they are permitted to eat. Food is now placed at the side of the coffin, and the dead and his gaoler are invited to partake; the friends and relatives kneel to pay their last respects, and the chief mourner returns the compliment on behalf of the departed. Two piles of paper money are then burned, one for the dead and the other for his guardian.

16. Meals served before the coffin.—The 'filial curtain,' made of white cotton, is next hung up before the coffin, drawn partially back at both sides, with a table and chair placed at the opening, a white cover like an altar-cloth draping the table. Regular meals are served to the deceased on this table every day, and, each time a meal is served, the server is expected to wail and cry. This continues until the funeral.

17. The fairy guides.—On each side of the chair are placed tall paper structures representing hills, one called the 'golden,' and one the 'silver' hill intended to indicate the vast sums which the for-

relatives have provided for the voyager, and behind these are tall figures of the 'Golden Youth' and the 'Jade Maiden,' bearing streamers to guide him across the 'Fairy Bridge.' The portrait of the deceased is hung up, behind the chair, supported on each side by scrolls bearing doleful inscriptions, and with white candles placed in front. The chair is occupied by the ancestral tablet, mounted on an inverted tub, and crowned by a piece of red silk fastened with red cord. The wording of the tablet reads: 'Ch'ing (dynasty) of the Rank of such-and-such, Master so-and-so's Spirit Chief.'

18. **Untying the knots.**—The day before the funeral, Bonzes and Taoists are invited to conduct 'masses,' called 'the Water Mass,' the object of which is to cleanse the departed of all sins and transgressions committed during his life. In the afternoon a bowl containing rice, and a thread rope consisting of seven strands, on which are threaded and tied twenty-four copper coins, is presented to a Bonze, who places it on a table in front of the table already referred to, and, as he recites the virtues of Buddha in releasing souls from pain and trouble, unties the knots in succession, putting the coins one by one into his vest. This untying of knots is meant to illustrate the release from all tightness and difficulties in the next world.

19. **The journey through the 'shades.'**—A Taoist takes his stand at the corner of the table, holding a bell in his hands, and, as he rings it, he chants a sort of sermon whose text is 'All is vanity,' and whose language has a remarkable similarity to the twelfth chapter of Ecclesiastes. He then describes the different stages of the journey to Hades. The journey is divided into seven periods of seven days, or 'weeks,' which correspond with the various stages of the spirit's wandering in the infernal regions. These stages are described in detail, with a wealth of impromptu illustration and elaboration; and the moral of all is the importance of repentance for not having spent one's days in vegetarianism and the repetition of Buddha's all-potent name, in order to avoid such horrors as have been related. When this long discourse is finished, a space is cleared in front of the 'spirit table,' and a large square with ornamental borders is mapped out on the floor with chaff; twelve oil lamps, provided by the Taoist priests, are disposed round the sides of the square, and are supposed to illumine the darkness of the gate of Hades.

20. **Funeral frivolities.**—A table is placed at which a Bonze and six Taoists sit, each performing on a different instrument. In the intervals they sing ribald or humorous songs, with the intention of exciting laughter. They also sing the 'Flower Song of the 12 Moons,' describing the different flowers which bloom in the different months, and other compositions which have apparently very little funeral reference.

21. **Offerings to the spirits.**—After supper the ceremony known as 'Fang Yen-kow' takes place. The spirit table and chair are removed; another chair is substituted, on which a priest takes his seat. Two tables, supporting two large candles and twenty-four bowls of vegetable food, are placed at a little distance in front, intended for the delectation of the various gods. Four other tables are disposed at the sides of the hall, two on each side, intended for the sacrifice to the family ancestors; a small table a little lower down contains the offerings intended for the dead person; and the spirit tablet sits at this table in the chair as before, attended on each side by relatives in light mourning garments. When the priests have finished their reciting, a quantity of paper garments and money is burned outside the house.

22. **Sacrifice to the dead.**—The apartment is now re-arranged, and preparations for the sacrifice

to the dead are made; musicians are requisitioned; large quantities of flesh and fowls are laid out; lamps are hung all over the room, and the chief mourner appears from behind the curtain, leaning upon the 'filial staff,' and supported by attendants. He kneels before the tablet and makes humble offering of the meats, etc. As he prostrates himself, a person standing at the side reads a long panegyric on the dead in a melancholy voice, and the chief mourner weeps as he lies upon his face. He is then escorted to the rear of the screen, and repeats the process three times; all the relatives and friends present follow him in his genuflections. When all is finished, the offerings and all the temporary fittings are removed, and preparations are made for the funeral.

23. **The funeral procession.**—In some places the funeral takes place in the fifth watch, i.e. between 4 and 5 in the morning, perhaps in the fifth week, or as late as one hundred days after death, sometimes even later, and in cases of poverty the coffin is left in the house, or put in a mortuary chamber for the time being.

Every one is awake and stirring at daylight when the day arrives, and arrangements are made for the start. An immense paper figure, representing the 'Clear-the-way god,' leads the van; next come two large bamboos bearing streamers, and four 'wagheads'—paper figures of men, whose heads bob continually as they are carried along. The son-in-law or nephew carries a dish containing rice, in which is placed the ancestral tablet. In wealthy families the tablet is placed in a sedan-chair, which is supported on each side by a son-in-law or nephew. The bearer of the tablet is robed entirely in white, and the friends of the family walk on either side of him. Then follows the coffin, borne by four men or a larger number, according to the rank of the deceased, and covered with a red pall or with a satin embroidered cover. After the coffin comes the chief mourner, wearing a head-dress of coarse hemp gauze, shaped somewhat like a biretta, with 'pom-poms' of cotton-wool placed at the intersections of the frame, and worn over a small white cap. He hangs his head as he walks, and is followed by the relatives, male and female. The daughter-in-law wears a cowl or hood of coarse gauze over her head, and a jacket and skirt of the same material; she also carries a staff or wand like that borne by the chief mourner; she sometimes sits in a sedan-chair, and the heavy head-dress is then placed on the top of the chair instead of on her head. She weeps and cries aloud as she goes, like the 'keener' at an Irish wake. Rice is thrown over the coffin and chief mourners as soon as they move towards the outside door. The figure of a crane, with outstretched wing and uplifted foot, is placed upon the centre of the coffin, and is supposed to convey the soul to the 'Western Heaven.'

24. **The entombment.**—When the place of burial is reached, the coffin is temporarily supported by a couple of blocks, whilst the exact location is being considered, with special reference to orientation. In wealthy families, a stone receptacle is prepared beforehand, and the coffin laid very carefully in the exact centre. A meal is laid out, to which the deceased and also the denizens of the neighbouring tombs are invited. The mourners' head-dresses and cinctures are burnt, with a quantity of paper money, and the streamers and staves are left at the grave. All present now set up a cry; the stone door of the tomb is placed in position, and the tomb sealed. The head-stone is set up, bearing the names of the deceased, with the date of erection. The mourners then join hands and perform a sort of 'merry-go-round' about the tomb, which is repeated three days later.

25. Return of the ancestral tablet.—The procession returns in the same order as before, escorting the ancestral tablet to the home, with crying and burnings. On arrival at the house a great bonfire is made outside the door, and all who have attended the funeral are expected to step across it before gaining the threshold; no one is exempted. In some places a little water is sprinkled over each person by the Taoist priests. The son, in (lighter) mourning garments of blue, kneels and offers the viands prepared, and burns a quantity of paper money. He next climbs by a ladder to the ancestral shrine over the central partition, lights candles before each shrine, and then carries up the new tablet and places it in position. All present are invited to partake of the feast which follows. On the third day a visit is paid to the tomb, and offerings of food, etc., are presented. Those who are present join hands, forming a ring round the grave, and circle round in one direction three times and then reverse three times; this is with the idea of confining the spirit in his proper habitat.

26. The seven 'weeks.'—On the seventh day a number of Taoists are hired, seven in all, to 'open the road,' and a great variety of ceremonies take place on this day—morning, afternoon, and evening. In the evening the hall is again arranged, with a table and chair, and a portrait of the deceased hanging behind the chair. Two cups of tea are put on the table, and two bowls of light food, together with candles and incense. The daughter-in-law weeps before the picture, as she 'invites' the spirit to partake of refreshment, and a quantity of paper money is also burned. At daylight, tea, etc., is laid as before. At breakfast-time, food of different kinds is offered and candles are lighted. The performance is repeated at noon, with this difference, that the viands are more elaborate. This takes place every 'week' until the seventh, the only exception being that in the fifth week a further meal is laid in the death chamber. In the fifth 'week,' Taoists are called to 'force the city,' or 'force the gate of hell.' A paper city with men, horses, etc., is set up, and, when night comes, a Taoist priest in full robes breaks through the city with the sword he carries, and liberates the imprisoned soul; afterwards a great bonfire is made in the open air, and three or four priests take their stand around it, holding long bamboos, to which are attached elaborate 'fireworks.' In the sixth 'week' the daughters are expected to provide a feast for the dead, and they are given a share in the division of the clothing which he has left. At the end of the seventh 'week' the chief mourner is allowed to shave his hair for the first time, but, if the coffin has not yet been removed, he is not permitted to do so until one hundred days have expired. The next year the mourners, wearing white garments, pay their first annual visit to the grave on the day known as 'clear bright,' and on this day the sounds of wailing may be heard in all directions. A further visit is sometimes paid in the ninth moon; and at the winter solstice paper garments, representing warm winter clothes, are presented and burnt.

27. The spirit's homecoming.—On the night appointed for the return of the spirit, a table of eatables is laid in the death chamber, which is then evacuated by the relatives. In the kitchen a quantity of lime is placed beneath and around the fireplace. When the hour arrives, as announced by the Taoist priest, a procession is formed, the priest leading, and all enter the chamber. The kitchen is then visited and the lime examined, the traces of the spirit's presence being discovered by the marks, as of the feet of a goose, upon it. A white cock is caught and carried in one hand in

front of a basket-lid, and, as the lid is struck by a measure held in the other hand, the cock crows; he is then escorted outside, and paper money burnt. This represents the sending off the spirit's escort. A white cock is said to be a protection against baneful astral influences, and to be the only capable guide of transient spirits.

DEATH AND DISPOSAL OF THE DEAD (Coptic).—When the decaying religion of ancient Egypt gradually gave place before the advance of Christianity, many of the beliefs, and much of the symbolism that had been so dear to the Egyptians for over three thousand years, survived the change of religion for some considerable time, and, as was to be expected from a people by whom burial rites had been magnified into a great and complicated magical system, the old customs were given up only gradually and reluctantly. To the Egyptians, Christianity presented itself in a somewhat different light from that in which it appeared to the other civilizations of the ancient world. From the dawn of history they had believed in a continuation of life after death, in a future existence that was well defined; and in order to secure this existence for the soul of man they had elaborated countless magical rites which were performed at the burial of the dead. They had also a god of the dead—a god who had once lived an earthly life, who had been slain by the power of Evil, and who by certain magical ceremonies had come to life again, and ruled as King of the under world. It was thus that in Osiris lay their hope of living again, and with him they considered the dead identified. The Christian belief in a resurrection was therefore not, in certain aspects, a new one to them, and the doctrine that the dead in Christ shall live in Christ was strangely familiar to all who had been reared in the Osirian creed. Thus it is not strange that, when Christianity began to be accepted in Egypt, the early believers continued to practise the ancient funeral rites, only slightly modified to meet the requirements of the new religion.

The chief concern of the pagan Egyptians had been the preservation of the bodies of the dead by embalming, so that the spirit of the deceased might pass to and fro between the kingdom of Osiris and the earthly shell which lay in the tomb; and the early Christians of Egypt saw no reason to alter the custom of their forefathers, more especially since the Christian and pagan doctrines of the resurrection had so much in common. Mummification of the dead, therefore, continued to be practised by the Christians until the beginning of the 5th cent., and only died out after that owing to the general opposition of the Church.¹ Mummies of anchorites and holy men and women have been found in various parts of Egypt, one of the most notable cemeteries containing Christian dead being the recently excavated burying-ground at Antinoë. The bodies are usually well preserved, the head being sometimes adorned with a garland. In the case of the men, the beard was allowed to grow, contrary to the ancient usage, and when the face is thin or emaciated it represents very much the type of the Good Shepherd as depicted in later iconography, but unlike the criphoric figures in the catacombs.² The body was carefully wrapped in bandages, usually intercrossed, and sometimes

¹ Anthony, the founder of Christian asceticism, had so great a dislike to it that he desired to be buried secretly, in order that his body might not be subjected to the general custom. It was probably his opposition that led to the suppression of the practice.

² Gayet, *AMG* xxx.

the face was covered with a painted plaster mask, as was the pagan custom of the time. In the case of a supposed Christian priest found at Deir el-Bahari, the outer wrapping was painted to represent the deceased holding the Eucharistic cup in his hand. On his left shoulder was the *swastika* ornament, which was much adopted in early Christian symbolism, while the lower part of his robe bore a representation of the boat of Isis.¹

But it was not only the belief in the efficacy of embalming that survived the change brought about by Christianity, for many of the other old funeral customs lingered on, although it is difficult to decide how far their import was understood by the Christians. There is some evidence to show that offerings of food continued to be made to the dead. In the Christian cemetery in the oasis of el-Khargeh the tombs follow the ancient design, the body being laid at the end of a long shaft, at the opening of which is a chamber containing niches for offerings.² Wine-jars and baskets for food were sometimes buried with the dead, and in a will made by a Christian at Antinoë the deceased requests that the holy offerings may be made for the repose of his soul. This, however, may refer to an *agape*, or a kind of mass said for the dead.³ It is interesting that at the Synod held at Hippo in A.D. 393, at which Augustine was present, the habit of placing the host in the mouth of the dead, which had become general amongst Oriental Christians, was strongly condemned. It was apparently also the custom to enclose some of the holy elements in the coffin. Some other pagan usages seem to have continued. As the dead were formerly buried with amulets and little figures of protecting gods, so the pious Christian was buried with figures of St. George and the Evangelists. In one case, at least, at Antinoë a sort of ivory praying-machine, a kind of primitive rosary, appears to take the place of the papyrus inscribed with prayers and magical formulae. There was also found, held in the hands of this body, a flower of Jericho similar to the mystic rose which was supposed to be the emblem of immortality, and to flourish every year on the day Christ was born. Hitherto this symbol was not considered to have been employed before the Crusades, but its presence in the cemetery of Antinoë points to its use in very early times. It is interesting also to note that the body of a monk named Serapion, from the same burial, was encircled by an iron band from which hung a cross.⁴ In cases where portraits of the deceased were painted on the outer coverings of the body, the ancient sign for life, the *ankh*, , is sometimes represented grasped in the hand.⁵ This symbol is very frequent in Egyptian iconography, and was often employed where the cross would have been expected. Its use was so persistent that it afterwards became identified with the cross, and was known as the *cruz ansata*. See art. CROSS.

As the influence of the Bishop of Alexandria increased over the remoter parts of Egypt, many customs which appeared semi-pagan died out, and the funeral rites were performed more in accordance with orthodoxy. After the Council of Chalcedon (A.D. 451), when the Coptic Church was definitely separated from the orthodox body, there could be but few remaining. From descriptions in the Coptic writings, it would appear that the dead, wrapped in a winding sheet, were immediately carried out into the desert and buried. Persons of peculiar sanctity it was the custom to bury in a reliquary. The Coptic *Life of Shnoute* states that he was buried in a reliquary pierced with holes, probably in order that pilgrims

might have the benefit of gazing on the holy remains.¹ As these relics are usually described as bones, it is evident that embalming had by then been abandoned. A Mass, or offering of the Eucharist, was sometimes performed before the funeral, but Masses for the repose of the dead in the Roman sense seem to have been unknown in the Coptic Church. The use of tombstones at this period was almost universal. They usually contain the words: 'One God who helpeth,' and the date on which the deceased 'fell asleep' or 'entered into rest.' Occasionally they contain pious ejaculations and quotations from Scripture. Rarely they are conceived in a more pagan spirit, with such phrases as 'Grieve not, no one is immortal,' an especially good instance of this being a tombstone in the British Museum [no. 400] which runs: 'O how dreadful is this separation! O departure to the strange land which removes one for all time! O condition of Hades, how do we come to thy gate! O Death, name bitter in the mouth! . . . Let all who love to weep for their dead come to this place and mourn greatly.'² This recalls the ancient Egyptian funeral prayer to the passer-by: 'O ye who love life and hate death . . . pray for the deceased.'

The Copts have undergone centuries of oppression under Muslim rule, which has driven many to embrace Islām. The Khalif al-Mutawakkil (850) even went so far as to interfere with their burial customs, and ordered that all the graves of the Copts should be level with the ground. Possibly owing to the influence of Islām, which has surrounded them on all sides for so long a period, the funeral rites of the Copts to-day have become very similar to those of their Muhammadan fellow-countrymen. The corpse is borne to the cemetery on a bier, followed by the female relatives and women of the house wailing and mourning. At the burial-ground a sheep is often killed by the more well-to-do, and its flesh given to the poor; the poorer give bread alone. Professional mourning women are hired to wail in the house for three days after death—a survival, perhaps, of the ancient Egyptian custom, or possibly only a ceremony borrowed from the Muslims. The lamentations are renewed on the seventh and fourteenth days after death, and sometimes for longer still. On the eve of the festivals of *al-Milad*, *al-Ghitas*, and *al-Kiyamah* (i.e. the Nativity, the Baptism of Christ, and Easter), it is the custom of the Copts to visit the cemeteries and spend the night there, many of the richer having houses built specially for these occasions. The women spend the night in the upper rooms, the men below. Next day an ox or sheep is killed, and the flesh distributed among the poor. Lane (*Modern Egyptians*, p. 296) states that the Copts say that these visits to the tombs are merely for the sake of religious reflexion. This custom, however, together with the practice of slaughtering animals for food, possibly goes back to pre-Christian times in Egypt, when the relatives of the dead made periodical visits to the tombs, and brought food-offerings for the *ka* of the deceased to refresh him in the under world. The funeral services of the Copts are according to the liturgy of St. Mark. One is in use for ordinary periods of the year, and a special one is employed during Easter (Tuki, *Rit. Copt. Arab.* p. 525).

DEATH AND DISPOSAL OF THE DEAD (Early Christian).—1. During the earlier years the Christians followed in general the burial customs of the Jews. But a livelier hope in the resurrection robbed death and the grave of many of their terrors. This gradually modified inherited funeral rites. To the followers of Jesus death was a sleep, and the grave a resting-place (κοιμητήριον) for those who had died in the faith (Jn 11³, Ac 7⁶⁰, 1 Th 4¹³, 1 Co 15¹⁸⁻²⁰). Not less but more respect was accordingly paid to the mortal remains of the departed, for their bodies had been 'temples of the Holy Ghost,' and were to rise and be glorified (1 Co 3¹⁶, 6¹⁹, 15⁴², Rev 7¹³). When death ensued, the eyes were closed, the body washed, the limbs swathed, the whole body wrapped in a linen sheet with myrrh and aloes, and laid upon a couch in an upper room (Ac 9³⁷; cf. Mk 15⁴⁶ 16¹, Jn 11⁴⁴ 19³⁹, 20⁵⁵). These acts were performed by the elder women—kindred and friends of the family. Relatives and intimates were admitted to view the face of the deceased, and an interval of eight or more hours was required before burial. The younger men carried the bier to the place of interment, followed by the relatives and friends (Ac 5⁶; cf. Lk 7¹⁴). Flute-players, hired mourners, and noisy demonstrations of grief were doubtless dispensed with (Mt 9²³, Lk 8³², Ac 8⁷, 1 Co 15⁵⁴). The place of burial was outside the city or village, in a natural cave, or in a tomb cut out of the rocky hill-side, or in a subterranean chamber, or simple grave. Local conditions were determinative. The description in the Gospel of John of the tomb of Lazarus and of that of Jesus will hold for the early Christian Palestinian place and form of burial (Jn 11³⁸ 19⁴¹; *Gosp. of Peter*, chs. 6 and 10). In fact, the form and character of Jesus' entombment influenced all subsequent Christian practice (1 Co 15³⁰). Tombs were, as a rule, private family possessions (Mt 27⁶⁷), and were large enough to receive several bodies, which were laid upon the ledges or in the niches cut in the sides. The brotherhood, however, from the beginning undoubtedly provided for the burial of its own poor (Ac 2⁴⁴; Aristides, *Apolog.* (Syr.) xv. 18). A large stone, rolling in a rabbit, closed the door of the hill-side sepulchre against prowling beasts and robbers (Mk 16³). It is altogether probable that the Jewish Christians whitewashed their tombs, as did their compatriots (Mt 23²⁷). In Rome and in general throughout the West, as well as in Egypt and North Africa, the Jews had already adapted the Palestinian form of interment to local conditions, and the early Christians modified this still further to meet their own peculiar requirements. Of course they borrowed this and that local practice from the current pagan usage. The wide-spread development of 'catacombs' (*q.v.*) as places of Christian burial was but a re-adaptation of Jewish and pagan burial customs. Simplicity and even plainness must have characterized the earlier forms of Christian entombment in all lands, partly on account of the poverty of the brotherhood, and also because of the hope of a speedy resurrection. A brief inscription expressing the hope of immortality (*ἐλπίη σοι, κοίμησις ἐν ἐλπίη, in pace*, etc.), sometimes accompanied by a consecrated symbol (a palm-branch or anchor, fish or dove), was the final tribute to those who had died 'in the Lord' (Bingham, *Antiq. of Chr. Church*, ed. 1870, bk. xliii.; *Am. Cath. Quart. Rev.*, 1891, xvi. 501 f.; Kaufmann, *Handb. d. chr. Arch.*, 1905, pp. 74 f., 111 f., 205 f., 277 f.; art. 'Köimeteria,' in *PRE³ x.*).

2. But changing conditions produced manifold developments. The wide-spread and increasing alienation between Jews and Christians in the early decades must often have suggested, if it did not compel, separate burial arrangements. And

the rapid increase of the Gentile element in the various churches throughout the Empire naturally tended strongly in the same direction. The Jewish cemeteries, indeed, would hardly have been open for the interment of deceased Christians with pronounced pagan antecedents. Our sources, it is true, are practically silent regarding the progress of this development, but it is safe to say that separation between Jews and Christians as regards cemeterial requirements had taken place before the close of the first century, especially in prevailingly Gentile Christian communities. And a similar separation must have been going on as between pagans and Christians. Hostility between them became marked towards the close of the 1st century (Ac 8¹⁴⁻¹⁵, 1 Co 7¹², 2 Co 6¹⁴, Col 2⁸, 1 Jn 2¹², 3¹³, Rev 2¹⁰, 20¹⁰, 3⁹, 6¹², and chs. 8-20), and martyrdom was not uncommon (Clem. Rom. *ad Cor.* 5-7; *Tac. Ann.* xv. 44; Suetonius, *Nero*, 16; Melito *ap. Euseb. HE* iv. 26, iii. 17-20; Pliny, *Ep. ad Traj.* x. 96, 97; Ign. *Ep. ad Rom.* 5, *ad Phil.* x. 2; Polyc. *ad Phil.* 1). The Christians would naturally wish to ensure the sanctity of the graves of their martyred dead, but in order to do so they had to provide separate cemeteries. That this began to be done in Rome by the opening of the 2nd cent. is generally admitted (de Rossi, *Roma Sott.* 1864-77, i. 343 f., iii. 386 f.; *Bull.* 1865, p. 36 f., 1886, p. 136; *Nuov. Bull.* 1901, p. 71 f., 1902, p. 217 f.; Bosio, *Roma Sott.* 1850, p. 141 f.; Armellini, *Gli Antiche Cimit.*, 1893; V. Schultze, *Katakomben*, 1882, p. 307; Kaufmann, *l.c.* 111 f.). But that it did not come to pass throughout the Empire is abundantly proved (Ramsay, *Cities and Bishoprics of Phrygia*, 1897, i. 500 f. and 717 f.). Influences other than hostility would often operate to hasten or prevent the institution of separate Christian cemeteries. In some lands, such as Syria and Asia Minor, it took even centuries to accomplish the separation of Christians on the one hand, and Jews and pagans on the other, as regards burial accommodation (Ramsay, *l.c.*).

3. The earliest distinctly Christian cemeteries of which we have any knowledge are to be found in the neighbourhood of Rome. The Neronian persecution, followed by that of Domitian, doubtless constrained the Christian brotherhood to provide separate resting-places for their honoured heroes who had 'fallen asleep.' And, as martyrs to the faith multiplied, such cemeteries became consecrated ground, and the tombs of the martyrs were ere long places of pious meditation and devotion. In certain communities this often necessitated chapels, where the brethren could gather without imminent danger of molestation. Then funeral rites and ceremonies soon shared in the general development, and these in turn reacted powerfully upon the whole manner and mode of burial. The entire catacomb development at Rome, Naples, Syracuse, Alexandria, Trèves, and elsewhere, for example, is adequately explained only on such presuppositions. Instead of family tombs and brief temporary resting-places for the dead, the Church, especially in the West, gradually made provision for the burial of all its deceased members (by A.D. 250). There accordingly arose, in the suburbs of every considerable Occidental city, Christian burying-grounds. And, where the remains of noted martyrs were laid, chapels were erected, and the brethren gathered to observe the Holy Eucharist and to hold fellowship with the 'saints who had gone before.' The chapel was named after the martyr; often the title was given to the whole cemetery; more frequently the cemetery bore the name of the patron who had provided the ground; occasionally of the bishop who enlarged and elaborated it. Instances of each are the cemetery of the martyr Prætextatus, of the patron Priscilla, and

of the bishop Calixtus—all in the neighbourhood of Rome. In the Orient, developments were different. Palestine is rich in rock-tombs, and so is the whole of Syria. Asia Minor has few ancient church-cemeteries; it has mostly family burial-places. And this is largely true of the whole Orient. Stone sarcophagi with Christian inscriptions are frequently found. These were placed in simple graves beneath the surface, or in tombs erected on the hill-side, with more or less elaborate façades. In all this there is little that was distinctively Christian (Ramsay, *op. cit.* i. 500 f., 717 f.). But in the West the pre-Constantine developments were quite unique. Beginning with the Jewish or pagan type of family tomb, the Christian churches soon provided cemeteries for all their dead (Aristides, xv. 8, 11; Tert. *Apol.* xxxix.). The most common form of these was that which was later known as 'catacombs' (*q.v.*). These underground cemeteries are enormously extensive in the neighbourhood of Rome, and were used as burial-places by the Christians down into the 5th century. They give us the larger part of our information on the theme in hand. The transition, for example, from the private family-tomb to the common church-cemetery is illustrated by the St. Lucina crypt and the Calixtus catacomb, by the so-called *speleunca magna* and the Prætextatus catacomb, the Flavian vestibule and the Domatilla catacomb, and the 'Acilii Glabrones' chamber and the Priscilla catacomb. The growing use of obituary inscriptions can also be seen in the catacombs, from the simple *επιφνη σοι* to the most elaborate personal tribute on the tomb of Sixtus II. (A.D. 258). The development of Christian symbolism can likewise be traced therein, from the rude but suggestive 'anchor' to the portrayal in fresco of the Last Supper or of the story of Jonah. Christian art in general had its beginnings and early elaborations in the catacombs, and every phase of it was closely related to the burial of the dead. This is especially true of painting, sculpture, and church architecture. The same is also true of the development of the liturgical and sacerdotal rites in the early Church, and the worship of the dead. The ante-Nicene development of burial customs is, however, quite amply reflected also in the current literature. The *Martyrium S. Polycarpi* speaks of celebrating 'the anniversary of his martyrdom,' or birthday, at his tomb (xvii.). Tertullian says: 'As often as the anniversary comes round, we make offerings for the dead (martyrs) as birthday honours' (*de Cor.* iii.; see also *de Monog.* x., and Cyprian, *Epp.* xii., xxiii., xxxvi. 2; cf., further, art. COMMEMORATION OF THE DEAD).

The Christians did not fear cremation, though they preferred 'the ancient and better custom of burying in the earth' (Min. Felix, *Oct.* xxxiv.; cf. *Mart. Polyc.* xviii.; Tert. *de Anima*, li., *de Res. Car.* lxxiii., *Apol.* xlii.; Origen, *c. Cels.* v. 23, viii. 30; Lactantius, *Div. Inst.* vi. 12; Euseb. *HE* v. 2, vii. 22; August. *de Civ. Dei*, i. 12, 13). Simplicity prevailed throughout the 2nd cent. (Min. Felix, *Oct.* xii. and xviii.), but by the opening of the 4th cent. everything had become elaborated. Associations had been formed in the West to hold the property; space was sold in the cemeteries; gravediggers (*fossores=κομιδαι*) had become a separate class, and there were artists, stonecutters, painters, sculptors, and architects. The anniversary festival had been extended so that the third, seventh, and perhaps the thirtieth and fortieth days after burial were celebrated (*Apost. Const.* viii. 41 and 42). Prayers were made at the tomb, psalms sung, and the Eucharist celebrated as fellowship with the dead; lighted tapers were placed at the grave; personal ornaments,

toilet articles, bottles, vases, etc., were interred with the corpse (Synod of Elvira, can. 34; of Laodicea, can. 9; of Gangra, can. 20; Euseb. *HE* vii. 16, *Vita Const.* iv. 66, 67, 70, and 71; Epiph. *Hær.* lxxv. 3; Socrat. *HE* i. 40, iii. 18; Jerome, *Ep.* xxvii. [cviii.] ad Marcellam).

4. With the recognition of Christianity by Constantine a new era opened. Recent martyrdoms had multiplied the number of saints and holy places, furnishing fresh sites for sacred buildings as well as holy relics for altars. Imperial favour and funds now facilitated the erection of churches throughout the Empire, and the graves of apostles, martyrs, and honoured saints were soon covered by imposing basilicas or mausoleums. In the suburbs of Rome, for example, the basilica of St. Peter arose on the Vatican Hill, that of St. Paul on the Via Ostiensis, that of St. Lawrence on the Via Tiburtina, that of St. Agnes on the Via Nomentana, and that of SS. Marcellinus and Peter on the Via Prænestina. These all were, or became, cemeterial churches, with which Imperial mausoleums were frequently connected, as in the case of the mausoleum of St. Helena, near the last-named church, and that of Constantina, near St. Agnes. All around this latter basilica were placed minor monuments in a large open-air cemetery. The 'churchyard' now soon becomes the prevailing type of cemetery throughout the West, including North Africa. Persecution having ceased, the Christians were free to bury *sub divo*, yet the martyr graves beneath the altars usually drew the cemeteries near the churches. Of course, local conditions were determinative. Churches within the walls of the cities could not have extensive cemeteries, though their crypts were used for burial purposes. Western Europe followed in general the lead of Italy and Rome as regards cemeterial churches and churchyards. North Africa seems to have early developed the open-air cemetery, independent of particular churches. Egypt continued for the most part the ancient practices of the native Egyptians and naturalized Jews. Syria also persisted in its old burial customs, though the elaborate mausoleums of antiquity were not erected as Christian tombs; and the same was true of Asia Minor.

5. The elaborate funeral ceremonies and the interment of the Emperor Constantine in Constantinople (Eusebius, *Vita Const.* iv. 60 and 66-72) indicate the stage which the development had reached and also lines of future progress:

The body 'was placed in the principal chamber of the palace, and surrounded by candles,' and 'encircled by a numerous retinue of attendants, who watched around it incessantly night and day'; the second son, Constantius, himself headed the procession, 'which was preceded by detachments of soldiers in military array, and followed by vast multitudes, the body itself being surrounded by companies of spearmen and heavy armed infantry. On the arrival of the procession at the church dedicated to the apostles of our Saviour, the coffin was there entombed. . . . As soon as Constantius had withdrawn himself with the military train, the ministers of God came forward, with the multitude and the whole congregation of the faithful, and performed the rites of Divine worship with . . . prayers for his soul. . . . His statue was erected . . . in every province.'

The funeral and entombment of Basil, Bishop of Caesarea, as described by Gregory of Nazianzus, is likewise instructive (*Paneg. on Basil*, 80):

'The saint was being carried out, lifted high by the hands of holy men, and every one was eager to seize the hem of his garment, or to touch his shadow or the bier which bore his holy remains. . . . The psalmody was overpowered by the lamentations. . . . the body was consigned to the tomb of his fathers. . . . and now he is in heaven, where, if I mistake not, he is offering sacrifices for us and praying for the people.'

Panegyrics on deceased distinguished personages, and over the remains of relatives and friends, became common (Euseb. *Vita Const.*; Ambrose on Valentinian and on Theodosius; Greg. Naz. on his brother, sister, and father [*Orat.* vii. viii. and xviii.], and on Athanasius; Greg. Nys. on Meletius;

August. *Conf.* ix. 12; Jerome, *Epp.* lxi. etc.). The anniversaries of famous martyrs were also occasions for elaborate discourses on their virtues. And their tombs now became the resort of pilgrims from far and near. The relics of martyrs and saints were frequently disinterred and sent to important churches for re-burial in the crypts, where shrines were erected and services held. The Synod of Gangra (c. 358 A.D.) declares: 'If any one shall, from a presumptuous disposition, condemn and abhor the assemblies (in honour) of martyrs, or the services performed there, and the commemoration of them, let him be anathema' (can. 20). Yet the Synod of Laodicea (before A.D. 381) announced that 'members of the Church shall not be allowed to frequent cemeteries or so-called martyries of heretics for prayer or worship' (can. ix.). Many councils in Spain, France, and Germany during the 6th cent. tried to stop burials in martyries and churches. Pelagius II. (A.D. 578) protested against the growing custom, but with slight effect. Burial around churches, or in porches, vestibules, and cloisters, soon became universal. Gregory the Great (c. 600 A.D.) complains about exactions of cemetery officials as a price of burial, but says: 'If parents or others wish to offer anything for lights, we do not forbid, but you must not ask it' (bk. ix. *Ep.* iii.). Jerome and Chrysostom had spoken approvingly of giving alms at funerals, for the relief of the souls of the dead.

6. A summary of the theme in hand may be given under the following heads. (1) The simple funeral rites and burial customs of the early days gradually gave way to more and more elaborate ceremonies and practices. (2) These developments were different in different lands, but they all tended in the same general direction. (3) Two universal influences were at work to produce these manifold changes: one arising out of the persistent faith and life of the Church, the other pressing in from the universal pagan environment. (4) Funeral rites were extended so as to include the elaborate ceremonials which have been described above, most of which were drawn more or less unconsciously from the surrounding pagan practices, although the Christians never lost the primitive faith and feeling which distinguished their early funeral customs. (5) The manner and forms of entombment were also steadily influenced by the various pagan practices, and yet to the Christians the grave remained the 'sleeping-place' for those who were to arise to 'newness of life.'

EDWIN KNOX MITCHELL.

DEATH AND DISPOSAL OF THE DEAD (Egyptian).—Of no other country in the world have the burial customs always attracted so much attention as have those of ancient Egypt. The artificial preservation of the body, the elaborate care with which it was provided with covering and ornament, the monumental nature of the tombs which were built or excavated to contain it, struck the earliest foreign observers with astonishment, and are still the theme of wonder and admiration in our own day. Moreover, the dry and microbe-free climate of Egypt, in which nothing is destroyed by the disintegrating action of the atmosphere or the attacks of bacilli, has helped the artificial aids of mummification and carefully-sealed burial to preserve the human body and its appurtenances intact just as they were placed in the tomb. Even if

removed from its wrappings, it is but rarely that a mummy is affected by any agency except damp; while the textile fabrics, the mats and baskets, and even the loaves of bread sometimes placed with it, are, if delicate and brittle and without elasticity, to all outward appearance the same now as when they were buried with the mummy. It is chiefly to their preservative methods of burial that we owe our present remarkable knowledge of the ancient Egyptians and their manners and customs, whereas in the case of Greece and Rome we have become acquainted with the course of daily life, and the objects of daily use, mainly through the medium of literary descriptions or the representations on painted vases. In Egypt we have the actual objects themselves, from the precious ornaments of gods and kings to the humblest bead-necklaces or rude idols of the *fella-hin*; we have chariots perfectly preserved, splendid furniture and marvels of cabinet-making which once adorned palaces, simple wooden benches, and the shoes, mallets, and baskets of the common peasants. The majority have been preserved in the tombs. Naturally we possess actual objects of daily use from Greece and Rome also, but they are rare, and tell us little compared with the vast corpus of knowledge which we have derived from the sepulchres of Egypt. And one thing we have from Egypt which is the most wonderful of all, and this we can never have from Greece and Rome. No man has seen the actual face and form of Themistocles, Pericles, or Cimon, of Solon, or of Socrates, of Alexander, Hannibal, or Augustus; yet every man now who wishes may gaze upon the actual bodies of kings whose ancient names were told by the priests to the Father of History, whose deeds as they were written on temple-walls were recounted to the nephew of Augustus, and whose statues were venerated as those of deities by the Emperor Hadrian. Sesostris, Ramses, and Osymandyas, who were ancient names to Hellenes and Romans, and were actually contemporaries of Greek kings who were the heroes and demi-gods of the classical period, lie now in the glass cases of the Cairo Museum. Mycerinus, of whom Herodotus (ii. 129-134) tells a merry tale, is No. 6006 of our national collection in the British Museum. Their preservation to the present day is due to the peculiar burial customs of their nation, and was intended.

The chief peculiarity of the Egyptian burial customs is the artificial preservation of the body. No doubt in later times a theory of resurrection was adopted, according to which, after a space of three thousand years, the several parts of a man—his *ikhu*, or spark of intelligence which had rejoined the gods, his *ba*, or bird-like soul which fluttered around the tomb, his *khaibit*, or shadow, and the *ka*, or double of him, which was born with him and accompanied him on earth during life and in the tomb during death—rejoined his *sahu*, or noble and venerable mummy, which had lain so long in solitary majesty in the tomb, and then the whole man rose again from the dead. But it is not clear that this actual man was to live again on earth as he had lived before. He was to live with the gods rather. According to another theory, the *sahu* was not the actual mummy, but a sort of spiritual body which germinated in the *khat*, or corruptible body, and sprang up out of it just as the wheat springs up out of the seed: so the dead Osiris gave birth to a new living Osiris. It was in this *sahu* that the concomitant parts of the man were re-united. A symbol of this belief is found in many tombs; it is a figure of Osiris on his bier, made of earth, in which seed was sown just

before the burial; as we find it now, we see the wheat which grew up and withered in the darkness. The two different ways of regarding the *sahu* probably arose from two different ideas of the actual dead body. In one aspect it was a mere dead thing, not different from a dead fish—the *khat* of a man like the *khat* of a fish—and was expressed in the hieroglyphic writing by the figure of a dead fish. But in another it was a fearful and wonderful thing—the *sahu*, dwelling in majestic loneliness and silence in the tomb, and endued with marvellous magical powers, which naturally included the power of summoning back to it at will the departed principles of life and intelligence, the shadow, the heart, and the name, ever regarded with awe by primitive races. So the *sahu* is represented as the human mummy lying on its bier. The two ideas were combined in later times by regarding the *sahu* as a spiritual body (which originally it was not) which sprang from the *khat*. The *khat* was simply the profane name for a dead body of any kind. In the oldest religion, when the actual human mummy was alluded to, it was called the *sahu*, and one prayed to the gods to allow the *ba* to re-enter the *sahu* and re-vivify it, so that it could feed upon the offerings which its descendants brought to it. It was probably out of this idea that the conception of a resurrection, whether of a spiritual *sahu* or of the actual man, grew. The real origin of mummification is to be found in a simple desire to preserve the dead man to his family. In the dry soil of Egypt bodies were found by experience not to decay utterly when they were buried in shallow graves, and the simple expedient of smoking or scorching was no doubt resorted to in order to stave off putrefaction even more. How far smoking is responsible for the crouched and drawn-up position of the oldest Egyptian bodies is doubtful. Real mummification was not known to the oldest Egyptians, but that it was introduced before the close of the Neolithic period is shown by the hieratic use, even in the very latest time, of a flint knife only, in order to make the incision through which the entrails were removed. Herodotus records for us this use of 'an Ethiopian stone' (see below). The ancient and holy stone-knife alone could be used for this act; the new-fangled metals were profane. Of this desire to preserve the dead as long as possible to 'those on earth who love life and hate death,' in the words of the Egyptian funeral-prayer, we may find a proof in the custom of keeping the mummy above ground for a specified period, in its own home, before it was finally committed to the tomb (see below, p. 462).

Wiedemann regards this custom, which we shall discuss further later on, as a survival of what he calls 'secondary' interment. In the most ancient days he considers that the primitive Egyptians buried the body first in ground near or under the house till it had partially decayed, and then transferred it to its final resting-place in the desert necropolis. In this way he explains, too, the fact of the disturbed condition of the bones in most of the Neolithic graves, which Flinders Petrie explains as due to a ceremonial cannibalism. Wiedemann thinks that the body was intentionally cut up after putrefaction had set in during the first burial in order to clean the bones before the second and final burial. He finds confirmation of this view in many texts of the 'Book of the Dead,' in which the cutting off of the limbs of the dead is referred to, while the deceased prays that his limbs may be restored to him, and that he may be whole. There is also the legend of the cutting up of the body of Osiris. That these passages are rightly interpreted as referring to a primitive custom of cutting up the body is possible. At Deshasha, Flinders Petrie found definite proof of dismemberment in some cases. But there is little proof that the reason for the practice is that advanced by Wiedemann. And, as a matter of fact, dismemberment was not so usual as has been thought, for much of the disturbance of the remains in pre-historic graves is no doubt due merely to predatory beasts and to wady-torrents (*sêls*).

The primitive custom of burial in a crouched-up posture gradually gave place, during the early

dynastic period, to that of burial at full length, with which real mummification is associated. At Médûm, Flinders Petrie found both customs existing side by side in the graves of the age of the IIIrd-IVth Dynasty. It was probably not till the time of the Vth Dynasty, when Egyptian customs became crystallized in the form which they more or less retained ever afterwards, that the old custom of the Neolithic people finally died out and the burial customs of the Egyptians took the final shape which we know so well. At least from the time of the IIIrd Dynasty, prayers were made for the dead in the ancient form: 'May Anubis [the protector of the tomb at Abydos] or Osiris [the Busirite god of the dead] grant a royal offering: may he give thousands of flesh, fowl, and everything good and pure on which the god there liveth, to the *ka* of N., justified and venerated' (see below). And the piety of those 'on earth' erected a gravestone 'in order to make his name to live on earth.' This was as far as the Egyptians ever went in the direction of ancestor-worship. As has been shown in the art. ANCESTOR-WORSHIP (Egyptian), the belief that the dead man was absorbed in the personality of the great god of the dead, Osiris—a belief universal throughout Egypt by the end of the 'Old Kingdom'—prevented any worship of him under his own name: he was venerated as being himself Osiris, not as an ancestor. Otherwise a developed ancestor-worship would, no doubt, soon have grown up; for family life was close and affectionate in Egypt, far more so than among the surrounding nations; and the names and figures of parents, children, and other relatives were constantly commemorated on the gravestones of the dead. 'Those living on earth who loved life and hated death' (*ankhu tep ta mer ankhu mestjetj mut*) were always full of sympathy with and affection for those who had gone down before them into the mysterious tomb-world, and to this is due the whole elaborate paraphernalia of Egyptian burial. The smoked body of the earliest period was provided with a mat on which to lie peacefully, with jars of food to live upon, and with flint weapons to use if it could. For how did one know what happened to the venerated *sahu* in his tomb? Would not *ka* and *ba* return to it, bringing back beloved life? That he who had been alive was now absolutely and irrevocably dead was as inconceivable to the childlike mind of the oldest Egyptian as it was to that of any other primitive man. And among this most conservative of all races, the primitive idea merely became more elaborate and overgrown with ritual as civilization progressed.

A better means was devised of preserving the body in order that *ka*, *ba*, and *ikhu* might come back to it and give it life and intelligence to live upon the offerings of its pious friends on earth, to go whithersoever it would, to take any form it pleased, to exercise its undoubtedly magical powers (was not death itself magic?) for good. The easily putrefying entrails and brain were removed, and the body, reduced to skin, flesh, and bone only, was salted in natron, filled with spices, and carefully bound up, in order that decay might never come to it. The removed portions were not cast aside, but were also mummified, and stored in four special jars, which we call 'canopic jars,' each under the protection of a certain demon, so that the dead man could have them at his need. And the shallow grave on the sand became for the well-to-do Egyptian a great sealed tomb in the rock, in which he could rest with his body, safe from the prowling jackal or hyæna, and with his protective amulets and funerary furniture, often made of precious materials, guarded from the impious hands of human robbers. For in Egypt,

as elsewhere, lust of gold drove men to theft; and even in Egypt, the most pious of lands, many could at all times be found who would brave the anger of gods, priests, and the outraged dead themselves to obtain riches. Many tombs were violated within a century of the burial of their owners, in spite of all the precautions taken in order to hide them. That of Thothmes IV. was already violated during the troubles of the reign of the heretic Ikhnaten, and the royal burial was 'restored' in the reign of Horemheb. The knowledge shown of the precise position of the carefully-hidden tombs makes it evident that the thieves, no doubt, came from among the ranks of the priests and guardians of the necropolises themselves; and in the reign of Ramses IX. the scandal had become so great that a royal inquisition into the robberies of tombs was held, which resulted in the conviction and punishment of many offenders. But tomb-robbery went on gaily; the prizes were worth having; and fifty years later all the royal mummies at Thebes had to be taken out of their original tombs and hidden in remote hiding-places, where they remained till discovered in our own time, and placed in the Museum of Cairo. The primitive Egyptian, however, had no fear of tomb-robbers, or of any disturbance beyond that of a storm-flood which might descend from the hills and lay his bones bare to the winds, or of the prowling jackal. This last was a very real danger, and a naive way of forestalling it was devised by regarding the magic-working beast who lived among the tombs as their protector as well as their ravager, and praying to him to take care of the resting-places of the dead and to allow the offerings of the living to remain in peace, and himself to give funerary offerings of the very best ('a kingly offering'), of thousands of flesh, fowl, and everything good and pure on which the god there (the dead man) lives, to the *ka* of the dead man. This is the origin of the well-known *di-hetep-suten Anup* formula, which we have already quoted (p. 459).—May Anubis (the jackal) give a royal offering, etc., which was inscribed on every Egyptian gravestone, till Osiris or another god took the place of Anubis, in which case, however, the formula remained the same. Another theory has explained the occurrence of the word *suten*, 'king,' in this formula as referring to an actual intervention of the earthly reigning king on behalf of the dead man. It is known that the kings often provided magnificent burials for favourite courtiers or nobles; but whether in the early period the monarch was always expected at least to make offerings vicariously at the grave of every subject is very doubtful.

The process by which Anubis lapsed into the position of a mere satellite of Osiris, whose worship as god of the dead spread from Busiris in the Delta over the whole of Egypt, has already been traced (see ANCESTOR-WORSHIP [Egyptian], B). The inscriptions and decorations of the tombs, especially those of the royal tombs at Thebes, exhibit to us a temporary degeneration of Osiris himself, at any rate at Thebes. During the Theban period Theban ideas naturally coloured the beliefs of the majority of Egyptians, and Osiris had become largely identified with Amen-Rā. The ideas of Busiris, Sakḥāra, and Abydos as to Osiris-Sekri-Khentamenti had all become blended with the Heliopolitan idea of the dead sun-god who, after his midday glory as Rā, set as Tum, and during the night sailed through the tomb-world beneath the earth in his barge, attended by the souls of the blessed; and to this was added the identification of the ram-headed Amen of Thebes with Rā. So that we find the dead Amen-Rā-Osiris, blue in colour like the dead Osiris but ram-headed like Amen and called by the mystic name

of Auf, 'his limbs,' passing, attended by Isis and Nephthys, the companions of Osiris at Busiris, through the lower world. The Theban priests developed a set of the ancient systems of spells and incantations designed to protect the dead man in the under world and describing his proceedings there (which the Egyptians called 'The Book of Coming Forth from the Day,' and we have named 'The Book of the Dead') into two 'books,' entirely separate from the ordinary 'Heliopolitan' and other recensions of the Book of the Dead. These they called 'The Book of the Gates,' and 'The Book of That-which-is-in-the-Underworld,' which are written and pictured on the walls of the royal tombs at Thebes. There is no doubt that the Egyptians pictured the *Duat*, or Underworld, as actually beneath the earth. This arose from the fact of the tomb being excavated in the earth. The houses of the dead in the necropolis, the *Kherti-neter*, or 'divine under-place,' as the Egyptians called it, formed in their ideas a subterranean world of their own, in which the *sahus* resided in awful majesty each in his tomb, while the ghosts could pass from tomb to tomb through the mazes of the under world. Later, the boat of the sun, in which the god of light crossed the heavens by day, was thought to pass through this dead world between his setting and his rising, accompanied by the souls of the righteous. In this under-Egypt, over which Osiris presided as the mortal king presided over the living Egypt above, and to which a dead sun gave illumination as the living sun gave light to living Egypt, the soul was supposed by some to live very much as the man had lived on earth: there were rivers and lakes to be navigated and fields to be tilled there, and the dead might be called upon to do work as he had worked on earth. But surely rest was the guerdon of a man who had lived a laborious life, so that with the dead were buried boxes full of little Osiris figures called *ushabtiu*, or 'answerers,' because, as the sixth chapter of the 'Book of the Dead' inscribed upon many of them said, 'If one calleth Osiris at any time to do any labours which are to be done there in the under world, to plough the fields, to fill the canals with water, to carry sand from east to west, behold! say, "Here am I when ye call!"' They answered for the dead man. There is little doubt that these *ushabtiu* were the descendants of very real 'answerers' in the shape of dead slaves, who in very ancient times were strangled and buried with their lords in order to serve them in the other world as they had done in this. Growing humanity and culture substituted wooden and stone slaves for real ones; but it may be that the custom of giving real 'answerers' was continued in the case of the kings till quite a late date. It may be even that the dead bodies found lying by the wooden boat in the tomb of Amenhetep II. (1450 B.C.) were murdered slaves. In the earlier days of Mentu-hetep II. (2200 B.C.?) priestesses of Hathor who were members of his harem seem to have been killed and buried in the precincts of his tomb-temple at Deir el-Baharî in order to accompany him to the next world. And naturally enough we find the bodies of slaves in the tombs of the 1st Dynasty kings at Abydos.

Although in later times the Egyptians were certainly more humane than either the Greeks or the Assyrians, it would be a mistake to suppose that they had always been so. In earlier days they had been, like all semi-civilized races, more or less children, and a child has no idea of the sanctity of life. Certainly the Egyptians had originally no conception of the sanctity of human life as distinct from other life. The slaves followed their masters

1 Some have merely the inscription 'Illuminate the Osiris N!'

to the tombs as the food did, or the caskets, or the jewellery.

In the tombs, if they are tombs, of the kings of the 1st Dynasty at Abydos, we find an immense *bandobast* for the journey to the next world. There were stacks of great vases of wine, corn, and other food, covered up with masses of fat to preserve the contents, and corked with a pottery stopper, which was protected by a conical clay sealing, stamped with the impress of the royal cylinder-seal. There were bins of corn, joints of oxen, pottery dishes, copper pans, and other things which might be useful for the ghostly cuisine of the tomb. There were numberless small objects, used, no doubt, by the dead monarch during life, which he would be pleased to see again in the next world—carved ivory boxes, little slabs for grinding eye-paint, golden buttons, model tools, model vases with gold tops, ivory and pottery figurines, and other *objets d'art*, the golden royal seal of judgment of king Den in its ivory casket, and so forth. There were memorials of the royal victories in peace and war, little ivory plaques with inscriptions commemorating the founding of new buildings, the institution of new religious festivals in honour of the gods, the bringing of the captives of the royal bow and spear to the palace, and the discomfiture of the peoples of the North-land. All these things, which have done so much to re-constitute for us the history of the earliest period of the Egyptian monarchy, were placed under the care of the dead slaves whose bodies were buried round the tomb-chamber of their royal master at Abydos.

Passing over a space of two thousand years, we see the burial of Iuaa and Tuyu, father and mother of Queen Tii, the consort of Amenhetep III., at Thebes. Here we have the same *bandobast* for the next world: beautifully carved chairs and beds, boxes for wigs and garments, even a chariot, besides all the regular appurtenances of the dead as now prescribed by religion. But the place of the dead slaves is taken by the stone and wooden *ushabtiu*. All this funerary pomp and circumstance grew up from the simple burial of the Neolithic Egyptian with his mat, his pots, and his flints. What kind of religious services were celebrated at the grave in the earliest period we do not know, but it is certain that they contained the germs of the later ritual as it was carried out in Pharaonic times. The descriptions given by Herodotus and Diodorus of the different processes of mummification and the funeral ceremonies are well known. They were eye-witnesses of what they describe; and their descriptions, with exceptions in the case of Diodorus, tally entirely with what we know from the monuments and inscriptions. The account of Herodotus (ii. 85 ff.) is as follows:

'When in a house a man of any importance dies, all the women in that house besmear their heads and faces with mud, and then, leaving the body in the house, they wander about the city, and beat themselves, with their clothes girt up and their breasts exposed; and all their relations accompany them. And on their part the men beat themselves, being girt up in like manner. After they have done this, they carry out the body to be embalmed. There are those who are appointed for this purpose and practise this art: these, when the body has been brought to them, show to the bearers wooden models of dead men made exactly like by painting. And (they show) the finest style (of embalming), which they say is His (i.e. Osiris') whose name I do not think it right to mention in connexion with this matter. And they show the second style, which is inferior and cheaper; and the third, which is cheapest. Having explained them all, they learn from them in what way they wish the body to be prepared; then the relations, when they have agreed upon the price, depart; and the embalmers remaining in the workshops thus proceed to embalm in the finest manner. First they draw out the brain through the nostrils with an iron hook, taking part of it out in this manner, the rest by pouring in medicaments. Then with a sharp Ethiopian stone they make an incision in the flank, through which they take out all the bowels; and, having cleansed the interior and rinsed it with palm-wine, they next sprinkle it with pounded incense. Then, having filled the belly with

pure myrrh pounded, and cassia, and other perfumes, with the exception of frankincense, they sew it up again; and, when they have done this, they pickle it in natron, entirely covering it for seventy days: longer than this it is not allowable to pickle it. When the seventy days are expired, they wash the corpse, and wrap the whole body in bandages of flax cloth, smearing it with gum, which the Egyptians ordinarily use instead of glue. Then the relations, having taken the body back again, make a wooden case in the shape of a man, and, when it is made, they enclose the body in it; and thus, having fastened it up, they store it in a sepulchral chamber, setting it upright against the wall. Thus they embalm bodies in the finest manner.

Those who desire the second method, in order to avoid great expense, they prepare in the following way: when they have charged their syringes with oil made from cedar, they fill the abdomen of the corpse with it without making any incision or taking out the bowels, injecting it at the fundament; and, having prevented the injection from escaping, they pickle the body in natron for the prescribed number of days, and on the last day they let out from the abdomen the oil of cedar which they had before injected; and it has such power that it brings away the intestines and vitals in a state of dissolution, while the natron dissolves the flesh, and nothing of the body is left but the skin and bones. When they have done this, they return the body without any further operation.

The third method of mummification is this, which is used only for the poorer people: having thoroughly rinsed the abdomen with a purge (*grippiata*), they pickle it in natron for seventy days, and then deliver it to be carried away.'

Diodorus gives much the same account; he adds that the first method cost one talent of silver (about £150), the second twenty minæ (about £60), the third much less. He gives additional details about the mourning, saying that during the interval between the death and the burial the relatives abstained from the baths and from wine, ate the simplest food, and wore no fine clothes; and also with regard to the embalmers themselves, adding the picturesque detail of the stoning and flight of the *paraschistes*, which is of considerable religious interest.

He says (l. 91) that, after the 'scribe' had made the mark on the body indicating the place where the incision was to be made by the *paraschistes*, or 'ripper', the latter performed his duty with the 'Ethiopian stone' (as Herodotus says), and then immediately fled away, pursued by a volley of stones and imprecations from the other embalmers, for the Egyptians held in abomination any person who wounded or committed any act of violence on the human body. We can see that this reason was not quite the correct one. The ceremonial stoning and fleeing away of the *paraschistes* was, like his ceremonial use of the 'Ethiopian stone' for the performance of his duty, an act of religious significance: the necessary cutting of the holy body of the Osiris had from the first been regarded as an impious act though one necessary for the preservation of that body; therefore a religious act of disapprobation and punishment had to be performed, though doubtless no one had a sacred body really deserving to hurt the agent of necessary impiety. That the *paraschistes* was universally regarded as unclean, however, is certain; whether the actual embalmers, or *choachytes*, shared this reputation to any extent or not is uncertain. Diodorus says that they consorted freely with the priests, to whose lower orders they in fact belonged, and were allowed to enter the sanctuaries. Diodorus also mentions the practice, to which we have already referred, of keeping the mummy in the house after death, with considerable detail, even going so far as to say that the richer Egyptians kept their dead in magnificent chambers, and enjoyed the sight of those who had been dead for several generations. There is little doubt that this is rather a misunderstanding than an exaggeration: the magnificent chambers can hardly be other than the real tombs, in which the Egyptian could always, if he were so disposed, see the sarcophagi which contained the bodies of his ancestors. In all probability the tombs of private persons were not entirely covered up and hidden away, as those of the kings were, for many years after their deaths.

We have one instance in the tomb of Aahmes, son of Abana, the admiral of king Aahmes in the war against the Hyksos, at el-Kab. In it we see a portrait of his grandson, the well-known Pahari, and an inscription which says: 'Lo! here is the son of his daughter, the director of the works of this tomb as making to live the name of the father of his mother, the scribe of the reckonings of Amen, Pahari, deceased.' From this we know that he embellished his grandfather's tomb as well as constructed his own, and we see that an inscription about him could be inserted on the walls of the earlier tomb after his death even, which shows that at least the hall of offerings in a tomb usually remained accessible to the relatives of the deceased for generations after his death. Thus, indeed,

may the Egyptians well have felt satisfaction in seeing the coffins which contained their dead, and have regarded the dead, to a certain extent, as contemporaries, as Diodorus says they did, though we know that they never looked upon the actual bodies themselves, as he seems to think. Yet that the dead were actually kept in the houses for some time before their burial seems certain, and Lucian gives his personal testimony to the fact: *ταριχεύει δὲ ὁ Αἰγύπτιος οὗτος μέντοι—λέγω δ' ἰδὼν—ξηράνας τὸν νεκρὸν ξύνδειπνον καὶ ξυμπότην ἐτοιμάσας (de Luctu, § 21).* This may have been a very ancient custom,—we may compare the way in which barbarian tribes still preserve the bodies of their dead chiefs or the dried heads of their enemies, e.g. the Dayaks of Borneo,—but we have no illustration of it on the Egyptian monuments, and we cannot doubt that Diodorus' account is due to a misunderstanding. The 'storehouse' in which Herodotus says the body was kept (*θησαυρίζουσι ἐν οἰκίᾳ θηκαίᾳ, ἰσθάντες ὁρῶν πρὸς τοίχον* [see above]) may either be a place for the temporary storage of the mummy, or the actual tomb. The detail as to the position of the coffin might seem to point to the former alternative, as the proper thing for the coffin was to be placed horizontally on the ground; but in later times it would seem that the coffin was often actually placed on end in the tomb, probably to economize space. Diodorus gives the same detail about placing the coffin on end, but says that this was done in a chamber which those who had not private tombs built on to their houses, in order to contain the mummy. Now it seems very probable that something of this sort was done by poorer Egyptians. Children are often found buried under the floors of the ancient houses, and during his recent examinations among the brick ruins of the ancient Thebes burnt by the generals of Esarhaddon in 668 B.C., Legrain found a burial chamber containing a mummy with *ushabtiu* of the 7th century B.C. This was undoubtedly a chamber built on to a house. Perhaps this may be the explanation of Herodotus' *οἰκίᾳ θηκαίᾳ*, and of Diodorus' apparent statement as to the retention of the body for a long period above ground. Ordinarily, however, the body of a well-to-do person would be buried in a tomb when the period of mourning was over and the tomb ready, till which time it was, no doubt, kept in a special chamber in the house. The time between the death and the actual burial is given differently by different authorities as from three to ten months. According to Gn 50⁸, the embalming occupied forty days, and the period of mourning seventy days.

With regard to the actual funeral ceremonies Diodorus (i. 93) gives some details which are not borne out by the monuments, and are evidently due to misunderstanding. His description of the exaggerated mourning at the death of a king is probably correct, but the details about the funeral oration pronounced over the body by the priests, and the liberty allowed to the people to express their disapproval of a bad king and so prevent his proper burial, have no actual authority to back them up, and seem highly improbable. Yet we have a curious sentence in the inscription describing the battle of Momemphis, in which Amasis says that he gave Apries proper burial, 'in order to establish him as a king possessing virtue, for His Majesty decreed that the hatred of the gods should be removed from him'—which seems to tally somewhat with Diodorus' statement. Evidently a king not considered to be *neb menkh*, 'possessing virtue,' could be debarred proper burial as an Osirian. But the judge would doubtless be a successful rival or usurper, not the common people. No doubt all usurpers had not always been so politic as Amasis was, and we know that

the bodies of rival kings were often torn from their tombs and cast to the winds by their enemies, whether usurpers or 'usurpees': Amenemeses, of the XIXth Dynasty, is an instance in point.

A funeral ceremony of very peculiar character which was actually carried out in the case of the kings is not mentioned by Diodorus. This is the remarkable 'Festival of the End' (literally, 'of the Tail'), or *heb-sed*. It would seem that in primitive times, as has been the case among many semi-savage peoples, the Egyptian king was not allowed to live beyond a certain term. He was then killed, and another took his place upon the throne, only to be killed himself eventually unless he died or was killed before his term had expired. The term was one of thirty years; at the end of his thirty years' reign the monarch was solemnly murdered and buried with all pomp and ceremony. But, as in the case of the human *ushabtiu* mentioned above, the growing humanity of later days, and doubtless the growing reluctance of the kings to let themselves be slaughtered, brought about a compromise. The king was no longer killed, but all the paraphernalia of the ceremony of his 'end' were preserved: he himself celebrated his own funeral ceremony, and performed mystic ceremonies before his own image as Osiris beneath the standard of the funerary wolf-god of Siut, Upuaut (sometimes called *Sed*, the god 'with the tail'). At the same time his eldest son or other heir-apparent was usually associated with him on the throne, so that a new king appeared in fact as well as in theory. We have illustrations of the 'Festival of the End' from the time of King Den, or Udimu, of the 1st Dynasty; well-known later representations of it are taken from the temple of Amenhetep III. at Sulb in Nubia and the 'Festival Hall' of Osorkon II. at Bubastis. In later times the festival lost all significance, and Ramses II. and other kings celebrated it at far shorter intervals than thirty years. In the old days, even so late as the time of the Middle Kingdom, so far did the pretence of killing and burying the old king go, that very probably an actual *heb-sed* tomb was made for his supposed dead body, a statue which was ferried over the river and carried in procession to the *sed*-temple and tomb. It may well be that the funerary temple of King Mentuhotep Nebhetep-Ra, of the XIII Dynasty, discovered by Naville and the present writer at Deir el-Bahari in 1903, is in reality a *heb-sed* temple: the great hypogeum beneath its western hall, which they called a 'ka-sanctuary' or a 'cenotaph,' may then, if it is not the actual tomb, be the *heb-sed* tomb of the king, and the neighbouring tomb called the *Bab-el-Hoan* may be the *heb-sed* tomb of another king of the dynasty.

Connected with Diodorus' statement as to the popular judgment of the virtue of a deceased king is his remarkable description of the carrying of the body of every man to a certain lake, where it was judged by forty judges, before whom any one could make accusations against the dead man: if these were substantiated, he was adjudged unworthy of proper burial; if not, his traducers were heavily mulcted, and his body was placed in a *baris*, or boat, and ferried across the lake to the place of burial. There is no doubt whatever that nothing of this kind actually took place, and that Diodorus or his informants were misled into thinking that the judgment of the dead man by Osiris and his forty-two assessors happened upon earth instead of in the next world: the lake and the boat are equally taken from the pictures of the 'Book of the Dead.' A full description of what is known to us from Egyptian sources as to the real proceedings at the funeral of an Egyptian of high rank will be found in Wallis Budge's book *The Mummy*, p. 153 ff. This account is based largely upon the evidence of the well-known 'Papyrus of Ani,' in the British Museum.

In accordance with Egyptian conservatism in religious matters, the bier and the various chests containing canopic jars, etc., which were borne to the tomb, were not till a comparatively late period placed upon wheels. The ancient sledge-runners of the days before the invention of the wheel were still used when the funerary rites were elaborated, and, when, at a later period, wheeled carriages were introduced for the funerary procession, the old sledge-runners were still preserved, and the wheels were placed beneath them. Oxen were used to drag the carriages to the tomb. The chief priestly participants in the procession and in the rites performed at the tomb were the *kher-heb*, or 'cantor,' as the word is sometimes translated, the *sem* or *setem*, and the *an-mut-f*. The *kher-heb* seems to have acted as a sort of general director of the funeral; he was often a relative of the deceased

He read the appointed prayers and spells. The function of the *an-mut-f* is not clear. He seems to have represented the god Osiris, and walked in the procession, bearing the crook and flail, the emblems of the god. The *sem* had very peculiar duties. On the night before final burial, after the procession, he proceeded to the tomb, and there laid himself down to sleep, covered with the mystic cow-skin, before the upright coffin containing the mummy. During his sleep he was supposed to 'see all the transformations of the god,' i.e. the dead man, in the next world. In the morning three persons preceded the procession and solemnly aroused the *sem*, who then took part with the *kher-heb* in a sort of antiphonal service, in which the two took the parts of Horus and Isis, that of Osiris probably being taken by the *an-mut-f*. Finally the *sem* donned the skin of a leopard, and performed the very important ceremony of the 'Opening of the Mouth and Eyes,' in order that the dead man might be able to see and eat the offerings brought to him. The 'opening' was performed by touching the mouth and eyes of the mummy with a model adze or chisel of antique form. The ordinary ceremonies of offering at the grave were performed by the *hen-ka*, or 'servant of the ghost,' in the case of a private person a near relative, in that of the king a regularly appointed priest. The funerary chapels of the kings had broad lands assigned to them for their maintenance, and in the time of the XIXth Dynasty developed into huge temples, of which the Ramesseum and Medinet Habu at Thebes are examples. These, like the royal tombs, were decorated with funerary subjects taken from the Theban 'Books of the Under World,' already mentioned; but in the royal temples scenes of the ordinary life of the monarch were also introduced. The private tombs are almost exclusively decorated with such scenes, as they had been in earlier days.

An interesting circumstance in connexion with the funerary chapels and tombs may be mentioned here. Since Osiris had become, in succession to Anubis, pre-eminently the god of Abydos, the necropolis of that place became, so to speak, the metropolis of the under world, to which all ghosts who were not its rightful citizens would come from afar to pay their court to their ruler. So the man of substance would have a monumental tablet put up to himself at Abydos as a sort of *piéd-à-terre*, even if he could not actually be buried there; while for the king, who, for reasons chiefly connected with local patriotism, was buried near the city of his earthly abode, a second tomb would be erected, a stately mansion in the city of Osiris, in which his ghost could reside when it came to Abydos. We know that both Senusret III. and Aahmes I. had second tombs, which they never occupied, made for them at Abydos; queen Teta-she-ra, grandmother of Aahmes, had an imitation pyramid made for her there by her grandson (see ANCESTOR-WORSHIP [Egyptian], B); and it is by no means improbable that the so-called royal 'tombs' of the kings of the Ist Dynasty, the contents of which have already been described, were in reality cenotaphs also, the monarchs being buried elsewhere. And Seti I. and Ramses II. had funerary chapels at Abydos, which, as at Thebes, are large temples.

From this sketch it will be seen that, in spite of the conservatism of the Egyptians, especially in such matters as these, considerable development and alteration took place in their burial customs and cult of the dead during the course of centuries. A difference is noticeable between the appointments of the mummy under the Old and Middle Kingdoms and under the New Kingdom. In the earlier period *ushabtiu* of the conventional type were rare, but wooden models of boats and boat-

men, butchers and bakers at work, field-labourers, soldiers, women carrying baskets, and other figures of the same kind, which were all *ushabtiu*, were *de rigueur*. Under the New Kingdom these all disappear, with the exception of an occasional boat, and their place is taken by the boxes of conventional *ushabtiu* in the form of a mummy holding two hoes for agricultural work in the next world, and by a much greater number of amulets than had been usual before. Chief among these were the 'pectoral' and the 'heart-scarab,' often combined in one, and inscribed with a certain chapter of the 'Book of the Dead.' The ordinary small scarab is, of course, constantly found, but was quite as much an amulet of the living as of the dead. As a matter of fact it is commoner as an amulet of the dead under the Middle Kingdom than under the New Kingdom. The names of dead persons are constantly commemorated on scarabs of the Middle Kingdom, very rarely on those of the later period, except during the Saïte archaistic revival. It must be remembered that, although the idea of the design or inscription on the base of a scarab was originally derived from the inscription of a seal, and although actual scarabs were often used as seals, yet the scarab itself was always an amulet, typifying 'coming into being' or 're-birth,' expressing the hope that the 'members' of a man would ultimately re-unite in a new life.

From the time of the Theban domination onwards, papyri containing chapters of the 'Book of the Dead' were always buried with the mummy, so that he could have with him his guide to the next world and its dangers. In earlier times this was not done; only in the case of kings were the older series of spells, out of which 'The Book of Coming Forth from the Day' developed, inscribed upon the walls of their tombs. These are known to us as the 'Pyramid Texts,' and they are a most interesting monument of the archaic stage of the Egyptian language. Later such kings, as we have seen, had the spells of 'The Book of the Gates' and 'The Book of That-which-is-in-the-Underworld' similarly painted on the walls of their tombs. The style of mummification and of the coffin varied at different periods: the great rectangular coffins and sarcophagi of the early period are very different from the gaily painted cartonnage coverings and coffins in the human shape which were usual in later days. Later still a casket-like form was again preferred, and in the Roman period painted portraits of the dead, either on flat panels or modelled in plaster in the round, were inserted in the coffins. The *ushabtiu*, which from the XIXth to the XXIIInd Dynasty often represented the deceased in his habit as he lived, not as a mummy, in later days reverted to the mummy-form, till in early Ptolemaic days their use was practically abandoned. One of the latest known (now in the British Museum) is of the Roman period: it is of faience, but very rude in style, and bears in Greek letters the simple inscription *Σωτηρ ναύτης*—'Soter, a sailor.' By this time the Egyptian mummies and funerary ceremonies had become the theme of the half-derisive wonder of the rest of the world, and indeed we need hardly be surprised at the derision, for the whole spirit and practice of the ancient rites had degenerated utterly and they became mere ridiculous exhibitions, while the ideas which they were supposed to express became the sources of religious charlatanism and more or less humbugging 'philosophies.' So Egypt 'expired, a driveller and a show.'

DEATH AND DISPOSAL OF THE DEAD

(Europe, Pre-historic).—I. Palæolithic period.—Owing to the negative evidence of archaeological researches, there are no data with which to combat the supposition that during the earlier stages of the evolution of humanity little or no attention was paid to the disposal of the dead, the deceased members of a family or community being simply abandoned by the way, like those of the lower animals. Nor is it known in what precise phase of social culture the custom of burial became recognized as a sacred duty of the survivors, for it is still a debatable problem among archaeologists whether the reindeer hunters of the Palæolithic period, who frequented the caves and rock-shelters of the Dordogne and other parts of Western Europe, were in the habit of systematically burying their dead. The few human remains hitherto encountered in the débris of these inhabited sites, which are accepted without cavil as belonging to the people of that period, are held by some archaeologists to be those of persons who had been accidentally killed by the fall of materials from overhanging rocks, and their skeletons are now occasionally met with under circumstances which clearly establish the above sequence of events. On the other hand, those which show from inherent evidence that they had been intentionally deposited in the Palæolithic débris and attended with sepulchral rites are still regarded by some anthropologists as interments of later times. The three well-known skeletons found in the rock-shelter of Cro-Magnon have long been regarded as representing the people of the later Palæolithic period; but, as they were lying on the surface of the culture strata of the shelter, in a small open space between it and the roof which only became covered up by a subsequent talus, they are now often regarded as belonging to the Neolithic period.

That Neolithic people were in the habit of burying their dead in caves formerly inhabited by Palæolithic races has been frequently noticed and recorded by explorers. Thus, in the upper strata of the débris in the Schweizersbild rock-shelter, a Neolithic civilization was attested, not only by a characteristic assortment of relics, but also by the fact that the shelter had been latterly made use of as a cemetery which contained no fewer than 22 interments. The graves were dug into the underlying Palæolithic deposits, and ten of them contained the remains of children, as well as those of adults. Fourteen adult skeletons reported on by Kollmann belonged to two very different races, one or a fair size (5 ft. 3 in.), and the other so small as to be characterized as a race of pygmies. Dr. Nüesch, the explorer of this rock-shelter, thought that man in the Neolithic time visited it only for the purpose of burying, or perhaps cremating, the dead—an idea suggested to him by the large quantity of ashes in the upper strata. It would appear, from the facts disclosed during the exploration of this early inhabited site, that there had been no discontinuity in the human habitation of this part of Switzerland since the reindeer hunters made

this rock-shelter their rendezvous up to the Bronze Age; but no evidence of systematic burial had been detected till the true forest fauna of the Neolithic period had taken possession of the land (*Neue Denkschriften der allgem. schweizerischen Gesellschaft für die gesammten Naturwissenschaften*, vol. xxxv.).

The celebrated station of Solutré (Saône-et-Loire), which has given its name to one of the intermediate phases of Palæolithic civilization in de Mortillet's classification, had also been subsequently utilized as a cemetery up to, if not beyond, Roman times; but, although some of the graves were clearly shown by their contents to be of greater antiquity than others, it was impossible to assign any of them with certainty to the Solutréen period. Moreover, the cephalic indices of 18 crania submitted to Broca varied from 68·34 to 88·26—an extent of variability which could be better accounted for by a post- than by a pre-Neolithic population.

Palæolithic burials.—Formerly it was commonly held among anthropologists that the Palæolithic people had no religion. But a fresh examination of old materials and some more recent discoveries supply data which modify this deduction, if, indeed, they do not prove the contrary. It is difficult to epitomize the facts and arguments thus raised, but the effort must be made, as otherwise our evidence would resolve itself into a series of bare assertions.

The sepulchral phenomena associated with some of the human skeletons disinterred in the Mentone caves (Balzi-Rossi), notably those known under the names of *Barna Grande* and *La Grotte des Enfants*, leave no doubt that the bodies had been intentionally buried with their personal ornaments, coiffures, necklets, pendants, etc., made of perforated shells, teeth, fish vertebrae, pieces of ivory, etc. Among the grave-goods discovered along with some of these skeletons, were one or two well-formed implements of flint, which differed from those met with in the surrounding matrix in being made of large flakes of foreign material, and showing a style of workmanship more akin to the Neolithic period. The discovery of two skeletons, of a negroid type, in the *Grotte des Enfants*, which Verneau describes as belonging to a new race, intermediate between those of Neanderthal and Cro-Magnon, marks an important addition to human palæontology.

The *Chancelade* skeleton, found in the small rock-shelter of Raymondon (Dordogne) and described as that of a man of about 60 years of age, lay at a depth of 5 ft. from the surface, in Magdalénien débris, on the left side, with the hands and knees strongly bent towards the face.

L'Homme écrasé de Laugerie Basse (Dordogne) is here noted, because the evidence is conclusive that during life this individual had been crushed, probably while asleep, by a fall of rock from the roof, and that consequently the victim must have been contemporary with the Magdalénien débris in which he reposed. He lay on his side, with the knees bent upwards in front of the breast, and appeared to have been adorned with a series of shells distributed symmetrically on different parts of his person. The corner of a great stone, part of a fallen mass, lay across his spine, and doubtless had caused his death, as the underlying bones were crushed.

A remarkable contrast to the skeletons of Chancelade and Laugerie Basse is that recently found in a small grotto at La Chapelle-aux-Saints (Corrèze).

It is described as that of an aged man, about 5 ft. 3 in. in height, who had been buried in a prepared grave beneath a bed of undisturbed Moustérien débris, 12 to 16 in. thick. The grave measured 4 ft. 8 in. in length, 3 ft. 3 in. in breadth, and 1 foot in depth. The body lay on the back, with the legs bent upwards, the right hand flexed under the head, and the

left extended. Around the body were bones of various animals broken for their marrow, together with a few flint scrapers and bone pointers—supposed to have been the remains of a funeral feast (*L'Anthropologie*, xix, 519).

Another skeleton, which has a striking resemblance to that just described, was recently found in the under strata of the rock-shelter of Le Moustier, in the upper valley of the Vézère.

It is described as having been buried intentionally in the attitude of sleep, beneath undisturbed strata of Moustérien age. The right arm was folded under the head, and the left extended. Near the left hand lay a pointed flint implement of the *coup-de-poing* type (6½ in. long), and a little further on a flint scraper. The cranium is described as having the osteological characters of the Neanderthal and Spy skulls. The face was strongly prognathic, and there was no chin. The skeleton was that of a young man, about 4 ft. 10 in. in height, whose wisdom teeth had not yet been fully developed. Bones of various animals, some of them being described as partially calcined, were close to the body. Both the discoverers and Dr. Klaatsch, who examined this skeleton, formed the opinion that it had been intentionally buried with sepulchral rites (*ZE*, 1909, p. 637).

A further discovery of a portion of a human skull has been announced, at a place called Combe-Capelle, near the town of Montferand-du-Périgord (Dordogne). From its osseous characters and associated relics this individual is regarded as occupying a chronological horizon intermediate between the Moustérien and Magdalénien periods.

It is a fact of some significance that all the races hitherto recognized as coming within the Palæolithic range of Western Europe are dolichocephalic, and that brachycephalic skulls are rarely found outside Neolithic burials, and then only in deposits of the transition period, to which reference will now be made.

2. *Transition period.*—Outside the haunts of these highly skilled hunters, artists, and workers in stone and bone, there existed, in certain parts of Europe, other communities, probably emanating from the same stock, who, owing to the exigencies of a changing climate and the gradual disappearance of wild animals from the plains, began to exploit new sources of food, which, in the course of time, caused a considerable divergence in their domestic economy. Thus, while the Chelléen and Moustérien culture relics can be more or less paralleled throughout the whole of Southern Europe, the artistic phases of the later civilization of the reindeer hunters are not forthcoming beyond a limited area, mostly in Southern France. Implements of Moustérien types have been found in the Mentone caves, but not a trace of the relics characteristic of the Magdalénien stations of France; and yet both sets of cave-dwellers may have been contemporary.

Perhaps the most interesting feature of the investigation of the 'kitchen middens' of Mugem, in the valley of the Tagus, was the discovery of upwards of a hundred interments at various depths in the shell-mounds; but it does not appear that any special grave-goods had been associated with them.

From the data at our disposal the point of most importance to the present inquiry is that the recently discovered skeletons at Moustier and Chapelle-aux-Saints, which undoubtedly were survivals of the earlier types of humanity, appear to have been interred with sepulchral rites, so circumstantially carried out as to suggest that they were founded on an already established cult of the dead. But, however this may be, it cannot be gainsaid that, during the Neolithic civilization, there is unmistakable evidence to show that the disposal of the dead had become a sacred obligation on the surviving relatives and friends. By this time the sepulchral materials are overwhelmingly conclusive in support of the doctrine that religiosity and a belief in a future life were

the dominating factors in the social organizations of the period.

3. *Neolithic period.*—During the Neolithic period the cult of the dead prevalent among the peoples of Western Europe was the outcome of psychological ideas which linked human affairs with the souls of men, animals, and things in the spirit world. The writer agrees with the animistic theory of Tylor, which represents man as first attaining to the idea of spirit by reflexion on various physical, psychological, and psychical experiences, such as sleep, dreams, trances, shadows, hallucinations, breath, and death, and so gradually extending the conception of soul or ghost till all Nature is peopled with spirits. However this may be, there can be no doubt that the religion of these pre-historic peoples, as disclosed by their sepulchral remains, involved a belief in intercommunications between mankind and the supernatural world. When a prominent man died, his weapons, ornaments, and other cherished objects were placed in the tomb along with suitable viands for his supposed journey to the Unseen World; and, indeed, there is evidence to show that in some instances his favourite wives, slaves, and pet animals were sacrificed, and buried in different parts of the mound. The selected grave-goods were appropriate to the standing and tastes of the individual, so much so that on this ground alone the graves of distinguished men, women, and children are readily recognizable. Such facts undoubtedly suggest that the people of those times did not regard life beyond the grave as differing widely from that on earth. To them death was the portal to the community of departed heroes and friends, to which they looked forward, across the span of human life, with hopeful anticipation of a more perfect state of existence. Hence the abodes of the dead were considered of greater importance than those of the living. Constructed of the most durable materials, and generally placed on a commanding eminence so as to be seen from afar, the tomb became an enduring memorial for many generations, till eventually its actual purpose and meaning became lost amidst the changing vistas of succeeding ages. One of the most common and effective methods of perpetuating the memory of the dead was by rearing a mound of stones or earth over the grave. To this custom we owe some of the grandest monuments in the world's history—the Pyramids of Egypt, the *topes* and *dagobas* of India, the mighty mounds of Silbury and New Grange, the megalithic circles of Stonehenge and Avebury, together with the numberless rude stone monuments known as dolmens, cromlechs, menhirs, etc., scattered along the western coasts of Europe and extending into Africa. To comprehend fully the motives which underlay the construction of ancient sepulchral monuments, it would be necessary to examine not only their structural peculiarities and contents, but also their surface accessories, such as stone circles, cairns, mounds, menhirs, earthen ditches, etc. Although a strong family likeness permeates the whole series in Western Europe, they differ so widely in certain districts that to deal with their local peculiarities and distribution alone would entail at least as many chapters as the number of countries within that area. Then the attentions paid to the dead before, at, and subsequent to, the burial disclose a wide field of speculative research, involving the foundations of religion, ancestor-worship, and general cult of the dead.

(1) *Inhumation and cremation.*—Pre-historic sepulchres vary so much in form, structure, position, and contents that to make a systematic classification of them on the lines of their chrono-

logical development is almost an impossibility. One special element which complicates such an inquiry was the custom of cremating the dead, which appears to have originated in Eastern lands, and to have spread westwards, reaching the British Isles towards the close of the Stone Age. This practice, of course, introduced various innovations on the sepulchral customs previously in vogue. Burial by inhumation, which, according to Greenwell, was much more common in the Yorkshire Wolds, is thus described by that veteran explorer:

'[It [the unburnt body] is almost always found to have been laid upon the side, in a contracted position, that is, with the knees drawn up towards the head, which is generally more or less bent forward: the back, however, is sometimes quite straight. So invariable is this rule, that out of 301 burials of unburnt bodies, which I have examined in the barrows of the Wolds, I have only met with four instances where the body had been laid at full length' (*British Barrows*, p. 22). 'In most cases there is nothing to protect the body against the pressure of the overlying soil, but now and then a few large blocks of flint or thin slabs of chalk have been placed round it, thus forming a kind of rude covering; and from the appearance of the earth immediately in contact with the bones, it would seem that turfs had sometimes been laid over the corpse' (ib. p. 13).

On the other hand, when the body was cremated, the incinerated remains were carefully collected and usually placed in an urn, and then buried. When no urn was used, the remains were laid in a little heap, either in the grave, over which a mound was subsequently raised, or in a hole in earth already consecrated to the dead, such as a former barrow. The corpse, thus reduced to a few handfuls of ashes and burnt bones, required no great space for its preservation either in a public cemetery or in a family burying-ground. Hence sprang up a tendency to diminish the size of the grave, and thus megalithic chambers gave place to short stone cists containing the body placed in a contracted position.

Simple inhumation, i.e. placing the body in a hole in the earth and re-covering it with the excavated earth, was probably the earliest method of disposing of the dead; and to mark the site the survivors naturally raised over the spot a mound of earth or stones. Among a sedentary population the next step in advance would be to protect the body from the pressure of the surrounding earth. This was usually done by lining the grave with flagstones set on edge, over which a larger one was placed as a cover, thus forming the well-known cist; sometimes, instead of flagstones, wooden planks were used in the shape of a rude coffin. The material used was not always a matter of choice, but rather depended on what was most readily procurable in the neighbourhood. Greenwell tells us that in the Yorkshire Wolds the stone cist, so common in other parts, was almost entirely wanting, because in chalk districts the requisite slabs were unprocurable. On the other hand, wood is so liable to decay that it is rare to find evidence of its having been used.

On one occasion the writer of this article was present at the excavation of a barrow, near Bridlington, under the guidance of Greenwell, and on reaching the primary interment there was only a large empty cavity, with nothing but the enamel of a few teeth lying on the floor to show that a burial had taken place. Greenwell, however, soon cleared up the mystery by pointing out the unmistakable impression of wooden beams on the clay walls of the empty space, which, doubtless, had formed some kind of coffin. A few instances of tree coffins have been discovered both in this country and on the Continent. One well-known specimen from a barrow at Gristhorpe is now preserved in the Scarborough Museum. It consisted of the trunk of a large oak, 7½ ft. long and 3 ft. 3 in. wide, roughly hewn and split into two portions; one of the portions was hollowed out to make room for the corpse, and the other formed the lid of this improvised coffin. Among the grave-goods were a small bronze dagger, 3½ in. long, containing 2 rivet holes for the handle, fragments of a ring and of an oval disk both of horn, together with a few flint objects (*Jewitt, Grave Mounds*, p. 48). Another remarkable discovery of a grave was made at Treenhöl, in Jutland, which contained a wooden garment, leg bandages, a horn comb, a small bronze

knife, and a bronze sword in its wooden sheath. The whole of the deposit in the grave was wrapped up in a large deer-skin, which probably had served as the warrior's outer cloak (*Worsaae, Danish Arts*, London, 1882, p. 53).

The stone-lined cist is perhaps the most widely distributed type of early grave known. From this to the megalithic chamber, with its sepulchral compartments, entrance passage, and superincumbent cairn, was an easy transition. But the chronological sequence thus suggested is of little value in dating these monuments throughout the British Isles, as there is evidence to show that some of the chambered cairns and long barrows were constructed before the introduction of cremation. Thus, in the counties of Gloucester, Wilts, Somerset, and some neighbouring localities, there are chambered cairns in which the primary burials were by inhumation, and the human skulls found in them belonged to a dolichocephalic race. Similar chambered cairns, containing remains of a dolichocephalic race, have been found in the Island of Arran; but as regards the analogous groups of sepulchral monuments further north, such as those in the counties of Argyll, Inverness, Sutherland, Caithness, and the Orkneys, it is conclusively proved that cremation and inhumation were contemporary from the very beginning; and the same remarks apply to the dolmens of Ireland. It would thus appear that, subsequent to the erection of the early chambered cairns of the Stone Age in Britain, there was a period of degradation in this kind of sepulchral architecture, during which the well-known barrows of the Bronze Age became the prevailing mode of burial.

In Scandinavia the Giant graves belonged to the Stone Age, but gave place during the Bronze Age to large stone-lined cists, suitable for more than one corpse. Finally, in the early Iron Age, both these monuments were discarded for simple burial, either by inhumation or after cremation; and there were then raised huge earthen tumuli, such as the mounds of Thor, Odin, and Freya at Gamla Upsala, and the ship barrow at Gokstad. The dolmens of the Iberian Peninsula, known as *antas* in Portugal, belonged to the Stone Age, and their interments, which were almost exclusively of unburnt bodies, showed that the people who constructed them were a dolichocephalic race—a remark which also applies to the cave burials of that country, some of which were older than the dolmens. Cremation appeared at a comparatively late period in the Bronze Age, probably owing to the distance of the Iberian Peninsula from the seat of its supposed origin.

The primary object of inhumation might have been nothing more than protection of the corpse from enemies and wild beasts; but, in the evolution of the grave from a mere hole in the earth up to the elaborately constructed chambered cairn, we must seek for a higher motive than a pious act of respect to the memory of a departed friend. The general idea entertained by archaeologists on the subject is that the grave was looked upon as also the temporary abode of the ghost, who was supposed to hover around the corpse till the natural decay of the latter had been completed—a process which took some time, and entailed on the ghost the irksome ordeal of passing through a sort of purgatory, or intermediate stage, between this life and that of the spirit-world. It is now surmised that the effect of fire had long been known as a means of purifying not only the body, but also the soul, from the pollution which death brings with it—an opinion which may account for the finding of so large a number of partially burnt bodies in graves, even before cremation was generally adopted. As soon as it became fully realized that burning was merely a speedy method of accomplishing the dissolution of the

body,—now regarded as nothing more than a mass of corrupt matter,—cremation became the culminating point of a religious cult, which taught that it was a most desirable object to set free the soul from its association with the corpse as speedily as possible.

But, whatever were the motives which led to the adoption of cremation, whether religious or sanitary, there can be little doubt that burial by inhumation was associated with religious rites and ceremonies long before its introduction into Western Europe. Subsequently both methods were practised concurrently during the whole of the Bronze Age, and down to the time when Christianity superseded paganism. According to classical writers, the Greeks and Romans practised both methods, but in fluctuating proportions, probably due to the influence of fashion or current religious opinions. That cremation was more prevalent among the richer classes was partly due to its being an expensive process, and, therefore, beyond the means of the common people. But one has to be cautious in drawing deductions founded on motives, as the predominance of one or other of these burial customs varied in separate districts, even within such a limited area as the Wolds of Yorkshire. On this point Greenwell writes (*op. cit.*, p. 21):

'In some localities on the Wolds it has been seen that cremation prevailed, though inhumation was the general custom throughout the whole district. In other parts of Yorkshire, however, cremation was all but universal; as, for instance, in Cleveland, where Mr. Atkinson's very extensive investigations did not produce a single instance of an unburnt body; and near Castle Howard, where a large series of barrows contained nothing but burnt bodies.'

Burial mounds are called 'cairns' when their constructive material consists of small stones, and 'barrows' when that material is ordinary soil; but not infrequently both substances were used in the same mound—a small cairn being often inside an earthen barrow. Their great diversity in external form gave rise to a number of qualifying epithets, such as 'long,' 'round,' 'oval,' 'bell-shaped,' etc. Sometimes the mound was surrounded by a ditch, or a stone circle, or both; and instances are on record in which one or both of these features were found within the area covered by the mound. Also, an interment, whether by inhumation or after cremation, may be found beneath the natural surface without any superincumbent mound, or any surface indications whatever. At other times, when the mound or cairn is absent, a standing stone, or a circle of stones or of earth, or a ditch may indicate the site of a burial. Sometimes the mound may be raised over an interment, whether burnt or unburnt, which had been simply laid on the surface of the ground. At other times a mound, seemingly of earth, and covered with vegetation, may contain a megalithic chamber with an entrance passage, and sometimes divided into sepulchral compartments. Structures of the latter kind were evidently family vaults, and often contained the osseous remains of several generations. As the abodes of the dead, specially adapted for the burial of unburnt bones, were continued after cremation began to be practised, it often happens that both burnt and unburnt remains are found in the same barrow. We have already seen that the earliest interments in the chambered cairns in the North of Scotland were burnt bodies.

(2) *Dolmens*.—Among the sepulchral monuments still extant in Europe, the megalithic graves, known as 'dolmens,' take the first place, not only for the wealth of evidential materials which they have supplied, but also on account of their great number, imposing appearance, and wide geographical distribution. A dolmen, in its

simplest form, may be defined as a rude stone monument, consisting of at least 3 or 4 stones, standing a few feet apart, and so placed as to be covered over by one megalith, called a capstone or table.

A well-known example of this kind in England is Kite Coity House, near Maidstone, which in its present condition consists of three large free-standing stones supporting a capstone measuring 11 ft. by 8 ft. Originally the spaces between the supports had been filled up by smaller stones, so as to enclose a small sepulchral chamber, and after interment the whole was then covered over by a mound of earth, but without an entrance passage.

Between this simplest form and the so-called *Giants' Graves*, *Grottes des Fées*, *Allées couvertes*, *Hünnebedden*, etc., there is an endless but regular gradation of structures in proportion to the number of supports and capstones used.

The well-known *Allée couverte* of Bagneux, near the town of Saumur, measures 18 metres in length, 6·50 in breadth, and 8 in height. It is constructed of huge flagstones, standing on edge, 4 on each side, with 4 capstones—the largest of which measures 7·50 metres in length, 7 in breadth, and 1 in thickness. Another, near Eze (Ille-et-Vilaine), called *La Roche aux Fées*, and about the same length, is constructed of thirty supports and eight capstones, including the vestibule.

Although many of these free-standing dolmens show no signs of having been at any time embedded in a cairn or mound, some archaeologists maintain that that was the original condition of all of them—a theory which derives some support from their present dilapidated condition, for many of them may be seen throughout the whole area of their distribution in all stages of denudation. Were the materials which compose the tumulus of New Grange, in Ireland, removed, leaving only the large stones of which its entrance passage and central chambers are constructed, there would be exposed to view a rude stone monument similar in all essentials to that at Callernish in the Island of Lewis.

The covered dolmens greatly vary in shape and appearance, owing to vegetation and other natural surface changes; and, as to size, they range from that of an ordinary barrow—a few yards in diameter—up to that of New Grange, which rises, in the form of a truncated cone, to a height of 70 ft., with a diameter at the base of 315 ft. and of 120 ft. at the top. Silbury Hill is 170 ft. in height, and over 500 ft. in diameter at the base.

There is no rule as to the position of the entrance gallery, it being attached, sometimes to the side, as in the Giant's Grave at Oem, near Roskilde, in Denmark, and sometimes to the end, as in the tumulus of Gavrinis (Morbihan). The Drenthe *Hünnebedden*, which in the present day are all uncovered, had both ends closed and the entrance passage on the side facing the sun, as was the case in all the dolmens.

Ruined dolmens are abundantly met with in the provinces of Hanover, Oldenburg, and Mecklenburg. According to Bonstetten, no fewer than 200 are distributed over the three provinces of Lüneburg, Osnabrück, and Stade; but the most gigantic specimens are in the Duchy of Oldenburg. In Holland they are confined, with one or two exceptions, to the province of the Drenthe, where between 50 and 60 still exist. The Borgen *Hünnebed*, the largest of the group, is 70 ft. long, 14 ft. wide, and in its primitive condition contained 46 stones, ten of which were capstones.

In Scandinavia the dolmens are confined to Danish lands and a few provinces in the south of Sweden. In the former country, in addition to the great chambered tumuli, free-standing dolmens may be seen situated on the tops of artificial mounds, and surrounded by enclosures of standing stones either in the form of a circle (*Runddysser*) or oval (*Langdysser*).

Only one dolmen has been recorded in Belgium, but in France their number amounts to close on 4000, irregularly distributed over 78 Departments, of which no fewer than 618 are in Brittany. From the Pyrenees they are sparsely traced along the north and west coast of Spain, through Portugal and on to Andalusia, where they occur in considerable numbers. The most remarkable monument of the kind in Spain is that near the village of Antequera, situated a little to the north of Malaga. The chamber is slightly oval in shape, and measures 24 metres long, 6·15 metres broad, and from 2·7 metres to 3 metres high. The entire structure comprises 81 monoliths—ten on each side, one at the end and five on the roof. The huge stones are made of the Jurassic limestone of the district, and, like those of Stonehenge, appear to have been more or less dressed. The

entire structure, now partially exposed, was originally covered with earth, forming a mound 100 ft. in diameter. In Africa, dolmens are met with in large groups throughout Morocco, Algeria, and Tunis. According to General Faidherbe, who has examined five or six thousand specimens, they are quite analogous to those on the European Continent, with the exception that, in his opinion, none of them had been covered with a mound (*Congrès Internat.*, 1872, p. 408). In Great Britain, Ireland, and the Channel Islands every type of the sepulchral monument is met with, especially chambered cairns, stone circles, and barrows.

The manner in which these sepulchral monuments are distributed along the Western shores of Europe, to the exclusion of central parts of the Continent, in which no dolmens are found, has given rise to the theory that they were erected by a migratory race called 'the people of the dolmens,' moving, according to some, from Scandinavia to Africa, and, according to others, in the opposite direction. But this theory has fallen into disrepute. Their magnitude and local differences in structure, even in districts bordering on each other, show that their builders were a sedentary population. Besides, the skeletons found in their interior belonged to different races. Against the theory advanced by Aubrey and Stukeley, that these rude stone monuments had been used as Druidical altars, there is *prima facie* evidence in the care taken by their constructors to have the smoothest and flattest surface of the stones composing the chamber turned inwards. Also, cup-marks and other primitive markings when found on capstones are invariably on their under side, as may be seen on the dolmens of Keriaval, Kercado, and Dol au Marchant (Morbihan).

(3) *Cromlechs*.—The word 'cromlech,' as used by some English archaeologists, is almost synonymous with 'dolmen'; but, as defined by Continental authorities and adopted by the present writer in this article, it is exclusively applied to enclosures (*enceintes*), constructed of rude standing stones placed at intervals of a few feet or yards, and arranged roughly on a circular plan—circle, oval, horse-shoe, or rectangle. In this sense it comprehends the class of monuments known in this country under the name of 'Stone Circles' or 'Circles of Standing Stones.' Stone circles are, or were formerly, more numerous in the British Isles than elsewhere in Europe. They generally consist of one line of stones, but not infrequently two or more circles are arranged concentrically, as may be seen in those at Kenmore near Aberfeldy, and Callernish in the Island of Lewis. At Avebury one large circle, 1200 ft. in diameter, surrounds two other circles placed eccentrically to the former, and each containing a second circle arranged concentrically.

Cromlechs may also be associated with alignments, menhirs, and other megalithic monuments, as at Carnac, Callernish, etc. In the British Isles, Scandinavia, some Departments of France, and elsewhere, they surround dolmens, tumuli, and cairns. Outside the ordinary stone circle there is often a ditch, as at Avebury, Stonehenge, Arbor Low, Ring of Brogar, etc. The most remarkable monument under this category now extant is Stonehenge, which differs from all others of its kind in having the monoliths of the outer circle partially hewn and connected at the top by transverse lintels. That most of the smaller circles have been used as sepulchres has been repeatedly proved by the finding of urns, burnt bones, and skeletons, sometimes deposited in the centre and sometimes at the base of the standing stones, or indeed anywhere within the circular area. It is difficult to believe that burial was the sole purpose of the large cromlechs such as Avebury, Stonehenge, the Giant's Ring near Belfast, Mayborough near Penrith, etc. This last consists of a circular mound composed of an immense aggregation of

small stones in the form of a gigantic ring, enclosing a flat space 300 ft. in diameter, to which there is access by a wide break in the ring. Near the centre of the area there is a fine monolith, one of several known to have formerly stood there. It is more probable that such enclosures were, like our modern churches, used not only as cemeteries, but for the performance of religious ceremonies in connexion with the cult of the dead.

(4) *Sepulchral caves*.—The custom of burying the dead in natural caves, to which we have already referred as having been met with in the Palæolithic period, was continued throughout the Neolithic and Bronze Ages. Discoveries of this character have been recorded in numerous localities throughout Europe, and especially in France. Professor Boyd Dawkins informs us that the most remarkable examples of caves used as sepulchres in Britain are to be found in a group clustering round a refuse-heap at Perthli-chwaren, a farm high up in the Welsh hills, in Denbighshire:

'The human remains belong for the most part to very young or adolescent individuals, from the small infant to youths of 21. Some, however, belong to men in the prime of life. All the teeth that had been used were ground perfectly flat. The skulls belong to that type which Professor Huxley terms the "river-bed skull." All the human remains had undoubtedly been buried in the cave, since the bones were in the main perfect, or only broken by the large stones which had subsequently fallen from the roof. From the juxtaposition of one skull to a pelvis, and the vertical position of one of the femora, as well as the fact that the bones lay in confused heaps, it is clear that the corpses had been buried in the contracted posture, as is usually the case in Neolithic interments. And, since the area was insufficient for the accommodation of so many bodies at one time, it is certain that the cave had been used as a cemetery at different times. The stones blocking up the entrance were probably placed as a barrier against the inroads of wild beasts. . . . The Neolithic age of these interments is proved, not merely by the presence of the stone axe or of the flint flakes, but by the burial in a contracted posture, and the fact that the skulls are identical with those obtained from chambered tombs in the South of England proved to be Neolithic by Dr. Thurnam' (*Cave-Hunting*, pp. 155-158).

The same writer describes similar remains from caves in the limestone cliffs of the beautiful valleys of the Clwyd and the Elwy, near St Asaph. He has also shown that the people who buried their dead in these caverns were of the same race as the builders of the neighbouring chambered tomb of Cefn, just then explored. The crania and limb bones were identical, and in both the tomb and caves the dead were buried in a contracted position.

In Scotland, human remains regarded as sepulchral have been found in some caves at Oban, which had been exposed by quarrying operations at the foot of the cliff overhanging the ancient raised beach on which part of the town is built. In one of these caves (M'Arthur Cave), along with some fragmentary skeletons, were two skulls sufficiently preserved to enable Sir William Turner to take correct measurements of their special character, from which it appears that their owners belonged to a dolichocephalic race, their cephalic indices being 70.2 and 75.4. Although no grave-goods are known to have been associated with these bodies, there is sufficient evidence from collateral phenomena to show that the chronological horizon to which they must be assigned is the Neolithic period.

Of all the countries of Western Europe, France has yielded by far the largest number of burials under this category. De Mortillet, writing in 1883 (*Le Préhistorique*, p. 598), states that he could count 117 in France distributed over 36 Departments, 24 in Belgium, 8 in Italy, and only 1 or 2 specimens in each of the other countries.

The following epitomized notices of one or two examples will give the reader some general idea of the importance attached to this class of sepulchral remains:

In the course of exploring the natural cave of Casa da Moura, near Lisbon, a large quantity of human bones, representing some 150 individuals, was disinterred. It appears that the Neolithic inhabitants had converted the grotto into a cemetery—which would account for the large number of bodies it contained. The bones were much decayed, only three or four entire skulls being amongst them, which so far indicated a dolichocephalic race. The upper portion of one of these skulls is of exceptional interest, inasmuch as it furnishes positive evidence of having been partially trepanned, thus disclosing the initiatory stage of the method of performing that operation (Cartailhac, *Les Âges préhistoriques de l'Espagne*, p. 84).

Of the French caverns which contained only long skulls, the two most remarkable are those of L'Homme Mort and Baumes-Chaudes, both in the Department of Lozère. In the former were nineteen skulls sufficiently well preserved to furnish the necessary measurements. Of these the cephalic indices of seventeen varied from 68·2 up to 78·7, and the other two were 78·5 and 78·8. There were, therefore, no brachycephalic skulls in this sepulchre, so that the race appears to have been comparatively pure. It may also be mentioned that some of the crania had been trepanned—a feature which, though at first overlooked, subsequently became the subject of much interest to anthropologists. The animal remains were those of the Neolithic epoch, but among them were none of the reindeer, horse, ox, or stag. Among the relics were a lance-head, and a portion of a polished stone axe. Drs. Broca and Prunières were of opinion that the individuals whose remains had been consigned to this ossuary belonged to an intermediate race, who flourished in the transition period between the Palaeolithic and Neolithic civilizations, and thus became connecting links between the people of the reindeer caves and the dolmens.

The crania recorded from the station known as Baumes-Chaudes were found in two natural caverns distinct from each other, but opening on a common terrace. They contained a vast collection of human bones, representing some 300 individuals; but both were regarded by the investigators as the continuation of the same family burying-place, which, indeed, had not been altogether abandoned till the beginning of the Bronze Age, as one of the skeletons in the upper deposits had beside it a bronze dagger. In one of these caverns only chipped flints, rude implements of horn, etc., were discovered; but in the other there were a few arrow-points, a bead, some roundlets of deer-horn, etc., which suggested some progress in culture. The crania measured and classified in M. Salmon's list from the Baumes-Chaudes ossuary amount to thirty-five, and they are all dolichocephalic, the indices varying from 64·3 to 78·1. The average height of this race was calculated to be about 5 ft. 8½ in.

As examples of sepulchral caverns in which brachycephalic crania formed the majority, a series of caverns at Hastières and Furfooz in Belgium may be cited. Of 33 skulls from the former measured by Professor Houzé, six are dolichocephalic, eleven mesocephalic, and sixteen brachycephalic. The well-known cave at Furfooz (*Trou du Frontal*) was merely a rock-shelter with a projecting cavity extending inwards for some 2 metres, and about one metre in height and one metre in breadth, and closed in front by a large slab. This cavity was filled with human bones mixed with earth and stones, but none of the bones retained their relative positions as regards the rest of the skeleton, so that dismemberment must have taken place before their final deposition in the cave. From the number of lower jaws, whole or broken, it was calculated that this sepulchre contained 16 individuals, of whom 5 were children. The cephalic index of some of the skulls was over 80. A disturbing element in the conclusions suggested by this discovery was the presence of fragments of pottery among the contents of the cave; while outside the alabaster there was an accumulation of debris and food refuse, which, judging from the fauna represented by its osseous remains, belonged to the Palaeolithic period. Hence, at the time, the human remains of Furfooz were regarded as belonging to that period—an opinion which is no longer held, as the sepulchre is now admitted to be of the Neolithic age (*Rev. de l'école d'anthr.*, 1896, p. 155 f.).

Artificial caves used for sepulchral purposes have also been discovered in certain Departments of France, more especially those with chalky formations, like the Marne district. Here upwards of a dozen stations, each containing a number of artificial caves excavated in the flanks of low hillocks, have been most successfully explored by Baron de Baye (see his *Archéologie préhistorique*, 1880). Among some hundreds of interments, over 120 crania, including various trepanned specimens and cranial amulets, have been collected and are now preserved in the Château de Baye. Associated with them were a number of implements, weapons, and ornaments of Neolithic types, such as stone axes and their handles, arrow points, flint knives, bone pointers, polishers, beads and pendants of amber, bone, stone (one of callais, like those of the tumuli of Brittany), fossil shells, teeth, and so on. Of the crania, 44 were submitted to Dr. Broca for examination, and are thus

classified:—dolichocephalic (71·6 to 76·7), 15; mesocephalic, 17; and brachycephalic (80 to 85·7), 12.

Dr. Broca recognized in these human remains the union of two races analogous to those of Furfooz and Cro-Magnon—the latter having already been identified by him as of the same type as the dolichocephalic people of L'Homme Mort and Baumes-Chaudes.

Some of these caves, especially those of Petit-Morin, are supposed to have been constructed in imitation of the dolmens, as they were preceded by an entrance passage and occasionally a vestibule, from which a low door, closed with a stone slab, led to the sepulchral chamber. Baron de Baye thinks that some of them had been used as habitations for the living before being appropriated to the dead, as they had sometimes niches and shelves cut out of the solid chalk walls, on which various industrial relics had been deposited. A rudely executed human figure with a bird-like nose, two eyes, a necklet, and breasts, together with the form of a stone axe in its handle, was sculptured in relief on the wall of the vestibule of one of the larger caves. This cave appeared to have been much frequented, as the threshold was greatly trodden down by the feet of visitors. M. Cartailhac explains this peculiarity by supposing that it was a place for temporarily depositing the dead before transferring them to their final resting-place. All these caves contained abundance of relics characteristic of an advanced Neolithic civilization, but without any trace of metals, and the surrounding neighbourhood is rich in flint objects of that period.

Finally, it may be observed that sepulchral phenomena and grave-goods associated with the artificial caves of France are precisely of the same character as those of the neighbouring dolmens and natural caves, thus conclusively showing that all these monuments belonged to the same epoch and the same civilization. Their relationship to the rock-cut tombs of Egypt, Etruria, Palestine, and other countries, we must leave to readers to work out for themselves.

(5) *Grave-goods*.—The gifts to the dead, as already mentioned, bear some relationship to the social position among the community in which the deceased lived. They include all manner of things—ornaments, weapons, tools, utensils, pet animals, and even the wives and slaves of great heroes. When a departed friend appeared in a dream dressed in his usual garments and armed with his favourite weapons, it was natural to suppose that these objects, as well as their owner, had shadowy existences in the spirit world. From this it is supposed that the pre-historic people believed that not only men, but animals and inanimate objects, had souls—a belief which may account for the frequency with which weapons and other grave-goods were broken.

The quality of grave-goods varied according to the culture and civilization prevalent at the time of the interment. During the Stone Age they consisted of perforated shells, teeth, pendants of ivory and coloured pebbles, stone axes, spear-heads, arrow points, bone pins, buttons, and other objects of the toilet. During the Bronze and early Iron Ages, to the above objects were added necklets made of beads of jet, amber, and coloured glass, rings, armlets, and fibulae of bronze, and sometimes gold rings. The stone weapons gave place to others made of metal. In the absence of written records, the objects thus collected and collated form the principal materials on which archaeologists base a more or less positive system of chronology. Among the calcined bones of cremated subjects, small articles such as pins, beads, buttons, etc., are occasionally found, showing that the corpse had been clothed when subjected to the fire. When de

posited in the earth without an urn, it has been argued that such objects had been used for binding the cloth or skin in which the calcined bones were wrapped up. From the quantity of objects sometimes deposited in the grave, it has been surmised that, when a person was possessed of property of rare and exceptional value, it was customary to bury it along with him, evidently with the intention of its being utilized in the world of spirits. As an illustration of this the following notice of a remarkable discovery of axes made of jade and other materials will be of interest:

The tumulus of Mont-Saint-Michel, which occupies a conspicuous position among the Carnac group of antiquities, rises to the height of 10 metres, on an elongated base measuring 115 metres in length by 58 metres in breadth. In recent times the top of the mound was flattened, and the eastern third is now occupied by a chapel, while at the other extremity there are the ruins of a modern observatory. In 1862 a small megalithic chamber, some two metres square and rather less than one metre in height, was discovered, and on the floor of the chamber, amidst a thick deposit of dust, the following objects were found: (1) Eleven beautifully polished axes of jade, varying in length from 9½ to 40 centimetres. Two of these celts were pierced near the point for suspension. One was broken into three portions, two of which were lying at one end of the crypt and the other at the opposite end. (2) Two large celts of a coarser material, both broken. (3) Twenty-six very small celts of fibrolite. (4) Nine pendants of jasper and 101 beads of jasper and turquoise, supposed to have formed a necklace; also a number of very small beads made of some kind of ivory. After the entire débris had been removed from the floor of the chamber, there were found, under a flagstone, remains of an interment occupying a shallow space between the floor and the natural rock (René Galles, *Bull. de la soc. polym. du Morbihan*, 1862).

(6) *Pottery*.—The pottery found with pre-historic burials consists of a variety of vessels collectively called 'urns'; but, as they are found in graves containing either burnt or unburnt bodies, they could not all have been intended for cinerary purposes, so that they have to be classified according to their ascertained special functions. Vessels associated with inhumed bodies are supposed to have contained food and drink—hence they are called 'food-vessels,' and 'drinking-cups' or 'beakers.' The cinerary urns, used exclusively for the purpose of preserving the cremated remains of the corpse, vary considerably in size, form, and ornamentation, being generally 10 to 18½ in. in height. They are narrow-based and wide-mouthed, with a broad overhanging rim to which the ornamentation is commonly confined; or they may be flower-pot-shaped, and ornamented by one or two transverse ridges. The food-vessel, which is considerably smaller, more globular, and more highly ornamented than the cinerary urn, is also wide-mouthed and narrow-based. As a rule it was placed with an unburnt burial in the vicinity of the head of the corpse.

Drinking-cups, or beakers, are tall, highly ornamented vessels, narrowing from the mouth to near the middle, then bulging out and again narrowing at the base. A few specimens have been found with a handle like a jug. Beakers are almost invariably associated with unburnt burials—only two out of 24 having been found by Greenwell in the Wold barrows, with cremated burials. Very small cup-shaped urns, often pierced with two or more holes in the side, and generally found inside a large cinerary vessel, are known under the name of 'incense cups'; but there is no evidence to support this suggested use of them, and they are now regarded as cinerary urns for infants.

The Hon. John Abercromby holds that the beaker is not only the oldest Bronze Age ceramic in the British Isles, but also an imported type from Central Europe by way of the Rhine Valley (*JAI* xxxii, 273 ff.). As an interesting corollary to Mr. Abercromby's views, it has been observed that, in almost all the instances in which the beaker has been found associated with human remains, the skull was brachycephalic.

That sepulchral ceramics of the beaker type have rarely, if at all, been found in Ireland may be accounted for on the supposition that the Continental brachycephali were later in penetrating

as far as Ireland; or, perhaps, that the few who did find their way to that country did so by a different route from those who entered Britain by way of the Rhine Valley. Anyhow, the rarity of both beakers and brachycephalic skulls in the pre-historic burials of Ireland is a suggestive fact to the student of Irish ethnology.

(7) *Cemeteries*.—As population increased and the influence of religion became more powerful as a governing factor in social organizations, the isolated and sporadic graves of the earlier people gave place to their aggregation in the form of cemeteries in certain selected localities, which were thus, as it were, consecrated as common burying-grounds for the disposal of the dead. The remains of such cemeteries may be found dispersed throughout the whole of Europe. There is documentary evidence that in pagan times the Irish had regal cemeteries in various parts of the Island, appropriated to the interment of chiefs of the different races who then ruled the country, either as sole monarchs or as provincial kings.

This authority consists of a tract called *Senchus-na-Relec* ('History of the Cemeteries'), being a fragment of one of the oldest Irish MSS, and in it reference is made to the cemetery of *Taillten*, which Mr. Eugene Conwell of Trim has identified as a group of chambered cairns on the Loughcrew Hills, near the town of Oldcastle, Co. Meath. Mr. Conwell also quotes the following stanza, among others, from a poem in the same old MS, viz. *Leabhar na hUidhre*:

'The three cemeteries of Idolaters are
The cemetery of *Taillten*, the select,
The ever-clean cemetery of *Oruschan*,
And the cemetery of *Brugh*.'

On the ridge of this range of hills, which extends for a distance of about two miles, are situated from 25 to 30 chambered cairns, some measuring as much as 180 ft. in diameter, while others are much smaller and nearly obliterated. They were examined in 1867-8 by E. A. Conwell, and an account of his discoveries was published in 1873 under the title of *Discovery of the Tomb of Ollamh Fodhla*.

An analogous group of dilapidated chambered cairns, with settings of stone circles, may be seen at Clava near Inverness, and other localities in Scotland. Stonehenge is in the centre of a vast burying-ground consisting of barrows in groups over the downs.

Urn cemeteries, without any external markings to indicate the site of the burials, are frequently met with in the British Isles, being exposed by agricultural operations, and especially by the removal of clay beds for the making of bricks. As the underlying clay slides from under the covering of soil to a lower level, urns are frequently seen sticking in the broken margin of the surface soil. A small urn cemetery was recently discovered at the digging of the foundation of a villa in the town of Largs. The site was a low gravelly mound, and the cemetery disclosed a unique feature in the finding of a stone-lined cist covered over with a large flagstone and containing seven flower-pot-shaped urns, all having more or less calcined bones in them (*Archæologia*, lxii, 239-250).

In 1886, in the course of removing the surface-earth above a gravel- and sand-pit at Aylesford in Kent, the following relics were discovered: a wooden pail or *situla*, with a bronze band ornamented with late Celtic designs; a bronze jug (*oenochos*); a long-handled pan and two *fibulae*, also of bronze, together with calcined bones and fragments of pottery. 'These objects were discovered in what had been a round burial-pit, about 3½ ft. deep, the sides and bottom of which had been coated with a kind of chalky compound. The bronze *situla* contained burnt bones and the *fibulae*,

the bronze vase and pan lying outside it, while around were the remains of several earthenware urns, some of which had been used as cineraries.' The discovery, fortunately, came under the notice of Dr. A. J. Evans, who lost no time in making a full inquiry into the circumstances. The result of his researches was a paper, 'On a Late Celtic Urn-Field at Aylesford,' which appeared in 1890 (*ib.* lii.). The conclusion to which Dr. Evans comes, after a wide comparison of Continental ceramics, is that the Aylesford urns are 'the derivatives of North Italian, and in a marked degree old Venetian prototypes.'

Perhaps the most instructive cemetery in Europe is that of Hallstatt, of which the present writer has elsewhere given the following brief account:

'The ancient necropolis, known as Hallstatt, lies in a narrow glen in the Noric Alps, about an hour's walk from the town of Hallstatt, situated on the lake of the same name. Discovered in 1846, and systematically explored for several years under the superintendence of Bergmeister G. Ramsauer, the results were published by Baron von Sacken in 1868, in a quarto volume with twenty-six plates of illustrations. One of the peculiarities of this cemetery was that it contained burials by inhumation and incineration indiscriminately dispersed over the entire sepulchral area, both, however, belonging to the same period, as was clearly proved from the perfect similarity of their respective grave-goods. The graves were thickly placed over an irregular area, some 900 yards in length and about that in breadth, but there were no indications above ground to mark their position. They were not arranged in any order, and their depth varied within the limits of 1½ to 5 ft.—a disproportion partly accounted for by the sloping nature of the surface, which caused a considerable rain-wash of the soil to the lower levels.

Out of 993 tombs described in v. Sacken's work, 525 contained simple interments; 455 had incinerated human remains; and in 13 the bodies had only been partially burnt before being interred. The inhumed bodies lay, generally, from east to west, having the face towards sunrise with the head occasionally resting on a stone. At other times the body lay on a prepared bed, or coarse casing, of hardened clay. In two instances traces of a wooden coffin were observed. Sometimes two or more skeletons were found in the same grave, while, at other times, some portion of the skeleton was wanting. The skeletons were not so scientifically examined as could be desired, but, according to Dr. Hoernes, they belonged to a well-developed dolichocephalic race, of medium height (5 ft. 6 to 8 in.), with a prominent occiput, long and slightly prognathic face, and a straight or gently receding forehead. The ashes and charred bones were carefully collected and deposited in the natural soil, sometimes laid over a flat stone, and sometimes in a roughly burnt trough of clay. Only twice were burnt bones found in a bronze vase, and once in a clay urn. When the cremated remains had been deposited the grave-goods were placed near them, after which the coarser pieces of charcoal were heaped over the whole.

An analysis of the contents of the graves gave the following results:—The 538 tombs, after inhumation, contained: bronze—18 objects of armour, 1543 articles of toilet, 57 utensils, and 81 vases; iron—165 objects of armour, and 42 utensils; 6 articles of gold, 171 of amber, and 41 of glass; 342 clay vessels; and 61 diverse objects (spindle-whorls, sharpening stones, etc.). Similarly classified, the relics in the 455 tombs after incineration were as follows: bronze—91 objects of armour, 1735 of toilet, 55 utensils, and 179 vases; iron—348 objects of armour, and 43 utensils; 59 articles of gold, 106 of amber, and 85 of glass; 902 clay vessels; and 102 diverse objects.

From these statistics it would appear that the burials after cremation were richer in articles of luxury—such as bronze vases and fibulae, beads of glass, gold cloth stuffs, etc., with the exception of objects of amber, which were more abundant with inhumed bodies' (*Rambles and Studies in Bosnia*², p. 899 ff.).

It may be noted as a point of some significance, that neither silver nor lead has been found in Hallstatt. Their absence, together with that of money, has been used to support the opinion that the cemetery was discontinued before these metals came into general use about the beginning of the 4th cent. B.C.

Baron von Sacken assigned the Hallstatt cemetery to the second half of the millennium immediately preceding the Christian era, and thought that it might be in continuous use till the advent of the Romans into that part of Europe. But, according to other writers, this range ought to be extended further back by several centuries, even to 1000 B.C. Owing to commercial currents from Eastern lands, especially by way of the Adriatic, and also, no doubt, to changes initiated by native skill, we might expect a considerable variation in the technique of the Hallstatt relics, even on v. Sacken's hypothesis of the more limited duration of the cemetery. The collection as a whole is thus a mere jumbling together of an assortment of objects, influenced not only by a rapidly progressing civiliza-

tion, but also by a continuous importation of new materials; hence the difficulty of classifying them into a more precise division than earlier and later.

In the cemetery of S. Lucia, near Tolmino, above the head of the Adriatic, in which incineration was almost exclusively the mode of sepulture—there being only three interments by inhumation out of 3000 tombs examined by Dr. Marchesetti—the warlike element was represented by only one sword, two spears, and seven lances (all of iron). The sword is distinctly the La Tène type—thus suggesting that the peaceful ways of the people had been disturbed only in later times, probably during one of the marauding excursions of the Gauls into Italy. On the other hand, the *fibula* numbered 1629 of bronze and 108 of iron; of which 248 were of the 'Certosa' type—i.e. not much earlier than 400 B.C.—and 3 of the La Tène type. Of metallic vases there were eighty of bronze and one of iron, among the former being six *ciste a cordoni*. A few of these bronze vessels were decorated with dots, circles, and perpendicular flutings, but rarely with animal figures, and all in the same style of art as the analogous objects from Hallstatt.

(8) *The proto-historic people of Western Europe.*—

As a general result of the preceding remarks on the sepulchral phenomena of Western Europe, the following propositions may be accepted as a fair summary of the ethnic elements, so far as these have been determined by modern research, which have helped to mould the physical characters of the highly mixed population now inhabiting the British Isles, but, of course, altogether apart from the influence of the environment.

(a) Anthropological researches have shown that during the Neolithic Age a long-headed race, of short stature but strong physique (average height 5 ft. 5 in.), who buried their dead in rudely constructed stone chambers, had spread over the whole of Western Europe, from the Mediterranean to the south of Scandinavia. Tacitus informs us that he identified the Silures, a people then occupying South Wales, as Iberians, on account of their swarthy complexion and curled hair (*Agricola*, xl.). The inference that these Silures were the direct descendants of the primitive long-headed people was not unreasonable, more especially as by that time the eastern parts of Britain had been taken possession of by successive waves of Gaulish and Belgic immigrants from the Continent—thus causing the earlier inhabitants to recede more and more westwards. And, if this is so, it follows that the long-headed men of the chambered cairns of Britain, Ireland, and France, as well as many other parts of the Continent, had a swarthy complexion, with dark hair and eyes, like so many people still inhabiting the more secluded parts of these localities.

(b) The incoming brachycephali were taller than the dolichocephali already in possession of the country—a statement which is proved by actual measurements of skeletons (average height 5 ft. 8 in.). Although they have been described by many modern writers as 'light in hair and complexion' (Greenwell, *op. cit.* p. 636), there does not appear to be any archaeological evidence to support this assertion. The mistake seems to have arisen from inadvertently applying to the Bronze Age brachycephali qualities which were undoubtedly applicable at a later period to the Celts of history. The former buried their dead in short cists and round barrows, and carried with them a knowledge of bronze. While these two early races (the dolichocephali and brachycephali) were living together, apparently in harmony, the custom of disposing of the dead by cremation spread over the land—a custom which was introduced from the Continent, and had its origin probably in the strong religious

elements of the time, as it was practised by both races.

(c) At a considerably later period, but not many centuries prior to the occupation of Britain by the Romans, there was another Continental wave of immigrants, generally regarded as an offshoot of the *Galli* of classical authors, and probably the *Belgæ* of Cæsar, who introduced the industrial elements of the civilization known in this country as 'Late Celtic.' These newcomers differed radically from the former so-called Celtic invaders in having dolichocephalic heads—a statement which is supported by archaeological evidence; for example, a skull found in a characteristic Late Celtic tumulus at Arras, Yorkshire, was described by Dr. Thurnam as having a cephalic index of 73·7. They were a branch of the Celts of history, whose very name at one time was a terror in Europe; and by classical writers they are described as very tall and fierce-looking, with fair hair, blond complexion, and blue eyes.

(d) The next and last of the great racial elements which entered into the ethnic composition of the British people of to-day were the successive Teutonic invasions from Germany, Denmark, and Scandinavia, all belonging to a tall blond dolichocephalic people who existed in Central Europe from time immemorial—possibly the descendants of the Neanderthaloid races of Palæolithic times.

There is no reference made here to the Roman occupation as a factor in British ethnology, because the Romans were a mere ruling caste, who, although they introduced new arts, industries, and customs into the country, kept themselves aloof from the natives, and did not, as a rule, intermarry with them. Hence, when they finally abandoned Britain they left its inhabitants racially unaffected, much as would be the case with India if the British were now to retire from it. To-day we hunt for remains of military roads, camps, accoutrements of war, and other relics of their civilization, but of their skeletons we know very little, and of their British offspring nothing at all.

R. MUNRO.

DEATH AND DISPOSAL OF THE DEAD (Greek).—Burial was the method of disposing of the dead followed by all the Mediterranean peoples during the Neolithic epoch, and the same custom obtained in Greece, and was continued without interruption at least until the Homeric period. That the Greeks of the pre-Mycenæan and Mycenæan civilization buried their dead is evident from the tombs discovered in Crete, in the Cyclades, at Mycenæ, Orchomenus, and Vaphio. It has also been proved that Schliemann was mistaken in believing that he found in the Mycenæan tombs indications of a partial cremation of the dead. In the island of Crete, Evans and Halbherr, who discovered many tombs of the Mycenæan epoch and others of different periods, found burial to be

the invariable custom without any sign of cremation, either partial or total.

Apparently, then, the first notice of cremation occurs in Homer; it is described with grim vividness, especially in the account of the obsequies of Patroclus (*Il.* xxiii. 110 ff.). Homer also offers an explanation of this new funerary custom, which appears to be contrary to the beliefs of the Greek people. He makes Nestor say that it is necessary to burn the bodies of those who died in battle, in order that the bones might be carried back to their native land to the sons of the dead (*Il.* vii. 331 f.). But this reason is inadequate to account for so profound a change of custom. The change from burial to cremation must already have taken place in the Homeric age, just as it had previously been made in Central and, in part, in Southern Europe. It was then introduced into Greece as it had been into Italy, and very probably by the same races who were afterwards known under the name of Aryan, and who originated many other changes in the customs of the peoples subdued by them.

While in some regions of Europe there was a period during which cremation prevailed (and among these regions must be included Northern and also, in part, Southern Italy), in Greece the ancient and the new practices flourished for a long time side by side, just as was the case in Rome; but in Rome, from the discoveries in the Forum and from those made in other parts of the city and in Latium, we can plainly recognize the substitution of cremation for burial. This does not appear so clearly in Greece; but it cannot have happened otherwise. At the time of the Homeric rhapsodies, cremation must have been in use quite as much as burial. In succeeding epochs both methods were employed, as may be gathered from Greek authors, who attest the existence now of the one custom and now of the other.

We have at the present day full information regarding the forms of the tombs used by the Greeks previous to the classic epoch, and especially in those characteristic periods which are to be referred to pre-Mycenæan and Mycenæan civilization both on the continent and in the various islands. The funerary architecture of these periods may be classified under four chief forms: (1) dome-tombs, (2) chamber-tombs, (3) shaft-tombs, and (4) pit-tombs.

The finest example of a dome-tomb is that of the tomb called the Treasury of Atreus at Mycenæ, discovered by Schliemann. Then come those of Orchomenus, of Vaphio, of Heraion, of Eleusis, and of other places, which are magnificently and splendidly decorated, not indeed like that at Mycenæ, although they have the same architectural form.

The chamber-tombs are distinguished from the dome-tombs by the rectangular form of their plan, the dome-tombs being circular; by their more or less flat roof; and also by the diminished height of the mortuary chamber. But, like the others, they have a corridor (*δῶρος*) for entrance, with a door of ingress, and they may also have a varying number of lateral chambers. These tombs were excavated in the rock, and are found throughout the whole of Greece and in the islands, especially in Crete, where they were discovered by Evans and Halbherr. Sarcophagi are found in them—sometimes one, two, or even four—made of terracotta and painted on the outside; or else there is a trench in them in which the corpse has been placed; or sometimes the corpse was laid upon the floor of the sepulchral chamber (Evans, *Prehistoric Tombs of Knossos*, p. 5; Orsi, *Urne funebri cretesi*, p. 2 ff.).

The shaft-tombs were dug in the ground and

covered with either rough or squared slabs of stone. In these graves the body was usually placed on its back; sometimes it was curled up.

The pit-tombs consist of a kind of well which was almost always excavated in the rock, with steps to descend into it; at the bottom an arched aperture is found which gives access to the sepulchral cell. The cell is generally supported by a double wall of rude blocks, and is sufficiently long to contain a skeleton stretched out at full length. But Evans remarks that this type of tomb, although it has different characteristics, resembles in its cell the shaft-tombs.

In the island of Crete no dome-tombs have been discovered like those of Mycenæ or of Orchomenus; but the royal tomb of Isopates described by Evans and re-constructed by Fyfe (Evans, *op. cit.*) fills up the lacuna.

It appears to have been the primitive custom of the Greeks to bury their dead in the village where they dwelt, and sometimes in the houses themselves. It is certain that at Mycenæ tombs have been found in the houses, here and there in groups of five, or even of twenty, among the remains of habitations. At Athens, also, houses with tombs have been discovered. Plato makes mention of this custom, and calls it barbarous (*Min.* 315). It seems to have been abolished by the laws of Solon. The *agora* also appears to have been used for burying; Mycenæ supplies an example of this. Further, it is well known that in the classic epoch many Greek cities had, or believed that they had, in the *agora* the burial-place of their more renowned heroes.

It appears, further, that the Greeks in primitive times offered human sacrifices at funerals. This seems certain not only from the Homeric account of the obsequies of Patroclus, but also from some indications in the tombs of Mycenæ. In the *dromos* of the rock-tombs, human bones have often been found, and in front of one sepulchre there were discovered six human skeletons placed cross-wise and mingled with the bones of animals and broken pieces of common utensils. From this it has been suspected that the bodies were those of victims sacrificed to the dead (Perrot-Chipiez, *Histoire de l'art*, vi. 564). Further, Plato says (*ib.*) that human sacrifices were offered in Lykaia (Λυκαία), and also by the descendants of Athamas, although they were Greeks and not barbarians.

From the most remote antiquity, as we gather from the pre-historic tombs, the Greeks had a religious cult for their dead. They considered the right of sepulture as sacred, and consequently as a law. This sentiment was handed down to the historic Greeks, the true Έλληνες. It was also a duty and a kind of Pan-Hellenic law (Πανελληνιον νόμος, Eurip. *Suppl.* 524) to give sepulture to enemies who died in battle. The law of Solon, which exempted a son from the obligation to support a father who had rendered himself unworthy, imposed upon him the duty of burying him with all due honours (Æsch. in *Timarch.* 13; the very words δίκαια, νόμιμα, affirm the right of the dead to sepulture). In the classic epoch, religious belief was permeated with the notion that the spirit of the dead could not enter into the subterranean realm if the body had not received burial—the soul (ψυχή) would wander about without a resting-place, and would not be able to pass over the fatal river in order to enter Hades.

We do not know how the primitive Greeks conducted themselves between the death and the burial of the deceased; but from what we know of the historical epoch we may infer without any doubt what were their customs in primitive times.

In the pre-historic tombs of Knossos the corpse was buried in a grave, or else was laid on the

pavement of the sepulchral chamber, or in a sarcophagus in a *larnax* of clay. It was usually placed stretched out at length, or sometimes curled up, either in the grave or in the sarcophagus. There was no fixed direction or orientation of the position of the dead. In tombs of every type, objects belonging to the deceased are found, according to sex and condition: weapons, swords, knives, arrows, razors, ornaments of gold and of bronze, rings, seals, lamps, and so on. Tombs like those of Mycenæ and Vaphio have furnished objects of great value both as to their material—principally gold—and as to their artistic make. Objects which were most dear to the deceased, and which he had possessed when living, were placed with him in the tomb. This usage continued without interruption into the historic epoch, together with other usages which were gradually abolished by various successive laws, because they were held to be barbarous. We have proof of this in the Homeric period, which may be regarded as an intermediate one between the pre-historic and the historic periods, primitive funeral customs being still found which were no longer practised in the period which followed, as well as others which were retained.

In order to give an idea of this, it will be sufficient to relate in full what was done at the funeral of Patroclus, so admirably described by Homer (*Il.* xviii., xxiii.). We shall follow the poet's order:—

The corpse of Patroclus was washed with hot water (*Il.* xviii. 345 ff.), then anointed with unguents and oil, and covered from head to foot with a thin linen cloth. It was laid in state on a bed (ἐν λέκτρῳ, 352), and was wept over with great lamentation by Achilles and the Myrmidons (315 ff.). On the return from the fight in which Hector was slain, Achilles and the Myrmidons again wept over the bier of Patroclus, since weeping is an honouring of the dead (ὁ γὰρ γέρας ἔστι θανόντων, xxiii. 9). A funeral meal follows the weeping. The corpse is to be cremated, and accordingly an immense pyre is prepared which is to receive the body of Patroclus. When the pyre is ready, the transportation of the body takes place in the midst of a great cortège of armed men; Achilles supports the head of his deceased friend, while the Myrmidons cut off their locks and cast them upon the corpse, thus covering it. Achilles also sacrifices his hair, which he puts into the hand of his dead friend. During the night those who attend to the preparation of the funeral (ἐπιτάφιοι, xxiii. 163) remain with Achilles. On the following day the body of the deceased is placed in the midst of the pyre, and is covered from head to foot with fat taken from the oxen and sheep which have been sacrificed; alongside are placed the dead animals, and amphoræ of honey and of oil. Four horses are sacrificed, and two of the nine dogs which the deceased possessed, together with twelve young Trojans who are to be burnt on the same immense pyre. The pyre burns all the night. In the morning the order is given to extinguish it with libations of wine, to pick out the calcined bones of the dead from among the other bones of men and animals—an easy task, since the body of Patroclus had been placed in the centre separate from the rest—and to enclose them in a cinerary urn between two pieces of fat. Finally, a tumulus of earth receives the urn, and is the sepulchre of Patroclus. But the funeral rites do not end here: Achilles orders funeral games, and distributes rewards to the victors (258 ff.).

In the classic period the dead body was washed, anointed with unguents and oil, and wrapped in a white garment. It appears, however, that the garment was not always white; it might be black. The eyes were closed, and the jaw was bound to the head in order that the mouth might remain shut when rigidity came on. The care of the dead was the business of the people of the house, especially the relatives, and among these the women. Further, a garland was placed on the head of the deceased. Afterwards the corpse was laid on an ordinary bed (κλίνη), and was exposed to view. This exposing (πρόθεσις) took place in the house, the feet of the dead being turned towards the door; a law of Solon prohibited an exposing before the door, as seems to have been done at first. This exposing took place the day after death. An earlier time was prohibited in order, naturally, that there might be assurance that

actual death had taken place; and, on the other hand, a too prolonged exposing was not allowed. According to Greek beliefs, the dead must be buried relatively soon in order that the soul might be able to enter the realm of the dead and might not wander about. Patroclus, whose body, on account of the solemn funeral rites, was exposed for twelve days after his death, says to Achilles, to whom he appears in a dream, *θάπτε με ὅττι τάχιστα, πόδας ἄϊδαο πέρῃσω* (Il. xxiii. 71).

At what seems to be a late period, a piece of money was placed in the mouth of the deceased as a *ναῦλον* to pay the ferryman who transported him to the further side of the river into the realm of the dead. A honey cake (*μελιτούρτα*) was buried with him, as an appropriate offering to the guardian of the doors of the infernal regions (Aristoph. *Lys.* 599). The scholiast on Aristophanes adds that the cake serves for Cerberus (*q.v.*), the piece of money for the ferryman, and the dead man's garland is for the struggle which he has undergone in issuing from life.

Upon the bier was placed a vessel of earth, usually a *λίκυθος*, which contained an unguent. On this vessel, which was of a characteristic form, were depicted appropriate funeral scenes; and, in fact, it represented the deceased. At the door of ingress was placed an earthen vessel (*δοτρακον*) containing spring water (Aristoph. *Ecc.* 1033), which was to serve for purifying those who had been in contact with the dead, and in general all those who were in the house.

The exposing of the body was followed by its being carried (*ἐκφορὰ*) from the house to the place of sepulture, and this could be done only by day; criminals alone were buried by night (Eurip. *Troad.* 446), when sepulture was granted them at all. The dead person was carried on the bed upon which he had been exposed to view; but it is not easy to say exactly who were the bearers, although there are expressions like *νεκροφόροι*, *νεκροθάπται*, *νεκροτάφοι*, which imply persons specially employed in this duty of carrying and of burial. However, we gather from Plato, Plutarch, Lucian, and others that these bearers were young men who lent themselves to this pious duty. Plato speaks of young men of the gymnasium (*Legg.* xii. 947). When the conveyance of the body took place, it was attended by a cortège which accompanied the bier as it made its way to the sepulchre. According to the laws of Solon, the men must go first, the women must follow; the latter, moreover, must not be less than sixteen years of age (Demosth. *Arist.* i.). Plato describes at length (*Legg.* xii. 947) how the funeral cortège was to be formed, and he also notes that the women who took part in it must not be younger than the child-bearing age. The sepulchre (*θήκη*) must be excavated underground, of elongated shape, and must be constructed of stone. But the dead were not always laid in a tomb of stone without a coffin (*σφόνδς*, *λάρναξ*). When the latter was used, it was made of cypress or other wood.

The different stages of the funeral were usually accompanied by weeping and lamentation on the part of the relatives and friends, and of other persons who visited the dead when exposed to view and attended him to the sepulchre. These manifestations of grief must originally have been excessive, and not different from those we have met with in Homer. They were prohibited by legislators like Solon and Charondas, who desired to restrain what appeared to many Greek writers to be clamorous and barbaric forms of grief. Plato describes as indecorous the weeping for the dead, and would have liked to prohibit lamentations (*θρηνεῖν*) outside the house (*Legg.* xii. 960). It is true that Æschylus (*Choeph.* 20f.), and Euripides (*Hec.* 642 f.)

describe displays of grief such as striking the breast, tearing and lacerating the face and garments, and pulling out the hair; but probably these two authors wished to reproduce primitive customs which were no longer permitted in their day. In spite of legislative prohibitions, however, there was no cessation at funerals of more or less exaggerated manifestations of grief; the bier was certainly accompanied by funeral-singers (*θρηνῳδοί*). Plato himself speaks of them (*Legg.* vii. 800) in the masculine only. This duty, however, was carried out also by women called *Καρίναι*, *θρηνῳδοί*, *μουσικαί*, probably, as is supposed, from their Carian origin, whence came the employment of the term for those women who sang over the dead, just as a kind of flute was called Phrygian as having been invented by the Phrygians, *e.g.* *αὐλὸς θρηνηγητικός* (Poll. iv. 75).

While in pre-historic times the places of sepulture were either the houses or the streets of the city or village, or even the *agora*, in the classical period the Greeks had fixed places outside the city, cemeteries in the common and broad signification of the term; or else they made use of the roads outside of the city, as may still be seen in Italy, *e.g.* at Pompeii. Moreover, distinguishing signs or inscriptions were placed upon the sepulchres. The sepulchres themselves had different names, as *θήκαι*, *τάφοι*, *μνήματα*, and they might have different forms, among which was that of the tumulus (*χῶμα*, barrow). There were placed upon them *stelæ* (*στήλαι*), a kind of posts, or actual columns (*κίονες*), or little temples (*ναῖδια*, *ἡρώα*), or else horizontal slabs of stone (*τάφειαι*), with inscriptions (*γραφαί*).

In the sepulchres in Greece, from the most ancient and primitive onwards, have been found objects and vessels frequently of great value, such as those of Mycenæ, of Vaphio, and of Crete. These were deposited in the tomb with the dead, and were objects which had belonged to him. Thus there have been found objects for the toilet, weapons, little figures of earth or of bronze, and, especially, bronze or earthen vessels. The sepulchres themselves contain the bones of domestic animals, among which are those of the horse. In the ideas and beliefs of the Greeks there was the conviction that the dead person must have for his journey to the subterranean world the same objects of use and of ornament which he had possessed when living, and also utensils and vessels which were proper for eating and drinking from, and containing food and drink. This usage did not cease in classic Greece, as has been proved by the vessels and other objects which have been found in the sepulchres of this epoch.

The burial was followed by the funeral meal (*πενδιπνον*), already met with in the Homeric period, though not by the games, which had been abolished; and also by the purification (*καταλούεσθαι*). But solicitude for the deceased did not end here: on the third day after the burial, sacrifices (called *ῥιπτα*) were offered upon the tomb, especially on the stele or other object placed on it; these sacrifices were repeated on the ninth day (*ἐνάτη*); and in the meanwhile the mourning began. This, in the majority of cases, lasted thirty days; the shortest period was twelve (Plut. *Lyc.* 27). As to external signs, mourning was shown by abstinence from everything which might cause joy and pleasure, and also by putting on a black garment, or clothing which was only in part black. According to Plutarch (*Quest. Rom.* xiv.), it was a custom with the Greeks that during the mourning the women should shave off their hair, and the men should let theirs grow, if the regular usage was for the men to shave off the hair, and the women to let theirs grow. Euripides makes mention (*Iphig. Aul.* 1437 f.) of the cutting off of the hair

and the putting on of a black *peplum* for mourning. The Argive custom of wearing a white garment for mourning instead of a black one (Plut. *op. cit.* xxvi.) seems to have been an exception.

In Athens there was also an anniversary of the death called by Herodotus (iv. 26) *γενέσια*, a funeral feast, during which sacrifices were offered to the earth (*τῇ γῇ*)—a commemoration called by others *νεκυσία* or *ἀπαλία*. It is to be supposed that such a commemoration was chiefly found in the case of men well known and highly thought of, notwithstanding that no distinction of persons or classes is made by Greek writers. But a general feeling of respect for tombs, and especially for ancestors, may be inferred from what one reads in Æschylus (*Pers.* 401 ff.) concerning the tombs of forefathers (*θίγκας τε προγόνων*). Just as in the commemoration on the third and ninth days after burial, so at the annual commemorations, there were sacrifices, offerings and libations (*ἐνάγισμα*) to the dead, who was supposed to be already in the subterranean world; whence such libations took also the name of *χαῖα*, and of *χθονία λουτρά*.

The unhappy criminal alone was denied sepulture and a funeral. In Athens the bodies of criminals were thrown behind the tower Melita and along by the northern walls of the city (Plut. *Them.* xxii.; Plato, *Repub.* iv. 439). The suicide's right hand was cut off; but he was granted burial. Plato would have the suicide buried in silence and without any sign of sepulture (*Legg.* ix. 873). Finally, to those whose bodies could not be obtained, cenotaphs or empty monuments were erected. Euripides (*Hel.* 1241) says that it was a law of the Greeks that he who died by drowning in the sea should be 'buried in a tissue of empty robes' (*κενοῖσι θάπτειν ἐν πέπλῳ ὑδάμαστιν*).

G. SERGI.

DEATH AND DISPOSAL OF THE DEAD (Hindu).—Life and death stand in perpetual contrast. To give expression to this fact is the aim of Hindu ritual in all its processes, down to the minutest details. In the case of offerings to the gods the participants circumambulate the fire with their right side turned towards it, and in a direction from left to right; in offerings to the *manes* the left side is turned, and the direction is from right to left—the opposite of the sun's course (see CIRCUMAMBULATION); in the former case the right knee is bowed, in the latter the left; in the one the sacrificial cord is put on from left to right (under the right arm), in the other from right to left (under the left arm); ropes are twisted from right to left; even numbers are assigned to the gods, odd ones to the *manes*; to the former belongs everything that is young, healthy, and strong, to

the latter what is old, weak, or deformed. Everything that is bright-coloured—the forenoon, the ascending half of the month or the year—is assigned to the gods; whereas the *manes* have their portion in all that is dark—the afternoon, the descending half of the month or the year. Even in the course of a human life the 50th year marks a boundary, those who have not reached it belonging to the gods, those who have passed it to the *manes*.

Dread of the evil influence of the dead, their impurity, their return, and their interference with the living is another characteristic of the ritual. Fire-brands and jets of water serve to ward off this influence; stones are laid down between the village and the place of cremation; on the way home from the latter, care is taken to obliterate footprints in order to prevent the dead from finding the way, or perhaps to save the footprint, which is a possible subject of magic, from being exposed to the influence of hostile spirits; at the funeral ceremonies plants are selected whose names—such as *apāmārga*, *avakā*, *yava*—have a protective sense.

The living are bound to prepare the way for the dead in the other world, to provide them with food for their great journey into Yama's realm, and to supply them with means for crossing the rivers. These ends are served by the *utkrānti* or *vaitarāṇi* cow, which in some cases has been presented to the Brāhmins before his death by the deceased himself or his son. The same was originally, no doubt, the purpose also of the *amustarāṇi* cow, which is led along in the funeral train, and whose members are finally laid upon those of the dead, its kidneys being deposited in his hands as food for Yama's dogs. The streams which have to be crossed are probably indicated by the piece of reed which is introduced into the wall of the tomb, and which is meant to serve as a boat (cf. CERBERUS, BRIDGE).

The realm of the dead is variously located in the west or the south—occasionally in the east, no doubt in conformity with the conception of Rigv. x. 15. 7, which speaks of the fathers as *arunām upasthe*, 'in the bosom of the dawn.' The dead are sought for in earth and air and heaven, in sun and moon and stars—in the last-named very rarely. In fact, we encounter a number of frequently contradictory views, which originated at different times and among different races, and which, after undergoing artificial amalgamation, now emerge in the Vedic ritual and its hymns (Hillebrandt, *Ved. Myth.*, Breslau, 1891-1902, iii. 414 ff.).

The usual method of disposing of the dead is cremation. But the well-known distinction drawn in Rigv. x. 15. 14 between *agnidagdhas* and *anagnidagdhas* (cremated and un-cremated *manes*) shows that other forms were known and practised. It is not at all impossible that Rigv. x. 18. 10 ff. originally referred to the rite of burial (Winternitz, *Gesch. d. ind. Litt.*, i. [Leipzig, 1905] 85). But our present ritual is not acquainted with burial except as applied to young children and ascetics, in whose case, from a motive half-philosophic, half-superstitious, and after a fashion known even at the present day, the skull was split with a coco-nut (Caland, *Altind. Bestatt.* § 50, p. 95). The only other trace which appears to point with any certainty to burial is found in the *śmaśānachiti*, which follows the placing of the remains in the urn. The Brāhmins were reluctant to abandon old customs; they modified them when necessary, and linked them on to other existing usages. Just as the *pravargya* ceremony—once an independent milk-offering—was combined with the soma-offering, so the non-obligatory *śmaśānachiti* may have been originally an independent custom. In the measures of this *chiti* Caland (*l.c.* 181 f.) has rightly seen the 'survival' of original burial; and the circumstance

that there the urn is not interred, but cast away, also appears to point to the independence of the *śmaśānachiti*, for which urn-burial is not a necessity.

The data as to burial are found in the Vedic hymns, and especially in the Sūtras—the *Gṛhya* and *Pitṛmedha* and kindred texts—and in the records of modern usages. It is not without interest that many of the regulations of the Sūtras find parallels at the present day among Indian tribes. As we find the injunction that those returning from the place of cremation are to deposit stones or other objects between the dead man and his village, so 'the Mangars of Nepal obstruct the road leading from the grave with a barricade of thorns, through which the soul, conceived of as a miniature man, very tender and fragile, is unable to force its way' (*Census of India*, 1901, i. 355). On the other hand, our Sūtras do not contain an account of all the customs that existed or may have existed, and do not coincide with the ritual known to the Rīgveda. An interesting illustration of this is supplied by Dr. Bloch (*Annual Report of the Archaeol. Survey*, Bengal circle, for the year ending April 1905, Calcutta, 1905 [ZDMG lx. 227 ff.]), who opened some burial-mounds at Lauriya, and found in the midst of them remains of a wooden post (*sthūmā*), which recalls the post mentioned in Rīg. x. 18. 13, and of whose meaning the Sūtra ritual gives us no idea.

It would be quite out of place here to treat even superficially of the huge mass of prescriptions to be found in published and unpublished texts, or of the variations presented by the usages of different schools and families. Caland divides the whole ceremonial into 114 acts, not to speak of the variations found in each of these. It is equally impossible to discuss the numerous verses which accompany the particular acts, and whose real relation to these is not always clear; or, more especially, the circumstantial casuistry with which the highly ingenious spirit of Brāhmanism has sought, in a manner that is far from uninteresting, to provide for all possibilities. Like the ceremonies connected with birth, those attending on death are a *samskāra*. 'It is well known,' says the *Baudhāyana Pitṛmedha*, iii. 1. 4, 'that through the *samskāra* after birth one conquers earth; through the *samskāra* after death, heaven.' Ritualists are therefore eager to have this *samskāra* performed with care and with regard to all circumstances. It may happen, for instance, that the Hindu dies in a foreign land and must be brought home, or that he dies there and remains forgotten. In the latter case cremation is performed in effigy upon a human figure composed of *palāsa* stems. Should it chance, however, that after all the man returns alive, the ritual provides even for this, and ordains that he must be born anew—i.e. undergo all the rites of *jātakarman*, in which he sits speechless and with clenched fists, like an embryo in the womb (Caland, § 44). When a prostitute dies, she must not be cremated, according to some teachers, with ordinary fire, but with that of the forest, wild and unchecked. Other regulations apply to the death of a widow or a woman in childbirth. If a man longs for death, he presents an offering, the various acts in which symbolize this longing (cf. *Kāt. Śr. S.* xxii. 6. 1). If one dies in the act of presenting an ordinary offering, certain rules are to be followed. But it is impossible to go into all this; only when the *Srauta* Sūtras have been translated, will the historian of religion and the ethnographer obtain full insight into this circle of ideas. Here we must content ourselves with a brief account of the most important features of the ritual.¹

¹ For fuller details, see the present writer's sketch in *GIAP* III. 2; and Caland (*op. cit. infra*), whose work is thorough, and yet does not exhaust the enormous quantity of material.

1. Death.—When the Hindu feels the approach of death, he must summon his relatives, hold friendly converse with them, and, if the dying-hour is very near, have himself placed on a cleansed spot on sandy soil. It promotes his future weal to make presents before his death to Brāhmins; among these gifts a special value attaches to the *vaitaraṇī* cow as his conductor over the stream of the under world. His dying-couch is prepared in proximity to the three fires, or, if he keeps up only one, near to it, viz. the domestic fire, and here he is laid down with his head turned towards the south. In his ear are repeated passages from the Veda of his school, or, if he is a Brahavid, from an *Aranyaka*. When death has taken place, they bring the corpse to a covered place, and then (or, with many, at a later stage) cut his hair and nails, which, according to Gautama (ii. 24), should be deposited in a hole in the ground. Many follow the practice (prohibited by others) of opening the body, removing the excrements, and replacing the entrails after they have been washed in water and filled with butter—a procedure intended, in the opinion of the present writer, simply to facilitate cremation, which would be hampered by the heavy *faces*. Then the corpse, with its head turned towards the south, is laid upon a bier covered with a black skin; on the dead man's head is placed a wreath of *nard*; he is clothed down to the feet in a new robe, the old one being given to the son, to a pupil, or to the wife of the deceased, to be worn for life or till it becomes too old for use. Others have a piece of the death-robe cut off, and hand it over to be kept by the sons. Noteworthy is the practice of some, who bind together the thumbs (or the toes) of the deceased—a custom which, as Caland (*l.c.* 176) and Steinmetz (*ap. Caland*) remark, is found also among other than Indian peoples (see above, p. 433^a).

If the deceased has in his lifetime presented animal-offerings, three he-goats are provided; if he has offered *sānnāyya* (sweet and sour milk libations) at new and full moon, a milk-offering (*āmikṣā*) is to be presented [evidently slight differences of cult going back to primeval times]. If goats are not used, many take 'black rice-grains,' of which from one to three rice-paps are made. A remarkable figure is that of an old, un-horned, vicious cow (*anustaraṇī*). When the cow is brought, the servants of the deceased have each to throw three handfuls of dust over their shoulders. At the head of the procession (according to the teaching of many) walks a man with a firebrand which he has kindled at the domestic fire; he is followed by the sacrificial fires of the deceased and the apparatus for the cremation ceremony, including the above-mentioned *anustaraṇī* cow; next in order is the dead man on his couch, which is placed on a mat or on the before-mentioned bier, carried by servants, old people, sons, or relatives near and remote, according as the custom may be. In many circles it is the practice—still followed in certain instances in India—to employ for the transport of the corpse a waggon drawn by black oxen, and to place upon it also the fires and sacrificial utensils of the deceased. Behind the corpse come the relatives, the older ones first, men and women, the latter with loose dishevelled hair and their shoulders besprinkled with dust. [In points of detail we meet with many variations.] When the corpse is lifted, the invocation, 'May Pūṣan bring thee from here!' is addressed to Pūṣan, who in the whole ceremonial appears as *ψυχοπομπός*—a rôle already assigned him in the Rīgveda. When a third or a fourth of the way has been covered, one of the goats is killed, or one of the paps of rice (or, if there be only one, a third of it) is poured upon a clod of earth thrown to the south. Thereupon the

company, with the younger ones in front, thrice circumambulate the corpse and the clod from right to left, with their hair loose on the left side and bound up on the right, at the same time striking their right thigh with the hand and fanning the corpse with the extremity of their garments. Then comes a thrice-repeated circumambulation from left to right, with the hair loose on the right side and bound up on the left, with a striking of the left thigh, but, according to the view of certain scholars, without another fanning of the corpse. The same procedure is repeated at the second third of the journey and at its termination. The rice-vessel is finally dashed on the ground, and its fragments so shattered that water will not remain upon them. [The variations encountered here in the practice of the different schools are numerous. Some walk along strewing small pieces of iron or roasted grains of rice upon the ground, while they recite or sing Yama-hymns. The Mādhyandinas deposit a rice-clod at the place of death, one near the door as they leave the house, one for the *bhūtas* half-way between the dwelling and the place of cremation, and one for the wind as soon as the place of cremation is reached, while one is deposited in the hand of the deceased.]

2. **Cremation.**—Special regulations, particularly as to its orientation, are offered for the choice of the place of cremation, which in some respects resembles the place of offering for the gods, while in others it is quite different. The duly selected spot is purified, and a formula is employed to scare away demons or ghosts. The kind of wood used, the size and orientation of the pyre, and everything of a like kind are regulated by rigid prescription, scarcely anything being left to caprice. The corpse is now (or later) laid on the pyre, the threads which bind the thumbs are loosed, the cords which hold the bier together are severed, and the bier itself is flung into the water or laid on the pyre, upon which the fires of the deceased also find a place. When all is done according to rule, the *amṣṭaraṇī* cow is brought forward, and so held by the relatives of the deceased that the youngest of them touches her hind-quarters, while the others are so arranged that an older person always touches a younger. The cow may either be slaughtered or—manifestly in connexion with a later custom—let go. The latter course must be followed in the case of one who has presented no animal-offerings. The animal is in that case led round the fires, the pyre, and the corpse, and with certain formulæ set free. To the north of the pyre the widow of the deceased crouches down, but (with formulæ which originally belonged to an entirely different ritual) is called on to rise and return to the world of life. There, too, is placed the bow of the deceased, which is afterwards cast upon the pyre. Upon the openings of the face are laid small pieces of gold, or at least melted butter is allowed to trickle down upon them. The sacrificial utensils of the dead, which he has had in his possession since the kindling of the fires, are distributed over his limbs, those of them that have a cavity being filled with butter—plainly for the purpose of feeding the fire; the two millstones (according to one version) are appropriated by the son, and so is everything made of copper, brass, or clay. In like manner the parts of the cow are distributed over the members of the deceased: the caul, for instance, being laid on his head and face, the kidneys (for Yama's dogs) being placed in his hands, along with a lump of curds (for Mitra-Varuṇa) if he has presented *sāmnāyā*-offerings. Before or during the process of cremation [here, as almost everywhere, different opinions prevail in the schools] the pyre is asperged after a fashion that may still be observed: the person performing this office walks round the pyre carrying

on his left shoulder a pitcher, in the back of which there has been made, by an axe or a stone, a hole through which the water runs out. After a triple circumambulation he casts the pitcher behind him.

Now begins the *cremation*, which is regarded as an offering into the fire, conducting the corpse to heaven as a sacrificial gift. In the *Dakṣiṇa*-fire are offered libations for Agni, Kāma, Loka, etc., and finally a libation on the breast of the deceased to Agni, 'who is now to be born of him as he once was of Agni.' If the man was an *Anāhitāgni*, the firebrand is taken from the domestic fire; if he was an *Āhitāgni*, the cremation is performed by the flames of the three or five fires kept up by him. Note is taken of which fire reaches him first, and it is augured therefrom whether the deceased has gone into the world of the gods or of the *manes*, or into some other world. To the north-east of the *āhavanīyā* a knee-deep trench is dug, in which a certain water-plant is placed—clearly an ancient superstition—in order to cool the heat of the fire. The traditional explanation of the custom is that 'the dead man rises from the trench and ascends along with the smoke to heaven.' Behind the pyre a goat is fastened, but in such a manner that it is possible for it to break away, and, if it does so, nothing is done to prevent it. The cremation is accompanied by a number of verses or songs selected according to the school to which the deceased belonged. While the pyre continues to blaze, the relatives move off without looking round. The officiant gives them seven pebbles, which on their way home they scatter with the left hand turned downwards. [According to the prescription of another school, three trenches are dug behind the pyre; they are then filled with water from an uneven number of pitchers, and gravel is thrown in. The relatives enter the trenches, touch the water, and then creep through branches set in the ground behind, and bound together by a rope made of *darbhā*-straw. The last to creep through tears the branches apart. Gautama directs a thorny branch, *Vaikhāṇasa* a grass snare, to be held in front of them, under which they must creep.] The company, as they leave the place of cremation, must restrain themselves from any exhibition of mourning, and go forward with heads bent down, entertaining one another with well-omened speeches and virtuous tales. Many tears, it is said, burn the dead (cf. *Raghuvamśa*, viii. 86). Yudhiṣṭhira is rebuked by Vyāsa for bewailing the death of his nephew. Story-tellers (*paūrāṇikas*, etc.) are therefore engaged in order to drive away by their skill the sorrows of the relatives (Lüders, *ZDMG* lviii. 706 ff.).

3. **Udakakarman.**—The offering of water to the deceased which follows is carried out in a variety of ways. According to one view, all the relatives—down to the seventh or tenth generation—must enter the water. They wear only a single garment, and the sacrificial cord hangs over the right shoulder; many also direct that the hair must be dishevelled and dust thrown upon the body. They turn their face towards the south, plunge under the water, call upon the dead by name, and offer him a handful of water. Then they emerge, bow the left knee, and wring their dripping garment.

An interesting usage prevails at the present day. Immediately after the bath a quantity of boiled rice and peas is set out for the crows (Caland, p. 78). This recalls the primitive notion that the dead appear as birds, and the comparison of the *Maruts* with birds, for the *Maruts* are an offshoot from the cult of the dead. Scarcely anything connected with the history of cults can be seen more interesting or more strongly reminiscent of the earlier times than an enormous Pipal tree—not the one sacred to the Buddhist community on the western side of the *stūpa*—growing to the north of the Buddhist sanctuary at Bodhi-Gaṇḍī, beneath which offerings to the *manes* are continuously presented, while blackbirds fly to and fro amongst its branches.

After the bath the relatives seat themselves

upon a clean grassy spot, where they are regaled with stories or Yama-songs. They do not return to the village till the first star shows itself, or the sun is partly set, or the herds come home. At the door of the house they chew leaves of the *pichumanda* (*Azadirachta indica*), rinse their mouth, touch water, fire, cow-dung, etc., or inhale the smoke of a certain species of wood, tread upon a stone, and then enter.

4. *Āśauca* (uncleanness).—The occurrence of death renders those associated with it unclean—a condition which lasts from 1 to 10 days, and is variously regulated according to circumstances and the usages of particular schools. 'After ten days' the mourning ceremonies for Indumatī are ended (*Raghuvamśa*, viii. 73). The prescriptions to be attended to during the *āśauca* are partly negative—in so far as they forbid certain things, such as the cutting of the hair and beard, study of the Vedas, *Grhya*-offerings; and partly positive—e.g. the enjoining of certain offerings. The first night a rice-ball is offered to the dead, before and after which water for washing is poured out for him, and he is called on by name. Milk and water are set out for him in the open air. Many set out perfumes and drinks for him, as well as a lamp to facilitate his progress through the terrible darkness that enshrouds the road to the city of Yama. Others cause a trench to be dug, into which perfumes and flowers are cast, while a pot suspended by a noose is hung over it. Even to-day the notion is to be met with that a thread serves the spirit of the deceased as a ladder to reach the drink suspended by it (Caland, p. 88).

5. *Samchayana*.—The collecting of the bones after cremation is usually carried out on an uneven day; according to some, during the dark half of the month, and under certain constellations. For the bones of a man a plain urn is employed; for those of a woman, a 'female' one, i.e. one adorned with breasts. The bones are picked up one by one, with the thumb and ring-finger, and are laid without noise in the urn. Among the *Taittiriya*s this duty is performed by women, regarding the selection of whom the prescriptions vary. According to the rules of *Baudhāyana* they must attach a fruit of the *brhati*-plant to their left hand with a dark-blue and a red thread, mount upon a stone, wipe their hands once with an *apāmārga*-plant, and with closed eyes collect the bones with the left hand. The urn, which is closed with a lid, is placed in a trench prepared in the same manner as the place of cremation, and having no flow to it except rain-water; or it may be laid under the root of a tree. Others place grass and a yellow cloth in a trench, and then throw in the bones. From the latest period we have an account of how one 'puts [the remains] into a little new barrel, and throws them into the water, if there be any at hand, or, if not, into some desert and lonely place.' The *Kapala-Banias* tie up the bones in a piece 'of silken cloth, and the bundle so made is suspended to the bough of a tree in the burning-ground' (*JASB* iii. 8, p. 489; Caland, 105²⁸⁴). Many schools enjoin a second cremation, in which the bones that have survived the first process are pulverized, mixed with butter, and then offered in the fire.

6. *Sāntikarma*.—This is another important department of the death-ritual. [In many ceremonies it comes at the point we have now reached, in many not till after the *śmaśānakaṛaṇa*. The reason for this appears to be that the *saṁchayana* and the *śmaśānakaṛaṇa* were originally parallel usages, which were only afterwards brought into connexion, and the *sāntikarma* continued in several schools to hold the place which belonged to it at first.] According to *Āśvalāyana*, the

ceremony is to be held on the day of new moon. The same authority directs that a fire, with ashes and fireplace, is to be carried southwards and set down at a cross-road or elsewhere; then the participants are to circumambulate it thrice, striking the left thigh with the left hand. [Others kindle an ordinary fire at a spot between the village and the *śmaśāna* ground.] Then they return without looking round, touch water, and furnish themselves with a number of new articles—jugs, jars, fire-sticks of *samī*-wood, etc. The fire is kindled afresh, and they sit till nightfall around it, entertaining one another with auspicious stories. When the stillness of night reigns, an uninterrupted stream of water is poured around the house from the south to the north side of the door, and then the participants take their places on an ox-skin that is spread for them. The formulae uttered during this and other parts of the ceremony have regard to life and the averting of death. A stone is laid down to the north of the fire, 'to keep off death.' The young women anoint their eyes with fresh butter. Many texts speak also of the leading around of an ox, of which the company take hold and walk behind it: the one who closes the procession has to obliterate the footmarks. A strange notion entertained by certain Indian tribes is cited by Caland (*l.c.*) from the *Bombay Gazetteer* (xiii. 1, *passim*), to the effect that, at an assembly held on the 12th day, the dead man takes possession of one of the company and intimates what his friends are to do for him, or takes leave of his relatives.

The fundamental aim of the *sāntikarma* is to take effective measures to ward off evil and to return to ordinary life. Hence even the fire that served the deceased is removed—not, however, by the door—and extinguished outside. Its ashes are placed on a mat or in an old basket, and carried to the south or the south-west, where they are set down on a saliferous, and therefore unfruitful, piece of ground (Caland, 114). The new fire is kindled by the eldest son, after (or, sometimes, before) the removal of the old. The *Rigveda* is acquainted with a similar ceremonial, but the details of the ritual are considerably different (Hillebrandt, *Ved. Myth.* ii. 108 ff.).

Many of the ceremonies prescribed by the ritual literature for the *sāntikarma* are connected by some authorities with the *śmaśāna*: e.g. the digging of seven trenches to represent the seven rivers is met with sometimes in the one ceremony, sometimes in the other; but for the general interest of the subject it is a matter of no great importance to what part of the death-ritual we assign particular actions.

7. *Pitṛmedha* or *śmaśāna*.—The questions for whom and at what time the *śmaśāna* is to be performed have given rise to ritual discussion, and have been variously answered by the different schools. The season of the year and the reigning constellations are also of significance; on the whole, a preference seems to have been given to the day of the new moon. On the preceding day certain plants are rooted up at the spot destined for the *śmaśāna*, to the north of which earth is dug up, and from this are made the 600-2400 bricks which serve for the structure, besides the number (not precisely defined) employed for packing. The urn with the ashes is brought and laid between three *palāśa*-stakes driven into the ground inside a hut which must be between the village and the *śmaśāna* spot. If the bones are not to be found in the trench mentioned above, dust is taken from this spot, or the dead man is called upon from the bank of a river, and then any small animal (this being taken to represent him) that happens to spring upon an outspread cloth is treated as if it were the bones. Upon the three stakes is placed a perforated vessel containing sour milk and whey, which trickles through the numerous holes upon the urn below. To trumpet blast and the sound

of the lute the company circumambulate the spot after the fashion already described (striking the left thigh with the hand, etc.), and fan the urn with the extremities of their garments. [Many ritual authorities speak also of song and dance and female dancers: some do not mention the hut; others have additions to, or modifications of, the above. The variations are great, indeed: e.g. some place an empty kettle in the hut, and beat it with an old shoe.]

The ceremonies take place during the first, middle, and last parts of the night. The company repairs quite early to the *śmaśāna* spot, regarding whose extent there are widely deviating prescriptions. It must be out of sight of the village, in a hidden situation, yet visited by the rays of the midday sun. The spot must be staked off and surrounded with a rope, and—as in the case of the *agnichayana*, with whose ritual the *śmaśāna* has many points of contact—its surface must be covered with small stones. Furrows must be opened with a plough drawn by six or more oxen, and various seeds cast into them. In the middle of the ground a hole is made, into which gravel, saliferous earth, etc., are cast. Milk from a cow whose calf died is poured into the half of a bowl and stirred up with groats into a kind of drink; and this, or something else, is set out as food for the dead. [Towards the south (according to some) two crooked trenches are to be opened, and filled with milk and water. It may be mentioned, as one of the numerous and frequently characteristic details, that in the *śmaśāna* a piece of reed is immured, apparently to serve the purpose of a boat to the deceased (cf. above, p. 475^b).] The bones are laid down upon a bed of *darbha*-grass, arranged in the figure of a man, covered with an old cloth, and asperged. The urn is destroyed. Over the remains is erected the monument, which conforms to a definitely prescribed plan, and in which the present writer sees the precursor of the *stūpa* of later days. When the structure has reached a certain height, food for the dead is walled in. After its completion, the *śmaśāna* is covered with earth, and water is poured over it from pitchers which it is the custom to destroy, or it is bestrewn with *avakā*-plants and *kusa*-grass. Much is done also to separate the world of the living from that of the dead; the boundary betwixt them is marked by lumps of earth, stones, and branches; and the same purpose is served by the uttering of certain formulae.

The soul of the deceased does not pass at once into the world of the *Pitara*s; it remains separate from them for a time as a *preta*, or 'spirit,' and has special offerings presented to it. But, after the lapse of a certain period, or when some fortunate circumstance occurs, the dead man reaches the circle of the *manes* through the instrumentality of the *sapindikarana*. The grandfather now drops out, since, as a rule, only three rice-balls are presented; but, as one of the *manes*, he receives his place in the ancestor-cult. This cult has struck its roots deep in Indian life. To feed the ancestors, to propitiate or keep them away, and to summon their aid, are the purposes served by the *śrāddhas* described in ritual- and law-books. The *śrāddhas* are offered either on special occasions, when fortunate occurrences take place, or regularly at certain periods of time. To the first category belong the birth of a son, the *nīmakarana*, and other festivals, when the *manes* are spoken of as 'cheerful,' and are honoured in the same way as the gods: to the second belong the daily worship of the *manes*, that on the day of the new moon, the monthly worship, the great offering to the *manes* at the four months' sacrifices, at the soma-sacrifices, and the *āṣṭakā* cele-

bration with the *anvaṣṭakya*, which coincide with the close of the year (see, for details, the present writer's sketch in *GIAP* iii. 2).

A. HILLEBRANDT.

DEATH AND DISPOSAL OF THE DEAD (Indian, non-Aryan).—I. Conception of death: not due to natural causes.—The conception of death among the non-Aryan tribes of India does not materially differ from that entertained by other savage and semi-savage races. Death is not regarded as the result of natural causes, but is supposed to be due to the interference of devils, demons, or other evil spirits. This is particularly the case with diseases like dementia, the delirium of fever, and the like, which seem to indicate action by some indwelling spirit. This belief is naturally extended to accidents caused by wild animals, and deaths due to epidemic diseases, each of which is attributed to the working of a special disease-spirit. Hence many of these tribes use special means to identify the spirit, and the methods usually partake of the nature of Shamanism. The soul, again, is regarded as a little man or animal occupying the individual, which causes him to move. It leaves the body through the skull-sutures or other pure orifices of the body, in the case of persons who have lived virtuous lives; in the case of the wicked, by one or other of the impure exits. The soul may at times live apart from the body—a theory which explains to those who hold it the nature of dreams and the danger of waking a sleeper. There may be more souls than one, and these may have separate abodes—a belief accounting for the performance among some tribes of funeral rites at the place of death, at the grave, or at some other spot, where offerings are made to appease the spirit, and explaining much of the vagueness which characterizes their funeral ceremonies. The soul, again, is believed to be mortal; and with their lack of interest in their national history, and their imperfect recollection of past events, these people, after a time, regard their deceased ancestors as no longer objects of reverence or fear, and the attention of the survivors is concentrated on the more recently dead. The soul, when it leaves the body, is figured as a

naked, feeble mannikin, exposed to all kinds of injury until, by the pious care of its friends, a new body is provided for it. This often takes the form of a temporary refuge—a hut, a stone, a tree, or a piece of sacred grass. Or the soul may abide in an animal or insect; and this temporary refuge, or, among tribes who accept the theory of metempsychosis, this form of re-birth, may be identified by laying out ashes or flour at the scene of death. These, when carefully examined, often show the footmarks of the creature by which the soul has been occupied. Among the jungle tribes the soul is commonly supposed to abide in a tree—a belief which may in some instances have been suggested by the habit of tree-burial (see § 4 (h)). In W. India a common refuge of the soul is the *jivkhāda*, or 'life-stone,' which is selected at the time of the funeral rites, and to which offerings and libations are made. This naturally leads to a further development, when a rude image of the deceased is made, placed among the household gods, and honoured with gifts of food and drink. In some cases, as among the Kachins of Upper Burma, an attempt is made to enclose the soul within a barrier of bamboos, from which it is solemnly released at the termination of the funeral rites (*Gazetteer Upper Burma*, i. i. 409). Sometimes, again, during this intermediate period, the soul is believed to haunt the scene of death, and at a later period it abides in the grave or at the cremation-ground. When beliefs such as these are current among the people, it is obviously of supreme importance that the funeral rites should be duly performed. No infective tabu is more dangerous than that which proceeds from a corpse unpurified by the customary rites; and perhaps no people in the world devote more anxious care than the Hindus to placating the friendly, and repressing or scaring away the malignant, spirits of the dead.

2. **Spirits friendly and malignant.**—The line between these two classes of spirits is clearly drawn, and it is based on the close family- and clan-organization of the non-Aryan tribes. The souls of the family dead, unless they are irritated by neglect, are generally benevolent; the souls of strangers are, as a rule, malevolent and hostile. In the case of the former no means of placation are neglected. Some tribes, after the soul has left the body, endeavour to recall it, and invite it to abide with them as a house-guardian; others make a miniature bridge to enable it, as it returns, to cross a stream, and thus evade the water-spirit (cf. art. BRIDGE, ii. 2, e); others, again, make a pretence of capturing the soul and bringing it back to its home. The provision of fire and light for the soul, either in the house itself or at the grave, is more general. Sometimes rites are performed to guide the soul to its longed-for place of rest; or it is solemnly invited to leave the grave and ascend to the other world, where it is welcomed by the friends who have gone before—a conception of the realm of the sainted dead which may have been independently arrived at by the non-Aryan tribes, though the details may be due to Hindu influence. To secure the peaceful departure of the soul, it is essential that the due egress should be provided for it by removing the dying person into the open air or into an upper chamber—a precaution which possesses the additional advantage of relieving the house from the death-tabu. With the same object, the skull is often broken at the time of cremation. When death occurs, the soul is placated by the wailing of its relatives; or, as among the Kāndhs, it is exhorted to keep quiet, to employ its time in working in the other world, and not to transform itself into a tiger and plague its friends (Risley, *TC* i. 408). More remarkable is the procedure of the Nāgas of Assam,

who curse the evil spirit which has removed their friend, and threaten to attack it with their spears (*JAI* xxvi. 195, xxvii. 34; Dalton, 40). This custom apparently does not prevail among the Manipur branch of the tribe (T. C. Hodson, *The Nāga Tribes of Manipur*, 1911, p. 146 ff.).

After death, the wants of the dead are provided for by gifts of food and drink (see art. FOOD FOR THE DEAD). Among some tribes the feeling prevails that the goods of the dead man should be appropriated to his use, and not taken by his friends, lest the envious spirit may return and claim them (Dalton, 21, 205; cf. Crawley, *Mystic Rose*, Lond. 1902, p. 98). In some cases a viaticum, in the shape of a coin or some article of value, is placed with the corpse to support it on its way to the other world, as among the Pahāria (Hosten, 'Paharia Burial-Customs,' *Anthropos*, iv. 670, 672). But people in this grade of culture, while strictly governed by a regard for precedents, contrive to evade the duty by placing worthless representations of the dead man's effects in the grave, or by merely waving them over his pyre (Rivers, *The Todas*, 362 f.). The arms and implements which are often buried with the corpse, or placed upon the grave, are obviously intended for the protection or use of the dead; and these are sometimes intentionally broken, either in the belief that, if left uninjured, they are useless to the dead, or to render them unavailable, and thus prevent the rifling of the tomb. Special clothing is also sometimes provided for the soul, and, as the garments of the dead man are supposed to be infected by the death-tabu, they are generally presented to some menial priest, whose sanctity guards him from danger in using them. Ornaments are sometimes placed in the grave: a set of diadems, for instance, like those of Mycenæ, having been found in a S. Indian interment at Tinnevely, where they were probably deposited as amulets to protect the soul from evil spirits (Thurston, *Notes*, 149 f.). Some deposit with the dead a prayer written by the tribal priest; others, like the Gāros of Assam, slay a dog at the grave to guide the soul to Chik-mang, the tribal paradise; or, as among the Gonds, clay images of horses, on which the soul may ride to heaven, are placed on the tomb (A. Playfair, *The Gāros*, 1909, p. 109; Oppert, 84 f.). Closely connected with this is the custom of slaying human victims at the funeral, in order that they may accompany and serve the soul. Some of the wilder Assam and Burma tribes, down to quite recent times, killed slaves with this object (*Gazetteer Upper Burma*, i. i. 553; F. Mason, *Burmah*, 1860, p. 92 f.). Blood being the favourite form of refreshment for the dead, it is provided by animal sacrifices. The victim is often slain at the grave, and its blood is poured upon it. The Andamanese mother places a shell full of her milk on the grave of her child, and the Dosādh of the United Provinces pours blood into a pit, so that it may reach the soul (*JAI* xii. 142; Crooke, *TC* ii. 354). With the same intention water is poured on the grave, or dropped into the mouth of the dead or dying man. Many articles of food placed with the dead serve the additional purpose of scaring evil spirits. Rites such as these, performed at the grave, naturally develop into a periodical feast held in the house or in some holy place; food, again, is offered to a rude image representing the dead. The final stage is reached when it comes to be believed that, by feeding the tribal priest or a Brāhman, the food passes on for the use of the soul.

3. **Rites performed to repel evil spirits.**—The rites performed in the case of the malignant dead assume another form. Such spirits are the souls of those who have been removed from this world by an untimely or tragical death—those of the

murdered, the unmarried, the childless women, robbers, men of evil life, and strangers. These are included under the general title of *bhūt* (Skr. *bhūta*, 'formed,' 'produced')—a term which does not necessarily connote malignancy, but is now generally accepted in this sense. They all cherish feelings of envy and malignancy towards the living, and it is necessary to placate or, more generally, to repress and coerce them. The souls of the unmarried dead are often propitiated by a mock posthumous marriage, in which a boy or girl represents the dead youth or maiden. For the unburied dead a mock funeral is performed over such relics of the dead as may have been recovered, or over an image representing the deceased. The soul of a dead bandit, as among some of the robber tribes of N. India, is sometimes deified and worshipped. The most common example of the discontented spirit is the *chūrel* of N. India, or, as she is called in the S., the *alvanti*, the spirit of a childless woman, or of one who has died within the period of sexual impurity. Like demons in other countries, she has her feet turned backwards, and is much dreaded. She is repelled by scattering grain on the road from her grave. When she rises, she halts to collect this, until the morning call of the cock forces her to return—a practice extended even to the benignant dead by the Pahāriās of British Sikkim, who drive a nail through each finger and toe of a prospective *chūrel*, to prevent her from harassing the living (Hosten, 673, 679). The ghost of a mutilated person is also an object of fear; but, except among the Chakmas of the E. frontier (Lewin, *Hill Tracts*, 74), there seems to be no Indian example of the custom of mutilating the corpses of enemies to prevent them from 'walking' (though Hosten, 679, records, without having been able to obtain any explanation for it, the custom of the Yakhās of British Sikkim, who, 'when a man has died, split open his hands from the middle knuckles to the wrist'). Spirits of this description of the malignant dead are repelled in various ways. Some tribes have an annual ghost-hunt, by which the evil spirits are scared from the house and village. Guns are fired, gongs and drums are beaten, and rockets are exploded. Dances and other revels, in which the rules of morality are disregarded—indecentry being a mode of scaring evil spirits—are performed. Sometimes the rite takes the form of a mock combat—one band of performers representing the evil, and another the friendly, spirits; and it is always arranged that the latter shall be victorious (Lewin, *Wild Races*, 185). Some tribes measure the corpse, or watch it until it is buried, lest it may be occupied by an evil spirit.

The devices intended to prevent the return of malignant spirits are manifold. In some cases a cairn is raised over the grave (§ 4 (d)), or, as an additional precaution, the excavation is filled up with stones or thorns; or, as among many of the wilder tribes, the body is buried face downwards—a practice adopted by the Thugs. In Upper India the ghosts of menial tribes, such as sweepers, are so much dreaded that riots have followed an attempt to bury their dead in the usual way with the face turned to the sky. Sometimes the grave is enclosed by a fence too high for the ghost to 'take it,' particularly without a 'run.' Such an enclosure has the additional advantage of marking the place as tabu, and was the origin of the stone circles, erected round cairns, which subsequently developed into the artistic railings of Buddhist *stūpas*. Another common method is to deceive the spirit by carrying out the corpse feet foremost or by a special door, so that it may be unable to find its way back, by removing the house-ladder, or by forcing the bearers to carry their burden at

a trot and to change places on the road. Special precautions are taken not to name the dead, at least for some time after death, lest the soul may consider it an invitation to return.

4. Methods of disposal of the dead.—(a) *Cannibalism*.—Of that most archaic method of disposal of the dead, the funeral feast, 'when the meat is nothing less than the corpse of the departed kinsman' (Hartland, *LP* ii. 278), India has so far supplied no clear examples. There are, however, cases of eating the aged with a view to reproducing the virtues or powers of the departed, as among the Lushais of Assam, and the Chingpaws and Was of Upper Burma (Lewin, *Hill Tracts*, 107; *Gazetteer Upper Burma*, i. i. 436, 496). But this custom is confined to the most isolated and savage tribes, and the similar tradition recorded by Dalton (220 f.) of the Birhors of Chotā Nāgpur is probably quite baseless—possibly an echo of a story told of tribes much further east.

(b) *Dolmens and other stone monuments*.—The earliest form of corpse-disposal of which physical evidence exists is that in dolmens, kistvaens, and other forms of stone monuments, of which India furnishes numerous examples. Though sporadic remains of such structures have been found in many parts of N. India, the assertion of Fergusson (*Rude Stone Monuments*, 475 f.) may be accepted as generally correct, that they are peculiar to the country south of the Vindhyan Hills, and are numerous in the country drained by the Godāvari and its affluents, and in particular in the valley of the Kistna and its tributaries, on both sides of the Ghāts, through Coimbatore down to Cape Comorin, and especially in the neighbourhood of Conjeeveram. The most complete account of these stone monuments is that of Breeks, who describes them under three heads—cairns, or rather mounds enclosed by a stone circle; barrows; and kistvaens. In the cairns have been discovered earthen jars containing fragments of burnt bones, and some beautiful bronze vessels, probably imported from Babylonia or some other foreign country. Questions connected with the origin, purpose, and date of this series of monuments have given rise to much controversy. The fact that stone circles, of a form analogous to that of the ancient monuments, are used by the modern Todas has led to the inference that the members of this tribe are the successors of, or closely allied to, the old circle-builders. The character of the remains discovered does not, as a rule, suggest a date earlier than the Iron Age, which, if the analogy of Europe be accepted (though there are no materials for such a comparison), need not imply a date earlier than 850–600 B.C. But V. A. Smith (*IGI*, new ed., 1908, ii. 98) supposes that the Iron Age in N. India may go back to 1500 or even 2000 B.C. The difficulty of fixing an approximate date for these structures largely depends upon the fact that modern tribes, like the Kols and their kinsfolk in Chotā Nāgpur, as well as the Nāgas and Khāsīs of Assam, still erect stone monuments of a type closely resembling the pre-historic examples. The modern funeral monuments of the Khāsīs have been fully described by Gurdon (*The Khāsīs*, 144 ff.), who divides them into three classes—those intended as seats for the souls of the dead while their bones are being conveyed to the tribal ossuary; memorial stones erected in honour of deceased ancestors; and stones which mark tanks used for purifying the mourners from the death tabu. Many monuments in Madras and among the tribes of the E. frontier take the form of ossuaries, into which the bones are removed after disinterment.

(c) *Exposure to beasts and birds of prey*.—Among other modes of disposal of the dead the most crude is that of exposure of the remains to beasts and

birds of prey. This custom still prevails among the Tibetans and certain tribes of the N. frontier, where it probably originated from the difficulty of providing wood for cremation, or excavating graves during the severe winter of these regions. At a later period it was re-introduced from Persia by the Parsis. Among the non-Aryan tribes of the Peninsula this method is occasionally employed for those dying in a state of tabu, as is the case with the Pahāriās of Bengal, the Nāgas of Assam, and some menial tribes in the northern plains (Dalton, 274; *JAI* xi. 203; Rice, *Essays*, 60; Crooke, *TC* ii. 92, i. 7, iii. 144).

(d) *Cairn-burial*.—The idea of protecting the corpse from violation, and the desire to prevent the ghost from 'walking,' account for cairn-interment, which was used by the early tribes of S. India, and is found at the present time among the Bhils of Bombay (*BG* xii. 87), the Kachins of Upper Burma (*Gazetteer Upper Burma*, i. i. 393, 409), and some of the Assam tribes (Dalton, 9; Risley, *TC* ii. 112). From such cairns the *stūpas* of the Buddhists have been developed.

(e) *Cave-burial*.—Cave-burial, common in other regions of E. and S. Asia, does not seem to have prevailed widely in India. But it must be remembered that many caves have been occupied continuously even to the present day, and thus the evidence may have become obliterated, and numbers of them may still remain unexplored. In Malabar, however, sepulchral chambers excavated in the laterite and containing clay vessels and iron implements have been discovered; and in the same class are the *pāṇḍū-kulī*, the name of which is based on the absurd belief that they were the abodes of the Pāṇḍava heroes of the *Mahābhārata* (*JAI* xxv. 371 f.; Thurston, *Notes*, 148). See also the account of cave-burials in 'anterior India,' a region not capable of identification, by Nicolo Conti (*India in the xvth Cent.*, ed. R. H. Major, Hakluyt Soc., 1857).

(f) *House-burial*.—Cave-burial naturally leads to house-burial, and the examples of this practice are abundant. More than one reason probably led to the adoption of the custom—the desire to retain the corpse in the house in the hope of its revival; the dread lest the relics might be used for purposes of black magic; or the hope that the soul of the ancestor thus buried might be re-incarnated in the person of some female member of the family. This last belief seems to be most general, and the custom, sometimes with this explanation, has been recorded among the Andamanese (*JAI* xii. 141, 144; Temple, *Census Report*, 1901, p. 65), the Nāgas of Assam (*JAI* xxvi. 200), the Was and allied Burman tribes (Scott, *Burma*, 408), and some Madras and Panjāb tribes (Thurston, *Notes*, 155; *PNQ* i. 123).

(g) *Disposal in water*.—The custom of consigning the dead to water is more common. Among orthodox Hindus, the bones and ashes after cremation are deposited in a river or tank at some sacred place. Among the lower tribes, in most parts of the country, the corpse is often flung into the nearest river, sometimes after a perfunctory attempt at cremation by singeing the face and beard. It has been suggested that this method of disposal is in some cases based upon the desire to free the bones rapidly from the products of decomposition, and thus to placate the spirit; but more usually the intention is simply to get rid as quickly as possible of the corpse and the tabu which emanates from it. Hence it is frequently adopted in the case of those dying in a state of special tabu, as, for instance, those perishing from epidemic disease; and the bodies of *sannyāsīs* and other holy men are frequently consigned to running water. Sometimes, again, the rite is in the nature

of sympathetic magic, as when in Bengal those dying of leprosy, on the principle of water to water, are flung into the Ganges (*Asiat. Res.* iv. 69; Buchanan, *E. India*, i. 114).

(h) *Tree-burial*.—The practice of tree-burial in India seems to depend partly on the desire to placate the spirit by saving the remains from the attacks of wild animals, and partly on the fact that the tree is the haunt of spirits. It is found among the Andamanese, Nāgas, and Māriyā Gonds (*JAI* xii. 144 f., xi. 205, xxvi. 199; Dalton, 43; *Census Report Assam*, 1891, i. 246; Hislop, *App.* xiii.). Among the Khāsīs of Assam the corpse is placed in a hollow tree, and the next development is the use of a tree-trunk as a coffin, as among the Nāgas and Karenis of Burma (Dalton, 56; *Gazetteer Upper Burma*, i. i. 528; *JAI* xxvi. 199).

(i) *Platform-burial*.—This rite further develops into the custom of platform-burial, which prevails among the Andamanese and some tribes on the E. frontier (*JAI* xii. 144; *Census Report Andamans*, 1901, 65; Lewin, *Hill Tracts*, 109). Among the E. tribes the custom of smoking the corpse is frequently combined with this.

(j) *Jar-burial*.—Jar-burial, in the sense that the corpse is deposited in an earthenware vessel, does not appear to prevail at present among the non-Aryan tribes; but instances of corpses placed in large mortuary jars have been discovered in prehistoric S. Indian interments (*JAI* xxv. 374); and some of these terra-cotta coffins closely resemble those found in Babylonia. At present, among most tribes which practise cremation, the ashes and bones are deposited in an earthen jar before burial or consignment to water.

(k) *Contracted burials*.—Besides the ordinary mode of burial in a recumbent posture, there are other methods which deserve special mention. First comes what is known as contracted burial, when the corpse is interred with the knees closely pressed against the breast. The tribal distribution of this practice does not throw much light upon its origin or significance. It is found among some of the more savage tribes, such as the Andamanese and the Pen tribe in Car Nicobar (*JAI* xii. 141, 144; *PNQ* iv. 66); and among the Lushais and Kūkis of the E. frontier (Lewin, *Hill Tracts*, 109, *Wild Races*, 246). Among such people it has been suggested that it represents an attempt to prevent the ghost from 'walking'; and in some cases, among various races, the thumbs and toes of the dead are bound, apparently with this intention. Another theory is that it symbolizes the prenatal position of the child in its mother's womb. In some instances it may be due to the practical difficulty of digging a grave of the shape and size in which the body may rest in a recumbent posture; in others it may represent the position of a savage sleeping beside a camp fire. It has been adopted by some of the religious orders, like the *sannyāsīs* of N. India and the Shenvi Brāhmins and Līṅgāyats of the south. Here it probably represents the posture of the *guru* engaged in meditation, or lecturing to his pupils, because some of these sects place the bodies of their *gurus* in this posture after death, and worship them (*BG* xv. i. 149).

(l) *Shelf- or niche-burial*.—Shelf- or niche-burial, in which the corpse is deposited in a chamber or cavity excavated in the side of the perpendicular entrance to the grave, seems to be based on the intention of preventing the incumbent earth from resting upon the corpse and thus incommode the spirit—a feeling which prevails among some wild tribes, like the Miris of Assam (Dalton, 34). It is found among some of the E. and S. tribes, like the Kaupūis of Manipur and the Paniyans of Malabar (*JAI* xvi. 355 f.; Thurston, *Notes*, 144); it has been adopted by some religious or semi-religious orders.

like the Jugs of Bengal, and the Rāvals or Lingāyats (Risley, *TC* i. 359; Crooke, *TC* iii. 19; *BG* xviii. i. 361); and it is the orthodox method among Muhammadans, who place the corpse in a niche (*lahad*) high enough to allow the spirit to rise when the dread angels, Munkar and Nakir, come to interrogate it regarding its belief in the Prophet and his religion.

(m) *Concealed burial*.—Concealed burial and the obliteration of all marks of the grave appear generally to be due to a desire to get rid of the spirit. It is found among the wilder tribes in Madras and Burma (Oppert, 199; Scott, *Burma*, 408).

5. *Disinterment of the remains*.—The practice of disinterment of the remains after decomposition has ceased probably rests upon the belief that the soul is immanent in the bones. The Andamanese and the Nicobarese disinter their dead, wash the bones, and, after wrapping them in cloth or leaves, re-bury them, or fling them into the jungle, or sink them in the sea (*JAI* xxxii. 209, 219 f., xii. 143, iv. 465, xi. 295 f.). Among the Khāsīs of Assam those who die from infectious disease are buried, the remains being dug up and cremated when danger from infection is over (Gurdon, 137). This custom leads, among some tribes, to the provision of ossuaries in which the dry bones are stored. Such structures are found in E. and S. India (*JAI* v. 40, vii. 21 ff.). The same belief in the continued, though mysterious, oneness of the body with its severed parts leads to the formation of tribal cemeteries, to which, often from long distances, as among the Chinbons of Upper Burma and some tribes in the central hills, the bones of tribesmen are removed (*Gazetteer Upper Burma*, i. i. 467; Dalton, 34, 262).

6. *Immediate and deferred burial*.—In most cases climatic conditions necessitate the immediate disposal of the remains by cremation or burial. The custom of deferred burial, in which the remains are retained in the house to enable friends from a distance to pay their last tribute of respect to the dead, is less common, and is found chiefly among the E. tribes like the Khāsīs, Nāgas, or Lushais (Gurdon, 138; *JAI* xxvi. 195; Lewin, *Hill Tracts*, 109).

7. *Embalming the dead*.—Customs of this kind naturally develop into the practice of embalming the dead, which is not common in India. In the form of preservation of the remains in honey or by smoking them over a slow fire, it is found only among some of the E. and Burmese tribes (Hooker, *Himalayan Journals*, ed. London, 1891, 486 f.; Shway Yoe [Scott], *The Burman*, ii. 330 f.).

8. *Inhumation and cremation*.—The methods of disposal of the dead which have been considered hitherto are all more or less abnormal. The modes now generally adopted are either simple burial in a recumbent position or cremation. We may, perhaps, in consideration of the Indian evidence, assume that the most primitive form was exposure of the corpse, followed by inhumation, and then by cremation. It has often been asserted that cremation was specially an Aryan practice; but the evidence from S. India monuments indicates that possibly it was only in the case of persons of rank that cremation prevailed (cf. art. *ARYAN RELIGION* in vol. ii. p. 16). At the same time, the facts at our disposal do not enable us definitely to decide why cremation displaced inhumation. Among the Aryans, as Ridgeway argues (*Early Age of Greece*, Cambridge, 1901, i. ch. vii.), the idea that fire was the only medium by which sacrifice could reach the gods may have led to the introduction of the process of cremation after the belief in an abode in the sky where the soul joined the *pitri*, or sainted dead, had become finally established; and, if it arose, as he argues

(*ib.* i. 539 f.), in a forest country, where the hut was consumed with the corpse to avoid tabu, there seems no reason why it may not have been independently discovered by the non-Aryan tribes.

At present it is only the most primitive non-Aryan tribes and some ascetic orders who still maintain the practice of earth-burial. On the other hand, many tribes in a low state of culture who now cremate their dead may have adopted the practice under Hindu influence. No literary evidence exists by which the historical development of these customs can be traced. The transition, however, between the two forms of disposal is in many instances clearly indicated. For example, among some tribes the ordinary dead are buried, while those under tabu are cremated; or the rich are cremated, while the poor are buried; or the question which mode is to be adopted depends upon the season of the year in which the death occurs. Among some tribes we find more than one method in use. One clan of the Nāgas combines platform-burial with cremation, placing the dead in open coffins raised several feet above ground, whence the remains are subsequently removed and burned close by (*JAI* xi. 213). The Kāmīs of Bengal burn, bury, or fling the corpse into water, as may be convenient at the time (Risley, i. 395). The Hābūras of the United Provinces either cremate or expose their dead in the jungle, as best suits their nomadic habits (Crooke, *TC* ii. 476). The widest variety of practice appears among the Nāgas, who bury, expose on a platform or in a tree, and sometimes cremate the corpse after placing it on a platform (*JAI* xi. 203, 213; Hodson, 146 ff.). After cremation the bones and ashes are usually deposited in a river or tank, the vessel while in process of removal to the sacred place being hung in a tree so that the spirit, when so disposed, may revisit the bones.

9. *The death-tabu*.—As among all races in the same grade of culture, the infective tabu arising from the corpse is specially dreaded. All who come in contact with the dead are considered to be infected. The corpse-bearers, for instance, as among the tribes of the central hill tract, have their shoulders rubbed with oil, milk, and cowdung by the women of the mourning family, while they are sprinkled with cow's urine from twigs of the sacred Nim tree (*Melia azadirachta*). The dread of the death-tabu appears throughout the rites of mourning. Thus, among some tribes a special dress is provided for the chief mourners, the intention possibly being in some cases to disguise the mourner from the ghost. With the same object the Andamanese smear their heads with clay (Temple, *Census Report*, 1901, p. 65). As the tabu infects the house, no cooking can be done there, and the mourners either fast or receive supplies of food from relatives or friends. Persons, again, when exposed to the death-tabu, are not allowed to leave the house or village, lest they may infect the neighbourhood. This form of tabu is specially observed by the E. tribes, like the Nāgas of Assam and the hill races of Arakan (*JAI* xi. 71, xxvi. 191, ii. 240; Hodson, 173 f.). Tabu is also marked by the rule that mourners sleep on the ground: partly because, if beds are used during this period, they too become infected; partly because spirits cannot touch Mother Earth. The continence enforced upon mourners is probably, as in the case of the sacred dairyman of the Todas (Rivers, 100 f.), a precaution against the dissipation of physical energy, all of which is needed during this critical period. By an extension of the principles of tabu, if the death-rites have been, by a misconception, performed for a person who subsequently returns, he is tabu, because the powers of the other world seem to have

rejected him as unworthy. The period of tabu varies among the different tribes, and seems usually to depend on the time during which, before the completion of the funeral rites, the spirit is supposed to haunt the neighbourhood of the place of death or the grave.

10. Purification from the death-tabu.—Purification from tabu is effected in various ways. One method is that adopted by the Andamanese and Gonds, who quit the house of death or burn it, along with some or all of the effects of the dead man (*JAI* xii. 142; Hislop, 19). But generally there is a special rite of purification. This usually consists in ablution, by which the clinging spirit or tabu is washed from the body of the mourner. Sometimes special substances, usually the products of the sacred cow, are used for this purpose. With the same object many touch fire on their return from the funeral, or pass their feet, which naturally are supposed to be specially liable to infection, through the smoke of burning oil. In other cases the tabu is removed by transferring it, and, by a later conception, the sins of the dead man, to a scape-animal. In its clearest form the rite appears among the Badagas of Madras (Gover, *Folk-Songs of S. India*, London, 1872, p. 71; Thurston, *Notes*, 195 f.). Traces are also found of the remarkable custom of 'sin-eating,' by which the sins of the dead are transferred to a Brāhman who eats food in the house of death, or even, as used to be the habit at Tanjore, eats the bones of the dead Raja ground up and mixed with rice (Dubois, *Manners and Customs*², 1906, p. 366).

Lastly, the custom of shaving the mourner may be mentioned. The idea seems to be to get rid of the death-infection clinging to the hair, which, possibly with the same intention, is often let loose in mourning, as is the case with other persons under tabu, like the ascetic classes (*Madras Museum Bulletin*, iii. 251 f.). The hair is sometimes dedicated to the dead, as in the Deccan and along the lower Himalaya (*BG* xviii. i. 364, 149; *NINQ* iii. 117), the intention being to strengthen the feeble spirit of the deceased by dedicating that portion of the human organism which, by its growth, furnishes the strongest proof of vitality (Frazer, *GB*, pt. i. [1911], 'The Magic Art and the Evolution of Kings', i. 31, 102). More usually the hair is shaven after the mourning period begins, or at its close. The shaving is usually confined to the immediate relatives or kinsmen; but in some cases the whole population shave their heads and beards on the death of a Raja, e.g. in Kashmir and other parts of the Himalaya (*NINQ* iv. 18, 98; Drew, *Jummoo*, 54).

LITERATURE.—For pre-historic interments, see J. Fergusson, *Rude Stone Monuments*, 1872; R. B. Foote, *Catal. of the Prehist. Antiq. Madras Museum*, 1901; J. Brecks, *Account of the Prim. Tribes and Monum. of the Nilagiris*, 1873. For Buddhist and early Hindu remains: A. Cunningham, *Archæol. Surv. DEATH AND DISPOSAL OF THE DEAD (Jain).—The Jains agree, on the whole, with the Brāhmins in their notions on death. The soul of every living being—the highest gods included—must be re-born as long as it possesses *karma*, i.e. merit or demerit; but, when the *karma* has been annihilated, then the soul, on death, will enter on its innate state of purity, and will be released for ever from the cycle of births. But on some points the Jains have developed peculiar notions.

1. Re-incarnation and liberation of the soul.—According to the Jains, *karma*, the effect produced on the soul by its deeds during life, consists of extremely subtle matter, which pours or infiltrates into the soul when worldly actions make, as it were, an opening into it (*āsrava*). This *karma*-matter, as we may call it, fills the soul as sand fills a bag, and acts on it like a weight. The soul by itself has an upward gravity (*ūrdhvagurutva*), and is kept down, during its worldly state, by the *karma*-matter, which, like all matter, has a downward gravity (*adhogurutva*). Therefore, if cleansed of all *karma*, the soul, on leaving the body, will rise in a straight line to the top of the universe, where the liberated souls reside for ever (see above, p. 160³, 'Jain cosmography')—just as a pump-kin coated with clay sinks to the bottom of a tank, but rises to the surface of the water when the clay has fallen off. But, if the soul is burdened with *karma*, it will, on leaving the body, move in any direction—upwards, sideways, or downwards. It does not travel in a straight line, but in a broken line, with one, two, or three angles or turns, and thus gets, in two, three, or four movements, to the place where it is to be re-incarnated. There it attracts gross matter, in order to build up a new body according to its *karma*.¹

2. Voluntary death or euthanasia.—It is a well-known fact that religious suicide is occasionally committed by the Hindus: under a vow to some deity they starve themselves to death, eat poison, drown themselves, enter fire, throw themselves down a precipice, etc. The Jains condemn such practices as an 'unwise death' (*bālamaraṇa*), and recommend, instead, a 'wise death' (*pañḍita-maraṇa*), as provided in their sacred books.

Two cases must be distinguished: religious suicide may be resorted to in case of an emergency, or it forms the end of a regular religious career; both cases apply to laymen as well as to monks.

(1) If a Jain contracts a mortal disease, or is otherwise in danger of certain death, he may have recourse to self-starvation. This practice is frequently mentioned in Jain narratives, and prevails, no doubt, even at the present day. If a monk is unable to follow the rules of his order, or cannot any longer sustain the prescribed austerities, he should rather commit suicide than break the rules. A particular case seems to be the following. When a monk falls sick, and foresees that he will not be able to go through the 'ultimate self-mortification' to be noticed hereafter, he may keep a long fast. If he gets well in the meantime, he is to return to his former life. But, if he should not recover, but die, it is all for the best. This conditional self-starvation is called *itvara*.²

(2) A pious layman may go through a regular course of religious life, the phases of which are the eleven 'standards' (*pratimā*); the first is to be observed for one month, the second for two months,

¹ Umāsvāti's *Tattvārthadhigama Sūtra*, II. 26-36 (tr. *ZDMG* ix. [1908] 304 ff.)

² *SBE* xxii. 72, note 3.

and so on.¹ In the last standard, which he must observe for eleven months, he becomes practically a monk. At the end of this period he abstains from all food and devotes himself to 'self-mortification' by the last emaciation,² patiently awaiting his death, which will occur within a month.

In the case of a monk, the 'self-mortification' lasts twelve years, instead of twelve months. If a monk believes himself purified to such a degree that he may enter upon this last mortification of the flesh, then he should apply to his *guru*, or spiritual master, who will test him in various ways before he gives him his permission. Then, for a period of twelve years, the monk has to exert himself by every means to overcome all passions, worldly feelings, desires, etc., and to annihilate his *karma* by austerities—trying, however, to ward off a premature death. At the end of this period he should abstain from all food till his soul parts from the body. There are three different methods by which this end is brought about; they are called *bhaktapratyākhyānamarāṇa*, *īṅgītamārāṇa*, and *pādapopagamāṇa*³—of which the last two are distinguished by the restriction of the movement of the person, and the motion of his limbs.

The rules for religious suicide form the subject of three canonical books—*Chausarāṇa*, *Aurapachchakkhāṇa*, and *Bhāttaparīṇa*.

LITERATURE.—This has been sufficiently indicated in the article.

H. JACOBI.

DEATH AND DISPOSAL OF THE DEAD (Japanese).—I. *GENERAL*.⁴—The oldest traditions respecting burial speak of a *moya* ('hut'), in which the body of the deceased was kept, often for a very long time (e.g. that of Jimmu Tennō is said to have been kept for 19 months in the *moya*); of religious dances and music; of an eulogy or elegy (*shinubi-kotoba*) pronounced by the head of the family; and of a funeral feast or wake. They also tell of the practice of the self-immolation of wives, retainers, and servants at the grave of a husband or master. The advent of Buddhism in the 6th cent. A.D. brought in certain limitations and modifications. Cremation was introduced in A.D. 703; from that date to 1644 all the Emperors were cremated. Funeral regulations concerning, e.g., periods of mourning, etc., have existed since the 10th cent.; the self-immolation of retainers began to lose favour in the 14th cent., and was prohibited by Iyeyasu, though it still continued sporadically for some time. During the whole of the Tokugawa period only members of the Imperial House were buried with Shinto rites, and even the present forms of Shinto funerals date from the same period.

We will suppose the patient to have been given up by his medical attendant. Relatives and friends stand around his bed, watching his last struggles. Some of them moisten his lips with drops of water conveyed on a feather (*matsugo no mizu*, 'water of the last moment'), others gently rub his eyelids and lips with their hands, so that mouth and eyes may keep shut the more readily after death has taken place. In the province of Iyo, in Shikoku (a district in which there are many quaint survivals), efforts are sometimes made to retain the dying soul, especially when there still remains some communication to be made by or to the man at the point of death. Three men climb

to the roof of the house, sit astride on the roof-ridge, and cry aloud: 'Come back, So and So, come back once more.' Nobody inside the house is supposed to have heard the cry, but the dying man will revive for a little, and his spirit will linger for an hour or two before taking its final departure.

After death, the corpse, which is washed by all Buddhist sects, but not universally by the Shinto (some sects apparently being contented with rubbing with a wet cloth), is laid out, with its face covered with a piece of white cotton or silk, and placed on a mat in some suitable place, very often in front of the *toko-no-ma* ('alcove'), in the best sitting-room. The corpse lies with its head to the north (as did that of Buddha), either on its back (Buddhist) or facing the west. At its head is placed a mirror, and a sword for protection (the latter especially in the case of a *samurai*). Round the corpse is a screen. Outside the screen is an eight-legged table (Shinto) with offerings of washed rice, fresh water, salt, fish, and a *tamashiro*,¹ etc. In Buddhist houses there is no necessity for the table to have exactly eight legs, but the offerings are so placed that the deceased may be able to see them. On the Buddhist table stands an *ihai*, or tablet, inscribed with the posthumous name of the deceased, offerings of vegetable foods (*kumotsu*), and, in a vase, a single branch of *shikimi* (Chinese anise). The single branch or stem is so specially associated with funerals that on other occasions a Japanese housewife will not use a single branch for room-decoration.

Both in Shinto and in Buddhism a kind of fiction is kept up, during the days intervening between death and burial, that the spirit is still present with the body. Meals are brought at stated intervals, the corpse is sometimes rolled from side to side, under pretence of giving it ease in lying, and conversation is kept up with it as though it were still alive.

The corpse is dressed, in Shinto, in (1) a *tafusagi*, a kind of apron tied round the waist; (2) a *hadagi*, or shirt, reaching down to the knees; (3 and 4) a *shitagi* and an *uwagi*, a lower and an upper garment, corresponding to the *kami-shimo* (lit. 'upper and lower') of ancient Japanese dress; (5) an *obi*, or belt; and (6) *shitagutsu*, or shoes. A corpse is never dressed in ceremonial clothes or uniform. These are placed in the coffin later. In Buddhist houses the garments are very much the same, only that a distinction is made between winter and summer garments, which may be either of white cotton or of silk (a further development of the fiction of the continued presence of the spirit in the body). But the garments are put on inside out, with the seams showing, and they are worn *hidarima*, folded to the left, instead of to the right, as in life. At different parts of the garments are stitched the formulæ *Namu Amida Butsu* ('Glory to Amida the Buddha'), or *Namu myō hō rengekyō* ('Glory to the Mystic Scripture of the Lotus of the True Law'), which are said to be

¹ The *tamashiro* is a wooden tablet, just like the Buddhist *ihai*, except that it contains the actual name of the deceased, and not the *kaimyō* ('posthumous name'). When the sick person is about to draw his last breath, the head of the family, or the person whose duty it will be to perform the funeral ceremonies (*moshu*), washes his hands, changes his clothes, places the tablet on a low table by the bedside, and then, taking it up again, carries it to the sickbed, and there respectfully writes on it the sick man's name. Then, addressing the dying man, he announces to him that the *tamashiro* has been prepared as a place of residence for his spirit: 'With all respect I address thee. Suffer thy excellent spirit to remain in this tablet, and accept the worship which will henceforth be perpetually offered before it by thy posterity in future ages.' Then, gently clapping his hands, he bows once and retires. The *tamashiro* is then put in a wooden box, or covered with a cloth, and placed, facing the south, on a low table in another room, where offerings are made before it. The Buddhist *ihai* (which is made in duplicate) cannot be prepared until after the priests have been called in to select a posthumous name for the deceased.

² Hoernle, *op. cit.* p. 47.

³ Prakrit *pāṇagāmana*, for which the correct Sanskrit is *prāyopagāmana* (see SBE xxii. 74 ff.).

⁴ The present writer is under great obligation to Dr. Ohrt, of the German Embassy in Tokyo, for permission to consult the MS of two lectures delivered before the Deutsche Gesellschaft für Natur- und Völkerkunde Ostasiens in Tokyo, during the winter of 1900-10.

potent protectors of the soul. In addition to the other garments, the Buddhists dress their corpses in straw sandals (*waraji*) and socks (*tabi*), the sandals being put on behind before. The corpse is also provided with a *dzudabukuro*, or bag, containing the *rokumonsen*, or six pieces of money required for the ferry across the Sandzuno-gawa, or Japanese Styx. Originally these were six pieces of actual money; at a later period six pieces of paper, cut and stamped in imitation of actual coins, were used; the present *rokumonsen* is simply a piece of paper with the representations of six coins stamped on it. The number of coins is not always the same—6, 12, 18, 49, according to circumstances; and the *dzudabukuro*, which is really an ascetic pilgrim's bag, contains all manner of things necessary for the long journey now commencing—the first lock of hair cut from the head of the deceased in infancy, bits of his beard, nail-parings, teeth, a rosary, 'letters of orders' (*kechi-myaku*), a tobacco-pouch, a comb, pins, needles, threads, a single change of garments, and a towel; but there must not be more than one of each of these things. When a husband dies, a wife cuts off her hair and puts it into the bag; when a father dies, the children cut their nails and put the parings into the bag.

In some houses, when a death occurs, a notice—*kichū* ('period of mourning')—is posted at the entrance as a notification to visitors. In one of the busiest thoroughfares of Tokyo the present writer recently observed an expansion of this idea. In addition to the *kichū* notification, there was a little white table standing in the street, with a white cloth over it, a bowl, and a flower-vase containing a single branch of *shikimi*.

One of the first things to be done after a death is the notification to the authorities. This is made, first of all, to the headman or mayor of the village or urban district, while in the case of the Shinto it is also made to the priest of the *ujigami* shrine (i.e. the shrine of the tutelary god of the village or family). Should that shrine be at an inconvenient distance from the deceased's residence, some other temple near by is selected. The Shinto clergy do not, however, have much to do with the arrangements for the funeral, although, as a matter of course, they have a voice in the selection of the day for the funeral obsequies.

In Buddhist funerals the priests play a larger part, and in former days their rôle was more important even than it is now. This may be seen in the fact that in some very ancient temples there may still be found a *yukamba* ('bath-room'), in which the ceremony of washing the dead (*yukan*) was carried on under their directions. (The washing ceremony takes place after midnight; a new wash-tub, pail, dipper, and towel are used, and, after the washing is over, all these utensils, together with any hair, nails, etc., taken from the body, are buried in some secluded spot.) The intervention of the priesthood is also necessary for the ceremonial shaving of the corpse, since shaving is the sign of ordination, and it is the theory of all Buddhist sects that the Buddhist layman passes at his death into the Order of Monks. When the shaving ceremony is over, the priests prepare a *kechi-myaku*, (lit. 'letters of orders,' i.e. 'certificate of ordination'), which, as we saw above, is placed in the *dzudabukuro* for use during the soul's pilgrimage in the realms of the dead.

The priests are also consulted about the selection of a day suitable for the funeral, and about the posthumous name to be given to the deceased. Government regulations and sanitary requirements interfere somewhat (not much) with the absolute freedom of choice of a propitious day, and attempts are made to get the funeral fixed for some time

within 24 hours after death. But these regulations are more frequently honoured in the breach than in the observance, and an interval of many days sometimes occurs. (The difficulty is occasionally got over by postponing the formal announcement of the death until all the necessary arrangements for the funeral have been made.) In addition to the ordinary cycle of the seven days of the week, there is another cycle of six days (generally to be found in the almanacs), according to which the propitious and unpropitious days are selected. The names of these six days are *senshō*, *tomobiki*, *sempu*, *butsumetsu*, *daian*, and *shakkō*;¹ a *tomobiki* day is never selected for a funeral. The posthumous name is always one with a religious meaning, and it is also so formed as to mark the sect to which the deceased belonged. Thus *yo* always appears in the posthumous name of a Jōdo believer, and *nichi* and *zen* in those of Nichiren and Zen believers respectively, but it is not always the case with the latter. Appended to the posthumous name is a designation of the deceased's status: *koji* ('landlord') and *daishi* ('landlady') for a gentleman and lady of high rank; *shinji* ('layman') and *shinnyo* ('laywoman') for ordinary men and women; *dōji* ('lad') for a boy; *dōnyo* ('lass') for a girl. The posthumous name is inscribed on the *ihai*, which is executed in duplicate, one being retained in the house, while the other goes to the funeral and is deposited in the temple. At the end of 100 days after death, lacquered *ihai* take the place of the plain wooden ones first used. In the same way, in Shinto rites, the *tamashiro* is at first placed in a 'temporary soul-receptacle' (*karimitamaya*); at the end of 50 days it is placed in a 'permanent soul-receptacle' (*mitamaya*). In some Buddhist families there is a large family *ihai*, on which the names of all the deceased members are inscribed, 100 days after death. It should be noticed that some Buddhist sects, e.g. the Shinshu, speak of two kinds of posthumous names: the *kaimyō*, given by the priests; and the *hōmyō*, given to the soul in Paradise by Amida himself—a kind of 'new name which no man knoweth saving he that receiveth it.'

Notice is now sent, by post-card or otherwise, to friends and relatives, announcing the decease. It is customary to pay visits of condolence, and to send presents to the house of the deceased. The nature and manner of presenting these gifts are fixed by custom, but it is very common at the present day to offer money in lieu of other gifts—a kindly tribute which is always very acceptable in view of the heavy expenses which a Japanese funeral entails.²

¹ The cycle of six days (see the talismanic tables in books on magic, e.g. Barrett's *Magus*, 1801) depends on the six elements common to Kabbala, Gnosticism, and Shingonism, which are symbolized by the term *Abarakakia*, to which reference is made in this article. It is one of the many links connecting the Mahāyāna with the Judæo-Gnostic thought of the New Testament times.

The days are (i.) *Senshō*, 'first half good.' A *senshō* day is good for pressing and urgent business during the forenoon, but not after midday. By urgent business, lawsuits, petitions, etc., are meant. (ii.) *Tomobiki*, 'drawing friendship.' These days are good in the forenoon or evening, but not in the afternoon. There is no contest about anything. The day brings its own luck, and no amount of human striving will alter it. (iii.) *Sempu*, 'first half bad.' No urgent business should be undertaken on such a day. The afternoon is, however, lucky. (iv.) *Butsumetsu*, 'destruction of Buddha.' A sort of unlucky Friday. Nothing done on such a day will prosper. (v.) *Daian*, 'great peace.' Very lucky for anything, especially removals or journeys; cf. the old seaman's superstition about starting on a journey on Sunday. (vi.) *Sekko*, 'red mouth.' With the exception of the noontide hour, the whole of this day is unlucky. In the cheap Japanese calendars (*koyomi*) each day is marked according to this sixfold cycle.

² E. Schiller, 'Japan. Geschenksitten,' in vol. viii. of the *Mitteil. der deutschen Gesellschaft. für Natur- und Völkerkunde Ostasiens*; cf. also A. H. Lay, 'Funeral Customs of the Japanese,' in *TASS*, vol. xix. pt. iii. The subject is a very large one, and beyond the limits of this article.

In due course the body is placed in the coffin. Coffins (*hitsugi* or *kwan*, the former distinctively Shintoist) are of two kinds—*nekwān* ('sleeping coffin') and *sakwān* ('sitting coffin'). In the latter the corpse is placed in a praying posture; in the former, in a recumbent one. At the bottom of the coffin is placed a piece of white cotton cloth, 4 hand-breadths wide, and 8 *shaku* (Jap. feet) in length; over this, a white *futon* and *fusuma* ('quilt' and 'coverlet'), and a pillow. Then the corpse is put in, together with any objects, e.g. an inkstand or photographs, prized by the deceased during life; and the whole is filled up with buckwheat husks to keep the body from moving. No metal object may be put into the coffin.¹ The interval between the encoffinement and the funeral is the most important period of the watching by the dead. It was a period of festivity in the old Shinto, but is now generally passed in silence: in the Buddhist *tsūya* ('wake') the silence is broken by the voices of the priests who are summoned on the last night to read Sūtras by the side of the deceased and for his benefit. This is known as *makuragyō*,² or 'pillow-Scripture,' and is accompanied by much burning of incense. Entertainments are provided for the guests. The lawfulness of the officiating priests partaking in these festivities is frequently discussed in Buddhist magazines. Very often the priest is provided with his meal apart from the laity, who do not begin until the clergy have finished; and an attempt is sometimes made to save appearances by drinking the *saké* out of tea-cups.

There are several strange old customs with regard to the choice of a location for the grave. Thus, in some of the remote mountain-villages in Tosa, while the corpse is still lying outstretched on the rush-mat, one of the near relatives kicks the pillow from under its head and carries it off to the cemetery. When he has selected the proper place for the grave, he puts down the pillow there, and, taking out four small coins, throws them east, north, west, and south. 'With these coins,' he says, 'I buy seven square feet of ground from the god of the earth.' Another old custom, still surviving in remote districts, is for a person not connected with the deceased by blood, and therefore free from death pollution, to sweep the ground selected for the grave, to spread a rush-mat on it, and on a table placed on the mat to erect a *himorogi* ('temporary tabernacle') for the earth-god. This is done by setting up *sakaki* branches with little paper pendants (*nusa*), etc., and by making offerings of rice, fish, vegetables, seaweed, and fruit. Then he offers the following prayer:

'I address the great god who is the lord of this locality. A new grave is here to be made for N. (name, office, rank). With an offering of wine, boiled rice, and *nusa*, I pray thee to grant that he may lie in this grave for ever, free from affliction and in peace. I speak with all respect and humility.'

Then he clasps his hands and bows twice.

When the preparations for the funeral are all complete, the coffin is carried into a front chamber, and incense, lights, and a single flower are again offered before it. A set of *zen* is also provided. In this case, the *zen* consists of a bowl of unhusked boiled rice (*kurogome no meshi*), soup, raw *miso* ('bean-paste'), unrefined salt, and a pair of chopsticks, one of which is made of wood and the other of bamboo. Everything is now in readiness for the funeral ceremony. From this point sectarian differences become more marked, and it will be well to treat of Japanese funerals in detail according to the various sects.

¹ In certain Buddhist sects a pilgrim's staff and a doll are also put into the coffin (Ohrt).

² The Sūtra varies with the sect. In the Zen sect it is *Yuikyō* (Eka-Sūtra); in the Shingon, *Rishukyō* (Buddhi-Sūtra). These Sūtras, which do not exist in Sanskrit or Pāli, are said to have been preached by Śākyamuni shortly before his entry into Nirvāṇa. They are classified under the Nehangyō or Nirvāṇa Sūtras.

II. *SHINTO*.—A purely Shinto funeral is divided into five distinct portions: (a) *mitamatsushi*, or introduction of the spirit into the *tamashiro*; (b) *shukkwan*, or taking the coffin out of the house; (c) *sōsō*, or funeral procession; (d) *maiso*, or committal to earth; and (e) the subsequent purification. The actual ceremonies are conducted by the *moshu* ('chief mourner'), who is generally the heir, eldest son, or other near relative. Relatives in the ascending line are generally excluded. Recently, when H.L.H. Prince Arisugawa lost his son, the *moshu* was Prince Itō. The *moshu* is dressed in a dress of some dark colour, over which is worn a white *hitatare* ('surplice') and an *eboshi* ('mitre'). In the middle classes, however, the ordinary *haori* ('upper garment') and *hakama* ('nether garment') are frequently worn.

(a) The *mitamatsushi* takes place apparently as soon as the *tamashiro* is provided. The *moshu* (sometimes a *kannushi*, 'priest') sits down before the *tamashiro*, bows twice, claps his hands, and announces that the spirit (*tama*) of the deceased has taken up its abode in the *tamashiro*. This is known as the *zokuji*, and the following *norito* ('prayer' [Shinto]) is used (tr. by Ohrt):

'Alas! my (father), thou hast been taken away from us. I, N. N., and the rest of us that remain behind, will still continue to do thee faithful service in our hearts. Thy life has come to its close upon earth. Hear us in thy place of rest, as we celebrate thy obsequies. Deign, exalted spirit, to take up thy abode in this *tamashiro*, and remain at rest for ever in this thy house. I address thee with the deepest reverence.'

This *norito* is frequently repeated, as well as the invitation to the soul to participate in the feast. The *tamashiro* is then placed on the *kamidana*, or 'god-shelf,' used in Shinto houses.

(b) *Shukkwan*.—Before the bier is taken out of the house, offerings of boiled rice, *saké*, etc., are again made. Then the celebrant seats himself before the bier, bows, claps his hands, and, presenting a *tamagushi*,¹ addresses the spirit with the following *norito*:

'This day, as the sun sets, we shall reverently celebrate thy obsequies. We pray thee to behold us in peace and without anxiety, as we start on our journey and pursue our way (to the cemetery). I speak with deep reverence and humility.'

Then he bows twice, claps his hands, and retires. All relatives present do the same. After this, four men, dressed in white, carry the coffin into the court-yard, where a fire is burning (on the theory of a midnight funeral), and the procession is formed in the following order: (1) coolies (or outriders); (2) coolies carrying torches or lanterns (still on the theory of the midnight funeral); (3) servant with a broom (relic of the old custom mentioned above); (4) white banner, 15 in. in width by 8 or 9 ft. in length, carried on a pole, and inscribed with the name and title of the deceased; (5) bearers with consecrated branches of the *sakaki* tree; (6) chest with offerings; (7) bearers with torches and lanterns; (8) the coffin (if a *sakwān*, it is carried in a *kago* ['litter']; if a *nekwān*, on a bier of white wood; it is carried on the shoulders of bearers in white surplices); (9) *bohyō*, a post, inscribed with the name, to be set up as a temporary mark for the grave; and (10) the chief and other mourners, on foot, as a general rule. Trestles (*koshidai*), a table for offerings, hangings, and a wooden pail and dipper also form part of the paraphernalia, but are now more generally found at the place of internment.

(c) The *sōsō no shiki* is generally celebrated within a curtained enclosure, though in Tokyo and other large places there are mortuary chapels to serve the purpose. The enclosure, or chapel, is invariably arranged in accordance with the annexed plan, the ritual observed in the chapel differing very slightly from that in the enclosure.

As the funeral procession arrives, the musicians take their seats and begin to play. During this

¹ i.e. a consecrated branch adorned with numerous pendants and streamers of paper.

time the bier is placed in its proper place, the flower-standards are arranged, and a high stand is erected, from which a pendant will later be suspended. When every one is seated, the celebrant, with his assistant, advances before the bier and bows. During this ceremony the music has ceased, but it begins again as soon as the priests return to their places.

The assistant now takes his place before the bier, but a little to the right of it. Acolytes bring a banner for the stand, and offerings to be placed on the table—*saké*, boiled rice, fresh fish, vegetables, seaweed, cakes, fruit, etc. Again the music ceases, while the chief celebrant advances once more, and, with his mace on his left hip, commences the repetition of certain prayers, which contain a recital of the dead man's birth, lineage, school-life, and career, official or otherwise, and conclude with words much to this effect:

'Our honoured N. has passed away to our great regret; to our sorrow he has given up the ghost. The prayer of our inmost

lid. Then the grave is filled up, and on the new-made mound is planted the *bohyō*, a few lanterns, and banners. An open shed resting on four pillars is sometimes built over it, and generally it is surrounded with a *magaki* ('bamboo fence'), and a *shime* ('cordon') of rice-straw string.

The Shinto ritual does not contemplate cremation, but it is sometimes adopted. In that case the *maisō-no-kotoba* and the ritual that follows are used at the time of the interment of the ashes.

(e) The purificatory rites are of two kinds—of the house and of the mourners. The house is purified, immediately after the corpse has been taken out, by a Shinto priest, who comes in and waves a *tamagushi* in every direction, though sometimes the purification is accomplished by the priest's rinsing his mouth with water and throwing salt over his head.

The mourners are purified on their return from the funeral. (The return journey is always by a different road from that taken when going to

heart was that he might live to very great age, but it is the way of the fleeting world that he should come to this. Our prayer is that he will regard with tranquil eyes the obsequies we are now performing, and lie down to rest in his grave, leaving his spirit behind him to guard the house. Reverently and with humility I make this prayer.'

This prayer is known as the *maisō-no-kotoba* ('words of committal'). Everybody stands while it is being offered. When the music begins again, the chief mourner, habited in black with a white surplice, and wearing a black *eboshi* ('mitre') and straw sandals, comes forward and offers a branch of *sakaki* as a *tamagushi*. All the relatives and friends follow this example, the attendant priests having a large number in readiness for the needs of the visitors. Funeral orations are delivered, sometimes before and sometimes after the offering of the *tamagushi*.

(d) *Maisō*.—The coffin is now carried to the grave, and lowered into it, with few or no ceremonies. A few handfuls of earth are thrown upon it, and a *boshi*, 'plate,' inscribed with the name, age, rank, etc., of the deceased, is put on the coffin-

the funeral.) There are apparently three methods of purifying persons, viz. (1 and 2) the methods observed in purifying a house, and (3) a slightly more elaborate one. Offerings are placed before the *tamashiro*, and in front of them a branch of *sakaki*. The priest (or the *moshu*) recites the following *norito*:

'I thus address the spirit of (my father) who has now become a god. I prayed day and night that thou mightest live to be a hundred years old, and now I can but weep and lament that thou hast left this beautiful world, and gone to the dark land beyond. I beseech thee, listen in peace to us thy relatives assembled here, as we celebrate the worship of the dead with all manner of food.'

Then the offerings are removed.

The first fifty days after death are observed according to the Shinto rituals with daily offerings before the *tamashiro*. Special emphasis is laid on the 10th, 20th, 30th, etc. On the fiftieth day, the *tamashiro* is removed from its temporary shrine to the *mitamaya* or *kabyō* ('spirit-house'), and henceforth the worship of the spirit is performed along with that of the other ancestors. On this occasion,

the *saishi-no-kotoba* are used—prayers asking the spirit of the deceased to take up his abode in the *kabyō*, and beseeching the whole body of the ancestors to receive him into their company. Similar prayers are offered on the 100th day after death. On that day the temporary post should be removed from the grave, and a stone monument set up. The first anniversary is observed; after that, the anniversaries of the 3rd, 5th, 10th, 20th, 30th, 40th, 50th, and 100th years. After that, there is a commemoration every 100 years. The reader will understand that it is only in very exalted families that such minutiae can be attended to, but the Shinto funeral is in any case almost entirely confined to the highest classes.

III. **BUDDHIST.**—Something has already been said about customs observed in Buddhist houses in the care of the dead. The general procession is somewhat as follows (it is more striking to the eye by reason of the greater splendour of vestments, etc.): (1) bearers with natural flowers (*seikwa*); (2) bearers with artificial flowers (*tsukuri-bana*); (3) four (sometimes two) paper dragons on poles (*jatō*), these being evidently connected with the friendly Nāgas of Indian Buddhism; (4) banner (*meiki*), with the personal name of the deceased; (5) the officiant priest (*dōshi*), with his assistant (*mukaisō*); (6) white paper lanterns; (7) one *ihai* (the other is left at home); (8) incense (*kōro*); (9) the coffin on a bier, borne on men's shoulders, and with a few friends of the deceased walking beside it; and (10) the mourners (generally in *jinrikisha*). A bird-cage full of birds to be released at the grave-side, and a *sotoba* or *stūpa*, actually a post, notched near the top, and inscribed with Sanskrit characters, often form portions of the procession.¹

1. **Ceremonies of the Zen.**²—(1) *The service in the house.*—In this sect, the officiating priest is generally called the *indōshi*, because a large part of his duty is supposed to be to guide (*indō suru*) the soul of the deceased on its voyage through the realms of the dead. The *indōshi* begins by laying his *hossu* ('chowry,' a brush made of long white hair) on the lid of the coffin, as a sign of authority. Then he takes up the razor that has been used to shave the deceased. This is followed by the words:

Teijo shuhatsu Tōyōan shujō Yōri bonnō Xuyō jakumetsu:
'The hair and beard have been shaved. I pray that all creatures may forsake evil passions for ever, and reach the goal of annihilation.'

This verse is sung three times, sometimes by the officiant alone, sometimes by the officiant and chorus. Next follows, sung or said in the same manner:

Ruten sangaiichū Onnai funōdan Kion nyūpusi Shinjitsu hōon sha: 'Whilst transmigrating through the Three Worlds, ties of kindness and affection cannot be cut off. He who has cut off this tie, and entered the realm of the unconditioned, is truly a grateful man.'

Now follows an exhortation to the deceased to confess his sins:

'Young man of good birth' [it will be remembered that the deceased is supposed to have received the tonsure], 'If thou wilt to stand fast in the Refuges and to observe the commandments, thou shouldst first confess all thy sins. [There are two formulae of penitence; there is also the form of confession which has come from the former Buddhas and been handed down by successive patriarchs.] All thy sins will be pardoned. Recite these words after me.'

Then the priest recites the confession, with the sound of clappers (*kaishaku*) once at the end of

¹ The Sanskrit characters are *Kha la ka va a*, representing the five *skandhas* ('forms of mundane consciousness'), and, as an alternative, the five elements which compose the universe. In Shingon, we have the pair of formulae *A-ba-ra-ka-kia* and *Kha-la-ka-va-a*: in Irenaeus, the Gnostic terms *Abrazas* and *Caulacau* (Irenaeus says that *Caulacau* = 'mundus' [cf. vol. ii, p. 428, note]). See the present writer's *The Faith of Haif Japan*, London, 1911.

² We take the Zen first, not as being the oldest of the now existing sects, but as representing most specially the purely Indian side of Japanese Buddhism.

each line, and twice at the end of the stanza. The spirit of the deceased is supposed to join him in his recitation:

'All the evil *karma*, which I have accumulated in the past, has had its origin in desire, hatred, or ignorance, in a series of previous existences which has had no beginning. It is due to the body, the tongue, and the mind. All this I confess.'

The priest continues:

'Thou hast confessed thy evil deeds of body, tongue, and mind, and hast obtained the perfect purification. Now, therefore, thou must stand fast in the Three Refuges, in Buddha, the Law, and the Order. The Three Treasures have a threefold virtue, the threefold absolute virtue, the threefold virtue as it was in Buddha's time, the threefold virtue as it is in a time when there is no Buddha (*ittai sambō*, *genzen sambō*, *jūji sambō*). When thou hast taken refuge in them, thy virtues shall be completed.'

Recitation of the ninefold Creed follows:

Namukie Butsu, 'Glory to Buddha in whom I take refuge.'

Namukie Hō, 'Glory to the Law in which I take refuge.'

Namukie Sō, 'Order'

Kie-butsu-mudo-son, 'I take refuge in Buddha, the super-

eminent.'

Kie-hō-ri-jin-son, 'I take refuge in the Law, the undefiled.'

Kie-sō-wagō-son, ' " " the Order, the harmoni-

ous.'

Kie-buk-kyō, 'I have finished taking refuge in Buddha.'

Kie-hō-kyō, ' " " the Law.'

Kie-sō-kyō, ' " " the Order.'

[After each sentence the clapper sounds once; at the end it is sounded twice.]

The officiant goes on:

'After this wise have I now conferred on thee the Refuges. Henceforth, the Tathāgata [the Buddha], the Truest, the Perfectly-Enlightened is thy Teacher. Put no faith in the Tempter, nor in any heretical teachers, but have respect to the great Benevolence, Deliverance, and Compassion that have been vouchsafed thee. Now will I recite for thee the ten grave commandments. They are these:

1. *fusesshō*, "thou shalt not destroy life."
2. *fuchūtō*, " " steal."
3. *fujainā*, " " commit fornication or adultery."
4. *fumigō*, " " lie."
5. *fukoshu*, " " sell intoxicating liquors."
6. *fusekkwa*, " " backbite."
7. *fujisankita*, " " praise self at the expense of others."
8. *fukenshōzai*, " " be grudging of the gifts of the Law."
9. *fushin-i*, " " be angry."
10. *fuhōsambō*, " " speak evil of the Three Treasures."

These ten grave commandments have been formulated by previous Buddhas and handed down by successive Patriarchs. I have now entrusted them to thee. Keep them well in all thy existences until thou attain to the Buddhahood. [This formula may be repeated at the discretion of the celebrant.] Sentient beings that fulfil the Commandments of Buddha are placed in the same rank with Him. He that is in the same rank as the Perfectly Enlightened One is truly a Son of Buddha.] [Wooden clappers twice, handbell thrice.]

The priests present now chant a stanza known as the *daihisshu*. When it is finished, a priest (not the one who led the service before) takes up his word:

'After this wise has been sung the *daihisshu*. The merits arising therefrom are to be transferred to N. [here insert the *kaimyō*], newly returned to the elements. We pray that when we place his body in the coffin the Sambhoga land may receive him.'

Then all together:

'All the Buddhas in the Ten Directions and in the Three Worlds, all the Honourable Bodhisattvas and Mahāsattvas, and Mahāprajñāpāramitā, the land of the Sambhoga Kāya.'

The same priest continues:

'If we meditate deeply on these things, lo! birth and death succeed each other as heat follows cold. They come like the lightning flashing over the deep sky, their going is like the cessation of waves on the great sea. The newly deceased N. has this day suddenly come to the end of his life, by reason of the exhaustion of all seeds of existence. He understands that all composite objects must be dissolved, and is convinced that the extinction (of the seeds of existence) is bliss. The holy congregation here assembled will respectfully recite the names of the saints. May the blessings resulting from that recitation serve to adorn the road leading to Nirvāṇa.'

Vairocana, the Buddha of the Holy Dharmakāya.

Rochana, the Buddha of the Perfect Sambhogakāya.

Sākyaṃuni, the Buddha, whose Nirmāṇakāya incarnations are hundreds upon hundreds of millions.

Honourable Maitreya Buddha, for whose coming we wait.

All Buddhas in the Ten Quarters and the Three Worlds.

Mahāyāna-Saddharma-puṇḍarīka Sūtra (personified).

Mahārya Mañjuśrī Bodhisattva.

Mahāvāna Samantabhadra Bodhisattva.
Mahākāruṇika Avalokiteśvara Bodhisattva.
Honourable Bodhisattvas and Mahāsattvas.
Mahāprajāpāramitā.

[Here follows the *shariraśmon*, or stanza for worshipping the relics of Buddha.]

One priest alone:

'After this wise the Names of the Holy Ones have been recited, and the Sūtra has been chanted. The merits arising therefrom will be transferred to the newly-deceased N. to adorn the Sambhoga land, with the prayer that the soul may travel beyond the consecrated border (of personified existence), that its *karma* may be exhausted, that a superior lotus flower may open for it, and that the Buddha may give it a prediction for life. Once more the Holy Assemblage is invited to chant.'

All present:

'All the Buddhas in the Ten Quarters and the Three Worlds, all the Bodhisattvas, Mahāsattvas, and Mahāprajāpāramitā.'

Then the *indōshi*:

'We are now about to lift the sacred coffin, and to celebrate imposing obsequies. The assembly is implored to recite the great names of saints, and to assist the soul of the deceased along the road to Nirvāṇa.'

This ends the *makuragyō*, or service in the house. The procession is now formed outside, and, when the coffin has been put on the bier, a start is made for the temple or graveyard.

(2) *The services in the temple.*—Whilst the procession, professedly modelled on the funeral of Suddhodana (the father of the Buddha), is making its way to the temple, certain preparations have been made for its reception. The temple-bell has been set tolling, and goes on until the cortège reaches the front gates. In the court-yard four small *torii* ('gates') of wood have been erected facing E., S., W., and N. On each is suspended a tablet with an inscription: (1) *Hosshimmon*, the gate of religious awakening; (2) *Shugyōmon*, the gate of religious practices; (3) *Bodaimon*, the gate of Bodhi; and (4) *Nehammon*, the gate of Nirvāṇa. They are symbolical of the various ways that lead to Eternal Life, and the coffin is carried three times round to them all to show that, in the opinion of the Zen, all four are necessary. The ceremony may be held either in the main hall of the temple or in an open court-yard.

While the procession is making its round of the four *torii*, some of the priests slip into the temple or hall, and begin the recital of certain *dharāni* ('secret formulæ'). These are supposed to be very efficacious, even by the Zen sect, which originated in a protest against the magic formulæ that were so rife in the China of the 6th cent. A.D. Gradually the assembly take their seats; when all are seated and the music and chanting have come to an end, the *indōshi* recites the *indō*, or 'guiding words,' for the benefit of the soul of the deceased. Then another priest says:

'This day the newly-deceased N., having exhausted all the causes of life (Skr. *pratyaya*), has entered Nirvāṇa, and is now to be buried according to the Law. His phenomenal body, the body that endures for a hundred years, will be buried; the real Self will be sent to tread the lone path that leads to Nirvāṇa. The holy assembly (of monks) is therefore prayed to assist the soul that is being enlightened, and to recite.'

Here all the priests present take up their cue and recite:

'Vairocana, the Buddha of the Holy Dharmakāya,' etc., as above.

The priest resumes:

'After this wise have the holy Names been praised, and the soul that is being enlightened has been helped. Let us pray that the mirror of Wisdom may shed its brightness on him, that the wind of Truth may waft on him its splendours. In the garden of Bodhi ('infinite knowledge') may the flowers of Enlightenment and Wisdom bloom, and on the sea of reality may the waves roll free from every stain. We offer three cups of tea, we offer incense to accompany him along the solitary, clouded path, and we worship the assemblage of the saints.' Here the congregation recites the *Ryōgonshu*; then the priest alone:

'After this wise have the names of the Holy Ones been chanted and the Sūtra been recited. The merits accruing from this act of worship are to be transferred (*ekō*) to the newly-deceased N., at the time of his interment, to adorn the Sambhoga land.

Chorus of attendant priests:

'All the Buddhas in the Ten Quarters,' etc., as above.

Small bells, drums, and cymbals are beaten in chorus three times, and the coffin is taken away for cremation or [and] interment.

No special ceremonies are observed in cremation. When the body (or the ashes, as the case may be) comes to the place of interment, it is lowered into its grave by the nearest kinsman. All the banners are placed on the coffin-lid, and the relatives each take a handful or spadeful of earth, which they throw into the grave. The grave is then filled up.

2. *Ceremonies of the Shingon.*—We now come to a sect whose ceremonies it is most difficult to describe, for the reason that a great deal is done by dumb show, the so-called *mudrā*, 'signs of the hand,' being matters of prime importance in these ceremonies. Great stress also is laid on the recital of mystic formulæ in debased Sanskrit, which it is not always easy to understand. Some of these formulæ are secret, and may not be revealed to the general public. [For all these the student is referred to vol. viii. of the *Annales du Musée Guimet*.] The Shingon sect is in many ways the most interesting of all the Buddhist sects in Japan; for not only has it been the great inspirer of Japanese art, but it has certain most striking resemblances both to Alexandrian Gnosticism and to the Jewish Kabbala. These will be duly pointed out as they occur.

(1) *Ceremonies in the house.*¹—A temporary place of worship having been arranged, when the service is about to commence, the officiant, also called *indōshi*, goes before the coffin with the long-handled incense-burner in his hand, and makes a bow. Then he takes his seat on the *raiban* ('exalted seat of worship'), rubs his hands with *dzukō* ('liquid incense'), and spends some moments in meditation, the subjects of which are supposed to be the 'three secrets' (i.e. the secret *dharāni*, the secret *manual acts*, and the secret *teachings* which have been committed to him); the 'way of purifying the three deeds,' i.e. of body, mouth, and heart; the 'three sections,' i.e. the world of Buddhas, the world of the Lotus, and the Diamond World; and the 'putting on of spiritual armour.' All these meditations are exhibited by the corresponding formulæ and manual acts. This section is closed by a meditation on the scented water, which is called the *kajikōsui*,² 'scented water signifying the acceptance by the believer of the great mercy of the Tathāgata projected over the hearts of his creatures' (so explained in *Sokushinjōbutsugi*). This produces an effectual union of the worshipper's heart with that of the Buddha.

The celebrant now proceeds to the invocation of the Buddhas. Commencing with a manual act ('diamond-joining-hands'), which signifies the raising of the thoughts towards *bodhi*, accompanied by a *dharāni* of the same import, he proceeds by a series of gestures and formulæ, which it is not necessary to give here, to invoke the Universe³ and the Atoms.⁴ From the invocation of

¹ The Shingon house-ceremonies are performed before a small temporary altar, on which stand the images of the thirteen Buddhas and Bodhisattvas, supposed to take charge of the soul of the dead for several years after death. These thirteen Buddhas, who are clearly not particularly connected with primitive Buddhism, appear to correspond with the *Æons* of the thirteen realms of the dead, through which, e.g., in the book *Piats Sophia*, the Gnostics supposed the souls of the dead to pass in Hades. The thirteen Buddhas are not peculiar to the Shingon, though this sect lays more stress on them than does any of the others. See note on the subject in the present writer's *Shinran and his Work* (Tokyo, 1910), Appendix iii. and also *The Faith of Half Japan*.

² The *kajikōsui* is also used in the *abhiṣeka*, or baptismal rites (Jap. *kwanjō*), of both Shingon and Tendai. It corresponds to the *opobalsanum* mentioned by Irenæus as used in the baptisms of the Marcionian heretics.

³ The *dharāni* is *Om-samaya satoban*, a debased Sanskrit which we have not been able to understand. The manual act is called a meditation on Samantabhadra.

⁴ Here the *dharāni* refers to the five exterior elements; it is *Om Abiraunkan*, 'earth, water, fire, wind, void.' This name

the Universe impersonal he passes to that of the Universe personal, to the Five Buddhas,¹ to Amitābha, the giver of immortality,² and to Amitābha with his attendants Avalokiteśvara and Mahāsthāmaprāpta, that they will come to the funeral ceremony and invite the deceased to enter the bliss of Paradise. After each of these invocations, the *kōmyōshingon*,³ or invocation of the Five Dhyanibuddhas, is chanted three times. Then, coming lower in the scale of dignity, we have the invocation of Kṣitigarbha, the sixfold protecting angel of the dead (*Roku Jizō*), and that of *Fudō-myō-ō* (*Achāravidyārāja*) and the other great *vidyārājas*—Mahātejas, Vajrayakṣa, Kundali, and Tribhava-vijaya. The mantra of Kṣitigarbha is *Kakakabi samaye abiraunken sowaku*; that of *Fudō-myō-ō*, which is chanted three times, is *Nōmaku sāmānda bāsarada sendam mākora shātei sowataya untarātā kamman*. (The meaning of these Sanskrit formulæ is now wholly lost.)

We now get three *mudrās*, representing the 'preaching' of Vairochana of the three *kāyas*—the Dharmakāya (*Namu A*), the Sambhogakāya (*Namu Vam*), and the Nirmāṇakāya (*Namu Ūn*). The three syllables *A-vam-ūn* (possibly Skr. *om = a + u + m*) represent the 'Trinity' of Vairochana. Then the *stūpa* is figuratively opened and shut—an evident allusion to the *Saddharmapundarika Sūtra*; next, a *mudrā* (or manual gesture) figuring the *abhiśeka* of *Fudō-myō-ō* (see above), with *Namu bam* repeated thrice; next, three representing respectively the Dharmakāya, Sambhogakāya, and Nirmāṇakāya (possibly of *Fudō-myō-ō*), with *mantras* respectively—*An ban ran kan ken, A biraunken, and Arahashanō*. But *Fudō*, like Kṣitigarbha, is sixfold in his operations in the six spheres of sentient existence, and we consequently have a suitable gesture, imparted to Kōbō Daishi by his Chinese tutor Keikwa, for which the *mantra* is *Abiraunken*, together with a secret formula which may not be written down, but which may be attained by means of a proper 'meditation on the Fire.'

Thus, the whole celestial hierarchy of the Shingon having been invoked, it remains only to procure for the deceased, on whose behalf all these celestials have been summoned, a suitable understanding of what it all means. This is effected by means of four more sets of manual acts and *mantras*, signifying respectively the attainment of the perfect knowledge of *rūpadharma* ('objects having form'), of *chittadharmā* ('objects conceivable, but without form'), of *rūpadharma* and *chittadharmā* together, which are not two, but one; and, finally, a meditation on the *dharma-dhātu* ('universe'), for which the *dhāraṇī* is *Om Maitreya Svāhā*. [The Shingon are firm believers in Maitreya, more so than any other of the Buddhist sects. It is their conviction that the body of Kōbō Daishi, which never decays, is awaiting the advent of Maitreya in his tomb at Kōya San, and Shingonists often send the bones of their dead, after cremation, to Kōya San, so as to be near to Kōbō at the resurrection, which will take place when Maitreya makes his appearance.]

The officiant now prostrates himself three times appears often as *Ambarammakaku* and as *A-ba-ra-ka-kia*. It is almost certainly the Gnostic *Abrahas*—a conclusion in which we are strengthened by the fact that the Gnostic *Caulacau* also seems to appear in the *mudrā*. See above, p. 489n, n. 1.

¹ In this place the five Dhyanibuddhas are Amogha, Vairochana, Mahānūdra, Mañipadma, and Jālapravarta—a very unusual enumeration. The more usual one is given below. We believe these to represent the five Dhyanibuddhas of the *Vajradhātu* ('Diamond World', i.e. world of ideas), the others the corresponding set of the *Garbhadhātu* ('Womb World', i.e. world of birth, death, concrete existence).

² The Shingon form of Amitābha is Amritābha.

³ In *Shinron* and his *Work* the present writer has shown that the word *kōmyō* seems always to have Manichean associations and connexions. It is quite possible that this *mantra* may have them too.

before the assembled deities, offers incense, strikes the bell three times, and recites a sort of creed:

'With deep respect for all the Buddhas here assembled, I take my refuge in Buddha. May all creatures follow my example! I take my refuge in Dharma. May all creatures follow my example! I take my refuge in the Saṅgha. May all creatures follow my example! The excellent physical body of the Tathāgata is without a parallel. The form of the Tathāgata is inexhaustible, and all the *dharma*s (Jap. *issaiō* = 'all matter') are permanent. With deepest reverence I address the great Vairochana, the Tathāgata, the Master of Shingon Buddhism, and all the venerable ones and saints of the two assemblies (i.e. the *Vajradhātu* and *Garbhadhātu*); and especially Amitābha, the master and teacher of the Land of Bliss, the Merciful Maitreya, for whose coming we wait; the holy Henjō Kongō (i.e. Kōbō Daishi), who sits cross-legged in deep meditation; all the great Achāryas, the transmitters of religious light in the three countries (India, China, Japan), and also in all the lands illuminated by the eye of Buddha, and pitied by the Three Gems.

If we meditate deeply thereon, the moonlight of "Opportunity—which is born when the desire thereof ariseth" (*Kikwai ki okoreba sunawachi shōzu*) shines in the sky of the tranquil spiritual Nature. The colour of the flower of "The Cause that being exhausted presently disappeareth" blooms in the Garden of unbounded Adornment.

Appearance is as non-appearance.

Disappearance is as non-disappearance.

Both appearance and disappearance are unattainable.

They cannot be named.

The deceased N., his causes of life having been exhausted, has gone to another world. He has left his body in Jambudvīpa, and has entered the intermediate state (Skr. *antarābhava*, Jap. *chū-ī*). Therefore now, in accordance with the testament of the Śākya king, who was endowed with the ten merits (*jūzen*), we will with tears celebrate the ceremonies of funeral-rites and cremation. Having adorned the Sacred Altar upon which the Tathāgata will descend in answer to our prayers, we will pray for the favourable acceptance of his soul by the Venerable Ones, and for its deliverance. We will kindle the pure fire, which passes through all the six elements (*rokudai mu-e*), and so cremate the body which from the beginning has had no true phenomenal appearance (*honrai fushō*). We pray that all the Buddhas may certify for him, that all the Saints may pray for him, and that they may receive him to a lotus-stand of superior dignity. May the living and lawful king of reason and wisdom (Vairochana [?] Amitābha [?]) endow him with the highest Buddhahood! . . . And may all sentient beings in the *Dharmadhātu* be equally benefited! . . . I speak this with all respect.

This ends that portion of the service which is known as *kyōhaku*, 'the expression of belief.' Next follows the singing or chanting of the *Jimben shingyō*, i.e. the *Mahāprajñāpāramitāhrdaya Sūtra*, for the purpose of giving pleasure to the assembled spirits, in order that they may make their appearance upon the altar. After this a priest says:

'In the yard where funeral services are being conducted (for a deceased person), it is generally the case that his sins all perish, and that his merits rise heavenwards. This is the time of his ascension to the land of Bliss, and we may consequently expect that Yama the lawful king, and the five infernal officers of the other realms of existence, will make their appearance. We pray, therefore, to the thirteen great Buddhas, to the infernal officers, and to all their retainers and followers, that they may aid this man to lay aside his *karma*, and attain Supreme Enlightenment.'

Chorus. 'Hail, Mahāprajñāpāramitā Sūtra!' (one bell).

'That the departed soul may ascend to the secretly adorned sphere of flowers (*mitsugonkezo*), we invoke'—

Ch. 'The Name of the great Buddha Vairochana' (one bell).

'That he may ascend to the world whose inhabitants hunger not, neither thirst (*anyō jōdo*), we invoke'—

Ch. 'The Name of Amitābha (one bell);

The Sacred Name of Avalokiteśvara' (one bell).

'That he may be re-born in the inner palace of Tuṣṭhaloka, we invoke'—

Ch. 'The Name of the Buddha Maitreya (one bell);

The Names of all the Saints in its inner and outer palaces' (one bell).

'That the Buddha-field may be accessible at all times to all who desire it, we invoke'—

Ch. 'The Three Holy Treasures' (one bell).

'That all sentient beings in the *Dharmadhātu* may be benefited equally (with him whose obsequies we celebrate), we invoke'—

Ch. 'The Name of Avalokiteśvara (one bell);

The Name of Vajrapāṇi' (one bell).

[Here the officiant lays down his censer and takes up his *nyō-ō*, or mace.]

Namo ('homage').

Kimyo chorai Mujōshugwan.

Shōrei indo Jōgokuraku,

It is a common action amongst Japanese Buddhists that Jambudvīpa, which is, of course, Hindustan, comprises China and Japan as well. It is in Japanese pronounced *Nan-embudai*. In Nichiren Sect books it is *fuchi-embudai*, which comes nearer to the sound of Jambudvīpa.

Hail! Buddhas and Bodhisattvas, whom I worship with bowed head and potent invocations! May this holy soul be led to, and be re-born in, the land of Bliss!

It is by the adornment and honouring of the Altar of the Teaching of Supernatural Power that Supreme Buddhahood may be obtained as in a moment. It is by the proclamation of the teaching that the material body is identical with Buddha,¹ that the Buddhas will themselves develop enlightenment in the doctrine that phenomenon is itself reality.²

Next follows an *ekô* ('prayer of transference'). The officiant lays down his *nyo-i*, and resumes his censer. (One bell.)

¹ I respectfully pay homage to the Three Eternal Treasures, and extol the teachings of Buddha, the Tathāgata who has realized Nirvāṇa and passed beyond birth and death. If any man will listen to Him with all his heart, that man's soul shall be filled with unbounded joy. All composite things are impermanent; they are possessed of the necessity of growth and decay. They spring into existence; again they perish; their extinction is bliss.³

Then the *Rishukyô* (Buddhi Sūtra) is read, and the ceremonies in the house are closed. On the road from the house to the temple, the priests meditate upon Fudô, and chant his *mantra* (see above).

(2) *Ceremonies in the temple.*—Near the entrance to every Shingon graveyard or temple will be found the six images of Kṣitigarbha (*Roku-Jizô*), the friend and protector of the dead. These must first be worshipped, as also the corresponding set of six Avalokiteśvaras (*Roku-Kvannon*). Then the officiant, entering, walks three times round the sacred fireplace which is found in every Shingon temple, with manual gestures and formulae representing the five elementary colours, the putting on of spiritual armour, the breaking of hell, the raising of the mind to the contemplation of *bodhi*, and the meditation on Samantabhadra (*Fugen*), the special patron of truth. The last of these *dharani* is *Om-sammaya satoban*, which we have mentioned above (p. 490⁴).

All this leads up to what appears to be the central portion of this temple-service, the ceremony of *abhiṣeka* (Jap. *kuanjô*, 'besprinkling'), a kind of baptism mystically performed, and transferred by a subsequent *ekô* to the credit of the deceased.⁵ The *abhiṣeka* is threefold, and is followed by an *indô*, 'guiding words,' very much the same as that used in the Zen ceremonies. But the Shingon *indô*, which is traditionally attributed to Kôbô Daishi, is not in writing, neither are the *dharani* used in this, the most sacred part of the service. They are all handed down orally from teacher to disciple, and it is not every Shingon priest that knows them. Next follows a passage from the *Dainichikyô* (Mahāvairocana-bhisambodhi Sūtra), also with a secret accompanying *mantra*:

⁶ Without leaving this physical body, man may attain to the supernatural power of *jinkyôtsû* (Skr. *radhipāda*, 'means of attaining magic power'), and, walking freely about in great space, may comprehend the secret of the body.⁷

Then come: *abiraunken* (five times); the *mantra* and gesture of the eye of Buddha (not committed to writing); a list of the succession of teachers, with the *kaimyô* of the deceased inserted at the end; separate *mantras* and gestures for all the six elements composing the 'enlarged Abraxas'⁸—earth, water, fire, wind, emptiness, consciousness; the

¹ It is an essential feature in Shingon teaching that all material objects—stones, trees, the human body, etc.—partake of the Buddha nature.

² If in the present writer is right in his conjecture that *Abarakia* or *Abiraunken* connects Jap. Shingon with Alexandrian Gnosticism, we may also be justified in supposing that the *abhiṣeka* thus administered in the Shingon funeral rites throws much light on the 'baptizing for the dead' mentioned by St. Paul (1 Co 15²⁹).

³ The fivefold scale of elements is represented by *Abarakia*. When a sixth element, *alaya* ('consciousness'), is added, the word becomes *Abarakia*. The addition of this sixth element is sometimes, though without good authority, attributed to a priest named Ryugyô Hôshi, about A.D. 1140. We believe this to rest on a misinterpretation of the *Hôjôki*, 'History of the Hôjô Regents.' See *Romaji* for 20th Nov. 1909.

fujumon, 'address,' describing the deeds, character, etc., of the deceased; the repetition of several *mantras* and hymns; another formula of *ekô*, transferring all the merit thus accumulated to the credit of the deceased; the dedication (figuratively) of the staff that is to accompany the deceased on his journey through the valley of the shadow of death; a number of prayers never committed to writing; and a similar manual gesture on the 'most secret Nature.' This brings the service to a close.

3. *Ceremonies of the Tendai.*—The Tendai has always been a sect with strongly developed Erastian tendencies. In the days of its initiation in China, it was the ally of the Sui and Tang Governments in their efforts to control the heterogeneous mass of teaching calling itself Buddhist, which was flooding China in the 6th cent. A.D. Introduced into Japan about A.D. 800, it served the same ends. And, when Iyeyasu had brought peace to Japan in the 16th cent., the Tendai played a considerable part in the spiritual policing of the country which was carried on during the whole of the Tokugawa period. The Tendai rites which we are about to describe were those observed at the obsequies of Viscount Takamatsu (August 1904).

(1) *Ceremonies in the house: the otogi, or 'wake.'*—The ceremonies begin with the adoration of the Three Precious Things. The celebrant (*indôshi*) thus begins:

'I take my refuge in Buddha. May all sentient beings comprehend the great Path, and raise their thoughts towards the Supreme Object!'

'I take my refuge in the Law. May all sentient beings (follow my example, and), plunging deep into the Treasure House of the Scriptures,¹ acquire knowledge as vast as the sea!'

'I take my refuge in the Order. May all sentient beings (following my example) attain to positions of rule in the great assembly!'

Then follows what is called the instructive stanza, as taught by the previous Buddhas, the predecessors of Sâkyamuni:

'It is our prayer that all sentient beings may refrain from the commission of sin, that they may do good, and purify their own minds. This is the teaching of all the Buddhas. We worship the assemblage of the Saints.'

The Stanza of Evening:

'Hearken to the Stanza of Impermanency under the similitude of evening. When this little day is over, our lives will end and we shall disappear. We are here like fish in a shallow (basin of) water. O ye Bhiksus, is there anything in the world that is pleasurable? Exert yourselves with diligence, and lose no time in saving yourselves from the fire. Meditate on the impermanency of material objects which are empty as the void, be diligent, be not slothful.'

The Stanza of Impermanency:

'All composite things are impermanent, for they are liable to growth and decay. They spring up into existence, and perish. Their extinction is bliss. The Lord Buddha has realized Nirvāṇa and banished for ever birth and death. He that wills to listen to this teaching with his whole heart shall gain immeasurable happiness.'

The Six 'Fors':

'For all believers² in the Ten Quarters, let us meditate on the Tathāgata Sâkyamuni. (One bell.)'

'For His Majesty our Emperor, let us meditate on Yakushi Rurikô Nyorai.³ (One bell.)'

'For the four "benefactions"⁴ in the Three Worlds, let us meditate on Amitâbha Nyorai. (One bell.)'

'For our Great Teacher, Dengyô Daishi,⁵ and all the Venerable

¹ The Tendai is one of those sects which profess to base their tenets on the whole vast Canon of the Mahāyāna.

² The Jap. word is *danna* (Skr. *dānam*, 'generosity'). Giving is the first duty of a layman. The word has come to mean 'householder,' 'layman,' and is commonly used by servants, etc., in addressing their master.

³ See above, for the connexion of Tendai with the State. Yakushi (Bhaiṣajyaguru) is the master of medicine, who went about healing sickness and had twelve disciples. He was a very favourite god during the Nara period.

⁴ The *shi-on* represent the gratitude we owe for the benefactions we receive from (1) our parents, (2) our rulers and the State, (3) sentient creatures in general, and (4) the Three Precious Things of religion.

⁵ Dengyô Daishi, founder of the Japanese Tendai, A.D. 767-822.

Ones, let us meditate on the Saddharmapundarika Sūtra. (One bell.)

For all the gods,¹ let us meditate on the Mahāprajñāpāramitā Sūtra. (One bell.)

For all Sentient Beings in the Dharmadhātu, let us meditate on the Bodhisattva Mañjuśrī. (One bell.)

The Four Reverential Invitations :²

'There is delight in the scattering of flowers (*bite*). We reverentially invite all the Tathāgatas in the Ten Quarters to alight on this sacred altar. There is delight, etc.

We reverentially invite Śākyamuni the Tathāgata to alight on the sacred altar. There is, etc.

We reverentially invite Amitābha the Tathāgata, etc. There is, etc.

We reverentially invite Avalokiteśvara, Mahāsthāmaprāpta (Kwannon and Seishi) and all other Bodhisattvas, etc. There is delight in the scattering of flowers.'

Namu Amida Butsu, Amida butsu, Amida butsu.

The reading of the *Sukhāvativyūha* (Amida Kyō).

Namu Amida Butsu, Amida butsu, Amida butsu.

Prayer of Transference (*ekō*) :

'All the benefits arising from the invocations we have just made, we transfer to the Lord Amitābha in the Land of Bliss. May we be graciously accepted in the great sea of His Vow, may our karma be destroyed, and may we realize *samādhi* ('supernatural tranquillity'). May the Devas and deities of the sky and the earth experience an increase of their dignities, and may the gods (Shinto) assembled in this place take pleasure in what we do! May the Great Teachers who have passed away accomplish Perfect Enlightenment, and may all souls, noble and mean,³ attain to Buddhahood! May Jikaku, our great Teacher,⁴ experience ever-increasing happiness, and may our benefactors during the last seven generations be re-born in the Land of Bliss! May the venerable soul that has now passed away be re-born in the Land of Bliss and attain to Buddhahood, seated on a lotus-seat of high degree! May the Court of our Wise Emperor be preserved from harm, and may the reign of His Majesty be long drawn out. May the country be peaceful, and may religion prosper! May the laymen in the Ten Quarters be free from evil and sorrow, and may the fraternity of monks who invoke the names of the Buddhas accomplish perfection! When they come to the end of their lives, may they not miss the ascent to the Land of Bliss, and may they meet Amitābha and his attendant hosts face to face! May their desire for *bodhi* ("supreme knowledge") never fail them, and may they be the leaders of all sentient beings in the Three Worlds and in Dharmadhātu! And may they all, partaking, as they do, of the same spiritual nature, alike attain to *bodhi*!'

The post-*ekō* hymn :

'May we, living in this world, be as though we lived in the heavens, like the lotus untarnished by the water! Prostrate on the ground, we worship the Pre-eminent One, with hearts purer than the lotus.'

Adoration of the Three Precious Things.

The Instructive Stanzas preached by the Seven Previous Buddhas.

The Confession of Sins :

'May the three obstacles (passion, *karma*, and the secondary results of *karma*, Jap. *hōshō*) be removed absolutely and universally for the benefit of the four benefactors (note 4 above), and for beings in all spheres of existence and throughout the *dharmadhātu*. For their sakes, we repent of all our sins, from the bottom of our hearts, in the presence of all the Buddhas in the Ten Quarters.'

Gonenmon, or meditation on the Five Gates of praising Amida, by which men enter into the Pure Land. These are all taken from Vasubandhu's treatise on the Pure Land (*Jōdoron*). They are: (1) *Raihaimon* ('the Gate of Worship'); (2) *Santammon* ('the Gate of Praise'); (3) *Sagwanmon* ('the Gate of Prayer'); (4) *Kwansatsumon* ('the Gate of Observance'); and (5) *Ekōmon* ('the Gate of Transference'). The following is an abbreviated form of the *Gonenmon*, as recited at a Tendai funeral :

'With my head touching the ground I adore Amitābha the Sage, the noblest of two-footed beings, whom gods and men

¹ i.e. the Shinto deities of Japan, adopted into the Buddhist pantheon.

² Similar forms will be found in the sects of Jōdo and Shinshū, which, originating in the Tendai, developed the doctrine of Amida. In the Nichiren, which rejects Amida, they are not found. The Zen derived neither doctrines nor ritual from Tendai, nor did the Shingon.

³ It was from this that Genshin (A.D. 942-1017), the first Japanese Patriarch of the Shinshū, derived his teaching about the twofold Paradise, *Kwedo*, in which the sins of the 'mean' souls are purged, and *Hōdō*, in which noble and mean alike attain to Perfection. This is brought out in Shinran's poem *Shōshinge*.

⁴ Jikaku, the second Patriarch of the Tendai (A.D. 794-864).

delight to honour, who dwells in the choice Paradise of ease and bliss, surrounded by an innumerable host of the Sons of Buddha. The pure golden body of the Buddha is like the king of Mountains, and his footsteps, when he walketh in tranquillity, are like those of the still-treading elephant. His eyes are as pure as the lotus. I, therefore, with my head touching the ground, adore the venerable Amitābha. His face, good, round, and pure, is as that of the moon at her full. His majestic brilliancy is as that of thousands of suns and moons. His voice is as mighty as that of the celestial drum (thunder) and as soft as the voice of the Kariobings bird. Therefore I, placing my head on the ground, adore the venerable Amitābha. . . .

Thus I worship the Buddha and praise his merits. May the *dharmadhātu* be adorned (with many virtues)! May sentient beings, arriving at the term of their lives, go to the Western Land, and, meeting with Amitābha, may they accomplish Buddhahood! May sentient beings go and be re-born in the Paradise of Bliss! May they go and meet with Amitābha, the Venerable One!'

Next follow the burning of incense and the presentation of oblations (cakes, tea, hot water sweetened with sugar, boiled rice). The chief mourner, the family, and relatives offer incense. Then are read passages from the Saddharmapundarika Sūtra, illustrating the various 'gates' of the *Gonenmon*, and thus the *otogi* ceremony (which is supposed to take place on the day of death) is brought to a close.

(2) *Ceremonies in the house : the first part of the actual funeral*.—This is conducted by the *fukudōshi* ('second celebrant'), with a choir of six assistants, the first celebrant (*dōshi*) awaiting the cortège at the temple.

The Four Invitations (as in the *otogi*).

Stanza of Repentance :

'All the evil *karma*, etc. (see above, 'Ceremonies of the Zen,' p. 489b).

The three Refuges :

'Hail be to, and I take refuge in, Buddha.

" " " Dharma.

" " " Saṅgha.

I take refuge in Śākyamuni, chief of two-footed beings.¹

" " " Dharma, chief of lustless things.

" " " Saṅgha, noblest of congregations.

I have finished taking refuge in Buddha.

" " " Dharma.

" " " Saṅgha.'

The General Vows (*sōgwan*) :

'Sentient beings are numberless. May I make them all traverse the sea of *samsāra* ('metempsychosis')!

Evil passions are endless. May I help sentient beings to destroy them!

The gates of the Law (Scriptures) are infinite. May I cause sentient beings to understand them!

Supreme Buddhahood is ineffable. May I make sentient beings attain to it!'

Hyōhaku (see under 'Shingon,' above, p. 491').

Chanting of a Sūtra ; either the *Sukhāvativyūha* or the *Saddharmapundarika*.

Post-*ekō* hymn (as in the *otogi* above).

Burning of incense and offering of oblations (as above).

Chief mourner, family, and relatives burn incense.

The Invocation of the Buddhas in the Ten Quarters.

'Hail to the Buddhas in the Ten Quarters.

" " " Dharma " " "

" " " Saṅgha " " "

Hail to Śākyamuni Buddha.

Hail to the Buddha Prabhūtaratna (mentioned in *Saddh.*).

Hail to Śākyamuni, whose body is divided into the Ten

Directions.

Hail to the Saddharmapundarika Sūtra.

" Mañjuśrī the Bodhisattva (Monju).

" Samantabhadra the Bodhisattva (Fugen).

This ends the ceremonies in the house.

(3) *The ceremonies in the temple*.—On arrival at the temple, the bell is tolled, and the choir of clergy take their seats, followed by the celebrant

¹ The Tendai very generally identify Śākyamuni with Amitābha. Hence the application of the same epithet to both. In the *Shinshū*, which derives much of its terminology from Tendai, this identification is known as *ni-san-tachi* ('the identity of the two Blessed Ones').

and his assistant. The choir recite, in debased Sanskrit, the fourfold hymn of Wisdom:

'Om basarasataba shigyaraka.
basararatnamadotaran.
basaradarumagaganai.
basarakarumakaro bava.'¹

The celebrant now goes up to the High Altar, and there makes a *mudrā* ('manual gesture') known as *kōmyōgu*.²

An introit is sung, the 'Hymn of taking the seat.'

Indō, 'guiding words,' spoken by the celebrant.

The praise of the *shakujō*, 'pilgrim's staff':

'I take a staff in my hand (does so). May all sentient beings follow my example!'

The whole choir say with the celebrant:

'I give a feast of charity, and, showing the true Way, make offerings to the Three Precious Things (*bia*). With a pure mind I make offerings to the Three Precious Things (*bia*). Striving to raise a pure mind, I make offerings to the three gems (shakes the *shakujō* twice); may all sentient beings follow my example! May I become the Teacher of Devas and men; may I fill the Heavens with my vows; may I cause suffering beings to traverse the sea of *samsāra*, and, guarded by spiritual beings, to make offerings to the Three Precious Things! May they meet with Buddhas and obtain the Buddhahood! (Shakes the *shakujō* twice.) May all sentient beings learn the sacerdotal Truth³ (*shintai*); may they treat their fellow-beings with respect and sympathy; may they learn worldly truth and treat their fellow-beings with respect and sympathy; may they learn the doctrine of the One Vehicle,⁴ and treat their fellow-beings with respect and sympathy; may they respectfully make offerings to the Three Precious Things—to Buddha, to Dharma, to Saṅgha—to each individually, to all three conjointly (*itai sambō*). [The *shakujō* is shaken twice.] May all sentient beings practise Śīlapāramitā (the perfection of character), . . . Dānapāramitā (the perfection of generosity), . . . Kṣāntipāramitā (the perfection of long-suffering), . . . Viryapāramitā (the perfection of fortitude), . . . Dhyānapāramitā (the perfection of meditation), . . . Prajñāpāramitā (the perfection of wisdom), . . . and may they treat their fellow-beings with benevolence and sympathy! [The *shakujō* is shaken twice.] Buddhas in the past have taken up the pilgrim's staff and have been enlightened. Buddhas in the present have taken up the staff and have been enlightened. Buddhas in the future will take up the staff and be enlightened. I therefore take up the staff and make offerings to the Three Precious Things (*bia*).'

The celebrant comes down from the High Altar and burns incense.

Offerings of tea and hot water with sugar.

Lifting the coffin off the bier and closing it.

The assistant (*fukudōshi*) reads the Funeral Oration.

Chanting of a Sūtra.

Chief mourner, family, and relatives burn incense.

General congregation follow their example.

When all who wish have burned incense, the celebrant and choir leave the temple.

So end the funeral ceremonies of the Tendai.

4. Ceremonies of the Jōdo.—The Jōdo sect, founded by Hōnen Shōnin in A.D. 1174, is an

¹ This in Sanskrit would be somewhat as follows:

'Oḥ vajra sattva saṅgraha!
vajraratnamanuttaram!
vajradharma gaganai!
vajrakarmakaro bhava!'

'Hail! Store of Diamond-Essence! Diamond-Jewel that hath none higher! Heaven of the Diamond-Law! Be thou working the Diamond-Karma!'

² *Kōmyōgu* is very possibly a Manichaean word. It was used in the designation of the Manichaean temples (cf. Lloyd, *Shinran and his Work*, Appendix i and ii).

³ There is a distinction made in Tendai (also in Shinshu) between the 'noble' and the 'mean,' just as Manichaeans were divided into 'hearers' and 'perfect.' For the hearers only a very simple creed was required (Jap. *zokutaimon* [cf. Lloyd, *op. cit.* p. 109]). A more elaborate form of faith and life was required from the perfect (*shintaimon*), which included assent to theological truths.

⁴ The Jōdo sects maintain that the One Vehicle is the one by Faith in Amida, also that the Tendai, if true to their own doctrinal standards, are committed to this position. It is perhaps worth our while to note as an interesting point that Amida is, to Tendai, Jōdo, and Shinshu, pre-eminently the Buddha, that the character for Buddha was introduced into China A.D. 64, that it signifies 'the man with the arrows and bow' (Emp. Ming-ti's Vision: cf. Rev. G.), that in the legend it is connected with a 'white horse,' and that, divided into its constituent elements (man, arrows, bow), it represents the first three letters of the name of Jesus.

offshoot of the Tendai, or rather an attempt to call back the Tendai to that sole Faith in Amitābha which the Jōdo sects maintain to be the essential feature of primitive Mahāyānism.

(1) *The service in the house (Gongyōshiki).*—Opening verse of the regular service:

'May our minds be purified as the incense-burner! May our minds be bright and clear as the fire of Wisdom!

Burning the incense of morality and tranquillity, thought by thought, make offerings to the Buddhas in the Ten Quarters, in the Three Worlds.'

Sambōrai, or worship of the Three Precious Things:

'With all our hearts we pay supreme honours to the Supreme Buddhas in the Ten Quarters. . . .

With all our hearts we pay supreme honours to the Supreme Dharmas in the Ten Quarters. . . .

With all our hearts we pay supreme honours to the Supreme Saṅghas in the Ten Quarters. . . .

Shubujō, or fourfold Invitation, as in the ceremonies of the Tendai: (1) all the Buddhas, (2) Śākya-muni, (3) Amitābha, (4) Kwannon, Seishi, and the other Mahābodhisattvas.

Tambutsu no ge, or hymn of praise for all the Buddhas:

'The handsome physical bodies of the Tathāgatas are unparalleled in the Universe. They are incomparable beyond conception. Therefore, behold, I worship them. The physical bodies of the Tathāgatas are inexhaustible and everlasting, and their Wisdom is as their bodies. Dharmas are infinite. Therefore I take refuge in them.'

Ryakusange, or abridged form of confession:

'All the evil *karmas*, etc., as in the Zen and Tendai.

Sankikai, or the threefold Taking of Refuge:

'I take refuge in Buddha . . . Dharma . . . Saṅgha.'

The ceremony of tonsure. While the head of the corpse is being shaved, the name of Amitābha is being repeated ten times. This is known as *Jūnen*. The number of repetitions shows that the shaving occupies only a short time. It is merely symbolical. In the Shinshu sect there is a ceremony called *Kamisori*, 'head-shaving,' roughly corresponding to Christian confirmation, which implies a formal acceptance of and admission into the sect. It is administered by the head of the sect only, and consists in passing a golden razor lightly over the hair of the candidates as they kneel before him. The ceremonial shaving of the dead is very often nothing more than this.

Kaikyōge, or hymn introductory to the reading of the Scriptures:

'The Law, which is pre-eminent, profound, and sought out,¹ can rarely be met with, scarcely once in a thousand *kalpas* ["ages of the world"]. But we have seen and heard, and do accept it. May we understand the true meaning of the Tathāgata's teaching!'

Reading of a Sūtra—generally a chapter from the Amitayurdhyāna Sūtra, or the Aparimitāyus Sūtra. Sometimes also the Amitābhatathāgata-muladhāraṇi is read:

'In accordance with the Original Vow of the Buddha we pray that we may hear His Name, and be re-born in the Land of Bliss. On being re-born in that land, may we all obtain the safe position from which there is no falling back! The 84,000 doors,² each different from the others, were opened as means of escape from ignorance, *karma*, and the results of *karma*. A sharp sword verily is the name of Amitābha Buddha. He that shall invoke it but once and meditate thereon,—his sins shall be destroyed for ever.'

Hotsugwanmon, or the raising of vows:

'Humbly we pray that our minds, at the hour of death, may be undistracted, unconfused, and in possession of all their faculties. With mind and body free from pain and filled with joy, in the state of contemplation, and in the presence of the Holy Ones (Amitābha and his 25 Bodhisattvas), by the merits of the Buddha's Vow, may we have a favourable re-birth in the Land of Amitābha.

On being re-born in that land, may we obtain the Sixfold Supernatural Power (*roku-jin-dō*), which shall enable us to assume visible forms at will and to manifest ourselves in the Worlds of the Ten Quarters for the Salvation of mankind. The Sky and the Law are infinite in extent; our vows are co-

¹ Not in the Biblical sense of 'sought out of them that have pleasure therein.' The allusion is to the Vow of Amitābha, which was framed after a careful survey and examination of all the Buddha-fields.

² i.e. the doctrines of Buddhism.

extensive with them. With these vows we take refuge in Amitābha Buddha with our whole hearts.

Kōmyō henjō
Jippō sekai
Nembutsu shuyō
Sesshufusha,

Shining upon all the worlds in the Ten Quarters with the bright rays issuing from his halo, the Buddha accepts the beings who call upon him. He will never abandon them.'

Invocation of Amida's name.

Ekō, 'transference':

(1) Special: 'May the soul of the newly-deceased N. (*kaīmō*) migrate to the pure fields, and may his *karma* give up dust-like trouble! May he see Buddha, hear the Law, and rapidly reach the pre-eminent way!'

(2) General: 'May the merits resulting from this service be transferred to all sentient beings alive! May they all lift up their hearts to Enlightenment, and all be re-born in the land of ease and comfort!'

Shinseigwan, or Four Holy Vows (see Tendai rites).

Sanrai, or Worship of the Three Precious Things: *Namu Amida butsu* is repeated nine times, three times for each.

This concludes the service in the house. The procession is now formed and starts for the temple.

(2) *The service in the temple* is almost a replica of that in the house. It begins with *gongyōshiki*, *sambōrai*, *shibujō*, *ryakusange*, and *tambutsu no ge* (see above). Then follow the beating of cymbals (*nyōhachi*), the *indō*, or 'guiding words,' *kaikyōge*, the reading of Scriptures, *kōmyō henjō*, etc., the invocation of Buddha's name, and another *ekō*:

'May the merits arising from this chanting of the Sūtra and the invocation of Buddha's name be transferred to the newly-deceased N. May his soul migrate,' etc.
(The rest as in the *ekō* above.)

Then follow invocations of Amida's name, the Four Holy Vows (as in Tendai), and the adoration of the *honzon*, or image of Amitābha. This brings the service to a close.

5. Ceremonies of the Shinshu.—The Shinshu sect, founded by Shinran Shōnin in A.D. 1224, carries still further than the Jōdo the doctrine of salvation by Faith only. The account of the ceremonies described in this section is taken from the *Fuzokugwahō* for Feb. 1894, and gives a summary view of the obsequies of Kōshō, the 21st Abbot of the Eastern Hongwanji, who died at Kyoto on 15th Jan. 1894.

(1) *The worship of the corpse*.—This ceremony is not peculiar to the Shinshu sect, but is observed in the case of all monks and priests [the Shinshu clergy are not monks; they marry and live with their families]; but naturally, in the case of the head of a great organization, such as the Hongwanji, the ceremonies connected with this worship were more carefully carried out than usual.

Three days after death, the corpse was dressed in silk crêpe robes of a grey colour, with a small *kesa* ('stole') over the shoulders, and was placed in a sitting posture on a *kyōkuroku* ('camp-chair') in one of the rooms of the Abbot's official residence. The face was covered with a white cloth, so that only the eyes were visible. Screens were set up behind the chair and on either side of it, and in front there was a slight curtain of split bamboo, which could easily be drawn up and down. Six laymen, in *kanishimo* (upper and nether ceremonial garments) of a grey colour, were constantly in attendance, to draw up the curtain whenever a group of worshippers presented themselves. Many thousands of Shinshu believers thus offered their last respects to the deceased prelate, the worship consisting of a silent prostration before the corpse.

On the following day the corpse was put into a coffin and removed to another apartment, where similar worship was offered before it. In this case, however, a scroll-picture of Amitābha was suspended on the wall behind the coffin, to represent the idea that the deceased had now passed

definitely under Amitābha's protection. Immense crowds of worshippers from every part of Japan came to worship.

(2) *The farewell to the corpse*.—This took place on the following day. Three short ceremonies were observed, the first in the apartment where the coffin had been lying in state since the previous day. It was then removed to the *daishidō*, or hall set apart for the worship of Shinran Shōnin, the founder of the sect, and from there to the *Amidadō*, or Hall of Amida. In each of these places a service was held, consisting very largely of repetitions of the *Namu Amida butsu*¹ and the burning of incense. Not unnaturally the third service was esteemed the most dignified. Not only blood relations, but proxies representing the princes of the blood, and the heads of other subdivisions of the Shinshu, came forward to burn incense, and, immediately after this last ceremony was over, the procession was formed and the funeral cortège started for Uchino, where the main obsequies were to take place.

(3) *The procession* need not delay us. It was on the same general lines as the procession mentioned at the beginning of this section (above, p. 489*). Only, as befitting a personage who, in addition to being the hereditary head of one of the largest of the Buddhist sects in Japan, was a peer of the realm, and a collateral descendant of the great Fujiwara family, it was, of course, a very imposing procession, more than a mile in length.

(4) *The service at Uchino*.—Uchino was in former days the cremation-place connected with the Eastern Hongwanji temple. But the growth of the city has rendered it unsuitable for the purpose. In the case, however, of the funeral of an Abbot, there are historical reasons why a part of the service should still be held there. An open space had therefore been curtained off, large enough to seat the great number of invited guests, and it was here that that part of the service took place which in ordinary cases would be held in the temple. (The farewell to the corpse, thrice repeated, corresponded to the service in the house at ordinary funerals. It followed, then, almost exactly the same order as is observed in Jōdo funerals.) A temporary crematorium had been erected for the symbolic cremation to be held here. The chief mourners were the new Abbot and his wife (the *urakata*). The actual cremation took place later at Kwazan, where the regular crematorium is situated.

The service, which was of the regular type,² followed the usual order:

The Four Invitations.

The *Shōshinge*.³

Nembutsu wasan,⁴ or hymn in praise of Buddha, followed by invocations of Amida's name.

Ekō, as in Jōdo sect, with the following addition:

Gwanmishi Kudoku,
Byōdōse issai,
Dōhatsu bodaiśhin,
Ōjō anrakukoku,

We pray that the merit of this service may be given equally to all sentient beings, that they may lift up their minds to the attainment of enlightenment, and ascend for re-birth in the Land of Ease and Comfort.'

¹ It is to be noted that the common interpretation given to these words is 'Believe in (trust) me; for I will save you.' This meaning, which has been read into, not out of, the Sanskrit words, is interesting.

² In the memorial service held by the Shinshu in Tokyo in honour of King Edward vii., the form approximated much more closely to the Tendai ritual. The explanation of this will be found in the Tendai origin of the Shinshu, and also in the fact that it was not a funeral service proper.

³ This is a poem by Shinran Shōnin giving an account of the transmission of the Amida doctrines. For text and tr. see Lloyd, *Shinran and his Work*, p. 35.

⁴ *Wasan* are hymns of praise composed in Japanese. The Shinshu sect, which, to its credit, has always used the vernacular whenever possible, is particularly rich in these hymns, some of which are of very great interest.

Symbolical cremation. The Abbot entered the temporary crematorium and lighted some straw, and, as the smoke issued from the building, it was accepted as an actual cremation. This was, of course, a special feature of this particular funeral. *Shōshinge* again.

Burning of incense by mourners, etc.

The coffin was now removed for the actual cremation.

(5) *The cremation.*¹—This was carried out semi-privately at Kwazan, only the new abbot, near relatives, old body-servants, and the superintendent of the crematorium being admitted into the curtained-off space around the furnace. The pyre was made of pine logs skilfully arranged on a hearthstone, and was attended to by four master-carpenters in white robes, overlooked by two priests in black. The Abbot, as chief mourner, having already, as we have seen, symbolically lighted the fire, it was apparently not necessary for him to do it actually on this occasion; though in ordinary funerals this is a duty which always falls upon the chief mourner. It must be a 'pure' fire (no sulphur or brimstone to be used in the kindling), and, when once kindled, is kept alive not only with additional fuel, but also by constant libations of *natane abura* ('rape-seed oil'). It is desirable that the coffin, as in this case, should be so thick that the body inside may be completely consumed before the sides of the coffin fall in; but this is, of course, merely a counsel of perfection not applicable in all cases.

When the cremation was over, the remains were reverently collected, with a short service (not used in ordinary cases), put into a small box, covered with a white silk cloth, and carried back to the late Abbot's residence, where they were privately disposed of in a suitable manner. A certain amount of secrecy was observed on this occasion. There existed for many centuries a bitter feud between the parent sect of the Tendai and her more prosperous but rebellious daughter, the Shinshu. When Rennyo Shōnin, the greatest of all the successors of Shinran, died in A.D. 1499, the jealous Tendai monks made an assault on the procession that was carrying home the sacred relics, and tried to seize and dishonour them. Since that time it has been customary, at the cremation of a Hongwanji Abbot, to bring the ashes home in secret, by some circuitous route, and under guard.

In collecting the bones, etc., after a cremation, it is customary to pick them up with chop-sticks, one of wood, and one of bamboo. Hence, in ordinary life it is deemed most unlucky to use chop-sticks of different materials, e.g. one of wood and one of bone. Shingon believers send the bones to Kōyasan; amongst the Shinshuists in Echigo and Shinshu they are often preserved in the house. In most cases, however, they are interred. Great efficacy is sometimes attributed to these relics (*shari*).

6. Ceremonies of the Nichiren sect.—The Nichiren sect, founded in A.D. 1253, differs from all other sects of Buddhism in that it concentrates the whole of its attention on the Saddharmapundarika Sūtra, which it almost personifies. This Sūtra consists of two parts, known as *Shakumon* (chs. i.-xiv.) and *Hommon* (chs. xv.-end); and the peculiar position of the Nichiren School is that for it the latter is the most important portion of the Sūtra, while all other Japanese sects lay special stress on the former. Nichiren himself claimed to be the first of the Four Great Bodhisattvas mentioned in the latter part of that Sūtra as rising out of the earth at the head of a large company

of believers. The services are very long; but they admit of condensed statement, because they consist almost entirely of readings from the Saddharmapundarika Sūtra.

(1) *The house ceremonies.*—(a) *Makuragyō*, entrusted to a minor priest (*shokesō*).

Kwanjōmon, or words of Invitation:

'We humbly invite Jiryō,¹ the *honzon* (principal idol) of the True Teaching,² to be present.

Glory to the Saddharmapundarika Sūtra, in which are contained the Three Mysteries of the True Teaching.³

Glory to Śākyamuni-Buddha, who is the great benefactor of sentient beings, who accomplished enlightenment before innumerable ages, and who alone is the Master of the Teachings.⁴

Glory to the Buddha Tahō,⁵ who certified to the teachings of the Saddharmapundarika Sūtra.

Glory to the Buddhas mentioned in the *Hommon* ('Real Teaching'—see above), as also to those spoken of in the *Shakumon* ('Temporary Teaching'), in this and in other worlds.

Glory to the Great Bodhisattvas in the thousand worlds, who were taught by the Buddhas of the *Hommon*, and who issued forth in troops out of the earth, when the *Kenhōtōhon* was being preached.

Glory to the Three Everlasting Precious Things mentioned in the Saddh. Sūtra, in which the Temporal Buddhas are secreted (swallowed up) and the True Buddha revealed.

Glory to Nichiren,⁶ the Great One, the founder of the sect, our mighty leader, who has been entrusted by Śākyamuni with the Secrets of the True Doctrine.

Glory to the successive Patriarchs (of Nichirenism). May all the Devas and good gods, the protectors of the True Faith, descend upon the altar and watch our worship.⁷

Reading of *Hōbenhon*, sect. 2 of Saddh. Sūtra.

Juryōhon, sect. 16

Much repetition of the *Daimoku*,⁸ or the true standard of faith and worship (*Namumyōhōrenge-kyō*, 'Glory to the Lotus-Scripture of the Wonderful Law').

Ekō, 'prayer of transference.' The gist of the prayer is that, by the virtue of the Sūtra, sentient beings may attain to Buddha-ship in their bodies.

Bestowal of a *Kaimyō*. This service may be performed before or after death, or may be entirely omitted. It is of great importance to the student, as giving the doctrinal position of the Nichiren body.

(b) *The wake (otogi)*. This is also entrusted to a minor priest. The whole of the Saddharmapundarika is chanted once, or sect. 16 thirty-six times. Sermons are delivered at intervals—the edification both of the living and of the dead.

The tonsure. A leaf of *shikimi* is cut with a razor over the head of the deceased.

(c) The home funeral service, by one or more minor priests. Five banners are prepared and set up, inscribed as follows:

(1) 'Glory to Prabhūtaratna, to the Saddh. Sūtra, to Śākyamuni, to Nichiren, the Great Superior Teacher of the Latter Days.'

(2) 'Glory to Jōgyōbosatsu,' i.e. to the Nichiren, first of the Four Great Bodhisattvas.

(3) 'Glory to Muhengyōbosatsu,' second of the Four Great Bodhisattvas.

(4) 'Glory to Jōgyōbosatsu,' third of the Four Great Bodhisattvas.

(5) 'Glory to Anryūgyōbosatsu,' fourth of the Four Great Bodhisattvas.

Four smaller banners are also prepared and set up, and inscribed as follows:

1 *Juryō* is a portion of the Saddh. Sūtra personified (sect. 26), and treated as the embodiment of the Deity.

2 Nichirenists maintain that there are three stages of Buddhist Teaching—the Smaller Vehicle, the Larger, and the True (*Jitsuryō*).

3 The Three Mysteries are: (1) The revelation of the true object of human worship made in the Sūtra, (2) the establishment of the true standard of faith and worship, (3) the true teachings of morality.

4 Observe that the Śākyamuni of Nichirenism is only incidentally the historical Gautama.

5 *Tahō* (Skrt. *Prabhūtaratna*) is a Buddha, previous to Śākyamuni, who, in the Saddh., is seen descending upon the latter as he teaches, in a *stūpa*; who is dead, then revives, and, after commending the teachings which Śākyamuni is giving in the Sūtra, becomes in some mysterious way identified with him. This account appears in *Kenhōtōhon* ('opening of the stūpa'), the 12th section of the Saddh. Sūtra (Chinese). It is to be noticed that Tahō's Paradise is represented as in the East.

6 Nichiren is supposed to have had the power of teaching committed to him by virtue of his being a re-incarnation of the first of the Four Great Bodhisattvas.

¹ The Japanese word for 'cremation' is *dabi*. It comes from the Pāli *jāpe* (causal of *jāpya*, 'to burn'), and is one of the few instances of the survival of a Pāli word in Japanese.

- (1) *Kaibutchiken*, i.e. 'May the deceased attain to the opening of a supernatural insight like that of Buddha!'
 (2) *Jibutchiken* . . . 'May he show forth a . . . etc. . . . !'
 (3) *Gobutchiken* . . . 'May he understand, more and more . . . etc. !'
 (4) *Nyibutchiken* . . . 'May he enter into . . . etc. . . . !'

Whilst the banners are being set up, the priests read—

Hōbenhon, sect. 2 of the *Saddh. Sūtra*.

Juryōhon, sect. 16 " " (or only its *gāthās*).

Ekō, as before.

(2) *Ceremonies at the temple*.—

Kwanjōmon (see above).

Juryōhon (prose sections only).

Beating of drums and cymbals.

After this a minor priest says in a distinct voice :

'*Nyokyakukenyaku*
Kaidajōmon,

Lo! the Gate of the Great Castle has been opened, and the bolt has been taken away' (from the *Kenhōtōhon*, sect. 12).

Offerings.

Indō, pronounced by the leader (*dōshi*).

Chanting the *gāthā* portions of sect. 16 of the *Saddh. Sūtra*.

Incense.

The *Daimoku*, oft repeated.

Ekō.

The ceremonies come to a close. There seem to be no ceremonies specially connected with cremation or interment.

See, further, **art. FESTIVALS** (Japanese).

LITERATURE.—The greater part of this article is based on information collected for the writer by his friend Mr. S. Tachibana, a Buddhist priest of the Zen sect. The other authorities have been cited in the text. A. LLOYD.

DEATH AND DISPOSAL OF THE DEAD (Jewish).—1. **Conception of death**.—Although there is uniformity, in a sense, in the physical phenomena of death, its character and circumstances and the impression which it makes vary in different times and places. In ancient Israel, death, like life, was more a matter of the family than it is now; it was not so much an occasion when an external professional element, represented by priests, lawyers, doctors, nurses, and hospitals, broke in upon or set aside the family. Again, violent deaths were more common; and the last illness of a dying man was not prolonged, as it is now, by the resources of medical science. In all probability the death-rate was much higher than it is with us, so that death was more common and familiar.

The impression made by death depends partly on belief as to its cause and as to the future of the individual after death. The modern mind is occupied with the physical cause of death, the particular disease, and the failure of remedial treatment. The Israelite and the Jew thought of death as an act of God; more especially a death in early years, or in the prime of life, or under exceptionally distressing circumstances, was often regarded as a judgment upon sin.

Death¹ was not the annihilation of the individual—at any rate, according to the ordinary Hebrew view. A feeble ghost of the dead man maintained a dim, shadowy existence in Sheol, the under world or Hades. But probably in early times other beliefs supplemented or replaced this view. There are traces of ancestor-worship and necromancy in ancient Israel, and these imply that the spirits of the dead could manifest themselves to the living, and could exercise some influence upon their fortunes. Samuel, for instance, appeared at the call of the witch of Endor and foretold the death of Saul (1 S 28). Although there is little positive evidence, it is probable that the popular

¹ Cf. W. H. Bennett, *Religion of the Post-exilic Prophets*, Edinburgh, 1907, p. 361 ff.

belief in ghosts prevailed in earlier as in later times. In Lk 24^{37a} the Apostles take the risen Lord for a ghost.

In a sense the Israelite looked forward to reunion after death, so far as this may be implied in such phrases as 'buried with his fathers' (2 K 12²¹), 'slept with his fathers' (1 K 2¹⁰); but there is nothing to suggest that he looked forward to any satisfying fellowship with his deceased brethren in a future life. Thus, for all practical purposes, death was a final parting.

As regards what happened to the individual when he breathed his last, death was thought of as the departure of the *nephesh* (נֶפֶשׁ), or vital principle;¹ though, curiously enough, *nephesh* is sometimes used in the sense of 'corpse' (Lv 19³⁰ 21¹ 22⁴ [all H], Nu 5² 6¹¹ 9¹⁰ [all P], Hag 2¹³).

Probably various primitive views prevailed in ancient Israel as to death and the individual after death, and these views were connected with general Semitic mythology; but the editors of the OT eliminated accounts of such crude superstitions, in the interests of orthodoxy and edification, so that only a few traces remain. A familiar myth is the death and resurrection of a god. Traces of this are found in the women weeping for Tammuz (Ezk 8¹⁴). According to Gressmann,² the account of the death and resurrection of the Servant of Jahweh in Is 53 is based on some such myth; of this possibly other traces are found in the references to מָוֶת לְבָנִים, 'mourning for an only son.'

The later books of the OT contain hints of a resurrection, which develop in the later literature, especially in the Wisdom of Solomon and the Apocalypses, into an express doctrine, so that for later Judaism and for Christianity—following Judaism—death became the portal to a future life. When Judaism evolved a hierarchy of angels, with proper names and special functions, there appeared among the rest, Samael, the Angel of Death. See **DEMONS AND SPIRITS** (Heb.) and (Jewish).

Later Judaism inherited or developed many curious fancies as to the hour of death; as, for instance, that the dying soul has a vision of the Shekinah just before its departure. Ben Kaphra, a Rabbi of the early Christian centuries, is quoted as saying :

'For three days the spirit hovers about the tomb, if perchance it may return to the body. But, when it sees the fashion of the countenance changed, it retires and abandons the body' (cf. *Expos. Gr. Test.* [1897] on Jn 11¹⁴).

2. **Disposal of the dead**.—The regular and legitimate mode of dealing with a corpse in ancient Israel was *burial*, and this has always remained the general custom of the Jews. *Embalming* was not an Israelite practice; when we read that Jacob and Joseph were embalmed (Gn 50^{2, 26}), we must clearly understand that they were treated as Egyptians, amongst whom embalming was the regular custom. In later times we are told that the body of Aristobulus was embalmed in honey (Jos. *Ant.* XIV. vii. 4). Embalming in the strict sense must be distinguished from the Jewish custom referred to in 2 Ch 16¹⁴ and in NT (Jn 19^{39a}, etc.) of anointing the dead body and placing it in or wrapping it up in spices. *Cremation*, amongst the Israelites, was exceptional. According to 1 S 31¹³, the men of Jabesh-Gilead burned the bodies of Saul and his sons, probably to prevent their falling into the hands of the Philistines. The fact that 1 Ch 10¹³ omits the burning, and that Josephus (VI. xiv. 8) states that the bodies were buried, is probably evidence of the repug-

¹ W. H. Bennett, *op. cit.* 228 ff.

² *Der Ursprung der jüd. Eschatologie*, Göttingen, 1905, p. 323 ff.

³ Am 8¹⁰, Jer 6³⁰, Zec 12¹⁰; cf. Cheyne, *The Two Religions of Israel*, London, 1911, p. 211.

nance of the Jews, at any rate in later times, to the cremation of the dead. The EV of Am 6¹⁰ speaks of 'he that burneth' a corpse; but the reference to burning the corpse is due to corruption or misunderstanding of the text. In some cases, however, criminals were burnt alive (Gn 38²⁴, Lv 20¹⁴ 21⁹), or their corpses were burnt (Jos 7^{15.23}). The picture in Is 66²⁴ of the corpses of sinners consumed by fire may have been suggested by the actual treatment of dead criminals. According to Kimchi¹ there were perpetual fires in the Valley of Hinnom for consuming dead bodies of criminals and animals. In Am 2¹ the burning of the bones of the king of Edom is an outrage which calls down inexorable doom on Moab.

Exposure without burial was a disgrace and a misfortune. Criminals or their representatives might be so treated (2 S 21^{10c}), but, according to Dt 21^{22c}, even their corpses were to be buried. Such a misfortune might befall sinners as the judgment of God (1 K 14¹¹, Jer 7³³, Ezk 26⁸, Ps 79³). To bury relatives, and even strangers, was a supreme duty; it is specially insisted on in To 1. 2, and is illustrated by the story of Rizpah (2 S 21^{10c}). Job complains that God allows the wicked man to have an honourable burial (Job 21^{22c}). The desecration of a grave was a kind of posthumous punishment (2 K 23¹⁶, Jer 8¹⁴).

There is not much evidence in the OT of graves dug in the earth in the modern fashion, though doubtless such were often used. The labours of the various Palestine Exploration Societies show that rock-hewn tombs were exceedingly common; they usually occur in groups. A space for a single corpse is hewn in the face of a rock and closed with a stone slab; this space was called a *kūk*, קוק (Jastrow, *Dict. of the Targumim*, 1886-1903, s.v.), by the Jews in later times. These are found grouped in one or more chambers in natural or artificial caves. One of the most interesting examples of such a burying-place is the cave of Machpelah, where Sarah, Abraham, Isaac, Rebekah, Leah, and Jacob are said to have been buried (Gn 23¹⁹ 25⁹ 49³¹ 50¹³). Masonry tombs with groups of *kūk*im are also found; and sometimes monuments were erected over tombs; for instance, Simon the Maccabee built an elaborate mausoleum at Modin for his father and brother (1 Mac 13²⁷⁻²⁹), no trace of which has yet been discovered.

In ancient times each family, like that of the patriarchs, had its own burying-place. Such burying-places would naturally be on the family estate. We read of Manasseh being buried in the garden of his own house, and Amon in the garden of Uzza (2 K 21^{18.26}). But usually the kings of Judah were buried in a royal burying-place in the city of David: e.g. Joash (2 K 12²¹), apparently near the Temple (Ezk 43⁷⁻⁹), the Temple being in ancient times an adjunct of the royal palace. Obviously dwellers in towns, who had not extensive gardens, would be required, as in later times, to bury their dead outside the walls. Poorer people would have no family burying-place, and we read of a public cemetery, 'the graves of the *bene hā'ām*' (2 K 23⁶, Jer 26²³). Apparently a measure of disgrace attached to burial there, 'in a pauper's grave,' so to speak.

The family desired to be together in death as in life, and men were anxious to 'sleep with their fathers,' i.e. to be buried in the family tomb. It is part of the punishment of Pashhur that he is to be buried in Chaldea (Jer 20⁶); and the Chronicler, in contradiction to the Book of Kings, states that certain wicked kings of Judah—Jehoram and Joash—were not buried in the sepulchres of the kings (2 Ch 21²⁰ 24²⁵). In post-Biblical times the Jews have had their own cemeteries. They still

retain their anxiety to be buried with their own people. Jews who are lax in many religious matters will keep the Day of Atonement in order that they may be buried in a Jewish cemetery.

A certain sanctity attached to the graves of ancient saints and heroes, and probably, as amongst the Muhammadans, such tombs became shrines; e.g. the tomb of Joseph at Shechem (Jos 24³²), and the tomb of the patriarchs at Machpelah. Necromancy and similar superstitions were often connected with graves (Is 65⁴).

On the other hand, the grave is unclean (Lk 11⁴⁴). In later times, at least, cemeteries were supposed to be special haunts of evil spirits; and the spirits of the dead lingered there, at any rate till the corpse had been assimilated to the soil. This belief, that the spirits of the dead inhabit the tombs, is found in most primitive religions, and was probably prevalent amongst the Israelites in early times.

3. Mourning and other observances.—Numerous passages illustrate the distress caused to the Jews by bereavement: the mourning of Jacob over the supposed death of Joseph (Gn 37³⁵); of David over Absalom (2 S 18³³); Rachel refusing to be comforted (Jer 31¹⁵). The behaviour of David, who fasted and wept when his child was dying, but arose and ate when it was dead, was a puzzle to his courtiers; his explanation, that lamentation was useless, hardly seems adequate (2 S 12^{16c}).

The feelings, sentiments, and ideas called forth by death gave rise to various burial and mourning customs. Decence was and is followed by the necessary arrangements for the seemingly 'laying out' of the corpse. The eyes and mouth are closed (Gn 46⁴, Jn 11⁴⁴), and the body is washed (Ac 9³⁷). It has been supposed that the dead were, sometimes at any rate, buried in their usual dress, with their arms and ornaments; Samuel appears to the witch of Endor in his mantle (1 S 28⁴), and the dead go down to Sheol with their weapons and their 'pomp' (תִּפְאָה). The practice certainly prevailed in later times. Thus Herod buried ornaments with the body of Aristobulus (Jos. *Ant.* xv. iii. 4); treasures were said to have been buried with David (XVI. vii. 1); Herod was buried covered with purple, with his diadem, crown, and sceptre (XVII. viii. 3; BJ I. xxxiii. 9). We are told that in later times such practices led to great extravagance, so that Rabbi Gamaliel II. ordained that corpses should be buried in a simple white dress. We read of Ananias, that they 'wrapped him round,' apparently in the clothes he was wearing, and carried him out, and buried him (Ac 5⁴).

Later on, the use of a shroud or special grave-clothes or wrappings for the dead became universal; but it is not clear when this custom was first introduced amongst the Jews. In Jn 11⁴⁴ Lazarus' hands and feet were bound with linen bandages (κεῖρα), and his face with a napkin (σινδύριον). The body of our Lord was wrapped in strips of linen (σθόλοι). We have already referred to the use of spices.

Coffins were not used by the Jews in ancient times, except in the case of Joseph (Gn 50²⁶), whose remains were placed in an 'āron, or chest; but this, like his embalming, was an Egyptian custom. The Jews laid their dead on a bier (OT *mitā*, מֵטָה, 'couch' [2 S 3²¹]; NT *σάβη* [Lk 7¹⁴]), as is the custom amongst Eastern Jews now. They use this bier to carry the corpse to the grave, and do not bury it.

The exigencies of the climate of Palestine called for burial soon after death, on the same day, or within 24 hours. As often, a natural necessity hardened into a sacred custom, which was long maintained amongst Jews in Western countries, where the same necessity did not exist; but after

¹ Cf. Sir C. Warren, in *HDB* II. 885.

a while it fell into disuse, and a longer interval is allowed in the West.

The carrying of the corpse to the burying-place was the work of friends of the deceased, and was the occasion of public lamentation, which, at any rate in the early centuries of our era, was partly performed by hired mourners and musicians. There does not seem to have been any formal burial service of a religious character in Biblical times,¹ but then and later funeral orations were sometimes delivered. According to *JE* (s.v. 'Funeral Rites,' v. 529), the mourners recited Ps 91 on their way to the cemetery; in the cemetery, other formulae, concluding with the *Kaddish*, or doxology; and on their return, passages from Lamentations. Women attended funerals in ancient times, and still do so amongst the foreign Ashkenazim, but not amongst the Sephardim or the English Ashkenazim.

The funeral of Herod the Great is thus described by Josephus (*Ant.* XVII. viii. 3; cf. *BJ* I. xxxiii. 9):

'The body was carried upon a golden bier, embroidered with very precious stones of great variety, and it was covered over with purple, as was the body itself: he had a diadem upon his head, and above it a crown of gold; he had also a sceptre in his right hand. About the bier were his sons and his numerous relations; next to these were the soldiery, distinguished according to their several countries and denominations; and they were put into the following order: first of all went his guards, then the band of Thracians, after them the Germans, next the band of Galatians, every one in their habiliments of war; and behind these marched the whole army, in the same manner as they used to go out to war, and as they used to be put in array by their muster-masters and centurions; these were followed by five hundred of his domestics, carrying spices.'

We may also quote the following description of modern Samaritan rites, which probably preserves many of the customs of Palestinian Jews in early times:

'Upon death the corpse is carefully and ceremoniously washed; it is not forbidden to the Samaritans, as has been frequently stated, to handle their dead, except in the case of the high-priest. Candles are burnt at the head and foot of the corpse before burial. Coffins are used—an exception in modern Palestinian custom. The mourning ceremonies last until the following Sabbath, the community going each day to the tomb, where they read and pray. On the Sabbath the community again visit the tomb, where they partake of a meal, while further appropriate services are held in the synagogue.'

The duration of mourning has always varied, according to the rank of the deceased and his relation to the mourner. Seven days was a very common period. The men of Jabesh-Gilead fasted seven days for Saul and Jonathan (1 S 31¹⁸); Joseph mourned seven days for Jacob (Gn 50¹⁰); Judith was mourned seven days (Jth 16²⁴); Sir 22¹² mentions seven days as the period of mourning. In later Judaism the period of strict mourning, the *Shi'ba*, lasts seven days; mourning of a less severe character lasts till the end of thirty days, and in the case of children to the end of the year.²

As to mourning-dress, the rendering of garments and the wearing of sackcloth are mentioned in Gn 37³⁴ etc. We also read of garments of widowhood (Gn 38¹⁴, Jth 10⁹), which apparently were worn by the widow throughout her life, and consisted of, or included, sackcloth. Modern Jews usually wear black as mourning, except in Russia, Poland, and Galicia, where white is worn.³ Mourners rend their garments at the time of death, and wear the outer garment cut and unbound during the thirty days of mourning.⁴

The presence of numerous guests at a funeral necessitated a special meal, 'funeral baked meats,' which, in spite of the character of the occasion, was apt to become a feast. This meal is perhaps spoken of in the OT as *lehem 'ontm*, 'bread of mourners' (Hos 9⁴), and was provided for the mourners by their friends at the close of the last

which occupied the day of the funeral (2 S 38⁵, Jer 16⁷)—a custom which seems to have prevailed ever since.¹

Other acts of mourning were fasting (1 S 31¹⁸), beating the breast (Is 32¹², cf. Lk 18⁴⁸), sitting in ashes (Jon 3⁶), sprinkling ashes on the head (Est 4¹). Ezk 24¹⁷ implies that mourners were wont to cover the lip and to go barefoot and bareheaded. According to Jer 16⁵, mourners mutilated themselves, and plucked out or shaved off the hair; but such practices are forbidden in Lv 19²⁸, Dt 14¹.

Traces remain in the OT of the worship of the dead, of sacrifices offered to or for them, and of furnishing them with food. Probably the later funeral feast was partly a survival of such practices. The worship of the dead was closely connected with necromancy, which was prevalent in Israel (e.g. Is 8¹⁹). The graves of ancient worthies seem often to have been shrines, as in Islam. Thus there was a *masgebā*, or sacred pillar, at the grave of Rachel (Gn 35²⁰), and the important sanctuary at Shechem may have been connected with the grave of Joseph (Jos 24^{26, 32}). The interpretation of Dt 26¹⁴ is a little doubtful. The EV renders '[I have not given food] for the dead,' but the reference probably is to offering food to the dead or providing food for them. The practice was condemned by official Judaism, but persisted nevertheless. Tobit 4¹⁷ bids the Jew place food on the tomb of the righteous;² and Sir 30¹⁸ also refers to the custom.³ In some quarters necromancy and its allied customs survived among the Jews in later periods.

In Rabbinical times and among the stricter modern Jews, during the *Shi'ba*, or seven days of strict mourning, the relatives abstain from work and remain at home, sitting on the floor or on a low bench, reading the Book of Job, and receiving visits of condolence. Bereaved children should abstain for a year from music and recreation.

A special feature of Jewish mourning is the repetition of the *Kaddish* by a bereaved son. According to the Jewish Prayer-book, this is to be repeated by sons for eleven months after the death of a parent, and also on the *Jahrzeit*, or anniversary of the death. It is a special form of *Kaddish* which runs thus:

'May His great Name be magnified and hallowed in the world which He created according to His will! May He establish His kingdom speedily and in the near future in your lifetime and in your days and in the lifetime of all Israel! Say ye Amen.

May His great Name be blessed for ever; may it be blessed for ever and ever!

May the Name of the Holy One (Blessed be He) be blessed and praised and glorified and exalted and set on high and honoured and uplifted and sung above all blessings and hymns and praises and consolations that are repeated in the world!

May the Name of the Lord be blessed from now even for evermore! May there be great peace from heaven and life upon us and upon all Israel, and say ye Amen. My help is from the Lord that made heaven and earth. May He that maketh peace in His high places make peace for us and for all Israel! And say ye Amen.'

This is publicly recited in the synagogue, but according to Oesterley and Box⁴ it 'is in no sense in itself a prayer for the dead, but the public recitation of it in this fashion by a son is regarded as a proof of the piety of the dead, as represented by a pious survivor.' This no doubt is the view of enlightened Jews; but others believe that the repetition of the *Kaddish* by the son shortens the purgatorial period which the father must spend in Gehenna or exalts him to a higher sphere in Paradise.⁵ The repetition terminates on the anniversary of the death, because it would be unfilial to suppose that a father's sins would require more than a

year's purgatory. In the Ashkenazic synagogues prayers are said four times a year by the bereaved for the souls of the deceased.¹

Priests were forbidden to mourn except in the case of the nearest relationships (Lv 21¹⁻⁵, Ezk 44²⁰).

4. Significance of death and of funeral customs.

—Some scholars² see in many of the funeral rites, notably cutting of the hair, self-mutilation, etc., which were forbidden by the more advanced Judaism, traces of an animistic stage of the religion of Israel, of the worship of ancestors, and of the allied ideas of the continued life of the dead, of the possibility of communion with them, of the necessity of providing for their needs and protecting them from evil spirits; or, on the other hand, of the need of protecting the living from injury by the spirits of the dead. No doubt the Semitic peoples passed through a stage of religious development when such ideas were current; and these ideas persisted and do persist when they have been outgrown by the purer forms of religion; but they do not belong to Jahwism or to Judaism so far as either was or is dominated by revelation. Nevertheless, the great importance attached to burial in the last centuries of the pre-Christian era suggests that the condition of the spirit of the deceased was supposed to be influenced by the treatment of the corpse. Later on, in some districts the habit prevailed of visiting cemeteries in order to obtain the help or intercession of the dead.

Another quasi-animistic explanation of mourning rites which involve disfigurement, unattractive dress, covering the head, etc., is that they were intended to prevent the spirit of the dead man from recognizing the mourner, and so to protect the latter from any injury the spirit might wish to inflict upon him. Similarly, the mourners' shrieks were intended to drive the spirit away; and satisfactory burial was necessary in order that the dead might find their way to Sheol and stay there. The suggestion that many mourning rites were due to the anxiety of the mourner to humble himself before God³ hardly seems probable. The most obvious explanation is that mourning arose out of a natural desire to express the emotions caused by bereavement. Such distress gives rise to wailing, frantic gestures, neglect of the dress and person, an aversion to the pleasures of life. Acts which were originally spontaneous would soon harden into a fixed etiquette or ritual. Many customs might easily be thus explained; and it is possible that this may be the true explanation, even in cases where a mourning custom does not seem to us a natural expression of grief. A man distraught by sorrow may seek relief in any unexpected, strange, unusual act; such an act may appeal to the imagination of spectators by its very strangeness, and be imitated till it becomes a custom.

The contagious uncleanness of a corpse (Nu 5², Lv 21¹) might be suggested in many ways; by the fear of the spirit of the dead man mentioned above, by the natural shrinking from an object so changed from the living friend or kinsman, and even by sanitary reasons. The uncleanness of the corpse would naturally be extended to the tomb. In the same way an unburied corpse defiled the land and brought down a curse upon it (Dt 21²³). It would be a mistake to try to explain all the mourning customs, even of one people, by the consistent application of a single principle. Bereavement affects men in many ways, so that natural affection, practical considerations, superstition,

and religion all contribute to give rise to the ritual connected with death. Moreover, a rite changes its significance and value from time to time, so that the meaning attached to it in later times may be quite different from that which it had originally, and the popular explanation of it may throw no light on its origin.

According to Gn 3, death was a consequence of the sin of Adam and Eve (cf. Ro 5¹²); it would be natural to draw the conclusion arrived at in the latter passage, that henceforth each man died because of his own sin (a view perhaps implied by Nu 27³).¹ But the narrative in Genesis stands apart from the general course of OT thought, which regards death as the natural end of life. The righteous man, according to a widely prevalent view, enjoys a long and happy life, and is gathered to his fathers in a good old age. Some passages of the Wisdom Literature, even apart from any belief in a real future life, regard life as a burden and death as a boon (Job 7¹⁵, 16, Ec 1² 4², 8).

In some passages of OT, death is personified (e.g. Job 28²², Is 28¹⁸, Hab 2⁹). In others the term is extended to mean spiritual death; it doubtless includes physical death, but only as a part of a wider judgment which also involves separation from God and exclusion from the Kingdom. In such passages, as Schultz said, 'death includes everything which is a result of sin.'² This usage of the term is extended and developed in the later literature. Thus Philo: 'The death of the soul is the decay of virtue, the taking up of evil.'³

In later Judaism, death is regarded as atoning for the sin of the deceased. According to a popular superstition, the dead man suffers pain while his body is decaying in the grave, and this pain has an atoning value. But, apart from such ideas, we find the doctrine taught by Rabbinical and other authorities. Thus the Sephardic ritual for a dying man includes the following:

'Let my death be an atonement for all my sins, iniquities, and transgressions, wherein I have sinned, offended, and transgressed against Thee, from the day of my first existence; and let my portion be in the Garden of Eden.'⁴ Again we read: 'The Day of Atonement and death make atonement when accompanied with sincere repentance.'⁵

DEATH AND DISPOSAL OF THE DEAD (Muhammadan).—According to the Qur'ān, 'every soul must taste of death' (iii. 182); the difficulty as to those who may be alive at the Last Day is got over by the explanation that on the blast of the trumpet all 'shall expire, except those whom God pleases' (xxxix. 68), the exempted being possibly some of the greater angels (Baidāwī, etc., *in loc.*). Further, it is laid down that the exact hour of each person's death is foreordained (xvi.

¹ Köberle, *Sünde und Gnade*, 334; but probably the passage regards Zolophehad as involved in the sin of Israel in refusing to enter Canaan from Kadesh.

63). In the traditions, men are forbidden by the Prophet to wish for death, though to a believer it will be desirable. Whoso's last words are the *Kalima* (profession of faith, 'There is no god but God') will enter into paradise; and it is directed that this shall be recited in the presence of the dying, and the *Sūra Yā Sin* (Qur. xxxvi.) should be said over the dead. A fantastic tradition, given on the authority of Abū-Huraira, relates what Muhammad is supposed to have said about the passing of the soul. In the case of a believer, angels of mercy clad in white come and invite the soul to the rest which is with God, and the soul comes out with a delicious smell of musk, which the angels sniff with satisfaction; the soul is handed on from angel to angel, till it reaches the souls of the faithful, who rejoice and question it about those left behind on earth. But angels of wrath come to the dying infidel, and his soul departs with a bad smell, which disgusts them, and they bring it to the souls of the infidels. This idea is elaborated in other traditions, in which the soul of the righteous is said to issue forth like water from a skin, and the angel of death seizes it; but the angels in white snatch it from him and wrap it in a shroud with an odour of musk, and convey it on and on to the seventh heaven, where the believer's name is registered, after which it is returned to its body on the earth, to undergo the questioning of the grave. But the dying infidel is visited by black-faced angels, and the soul is drawn out like a hot spit out of wet wool which sticks to it, and is wrapped in sackcloth, smelling fetidly; and its name is written in hell (*sijjin*); and it is violently thrown down upon the earth, to be examined by the angels of the grave, as will be described later.

Meanwhile the body is treated with a ceremonial which varies little in different parts of the Muslim world, and is nearly the same for men and women. Precedents for most of the ritual are traced to traditions of the Prophet; but two customs—the wailing of women and the recital of praises of the dead—are observed in direct defiance of his commands. The dying man is turned to face the *qibla*, or direction of Mecca, and, as soon as his eyes are closed in death, the surrounding men ejaculate pious formulae and the women raise cries of lamentation (*wahwala*), the family calling upon the dead in such terms as 'O my master!' 'O my resource!' 'O my camel!' 'O my misfortune!' The clothes of the deceased are instantly changed, his jaw bound, and his legs tied; and he is covered with a sheet. Women friends, and sometimes professional 'keeners' (*naddāba*), with tambourines, join the mourners and cry, 'Alas for him!' If he was one of the *ʿulamā* of Cairo or some man of mark, his death would be announced from the minarets in the call known as the *Abrār* (from Qur. lxxvi. 5-9). The lamentations go on all night, if the death occurred in the evening, and a recitation of the Qur'an by hired *fiqis* takes place; but, if the death occurred in the morning, the burial follows on the same day, as, in addition to the rapid decomposition in a hot climate, there is often a superstitious dread of keeping a corpse all night in the house. The washing of the dead is done by a professional washer (*mughassil* or *ghassāl*), male or female according to the case, who brings a bench and bier, and does the work, often in a courtyard, with much reverence and decency, and with care in the disposal of the water, which people fear to touch; while the *fiqis* continue chanting in the next room. After a very elaborate washing, the nostrils and other orifices are stuffed with cotton, and the corpse is sprinkled with camphor, rosewater, and lote leaves (*nabq*), the feet tied together and hands laid on breast, and the grave clothes (*kafan*) put

on according to precise rules. Those vary from two or three pieces of cotton (or five for a woman), or a mere sack, in the case of the poor, to a series of layers of muslin, cotton, silk, and a Kashmir shawl, among the rich; and the fashions vary in different lands. Women usually have a long shift (*yalak*) added, and in India a coil (*damni*). White and green are the favourite colours for the *kafan*, or any colour but blue, but white alone is allowed in India. A shawl is thrown over the body when placed on the bier (*janāza* or *qandūq*). There is no coffin, and, of course, no priest.

The funeral or procession varies in different countries. In India, women do not attend as a rule, but they do in Bukhārā. In Egypt the cortège is often preceded by half a dozen poor men (*yamaniya*), blind by preference, walking in pairs and chanting the *Kalima*. After them come the male friends and relations, and perhaps some darwishes, especially if the deceased belonged to a darwish order. A few schoolboys follow, carrying a Qur'an on a desk, and chanting lively verses on the Day of Judgment and similar topics. Then comes the bier (which for women and children has a post [*shāhid*] at the head, covered with a shawl, and often adorned with gold ornaments, or, in the case of a boy, surmounted by a turban), carried head foremost at a brisk pace by friends, who relieve each other in turn. It is an act of merit for any passer-by to lend a hand or to follow the bier; and the Prophet made a point of always standing up when a bier was passing, and saying a prayer. The women walk behind the bier, with dishevelled hair, keening and shrieking, and the hired mourners swell the chorus and sound the praises of the dead, contrary to the Prophet's will. Blue headbands and handkerchiefs distinguish the women relations, who slap their faces and sometimes smear them with mud. There are some variations in the procession when the deceased is a woman. Rich people add camels to the procession, and hire *fiqis* to chant chapters of the Qur'an on the march, or members of religious orders carrying flags; and also sacrifice (*al-kaffāra*) a buffalo at the tomb for the benefit of the poor; whilst ladies riding the high ass often follow their female relations. If it be a saint (*walī*) who is being buried, the women raise joy-cries (*zaghārit*) instead of *wilwāl*, or keening; and, if these cries cease, the bier stops too; for saints are believed to be wilful and able to stop their bearers, and even to direct them to where they prefer to be buried. It is said to be useless to try to rush a saint's bier in a direction he does not like, but the somewhat bizarre device of turning the bier round rapidly several times has been found successful in confusing the corpse's sense of orientation (Lane, *Mod. Eg.* p. 518).

The ceremony at the mosque consists in laying the bier on the floor, right side towards Mecca, when a service of prayer is recited by an *imām* and his attendant *muballigh*, in the presence of the congregation of mourners and all who choose to attend, ranged in a prescribed order, ending with an appeal to the audience: 'Give your testimony concerning him,' and their reply: 'He was of the righteous.' The *fiqis* may then recite the *Fātiha*, etc., and the funeral goes on to the graveyard.

There a tomb has been prepared, of ample size, with an arched roof, so that the corpse may sit up at ease to answer the interrogatory of the examining angels, Munkar and Nakir, who will enter the tomb to question him as to his orthodoxy. If the replies are satisfactory, the grave will be enlarged to him, and a man with a beautiful countenance will appear to tell him: 'I am thy good deeds'; otherwise, a hideous face comes to represent

his evil deeds, and painful experiences ensue. The fear of 'the torment of the grave' is very real among Muslims.

The construction of tombs varies in different places, and no one pattern can be indicated. In Egypt, the entrance is at the foot, the side furthest from Mecca, and the tomb is often made to hold several bodies; but, if they are of opposite sexes, a partition is set up. Over the tomb is an oblong stone slab or brick monument (*tarkiya*), with an upright stone (*shāhid*) at head and foot. The inscription is on that at the head, which is often carved with a turban. A small chapel covered with a cupola is frequently built over the tombs of saints and other distinguished people, while the tomb-mosques of sultans and amirs are often beautiful examples of Saracenic art.

The body is lifted out of the bier and laid in the tomb, on its right side, with the face towards Mecca, propped in that position by bricks. Its bandages are untied, its Kashmir shawl rent, lest it should tempt grave-robbers, a little earth is sprinkled, ch. cxii. of the Qur'an, or xx. 57, is recited (but this was forbidden by the Wahhābīs and others), and the entrance is closed. There is no service at the grave; but, before leaving (unless the funeral be of a Mālikī), a *fiqi*, in the character of *mulaggin*, or tutor of the dead, sits before the tomb and tells the defunct the five correct answers to be given to the examining angels that night (the 'Night of Desolation,' *Lailat al-waqsha*) when they come and ask him his catechism: he must reply that his God is Allāh, his prophet Muḥammad, his religion Islām, his Bible the Qur'an, and his *qibla* the Ka'ba. The grave is left in solitude and the mourners depart, saying a *Fātiha* for the defunct and another for all the dead in the cemetery. Some *fiqis* take a repast in the room where the deceased died and recite ch. lxxvii. of the Qur'an, or perform the more elaborate ritual called the *Sabha*,

'Rosary,' in which a rosary of a thousand beads is used to count the thousands of repetitions of the *Kalima* and the hundreds of other formulæ repeated. This performance ends with one of the *fiqis* asking the others: 'Have ye transferred [the merit of] what ye have recited to the deceased?' and their answer: 'We have transferred it.'

Wailing is resumed by the women on the Thursdays of the first three weeks after the burial, and the men receive friends of the deceased in the house and hire *fiqis* to perform a *ḥatma* of the Qur'an; and on the Fridays following these three Thursdays the women visit the tomb and go through various rites, including the placing of a broken palm branch on the tomb and giving food to the poor; and the same is done on the Thursday and Friday completing or following the forty days after the funeral. Men do not display mourning in their dress, but women dye their veils and other gear dark blue, and sometimes smear the walls of their rooms, and even stain their hands and arms with the same indigo dye. They also disarrange their hair, and the furniture and carpets are upset in mourning for the head of the house.

LITERATURE.—The most minute account of all the ceremonies and processes used in regard to the disposal of the corpse is to be read in G. A. Herklots and Ja'far Sharif's *Qanoon-e-Islam*, London, 1832, ch. xxxviii.; the ceremonies after the funeral are described in ch. xxxix.; but a good deal of this account consists of details peculiar to the Muslims of Hindustān. The corresponding ceremonies observed in Egypt are described in Lane's *Modern Egyptians*², London, 1860, ch. xxviii., where also is a notice of a curious dance performed on the occasion of a death by the peasants of Upper Egypt. The Egyptian customs are similar to those observed in Syria and Turkey, though local differences of usage are to be noticed, a fairly detailed account of which for Turkey may be read in *The People of Turkey*, ed. S. Lane-Poole, London, 1878, li, 136-143. See also Hughes' *DI*, London, 1885, s.v. 'Burial' and 'Death,' where Herklots is conveniently abridged. The traditions of Muḥam-

mad on the subject are accessible to English readers in *Mishkāt al-Masābīh*, tr. Matthews, Calcutta, 1809, vol. i. pp. 355-403.

STANLEY LANE-POOLE.

DEATH AND DISPOSAL OF THE DEAD (Parsi).—1. Before death.—When death approaches, one or two priests are summoned to make the dying person confess his sins. The *Patel*, or confession of sins, is recited for his benefit, and it is a meritorious act if he is able to join the priest in repeating the confession. According to the *Šād Dār* (xlv.), the man who 'accomplishes repentance' does not go to hell, but, having received his punishment at the end of the Chinvat bridge, is led to his place in heaven. In a case of urgency the short *Ashem-Vohū* (Ys. xxvii. 14) formula may suffice, and the Hātōkht Nask fragment (Yt. xxi. 14 f.) attributes a special value to the recital of *Ashem-Vohū* in the last moments of life. The *Šād Dār* adds (lxxx. 11) that it brings one who has deserved hell to the *Hamistakān* (the 'ever stationary' region between heaven and hell); one who has deserved the *Hamistakā* to heaven; and one who has deserved heaven to the highest paradise. The *tanu-peretha*, after whose death the *upaman*, 'waiting,' 'mourning,' of the relatives must be prolonged beyond the usual period (*Vend.* xii.), is explained by tradition as one who has died without *Patel* and without *Ashem-Vohū*. Sometimes a few drops of the consecrated *haoma* juice mingled with water are poured, if possible, into the mouth of the dying person, *haoma* being believed to produce immortality. Formerly this custom was more common; and it was also usual to drop into the mouth of the dying person a few grains of pomegranate, belonging to the holy ceremonies of the Parsi sacrifice.

2. Death.—According to *Vend.* v. 10, the ancient Zarathushtrians had special chambers or buildings (*kata*) for the dead—one for men, one for women, and one for children—in every house or in every village, and the common mortuary still exists amongst the Zarathushtrians of Persia and in the Mofussil towns of Gujārāt. In Bombay and other parts of India a special place in the house is prepared beforehand and washed clean in order to receive the dead body. The body is bathed all over and covered with a clean, but worn-out, white suit of cotton clothes, which must be destroyed and never used again after having served for this purpose (cf. *Vend.* v. 61, viii. 23-25). A relative girds the sacred cord round the body, reciting the *Ahura Mazda Khudān*, a short prayer in Pazand. The corpse is placed on the ground on a clean white sheet. Two relatives sit by his side keeping themselves in contact with him—a custom probably derived, like the *paivand* (see below) held by the watchers and the bearers of the corpse, from the idea of forming a bridge or a way for the soul. An *Ashem-Vohū* is recited close to the dead man's ear.

3. Impurity of the corpse.—The corpse is now supposed to be assailed by the corpse-demon, the *Druj Nasu*. According to *Vend.* vii. 1-5, the *druj* of the corpse rushes on the body from the north, in the shape of a fly, immediately after death in a case of natural death. But in a case of violent death (by dogs, or by the wolf, by the sorcerer, by an enemy, or by the hand of man, by falling from a mountain, by strangling oneself, or by treachery) the demon comes only in the *gāh* (one of the five divisions of the day) that follows after death. Only special despised officials, set apart for that purpose, are allowed actually to touch the body, and they must scrupulously observe certain fixed rules. If any one else happens to touch it, the contagion spreads to him, and he must undergo the great purification, *bar-*

ashnūm, for nine days (being washed with the urine of the cow, etc. [*Vend.* ix.]). The glance of a dog (see below) or other animal is considered to be particularly effective for driving away the corpse-demon.

In theory the old tabu ideas concerning the dead have been modified in a characteristic manner by the Avestan dualism. Thus, since the death of a Mazdayasnian implies a victory of the Evil Power, his body is unclean, but the corpse of an unbeliever is clean, because his death favours the cause of Ahura Mazda, and a wicked man defiles only during his life, not after his death (*Vend.* v. 36-38).

4. Isolation of the corpse.—The place of the two relatives waiting beside the body is next taken by the *nasu-kashas* of the Avesta, now called *khāndhya* ('shoulder-men') by the Parsis of India. Two of those funeral-servants prepare themselves by washing and by putting on clean suits of clothes and the sacred cord, and by reciting the *Srōsh-bāj* (on which see Darmesteter, *Le Zend-Avesta*, ii. 686-688) up to the word *ashahē*. They then enter the room where the dead body is placed, keeping between them a piece of cloth or cotton tape—the *paivand*. They cover the body with cloth except the face—which, however, in some parts of Gujarāt is also covered—with a *padān* (the *paṭidāna* of the Avesta, a piece of white cotton stuff which the Parsi priest holds before his nose and mouth in order not to defile the sacred fire and the other pure things). Then the two *khāndhyas* lift the corpse on to slabs of stone placed in a corner of the room, its arms being folded across the chest. The face must not be turned towards the north, whence the demons proceed. In some districts of Gujarāt the old Avestan rule (*Vend.* viii. 8) is still observed of laying the body on a thin layer of sand in a cavity dug in the ground five inches deep, while in Yezd the corpse, after being lifted from the bier in the common mortuary, is placed 'on a raised platform of mud paved with stone, about nine feet long and four feet wide' (Jackson, *Persia*, p. 391). The place in which the body reposes is ritually separated from connexion with the living by three deep circles, *kasha*, drawn with a metallic bar or nail by one of the two *khāndhyas*, who afterwards leave the house, still making *paivand*, and finish their *Srōsh-bāj*.

5. The *sag-did*.—If possible, 'a four-eyed' (*cathecashma*) dog, i.e. a dog with two eye-like spots above the eyes, is now brought near the corpse in order to frighten the *druj* by his look, i.e. the *sag-did* ('dog-gaze') is arranged. According to *Vend.* viii. 16, a white dog with yellow ears has also a particular power against the demons, but any dog may suffice. The *sag-did* is repeated at the beginning of every *gāh*, until the body is carried from the house. The prescription of *Vend.* viii. 14-18 seems not to be observed nowadays, namely, that a yellow four-eyed dog or a white dog with yellow ears must be led three times if he walks willingly, six or nine times if he is unwilling, along the road where a corpse of a man or of a dog is carried, in order to scare away the corpse-demon. In Yezd the ordinary street-dog is used, and 'morsels of bread are strewn around the corpse, or, according to the older usage, laid on the bosom of the dead, and the dog eats these' (Jackson, *op. cit.* p. 389). Immediately before entering the *dakhma* ('tower of silence'), the dead body is once more exposed to the *sag-did*. The demon-expelling glance is attributed by *Vend.* vii. 3. 29 f., viii. 36, not only to the dog, but to 'the flesh-eating birds' as well as to 'the flesh-eating dogs.'

Those passages evidently refer to the moment when the animals, to which the body is exposed, rush on it to devour

it; but the eminent Parsi scholar J. J. Modi, to whom we principally owe our knowledge of the actual funeral ceremonies of the Parsis, interprets *Vend.* vii. 3 in the following way: 'It is enjoined that in case a dog is not procurable, the "Sagdeed" of flesh-devouring birds like the crows and vultures should be allowed, that is to say, it will do if a flesh-eating bird happens to pass and sees the corpse from above or if the flesh-eating birds fly in that direction' (*JASS* ii. 414).

6. Demon-frightening fire.—We return to the mortuary room, where, after the first *sag-did*, the demon-killing fire (*Vend.* viii. 80) is brought and fed with fragrant sandal-wood and frankincense, and where, until the body is removed, a priest recites the Avesta, keeping himself, as well as every other person, at least three paces from the dead body (*Vend.* viii. 7).

7. Time of removal.—The removal of the body must take place in the daytime, in order to expose it to the sun (*Vend.* v. 13). In ancient times the corpse might lie in the special mortuaries as long as one month or even until the next spring (*Vend.* v. 12). Now, in India, the body is removed the next morning, if death takes place early in the night; if a person dies late at night or early in the morning, the body is removed in the evening. In case of death by accident the body may wait longer.

8. Removal.—Two 'corpse-bearers' (*nasā-sālārs*), clothed in white, with 'hand-cover' (*dastānā*) on their hands, and making *paivand*, enter the house about one hour before their departure to the *dakhma*, carrying an iron bier (*gāhān*). They must be at least two in number (*Vend.* iii. 14), for a single man is not allowed to carry even the body of a child. Wood being more liable to infection, the bier must be of iron. It is placed beside the body. The corpse-bearers read the *Srōsh-bāj* up to the word *ashahē* (the remaining portion of that prayer is recited only when their operations relating to the corpse are finished), and add in a low voice: 'According to the dictates of Ahura Mazda, the dictates of the Amshaspands, the dictates of the holy Sraosh, the dictates of Aderbād-Mahrespand, the dictates of the Dastur of this time.' Then they sit silent, while two priests, having performed the *kosti* (cf. Darmesteter, *op. cit.* 685 f.) and repeated the special prayers of the *gāh*, enter the chamber, making *paivand*, put on their face-veils, 'take the *Srōsh-bāj*' (i.e. repeat it as far as *ashahē*), and commence the Ahunavaiti *Gāthā* (*Ys.* xxviii.-xxxiv.), keeping themselves near to the door or at least at a distance of three paces from the corpse. At the words of *Yasna* xxxi. 4: 'Seek thou for me, O Vohu Manah, the mighty Kingdom, through whose increase we may overcome the Druj,' they stop; the corpse-bearers lift the dead body on the bier, when the priests turn to the dead and finish the *Gāthā*, after which a new *sag-did* is performed. The moment is now come for relatives and friends, who have gathered in the house (or, in Yezd, in the common mortuary, the *zād-ō-marg*, 'birth and death,' or *purish-khānah*, 'inquiry house'), to have a last look at the deceased. They bow before the body, i.e. make the *sejdo*, before its face is covered up.

9. Funeral procession.—Having carried the body outside the house (according to *Vend.* viii. 10, the corpse should be removed through a breach specially made in the wall of the house, and in this connexion it is worthy of note that the Persian *zād-ō-marg* has two doors, the corpse being brought in by the one and carried out by the other), the *nasā-sālārs* entrust the bier to two or more *khāndyas* (who are also sometimes called *nasā-sālārs*) to bear it to the 'tower of silence.' Two priests walk in the front of the procession, at a distance of thirty paces after the bier, accompanied by relatives and friends, two abreast, clothed in white and making *paivand*. In Persia, however, the order

is different. There the procession is led by a man bearing a vase containing fire (and formerly also by a musician playing a doleful air), followed by the relatives and friends, the corpse, the priests, and additional members of the family of the deceased. Here, too, if the *dakhma* is far distant, the body may be conveyed on a cow or donkey (cf. the Pahlavi commentary on *Vend.* iii. 14), and the mourners may ride, though the priests are required to walk.

10. In the tower.—At the gate of the tower the bier is set down, the face is uncovered to let the accompanying procession pay their last respects to the dead from a distance of at least three paces, and once more the *sag-did* is performed. Now the two real *nasā-sālārs*, who had arranged the body on the bier in the house, and who alone are allowed to enter the tower (not wearing their usual clothes [*Vend.* viii. 10], but the so-called 'clothes of *dakhma*'), open its gate, which is closed with an iron lock, lift the bier, carry it into the tower, place the body, with the head toward the south (the auspicious quarter), on one of the beds of stone (*kesh*) arranged in concentric circles, rising like an amphitheatre, which are intended for receiving the bodies. These circles are separated by canals (*pavis*), a word which seems also to be used of the sections divided by the canals. They remove the clothes from the corpse, leaving it naked (*Vend.* vi. 51), and cast them into the central well, forming the middle of the tower, and surrounded by the amphitheatre-like circles of stone beds. The naked corpse may be left 'on the earth, on clay, bricks, and stone and mortar.' The vultures, Nature's scavengers, are already waiting, and in one or two hours they devour all that is corruptible of the body. Twice a year the *nasā-sālārs* throw the skeletons into the well, where sun, rain, and air soon reduce the whole to dust. The *Dinkart* to *Vend.* v. 14 considers the falling of the rain on the corpses in the *dakhmas* and on the impure liquids as a great advantage. Formerly the bones were preserved in an ossuary.

'Whither shall we carry the bones of the dead, Ahura Mazda? Where shall we place them?' Ahura Mazda answered: 'You may make a structure (*uz-dānem*) for them beyond the reach of the dog, of the fox, of the wolf, inaccessible to the rain from above. If the Mazdayasians are rich, they may construct it of stones, of plaster, or of earth. If they are not rich, they may place the dead on the ground in the light of heaven and looking towards the sun' (*Vend.* 49-51).

If, in Persia, a Zoroastrian community is too small to support a *dakhma*, the body 'is carried to some remote place in the hills or mountains, is then piled around with stones and covered with a slab, but not interred' (Jackson, *op. cit.* p. 394).

The *Dādistan* (xviii.), in the 9th cent. A.D., recommended collecting the bones and putting them in an *astōdān*, elevated above the ground and covered with a roof to preserve them from rain and from animals. These receptacles to protect the bones from the sun were made of two excavated stones, one forming the coffin, the other the cover. They might also be real monuments, perhaps corresponding to the caves of the Achæmenians at Naksh-i Rostam (Modi, 'An old Persian Coffin,' *JASB*, 1888; cf. Darmesteter, *op. cit.* p. 93, note 34). At the present day the bones of the dead are no longer preserved.

Vend. vi. 45, in directing the dead to be carried 'to the most elevated spots, where flesh-eating dogs and flesh-eating birds may most surely perceive it,' gave sanction to a primitive method of disposing of the dead, still practised, e.g., by the Kāfirs, who expose their dead in wooden coffins on the tops of the mountains (Lassen, *Ind. Alterthumskunde*, i. 2, Leipzig, 1867, p. 520), by some wild tribes of India (Crooke, *JAI* xviii. [1899] 245 f.), and by the Massai, where a person dying without children is abandoned, some hundred yards outside the kraal, to the hyenas, whose speedy devouring of the corpse is considered a favourable sign (Merker, *Die Masai*, Berlin, 1904, p. 193). The Hawaiians threw their dead to the sharks, etc. (Segerstedt, *Le Monde oriental*, Upsala, 1910, iv. 2, p. 64). According to Strabo (p. 517; cf. Kleuker, *Anhang zum Zend-Avesta*,

Riga, 1788, ii. iii. 71 f.), the Bactrians threw their sick and aged people to dogs, trained to devour them; the Caspians considered it more auspicious if birds devoured their dead exposed in the desert than if they were eaten by dogs or wild animals (cf. Marquart, *Philologus*, Supplem. x. [1907] i. 141).

11. *Dakhmas*.—Special constructions or towers (*dakhmas*), for exposing the corpses, are well known to the Avesta. They constitute the most awful and impure spots on the earth, and it is one of the greatest merits to demolish them when they have served their purpose, and thus restore the ground to cultivation (*Vend.* iii. 13, vii. 49-58). The construction of the actual 'towers of silence' used by the Parsis of India is accompanied by a series of religious ceremonies, the consecration lasting three days (Menant, *Les Parsis*, Paris, 1898, pp. 206-235, with plans and illustrations).

12. Dispersion of procession.—At every *dakhma* a kind of chapel (*sāgrī*) is built, to which the funeral procession retires while the *nasā-sālārs* do their work with the dead inside the tower. When the *nasā-sālārs* are ready, the assistants, gathered in the *sāgrī* or seated at some distance from the *dakhma*, get up and finish the *Srōsh-bāj*, which they had commenced before starting in the funeral procession. In concluding the *pāvand* they recite this prayer: 'We repent of all our sins. Our respects to the souls of the departed! We remember here the fravashis of the pious (departed).' They then take urine of the cow, wash the naked parts of their bodies, make the *kosti*, and repeat the *Patet*, mentioning the name of the departed at the end of the prayer, after which they return home and take a bath.

13. Ceremonies at home.—At home, immediately after the removal of the body, urine of the cow (*nirang*) is sprinkled over the slabs of stone on which the corpse was placed, and upon the road by which it was carried out of the house. All clothes, utensils, and other articles of furniture must be cleansed, principally by the same means—*gōmēz* (urine of the cow) and water—or rejected altogether, if they have come into any contact with the dead body. After the removal of the body, all the members of the family are required to take a bath.

In an ancient Iranian province, Harōiva (Harāt), the custom recorded from later times (Chardin, *Voyages en Perse*, Amst. 1735, iii. 109), of abandoning the house to the dead, seems to have prevailed according to the *vish-hareznāna* of *Vend.* i. 9 (cf. N. Söderblom, *RHR* xxix. [1899] 256 ff.). The *Great Bundahishn* gives the following explanation of this custom: 'We keep the prescriptions (of removing the fire, the *barashnūm*, the cups, the *haoma*, and the mortar) during nine days (in the winter) or a month (in summer)' (cf. *Vend.* v. 39 ff.). 'They abandon the house and go away during nine days or a month' (Darmesteter, *op. cit.* p. 9, note 20). It may be that *upaman*, 'waiting' (*Vend.* v.) originally meant a temporary abandoning of the house. At present, in Bombay, all the members of the family have to take a bath after the removal of the body, and fragrant fire is burnt on the spot where the corpse was laid. During nine days in winter and one month in summer a lamp is kept burning on the same spot, and no one is allowed to go near it during that period. After its expiry the whole room is washed. The members of the family and also near friends abstain from meat during three days after the death.

We do not deal here with the festivals and gifts intended for the priest and for the poor after the death of a wealthy Parsi, or with the recital of several offices for his soul (see IMMORTALITY [Parsi]). The funeral expenses of an eminent Parsi gentleman who died in 1763 amounted to more than 738 ruzpes, which would mean more than double this sum at present (Bomanji Byramji Patel, *JASB* iii. 144 ff.).

14. Recent opposition.—In some circles of Parsi society the question of introducing a more hygienic

and less savage manner of disposing of the dead has of late been very eagerly agitated. Both burning and burying being prohibited because of the purity of fire and earth, it has been proposed to consume the corpse by electricity, and the exegetical question has been discussed whether such a method can be considered as burning or not. No change has been officially permitted as yet in the disposal of the dead, which shows the tenacity of custom, and maintains continuity with an immemorial antiquity.

LITERATURE.—J. J. Modi, 'On the Funeral Ceremonies of the Parsees, their Origin and Explanation,' in *JASB* ii. (1892); J. Darmesteter, *Le Zend-Avesta*, ii. 146 ff., Paris, 1892; D. Menant, *Les Parsis*, Paris, 1898; D. F. Karaka, *Hist. of the Parsis*, i. 192 ff., London, 1884; A. V. W. Jackson, *Persia Past and Present*, pp. 887-894, London, 1906; Khudayar Sheheryar, 'A Zoroastrian Death in Persia' (in Gujarati), in *Zartosti*, i. 169-181.

NATHAN SÖDERBLOM.

15. Ancient Persian rites.—In ancient Persia, before the spread of Zoroastrianism, the means of disposal of the dead were quite different from those observed by the adherents of the great Iranian religious leader. Attention has already been called, in § 10, to the Bactrian custom of leaving the sick and the aged to be devoured by dogs—a practice recorded not only by Strabo (p. 517), but by Cicero (*Tusc. Disp.* i. 45) and by Eusebius (*Præp. evang.* i. iv. 7). Both Herodotus (i. 140) and Strabo (p. 735) expressly state that, while the Magi exposed their dead to dogs or birds (as the Avesta enjoins), the Persians interred the dead body after coating it with wax (*κατακρῶσαντες δὲ τὸν νεκρὸν Πέρσαι γῇ κρῶνται*). It was, therefore, rank blasphemy (*ὄλεθ' ὄσια*) when Cambyzes ordered the corpse of Amasis to be cremated (Herodotus, iii. 16); and it is very doubtful whether any credence can be given to Xenophon's account (*Cyropæd.* viii. vii. 25) of the request of the dying Cyrus—'Put my body, my children, when I die, neither in gold nor in silver nor in anything else, but commit it to the earth as soon as may be (*τῇ γῇ ὡς τάχιστα ἀπδοτε*). For what is more blessed than this, to be mingled with the earth (*γῇ μυχθῆναι*)?'—since this last phrase would seem to exclude any coating of the body with wax. Equal suspicion seems to attach to Xenophon's story (*ib.* vii. 3) of the death of Abades, for whom a grave was prepared, and whose dead head was held on her lap by his wife, whose corpse, after her suicide, and his were both covered over by her nurse before burial. Ctesias, however, who is much more reliable than his ancient contemporaries would allow, may be right when he states (*Pers.* 59) that Parysatis buried the head and right hand of Cyrus the Younger, for here the wax coating may perhaps have been employed.

Unfortunately, our sole information on this subject must thus far be gleaned from the meagre statements of the classics. If we may judge from the tombs of the Achæmenians, their bodies were not exposed as Zoroastrianism dictated; but it is by no means impossible that they were coated with wax, or even, as Jackson also suggests (*Persia Past and Present*, p. 285), 'perhaps embalmed after the manner of the Egyptians.' According to Arrian (*Anab.* vi. xxix. 4-11), the body (*σῶμα*) of Cyrus was laid in a coffin of gold (*πύλον χρυσοῦν*; cf. Jackson, *loc. cit.* and p. 304 f., for further references).

All this was, of course, changed when Persia definitely became Zoroastrian. In his account of the obsequies of Mermeroes († A.D. 554), Agathias (*Hist.* ii. xix. 22) recognizes only the usage of the Avesta (with the addition of the exposure of the sick while still living), and he expressly says that the Persians could not place the dead in a coffin (*θήκη*) or urn (*ἀρνάκι*), or bury in the earth (*τῇ γῇ καταχωρῶνται*); and the 5th cent. Sasanian monarch

Kobad demanded, though without success, that the Christian Iberian ruler Gurgenes should adopt the Persian custom of exposing the dead to birds and dogs, instead of burying them (Procopius, *de Bell. Pers.* i. 12).

LITERATURE.—In addition to the works mentioned in the previous section, reference may also be made to Kleuker, *Anhang zum Zend-Avesta*, n. iii. 9 f., 571, 144, Riga, 1783; Brisson, *de Regio Persarum principatu*, ed. Lederlein, p. 619 ff., Strassburg, 1710; Rapp, *ZDMG* xx. [1866] 53-56.

LOUIS H. GRAY.

DEATH AND DISPOSAL OF THE DEAD (Roman).—As in other lands and in other times, so also among the ancient Romans the customs attendant upon death and burial varied so considerably according to wealth, rank, occupation, nationality, religion, place, and period that no single succession of circumstances may be taken as typical, and great caution must be exercised in dealing with the scattered and fragmentary evidence on the subject, in order to avoid confusing the particular with the universal, or attributing to one period the customs peculiar to another.

The greater part of our evidence having to do with the upper classes during the late Republic and early Empire, it will be best to re-construct, as a nucleus around which to build up an account of burial customs in general, a typical instance of the death and burial of a Roman grandee of the 1st cent. of the Empire.

As the man breathes his last, the assembled relatives loudly and repeatedly call out his name in the *conclamatio*—a more or less formalized expression of grief which is probably reminiscent of primitive attempts to wake the dead back to life; and perhaps the nearest of kin kisses him, as if to catch and preserve in the family line the last breath. After the formal announcement '*conclamatum est*,' the eyes are closed, and the usual bathing and anointing, perhaps embalming, take place, performed by one of the household, or by the professional *libitinarius* or *pollinctor*. The body is composed, arrayed in the toga—the full dress of antiquity—ornamented with all the insignia won during the dead man's career, and placed in state on the *lectus funebris* in the *atrium*, or main chamber of the house, with the feet towards the street-door. There are also flowers, *coronæ* of honour, and burning censers supported on candelabra. Near by are attendants, among them being sometimes included paid mourners who chant the funeral wail. [These details may be seen in the Lateran Museum on the tomb relief of the Haterii, a family of considerable importance during the latter part of the 1st century.] Possibly a coin is placed in the mouth as passage-money across the Styx—a custom always in vogue to some extent. A wax impression of the face is then taken, afterwards to occupy its niche in the *ala*, a state room off the *atrium*, along with the masks (*imagines*) of the ancestral line, and to be supplied with the appropriate inscription, or *titulus*, recording the name, years, offices, and deeds of the dead. Outside, the fact of death is made known, and the proper safeguard taken against chance religious or social impropriety, by the hanging of a cypress- or pine-branch at the entrance of the house.

In due time, which in ordinary cases is as soon as arrangements can be made, and in funerals of state from three to seven days, the last ceremonies take place. Criers go through the streets announcing its coming occurrence in the ancient formula: '*Ollus Quirīs leto datus. Esequias, quibus est commodum, ire iam tempus est. Ollus ex aedibus effertur*' ('This citizen has been given over to death. His obsequies those who find it convenient may now attend. He is being carried forth from his dwelling'). Under the supervision of the *designator* and his attendant lictors, the stately

funeral-train takes form and moves: musicians, and perhaps paid singers; dancers and pantomimists, who jest freely, sometimes impersonating in humorous wise even the deceased; a succession of cars, at times amounting to hundreds (six hundred at the funeral of Marcellus), on which sit actors dressed to impersonate the long line of the dead man's ancestors, wearing their death-masks, now taken from the niches in the *alae*, and accompanied by lictors, as in life—symbolically conducting the most recent of the family line to take his place with his forefathers in the lower world; a display of the dead man's memorials—trophies, horses, dogs, insignia, painted representations of his exploits—after the manner of a triumph; more lictors, with down-pointed *fascēs*, reminiscent of olden-time burial by night; and then, high on a funeral car, the dead himself, with face exposed to the sky, or enclosed in a casket and represented by a realistic figure clad in his clothes and death-mask; the immediate mourners—sons with veiled heads, daughters bareheaded with flowing hair; and finally the general public, not without demonstration. On both sides, as the procession passes, is the Roman populace, pressing to the line, and climbing up

‘To towers and windows, yea, to chimney tops,’

to witness what must have been one of the greatest spectacles of all time.

Arrived at the Forum, the great centre of civic life, the dead is carried to the Rostra, on which, surrounded by his ghostly ancestry, he lies while his nearest relative delivers over him the *laudatio*, a formal and often extravagant glorification of the deceased and his forefathers which is preserved among the family archives, and whose uncritical use will do so much to falsify or distort Roman history. The procession then forms again, resumes its way, and passes through the city-gate to the destined place of cremation or inhumation at one of the great *mausolea*, such as that of Augustus, at the north end of the Campus Martius, or in one of the long lines of lots which border the high road. Here the dead, with ornaments, weapons, and other possessions dear in life, together with many memorials brought by friends and relatives, is placed upon an elaborate pyre, to which, with averted face, the nearest relative or friend, or some civic dignitary, applies the torch. As the flames rise to the summit of the pyre, perhaps they liberate from his lightly fastened cage an eagle, which soars aloft—the symbol of the spirit of the dead setting out for its home among the immortals. The embers are quenched with water or wine, the final farewell (another *conclamatio*) is uttered, and all return to the city except the immediate relatives, who collect the ashes of the departed in a napkin, bury the *os resectum* (see below) to preserve the form of earth-burial, perform a purificatory sacrifice, and partake of the funeral-meal in the family tomb-chapel.

There follow nine days of mourning, on one of which the now dry ashes are enclosed in an urn of marble or metal, and carried by a member of the family, barefooted and ungirdled, to their final resting-place in the tomb-chamber. At the end of this period, the *sacrum novendiale*, a feast to the dead, is celebrated at the tomb, and a funeral-banquet is held at the home. Mourning continues ten months for husbands, wives, parents, adult sons and daughters, eight months for other adult relatives, and in the case of children for as many months as they have years. Memorial festivals, which partake of the nature of a communion, are celebrated on Feb. 13-21, the *Parentalia*, or pagan All-Souls' Day; again on the birth or burial anniversary; and again at the end of March and May, the *Violaria* and *Rosaria*, when violets and roses are profusely distributed, lamps lighted in the tomb-

chambers, funeral-banquets held, and offerings made to the gods and to the *manes*, or spirits of the dead.

Such a funeral, though not unfamiliar to the Roman people, was the exception rather than the rule. The imposing nature of the whole—the splendour of its appointments, the dignity of the participants, the impressiveness of the stately train, with its hundreds of impersonated prætorians and consulars, traversing the principal thoroughfares between thronging spectators—may best be compared with the funerals of Italian royalty in modern times, though the latter probably fall far short of the magnificence of the ancient ceremony.

The funerals of middle and lower class people, and of most of the upper class, were less ostentatious, and unaccompanied by the *laudatio*, the display of death-masks, and the paraphernalia of wealth. Children, citizens of the lowest class, and slaves were carried to their last rest without public procession, and with few formalities.

Unlike modern burial-places, the Roman cemeteries were not public communal enclosures set apart by themselves, but were situated along the great highways that led from the city-gates, and took the form of a very long and narrow series of private holdings, whose front, occupied by imposing monuments, bordered immediately on the road. All streets leading from Rome had their tombs, and the location of sepulchres along them in the country also, on landed estates, was frequent. Most prominent among the highway cemeteries at Rome were the Via Flaminia and the Via Salaria on the north, the Tiburtina and the Prænestina on the east, the Latina and the Appia on the south, and the Aurelia on the west. Most magnificent of all was the Appian Way, *Regina Viarum*, which still displays almost unbroken lines of tomb-ruins from its issue at the old Servian Porta Capena to the Alban Mount, fourteen miles away. Among its two hundred or more larger monuments, displaying great variety of architecture and ornamentation, are to be seen most of the types of the Roman tomb: the *mausoleum*, round, and probably once with conical summit, copied and named after the tomb of Mausolus, the king of Icaria, who died about 351 B.C.; the *tumulus*, a conical mound heaped over the body or ashes of the dead, also reminiscent of Asia; the tomb above ground; the tomb excavated in the tufa bed of the Campagna; the combination of both, with tomb below and chamber above; the *columbarium*, for the reception of the cremated dead of burial-associations; the chambers in series called ‘catacombs’ (*q.v.*). Burial lots were marked by boundary stones, inscribed with measurements: e.g. ‘*in fronte p. xvi. in agro p. xxii.*’ (‘frontage, 16 ft., depth, 22 ft.’). Threats and curses were frequently added to safeguard the area and monuments against violation or profanation. The more pretentious areas were great family burial-places, where were laid to rest all the members of a gens, or branch of a gens, including its freedmen and slaves, and sometimes even clients and friends. Such a burial-place might include a generous plot of ground, with an area before the tomb, a garden behind, an *ustrina*, or crematory, *edicula*, or shrines with statues of the dead, banquet-room for anniversary use, pavilion, well, and custodian's quarters. The epitaphs, incised upon slabs let into the front of the monument, or on tombstones at the graves of individuals, or near the remains inside the vault, are characterized by great variety of content and expression. Name, parentage, public offices, and an accurate statement of the length of life are found in most of them, without dates of death and birth. A type may be seen in that of Minucia, the daughter of Fundanus, whose death is the subject of Pliny's *Ep.* v. 16:

'D. M. Minuciae Marcellae Fundani F. Vix. A. XII., M. XI., D. VII.' ('To the Departed Spirit [*Dis Manibus*] of Minucia Marcella, the Daughter of Fundanus, who lived 12 years, 11 months, and 7 days') (*CIL* vi. 16631).

A portrait-bust sometimes accompanied the epitaph, and it was not infrequent for the inscription to be in the form of an address to the passer-by from the mouth of the departed, as the quaint archaistic one of Marcus Cæcilius, which lies by the Appian Way (*CIL* i. 1006):

'Hoc est factum monumentum Maarco Caicillio.
Hospes, gratum est quom apud meas restititæ seedes.
Bene remi geras et valeas; dormias sine cura.'

('This monument is erected to Marcus Cæcilius. Stranger, it gives me pleasure that you have stopped at my resting-place. Good fortune attend you, and fare you well; may you sleep without care.')

Such appeals as this upon stones, the use of portrait-sculpture, and the custom of roadside burial illustrate the Roman yearning for continued participation in the affairs of the living, and an instinctive conviction as to future existence.

Among the lower classes, especially freedmen and the labouring part of the population, a most popular form of tomb was the *columbarium*, so named because of its resemblance to a dove-cot. Long narrow vaults were either built above ground or excavated in the tufa, and in their walls were formed numerous compact rows of niches, each of a size barely large enough to receive an urn containing the ashes of one person, whose identity was made known by a *titulus* upon a slab below the urn, or on the urn itself, sometimes accompanied by a small portrait-bust. One of these *columbaria* on the Via Appia, from which three hundred *tituli* have been preserved, was for the use of the freedmen of Augustus and Livia. Such tombs were sometimes given as benevolences, and sometimes erected by speculators, but it was more usual for them to be constructed, or at least managed, by *collegia funeraticia*, co-operative funeral associations, which sold stock, assessed regular dues, and paid benefits, thus ensuring their members proper disposition after death. They were administered by *curatores*, who divided and assigned the space by lot to the shareholders, who might in turn sell their holdings.

The lot of the ordinary slave and the very poorest class of citizens was less fortunate. Outside the line of the Servian Wall, where it crossed the plateau of the Esquiline, there existed, down to the time of Horace (when it was covered with earth and transformed into the Gardens of Mæcenas), a great burial-ground which might be called 'the potter's field' of Rome. Here, as shown by excavations made from 1872 onwards, was an area of irregular dimensions extending a mile or more along the wall, from near the present railway-station on the north-east to the Lateran on the south-east, which had served as a necropolis from time immemorial, and was the burial-ground to which Horace made reference in *Sat.* i. viii. 8-16:

'Huc prius angustis eiecta cadavera cellis
Conservus villi portanda locabat in arca;
Hoc miserae plebi stabat commune sepulchrum,
Pantolabo scurrae Nomentanoque nepoti.
Mille pedes in fronte, trecentos cippus in agrum
Hic dabat, heredes monumentum ne sequeretur.
Nunc licet Esquilis habitare salubribus, atque
Aggere in aprico spatium, quo modo tristes
Albis informem spectabant ossibus agrum'

('Hither, of yore, their fellow-slave contracted to carry in their cheap coffins the dead sent forth from their narrow dwellings; here lay the common sepulchre of the wretched *plebs*, for Pantolabus the knave, and Nomentanus the ne'er-do-weel. A thousand feet front, three hundred feet deep were the limits; the monument not to follow the heirs. To-day you may dwell on a healthful Esquiline, and take walks on the sunny *agger*, where but now your sad gaze rested upon a field ugly with whitening bones').

The reference in the above lines to the cheap coffins, the slave hiring, the contrast between the gloomy bone-strewn Esquiline of former days and

the healthful gardens of the present, and the sardonic allusion to the *cippus* as the one monument of a whole city of wretched poor constitute an eloquent comment on the mortuary destiny of the lowest class, though to interpret literally the poet's mention of whitening bones seems unnecessary. Excavation has revealed pit-graves 13 to 16 ft. square and of great depth, in which the bodies of the criminal and otherwise unfortunate were deposited one above the other, unburned, and with little ceremony.

Cremation and inhumation existed side by side throughout the pagan period. The earliest cemeteries—the lowest stratum of that on the Esquiline, and the necropolis recently (1902) excavated on the Sacred Way near the Forum—contain both cinerary urns and sarcophagi, the latter being sometimes made of hollowed tree-trunks. The later strata on the Esquiline also contain both. The Cornelian gens held to earth-burial until Sulla chose cremation as a measure of safety. The tomb-chambers of the Scipios, a branch of the Cornelian gens, on the Appian Way inside the Wall of Aurelian, were filled with sarcophagi containing unburned dead; and in many large tombs the heads of families were laid away in sarcophagi, while the cremated remains of their freedmen and the humbler members of the household were deposited about them in the same chamber. Inhumation, as the cheaper and more natural method, seems to have been the earlier, basic, and popular custom; even in Augustan times, when cremation was as nearly universal as it ever became, it was the custom to perform at least a symbolical burial of the body by the interment of a small part of it, the *os resectum*, usually a joint of the little finger.

The foregoing account of death and burial has to do principally with the 1st cent. A.D. and with the city of Rome. Naturally, there were variations in detail before and after this period; e.g. burial by night was the practice of earlier times, and was prescribed again by Julian, on the ground of inconvenience to urban business caused by diurnal rites; the cemeteries of the earliest times were less distant from the heart of the city, by reason of the lesser circumference of the primitive walls, each successive fortification carrying the line of tombs farther out because of the law forbidding burial within the city limit; there was less of both display and poverty before the rise of the Empire; sumptuary laws governing funerals were known from the first centuries of the city; the employment of chambers and galleries excavated in the bed of the Campagna, long known on a small scale, grew much more general and extensive after the rise of Christian Rome, developing into the great communal burying-places called 'catacombs'; cremation died out because of its expensiveness and the influence of belief in the resurrection. As to other cities, practice there was essentially the same as at Rome; and in small towns in the country a great deal of conservatism no doubt obtained, manifest in the retention of customs long after they had gone out in the capital.

All periods of the history of Roman burial, however, are unified by the belief in the continued existence of the dead, and in his ghostly participation in the life of the family and community, and by the consequent scrupulous care about proper burial, and the maintenance of right relations with the spirits of dead ancestors. The quick and the dead of ancient Rome were in a more than usually intimate communion.

GRANT SHOWERMAN

DEATH AND DISPOSAL OF THE DEAD (Slavic).—The subject of death and the disposal of the dead, so far as the Slavic peoples are concerned, was discussed with considerable fullness in the art. *ARYAN RELIGION*, vol. ii. p. 11^b ff. It cannot be doubted that the primitive conditions in this particular phase of human life, though to some extent overlaid with a dressing of Christian thought and practice, have been maintained most faithfully among the peoples in question, and it was therefore quite natural that the writer of that article should begin with Slavic ideas and customs, so that, by comparing these with the corresponding phenomena among the linguistically allied races, viz. the Indian, Iranian, Greek, Roman, Celtic, Teutonic, and Lithuanian, he might carry his investigation back to the so-called Aryan period. There is consequently no need to cover the same ground again, but it may not be out of place to record here such facts as have emerged, or have come to the writer's knowledge, since the appearance of the article referred to. We shall arrange these fresh data under five heads.

1. Burial and burning of the corpse (cf. *ARYAN RELIGION*, vol. ii. p. 16 f.).—In the early historical period, as was shown in the passage cited, both of these methods were in operation—probably simultaneously—among the Slavs, and, as recent archaeological investigation shows, they prevailed also in the pre-historic age. With reference to *burial*, there has recently come to light a most remarkable correspondence between Middle Germany and Southern Russia in regard to the practice of constructing the tomb in the form of a hut.

At Leubingen, a station on the railway from Erfurt (Thuringia) to Sangerhausen, and not far from Sömmerda, there is a now celebrated sepulchral mound, which has been excavated by Prof. Klopffleisch, a long misunderstood pioneer in the study of primitive history. Near Helmsdorf, again, a village at no great distance from Leubingen, in the so-called Mannsfeld Seekreis, another mound, similar in many respects to that at Leubingen, was recently opened (cf. P. Höfer, in *Jahresschr. f. d. Vorgesch. d. sächs.-thüring. Länder*, v. [Halle, 1906]; and H. Grössler, *ib.* vi. [1907]). In each case the remains (which in the mound at Leubingen lay upon a flooring of wood, and in that near Helmsdorf in a bed-shaped chest of hewn timber) had been arched over by an actual wooden hut of excellent workmanship, with a steep roofing, the planks of which in the Leubingen example were thatched with reeds. The remains found at Leubingen were those of an elderly man, across whose breast had been laid the body of a girl some ten years old, while the Helmsdorf mound, to all appearance, contained but a single body, in a doubled-up position. The objects found beside the dead in both cases—bronze axes, dagger-rods and daggers, small chisels, a diorite hammer, and also numerous ornaments in gold, such as armlets, pins, spiral rings and bracelets—point to the Bronze Age (c. 1500 B.C. ?), and also show that the dead had been persons of rank. In a dense layer of ashes under the chest in the Helmsdorf mound were found the skeletons of two men, who had doubtless been given to the dead as his servants. But the most interesting feature of either barrow is unquestionably the wooden hut, designed unmistakably to provide a house for the dead.

Now, although students of pre-historic times are as yet unaware of the fact, similar, and, indeed, almost identical erections are found in great profusion in the Russian *kurgans*, i.e. the sepulchral mounds which lend a picturesque variety to the monotony of the Steppes in the districts to the north of the Black Sea. These erections are met with, moreover, not only in the *kurgans* con-

structed by the Scythian tribes who once dominated that region, but also in those dating from the earlier epochs, which in so many respects still require investigation. It will be to the purpose, therefore, to give a relatively full description of a single specimen of the South-Russian burial-huts—that, namely, discovered in 1903 by V. A. Gorodtsov in a *kurgan* situated in the Government of Ekaterinoslav, and dating, according to its discoverer, from the close of the second millennium B.C. (cf. *Results of the Archaeological Excavations in the District of Bachmut in the Government of Ekaterinoslav in 1903* ([Russ.], Moscow, 1907, p. 152 ff.). In the heart of the *kurgan* was a spacious square cavity, on the floor of which rested a framework box of thick oak boards—some kind of coffin. Between the walls of the cavity and the box, on the east side, lay a red-coloured jar and a cow's head, while each of the four corners of the cavity contained a cow's foot. Inside the box was the doubled-up skeleton of a woman, lying on its left side, with the head turned towards the north-east, and the wrists under the face. At the neck of the skeleton were found small fragments of bronze beads or other ornaments of the kind. In front of the face stood an earthen vessel; and before the breast were a number of rattles, which had been cut from the backbone of an animal. The skeleton lay on chalky earth, but the skull had a pillow of rushes. The most striking feature of this burial vault, however, is the hut erected over the chest. This hut was supported by two posts fixed in roundish holes at the head and feet of the skeleton, but outside the box in which it lay. The post supported a beam, which had branches leaning against it on either side, so forming the sloping framework of the roof; the branches, again, were covered with reeds. Upon the roof-beam stood a number of pots upside down, and also a badly-weathered quern of sandstone. Above these was a layer of ashes, containing a cow's head, four cow's legs, a large pot with a dimpled ornamentation at its neck and a perforated bottom, incinerated bones, and a whetstone.

As bearing upon the primitive history of Russia, and even of Europe, however, these discoveries are surpassed in importance by the places for the cremation of corpses—perhaps the oldest in Europe—which have been discovered in the valleys of the Dniester and the Dnieper, to the east of the Carpathians, and at no remote distance from the localities above referred to. These places for cremation date, for the most part, from a late Neolithic civilization, which yields little of importance, but in their pottery they furnish a new factor in the cultural development of Europe, extending, as it does, towards the west, across Southern Russia and Bessarabia, and to the north of the Balkan Peninsula. Among its characteristic products are magnificently painted vessels, with plastic decorations of bulls' heads and the like, and numerous idols, mainly representing women and cattle.

The last-mentioned discoveries are due in the main to the researches of Chvojko, of Kiev (*Papers of the XIth Archaeol. Congress at Kiev* [Russ.], i.; also *Antiquités de la région du Dnieper* [Collection B. Khanenko, première livraison, Kiev, 1899], and [for Bessarabia] v. Stern ('The "pre-Mycenaean" Civilization in Southern Russia,' in *Papers of the XIIth Archaeol. Congress in Ekaterinoslav* [Russ.], i.), and they have been critically examined by E. Meyer, *Gesch. d. Altertums*, i.² (Stuttgart, 1909) 741 ff. But we are not yet in a position to identify with certainty the peoples from whom emanated the civilizations thus traced at Tripolje, to the south of Kiev, and at Petreny, in Bessarabia.

2. The funeral procession (cf. art. *ARYAN*

RELIGION, vol. ii. p. 20).—In the passage cited we were able to indicate that the practice of bearing the dead to the grave on sledges, even in summer, once prevailed in certain parts of Russia. In an exhaustive work shortly referred to in that passage (viz. 'Sledge, Boat, and Horse as Accessories of Burial Ritual' [Russ.], vol. xvi. of the Moscow *Drevnosti*), Anučin has conclusively proved that in ancient Russia the dead were often, even in summer, conveyed to the grave on sledges, which, however, might be either *driven* or *carried*. The former method is illustrated by a picture in the Sylvester MS ('Conveyance of the Remains of St. Glebu by Sledge to the new Church'); the latter by a picture in the Sylvester MS of SS. Boris and Glebu ('Conveyance of the Corpse of Prince St. Boris by Sledge'). But, as the use of the sledge in funeral obsequies is also found, according to Anučin, among many Finnish tribes, and as to this day the funeral-sledge often supersedes the waggon—even in the finest season of the year—in the north-east of Europe, it is safe to conjecture that the Russians had adopted the practice from the East European peoples with whom they mingled as they spread towards the north-east. Traces of funeral-sledges are likewise found in Egypt, while Lycian grave-stones sometimes exhibit houses resting upon sledge-runners (cf. R. Meringer [*Indogerm. Forschungen*, xix. [1905] 409).

3. The gifts to the dead (cf. art. ARYAN RELIGION, vol. ii. p. 20 ff.).—Just as we read in the *Iliad* (xxiii. 17 ff.) that the four-horse team of Patroclus was burned upon his funeral-pyre, in Herodotus (iv. 71 f.) that large numbers of horses were buried with the Scythian kings, and in Tacitus (*Germ.* 27) 'quorundam [the Germans] igni et equis adicitur'; so from the Russian *byliny*, or histories, we learn that men were interred with their horses, and sometimes even upon horseback. The burial of Bogatyri Potok Mikhail Ivanovič, for example, is thus described:

'Then they began to dig a grave there;
They hollowed out a grave deep and large:
A deep one, some twenty fathoms wide.
And then was Potok Mikhail Ivanovič,
With his steed and harness of war,
Lowered into the deep grave.
And they covered it with a roofing of oak,
And strewed it with yellow sand.

(Anučin, *loc. cit.*)

4. The funeral feast (cf. art. ARYAN RELIGION, vol. ii. p. 20^b): attentions paid to the dead after the funeral rites (Ancestor-worship) (*ib.* 23 ff.).—The various facts—and especially those referring to the White Russians—set forth in the paragraphs cited have meanwhile been largely supplemented from various quarters of the Slavic world. This fresh information is supplied by Matthias Murko in an art. entitled 'Das Grab als Tisch,' in *Wörter und Sachen: Kulturhist. Ztschr. f. Sprach- u. Sachforschung*, ed. R. Meringer, etc., ii. 1, Heidelberg, 1910, p. 79 ff. The first three chapters of this most instructive essay deal respectively with the following subjects: (1) funeral repasts of the Slavs at the burial-place after the interment; (2) sepulchral meals of the Slavs at the graves of individuals; and (3) sepulchral meals on the all-souls'-days and at the ancestral feasts of the Slavs, and meals for the dead among aliens in Russia. That Murko is in this field of inquiry essentially at one with the present writer appears, e.g., from his remarks on p. 110:

'For experts in this study, it will not be necessary that I should emphasize the fact that so many customs and festivals still in vogue recall those of the Greeks and the Romans, and even surpass the latter in remoteness of origin, so that we must look for their parallels among primitive peoples. I shall merely state that the original purport of the practice of eating and drinking at the grave can still be clearly recognized: the deceased still takes part in the meal; the mourners leave a place vacant for him at the grave-table; they expressly invite

him; they eat with delight of his favourite dishes; they give him wine and honey to drink; they pour wine and water upon the head of his grave; and beside or upon the grave they set food for the dead,' etc.

5. In the article referred to, however, Murko carries his investigation considerably further, as in subsequent chapters he sketches the process by which the relics of ancient ancestor-worship have in the Eastern Church become intermingled with the primitive worship of the dead among the Slavs ('worship of heroes and its transference to the Christian martyrs'). The details of the process are given in the following chapters: (4) the early Christian Agapæ and the meals connected therewith; (5) the survival in the Slav languages of Gr. *ἑρπαιστα* and other foreign words connected with the cult of the dead (cf. art. ARYAN RELIGION, vol. ii. p. 27^a, regarding Russ. *kannunū* = Gr. *κάνων*); (6) Romano-Greek influence upon the spring festivals for the dead among the Slavs (O. Slav. *rusalija*, Serv. (*dyruzičalo*, Russ. *radunica*; cf. vol. ii. p. 25^b and 25^c); Murko's derivation of Russ. *radunica*, from Gr. *ῥόδωνια*: *οἱ τῶν ῥόδων λειμών* of Suidas, is original and convincing, so that its meaning is the same as that of *Rosalia*, the spring festival for the dead); (7) Lat. *silicernium*, *silicernus* (cf. vol. ii. p. 28^a; Murko thinks that this word denotes the feast held upon the *silices*, i.e. the rubble of the grave).

LITERATURE.—This is sufficiently indicated in the art. and in ARYAN RELIGION. O. SCHRADER.

DEATH AND DISPOSAL OF THE DEAD

(Tibetan).—In Tibet, death is regarded as the work of the death-demon, who has accordingly to be exorcized from the house and locality. The ceremonies at death and the methods of disposal of the body are almost entirely of a pre-Buddhistic or Bon character, although now conducted for the most part by orthodox Buddhist priests.

The Tibetans believe that the soul lives after the death of the body, but the future life desired by the people is not the Buddhistic one of a higher earthly re-birth or the arhat-ship of *Nirvāṇa* or Buddhahood. They desire the new life to be in an everlasting paradise, which is now identified with the Western Paradise of Buddha Amitābha of the later Indian Buddhists. The object of the death-ritual, therefore, is, firstly, to secure the due passage of the soul of the deceased to this paradise, and, secondly, to safeguard the earthly survivors against harm from the death-demon, as well as from the spirit of the deceased in the event of its failing to reach paradise and so becoming a malignant ghost.

Formerly, so late as the 8th cent. A.D., human sacrifices were made on the death of kings and nobles. Five or six chosen friends from amongst their officers were styled 'comrades,' and killed themselves on the death of their master, so as to accompany him to paradise, and their bodies were buried alongside of his. The crests of the hills were crowned by such sepulchral mounds, as in China and amongst the Turkic tribes. Beside the body were buried the clothes and valuables of the deceased, his bow, sword, and other weapons, and his favourite horse; and a tumulus of earth was thrown up over all. Animal-sacrifice seems also to have been practised, as is evidenced by the dough effigies of animals which are offered as part of the sacrificial rite by the hands of Buddhist monks, who now perform the popular death-rites, and by their religion are prohibited from taking life (L. A. Waddell, *Buddhism of Tibet*, p. 518 f.).

1. Extraction of the soul.—On the physical death of a person, Tibetans believe that the spirit does not depart forthwith, but continues to linger within the corpse for a varying period, which may extend to four days, after the cessation of the heart and

breath. In order to secure the release of the spirit in that direction in which it has the greatest chance of reaching paradise, the services of an expert priest are necessary.

After a death occurs, no layman is allowed to touch the body. A white cloth is thrown over the face of the corpse, and a priest is sent for to extract the soul in the orthodox manner. This priest is one of the higher monks, and bears the title of 'The Mover or Shifter' (*'p'o-bo*). On his arrival in the death-chamber, all relatives and others are excluded, and the priest, closing the doors and windows, sits near the head of the corpse and chants the directions for the soul to find its way to the Western Paradise. After exhorting the soul to quit the body and give up its attachment to earthly property, the priest seizes with his forefinger and thumb a few hairs on the crown of the corpse, and, jerking these forcibly, is supposed thereby to make way for the soul of the deceased through the pores of the roots of these hairs, as though actual perforation of the skull had been effected. If, in the process, blood oozes from the nostrils, it is an auspicious sign. The soul is then directed to avoid the dangers which beset the road to paradise, and is bidden God-speed. This ceremony lasts about an hour. When, through accident or otherwise, the body is not forthcoming and the fourth day is expiring, this rite is performed *in absentia* by the priest conjuring it up in spirit whilst seated in deep meditation.

2. **Handling the corpse.**—All persons are tabooed from touching a corpse (*ro*) except those who belong to the father's family or those indicated by the astrologer-priest, who casts a horoscope for the purpose. This document also prescribes the most auspicious date for the funeral and the mode and place of disposal of the body, as well as the worship to be performed for the soul of the deceased and for the welfare of the surviving relatives.

The persons who may ordinarily handle a corpse must be children by the same father as deceased (*p'as-spun*), though in Lhasa and large towns with many strangers the professional scavengers may do this work. In rural communities, when a man has no paternal relatives of his own, he procures admission into the family of a friend for such funeral purposes as official mourner by giving a dinner to announce the fact. The persons so authorized then approach the body with ropes, and, doubling it up into a crouching attitude, tie it in this posture, with the face between the knees and the hands under the legs. If *rigor mortis* be present, bones may be broken during the process. The attitude of the body resembles that found in some of the early sepulchres, and is probably a survival of the pre-historic period. It ensures portability of the corpse.

When tied up in the proper attitude, the body is covered with some of the clothes of the deceased, put inside a sack made of hide, tent-cloth, or blanket, and removed from the room to the chapel of the house (where there is one) as a mortuary, and placed in a corner there. A sheet or curtain is stretched in front of the sack as a screen, and all laymen retire. Where the body has to be kept a long time for climatic or other reasons, it may be slung up to the rafters.

3. **Pre-funeral rites.**—Priests remain in relays day and night chanting services near the corpse until it is removed. The head priest sits near the screen, with his back to the corpse; the other priests face him, and all read extracts from the Buddhist scriptures, often from different books at the same time; and they keep alight lamps (from 5 to 108, according to the means of the deceased). The relatives sit in another room, and offer food and drink to the deceased. His bowl is kept filled

with tea or beer, and he is offered a share of whatever food is going; and such drink and food as are offered are afterwards thrown away, as it is believed that their essence has been abstracted by the soul of the departed. Feeding the *manes* is also found in the Indian Buddhist practice of *avalambana*, based upon the Brāhmanical rite of *śrāddha*.

Before the funeral the guests, after libations, partake in solemn silence of cake and wine within the house in which the corpse is lying; but, after the latter is removed, no one will eat or drink in that house for a month.

4. **Funeral procession.**—This occurs on the auspicious day and hour fixed for it by the astrologer. The relatives and guests bow to the corpse, which is then lifted by the official mourners, put on the chief mourner's back, and carried to the door, where it is placed in a square box or coffin (*ro-rg'am*) provided by the monastery which is conducting the funeral, and the box is carried thence by the official mourners to the cemetery or cremation ground. If the chief mourner is a woman, she does not accompany the funeral, but, after walking thrice round the coffin and prostrating herself thrice, is conducted back to the house.

In front of the procession go the priests, chanting Sanskrit spells or *mantras* extracted from the later Indian Buddhist scriptures, and blowing horns, or beating drums, or ringing handbells; then follow the relatives and friends, and last of all comes the coffin. This is led by the chief priest by means of a long scarf, one end of which is attached to the coffin; the other end he holds in his left hand, whilst with his right he beats a skull drum as he walks. This scarf probably represents the 'soul's banner' (*hurin-fan*), which is carried before the coffin by the Chinese.

The spot or cemetery to which the body is carried is usually a solitary rock on a wild hilltop, and is believed to be haunted by evil spirits. In Lhasa the ordinary cemetery (*dur-k'rod*) is within the city. The corpse must not be set down anywhere *en route*, otherwise the final ceremony would have to be performed at that place.

5. **Disposal of the body.**—The particular mode in which the body is to be disposed of is prescribed by the astrologer-lama. Of the various modes, one only, namely cremation, presents Buddhist features. The methods may be said to be five in number:

1. **Consumption of flesh by animals and burial of bones.**—This, the so-called 'terrestrial method,' is the commonest and obviously the most ancient. It was a custom of the ancient Scythians known to Herodotus; and its practice by the Parsis at the present day may also be derived from such a source or from the Turkic tribes. There seems no reason to ascribe it, as has been conjectured, to the influence of those Jātaka tales which relate that Śākyamuni in former births offered his body to feed famished tigers and other animals. Such a practice of disposal of the dead is not recorded in Indian Buddhism, and its present-day practice in Siam and Korea, as well as in Tibet, is obviously a survival of the ancient Scythic and Mongolian custom.

At the cemetery the body is placed face downwards on the rock or slab of stone, divested of its clothes, and tied to a stake. The priest, chanting *mantras*, scores it with a large knife, and the corpse-cutters slice off the flesh and throw it to the vultures and other animals of prey which frequent these cemeteries. In Lhasa dogs and even pigs assist in devouring the corpses. As, however, vultures are esteemed more auspicious, the attendants for a small sum engage to keep off the other less desirable beasts of prey. The rapidity with which the body is devoured is considered of good

omen, and the skull of such a corpse is prized as an auspicious libation-bowl.

The bones of the stripped and dismembered body are then buried, and, if the person be wealthy, a mound or tower is erected over them.

2. *Total consumption of flesh and bones by animals.*—This, the so-called 'celestial method,' is much less common, though not infrequent with the richer classes. The bones, stripped of their flesh as above, are not buried, but pounded and mixed with meal, and given to dogs and vultures to consume.

3. *Throwing into rivers or at waste places.*—This, the most ignoble method, is the fate of the poorest, as burying entails considerable expense. The body is dragged by a rope like a dead beast. In this way are also disposed the bodies of criminals, those killed by accident, lepers, and sometimes barren women. The skulls of enemies slain in battle are deemed auspicious for drinking-goblets.

4. *Cremation.*—This mode of disposal of a quasi-Buddhistic kind is reserved in Tibet for the bodies of the higher lamas, though, in those districts where wood fuel is more available, it is also used for the laity.

The body is placed on the pyre, seated erect in a devotional attitude, cross-legged like Buddha's image. The soles of the feet are turned upwards, the right hand with palm upwards resting on the flexed thigh, and the left hand is raised in front of the shoulder in the 'blessing' attitude. In the case of the laity, the face seems usually to be placed downwards. When the wood is lighted, melted butter is poured over the body, and, when the first limb or bone drops from the body after a few hours, the funeral ends, though some of the relatives remain till the cremation is over. The body is seldom completely reduced to ashes. The ashes and unconsumed relics are removed by the priests to the house of the deceased, and there pounded and mixed with clay to form in a mould miniature votive *chaitya* medallions called *ts'a-t's'a*, the *dharma sarira* relics of Indian Buddhists. These are placed in the niches of the funeral towers known as *chortens*, or, if the deceased be rich, a special tower may be erected over them (see art. CHORTEN).

5. *Preserving the entire body by embalming.*—This mode seems to be restricted to the sovereign Grand Lamas of Lhāsa and Tashilhunpo. The body is embalmed by salting, and, clad in the robes of the deceased and surrounded by his personal implements of worship, is placed, in the attitude of a seated Buddha, within a gilded copper sarcophagus in one of the rooms of the palace; it is then worshipped as a divinity. Before it, on an altar, food and water are offered, and lights are kept burning. Eventually it is enclosed in a great gilded *chorten*, surmounted by a gilt dome, and becomes one of the recognized objects of worship to pilgrims.

With the disposal of the body, the relatives and guests disperse, after a feast given in the open air.

6. *Post-funeral obsequies.*—The funeral does not end the ceremonies. The soul of the deceased is not effectively disposed of until forty-nine days after the death, and the death-demon is also to be expelled from the locality. This latter exorcism is an indigenous Bon rite, and must be performed within two days after the funeral. It is termed the 'Turning away of the face of the Devouring Devil (*Za-dre*). The demon is represented as of human form, riding upon a tiger; and, in laying the evil spirits, figures of animals moulded in dough are used in the sacrifice. For the final disposal of the soul of the deceased, further priestly services are required weekly until forty-nine days after death. During this period (i.e. 7 × 7 days)

the soul is believed to remain in a purgatory or intermediate stage (*bar-do*) between death and regeneration, and is assisted onwards by the prayers of the priests. For this a lay effigy of the deceased is made in the house, on the day on which the corpse was removed, by dressing up a bench or box with the clothes of the deceased, and for a face a paper mask is inserted bearing a print of a dead Tibetan. On the forty-ninth day this service is completed, the paper mask burned, and the clothes given away. The priests receive as presents some valuable articles from the property of the deceased, and a feast concludes the ceremony.

Mourning is practised chiefly for young people; the old are less lamented. The full term of mourning is about a year, but three or four months is more usual. During this time no coloured clothes are worn, nor is the face washed or the hair combed; men may shave their heads, and women leave off their jewellery and rosaries. For Grand Lamas the general mourning of the people lasts from a week to a month.

All the places where bodies are buried or otherwise disposed of are esteemed sacred.

L. A. WADDELL

DEATH OF THE GODS.—See DECIDE.

DEBAUCHERY (French *debaucher* [*de*, 'from,' and old Fr. *bauche*, 'a course,' 'a row'], 'to lead from the straight course'; hence 'seduction from duty,' 'excessive intemperance,' 'habitual lewdness').—Although individuals who habitually indulge in reckless dissipation are justly regarded as defective in ordinary self-control, and although it might be shown on incontestable evidence that no inconsiderable proportion of such persons are insane or mentally defective, it would still be preferable to approach this subject from the standpoint of normal psychology in order to trace the nature of the impulse which impels men in the direction of excessive intemperance and lewdness. To do this successfully we must take into consideration the habits and proclivities of primitive men. Uncivilized peoples manifest an intense love of excitement, particularly in connexion with their social and religious gatherings. All the writings of travellers referring to the domestic and social life of savages are unanimous as to the fact that every event out of the daily routine which causes people to assemble together is likely to become an occasion for intoxication. Birth alone is perhaps less associated with this form of enjoyment; marriages and deaths are certainly a very common excuse for it, and it is remarkable that we still retain survivals of these customs even in Western Europe. A culmination in intense excitement without the aid of intoxicants is frequent in their social gatherings. Featherman (*Social Hist. of Races of Mankind*, 1881–91, iii. 341) gives many examples, from which the following may be selected:

'They arranged themselves in groups, and at a given signal each group began to sing at first in a low tone of voice, which became louder and terminated in dreadful yells and hideous howls. The jumping was so violent and their efforts were so furious that some of them fell senseless to the ground. Three or four players or sorcerers stood in the centre, shook their tamarak, and blew tobacco smoke from a cane pipe upon the dancers.'

Mrs. French-Sheldon (*JAI* xxi. [1891] 367), speaking of the natives of East Africa, says:

'At some of their festivals this dancing is carried to such an extent that I have seen a young fellow's muscles quiver from head to foot, and his jaws tremble without any apparent ability on his part to control them, until, foaming at the mouth and with his eyes rolling, he falls in a paroxysm upon the ground.'

to be carried off by his companions. This method of seeking artificial physical excitement bears a singular resemblance to the dances of other nations outside of Africa.

Not only are the reunions of savage peoples characterized by intoxication and induced physical and mental excitement, but their religious ceremonies owe attraction largely to the induced mental fervour of the ministrants and audience. Partridge (*AJPs*, Apr. 1900, p. 363) goes so far as to hold that intoxication is one of the most important parts of the religious and social life of primitive man. He says:

"The use of alcoholic beverages arose in connexion with the religious social life in the effort to heighten the religious self-consciousness. Its use for these purposes among primitive people is widespread and almost universal."

Among some tribes in the Philippine Islands the shaman (usually a woman) works herself up into frenzies of nervous excitement by means of contortions and copious draughts of fermented liquor. Feasting and revelling follow, until oftentimes at her ceremonies all present become intoxicated, and fall into an unconscious state (cf. Tylor, *Prim. Cult.* ii. 134 ff.). Similar practices are universally prevalent at the present day among the Persian dervishes, who produce in themselves states of exaltation and hallucination by means of opium and hashish. A similar condition is induced by the Peruvian priests by means of a drug known as 'tonca' (*ib.* 416 ff.). The reunions of savage and barbarous peoples are characterized not only by intoxication, but also, frequently, by sexual orgies of a revolting character. Bancroft (*Native Races*, i. 551) says (quoting Kendall):

"Once a year the Keres have a great feast, prepared for three successive days, which time is spent in eating, drinking, and dancing. . . . To this care, after dark, repair grown persons of every age and sex, who pass the night in indulgences of the most gross and sensual description."

Writing of the Mosquitos, the same author (p. 735) states:

"Occasionally surrounding villagers are invited, and a drinking-bout is held, first in one house and then in another, until the climax is reached in a debauch by both sexes of the most revolting character."

The ravenous appetite of certain savages justifies the accusation of gluttony which has been ascribed to them by various authors. The enormous development of the jaw muscles, as well as the protuberance of the alimentary system, is a sufficient indication of their propensity for swallowing enormous quantities of food when opportunity offers. A Yakut child, according to Cochrane, devoured at a sitting three candles, several pounds of sour frozen butter, and a large piece of yellow soap, while an adult of the same tribe devoured forty pounds of meat in a day. Wrangle says each of the Yakuts ate in a day six times as many fish as he could. The Comanches, according to Schoolcraft, eat voraciously after long abstinence, and without any apparent inconvenience (quoted from Spencer's *Sociology*, i. 45). That debauches are restricted solely through the want of opportunities for prolonging and repeating them is only too apparent from the histories of those savage or barbarous tribes which have been brought into close and constant contact with the more unscrupulous representatives of civilization. So long as alcohol and pleasurable excitement were obtainable, no price was grudged for them until, as a consequence of reckless self-abandonment, the wretched hedonists stood stripped of their possessions, and incapable of resuming their previous methods of life. The unfitness of savages, in the majority of instances, for regular or sustained employment of any kind is one of their most marked characteristics. It might be objected that such a generalization is too sweeping, and, moreover, that war and the chase are the only careers open to primitive man. It may be admitted that many members of the so-called inferior races have shown exceptional

aptitude for commerce, agriculture, and industry of various kinds; but the history of the emancipated Negroes and of the native Indians in the Reserve Territories of the United States is conclusive proof of the inadaptability of these races, as a whole, for the rôle of civilization in which sustained and regular labour is the active and most important element. In these races labour is fitful and distasteful, and alternates with long spells of inactivity and unproductiveness.

From the foregoing statements it is evident that among the members of uncivilized communities certain anti-social defects which are hostile to the progress of civilization are extremely prevalent. These defects may be summed up as: (1) a craving for intense mental states, which is most easily gratified by induced excitement, by alcohol or other drugs, by sexual excitement, or by the appetite for food; (2) an inability or, at any rate, a strong disinclination for sustained mental or physical exertion. The representative anti-social elements in a modern civilized community may be regarded as the legitimate survivals of uncivilized ancestors. They all manifest the same strong craving for intense mental states, which can be fully gratified only by the grosser forms of dissipation, while they also exhibit the natural disinclination for sustained and productive labour. The prostitute, the gambler, the drunkard, the criminal, and the loafer have this in common, that they desire the grosser forms of excitement, that they are prodigal of their means, and unproductive in their methods of supplying their wants.

The view which regards the pronounced anti-social members of a community as the survivals of a period when the race as a whole was comparatively primitive in its social development is the only scientific one, and displaces to a large extent the older views of deliberate sinning and moral responsibility; for a little consideration will enable us to see that a person who is constitutionally *a-moral* cannot be also at the same time *im-moral*. Such a statement must not be taken to imply a disbelief in individual moral responsibility, for it must be recognized that persistent immoral conduct may depend upon opportunity and the absence, for any reason, of public opinion. It follows that a person who is able to control his conduct under the influence of any ordinary deterrent must be, more or less, responsible for his conduct in the absence of these deterrents. In the development of society, as of the individual, there are two factors—environment and evolution. The environment is never constant but is always changing, while the development of a society depends upon the development of its units, subject to the influence of the environment. Physically as well as mentally, the individual must be in harmony with his surroundings or he cannot exist. In every established race of living beings the majority of the individuals present an average mean of certain qualities the possession of which entitles them to be regarded as normal representatives of their race; but there is in every such race a large minority of individuals who vary to a greater or less extent from this mean of any given quality. Some of them possess the quality in excess of the mean, others in defect. The majority of the members of a civilized community subordinate their desires for the grosser pleasures to the duty of sustained effort and the dictates of morality. Through a long process of natural selection this standard has been attained; but, just as a race of men present marked divergencies in stature or mental ability, so do they manifest throughout their composing units the greatest differences in respect to social qualities, varying from the highest manifestations of altruism to an absence of the

sense of responsibility and a reckless craving for gross self-indulgence. 'A community,' says Giddings (*Princ. of Sociol.*, 1898, p. 414), 'that delights in many harmonious pleasures has, on the whole, more chances in life than one which is satisfied with a few intense pleasures.' It is scarcely necessary to insist upon the instability of a community the majority of whose members are constitutionally indolent or immoral. We see, therefore, that the debauchee and the loafer are variations from the mean type of their society; we also see the sense in which they may be described as representatives or survivals of more primitive social states. In relation to their social environment they are anti-social and irretrievably doomed to elimination. The rapidity of this process of elimination is apt to be obscured by the fact that each new generation produces its fresh quota of individuals who are socially abnormal; but it must be borne in mind that the rapidly changing environment advances the moral standard of each generation, and that therefore a relatively higher and more stringent natural selection is gradually being brought to act upon those unfortunate units whose mental or physical organization is out of harmony with its requirements. With the advance in the standard of morals of a community there emerges gradually an expression of the ethical attitude of the public towards disease and infirmity, of which sufficient proof is to be seen in the improved condition of the insane, in the founding of 'homes' for epileptics and inebriates, and in the increased interest in the study of criminology. All these movements exhibit the tendency of modern societies to regard the actions of its anti-social members as irresponsible. It therefore seems highly probable that at no distant date civilization will enable us to dispense with retaliative punishment as a deterrent in certain moral delinquencies, and that the State will take upon itself the regulation of the lives of those who are incapable of living up to the standard of decency and order required by the existing social environment.

DECALOGUE.—*Introductory.*—There is probably no human document which has exercised a greater influence upon religious and moral life than the Decalogue. On account of its brevity, its comprehensiveness, its forcefulness, and its limitations, it has stood out from other teaching, and has been embedded in Christian liturgies and catechisms, so that it is difficult for any one brought up with any degree of Christian culture to escape knowledge of its contents. The exalted idea of its superior value goes back certainly to the Book of Deuteronomy; for we are told repeatedly there that the Ten Words were written upon two tables of stone by God Himself, and even with His finger¹ (4¹³ 5²² 9¹⁰ 10¹⁻⁴; cf. Ex 31¹⁸ 32¹⁶ 34¹⁻²⁸). However freely the statements may be interpreted, however figuratively the author may have written, it was certainly his intention to show that he placed this code above all other legal codes, these words above all other revealed words. In other cases it sufficed to say that Jahweh spoke to Moses, and Moses' memory was depended upon to convey accurately to the people all the vast amount of revelations given in the course of many days. But the Ten Words were so precious that no risk of forgetfulness could be run, and they were at once engraven on the solid stone. And

there is more to show their high station. When Moses brought the stones down from the mountain, and saw Israel's apostasy, he dashed the stones to the ground and broke them. The precious record could not be lost, however; nor could Moses, who may be presumed to have known them by heart, be trusted to reproduce them. He was directed to prepare two new tablets of stone, and take them up to the mountain again, that the original text might be restored by the same finger which engraved the first copy. Finally, that there might be no further chance of breakage, Moses by command made an ark of acacia wood for their safe keeping (Dt 9. 10). It is now advisable to see what this document is, and to test the statements accounting for its origin.

1. **The two forms of the Decalogue.**—The Decalogue has come down to us in two versions which differ to a considerable extent, one (in common use) being in Ex 20²⁻¹⁷, the other (unfortunately almost ignored) in Dt 5²⁻²¹.¹ Some of the variations in the Decalogue may be due to accidents in the transmission of the text, but the most of them are certainly deliberate. Moreover, the process of development did not stop with our present Heb. text, as the LXX shows still further modifications, few if any of which can be fairly attributed to the translators.

In the case of the *Fourth Commandment*, the important differences are indicated in the following parallel renderings, italics showing variations:

Ex 20 ²⁻¹¹ .	Dt 5 ¹²⁻¹⁵ .
Remember the sabbath day to sanctify it. Six days shalt thou labour, and do all thy work; but ² the seventh day is a sabbath to Jahweh thy God. Thou shalt not do ³ any work: thou and thy son and thy daughter, thy man-servant and thy maid-servant, and thy cattle, ⁴ and thy guest who is within thy gates. ⁵ For in six days Jahweh made the heavens and the earth, the sea ⁶ and all that is in them, and he rested on the seventh day. Therefore Jahweh blessed the sabbath ⁸ day and sanctified it.	Guard the sabbath day to sanctify it, as Jahweh thy God commanded thee. Six days shalt thou labour and do all thy work; but the seventh day is a sabbath to Jahweh thy God. Thou shalt not do any work: thou and thy son and thy daughter, and thy man-servant and thy maid-servant, and thy ox and thy ass and all thy cattle, and thy guest who is within thy gates; ⁷ in order that thy man-servant and thy maid-servant may rest as well as thou. And thou shalt remember that thou wast a servant in the land of Egypt and that Jahweh thy God brought thee out from there by a strong hand and by an outstretched arm. Therefore Jahweh thy God commanded thee ⁹ to make the sabbath day.

¹ There are many other instances of duplicates in Holy Scripture: Ps 18 has been incorporated in the history of David (2 S 22), on the supposition that it is an account of an episode in his life; but a more striking parallel for our purpose, because of the importance of the material, is the Lord's Prayer (Mt 6⁹⁻¹³, Lk 11²⁻⁴).

² LXX has *ἢ δὲ ἡμέρα*; so in Dt 5¹⁴ = Dt¹³, 'but on the seventh day there is a sabbath (or rest).'

³ LXX adds *ἐν αὐτῇ*; so in Dt 5¹⁴ = 13, a necessary correction, followed by Lat. and Eng. versions. This reading is found in the Papyrus Nash (see Peters, *op. cit. infra*).

⁴ LXX reads: 'thy ox and thy ass and all thy cattle,' in agreement with Dt 5¹⁴. The translator would scarcely have inserted this phrase for the sake of harmony when he leaves so much else divergent; therefore the early Heb. texts must have differed from each other in the same code.

⁵ LXX reads: 'the guest who dwells with thee'; so in Dt 5¹⁴. In spite of its more primitive appearance (cf. below), this reading can hardly be original, for the Heb. phrase would not have been changed after the Greek version was made. The LXX expression is more comprehensive, and may be a free rendering, though all else is intensely literal.

⁶ LXX B lacks 'the sea'; perhaps it is a later addition.

⁷ LXX B adds here: 'for in six days the Lord made the heaven and the earth and the sea and all that is in them.' The words are a manifest harmonizing gloss, as is shown by the impossible connexion with the following clause, 'in order that thy man-servant and thy maid-servant may rest as well as thou.' The gloss may have been found in a Heb. text.

⁸ LXX has *ἡβόησεν*, 'seventh'—a better reading, for it was Jahweh's blessing of the seventh day which made it the sabbath.

⁹ LXX reads: 'that thou shouldst guard the sabbath day and

¹ Compare our Lord's casting out devils by the 'finger [i.e. the power] of God' (Lk 11²⁰).

The peculiar phrases in the Deuteronomic edition are characteristic of the author; they are unmistakable, for there is no other OT writer whose style is so readily detected (see Driver's *Deut.*, in *loc.*). It will be noted that we have here a commandment, and the reasons for its observance. The two versions have no important divergence in the commandment, but separate absolutely on the reasons. Beyond question Deut. is the older. The sanction on humane grounds is original with him, for it accords with his spirit through and through. There came a time when grounds of humanity were not strong enough. Another editor, perhaps the one who constructed the Creation story in Gn 1-2⁴ for this purpose, put it on a basis which is to him distinctly higher—that man should follow the example of God. That story of the Creation is much later than Deut., and this addition to Ex. is perhaps the latest touch to the Decalogue. It is unfortunate that this version, with its sanction on a ground which nobody believes now, is the one in general Christian use.

In the *Fifth Commandment*, Dt 5¹⁶ has two clauses which do not appear in Ex 20¹². The former version runs: 'Honour thy father and thy mother, as Jahweh thy God commanded thee, that thy days may be long, and that it may be well with thee, upon the land which Jahweh thy God is giving thee.' These are common Deuteronomic phrases, and are plainly editorial additions. The first obviously overlooks the fact that Jahweh Himself is supposed to give the words from His own mouth. The second is found in the best Greek texts of Exodus, but preceding the clause about long days. The words may have got into some of the Heb. editions, but not into those which have come down to us. In earlier times, length of days would be a sufficient reward, but later the craving for good days would naturally find expression.

In the *Ninth Commandment*, Dt 5²⁰ differs from Ex 20¹⁶ by a single word: instead of *אשר*, 'false', we find *אין*, the word used in the Third Commandment for 'vain' (cf. below). The Greek text renders freely: 'Thou shalt not falsely testify against thy neighbour false testimony,' and the renderings of Deut. and Ex. agree *verbatim et literatim*, showing a careful comparison, which ignores the difference in our present Heb. text. The proper rendering of the Hebrew is: 'Thou shalt not answer against thy neighbour a false witness.' By a slight change of the text (from *אין* to *אשר*) we get 'testimony,' as LXX. But the Heb. seems to mean that a man shall not bring a false witness to testify against his neighbour, as Jezebel did against Naboth. This view makes the mandate more ethically refined, laying the stress of the wrong on the procurer of false testimony rather than on the witness.

In the *Tenth Commandment* we have a considerable variation:

Ex 20¹⁷.

Thou shalt not covet the house¹ of thy neighbour; thou shalt not covet the wife of thy neighbour,² nor his man-servant nor his maid-servant, nor his ox nor his ass,⁴ nor anything which is thy neighbour's.

Dt 5²¹.

Thou shalt not covet the wife of thy neighbour. Thou shalt not desire² the house of thy neighbour, nor his field, nor his man-servant nor his maid-servant, his ox nor his ass, nor anything which is thy neighbour's.

The use of 'desire' instead of repeating 'covet' sanctify it.³ This could scarcely be a rendering of the present text. In the text above, instead of 'make' we might render 'inspire.'

¹ The LXX order is 'wife,' 'house,' as in Deuteronomy.

² LXX uses the same verb in both clauses, as in Exodus.

³ LXX adds: 'nor his field,' as in Deuteronomy.

⁴ LXX adds in both versions: 'nor any cattle of his,' to agree with v.¹⁰. Codex L has 'nor any vessel of his,' reading *כלי* as *כלי*. The two texts of LXX in that verse, as in the preceding, agree *verbatim et literatim*.

is presumably for rhetorical elegance. The transposition of 'wife' and 'house' is not so easily explained. It may be due to the greater importance of the wife in the time of Deut., taking the wife out of the property class (so *EBi* i. 1049, *s.v.* 'Decalogue'); it may be a copyist's error; it may be an effort to secure a more logical sequence, the wife not belonging so strictly to the category of property as the other objects enumerated; or it may be due to the influence of such facts as David's marriage with Bathsheba. The interpolation of 'field' seems surely to reflect the impression made upon the people by the story of Naboth's vineyard, and of other instances which gave occasion to Is 5⁴ 'Woe unto them that join house to house, that lay field to field, till there be no room, and ye be made to dwell alone in the midst of the land.' Cf. Mic 2². There are a few other variations, but they practically consist of the addition of conjunctions in Deut. to connect the clauses for greater rhetorical effect.

A few of the more important readings of the Greek text may be noted beyond those already cited. In Ex 20¹ A reads: 'And the Lord spoke to Moses all these words, saying.' Here we have an explanation of the singular which is used throughout the Decalogue. The words are in the first instance commands to Moses. This introduction is scarcely consistent with the statement of Deut., that they were first inscribed upon stone tablets by the finger of God. Deut. reconciles the two ideas by saying that Jahweh first spoke the words unto all the assembly with a great voice, and then wrote them upon the stone (52²). In v.², instead of 'house of slaves,' LXX has 'house of bondage' (so in Deut.)—a reading which is followed by our versions. The Heb. is better, for the term 'house of slaves' is used to designate the land of Egypt. In v.³, LXX renders *ἐξέτι*, 'except me' (*ἐλπί* μου) in Ex.; but in Dt 5⁷ B has 'before my face' (*πρὸ προσώπου μου*, Lat. in *conspetu meo*). The Eng. versions have 'before me' in the text, but RVM 'beside me.' The latter is a doubtful rendering, like the Prayer-Book form 'but me.' The words literally are 'upon my face,' and would most naturally mean 'in preference to me.' If that is the true sense, then this command represents a more primitive religious conception than the absolute monotheism of the prophetic age. Weiss holds that the words forbid the worship of all other gods (*Das Buch Exodus*, Graz, 1911).

In v.⁴ (8) 'any likeness which is in the heavens' (an exactly literal tr.) gives no sense. LXX has *πᾶν εἶδος ἀγάλματος* (so in Deut.), and this is followed by Eng. versions. Kittel (*Bib. Heb.*, 1905) suggests *כל נדמה*, on the basis of LXX (cf. Dt 4²⁵). The reason for this prohibition is given at length in Dt 4¹⁶⁻¹⁸.

In v.⁵ *אֶתְּנוּ*, LXX B has *ἐως τριῶν*, implying a reading *τῶν* instead of *τῷ*. The Heb. is right. The absence of the conj. (though Deut. has it erroneously) shows that we have a case of apposition, i.e. 'upon the sons, upon the third and fourth generations.'

In v.¹² LXX has 'upon the good land' (*ἐπὶ τῆς γῆς τῆς ἀγαθῆς*). The addition of 'good' sounds like Deut., and yet the reading is found only in Exodus.

In vv.¹³⁻¹⁵ LXX A transposes here and in Deut., having the order: adultery, stealing, killing. The change may be accidental, or due to an idea that the Seventh Commandment is more closely related to the Fifth. The relation is not very obvious, and the LXX was not wont to take such liberties. There is much variation in the order of these three commandments. In MT, Jos., Syr., the order is murder, adultery, stealing; in Codex Alex. and Ambros., murder, stealing, adultery; in Codex Vat., adultery, stealing, murder. Peters holds that the original order was adultery, murder, stealing, which he says, 'commends itself on internal grounds' (*op. cit.* p. 33). If conjecture could govern, the present writer would prefer the order—murder, stealing, adultery—after some Gr. texts, on the ground that we have then a true sequence in the development of the moral standard. Murder was recognized as wrong long before adultery.

2. Real meaning of some of the commandments. —We turn now to the interpretation of some of the more difficult passages.

In the *Second Commandment* the meaning of the word 'thousands' is not altogether clear. In Dt 7¹ we have apparently a commentary on this commandment: 'the faithful God, keeping the covenant and mercy to those who love him and keep his commands, to a thousand generations.' This interpretation was followed in the Targums, and has been generally accepted. Weiss, the latest writer on Exodus, takes this view. The contrast with 'third' and 'fourth' seems to support it. But the antithesis between the two clauses is not so clear

as appears at first sight. In the first part we have 'visiting the sins of the fathers'; in the second, 'showing the mercy of God.' In the one case God brings the consequences of paternal sins upon the sons, in the other He displays His own mercy to thousands. It appears, therefore, that 'thousands' is contrasted with 'sons,' not with 'third and fourth generation.' Further, *אֶלְפִּי* never means 'a thousand generations'; it has two distinct meanings: a 'thousand' as a numeral, and a body of a thousand people, such as a regiment. In the latter connexion the word is used to indicate a subdivision of a tribe, and means a clan (cf. Jg 6¹⁸, 1 S 10¹⁹). The word here must either be a numeral, 'thousand,' or it must = 'clans.' The extension of mercy is therefore outward not downward. The sin goes down to the sons, the mercy goes outward to the whole family or clan.

'There's a wideness in God's mercy
Like the wideness of the sea.'

The meaning is illustrated in Abraham's plea for Sodom and Gomorrah (Gn 18²²⁻²⁷); if there had been ten righteous men in the city, the whole population might have been saved.

The *Third Commandment* is the vaguest of all: 'Thou shalt not take the name of Jahweh thy God in vain.' The moment we reflect upon the words, the vagueness appears. The usual interpretation is that it is an injunction against profanity. Weiss (*in loc.*) says that 'not only false swearing, but every sinful use of the name of Jahweh, in imprecation, blasphemy, charm, divination, and every frivolous use is included.' And yet it is a little difficult to discover that sense in the original. We should expect the Ten Words to deal with vital matters. There is no evidence that profanity was specially common among the Hebrews, or that they regarded it as a serious offence. From the concluding clause, 'Jahweh will not hold innocent' the one who commits this wrong, it is clear that we are dealing with a serious evil; in fact, with the unpardonable sin of the OT. Indeed, we might well render 'Jahweh will not forgive,' etc. It is at least a step in clearing up the matter to note that *אָמַר* means 'speak.' First there was the full expression, 'he lifted up his voice and spake,' then he 'lifted his voice,' finally 'he lifted,' but with the meaning 'spoke.'¹ *אֶלְפִּי* means 'in vain,' i.e. without result (cf. Jer 2⁸⁰). We therefore have: 'Thou shalt not speak the name of Jahweh thy God without result,' i.e. without doing what was vowed in His name. Thus we can grasp the force of what is otherwise a pure redundancy, 'for Jahweh will not deem innocent him who speaks his name without result.' Now, if there was a principle cherished by the Hebrews above any other, it was the obligation to carry out a vow made in the name of Jahweh. We may note the case of Jephthah, who felt bound by his vow to sacrifice his daughter (Jg 11). Other cases will occur to the reader; and we find the principle strongly urged in Ec 5¹⁻⁶. It may be remarked that, so far as internal indications go, this command may be early. At all events the obligation was recognized in the primitive ages. It was the misuse of the command as above interpreted that our Lord sought to correct (cf. Mt 5³³⁻³⁷, 23¹⁶⁻²²). The Jews held that only a vow in Jahweh's name was binding; Jesus teaches that a man's personal word should be as strong an obligation as any oath.

3. *Original form of the Decalogue.*—It is apparent from a comparison of the texts that the Decalogue has not come down to us in its original

¹ Morgenstern holds that *אָמַר* in Bab. is a technical name for an oath, and that speaking the name of the gods was a sin for any but priests. He regards *אָמַר* as an equivalent term, and the Third Commandment as having that meaning ('The Doctrine of Sin in the Bab. Religion,' *MVG*, iii. [1905] 351.). There is no evidence in the OT to support this view.

form.¹ Many attempts have been made to determine what that original form was. For the most part it is a matter of pure conjecture. But it has been noted that there is a persistent tradition that there were 'Ten Words,' and that they were inscribed on two tables of stone. It has been assumed that there would be practically an even division—five on each table.² The Decalogue divides into two parts, but Commandments 1-4 deal with man's relation to God, and 5-10 with his relations to men—not therefore an even division. In the Heb. text of Exodus, Comm. 1-5 contain 146 words, 6-10 contain 26 words. Taking the division by subject, 1-4 have 131 words, 6-10 have 41 words. Comm. 1-3 contain 76 words, 4-10 contain 96 words. This is the nearest approach to an even spatial division. Hence it is assumed that the commandments must originally have been all short, as 6-9 still are. Com. 2 then would have been simply: 'Thou shalt not make thee a graven image'; Com. 4: 'Remember the sabbath day to sanctify it'; and Com. 10: 'Thou shalt not covet.' This would make commands of sufficiently even length. The growth is easily explained. The images were hard to get rid of, as all religious usages are hard to change. To reinforce the law and to prevent evasions, amplification was necessary and dire consequences of disobedience must be added. Down to the time of Nehemiah the rule for cessation of labour on the sabbath day was disregarded (cf. Neh 13¹⁵⁻²²). Reasons were appended to the law to secure a stricter conformity.

While all this is very probable, the reason urged on the ground of an even division on the two tables is not convincing; for we have many ancient inscriptions on stone and clay, and there is no evidence of an attempt to conform the contents to the size of the material used for the inscription. The size of the characters and of the tablet is determined by the amount to be written. The commandments must have taken shape originally according to their substance, and could hardly have been framed with reference to two tables of stone. The only reason for using two stones was that there was not room enough on one, just as a correspondent takes up a second sheet when one does not suffice for his letter.

4. *How far Mosaic.*—A still more baffling problem is found in the origin of the Decalogue. In both codes it is attributed to Moses, i.e. Moses is the mouthpiece of Jahweh. In Dt 9. 10 there is an unusual wealth of detail about the matter, describing the first writing, the breaking of the stones, the second writing, and the care for the preservation of the final record. The Covenant and the Decalogue are certainly identified in the story, but that is, of course, due to the author of Deut., who lived long after Moses' day. His identification may be correct, but is not necessarily so.

We are obliged to face the question as to the value of this evidence. Now, we know that in the OT all Hebrew law is attributed to Moses, as practically all Hebrew psalmody was ascribed to David, and all wisdom to Solomon. There is, therefore, a presumption against this testimony; for it would be extraordinary if the whole body of a nation's laws were enacted by a single individual,

¹ The Rabbis were puzzled by the variants, but, as usual, were equal to the occasion, holding that both versions alike were of Divine origin, and were spoken miraculously at the same time. Saadya alleges that the Exodus version was on the first set of tables that were broken, and the Deut. text on the second (cited in *JE* iv. 494, s.v. 'Decalogue').

² The Rabbis indulged in their usual fanciful guesses about this distribution. Some held that all ten were on each stone; others that all ten were on each side of each stone; while Simai goes further and alleges that all ten were engraved four times on each stone (*JE*, *loc. cit.*). The idea was that the more times the words were inscribed the more important they were.

and that before there was any nation at all. The evidence, therefore, that Moses produced the Decalogue is no greater than that he produced the law governing the fringe on the priest's cloak. The persistent tradition proves, in the opinion of the present writer, that Moses was a truly great lawgiver; but, by ascribing all laws to him, it puts upon us the necessity of determining as best we can his connexion with any particular law. We are compelled, therefore, to consider whether the Decalogue could have come from so early a date as that of Moses.

Some of the prohibitions are of such a general character that they might belong to any period; such is the case with Comm. 3, 5-9. Others seem to have a closer relation to the development of religion, and a place for them ought to be found accordingly. Com. 1 is monotheistic, though perhaps not so sharply so as has generally been assumed; for the meaning may certainly be that no other god is to be set above Jahweh, and this possibility must have full weight (see above). So far as we know, the victory of monotheism was won by the prophets, one of the great battles being fought by Elijah. But it is certainly true that there were monotheists from the earliest days, such as Deborah, Gideon, and even the freebooter Jephthah. This law may have been as early as Moses for anything we know to the contrary.

The law against images does not belong to the same category. Image-worship was certainly practised down to the Exile, and as late as Hezekiah's time (2 K 18⁴), without rebuke. The war against it appears to have had as its main-spring the effort to centralize the worship at the temple in Jerusalem.¹ As a means of destroying the cult at the local shrines, where images abounded, they were forbidden, for there appear to have been no sacred images in Solomon's temple. It is true that disobedience to a law does not prove its non-existence. The teaching of Jesus about the perils of wealth has not made a very profound impression on the world even yet. But there was no strong motive for images, and it is difficult to think that David would have defied so fundamental a law (1 S 19¹³), or that Isaiah would have countenanced images (19¹⁹). This command, therefore, appears not to have been formulated long before the time of Deuteronomy.

In its present form, Com. 4 cannot be Mosaic. The nomad is never a very hard worker, and a day of rest is not of urgent necessity for him. Moreover, such work as he does is necessary on every day of the week. Further, in the time of Moses there were no guests (*gêrim*, 'protected strangers') within the gates. Sufficient emphasis does not appear to have been laid upon the term 'gates,' disclosing as it does urban life, and therefore belonging at the earliest to the period after the conquest. It is true that so acute a scholar as Weiss holds that *ꠔꠔ* may mean the gate of the camp as well as of the city, and he thinks, therefore, that this term does not presuppose the settlement in Palestine. But the only instance of this meaning that occurs to the present writer is Ex 32²⁶, where the word is a natural figure for 'entrance,' easily used by a writer familiar with gates. Moreover, the expression 'within thy gates' is a characteristic Deuteronomic expression, occurring some twenty times in Deut., and not found elsewhere in the Pent. save in Ex 20¹⁰. The solicitude for the stranger or guest is also Deuteronomic.

The silence about the sabbath day in the records

of the early days is truly remarkable from any point of view. In Jos 6^{4, 14, 15} we read of the army's marching around Jericho on seven successive days, one of which must have been the sabbath. That looks very like 'any kind of work,' and was certainly unnecessary. There are, however, two references to the sabbath which throw welcome light on the situation. In 2 K 4²³ the Shunammite asks his wife why she is going to the prophet Elisha, and gives as the reason for his question 'it is not new moon and it is not sabbath.' It would be easy to draw too large a conclusion from this statement, but one thing is certain, viz. that there is no objection to a journey from Shunem to Carmel (30-40 kilometres, 20-30 miles; see Kittel, *Bücher der Könige*, 1900, in loc.) on the sabbath day; further, it is a reasonable inference that the sabbath was a day for religious rites, but that cessation of labour was not a part of its observance. Something like half a century later Amos makes the people say: 'When will the new moon be over that we may sell grain, and the sabbath that we may open up corn' (8⁵). It is clear that we have an advance from Elisha's time, in that trade is not permitted on the sabbath—precisely the conditions which Nehemiah enforced (Neh 13¹⁵). The new moon is not mentioned in the Decalogue, but it is here, as in Elisha's time, on the same plane as the sabbath. There is hardly evidence, therefore, to support the existence of the Fourth Commandment. The passage may seem to imply that the sabbath had already come to be a mere form (Marti, *Dodekapheton*, 1903, in loc.). But it is more likely that the prevention of trade was a new feature, not approved by the merchants; hence their impatience at the loss of trading days. It appears that under the prophetic influence a movement was making for a stricter regulation of both these festivals. The effort finally centred on the sabbath, and by Josiah's time all labour as well as trade was forbidden. The older idea always persisted, for Nehemiah did not attempt to check sabbath labour in the fields, but restrained trade even by threats of violence. Even to-day Sunday trading is objected to much more than Sunday labour.

Finally, Com. 10 cannot be Mosaic in its present form. In the Exodus version the first object whose coveting is forbidden is the house; in Deut. this is followed by the field. Nomads have neither houses nor fields. It is true that *ꠔꠔ* is often interpreted as meaning 'household' in Exodus. This use is very common, especially in the Hexateuch.¹ But it would be strange to say, 'Thou shalt not covet thy neighbour's family,' and then to continue, 'Thou shalt not covet thy neighbour's wife, and servants and cattle.' It is plain that in the time of Deut. *ꠔꠔ* was interpreted as meaning 'dwelling,' for it is not difficult to see why 'field' was added. As we have noted above, there was much taking of others' land even by violence. The oppressors might easily reconcile their aggressions and the law by saying they had not taken the house but only the field. The law is, therefore, amended to carry out its original intent. Doubtless the sweeping final clause, 'nor anything which is thy neighbour's,' was added to meet casuistical juggling. If the command was Mosaic, therefore, it could only have been in the form quoted by St. Paul, 'Thou shalt not covet' (Ro 7⁷). But here we meet a new difficulty. It is often urged that this law shows an ethical refinement too great for the period of Moses. Quite true. But it is not so sure that the refinement was too great for Moses, the man of God. The Decalogue does not profess to be a production showing the moral sentiment of the age, but is the work of the most enlightened man

¹ Wellhausen holds that the early Hebrews would object to a *ꠔꠔ*, 'image' (the word used in the Decalogue), but not to a *ꠔꠔꠔꠔ*, 'pillar' (*Revue Arab. Hebd.* pp. 101, 141). It is difficult to see sufficient ground for this distinction.

¹ See the Hebrew lexicons.

of the time. Among a rude people it is always possible for one to rise head and shoulders above the rest, not only in stature, like Saul, but in moral insight, as Moses certainly did.

In a word, if we strip the Decalogue of the known later accretions, and the probable additions to meet new conditions, the Commandments may all be Mosaic except possibly the First, and almost certainly the Second. This is confessedly very far from affirming that they did come from the hand of the great lawgiver. Indeed, it is not unlikely that the Decalogue itself may be a growth covering a period of some centuries before the last addition was made. Various men may have tried their hand at putting the great principles of the Law into a terse and comprehensive form. All that we can say positively is that the Decalogue was complete some time before 621 B.C. (the date of Deut.), and that it has not survived in a standard and authoritative form. If it was originally issued on stone tablets, such a version is lost beyond present power of recovery.

There has never been agreement even as to the proper division of the material we have. In Deut. the command against coveting falls into parts, and Com. 1 may be regarded either as a part of the introduction, or less probably as part of the First Commandment, which here deals with images. This arrangement is followed by the Roman Catholic and Lutheran Churches to this day, while most Protestant bodies and the Greek Church adhere to the division in Exodus.¹

5. Theology and ethics of the Decalogue.—In its theology the first striking feature of the Decalogue is its monotheism. It is true that there is some doubt as to the meaning of the First Commandment, but, whatever its original meaning, it was ultimately interpreted as an uncompromising prohibition of the worship of any deity other than Jahweh. That is a necessary step in the development of any religion. Even some that are formally monotheistic are not really so. A prophet may be exalted to the place of a subordinate deity, as in Muhammadanism; or a saint may be made to stand so close to God that the distinction is unreal to the ordinary worshipper. In the lower forms of religion there is a tendency to divide the supposed Divine functions, and assume a deity to preside over each. In the Decalogue, even in its most primitive form, there is but one God, and all Divine offices are performed by Him. In the Deuteronomic form there is nothing which goes beyond nationalism. Jahweh is the only God in Israel. He brought them out of Egypt, and He ordained laws for them. In the later form, the thought of Jahweh as the God of the whole world is brought out in reference to creation.

The prohibition of image-worship puts the religion on a high plane. Though it was supposed that Jahweh could engrave stones, His image could not be made in stone. Jahweh was truly a spiritual being, too sublime to be represented in an image, and too great to be portrayed in the likeness of animal life. In the present form of Com. 2, idolatry is deemed the worst form of sin. It is this that arouses the jealousy of Jahweh, and calls down enduring punishment upon the offenders, and wide-spreading mercy to the innocent. Hating Jahweh is synonymous with idolatry, and loving Him is equivalent to spiritual devotion. This conception could hardly have come from the pre-prophetic period.

The ethical tone of the Decalogue is very high, especially if we assign it to the early period of national life. We note first the demand for truthfulness. Really this appears in both Comm. 3 and 9. No one was to swear to his neighbour and then disappoint him, no matter what the consequences might be—a command correctly interpreted in Ps

154;¹ and no one was permitted to bolster up a bad case against his neighbour by the introduction of false witnesses. Killing and stealing are fairly common vices among undeveloped races, and are far too prevalent even among the most advanced peoples. But the clear terse laws on the two tables, without any qualifications whatever, doubtless saved many a life in Israel, and helped to maintain personal property inviolate. The forbidding of coveting reaches the evangelical note (cf. Mt 5²⁸). It is hardly necessary to assume that coveting is as great a vice as stealing, or that a lustful desire is as degrading as a lustful act. But even in the early ages it must have been apparent that coveting leads to vicious action. Abimelech coveted the throne, and the murder of his seventy brothers resulted (Jg 9). Ahab coveted the land of Naboth, and the murder of Naboth and the confiscation of his land was the consequence (1 K 21). David's passions were aroused by the sight of a beautiful woman, and there followed the criminal death of Uriah and the unholy marriage with his widow (2 S 11).

The ethical standards of the world are still far too low, but it is certain that they would be even lower but for the great influence of the Ten Commandments. It is very desirable that they be stripped of later accretions, and in a simpler and more original form continue to be read to the people in the churches and taught to the children in the Sunday schools.

LITERATURE.—The student will naturally consult the various commentaries on Exodus and Deut., the Bible dictionaries and encyclopædias, and works on Hebrew religion. The following may also be consulted: G. L. Robinson, *The Decalogue and Criticism*, Chicago, 1899; R. Kraetzschmar, *Die Bundesvorstellung im AT*, Marburg, 1896; Meisner, *Der Dekalog*, Halle, 1893; B. Baentsch, *Das Bundesbuch*, Halle, 1892; N. Peters, *Die älteste Abschrift der zehn Gebote*, Freiburg i. B. 1905; F. W. Farrar, *The Voice from Sinai*, London 1892; J. Oswald Dykes, *The Law of the Ten Words*, do., 1884; E. Kautzsch, art. 'Religion of Israel,' in *HDB*, vol. v. p. 612.

L. W. BATTEN.

DECISION.—The term 'decision' may be used (1) concretely, of the judgment which is affirmed at the conclusion of a period of deliberation (*q.v.*); or (2) abstractly, of the ability to 'come to a decision,' *i.e.* to bring deliberation to a conclusion.

Decisions are as various in kind as the subjects about which we deliberate. Thus the judge issues his decision—that a charge is proved or not proved; a connoisseur decides that he prefers one wine to another. Decisions which consist in the resolve that a certain kind of action is to be performed by oneself seem to form a class apart. It is in connexion with these that the strife between necessitarians and libertarians has been waged. This, however, is a controversy affecting the determination of content of the judgment which is a decision, *i.e.* the quality of the conduct decided on. Though extreme necessitarians declare that every decision is mechanically determined, no one denies the reality of decision as a psychological crisis. This crisis consists in a concentration of the attention on the idea of one of the possible courses of action before us, with a consequent inhibition of the ideas of the other possibilities. Recent advocates of the doctrine of free will (*q.v.*) base their argument upon the feeling of effort which accompanies a typical class of decisions. See, further, **DESIRE, WILL.**

LITERATURE.—W. James, *Text-book of Psychology*, London, 1892, pp. 415-460; W. M. Wundt, *Human and Animal Psychology*, Eng. tr., 1901, p. 233. G. R. T. ROSS.

¹ There are really three uses, the Jews taking the preface as Com. 1. For the details, see art. 'Decalogue,' in *HDB* i. 580.

¹ This is finely brought out in the Prayer-Book version: 'He that sweareth unto his neighbour, and disappointeth him not, though it were to his own hindrance.' This is a confate reading. The Heb. has: 'He that sweareth to his own hurt'; the Greek: 'He that sweareth to his neighbour.' The liturgical version contains both readings. See Perowse (*Psalm*⁸, London, 1898) on the passage.

DECOLLATI.—The full expression is *le anime dei corpi decollati*, 'the souls of executed criminals.' These souls are the object of a popular cult in Sicily. It is spread throughout the island; but its most famous shrine is the Church of the Decollati, near the river Oreto at Palermo. It seems to have arisen out of the sympathy naturally felt in an oppressed community for sufferers at the hands of a ruling caste. For many centuries Sicily was subject to rulers who were either foreigners, or at any rate divided by a sharp and impassable line from the mass of the people. The latter were ignorant, and more or less passively hostile to the governing class. They regarded all who were put to death under the forms of law as heroes; nor did they distinguish between moral and merely legal crimes,—between acts directed against the rulers and acts directed against society at large,—if, indeed, these two categories were always distinguishable. The priests were for the most part drawn from the 'folk,' and probably shared to a great extent their ignorance, their superstitions, and their feeling towards the government. The executions were public. The condemned man (called *l'affitto*, 'the afflicted'), having been reconciled to the Church and having received its consolations, was regarded as a martyr; and his death-scene was a species of triumph. He passed, it was true, into purgatory; but his prayers on behalf of others, even from purgatory, were deemed to have great intercessional value by virtue of his sufferings.

Formerly at Palermo several of the churches witnessed the cult of the Decollati. During recent centuries, however, it became the custom to bury in the graveyard adjoining the little church beside the Oreto such bodies of criminals as were not given to their friends, or reserved to adorn the gallows in chains. Accordingly, the cult has concentrated there. Its particular shrine is a side-chapel filled with votive offerings of wax, testifying to the various benefits for which the intercession of the Decollati is sought. The souls of the Decollati are believed to congregate under a large stone just inside the door of the chapel. Pilgrimages are frequent; and the pilgrim, having performed his devotions at the altar of St. John the Baptist, adjourns to the chapel and prays to the Decollati, listening for an answer to the prayer. The slightest sound is taken for a favourable reply. Invocations, however, may be addressed to them elsewhere by suppliants who cannot undertake the pilgrimage.

The objects for which intercession is sought are primarily protection from violence or accident, and the cure of sufferers from either. For the Decollati, however much they may in their lifetime have been guilty of violence, now having suffered and been reconciled to the Church, hate violence and punish it, or at least protect and heal its victims. By an extension of the idea, they are invoked against diseases, especially hæmoptysis, of which bleeding is the manifestation. Two long cases of rude water-colour drawings on the churchyard walls record with ghastly detail many examples of vows made and benefits received, where violence, accident, or disease of the kinds indicated was concerned. But, in fact, the good offices of the Decollati are not limited to these. They are implored for aid by the poorer classes throughout Sicily on all sorts of occasions, and for all sorts of purposes. They have their prayer-formule, which are extensively used; and many stories of miracles performed by them in person are current. The ordinary vehicles of the country are light carts, painted with scenes from the history and traditions of the island. Many of these carts are adorned with paintings of the Decollati.

LITERATURE.—The cult has been described and illustrated with many details by Giuseppe Pitre, the venerable recorder of the insular traditions and customs. See particularly his *Biblioteca delle tradizioni popolari siciliane*, i. (Palermo, 1871) 77, ii. (1871) 88, xvi. (1889) 4 ff., *La Vita in Palermo*, ii. (Palermo, 1906) ch. xviii., *Mostra etnografica siciliana* (Palermo, 1892), 61, 80. See also a paper by the present writer, with plates from photographs, in *FL* xxi. (London, 1910) 163.

DECRETALS.—See **BULS AND BRIEFS.**

DEDICATION.—See **CONSECRATION.**

DEGENERATION.—I. Application of the term.—'Mental degeneracy' is a term which is applied to a group of characteristics inferred from the speech, behaviour, or productive activity of individuals, and generally held to be symptomatic of defect in the central nervous system. The nervous defect in question may be either congenital or acquired through accident or disease; in either case, it may be organic or 'functional.' Savill (*Neurasthenia*, 17) defines a functional nervous disease negatively, as one in which 'no anatomical changes can be found after death, either with the naked eye or with the microscope, which can account for the symptoms during life.' It may really be due to some structural change, which available means cannot determine, to the presence of toxic materials in the blood (of endogenous or exogenous origin), to deficient quantity or quality of blood, or to exhaustion of the nerve tissues from excessive use, etc.

The term also implies that the individual falls markedly below the mental level attained by the average or normal member of the race, sex, age, and period of civilization; but, since the number of degrees of defect is potentially infinite, and the defect may be either general or special (in the former case touching all the mental capacities, in the latter such special functions as sensation, memory, emotion, etc.), the actual usage of the term is extremely indefinite. Thus it is employed to denote (1) actual insanity, including amentia, imbecility, dementia, mania, and melancholia; (2) persistent criminality; (3) mental instability, excitability, excessive irritability, or mere eccentricity; and (4) the neuroses of hysteria, psychasthenia, and others: to the last two groups belong those whom Dr. Balfour has named the 'denizens of the borderland' (*Edin. Med. Journ.* 1901). It would seem that strictly the word should apply only to those who have some congenital defect in mental capacity, excluding those in whom the defect has been due either to accidental injury, or to lesions of the brain arising from toxic influences, subsequent to the birth of the individual (for example, alcoholic insanity, or insanity sequent upon typhus fever). It is impossible, however, to draw a hard and fast line between the congenital and the acquired, as many cases of insanity would not have occurred had not the individual been already predisposed to the disease by physiological or mental weakness. On the other hand, the term is also frequently applied to an acquired defect, especially when it is of the progressive type.

In popular usage the word 'degenerate' means one whose tastes are lower than those of the society in which he has been educated, e.g. a clergyman's son who associates with racing touts or public house loafers; or one whose intelligence and tastes show a marked deterioration from his own earlier standard, as in alcoholism, etc. It is applied æsthetically to those whose interests, whether as readers or as authors, as artists or as critics, lie in disease, physical or moral; to realists or naturalists in the narrow sense of these words; and also to pessimists. The assumption is that the healthy

mind will avoid these things as topics of thought or imagination, except with the object of removing them or lessening their evil effects; that only the diseased mind will seek to dwell upon disease, or take a pleasure in its contemplation.

To the biologist, the degenerate appears as a reversion to an older type of the race, as one who has been born with a physical nature in which some primitive human or even pre-human stage of cerebral development is reproduced. He is a primitive being set in a civilized environment, unable to adapt himself to it, and hence coming into conflict with its conditions.

The only common feature underlying these diverse applications of the term is a marked 'deviation from type' either in quantity (energy, rate, etc.), or in quality, of thought and action.

2. Physical and mental conditions of degeneracy.

—The causes of such mental deviations may be grouped in three classes: (1) an originally defective physical and mental capacity, or defective development; (2) physical accident or injury, disease, privation, etc., by which the central nervous system is weakened locally or generally; and (3) social conditions, such as family life, educational disadvantages, poverty, occupation, etc. (Ferri, *Criminal Sociology*, Eng. tr., London, 1895, ch. 2). Thus, alcoholism may occur in a given individual because he is by nature unstable, excitable, pleasure-loving; because his brain has been weakened by an exhausting disease; through mere imitation of heavy-drinking companions; from lack of employment, unbearable home life, or other social conditions; or from any combination of such factors—the result in each case being a gradual deterioration of the nervous system, by which the original tendency is strengthened, until the control of the will is destroyed.

The relation between mental and physical defect is by no means so clear or so simple as is commonly assumed. It is argued that, with the exception of those relatively few cases in which the disorder can be traced to some definite accident, such as a fall or blow upon the head, or to some virulent fever which has been caught by infection, it invariably arises from a congenitally defective disposition of the nervous system; this defect or weakness predisposes to insanity, so that any physical or mental shock which might leave a healthy individual uninjured overthrows the balance of such subjects and renders them insane. They suffer from what Maudsley (*Body and Mind*, 43) has called 'the worst of all tyrannies, the tyranny of a bad organization.' The result of this organization may be that the normal development cannot be completed, that the subject remains at a lower level, mentally and physically, than his more fortunate brethren; hence either definite idiocy, insanity, or some of the minor forms of defect already referred to. In cases of idiocy there is almost invariably some malformation of the brain, whether in its size, in its shape, or in the complexity of the convolutions (the brains of many idiots remaining as smooth as those of the higher apes); the result is an arrested development, and a disproportionate growth of the different parts of the system, which, under the principle of 'recapitulation,' suggest a reversion to, or a stopping short at, some stage in the animal ancestry of the human individual. Popular superstition has always recognized a close relationship between mental defect and congenital physical deformity; Shakespeare's 'stigmatic' contains both the modern name and the modern idea (the 'stigmata' of the insane, of the criminal, of the hysterical temperament). From Hippocrates onwards many have insisted that in a great number of persons the predisposition to insanity is inherited,

and hence that slighter causes are sufficient to produce its onset than in other persons; moreover, that this predisposition may be inherited from parents not necessarily insane, but only nervously diseased; the contrary is also true—mere nervous disease in the child corresponding to and connected with insanity in the parents or near ancestors. In 'degenerate' families there is a tendency for this degeneracy to be progressively worse from generation to generation, until ultimately sterility appears, leading to the extinction of the degenerate race (Talbot, ch. 1). Moreau-de-Tours renewed the old thesis that genius is twin brother to madness, both being in many cases derived from the same parentage, and argued that degenerate types often represent throw-backs or reversions to more primitive types of evolution. The principal application given to this doctrine has been in the theory of criminality, of which Lombroso was the chief exponent, viz. that the criminal is born, not made, that (passion and accident apart) crimes spring from natures in which both the physical and the mental characteristics are those of primitive man, or, it may be, of the ape. The physical stigmata of the 'congenital criminal'—deformity of skull, sloping forehead, prominent cheekbones and projecting jaw, large ears, small deep-set and 'shifty' eyes, irregular dentition, cleft palate, stammering, etc.—are not now so seriously taken, and, according to Lugaro (p. 17), the anthropological theory, whether applied to insanity or to crime, is 'a thing of the past.' It is true that both the criminal and the idiot or imbecile are more liable to diseases, such as phthisis, etc., than the normal individual, and have many other physiological deficiencies; while statistics have been frequently compiled to show the apparent transmission from parent to child of the 'criminal temperament,' and its hereditary relationship with imbecility and insanity. From such data, however, even if we exclude the immeasurable influence of environment, physical and social, it can be argued only that some nervous deficiency is transmitted, which disposes, under 'favourable' conditions, to insanity, crime, or mental instability.

Against the physical theory of degeneracy (as an all-sufficient account), there may be pointed out the frequency with which mental causes produce, or at least initiate, a change of intellectual or moral character, e.g. emotional shock, disappointment, loss of occupation or of means, death of husband, wife, or child, social degradation, religious emotion, school strain, privation, prolonged worry, etc. It is by no means necessary that a hereditary or congenital physical predisposition should exist in all cases; thus, a shock coming closely upon or during an illness or exhaustion, or a period of insomnia, may give all the conditions necessary for the outbreak of insanity. The influence of the mind upon the production of insanity was fully recognized by Pinel in 1801, and by others after him. The evolution theory gave, however, a stronger hold to the organic theory of mental disease, and its connexion with heredity, so that this view is now practically universal. It is clear that such disease is always a product of two factors—a predisposition on the one hand, physical or mental; and, on the other, a shock or a stress leading to the actual appearance of the insanity or mental defect. Thus the physiologically critical periods of life are those at which outbreaks of insanity are most frequent—first and second dentition, puberty, adolescence, the climacteric, etc. Of course, if we assume from the first that mind is never an agent of bodily changes, but always their mere concomitant or their effect, then mental degeneracy cannot but be the sign or symptom of physical degeneracy, which is the

reality underlying all the phenomena. On the other hand, it may with equal plausibility be argued that the real factor is the *mental disposition*, the fundamental mode of *feeling* and of *reacting* upon impressions, which has a characteristic form and degree in every individual, but is variously modified by the *temporary disposition* which arises in connexion with bodily states—fatigue, exhaustion, illness, etc. A shock or stress will disturb the mind more or less, according to its fundamental and temporary disposition at the period when the strain comes. Without prejudice to any theory of the relation of body to mind, it may be admitted that actions are the outcome of the dominant feeling or emotion, which in its turn is mainly a product of perceptions and reproductions or memories; hence in human conduct the mental life predominates over the physiological: and this is especially the case after the child has become able to appreciate moral ideas. It is not denied that the physical nature has an immense influence in the causation of insanity.¹ But it is claimed (1) that this physical nature may be largely modified by education and by suggestion; (2) that it may itself be of a mental origin either in the ancestors or in the individual; (3) that the outbreak of insanity is almost invariably caused by mental factors, including, for example, emotional shock or mental contagion (as in imitative insanity); and (4) that the insanity may be cured by suggestion and other mental measures, in addition to physical hygiene (Dubois, in *Archives de psychologie*, x. [1910] 1: 'Psychological Conception of the Origin of Psychopathies').

3. Symptoms of mental degeneracy.—The manifold forms in which mental degeneracy expresses itself may be illustrated from the two most important 'functional' diseases—hysteria and psychasthenia.

(i.) *Hysteria* has been defined as a 'morbid mental condition in which ideas control the body and produce morbid changes in its functions' (Dana, *Journ. of Abnormal Psychol.*, Feb. 1907). Its most prominent features are anaesthesia, amnesia, loss of control over the attention, paralysis of certain muscles. (1) The anaesthesia may be the loss of sensibility in the whole of a special sense (e.g. blindness) without any injury either to the sense-organ or to the conducting nerve-fibres; or it may be partial (monocular blindness; narrowing of the field of vision in both eyes; colour-blindness), or systematic (loss of power to perceive certain persons or classes of objects, while the sensibility is otherwise intact). A historical illustration is the 'devil's marks' on the skin, by the insensibility of which a woman's guilt in trials for witchcraft was often determined. The insensibility differs from that which is due to nerve-injury, in that it is not permanent, but varies; it is, for example, sometimes removed during sleep, or under the influence of chloroform, or in the hypnotic trance, while emotional excitement of any kind is said to intensify it. Also the insensibility does not correspond to the distribution of a particular nerve or group of nerves; many of the reflexes are preserved in connexion with the sense-organ, while the insensible limb is not liable to accident or to injury, as is the case with insensibility arising from a severed nerve. It has been

proved also that, while the subject is unaware of the existence of such anaesthesias, and therefore does not, of course, notice the impressions which are made on the insensitive organs, these are nevertheless recorded, and may be later brought to consciousness, e.g. when the patient is hypnotized; these and many similar facts show that the seat of the anaesthesia is not in the sense-organ but in the central organ, the cerebrum. *Physiologically* the impression is made on the nervous system, but it is, under the special conditions, unable to effect consciousness, as in other conditions it would (Janet, *L'Etat mental des hystériques*, p. 20 ff.).

(2) A further group of symptoms is found in the *amnesias*, which also almost always accompany hysteria. The memory may be defective in one or more of many different ways; it may simply show weakness, the subject being unable to remember events of recent occurrence, or material which has been learned, with the same vividness, accuracy, and completeness as a normal individual; or the defect may be specialized so that particular qualities or classes of experiences can no longer be recalled at all; for example, visual memories, or auditory memories, or the memory of actions; and within any one of these groups there may be specialization: in the visual group the patient may be unable to recall the colours of objects, while remembering their forms and their light and shade; in the auditory group, he may remember spoken words, but not melodies or tones, etc. Or the lapse of memory may be systematized, and this also in two ways: (a) with reference to the time-series; a period of life may be wholly forgotten—sometimes a recent period, sometimes a more distant one, while events before and after this period are remembered with distinctness; (b) with reference to systems of knowledge, as, for example, when the power of reading lapses, or the memory for a particular language, or a particular science, etc.; still more completely systematized are the cases in which a particular object or person, formerly familiar, is no longer remembered.

(3) The will and power of attention may be affected. There may be excessive concentration on one impression or idea, or there may be incapacity to concentrate the attention upon *any* impression or idea; in the former case we have an approximation to the state of melancholia, in the latter case to the state of mania or the insane flight of ideas. Whether the span of attention is narrow or wide, a subject may be distracted from a task by the slightest stimuli, and hence be unable to learn new material or to complete any task attempted by him; on the other hand, even though the attention be unconcentrated, it may still be excessively persistent, just as in ordinary experience a weak-willed individual may on occasions reveal the utmost obstinacy of character. Education and development are mainly a function of the power to direct the attention, at will, to objects uninteresting in themselves, or for the moment uninteresting to the individual: this power the hysteric patient possesses to a minimum degree. His attention is easily caught by sensory impressions which fall within his field of morbid interest, by ideas which enter the mind through purely casual associations (associations of contiguity, of similarity of sound, or the like), but is not caught or held by ideas of deeper logical value. As the attention decides which of the many ideas that are clamouring on the margin of consciousness shall enter its focus and become determinative of the course of our actions and of the course of our thoughts, so in hysteria the level of thought and action falls. Words suggest thoughts through their sound (punning, rhyming words) rather than through their meaning; actions are decided by

¹ Cf. Lugaro, p. 22: 'The functional insufficiency of a shrunken gland in the neck causes the syndrome of cretinism. Slight but chronic lesions of the kidneys can determine conditions of stupidity, temporary loss of speech, and violent attacks of confusion and agitation. A febrile malady occurring in infancy, though transient, attracting little notice, and passing away almost unobserved, can ruin the brain beyond repair. The effects of this may either manifest themselves as moral and intellectual defects of every degree, or as epileptic convulsions which may appear after many years, and by their repetition progressively destroy the mind.'

sensations or simple associative images rather than by systematized tendencies built upon experience; originality and spontaneity are replaced by banality or by automatism.

(4) On the motor side, there is frequently paralysis, or *paresis*, inability or weakness in the use of the limbs on one side of the body, or of a particular limb or organ, or a particular muscle; and (5) usually also disturbances, of 'nervous' origin, in the circulatory and other functions of the body—asthma, vertigo, palpitation, fainting, congestion, etc. Sometimes a power is exercised over these functions, which to the normal individual appears impossible: e.g. control of the heart, or of the digestive processes, ability to hasten or retard them at will. Both the muscular and the organic defects or abnormalities are, like the anæsthesias, of purely central origin; i.e. they spring directly from some temporary and local change in the cerebral system—a change which, however, has probably a mental origin.

The different phenomena in a particular case may usually be traced to a single system of ideas, which has obtained an undue control over the personality—for example, the memory, conscious or suppressed, of some emotionally exciting event or experience. Cure is sometimes effected by suggestion, which strengthens the power of the personality over the ideas, sometimes by a shock or accident calling up the dormant energies of the individual: thus in one case (Donaldson, *Growth of Brain*, London, 1895, p. 304, from Taylor, *Journ. of Nerv. and Ment. Dis.*, 1888) a lady recovered from a hysteric paralysis on the sudden death of her husband; in another, a cure resulted from the elopement of a daughter. For the most part, however, almost any stimulus is enough to re-excite the dominant idea, and to determine thought and action according to it. Thus a man who had been lost in the Australian Bush, and in the agony of thirst had frequently plunged into imaginary pools of water, used, long after his rescue, under the slightest dose of alcohol, to go automatically through the actions of diving, regardless of the surroundings or of the position in which he was. There is, for the most part, some such absorption by, or fixation of the mind upon, the compelling thought, with entire failure to correlate it with the immediately given sensations and impressions, or to criticize it by them. Epidemics of hysteria or insanity are common among peoples or races at a low level of development, or who suffer from insufficient nutrition (J. M. Clarke, 'On Hysteria,' *Brain*, xv. [1892] 526).

A well-known case is that of Haute-Savoie, 1857, in which a young girl saw a companion taken out of a stream half-drowned; the girl fell down in unconsciousness, and a few days later a friend who was with her became similarly affected. Other hysterical phenomena followed. Within four years there were 120 persons in the same neighbourhood affected in the same way, and this in spite of the fact that public exorcisms were held by the priest. 'The epidemic was stopped' by the Government sending a force of *gens d'armes* to the district, removing the parish priest, isolating the patients, and sending the worst cases to distant hospitals' (Clarke, *loc. cit.*). Here it is the force of suggestion acting on an unstable nervous organism, and securing an influence over the internal organs of the body such as is not possessed, or is possessed only to a very slight degree, by the normal individual. See also art. HYSTERIA.

(ii.) A different complex of symptoms is presented by what is now called *psychasthenia*, or 'obsessional insanity' (Janet), although at some points it is closely related to hysteria. Whereas in the latter the morbid ideas are specific or particular, in obsessional insanity they are general or governing ideas, entering into relation with every possible action or thought of the subject, for example, the idea that one is a criminal, or has committed some unpardonable sin. The idea is involuntarily, continuously, and painfully present to the mind, if not in the centre, at least on the verge, of con-

sciousness, so that to escape from it is impossible. The general ideas most commonly present are those of (a) *crime*, including homicide, suicide, dipsomania, sacrilege, etc., and there are two forms—the obsession of committing the crime, and the obsession of remorse for a crime already committed, the actual crime being in such cases enormously exaggerated in the mind (what was really a mere thought or passing idea being transformed into an actual deed); (b) *physical or mental defect*, again in two forms—obsession of being, and obsession of becoming. Thus, a lady who is distressed at her actual stoutness may refuse food, or take insufficient rest in consequence, while a lady at present of moderate dimensions may adopt the same tactics from fear of becoming unduly stout. Other instances are the fear of approaching old age, of approaching madness, of approaching death.

The common qualities, as regards the content of the obsessional ideas, are: (1) they regard acts or states of the subject himself, not primarily of any external object; (2) the acts or states are socially disreputable, wicked, or ridiculous, or in general undesirable; (3) (and in this is the fundamental difference from hysteria) they are endogenous, self-suggested, whereas in hysteria the morbid idea is usually exogenous, or suggested from without. Accordingly, we find that at the early stages there is full consciousness of the absurdity or folly of the obsession; and also that, except in rare cases, the morbid action is not completely realized. Thus, a kleptomaniac used to take a servant with him when he went shopping, to watch and afterwards return the stolen articles; in another case, a youth, after taking poison, telephoned to his mother to inform her of the fact, with the (expected) result of a doctor's arrival. Again, the hallucinations have not the same definiteness or 'body' as those of hysteria; they lack details, and hence the slightest effort of the attention destroys them, as is the case in dreams; they are seldom completely externalized, or definitely located; they are really symbolic or type-ideas, standing for a system of thought rather than for a definite object.

On the volitional side, there are almost invariably automatisms, that is, actions which occur independently of and even in opposition to the will of the subject. These Janet classifies into three groups, in each of which the disturbance is either systematic or diffuse. (1) Mental agitations, including the systematic forms—manias of interrogation, of doubt, of precision, of explanation; and the diffuse form—the mania of rumination or reverie. The essential character of all is a movement of the mind which is incapable of arresting itself upon any one fact or thought, but is compelled to pass beyond it, to add something to it, and then something more, and something more, without end—'ideas either revolving in a circle, or branching out endlessly, but in any case never reaching an end, a definite conclusion' (*Les Obsessions*, i. 150). Familiar cases are those in which a patient deliberates for hours about carrying out some simple, and, normally, habitual action: e.g. that of putting on a sock, choosing a necktie, stepping over an object in the roadway. (2) On the motor side, what are called 'tics,' that is, automatic actions, twitchings, movements of the lips, etc., these being in nearly all cases symbols or traces of complete actions as suggested by the ideas—'psychic short-cuts.' (3) On the emotional side there are systematic dreads, or 'phobias,' or a generalized anguish or terror. Among the 'phobias' are the fear of crossing an open space (*agoraphobia*), fear of remaining in a shut or closed place (*claustrophobia*), fear of infectious disease (*nosophobia*), fear of insanity, of snakes, of vermin, etc. The diffuse form has sometimes been called *panophobia*,

a generalized expectation or dread of some untoward event happening.

4. **Explanation of the symptoms.**—The explanation of these phenomena is found first in a weakening of the mind, by which the control over the finer mechanism, alike of association and of voluntary movement, is relaxed and ultimately destroyed. The contrast with the normal individual is the same as that which occurs, within an individual life, between bodily health and sickness or fatigue—in the former case the greater activity, co-ordinative power, effectiveness of movement, ability to recollect at will, and to direct the thoughts; in the latter state the weakening or failure of these powers. Obsessional insanity is an exaggeration of this relatively healthy state, having its centre or point of support in some actual psychological experience of the subject. In hysteria, the general symptoms may most simply be referred to a disaggregation of the personality: some group or groups of memories, or of habits, or of other acquired activities, separate off from the controlling consciousness with which the normal individual identifies his self or ego. Thus, in the automatic writing and other expressive movements of hysteric or neurasthenic patients (Binet, Janet, etc.), the subject is entirely unaware of the actions done, although they would normally imply consciousness both to initiate and to carry out. So, the hypnotized subject may carry out many actions which apparently involve deliberate consciousness, and, on awakening, show complete ignorance of them; and there are familiar cases in which a patient leads, for a shorter or longer period of time, a different life from that of his normal condition, during which he is unconscious, or at least has no memory, of his previous state, while afterwards, on recovery, he has forgotten the temporary abnormal state (Ansel Bourne, etc.). Morton Prince gives a remarkable instance of such a case of double or multiple personality in his *Dissociation of a Personality*. Normally all our experiences, or at least those which are important to us, are synthesized, unified in the single dominant consciousness or personality; abnormally, some bundles of experience, more or less large, are detached from this unifying consciousness, and form secondary personalities, which may make use of the general fund of memories, habits, etc., organized in our experience, and represented in the intimate structure and fabric of the brain. It is not necessary here to discuss how far these self-realizing ideas deserve the name of 'separate consciousnesses' or 'separate personalities.' There are all degrees of disaggregation—from the simple hearing and answering of a question by an absorbed reader, without subsequent awareness on his part of the action, and the extreme form found in Ansel Bourne, Janet's 'Léonie,' or Prince's 'Miss Beauchamp.' There is a close parallelism between such cases and insanity—for example, the insanity of fixed ideas, or of delusions, etc. Freud argues that many of these secondary personalities, as is the case in insanity, represent attempted realizations of certain wishes, desires, ambitions, which the subject has been prevented from successfully carrying out, or which he has voluntarily repressed (*Neurosenlehre*, ed. E. Hirschmann, Leipzig, 1911, p. 54). On the one hand, there is a loss (or a defect), in Janet's view, of tension or *tonus* in the central nervous system, or some part of it, and on the other a 'psychic misery,' a disorganization of the mental life, in which images and ideas tend to realize themselves apart from the control usually exercised by the self on the basis of past experience and according to the claims of the social environment. (On mental dissociation, see also J. Macpherson, *Mental Affections*, London, 1899.)

Corresponding to this disorganization of the mind is the existence of what may be called a floating mass of emotion, dread, or anxiety, ready to attach itself to any idea that may arise, and leading to actions that may be out of all proportion to the motive-idea, taken by itself. This emotion is really the mass of feeling that springs from the altered bodily constitution, and the altered organic and other sensations which form the basis of the 'feeling of self.' Since the alterations consist largely in an increase of bodily and especially of painful sensations, the emotion as a whole is of the depressive type. Such an emotion necessarily alters the whole mental character, and especially the moral character: the subject becomes timid, secretive, cunning, superstitious, selfish, and cruel. In originally higher types there is a tendency to pessimism: the patient is unable to carry out the ideals, frequently extravagant, which he sets before himself; hence doubt and distrust of himself and others; his life is suffused with pain; slight motives cause him distress and anxiety; this 'psychosis' he projects into others, and believes life to be predominantly painful.

Obsessions and fixed ideas are for the most part the result of a logical attempt to account for the emotion of which—although not of its cause—the subject is conscious. In other cases the system of ideas may be derived first from the environment—consciously or unconsciously—and the dread or anxiety is built upon it or attached to it afterwards (see Williams, in *Journ. Abn. Psychol.* v. [1910] 2).

The same features—disaggregation, depressive emotional-tone, or both—may occur in mental degeneration at all its levels. Thus in the *imbecile*, there is failure to co-ordinate experiences, to take more than the first few steps in the synthesis of personality: the result is impulsiveness of character, inability to concentrate the attention, motivation only by the simplest ideas, and these only in isolation from one another, no coherent or sustained activity either of thought or of action. Where depression is also present, the imbecile may become the criminal, with homicidal or other socially dangerous tendencies. In the *paranoiac*, there is failure to form, or the lapse of, the highest mental synthesis—the recognition of the 'social self'—on which the possibility of morality and of religion depends: hence the primary self-consciousness has the field to itself; there is an unrestrained assertion of individual wishes and desires, and a total disregard for the convenience, wishes, or claims of others. The enormous self-esteem easily leads to delusions of unlimited power, wealth, or high rank (*megalomania*), or, where depression is present, to mania of persecution, etc. The nearest parallel that we have in normal life is to be found in dreams (*q.v.*), the analogy of which with insanity has been frequently pointed out (Moreau-de-Tours, Maury, Sir Arthur Mitchell, etc.). The higher systems are out of function, for the time being; the will is at rest; each idea, suggested by present sensory impressions, or by recent experiences, has the field of consciousness to itself: hence it takes on an illusory objectivity, and appears as a real experience or perception, while it tends to call up associate ideas which, however, are bound to it only by the lowest, purely mechanical, bonds (habit-associations, associations of sensory similarity). Thus, Maury (*Le Sommeil et les rêves*, Paris, 1865, ch. vi.) describes a dream in which the main incidents were connected together through the words 'Kilomètre,' 'Kilogram,' 'Gilolo,' 'Lobelia,' 'Lopez,' 'Loto.' Simultaneous dissociation of personality is also a common feature of the dream; we appear to be debating with another person, who questions us and answers us; both dis-

putants, however, are ourselves. Maury (*loc. cit.*) mentions that the apparent revelations of dreams may sometimes be traced to forgotten memories of our own, which we recall to ourselves and put in the mouth of another person, in our dream. In general, however, the thoughts of the dream are trivial, absurd, meaningless, as any one may prove for himself by writing down, immediately on waking, the words he has just been uttering in his dream. The same defect, and the same lack of power to criticize what passes through the subject's own mind, we have found to be common in mental degeneracy. The hallucinations of the insane, and the vague emotional depression, dread, or anxiety, have also their analogy in dream-life. All these phenomena of degeneracy appear also in normal life during fatigue, exhaustion, illness, senility, and in the temporary insanity of intoxication by alcohol or other drugs (nicotine, opium, hashish, etc.; see, for example, R. Meunier, *Le Hachich*, Paris, 1909).

5. **Progressive mental degeneration.**—When degeneration attacks a well-developed mind, the symptoms frequently show a regular sequence, according to Ribot's Law of Regression or Involution (see his *Diseases of the Memory*); the more unstable forms of experience or acquirement are the first to lapse, *i.e.* (1) the most recently acquired, (2) the most complex, (3) the least frequently repeated, the least habitual or automatic powers. Thus, in senile insanity, or in the beginnings of alcoholic insanity, it is the power to meet new situations, to face difficulties, to create, invent, or discover, that fails earliest: habitual situations are met, adequately perhaps, in habitual ways, but the bloom of individuality is gone. There follows the delicate appreciation of moral values—there is an increase of selfishness, and of obstinacy, along with a failure of higher ambitions; then the more complex intellectual acquisitions, professional skill, scientific interests; then the memory for recent events, the recollection of the less familiar complexes of experience. With the narrowing of intellectual interest, the emotional life occupies a larger space; the patient becomes irritable, and irritating, discontented, malicious, neglectful of the ordinary conventions of life; his thoughts and his speech become less coherent, more vulgar and petty, until, finally, dementia leaves no powers in function except the primitive instincts and reflexes, with at the most a few of the more ingrained habits of mind and body. In a general way also, although by no means in detail, these stages have their parallels in the different concrete forms of degeneracy found in different individuals—from the morally deficient 'intellectual' down to the congenital imbecile or idiot.

DEGRADATION.—See DISCIPLINE.

DEHRĀ.—A town, the capital of Dehrā Dūn, a valley projecting from the Plains of Northern

India like a triangle towards the source of the Jumna river and the main range of the Himalaya, lat. 30° 19' 59" N.; long. 78° 2' 57" E. From a religious point of view, the place is remarkable as the seat of a strong body of Udāsīs, a Sikh order of Hindu ascetics, who are said to owe their establishment to the son of Gurū Nānak, the founder of Sikhism. Their *gurudwārā*, or temple, the work of their leader Rām Rāy, was erected in A.D. 1699. The central block, in which the bed of the *gurū* is preserved, was built on the model of the Emperor Jahāngir's tomb at Lahore. At the corners are smaller monuments in honour of the *gurū*'s four wives. The temple is supported by a large endowment, and the *gurū*, who has the revenues at his disposal, is the richest man in the Dūn valley. Formerly the appointment of each new *gurū*, who was selected from among the disciples of the deceased *gurū*, was in the hands of the Sikh chiefs of the Panjāb, who, at each new installation, made a gift to the British Government and received in return the complimentary present of a pair of shawls. This practice is now discontinued. The special dress of the members of the sect is a cap of red cloth shaped like a sugar loaf, worked over with coloured thread, and adorned with a black silk fringe round the edge. The *mahant*, or *gurū*, enjoys high consideration in the country round; and large numbers of devotees, drawn from all classes of Hindus, attend the shrine. But the most enthusiastic worshippers naturally come from the Cis-Sutlej Sikh States. The annual ceremonies, which last ten days, are performed at the Hindu feast of the Holt in spring.

LITERATURE.—Atkinson, *Himalayan Gazetteer*, iii. [1886] 1971. W. CROOKE.

DEICIDE.—This term, though not new, has been used in the past with such restricted meaning, and so seldom, that there is an imperative need to enlarge its definition before it can be of service in that branch of scientific research in which it is increasingly used. The following definition, taken from Ogilvie's *Imperial Dict. of the Eng. Lang.*, will show this:

'*Deicide*.—(1) The act of putting to death Jesus Christ our Saviour. "Earth, profaned, yet blessed with *deicide*" (Prior). (2) One concerned in putting Christ to death (Craig). [Rare in both senses.]'

Another quite recent dictionary defines the word thus: 'The killing of God; especially the crucifixion of Christ.' Though there is here a definition more in accord with modern requirements, the student of religions, acquainted with facts which seem to show that there has been a wide-spread custom of putting to death both men and animals thought to be gods incarnate, must set aside everything that so narrows the word as to make it unfit for his purpose. Doing this, one is left with what is, after all, a mere translation of the Latin term, *viz.* 'the killing of a god,' or, more briefly, 'god-slaughter.' It is in this largest sense that the word is to be here used. For obvious reasons, there will be few, if any, references to what was at one time looked upon as the sole instance of *deicide*—the Crucifixion.

None of the phenomena which the scientific study of religions has made known has aroused more interest than those obscure rites and ceremonies, those strange customs, which seem best explained by the theory that *deicide*, once supposed to find its only example in the Crucifixion, has been, in fact, a wide-spread custom, which has left a deep impress on the religious thought of the race. Before giving the few instances of this custom which space limits allow, it will be well to make some kind of classification, which will enable the student to understand more fully their nature and extent. It is suggested that instances of god-slaughter may be placed in one or other of two

main classes, as being (1) *real*, (2) *mimetic* or *symbolic*. A noticeable variety of the former is, on one theory at least, traceable in certain solemn expiatory sacrifices, and may therefore be termed 'expiatory' or 'piacular.' Again, in many of these instances for which the name 'mimetic' or 'symbolic' has been suggested, the effort 'to keep in remembrance' seems so prominent that they may well be termed 'commemorative.' The following is therefore suggested as a working classification for those instances of god-slaughter which seem to have been enacted.

1. *Real* (with sub-class 'piacular' or 'expiatory').—Cases of real god-slaughter may be seen in the strange custom, at one time wide-spread though now well-nigh extinct, of putting to death kings and chieftains at set times, or when they showed some sign of approaching decay and death. There is evidence to show that originally these high-placed victims were looked upon as Divine in a very real sense—gods incarnate. Such Divine honours are still ascribed by savage people to their king or ruler. The existence of these Divine beings in full vigour was deemed necessary to the welfare of all their people. It was a proof that their god could still safeguard their interests. The reason for putting these gods incarnate to death is believed to have been the dread lest, through disease or decay of strength, they might be unable any longer to help and keep in safety those who looked to them for these blessings. It was necessary, therefore, that a fresh and more vigorous incarnation should be sought for, to take the place of that which was ready to vanish away.

Africa and India furnish the best attested instances of such deicide, though traces of it are supposed to have been discovered in the accounts of old-world rites handed down by classical writers. Three centuries ago it was the practice to put to death the king of Sofala, an African State, when even a slight bodily blemish became manifest; whilst the king of Eyo, also in Africa, was expected to commit suicide should his headmen think it demanded by the needs of the State. Again, in one of the kingdoms of Southern India the king was put to death or compelled to self-immolation, after a reign of twelve years. Similar customs seem to have obtained in others of the Indian States. It is not surprising to find that, in course of time, means of evading this disagreeable necessity were discovered; one method, that of providing a substitute, human or animal, having a special interest as being the possible beginning of vicarious sacrifice.

An interesting variety of these customs may be seen in cases where an original totem has developed into a deity worshipped by the members of the totem clan. It has been observed that at certain times, when the deity seems to be estranged from his worshippers, or for some other reason the clan-bond needs renewing or cementing, recourse has been had to sacrifices of special solemnity and efficacy. In these the victim has been an animal of the same species as the original totem. In other words, the very deity constitutes the sacrifice which is to heal the breach between himself and his worshippers. It is not difficult to see in these solemn renewals of covenants the beginning of expiatory or piacular sacrifice. There seems to be a sufficient reason for thinking them to be cases of piacular deicide. On the other hand, the solemn putting to death, by his own priests, of the divine Apis bull of Egypt, after the lapse of a certain number of years, seems rather to be an instance of the endeavour to secure a renewal of the Divine life in an incarnation of unbroken vigour.

2. *Mimetic* or *symbolic* (with sub-class 'commemorative').—This has its roots in those myths

which constitute so large a part of the *quasi*-theology of the great ancient Nature-religions. In these myths the phenomena of Nature are personified and deified, and her processes become incidents in the lives of the gods thus originated. The myths which most readily furnish illustrations of the matter now in hand are those connected with the changes of the season which are so closely related to the growth of vegetation, the quickening of the seed, and the maturing of the kindly fruits of the earth. Such are the myths of Adonis, the Syrian deity, slain by the hunted boar on Mount Lebanon, so that his blood reddened the waters of the river which carried it down to the sea; of Osiris, slain by the malice of his brother Set or Typhon; of Dionysus, god of the vine, who, according to the Greek myth, was put to death by jealous Juno. Many quaint superstitions and ceremonies still surviving, among the peasantry of Europe as well as among the farmers and cultivators of well-nigh all other lands, find their best explanation in the wide-spread belief in similar stories. In them, and in the rituals based upon them, were set forth the death by violence and, in some cases, the subsequent resurrection of a god—a god of vegetation, and especially of corn.

J. G. Frazer writes thus of the Adonis rite: 'His death was annually lamented with a bitter wailing, chiefly by women; images of him, dressed to resemble corpses, were carried out as to burial and then thrown into the sea or into springs; and in some places his revival was celebrated on the following day' (*CP* 224, 116).

Concerning the Egyptian deity Osiris he says: 'Of the annual rites with which his death and burial were celebrated in the month Athyr we unfortunately know very little. The mourning lasted five days, from the eighth to the twelfth of the month Athyr. The ceremonies began with the "earth-ploughing," that is, with the opening of the field labours, when the waters of the Nile are sinking. The other rites included the search for the mangled body of Osiris, the rejoicings at its discovery, and its solemn burial. The burial took place on the 11th of November, and was accompanied by the recitation of laments from the liturgical books' (*ib.* 140).

Again, of Dionysus he writes: 'The Cretans celebrated a biennial festival at which the sufferings and death of Dionysus were represented in every detail' (*ib.* 163).

Other evidence obtainable warrants the belief that mimetic or symbolic deicide occupied no small place in the ritual of long-vanished religions. Such god-slaughter was not a mere amusement, or even a gratification of the dramatic instinct so deeply implanted in human nature. It had a far more serious purpose. Most probably these annual rites were performed in the firm conviction that they would further and assist those great and all-important natural processes on which the very life of the world depended. No doubt, in course of time, many of these customs, at least before they became mere superstitions, would be retained as a means of keeping in remembrance that which ought not to be forgotten. In other words, they would be more distinctly 'commemorative.' Such seems to have been the case with some very striking ceremonies observed by the ancient Mexicans, in which it was the custom to make paste or dough images of certain of their gods. These images were then 'killed' and broken in pieces to furnish material for a sacrificial meal. It is a curious circumstance that portions of this consecrated food were reserved for the sick, and carried to them 'with great reverence and veneration.'

Concerning such customs as these, many questions arise which it is not easy as yet to answer. Even the conclusions already arrived at are by no means so established as to be accepted without reserve. The evidence, after all, is so scanty and elusive that one is compelled to a resolute distrust of one's own judgment, and to reliance rather on the sagacity of those skilled in such investigations, reserving to oneself the right of giving a casting vote in cases where the evidence for and against a certain view seems evenly balanced. Yet, not-

withstanding all this, no part of the great study of religions is fuller of suggestion than this, more especially in the strange parallels noticeable between pagan and Christian thought and ritual. It is only necessary to name such themes as 'Incarnation,' 'Crucifixion,' 'Sacrifice,' 'Eucharist,' etc., to show this. What influence the recognition of such analogies may have, in the future, on Christian speculation it is impossible to say.

DEIFICATION (Greek and Roman).—I. The Greeks.—The deification of actual men and women among the Greeks is a natural development of that view of the gods which their early literary documents show already prevalent. The Greek was not satisfied to leave the superhuman beings whose presence he divined in the operations of Nature, and whose legends he learnt as a child, in a mystical haze, as vast powers of shadowy and uncertain outlines; his mind loved the light of day; he early wanted to know exactly what these beings looked like, what definite things they had done, in what relations of kinship they stood to each other and himself. Hence it was that the gods of the Greek came to be anthropomorphic in a peculiar sense. He conceived them as really like men; they had actually trodden the hills and fields familiar to himself: the Athenian could look at the very mark which the trident of Poseidon had left upon the rocks of the Acropolis; the Spartan knew from a child the grave of Hyacinthus, whom Apollo had slain with the discus.

'From one origin are begotten gods and mortal men,' says a line attributed to Hesiod (*Works and Days*, 108), and Pindar echoes it in the opening of *Nem.* vi. 1: 'There is one self-same race of men and gods; and from one single Mother have we both the breath of life; only faculties altogether diverse distinguish us; since man is a thing of nought, and those have brazen heaven for a sure abiding home. And yet we have some likeness, either by greatness of soul or by fashion of body, to the Deathless Ones.'

Yet more, the gods had begotten human children in intercourse with men; the families of the legendary chieftains, and such families of a later day as could make out a descent from the heroes of legend, were literally and physically their issue. The ancient heroes, as Homer tells us by a number of recurring epithets, were very much like gods to look at. And not only could the Divine thus come to earth, but the legends knew of men becoming gods (*Eur. Andr.* 1255, etc.).

Especially is the boundary-line between the worship of the dead and that of the gods hard to draw, for the rites offered generally to the dead implied the belief that the deceased had some power of action in the living world; only the scope of such power was greater in the case of those worshipped as heroes, whilst the distinction, again, between the rites proper to heroes and to gods respectively tended in practice to become blurred (*Deneken*, col. 2526, note). A difference was, indeed, recognized in common parlance between the ordinary attention to the dead, 'heroic' honours, and divine honours (see *Arr. iv.* 11. 3); but, when we try to draw a hard-and-fast line, the difference appears rather one of degree.

The mass of the heroes worshipped by the Greeks were mythical figures imagined in a remote past, especially the legendary founders of cities, the eponymous ancestors of clans, or the patrons of particular professions. How some cases occurred in which actual men were assimilated after their death to these heroes of the fabulous past we cannot say, but it seems to have happened early in certain parts of the Greek world (esp. Thrace and Sicily) that the founders of new cities received the same honours which the older cities gave to their legendary heroes (Timesius in the 7th cent. B.C. (*Hdt.* i. 168); Miltiades in the 6th cent. (*Hdt.* vi. 38); Gelon, Theron, and Hiero in the 5th cent. [*Diod.* xi. 58, 66]; Hagnon and Brasidas in the same century [*Thuc.* v. 11]); or that the spirits of those

who had been violently slain under circumstances which made some community dread their vengeance were placated with 'heroic' honours (Philip of Ocroton in the 6th cent. (*Hdt.* v. 47); Onesilus, king of Salamis, in the 5th cent. (*Hdt.* v. 114)).

It was thus natural that, when the emotions of reverence or gratitude entertained with regard to some actual man were raised to a high degree, they should be felt as almost identical with those which had the gods for their object (*ἴσον γὰρ σε θεῷ τίσουσιν Ἀχαιοί* [*Hom. Il.* ix. 603]; *θεός δ' ὡς τιετο δῆμῳ* [*ib.* v. 78, etc.]). In a moment of exaltation it might even seem proper to express such feelings in the same ritual performances as those used for the gods. 'Ὁ παῖδες, Ἀργεῖοισιν εὐχεσθαι χρεῶν, θύειν τε λείβεσθαι θ' ὡς θεοῖς Ὀλύμπιους σπονδάς, exclaims the Danaos of Æschylus (*Supp.* 980 ff.). Such language was, of course, a rhetorical exaggeration; but, when the notion, even as an extravagance, was present to the mind, it was a short step, in days when the old awe of the gods had declined and novel dramatic expression was craved for, to translate it into action. According to Duris, the first instance of the formalities of religious worship being addressed to a living man was when Lysander, at the end of the 5th cent., became the object of a cult in Samos; altars, sacrifices, pæans, and games are specified as its constituents (*Plut. Lys.* 18). The case did not remain isolated. In Thasos, soon after, it was taken for granted that the State might confer divine honours on whom it pleased; but the fact that this new development was reprobated in quarters where old-fashioned piety still existed is shown by the answer of Agesilaus when the Thasians informed him that they were building him temples (*Plut. Apophth. Lac. Ages.* 25). When Dion entered Syracuse in 357, he was received as a god, with sacrifices, libations, and prayers (*Plut. Dion.* 29). Clearchus, the tyrant of Heraclea, adopted the insignia of the Olympian gods, and compelled his subjects to approach him with prostrations (*Suid.* s.v. Κλέαρχος).

To understand the state of mind which led to such practices, we must remember the movement of Greek thought which had taken place since the days of Æschylus. The religious scepticism which was abroad had, no doubt, for many minds emptied the traditional forms of worship of their content of awe and devotion, and in proportion as they had become mere formalities there was less restraint from offering them to men. So far as the old gods remained as figures for the imagination, anthropomorphism had gone a step further, as may be seen in the contrast of Praxiteles with Phidias. Scepticism had in fact brought anthropomorphism to its ultimate conclusion by asserting roundly that the gods were men, as was done by the popular Euhemerism. The gods, according to this theory, were kings and great men of old, who had come to be worshipped after their death in gratitude for the benefits they had conferred (see EUHEMERISM). On this view, there was nothing monstrous in using the same forms to express gratitude to a living benefactor. In so far as the worship of living men arose from these conditions, it was a product, not of superstition, but of rationalism. It shows, not how exalted an idea was held of the object of worship, but how depreciated in meaning the forms of worship had become. If this is so, Frazer (*Early Hist. of Kingship*, 1905, p. 137) errs in confusing it with primitive superstition, of which it is really the antithesis. At the same time, the development of religious feeling, which revolted against the traditional anthropomorphism, was not altogether unfavourable to such cults. The tendency to merge the separate divinities in the conception of One pervading Divine power (*Schmidt, Ethik d. alt. Griechen*, 1882, i. 52) would make it easier to see manifestations of this power in human personalities which asserted themselves

strongly. A special kind of deification was that which we find in connexion with the mystic sects dispersed through the Greek communities and the philosophies which borrowed from them. If deathlessness had been all along the distinguishing characteristic of the gods, those who laid stress upon the deathlessness of the individual soul thereby came near to making it divine. And so we get the idea that the human soul is a divine being imprisoned for some pre-natal offence in the mortal body. The notion, current among the Orphics, passed from them to the Pythagoreans (Rohde, *Psyche*, ii. 121 f., 161 f.). So, too, Empedocles declared that, if a divine being sinned, he was incarnate for punishment till he had worked out his salvation in a number of successive lives, and was restored to fellowship with the gods (frag. 146, 147 [Diels]). Empedocles himself was already reaching that consummation, and claimed divine honours: ἐγὼ δ' ὑμῖν θεὸς ἀμβροτος, οὐκέτι θνητός, | πωλεῖμαι μετὰ πᾶσι τετιμένος, ὥσπερ ἔοικα, | ταῖναις τε περισσεύουσιν στέφουσιν τε θαλεροῖς (frag. 112 [Diels]; cf. Rohde, *Psyche*, ii. 171 f.). So, again, on the funeral tablets discovered at Thurii, the dead man declares to the gods that he is of their kindred, and is saluted as one who has passed from mortality to deity: 'Ὀλβιε καὶ μακαριστὲ, θεὸς δ' ἔσθ' ἀντὶ βροτοῖο. Θεὸς ἐγένον ἐξ ἀνθρώπων (Michel, *Recueil*, 1896-1900, nos. 1330, 1331; Harrison, *Prolegomena to Gr. Relig.*, 2, 1908, p. 660 ff.).

If any one had the right to divine honours, Alexander, after feats of conquest to which Greek story knew no parallel except the mythological triumphs of Dionysus and Herakles, obviously had a pre-eminent claim. Already his father, Philip, had in his own kingdom caused his own statue to be carried in procession, together with those of the twelve gods (Diod. xvi. 92. 5). It is absurd to call in the influence of 'the East' to account for what followed so inevitably from the prevalent disposition of the Greek world. As a matter of fact, the Achaemenian kings were apparently not worshipped as gods (*Aesch. Pers.* 157 is cited by Beurlier and others to prove that they were, but the evidence of the native monuments is against it, and the Greek notion represented by *Aeschylus* seems to rest upon a misapprehension of the formality of prostration). In Egypt, indeed, since the New Empire, the reigning king had been so worshipped, and it was natural that Alexander should here be saluted as the son of Amen (Ammon). But we may safely say that, even without this, the Greeks would have worshipped him. The oracle of Didyma had already in 331 (unless Strabo is right in his scepticism) declared Alexander to have been begotten by Zeus (Strabo, xvii. 814). In 323, on Alexander's return from India, embassies arrived at Babylon from Greece, wearing and bringing crowns such as indicated that they were *θεωποι*, approaching a god (*Arr. vii.* 23. 2). There was still, indeed, in Greece a party of old-fashioned piety who opposed the extravagant flattery as profane. The question provoked stormy debates in the Athenian assembly. The divine honours were defended on the other side with dippant sarcasm as a form too empty to matter. 'By all means,' exclaimed Demosthenes, 'let Alexander, if he wish it, be the son of Zeus and Poseidon both together' (*Hyper. [Blass]* i. 31. 17; cf. ps.-Plut. *Vit. X. Orat.* vii. 22; Valer. Max. vii. 2, 13; Dinarch. in *Demosth.* i. 94). The expression shows that Alexander was understood himself to demand such honours. According to an account preserved by Arrian, it was the philosopher Anaxarchus who was employed to propose divine honours to Alexander in the circle which surrounded the king's person. The prostration which Alexander demanded was regarded by the Greeks as an acknowledgment of deity, and Anaxarchus is represented as defending Alexander's deity on purely rational-

istic euhemeristic grounds (*Arr. iv.* 10). For Hephaestion, at any rate, Alexander demanded worship after his favourite's death. The worship was 'heroic' in kind; Arrian gives under reserve the story that Alexander had wished to make it properly divine, but had been forbidden by the oracle of Ammon (*Arr. vii.* 14. 7; but cf. *Diod. xvii.* 115).

If worship offered to the living Alexander had offended the more conservative Greek feeling, worship offered to the dead Alexander as a hero was in accordance with Greek tradition. The forms of worship chosen would show numberless local variations which we cannot now trace. The Ionian Confederacy maintained a cult of Alexander centred in a sanctuary near Teos (Strabo, xiv. 644) till the days of the Roman Empire. Under the Roman Empire itself the cult of Alexander flourished (Lamprid. *Alex. Sev.* 5. 1; Herodian, iv. 8; Dio Cass. lxxvii. 7).

Naturally, the Macedonian chiefs who entered upon Alexander's inheritance saw their interest in publicly recognizing his divinity. In what forms they severally did so is not recorded. Eumenes had a 'tent of Alexander' in his camp, with a throne before which the officers offered a sacrifice as to a present god (*Diod. xviii.* 60, 61; *Plut. Eum.* 13; *Polyan.* iv. 8. 2). The appearance of Alexander's head, with the horns of Ammon, upon the royal coinages is an assertion of his assimilation to the gods.

Antipater was an exception; in him the old feeling which condemned these practices as impious (*ἀσεβές* [Suidas]) still found a representative. The official worship of Alexander at Alexandria as god of the city cannot be traced further back than Ptolemy II., who transferred the conqueror's body from Memphis to the new temple called the *Sēma* in Alexandria. [It is curious that *Diod.* speaks of the honours offered to Alexander in Alexandria as *ἡρωϊκά* (xviii. 28. 4). Probably the expression is used loosely, because the honours were offered to a dead man.] Henceforward the annual priest of Alexander, chosen from a limited number of privileged families, was eponym for the year till Roman times. A golden crown and a crimson robe were his insignia. The cult continued in Alexandria till the institution of Christianity (Otto, *Priester und Tempel in hellenist. Aegypten*, i. 138 f., 253).

The Greeks, who had worshipped Alexander in his lifetime, were ready enough to give the same sort of worship to his successors. Craterus, who died in 321, was honoured at Delphi with a pean (*Athen. xv.* 696e). Scsepsis in 310 voted the living Antigonus a *τέμενος*, altar, and image; they had already some time previously instituted sacrifice, games, and *stephanephoria* in his honour (Dittenberger, *Inscr. Orient.* i. 6). In 307 Athens exhausted all forms of adoration in regard to the same two princes. They were addressed as *θεοὶ σωτῆρες*; a regular priesthood was established for them; and changes, ostensibly permanent, were made in the calendar and religious organization of the people. In 290, a hymn, which has been preserved, was composed for the reception of Demetrius. In it Demetrius is hailed as the son of Poseidon and Aphrodite; he and Demeter are the 'greatest and friendliest of the gods,' and so on (*Diod. xx.* 46; *Plut. Dem.* 10 f.; *Athen. vi.* 253, xv. 697a). It is important to observe that the really religious people still protested against these perversions, and saw in the failure of the vintage a judgment of the true gods (Philippides, *ap. Plut. Dem.* 12). The first Greek State to offer divine honours to Ptolemy was apparently the Confederation of the Cyclades (*περὶ ἡμετέρας πρῶτοις τὸν σωτῆρα Πτολεμαῖον ἰσοθέους τιμαῖς* [Ditt. *Syll.* i. 202]); Rhodes in 304, or soon after, conferred upon him the divine surname of

'Saviour,' and dedicated to him a *rémevos* and festival (Diod. xx. 100. 3 f.; Paus. i. 8. 6; cf. *Προδευαλον τοῦ Σωτήρος καὶ θεοῦ* [Ditt. *Inscr. Orient.* i. 16]); and Lysimachus was worshipped with altar and sacrifice at Priene (*Inscr. of the Brit. Mus. cecci.*) and in Samothrace (Ditt. *Syll.*² i. 190). Seleucus, after his conquest of Asia Minor (281), had an altar built to him by Ilion, and games were instituted to him like those held in honour of Apollo (Hirschfeld in *Archäol. Zeitschr.* xxxii. [1875] 155; Haussoullier in *Rev. de Philol.* xxiv. [1900] 319). Both Seleucus and his son Antiochus were worshipped by the Athenian colonists in Lemnos (Phylarch. *ap. Athen.* vi. 254). Especially where a chief had founded or re-founded a city, he had the founder's prerogative of worship: so Cassander at Cassandrea (Ditt. *Syll.*² i. 178), Demetrius at Sicyon (Diod. xx. 102 f.), and Ptolemy at Ptolemais (Otto, *Priester u. Tempel*, i. 160).

It is probable that all through the epoch when the dynasties of Seleucus and Ptolemy ruled in Asia and Egypt respectively, the Greek cities which were subject to them, and some which were merely allied, expressed their loyalty in a cult. Our evidence is, of course, fragmentary.

We find at Ilion a priest of Antiochus I. soon after his accession (Ditt. *Inscr. Orient.* i. 219); and cults of the same king celebrated by Barygia after his death, and by the Ionian Confederacy during his lifetime (*rémevos*, altar, image, sacrifice, games, *stephanephoria* [Michel, 486]). At Erythrae, games called *Σελευαία* are mentioned, and *Σωτήρια* at Mylasa (Michel, 252, 502). At Didyma, Antiochus I. and his wife Stratonike seem to have been worshipped after their death as *θεοὶ σωτήρες* (CIG 2852; cf. Haussoullier, *Hist. de Milet*, 1902, p. 51). Smyrna instituted a special worship of Stratonike as Aphrodite Stratonikeis, in which her son Antiochus II. was associated with her (Ditt. *Inscr. Orient.* i. 229; Tac. *Ann.* ii. 62). Similarly, in the case of the Ptolemies, we find *Πτολεμαῖα* celebrated at Athens, where Ptolemy I. was chosen as the eponymous hero of a tribe (Paus. i. 5. 5; CIG ii. 444. 32, etc.), in Lesbos (Ditt. *Inscr. Orient.* i. 360), and by the Confederation of the Cyclades (Delamare, *Rev. de Philol.* xx. [1896] 103 f.). Halicarnassus dedicated a stoa to Apollo and king Ptolemy (Ditt. *Inscr. Orient.* i. 46). The Antigonid dynasty which inherited Macedonia was honoured by *Ἀντιγονεία*, which are found at Delos (BCH vi. 143), in Euboea (*ib.* x. 102 f.), and, after 228, among the Achaeans (Plut. *Arat.* 45, etc.; cf. Niese, ii. 338). Attalus of Pergamum became in 200 B.C. the eponym of an Athenian tribe, and his wife Apollonis the eponym of a deme; a special priest was attached to his service (Polyb. xvi. 25; CIG ii. 1670, 446, 469). Sicyon in 198-7 instituted a festival in honour of Attalus I. (Polyb. xviii. 16); Cos a *πρωτήριον* to Eumenes II. (Ditt. *Syll.*² i. 619). As a matter of course, the cities actually subject to the Attalids maintained some such worship (Gyzicus [temple of Apollonis], *Anth. Pal.* bk. iii.; Sestos [priest, birthday festival], Ditt. *Inscr. Or.* 339; Elea [Attalos σύνναος with Asklepios, priest, daily sacrifice], Ditt. *Inscr. Or.* 332; Ilion [tribe Ἀτταλῆς], CIG 3616; Sardis [Eumeneia], Ditt. *Inscr. Or.* 305; Ionian Confederation, *Arch. Anzeig.*, 1904, p. 9; Nacrassa [Βασιλεία], Ditt. *Inscr. Or.* 268; Eumeneia [φιλᾶδελφεία], coins; Aphrodisias [Ἀτταλῆα], coins; Teos [priest of Eumenes and deceased Apollonis, priestess of Stratonike and Apollonis, temple of Apollonis Ἀροβαργία], Ditt. *Inscr. Or.* 309; Hierapolis [deification of Apollonis], Ditt. *Inscr. Or.* 308; Magnesia-on-Meander [tribe Ἀτταλῆς], Ditt. *Syll.*² i. 558; and Aegina [Ἀτταλῆα, Εὐμηνεία], Ditt. *Inscr. Or.* 329).

All these cults are instituted by cities, ostensibly by their own act, as separate communities; the cult of one city differs in its forms from that of another. They are to be distinguished therefore from cults instituted by the kings themselves for the realm. The first cult of the latter sort we know of is that instituted for the first Ptolemy, as *θεὸς σωτήρ*, after his death (282-3), by his son Ptolemy II. (Ditt. *Syll.*² i. 202). With his father Ptolemy II. associated his mother Berenice on her death (soon after 279), the two being worshipped together as *θεοὶ σωτήρες*. 'First of all men, dead or living,' says Theocritus, 'this man established temples fragrant with incense to his mother and his sire' (xvii. 121). When the sister-wife of Ptolemy II., Arsinoë Philadelphus, died in 270-1, she too was deified. And now a further step was taken. Ptolemy II. had himself put on a level with his sister; the living king and the dead queen were worshipped together as *θεοὶ ἀδελφοί*. This cult was combined with that of Alexander, a single priest

serving the group of divinities; the cult of the *θεοὶ σωτήρες* remained for the time distinct. When Ptolemy II. was succeeded by Ptolemy III. Euergetes, the *θεοὶ εὐεργεταί* (i.e. Euergetes and his wife Berenice II.) were added to Alexander and the *θεοὶ ἀδελφοί*, and so on with the other kings till the end of the Ptolemaic dynasty. Under Ptolemy IV. Philopator (between 220 and 215) the cult of the *θεοὶ σωτήρες* ceased to be distinct; their name now appears in the official registers after that of Alexander. The seat of this official cult seems to have been the *Sēma* of Alexander, to which a *Πτολεμαῖον* (a mausoleum of the Ptolemies) was joined (Otto, *Priester und Tempel*, i. 139). Some of the Ptolemaic queens had priestesses of their own—Arsinoë Philadelphus a *κατηφόρος*, Berenice II. an *ἀδοσφόρος*, Arsinoë, sister-wife of Ptolemy IV., a *λέρεια*, and Cleopatra III. (daughter of Ptolemy Philometor, wife of Ptolemy Euergetes II.) a variety of ministers, a *στεφανηφόρος*, a *πυροφόρος*, a *λέρεια*, and a male priest styled *λεπὸς πῦλος* (Otto, p. 158, cf. p. 411). The priestesses of the queens may have performed their rites at separate shrines in Alexandria. Distinct, of course, from this system of Greek worship was the worship given by the Egyptians, on the lines of their national tradition, to their foreign kings and queens; though the influence of the Egyptian forms of worship upon the Greek may be seen, e.g. in the king himself becoming, on occasion, priest of his own deity in Alexandria (Otto, p. 182, note 6). Cyprus, a Ptolemaic dependency, had a high priest (*ἀρχιερεὺς τῆς νήσου* or *τῶν κατὰ τὴν νήσον λεπῶν*) of its own, in whom we may see the president of the provincial cult of the kings (Strack, *Dynastie der Ptolemäer*, no. 76, etc.).

In the Seleucid realm, when Seleucus was murdered in 281, his son Antiochus I. was forward to do as much for his father as Ptolemy II. had just done for his. The tomb of the old king at Seleucia was constituted a temple, a *Νικατορείον*, and a cult was officially instituted for him as a god (App. *Syr.* 63). With him each of the following kings was in his turn associated; one priest served the founder and his deified successors, and one the reigning king (Ditt. *Inscr. Orient.* 245). How soon it came about in the Seleucid realm that the living sovereign was the object of worship instituted by the court we do not know. The important inscription which gives us a rescript of Antiochus II. (261-246 B.C.) (Ditt. *Inscr. Orient.* 224) shows us such already existing. It is a worship of the king organized by provinces, each province having a high priest. The rescript is issued in order to associate the queen Laodike in the cult, instituting provincial high priests for her, side by side with those of the king. Incidental mention of provincial high priests in later reigns shows us the system still in continuance (Michel, 1229), and they present an obvious parallel to the high priests of Cyprus in the Ptolemaic realm.

Although a difference is rightly insisted upon between the cults instituted by the central government and those offered by the Greek communities as independent agents, the dividing line between the two is not easy to draw. This is due to the ambiguous position of the Hellenistic kings, who wished, while retaining Greek cities under their control, to leave them the semblance of autonomy. Cults offered ostensibly by a city spontaneously might be framed at a suggestion from the court which it was impossible to disobey. In what class, for instance, are we to put the cults offered to the Ptolemaic kings at Ptolemais, to the Seleucid kings at Seleucia, to the Attalids at Pergamum? All these cities had the forms of municipal autonomy, but were entirely subject to royal dictation. The nucleus of the cult at

Ptolemais is that of the founder Ptolemy I. Soter, and to him the later kings (at any rate after the *θεοὶ φιλοπάτορες*) become attached. The cult of Seleucia founded under Antiochus I. we have already mentioned. At Pergamum a sheep was sacrificed by the civic authorities to Eumenes I., that is to say, even before the rulers of Pergamum had acquired the title of kings (Ditt. *Inscr. Orient.* 267). An inscription of the time of the last king of Pergamum, Attalus III., shows us sacrifices offered to the founder Attalus II., his brother Philetærus, and the reigning king (*Mitt. Ath.*, 1904, p. 152).

In connexion with the assumption of deity by the kings themselves, we must reckon the appearance of their effigy on coinages struck by royal authority. The official surnames, again, which they bear have been thought to have religious significance. This is difficult to prove, because the king would naturally be addressed in worship by his full titles, and if, therefore, we find the surname used in the cult, it would not necessarily show a religious origin. In favour of the hypothesis are: (1) the fact that some of the surnames, e.g. *σωτήρ*, *ἐπιφανής*, have undoubted religious associations; and (2) the practice of the Greeks of attaching surnames to the names of deities—Athenē Promachos, Zeus Meilichios, etc.; cf. also the title of *εὐεργέτης* conferred on Diogenes (see below).

The title of *θεός* does not seem usually to have been assumed by kings during their lifetime. For the Greeks of Egypt, as we have seen, their living king was a god from the time when Ptolemy II. associated himself with his dead and deified sister. But, whilst the living king and queen were, after Ptolemy II., regularly worshipped together as *θεοὶ εὐεργέται*, *θεοὶ φιλοπάτορες*, etc., the kings do not seem to have had themselves called *θεοὶ* in the protocol of State documents till the time of Euergetes II. (Strack, *Dynastie der Ptolemäer*, p. 120). In the Seleucid dynasty also it is to be noted that Antiochus IV. Epiphanes is the first king under whom *θεός* is attached to the royal name upon the coinage, and Antiochus is exactly the king who seems to have put his deity prominently forward (cf. Bevan, *House of Seleucus*, 1902, ii. 154). The usage of the Pergamene kingdom appears also to have confined the title of *θεός* to deceased sovereigns. A king or queen at death seems to have been officially declared to have joined the number of the gods (Cardinali, 'Regno di Pergamo,' p. 153, note 4). This did not exclude the offering of rites of sacrifice, etc., to the living sovereign. Whether, in the case of acts which were understood to be ceremonial flattery, any attempt was made to reconcile the inconsistency of worshipping some one whose apotheosis was still future we do not know.

It remains to consider the relations to the older gods in which these cults in theory placed the men worshipped. These were of three kinds.

(1) *Descent*.—Those Greek families which professed to trace back their family tree to heroic times had, of course, no difficulty in making out their descent from some god. It can hardly, therefore, have been the peculiar prerogative of the royal dynasties in Hellenistic times to possess this sort of link with divinity. They seem, nevertheless, to have thought it worth while to emphasize the divine origin of their families. So we find that the family of Ptolemy at the Egyptian court was traced back to Herakles and Dionysos, the latter deity after the reign of Philopator being given prominence over the former. Possibly the family of the Seleucids claimed descent in the same way from Apollo. The Attalids, like the Ptolemies, apparently took Herakles and Dionysos

for the founders of their race (Cardinali, *op. cit.* 147).

(2) *Immediate sonship*.—Dignity of family was not enough. If possible, the person worshipped had to be himself the offspring of a god. Already, in the times before Alexander, this was asserted at the Syracusan court of Dionysius (Plut. *de Alex. virt.* ii. 5). Alexander claimed that his mother had conceived him of Zeus Ammon. The real father of Seleucus, it was asserted at the Seleucid court, was Apollo (Just. xv. 4). Apollo was ἀρχηγὸς τοῦ γένους (*CIG* 3595).¹ So, too, we saw that the Athenians in 308 hailed Demetrius as the son of Poseidon and Aphrodite.

(3) *Identification*.—For this, again, we have a precedent before Alexander in Clearchus of Heraclea (*FHG* iii. 526). The first instance we can trace after Alexander is that of Seleucus, who was worshipped at Seleucia as *Zeus Nicator*. His son at the same place was Antiochus *Apollo* Soter (Ditt. *Inscr. Or.* i. 245). In Egypt, Arsinoë at her apotheosis was identified with Aphrodite (Strabo, xvii. 800; Athen. vii. 318d, xi. 497d), and so was Stratonike I. at Smyrna. Antiochus Epiphanes probably identified himself with Zeus (*JHS* xx. [1900] 26 ff.). The surname *νέος Διόνυσος* was borne by Antiochus VI. (145–143 B.C.) and Antiochus XII. (86–85 B.C.) in Syria; and by Ptolemy Anuletes (81–52 B.C.) in Egypt. Cleopatra VII. was styled *νέα Ίου* (Strack), and the last Cleopatra also bore the same title, and appeared in public arrayed as the goddess (Plut. *Ant.* 54).

The Greeks had no idea of any divinity in kingship *per se*. The proffer of divine honours in the 4th cent. B.C. was the recognition simply of a personality mighty to impress and modify the world. The Greeks, as a matter of fact, who approached Alexander with worship did not regard him as *their* king (he was king of the Macedonians and Persians). Naturally the Macedonian chiefs who made themselves kings after Alexander attained thereby a position which gave them pre-eminent power upon the world, and the proffer of divine honours expressed a desire to secure their good-will and protection. We have here further evidence that it is a mistaken track to assimilate the Greek worship of kings with a worship of the king as such, like that which had existed recently in Egypt and, centuries before, in Babylonia. Naturally, too, when the new kingdoms had developed settled institutions, the courts found in the cult of the sovereigns a useful means of imposing upon the popular imagination and securing an expression of loyalty. And, as Kaerst has pointed out, it was not easy to find a formal expression for dominion over a number of Greek States which were, by Greek political theory, independent sovereign communities. Over the authorities of the city had been, in olden days, only the gods, and the assumption of deity gave a sort of legality to the relation of the king with the subject Greek States. Antiochus IV. turned his deity to further account by representing himself as the divine husband of the goddess of a rich temple like that of Hierapolis, and claiming the temple treasure in that capacity (Gran. Licin. 28).

The Greek practice passed to the new dynasties which arose in the East. The Greek kings of Bactria, Agathocles and Antimachus (c. 190–160), are styled 'god' upon the coins. The Arsacid kings of Parthia, if, as adherents of some form of Zoroastrianism, they recognized only One Supreme God, found no difficulty in giving the name of 'god' to subordinate powers, and in classing them-

¹ Something of the same sort seems to be implied when the Pergamene king is called *Ταύροιο διοργέσιος φίλον νόον* (Paus. x. 15. 2; cf. Suidas, s.v. Ἀττάκος), i.e. son of the divine Bull, DIONVOS.

selves among the number. Here, too, on some of the coins the name of the king is accompanied by the epithet θεός or θεοτάτος (Wroth, *Coins of Parthia*, 1903, p. xxix). So, too, the Sasanian kings (after A.D. 224) continued to bear the title of θεός (Pers. *bag*); but, whilst the Greek was ambiguous, in the native language the distinction between the lower divinity of the human deity and that of the gods proper was made plain by another word (*yazdān*) being reserved for these last (Ditt. *Inscr. Orient.* i. 432, 433). So far, then, from its being the case that the deity of the human ruler was an idea borrowed by the Greeks from the East, the borrowing was the other way; the Orientals took it from the Greeks.

Even the minor dynasties of the East came to bear divine titles. So Antiochus I. of Commagene describes himself as θεός in the same breath with which he professes piety to be the rule of his life, on the monument where his body rests after his soul has gone to the 'heavenly seats of Zeus Oromasdes.' The honours to be paid to himself and the other kings are distinguished, as 'heroic' (lines 48, 118, 125), from the cult of the greater gods. His own image is σύνθετος with that of Zeus-Oromasdes, Mithra, Artagnes, and Commagene (line 60) (Ditt. *Inscr. Orient.* i. 383). The Jewish Herod Agrippa I. received from heathens the now banal ascription of deity (Ac 12²²; Jos. *Ant.* xix. 8. 2).

Even in the age of the Hellenistic kings, deification was not their peculiar prerogative. It was open to other men, in their degree, to become objects of religious worship. Sometimes they might secure this by the authority of the kings themselves. Antiochus II. had his favourite Pytherrnus worshipped as Herakles (Athen. vii. 289 f.), and Ptolemy II. consecrated his mistress Bilistiche as Aphrodite (Plut. *Anat.* 9). Consecration sometimes took place by the authority of a Greek State.

So Athens conferred *herois* honours after his death upon Digenes, who had commanded the Macedonian garrison in the Piræus (title of *εὐπρύμνος*, priest, *τέλειος*, games [*IG* 4 ii. 467, 24; 481, 67; 1669]). Aratus after his death was worshipped with *herois* honours at Sicyon; and, as in the case of the deified kings, it was asserted that his mother had really conceived him of a god (Polyb. viii. 14. 7; Plut. *Arat.* 53; Paus. ii. 8. 2, 9. 4). Philopœmen after his death was worshipped with *divine* honours at Megalopolis (altar, *τέλειος*, games [Plut. *Philop.* 21; Paus. viii. 51. 2; Diod. xxix. 18; Liv. xxxix. 50; Ditt. *Syll.* 210]).

Probably to this age, and not an earlier, belongs the consecration of the athletes of former generations who had brought glory to their cities, like Theagenes, who was worshipped as a god at Thasos (Paus. vi. 11. 2), Oebotas of Dyme (Paus. vi. 3, vii. 17. 3 and 6), and Diognetus the Cretan (Ptol. *Heph. ap. Phot. Bibl.* p. 151a, 20). Other consecrations were the act of guilds or associations, who worshipped their founders or distinguished members. So we find a guild of Dionysiastæ (2nd cent. B.C.) in the Piræus 'heroizing' a certain Dionysius (ὅπως ἀπορωθεὶ Διονύσιος) (*Mithr. Ath.* ix. [1884] 279 f., 283 f.), and something like a heroic cult of their founder was maintained in the philosophical schools created in the form of religious guilds by Plato and Epicurus. In the case of Plato, the story of a miraculous birth was again circulated; he was the son of Apollo (Diog. Laert. iii. 1. 2; Olympiod. *Vit. Plat.*). So, too, Hippocrates seems to have been worshipped in schools of medicine, not in Cos only, but in the Greek world generally (Luc. *Philops.* 21). Sometimes the consecration took place according to testamentary dispositions, which founded an association for the cult of the testator, as in the case of a family of Thera, whose *herōon* is the subject of the will of Epicteta (*CIG* 2448), and in the case of Epicurus.

When the power began to pass from the hands of kings to that of Rome, the Greeks, in transferring their homage, continued the forms of religious worship. The cult which replaced that of the Hellenistic kings was that of the goddess Rome. Smyrna was the first Greek city to erect a temple to Rome in 195 B.C. (Tac. *Ann.* iv. 56), and the cult later became general. The Roman general Titus Flamininus a few years later was receiving divine honours in Greece (Plut. *Flamininus*, 16). In the last cent. B.C. it seems to have become the usual thing for Roman governors to be worshipped by the provincials under their rule (Cic. *ad Q. frat.* i. 1, 26, cf. *ad Att.* v. 21; Suet. *Aug.* 52); the notorious Verres in Sicily had games (*Verria*) celebrated in honour of his divinity (Cic. *Verr.*, Orat. ii. 2. 21). Of the numerous temples erected to Pompey (τῷ ναοῖς πόλιντι πόντῳ σπένδῳ ἔπλετο τὸν πόλιν, *Anth. Pal.* ix. 402) no material trace has been recovered; but two inscriptions, one from Ephesus and one from the island of Carthæa, show the sort of worship offered to Julius Cæsar by the Greeks in his day of power. The first (*CIG* 2957) describes him as 'God manifest and universal saviour of humanity'; and the second (*CIG* 2369), as 'God and Emperor and Saviour of the world.' But now the ruling race itself was prepared to follow the Greek fashion.

2. Deification under the Roman Empire.—For the old Romans the gap between gods and men was not bridged as it was for the Greeks. They had indeed, like other primitive peoples, rites for placating the spirits of the dead (*di manes*), but such spirits did not pass into gods proper; there was no intermediate class of heroes. The offering of divine honours to living men would have seemed to them highly shocking. As, however, the Greek element grew in Rome, new ideas found entrance. Scipio Africanus was not worshipped, but there was believed to be something supernatural about him, and stories were told of his divine birth (Liv. xxvi. 19). In the last century of the Republic, rites proper to divine worship were offered to Metellus Pius (Macrob. *Sat.* iii. 13. 7) and Marius Gratidianus (Cic. *Off.* iii. § 80; Seneca, *de Ira*, iii. 18); but in the former case by private friends, members of a Hellenized aristocracy; in the latter, by a semi-Hellenic populace; in neither case, with official authorization.

The note of that Empire which Julius Cæsar conceived was an assimilation in which the old Roman tradition lost its prerogative. Under his rule the Roman people were allowed (Suet.) or encouraged (Dio) to adopt the Greek forms of homage. The image of Cæsar now figured along with those of the gods. A month of the year was called by his name. In 45 B.C. a temple was even founded to Juppiter Julius and his Clementia, in which M. Antony was to serve as flamen (Dio Cass. xlv. 6; Suet. *Cæs.* 76; App. *Bell. Civ.* ii. 106). On Cæsar's murder in 44 the scheme collapsed (Cic. *Phil.* ii. 43); but in the comet which appeared the following year the Roman populace saw Cæsar's spirit raised to heaven (Plin. *HN* ii. 94; Virg. *Ec.* ix. 47; Ov. *Metam.* xv. 843 ff. etc.). When the Cæsarian party triumphed, the worship of the dead Cæsar was put upon a regular footing; public policy was now shaped by the cautious spirit of his nephew. A law passed by senate and people set *Divus* Julius among the gods, and a temple was erected (42 B.C.) to him on the spot where his mangled body had been displayed to the people (Dio Cass. xlvii. 18; App. ii. 148; *CIL* i. 626, ix. 2628). There is no reason to suppose that *divus* had at this time acquired a meaning different from *deus*; it was the precedent of the Cæsars which limited it to those divinities who had once been men (Mommsen, *Staatsr.* ii.³ 756, note 1; Wissowa,

p. 285). In *CIL* x. 3903, we find *dei Caesaris* alongside of *divi Augusti* (cf. *ib.* 1271). So, too, we find *Καῖσαρ ὁ θεός* as the proper designation of Julius Caesar in Greek (Strabo, viii. 381, etc.).¹ From Rome the worship soon spread to other places. An altar of Divus Julius is mentioned at Perugia in 41 (Dio Cass. xlviii. 14; cf. *CIL* i. 697, 698). In the Western provinces the cult seems to have been maintained only in the colonies founded by Julius Caesar. Antony and Sextus Pompeius, who disputed with the adoptive son of the *divus* the empire of the world, each advanced his own claims to divinity. Antony masqueraded in the character of Dionysos, and at Athens followed the precedent of Antiochus Epiphanes by demanding a dowry as the husband of the city-goddess (Plut. *Ant.* 24; Dio Cass. xlviii. 39; Athen. iv. 148; M. Seneca, *Suas.* i. 6; Vell. Patere ii. 82; Plin. *HN* viii. 55). Sext. Pompeius claimed to be the son of Neptune (Dio Cass. xlviii. 19; App. v. 100; Plin. *HN* ix. 55). When the young Caesar stood forth supreme and brought to the vexed world an era of peace, the tide of worship could not be stayed. But the temper and policy of the new ruler inclined him rather to reduce such honours to their minimum, and among the Romans to bring them into connexion with the national tradition rather than with foreign usage. In 27 B.C. he accepted from the Senate the name of *Augustus*, which connoted sanctity without asserting absolute divinity (Dio Cass. liii. 16; Suet. *Aug.* 7; Ovid. *Fasti*, i. 609; Censorinus, *de Die Nat.* 21. 8). He showed the same moderation in the provinces.

But first three sorts of cults offered to the Emperor must be distinguished: (1) the *provincial* cult, maintained by each province as a whole at one of the provincial centres; (2) the *municipal* cults, maintained by the separate cities; (3) the *private* cults, maintained by individuals or voluntary associations. The first were far more completely controlled (if not instituted) by the Imperial Government; and to them alone strictly applies the rule laid down by Augustus, that he was not to be worshipped save in association with the goddess Rome. Asia and Bithynia were the first provinces to be authorized to establish a provincial cult of this sort; and temples to Rome and Augustus were reared at Pergamum and Nicomedia. This permission did not extend to resident Roman citizens; they were to worship, not Augustus, but Rome and Divus Julius in temples of their own at Ephesus and Nicaea (Dio Cass. li. 20; cf. Tac. *Ann.* iv. 37). In the West the first provincial cult seems to have been instituted in 10 B.C., when an altar was consecrated to Rome and Augustus at Lugdunum (Lyons) for the province of the Three Gauls. A few years later a similar altar was consecrated for Germania at Oppidum Ubiorum (Cologne). To the municipal and private cults much greater liberty was allowed. In ordinary practice, however, the cities seem under the early Empire to have combined the name of Augustus with that of Rome. The cult instituted in A.D. 11 by the colony of Narbo is addressed to the *numen* of Augustus alone (*CIL* xii. 4333). Or, again, the municipal and private cults might emphasize the Emperor's deity by giving him the name and attributes of some traditional god. In Egypt and Caria, Augustus is Zeus Eleutherios (Καῖσαρ, ποντομέδοντι καὶ ἀνέλων κρατέρου | Ζεὺς τῷ ἐκ Ζηνὸς πατρὸς Ἐλευθερίῳ, *CIG* 4923; cf. 4715; *BCH* xi. [1887] 306; and the expression 'god of god', i.e. son of Divus Julius, in Ditt.

¹ That the Daphnis who is deified in Virgil, *Ee.* v., represents Julius Caesar was suggested by the scholars of antiquity and is commonly repeated to-day. Daphnis has, however, nothing but his deification in common with Caesar; and, since the deification was a part of the old Sicilian story it forms a very slender ground for the identification.

Inscr. Orient. 655); at Alabanda in Caria, Apollo Eleutherios (*CIG* 2903f=Ditt. *Inscr. Orient.* ii. 457). At Athens the temple begun by Pisistratus to Zeus Olympios was consecrated to the *genius* of Augustus (Suet. *Aug.* 60). Not only Augustus himself, but other members of the Imperial family become objects of worship. Athens honours his grandson Gaius as *εὐός Ἀπῆς* (*CIA* iii. 444); Mitylene, his son-in-law Agrippa as *θεός αὐρίπ* (*CIG* 2176); Nyssa has a special priest for his stepson Tiberius (*CIG* 2943). A temple was consecrated to Octavia after her death by Corinth (Paus. ii. 3. 1). The first day of each month in Egypt and Asia was called Σεβαστή (Kaibel, *Inscr. Græc. Sic.* 1890, p. 701). Games, among the Greeks a form of religious festivity, were everywhere instituted in honour of Augustus or members of the Imperial house (Ρωμαῖα Σεβαστά, Καὶσάρη Ἀγριππῆα, Ditt. *Syll.*² 677; Suet. *Aug.* 98, etc.). Even king Herod built temples and instituted games to Augustus and Rome (Jos. *BJ* i. 21, §§ 403 f.). In Italy the cult of Augustus seems to have spread largely before his death; temples and priests (*sacerdotes* in some places, *flamines* in others) are found in existence, at any rate, in colonies which Augustus had founded, and in cities of which he was in some way the patron (Beneventum, Cumæ, Fanum, Fortunæ, Pise; see Beurlier, *Culte impérial*, p. 17; Hirschfeld, p. 838). It was at Rome that the worship was most severely restrained. The Emperor refused to be saluted by his fellow-citizens as god, or to allow a temple to him to be erected in the capital. But he permitted his name to be inserted in the ancient hymns of the Salii (Mommsen, *Res gestæ divi Aug.*, 1883, p. 44), and the *Genius* Augusti to be worshipped along with the *Lares* of the city—i.e. so far as the worship of a living man was admitted, it must put off its alien complexion and be screened by the formulæ of the national religion, though here again the restraint could not extend to the action of individuals or the exuberant language of literature.

The poets, inspired as they were by Greek ideals, and using the old mythological conceptions without any belief in their literal truth, let their fancy run free in expressing the Emperor's deity (Virg. *Georg.* i. 24 f.; Hor. *Ode.* iii. 3. 11; 5. 1 f., 25. 4 f., etc.).

In Rome, too, men found pleasure in identifying the Emperor with some particular one of the old gods; sometimes it was Apollo (Suet. *Aug.* 70; Serv. ad *Ecl.* iv. 10); sometimes it was Mercury (Hor. *Odes*, i. 2. 41 f.); cf. Reitzenstein, *Poimandres*, 1904, p. 176 f.); sometimes it was Juppiter (Hor. *Epist.* i. 19. 43; Preller-Jordan, *Röm. Myth.* ii. 445).

When Augustus died (A.D. 14), the Roman people might at last worship him without restraint. After the precedent set in the case of Julius Caesar, he was declared a *divus* by a decree of the Senate. As the timely appearance of a comet was not to be counted upon, an eagle was liberated at the funeral, to represent visibly the soul of the Emperor flying to heaven; and a senator was found to bear witness to having seen the actual Emperor ascend (Suet. *Aug.* 100). Tiberius followed his predecessor in restraining the divine honours offered to himself. It is only due to his resolution that we do not to-day say 'Tibery' for September or October, as we say 'July' and 'August' in memory of the first two *divi*. The Greeks, indeed, were permitted as before to worship the living Emperor, and to consecrate temples to himself and his mother Livia, while the merely figurative character of the worship was emphasized even more than before by the 'God-Senate' (θεός σύγκλητος) taking the place of the goddess Rome in the cults maintained with Imperial sanction by the provincial centres (Tac. *Ann.* iv. 15). Municipal priests of Tiberius are found in one or two Italian towns (Venusia, Surrentum)

(Hirschfeld, p. 842), but in Rome itself no such cult was tolerated, nor would Tiberius entertain the request of the province *Betica* to be allowed to build a temple to him and his mother (Tac. *Ann.* iv. 37, 38). The worship of *Divus Augustus*, on the other hand, Tiberius piously furthered. A temple was begun to him in Rome; and, whereas old altars had hitherto been erected to him in the Western provinces, Tarraco was allowed in A.D. 15 to build him a temple (Tac. *Ann.* i. 78). In the East, Cyzius was even punished for slackness in this cult (Tac. *Ann.* iv. 36). The severity with which the transgressions of individuals were visited increased as the reign of Tiberius went on. It became punishable even to change one's garments before an image of Augustus, or carry a ring with his effigy engraved upon it into an unclean place (Suet. *Tib.* 58). At the death of Tiberius it was seen that the formality of consecration, if religiously empty, had some political value as a verdict passed upon a deceased ruler by his subjects. The Senate refused to raise Tiberius to divinity. It had, indeed, not improbably been the intention of Tiberius that consecration should by no means become a rule, but should be confined to the founders of the dynasty, Julius and Augustus. But Caligula, who succeeded him (A.D. 37), was so far his opposite that he claimed the honours which Tiberius had repelled. No mummery was too extravagant for this wretched maniac. A temple was built for him on the Palatine; he made himself the equal of Juppiter, and the Roman aristocracy were compelled on pain of death to offer him all the forms of religious homage. On his assassination in 41, the Senate refused him also divinity; his reign was a mad episode; but under Claudius we register further developments of a lasting kind in the worship of the Emperors. Caligula had already caused his sister Drusilla to be consecrated by the Senate as the first *diva*. Claudius had his grandmother Livia associated as *diva* with her husband *Divus Augustus* (Suet. *Claud.* 11; Dio Cass. ix. 5); and he permitted (between A.D. 50 and 54) a temple (not an altar) to be erected to himself in Britain at Camulodunum (Tac. *Ann.* xiv. 31; Sen. *Apokol.* 8; cf. Kornemann, p. 102, note 2; Toutain, *Cultes païens*, p. 86). Claudius after his death (54) became the third *divus* by decree of the Senate; his elevation provoked the lampoon called *Apokolokyntosis*, which has come down to us among the works of Seneca.

After the precedent set by the elevation of Claudius, consecration became a normal formality at the decease of every Emperor, unless it was desired to affix a stigma to his reign. The outlines of the worship of the Emperors remained very much as they had come to shape themselves under Augustus, Tiberius, and Claudius, i.e. in the Greek East various local cults of the reigning Emperor, whilst at the provincial headquarters the cult of Rome and Augustus became, after the apotheosis of Claudius, a cult of the *θεοὶ Σεβαστοί*, among whom the reigning Emperor was included; in the Western provinces, the cult of Rome and (the first) Augustus became a cult of Rome and (the reigning) Augustus or 'Rome et Augustorum.' Beside the original altars, temples would seem to have generally arisen after the precedent of Tarraco; at Lyons, in the latter part of the second century, the altar was consecrated to the cult of the reigning Emperor ('*Cesaris nostri*'), the temple to the deceased Augusti (Kornemann, p. 109). It also remained common for other members of the Imperial family to be consecrated on their decease (Poppæa and her daughter under Nero, Domitilla, the wife of Vespasian, the infant son of Domitian, the father of Trajan, etc.), although after Hadrian the privilege seems generally to have been restricted to

Emperesses¹ (see list of *divi* in Beurlier, p. 325 f.). And, although the worship of the living Emperor was not usually countenanced in Rome, the worship of his *numen* or *genius* was part of the official religious system. The oath generally recognized in the business of the Empire was by the *genius* of the Emperor (ὁ Σεβαστοῦ ὅρκος, cf. Apul. *Metam.* ix. 41). In the laws of Salpensa and Malaga the formula for swearing inserts, between Juppiter and the *penates*, first the list of consecrated *divi*, and then the *genius* of the reigning Emperor.

None but the worst Emperors followed Caligula in demanding for themselves divine honours during their lifetime. Nero did so, and a temple to him as *divus* would have been erected in Rome but for its ill omen, 'for the honour of the gods is not conferred upon the ruler before he has ceased to act among mankind' (Tac. *Ann.* xv. 74). Domitian established a worship of himself, and was addressed at court as '*dominus et deus*' (Dio Cass. lxxvii. 13; Suet. *Dom.* 13; Martial, v. 8). Commodus had himself worshipped as Hercules, and was fond of masquerading with club and lion-skin (Lamprid. *Commod.* 8, 9; Herodian, i. 14. 9, 15. 2-5).² Aurelian (A.D. 270-275) was the first Emperor of sound understanding who took to himself the titles of divinity ('*dominus et deus*'), but he already had conceived the idea of giving the Roman autocracy an expression no less ceremonious than that of Oriental monarchy. What Aurelian conceived Diocletian (A.D. 284-305) carried out. Among his measures was one to introduce the custom of prostration, and to take for himself and his colleague the names of Jovius and Herculius. When Christianity became dominant with Constantine, worship of the earthly sovereign had, of course, to cease. To the forms, however, of the old worship a political or social value had come to attach which made it difficult to abolish them absolutely. The Christian Emperors as late as Valerian I. (A.D. 364-375) were officially consecrated after their death (Ausonius, *Gratiar. act.* 7), and the use of the term *divus*, in common parlance, of a deceased Emperor continued for centuries (Gregory of Tours, *Hist. Franc.* ii. 8; *Cod. Just.* v. 27. 5, etc.). The provincial temples of the Emperor had become so much a centre for public festivities, etc., that Constantine allowed them to continue, stipulating, however, that no rites of pagan sacrifice should be performed in them (Wilmanns, *Exempla Inscr. Latin.* [1873] 2843, l. 45 f.). Such temples were no longer dedicated to any Emperor personally, but to the Imperial Family (*gens Flavia*) in the abstract. The priests of the Imperial cult and the *sacerdotes* (ex-priests) had come to form an important element in the cities of the Empire, discharging secular as well as religious functions. These, therefore, the Christian Empire allowed to subsist. Since, however, they still bore the insignia of old pagan *coronati* or *sacerdotes*, there was a feeling against them among the religious (Synod of Elvira, Canon 55). Christians did, indeed, accept the office (*CIL* viii. 8348), but Pope Innocent I. (Mansi, iii. 1069) pronounced that all who had done so after baptism were disqualified for the Christian priesthood. The municipal *flamines* continued locally as secular officials with the old name as late as Justinian (*CIL* viii. 10516; cf. Synod of Elvira, canons 2 and 3).

We have seen that the offering of divine honours to men arose among the Greeks as a formality

¹ Such consecration did not, however, imply necessarily the persistence of the cult when the Imperial power had passed to other families.

² It was always, of course, possible for private persons to use forms of flattery, and the Imperial portraits which have come down to us often represent them in the conventional guise of some old divinity, the Emperesses especially as Demeter; this need not signify more than the fancy of some individual.

whose religious significance was mainly that it showed how empty religion generally had become. Can we say the same of the mass of organized cults we have just surveyed—cults which endured throughout the Græco-Roman world for more than three centuries? It is obvious that to some extent we can. Among the Roman aristocracy, among the better educated people everywhere, the ascription of deity to the living Emperor, if not mere flattery, as in the case of the Augustan poets, was no doubt understood in a metaphorical sense which emptied it of value properly religious. The better Emperors, as we saw, repelled such homage, and Vespasian jested on his death-bed at the court fiction ('Vae, puto, deus fio,' Suet. *Vesp.* 23).

But how, if these practices had so little meaning, could they go on so widely and so long. The answer to this might perhaps be as follows. (1) The practices were not meaningless in so far as they reposed upon a genuine sentiment, if not, strictly speaking, a religious one. Octavianus Caesar brought the world relief from long anarchy, and for the following centuries order and peace around the Mediterranean were felt to be bound up with the Imperial government. Real feelings of loyalty to the head of the world-State may, therefore, have sought symbolical expression, and the symbol, according to the conditions of the ancient world, could be nothing but a religious formality.¹ The Christians appeared rebels to the civil power when they refused to throw incense upon the altar consecrated to the genius of Augustus. (2) Among the masses of the people, among those to whom the Emperor was a distant and unseen power, some real belief in his deity may have existed. The formalities of worship impressed the mind insensibly, and in the sphere of belief there are notoriously many half-shades that cannot give a clear logical account of themselves. The common oath by the genius of the Emperor must have acted continually to suggest his actual presence. The exclamation 'Ω Καίσαρ' seems to have been the one which naturally sprang to the lips of an over-driven menial (Luc. *Lucius*, 16). Especially where the personality of an Emperor had impressed itself upon the popular mind might it be believed that he had at death actually become an operative supernatural power. Images of Marcus Aurelius were to be seen among the *penates* of Roman houses as late as the time of Diocletian, and he was believed to reveal the future to men in dreams (Capitolinus, *Marcus*, 18. 6f.). (3) The cults of the Emperor once established served various interests incidentally. The prestige and profit brought to its locality by an illustrious temple, the festivities and holidays connected with a provincial or municipal cult, would tend to perpetuate it apart from religious motives; the motives to-day which maintain the observance of Christmas or Easter are by no means all religious. So, too, the natural instinct of men to form societies of a friendly or convivial kind could be gratified under cover of Caesar-worship, just as they had been gratified by quasi-religious associations under the Ptolemies (cf. the clubs of *Cultores Augusti*, *φιλοβασιλῆς*, etc., in Beurlier, p. 258 f.). The cosmopolitan guild of dramatic artists thought it politic to set the name of Hadrian as *πῶς Διόνυσος* alongside of the old Dionysos who was their patron deity. So, too, the social ambitions of the freed-man class found an opportunity of gratification in the institution of the *Augustales* in the Latin cities of the Empire (Boissier, *Religion romaine*, i. 162 f.).

Deification, we have seen, had not been among

the Greeks and Romans a recognition of the divine right of kings *per se*, but of the material or moral power of individuals. And under the Roman Empire, if the Emperors alone were divine for the whole realm by the theory of the State, other men might attain deity for a particular locality or a particular sect. The deification of widest range after that of members of the Imperial family was that of Antinoos, the youth loved by Hadrian. The Emperor on his death (A.D. 130) encouraged the worship of him as a god; temples and innumerable statues were erected to him, and a star was discovered which was clearly his soul in heaven (Dio Cass. lxi. 11; Paus. ix. 7; Spart. *Had.* 14. 7; *CIL* xiv. 2112, etc.). Theophanes of Mitylene, the friend of Pompey, was worshipped as a god by his native city after his death (Tac. *Ann.* vi. 18; coins of Mitylene), and, similarly, Cnidus voted his contemporary Artemidoros *τυπὴν ἰσθῆδος* (*Inscr. in Brit. Mus.*, no. 787). The vote recorded in the inscription was passed in his lifetime; but the divine honours were probably not to be offered till after his decease. Apollonius of Tyana, according to Philostratus, though he disclaimed deity, was saluted as a god by large numbers of people (iv. 31; cf. iii. 50); Caracalla built a temple to him (Dio Cass. lxxvii. 18), and he continued for long to be an object of popular worship (Vopisc. *Aurelianus*, 24).

The practice of offering heroic honours to the dead became much more general in the later times of pagan antiquity. Such honours were sometimes conferred publicly by a city or association as a special distinction, as, e.g., by Tarsus upon the philosopher Athenodorus (pseudo-Lac. *Macrobius*, 21; cf. Head, *Hist. Num.*, 1887, p. 488); Athens (*CIA* iii. 889); Cyzicus (*Mitt. Athen.* ix. [1884] 28 f.).² But the private consecration of the dead by their relatives and friends became increasingly common in Roman times. Cicero resolved on the 'apotheosis' of his daughter and designed a temple for her (*ad Att.* xii. 36; cf. the temple of Pomptilla, *Inscr. græc. Sic. et It.* 607).³ The salutation of the dead as 'hero' or 'heroine' becomes an ordinary formula on grave-stones; *ἥρως* becomes an ordinary name for a tomb. That many a bereaved person who had such an epitaph engraved meant to imply that his or her dead had actually passed into a life of higher power or beatitude, is shown by such phrases as 'Thou livest as a hero, Thou art not become a dead thing' (*ἥρως ὡς ἥρως, καὶ νέμεις οὐκ ἐνέρον*, Kaibel, *Epig. græc.*, 1878, p. 433). But the custom of coupling the title 'hero' in common speech with the name of a dead man became so general that it survived in Christian times, 'hero' being now simply an equivalent of *μακάριος*, 'sainted,' just as in the West *divus* survived as the title of deceased Emperors (Deneken, in Roscher, col. 2547 f.; Rohde, *Psyche*, 646 f.).

E. R. BEVAN.

DEISM.—I. HISTORICAL.—The movement of religious thought known as 'Deism' was of comparatively brief duration. Its rapid rise into notoriety, its short-lived prevalence, and its gradual subsidence all fall within the limits of a single century. Roughly speaking, the beginning of the movement was contemporaneous with the Revolution of 1688. Its epitaph was pronounced in 1790, when Burke could speak of the Deistic writers as already forgotten. Nor is the speedy exhaustion of interest difficult to explain. The conditions which combined to direct men's attention to the Deistic problem were transient; and the whole dispute was too frigid and too little in contact with real life to affect the deeper currents of religious thought. Superficially, much excitement was stimulated, until the air was thick with controversial writings. But, with a few exceptions, neither was any conspicuous literary merit displayed by the controversialists, nor did their arguments penetrate far into the secrets of the spiritual life. This serves to explain why the religious debates of the 18th cent. have faded from the common memory more completely than those of earlier periods. On the other hand, to the student Deism presents special points of interest. English religion would never have reached its present condition if it had not passed through the stage with which we are about to deal.

If the movement is to be understood in relation to the general development of theological thought, it will be necessary to seek for an explanation of its origin in a period when the name 'Deism' had not yet come into vogue, and in speculations the true issue of which was not anticipated by their own authors. Halyburton, in his book entitled *Natural Religion Insufficient* (1714), was the first to name Lord Herbert of Cherbury as the parent of Deism. The charge was endorsed by Leland, whose *View of the Deistical Writers* (1754) contains much carefully amassed material, very useful to later students. Since then Lord Herbert's responsibility, whether to his credit or discredit, has been commonly recognized, and this in spite of the fact that his famous book *de Veritate* was composed with a purpose quite different from that to which its arguments subsequently contributed. The book deserves an epithet often applied in cases where there is little justification for so strong a term. It was, without exaggeration, 'epoch-making.' It initiated a line of thought and a method of religious speculation pregnant with results, the full measure of which has not even to-day been exhausted. No better introduction to the study of Deism can be provided than a brief analysis of the main theses which Lord Herbert sets out to establish. The title of the book, given in full, clearly indicates the writer's purpose: *de Veritate, prout distinguitur a Revelatione, Verisimili, Probabili, et a Falso* (Paris, 1624). At the basis of the author's theory is his belief in the existence of *notiæ communes*, or innate principles. These he explains in his chapter 'de Instinctu Naturali,' to be distinguished by six marks, viz. Priority, Independence, Universality, Certainty, Practical Necessity, and Immediate Cogency. Ideas to which these marks belong are imprinted on the mind by the hand of God. They are axioms, neither requiring nor admitting proof. When dealing with

the subject of religion, he distinguishes five principles as exhibiting this primary character, and consequently independent of all tradition, whether written or oral. They come direct from a heavenly source and are common to all religions. These five fundamental truths are the following: (1) that God exists, (2) that it is a duty to worship Him, (3) that the practice of virtue is the true mode of doing Him honour, (4) that man is under the obligation to repent of his sins, and (5) that there will be rewards and punishments after death. The axiomatic character claimed on behalf of principles such as these is open to debate, and Lord Herbert's theories were afterwards subjected to damaging criticism by Locke. But, whatever opinion be held as to the validity of Lord Herbert's assumptions, it remains true that in his works we are brought face to face with the principles which lie at the root of Deism. Here we find assertion of the competence of human reason to attain certainty with regard to fundamental religious truths, and insistence upon the indissoluble connexion between religion and the practical duties of life. This is precisely the theme on which the Deistic writers enlarged. The pivot of the whole controversy is the disputed question of the sufficiency of natural reason to establish religion and enforce morality—a sufficiency as vehemently asserted by the Deists as it was denied by their opponents.

Much misunderstanding will be avoided if it be remembered from the outset that the Deistic controversy was in the main philosophical rather than religious. Had it not been so, it would have been incorrect to indicate a metaphysician like Lord Herbert of Cherbury as the forerunner of Deism. Disappointment awaits those who expect to find in the writings of this period any searching analysis of a living spiritual experience. The controversy arose not from the attempt of the soul to explain to itself its joys and fears in the presence of God, but from the desire of the thinker to remove from his theory of the world inconsistencies of which he was continually becoming more uncomfortably conscious. The details of the controversy will show that the chief impulse came from the wish to find a way of reconciliation between the then commonly accepted philosophic view of the Divine nature and the facts of observation. And new facts were the order of the day. It was a period of discovery and of the rapid acquisition of all kinds of knowledge. Information was pouring in with regard to the religious systems of other parts of the earth. It was no longer possible to live in a religious world limited by the horizon of Western Europe. Travellers were bringing home from recently discovered, or re-discovered, countries reports of imposing civilizations, in which the sanctions of civil order were provided by religions of the utmost diversity in origin and character. In this way materials for the study of comparative religion began to be collected, and it became possible to form some conception of the bewildering multiplicity of religious customs, ceremonies, and doctrines throughout the world. No philosophic explanation of man and man's religious faculties could claim to be adequate which left all this mass of new material out of account.

At the same time, other more subtle influences were at work stimulating man's natural desire to unify his knowledge. In the domain of physical science the process of unification was advancing with unparalleled rapidity. The so-called 'natural philosophers,' among whom were numbered the greatest intellects of the day, were engaged in establishing those wide generalizations which have formed the basis of modern science. The visible success thus achieved, deserving and receiving the applause of the world, prompted the philosophic student of religion to search for some wide formula that would cover his facts as satisfactorily as the formula of Newton covered the phenomena of the physical world.

1. Forerunners of Deism.—It is far from easy to form any estimate of the phase of intellectual development through which the nation was passing at the time when it was disposed to accept, or at all events to discuss, the novel theory of religion which the Deists proposed. English philosophy has never flowed in a very wide or deep stream. It is a common reproach that as a nation England has been in the past, and remains to the present day, strangely insusceptible to the influence of abstract ideas. It is difficult to deny the truth of the criticism. Even the controversies of the Reformation were in England decided to a great extent upon practical considerations. Little atten-

tion was for the most part paid to the examination of first principles. An exception to the general rule, however, is afforded by Hobbes († 1679). Together with other writers of the time, he exhibits a strong prejudice against the scholastic philosophy. In certain respects he represents, with some characteristic English peculiarities, the sceptical tendency of the Renaissance. It was, indeed, chiefly as an exponent of political philosophy that he made his mark and arrested the attention of his contemporaries. With the political theories which he defended, and with the controversies which ensued, we are not concerned. His importance in relation to the course of religious speculation lies rather in the temper which he contributed to produce than in the acceptance of his principles by any body of disciples. His self-sufficiency, his obvious one-sidedness, his disregard of necessary qualifications, and his rigorous insistence on the most paradoxical conclusions from his premisses aroused an angry opposition. Hence it is not surprising to come across the statement that, while he had innumerable opponents, his supporters numbered but one. It was a true instinct which made the men of his time feel that the tendency of the *Leviathan* was in the direction of a thoroughgoing infidelity. The literature of the Restoration bears witness to the existence of a general opinion that danger was to be apprehended from the spread of his influence. Though Hobbes himself was utterly opposed to that kind of natural religion which afterwards formulated itself as Deism, yet he was, in fact, one of the pioneers of the movement. As much as any other single writer he gave the impulse to religious speculation, and, by helping to shake the old confidence in tradition, contributed to the removal of one of the main obstacles to the introduction of Deism.

Another and a very different element at work in the intellectual life of the nation was derived from the influence of the Cambridge Platonists (*q.v.*). They were a small body standing much aloof from the general life of the country, who from the vantage ground of academic seclusion surveyed the troubled course of the political struggle and the contentions of the warring sects. For themselves, they desired to establish on rational grounds a Christian philosophy, leaving to others the barren victories in the field of popular controversy. In them the genuine philosophic instinct to pursue the search for ultimate truth was unmistakably present. It was their dominant motive. Influenced by the wide-spread reaction against the Aristotelianism of the Middle Ages, they discovered, in a modified form of Platonism, a theory which afforded satisfaction alike to their religious and to their intellectual requirements. In the forefront of their system they placed the conception of the human reason as receptive of illumination from the Divine source. From the elevation of the standpoint thus attained—so it seemed to them—the questions at issue between the sects were reduced to their true dimensions, and lost the exaggerated importance which had been conventionally attached to them. In the speculations of these students the ethical motive is markedly prominent. They insisted on the immutability of the moral law and on its independence of any positive commands, human or Divine. For the most part they were inclined to abstain from controversy. But some of them found it expedient to meet the theories of Hobbes with an explicit refutation. Against his materialism, and his speciously simple reduction of all human motives to various manifestations of self-love, they opposed their Platonic idealism and their belief in the existence of moral principles to which an inviolable obligation essentially belonged.

At first sight it might appear paradoxical to maintain that two systems so consciously and directly opposed to one another as those of Hobbes and the Cambridge Platonists both helped to prepare the ground for the growth of Deism. But it will be remembered that the effect of the writings of Hobbes has been described as in the main negative. He helped to sap the defences of authority, whereas the Cambridge School contributed something more positive, accustoming the minds of men to the hope of finding in their own reason a judge capable of bringing to an end the weary series of doubtful disputations over matters of faith.

In a still more marked degree is it true that the writings of Locke († 1704) produced an effect upon the current of religious thought which he neither intended nor approved. Locke was not a Deist, though the reproach was naturally enough cast in the teeth of the man apart from whose influence Deism would never have enjoyed the vogue to which it eventually attained. While his relation to the movement was unquestionably close and intimate, it was at the same time far from simple. For not only did the Deists profess to draw their inferences from his principles, but many, perhaps most, of the opponents of the movement likewise were convinced adherents of his philosophy. Locke may therefore be said to have laid down the lines along which the controversy was destined to move. This he did, above all, by his short but very significant work on the *Reasonableness of Christianity* (1695; see art. LOCKE). In the pages of the writers who followed along the path where he led the way we shall find the same ostensible attempt to simplify the ancient faith, at first with an apologetic purpose, then with a gradually increasing and more overt hostility; the same principle of discrimination between the supposed valuable and worthless elements of the Creed; the same pre-eminence assigned to the ethical teaching of Christianity; the same conception of religion as a moral philosophy and a code of precepts rather than a power enabling the enfeebled will; the same treatment of miracles and prophecy as external evidences of the truth of the claims of Christianity; the same anxiety to discover a reconciliation between belief in the absolute impartiality of the Divine goodness and the position of privilege assigned to revealed religion. It would not, of course, be true to say that all these ideas were novel when they were propounded by Locke. Many of them had already a long history behind them, and had provided the subject-matter of mediæval disputations. But what is worthy of remark is that here, for the first time, we meet them in systematic combination with one another. They are made to converge upon a certain point, and to conduct to a conclusion which involves certainly the modification, and possibly the repudiation, of important elements in the hitherto accepted creed.

2. Deism in progress.—Those who wish to be supplied with a chronological list of the Deistic writers may be referred to the work of Leland (see Literature at end). It will be more profitable for our present purpose to select certain writers, not necessarily those of the greatest reputation, but those most typical because representative of some critical moment in the development of the movement. Of these the first to deserve mention is John Toland, who in 1696 published his *Christianity not mysterious, showing that there is nothing in the Gospel contrary to Reason nor above it, and that no Christian Doctrine can properly be called a Mystery*. The author claimed to be drawing the natural inferences from the premisses of Locke's philosophy; and the title of the book indicates clearly enough in which direction

he pushed forward the argument. Where Locke had urged the 'reasonableness of Christianity,' Toland would interpret the word 'reasonable' as equivalent to 'not mysterious.' This is not in the least what Locke meant. It is a long step further forward along the road which led to the rejection of Christian belief.

The book was of no particular merit, but, owing to the highly charged condition of the intellectual atmosphere, its publication caused a considerable explosion of indignation. It was condemned by the Irish Parliament and ordered to be burnt. The Lower House of the Convocation of Canterbury took cognizance of it, and would have proceeded further, had not the Bishops decided, on a point of law, to take no action in the matter. Though the ecclesiastical authorities did not move, there was a general feeling that it was an abuse of the recently accorded freedom of the press when a young author put forward such crude and revolutionary views as that 'neither God Himself nor any of His attributes are mysteries to us for want of adequate ideas,' and that so far as any Church allows of mysteries it is anti-Christian (cf. Wilkins, *Concilia*, 1787, iv. 631). Toland desired so to enlarge the jurisdiction of reason as to make it co-extensive with the contents of revelation. In deliberate opposition to the principle of earlier writers,¹ he refused to acknowledge the validity of the distinction between apprehension and comprehension. What man could not comprehend was on that account to be rejected as false. Not content with merely stating this general principle, he attempted to give a historical account of the process by which mystery had intruded itself into a Christianity originally devoid of this baser element. He pointed out, correctly enough, that in the language of the NT the word 'mystery' signified not something incomprehensible, but a secret revealed to the initiated. Hence he inferred that the conception of mystery in the sense of that which is beyond the reach of human understanding was alien from the spirit of original Christianity, and he endeavoured to show that a gradual assimilation of the new faith to the lower type of Jewish and heathen religions, the intrusion of Platonic philosophy, and the ambitious projects of an unscrupulous priesthood were responsible for the deterioration.

Although Toland cannot be credited with any large measure of originality, yet his book marks a critical point in the gradual change of men's views with regard to the comparative authority of reason and revelation. A certain arrogant assertion of superiority on behalf of reason was now substituted for that deference which had hitherto been considered the fitting attitude of the human mind in the presence of knowledge communicated from above. Another and more easily recognizable result of his rash speculations was connected with his theories as to the course of early Church history. The discussion of the views which he set forth stimulated a lively inquiry into the nature and value of the documents on which the historian of that period must depend. In a book entitled *Amyntor*, which was published in 1699, Toland himself, taking part in the discussion, endeavoured—or so it was supposed—to undermine the credit of Scripture by calling attention to the large mass of early Christian literature, and by suggesting covertly that canonical and uncanonical writings alike were the offspring of superstition and credulity.

Another new departure was taken when Anthony Collins, in 1713, published the *Discourse of Free-thinking occasioned by the Rise and Growth of a Sect called Freethinkers*. Collins reiterated and emphasized the claim of reason to pronounce upon the contents of revelation. He advanced beyond the point where Toland had left the matter, by attempting to provide a theoretic justification of the claim to unlimited freedom of inquiry, in all directions, over the whole field of moral and religious speculation. Toland had himself exercised this freedom, but without prefixing any thorough examination of the positive and negative arguments in favour of extending this privilege to all classes. Collins had the acuteness to perceive that the whole of the Deistic argument, involving, as it did, an appeal to the reason of the ordinary man, rested ultimately upon a decision in favour of unconditional individual liberty to pursue in-

vestigation, and upon a conviction of individual capacity to discover the truth. Accordingly he set out systematically to prove that the progress of civilization has been furthered where men have claimed this right for themselves and extended it to others, while, on the other hand, deplorable consequences have ensued wherever the privilege of free thought has been withheld.

In some directions his task was easy. History provided an ample supply of examples of the evils which attend a policy of obscurantism, coupled with a blind and unintelligent deference to external authority. But he adopted a much more questionable position when he maintained that the cause of morality would be benefited by its complete dissociation from all mysterious sanctions whatever. He supported his case by the assertion that the great moral teachers of mankind had appealed, not to the fears, but to the reason, of their hearers. It was the method of the Prophets, of the Apostles, of Christ Himself. On the other hand, the endeavour to enforce belief by any other means than the plain straightforward appeal to the individual reason had been the bane of both Church and State, the source of moral corruption, the cause of every kind of discord, disturbance, and disaster. Bitter attacks are made upon all professional ministers of religion. Invective of this kind was a favourite theme with the Deistic writers, and for various reasons, chiefly political, was not distasteful to the public. The supposed machinations of the clergy served as a convenient explanation of certain facts in the history of religion, which did not easily square with the Deists' theory of contented reliance on the natural reason and instinct of man. From their point of view the prevalence of patently false religions and the persistence of superstitions were anomalies that had to be accounted for. So they sought to save the credit of the natural human reason by fixing the responsibility for these evils upon an intriguing, selfish, and idle priesthood.

Another point to be observed is the markedly utilitarian character of the reasoning employed by Collins. In defending the principle of freedom of thought he calls attention primarily to the desirable consequences which will follow upon its adoption. Like many others of his school, he made expediency a criterion of ethical values. The spirit of the age, devoted to the supposed interests of practical common sense, resented the application of any rule except one calculated on the basis of consequent pleasures and pains.

A later work by the same writer is significant of the transition to yet another phase of the controversy. In the *Discourse of the Grounds and Reasons of Christian Religion* (1724), Collins forsakes the question of the relative reasonableness or unreasonableness of the contents of the Christian Revelation, and turns to an inquiry into the credibility of prophecy and miracle. It had been a recognized mode of traditional Christian apology to rest the case for Christianity on two main supports—the correspondence of NT facts with OT prophecies, and the miraculous powers displayed by Christ and the Apostles. So long as the Biblical record remained unquestioned and uncriticized, this position was strong enough to withstand assault. But, now that the spirit of criticism had begun to throw suspicion upon the authenticity and the good faith of the Biblical documents, serious weaknesses in this line of defence revealed themselves, of which the innovators were quick to take logical advantage. If the facts were doubtful, what became of the argument from correspondence with prophecy and from miracle? So began the long debate over the 'external' evidences of Christianity. It was a descent from the comparatively higher level of an inquiry into the fundamental truths of religion to undignified and often vituperative disputes over the veracity of the Apostles and the other NT writers. But, although the tendency to substitute this less important issue showed itself as early as the third decade of the century, it was not till some years later that the change became general.

Christianity as old as the Creation, or the Gospel a Republication of the Religion of Nature, was published in the year 1730. Its author, Matthew Tindal, Fellow of All Souls' College, Oxford, had passed through various changes of religious belief, and did not bring out this, his best-known work, till near the end of a long life. It was at once recognized as a noteworthy contribution to the controversy. It was sober and restrained in tone, and

¹ e.g. Bacon, 'Concludamus theologiam sacram ex verbo et oraculis Dei, non ex lumine naturae aut rationis dictamine hauriri debere' (*de Augm. Scient.* ix. 1).

but an old priest or functionary, as was the case until a few years ago with the Musulmán schools of modern Egypt) lasted from morning to mid-day (Sallier Papyrus, ii. 10. 6); then the children 'went out shouting with joy.' The rest of the day was probably occupied in preparing tasks or learning lessons for the next day. Reading, writing, penmanship, and spelling were the chief subjects.

They began with the exercise of copying in hieroglyphics or hieratic. Then, judging from the papyri that have come down to us, dictation was the customary method of the teacher. The passage was usually taken from a religious, magical, or poetical text. Erman (*op. cit.* p. 332) makes mention of the fact that the task for the day was on an average three pages of this kind of exercise. We still have this before our eyes in the papyri of our museums, with the notes, sketches, annotations, or corrections, of the teacher. There was also the reading of edifying information; and the master's favourite method, in order to train the future administrator for his profession, was to imagine a series of fictitious letters, a pretended correspondence between the pupil and an imaginary manager of State affairs. This is the subject of half the papyri of this kind that have survived. There were added to the above course, according to individual needs, a little arithmetic, geometry, formulae, protocols, etc. The materials for these exercises, as throughout the whole of the East, were white boards which could be cleaned afterwards like our slates, chips of stone, pieces of broken earthenware, or old papyrus rolls. They wrote on them all with a reed (cf. on this point Budge, *Guide*, p. 79).

Corporal punishment was approved of. The phrase 'the child has his understanding on his back' elliptically but forcibly expresses how floggings contributed to make him listen quietly (Anastasi Papyrus, v. 8. 6). 'The youth has a back; he attends when it is beaten,' says the same papyrus, and the pupil harboured no bad remembrance of it. 'You beat me on the back and the instruction entered my ear,' the pupil afterwards reminds his old master (*ib.* iv. 8. 7). The teacher's salary was probably moderate, like that of the schoolmasters of the Musalmán *qubbas* under the ancient Egyptian régime: three rolls of bread and two jugs of beer per day from each pupil, if we may believe the Bulaq Papyrus (correctly interpreted by Budge, *Guide*, p. 78; Erman, *Life*, p. 330, thinks it refers to the daily rations of the pupil).

We know that this phase of life lasted until the boy had completed his twelfth or thirteenth year. But, as in the case of the remainder of the life of the infant, there are no certain traces of rites or ceremonies marking the end of childhood and the entrance on puberty (real or social), and the access to public functions or to the life of a man (on this whole subject see art. CIRCUMCISION [Egypt.]).

During the whole of this period, and consequently until the age when the young Egyptian became adolescent and a man from the social point of view, the rôle and power of the mother remained as important as in infancy. Egyptologists agree in drawing attention to the greatness of the maternal influence on the education of the child (cf. Budge, *Guide*, p. 77; Erman, *Life*, p. 155), and her care during the time when he is attending the 'house of books,' etc.

This fact has been compared with others, such as the presence of the mother beside her son in the groups of statues at tombs, and in the scenes of funeral feasts represented on the stela, in order to draw far too general and hasty conclusions as to the existence of a primitive mother-right in early Egypt. More complete knowledge of feudal law and of wills must be acquired before we can state such facts with the necessary authority.

With regard to young nobles or princes of a feudal family, the above applies as a general rule both to the family life and to their education or instruction. The scenes portrayed show them clothed like grown-up persons (cf. Wilkinson, ii. 334), and wearing the amulets or talismans customary for all children, but of richer material, and frequently having round their neck the pearl necklace, the protective figures of Ririt, the *ab* in the shape of a heart, which confers wisdom and wards off diseases, or a papyrus covered with cloth. Many were sent (and often by order, somewhat

like hostages) to the court of Pharaoh, where they received instruction for the military or administrative service of the crown. Just as ordinary girls were associated with royal princesses, these young men shared in the life, games, and exercises of the royal princes (cf., on this whole subject, the inscriptions of Beni Hasan, Syut, and Abydos). The nobleman Tefabi recalls with pride that he learned to swim with the royal children (cf. Mariette, *Mon. divers*, Paris, 1872-77, pl. 68d). Ptahshopsisu (cf. Breasted, *Ancient Records*, i. 256) shows, by his example, that this custom of bringing up some children of common people along with princes was current under the Memphites.

The supposed participation of the children of noblemen in the great sports of fishing and hunting has arisen from a probably incorrect interpretation of the heraldic scenes on the tombs. It is, in fact, the regular custom to represent the children of the feudal lord or the high noble functionary helping their fathers to hunt the birds of the marsh in boats, or striking the crocodile or hippopotamus, or throwing the harpoon at large fish. The scene has passed from there to the tombs of functionaries in general, and has become a conventional theme *de rigueur*. As a matter of fact, the present writer thinks that in the painting of these scenes the aim is to associate children with their fathers, to show that they enjoyed along with them the noble prerogative of directing these sports, and that one day they would succeed their fathers in their responsibilities and dignities. It is probable that this is also the explanation of the presence of little girls in the hunting and fishing boats with their mothers. It is a way of showing the association of the feudal rights of the women and of their transmission to the daughters, but not the representation of a real participation in these sports, at least during the historical period.

5. Games, toys, and amusements.—Certainly no other dead civilization has bequeathed such a large number of materials connected with the amusements of children. We have not only the representation of a long series of games and sports for children, but the actual evidence of these amusements in the shape of hundreds of toys, found in the houses or the tombs; and some museums, like those of London and Berlin (the latter valuable for the comparison between the objects in the cases and the corresponding methodical series of the bas-reliefs of games), in a few minutes' examination of their cases teach an excellent and substantial lesson on this point. Moreover, the pictures of games do not contain the same kind of evidence as the playthings which really were in existence in ancient Egypt; so that the two combined form a very complete repertoire. We cannot give the entire inventory here. We shall mention only the chief types of playthings and then of games.

As the most noteworthy toys we naturally find dolls in the majority—made of all kinds of material (wood, earth, limestone, ivory), and from the coarsest, for poor children, to carefully made dolls with clothing (Berlin, no. 10,024). Some of them are jointed (Cairo, no. 869; London, no. 37,162), and were moved by means of strings. A large number, for very small babies, are, like ours, simply bodies without legs, but with a head and rudimentary arms. Others, on the contrary, are carefully painted, and wear amulets or prophylactic magic figures, Thueris, etc. (London), or even have artificial wigs (London, Room iv. Standard Case C, Shelf i.). Some of them are nursing a baby doll (London, no. 23,424) or carrying it (*ib.* 30,725). A picturesque and local touch is given by the presence of negress dolls, and by the curious details of head-dress (London, no. 32,120—a doll with a wig of long tresses made of clay). Animal-figures bear witness to the tastes of the young Egyptians: wooden birds (London), pigeons on two castors (London, Berlin, Oxford [Ashmolean], Cairo), a cat with inlaid eyes and a movable jaw (London), a calf of painted wood (London), a jointed frog (Cairo, no. 871), and—the Egyptian *toy par excellence*—the crocodiles with movable jaws (in the museums of Berlin, the Louvre, and Leyden). Some of these animals give evidence of a veritable art of amusing very small children; for example, the monkey driving a chariot, the dwarf with a cat's head, and the negro pursued by a panther (London, nos. 21,984, 22,883; cf. Budge, *Guide to the 3rd and 4th Rooms*, pl. v.). The linen-washer of the Leyden museum is a toy almost similar to those of our own time; and the cavalier (Berlin, no. 12,654), and the elephant with the driver (London, no. 29,712), if they do not belong to an early period, are no less curious.¹ Whips, marbles

¹ It should be remarked, however, that in Egypt the archaeologist must be careful not to confound with children's playthings certain figures of dolls and boats which in reality were very rough representations of slaves and funerary barques

(Cairo), rattles (Berlin), boats (Cairo), and, above all, a huge collection of balls (made of leather filled with straw, or of plaited papyrus covered with leather), show that the taste of the young Egyptians in their first games was practically similar to that of modern children. Like the Arab children of the present day, they went to play among the ruins that existed in their time. 'And then the children played among the ruins of the temple,' says the inscription of the restoration of the temple of Cusæ (Speos Arthemidos, line 16).

The series of games and sports represented in the frescoes and bas-reliefs of the tombs show that games of ball, running, and jumping were much in favour. Vaulting, the throwing of pointed sticks, and wrestling were indulged in by older children. Swimming was certainly a regular sport, for the texts mention those who 'learned to swim with the royal princes.' Certain scenes show us more especially Egyptian games, e.g. the scene in which one of the players has his hands tied behind his back (cf. Erman, *Verzeichnis*, p. 281), but, on account of the absence of texts, it cannot be explained; or, again, there is the scene showing, but with rather indistinct details (cf. Wilkinson, ii. 69), the throwing of a dagger into a circle drawn on a plank of wood; and, lastly, the Memphite *mastabas* and the paintings of Beni Hasan reveal to us an infinite series of feats of strength and dexterity. Several writers, e.g. Wilkinson, have made extensive use of these in their re-constructions of the amusements of the ancient Egyptians.

But there is a reservation to be made here. It should be noted that those curious scenes (the tombs of Ptahetep, Merruka, etc., for the Memphites; the tombs of the lords of Beni Hasan for the proto-Theban Empire, etc.) represent not ordinary but professional children (buffoons, acrobats, young dancers, etc.), and often even professional adults. The present writer, however, thinks that these documents may be regarded scientifically, in most cases, as giving *indirect* information on the games of children, except where the scenes clearly represent the feats of acrobats. As a matter of fact, it is probable that certain feats of professionals are simply the improved form of the ordinary games of children (wrestling, jumping, etc.); or, as in our own time, children in their games imitated the actions which they saw professionals perform. We must not, therefore, make the very strict distinction that is sometimes made; and the system of Wilkinson's ancient manuals of including all in the same rubric is a good one to retain, though with the reservation which we have just stated.

6. Death.—In spite of all the medical knowledge attested by the papyri, infantile diseases exacted a heavy tribute from the population (see art. DISEASE [Egyptian]). They occurred continuously from birth to puberty. If there were a great many children in Egyptian houses of any rank, infant mortality reached a very high rate there, as throughout the whole of the ancient East. If there were no other evidence, we should find conclusive proof (1) in the number of royal heirs who died (e.g. in the XVIIIth dynasty the reigning king is often the third or fourth son); and (2) in the surprising proportion of children's coffins in the series of sarcophagi of the priestly families of the god Amon. The children of the lower and middle classes were often buried in the houses, being summarily placed in an old tool- or linen-box with some toys or amulets (cf. Budge, *Guide*, p. 78, for the toys from the tombs in the British Museum). Often two or three babies were buried together (cf., for details, Petrie, *Illahun*, p. 24, and Maspero, *Hist.* i. 318, with the bibliography on the subject). Children of the upper classes received the same funerary pomp in the family tomb as adults (good examples at Thebes; Petrie's recent work, *Gurneh*, London, 1909, p. 10, gives an excellent specimen of the burials of the infants of the middle class; see pl. xxiii.-xxv.): sarcophagi, statuettes, funerary furniture, etc. Theban examples are mentioned placed in the tombs for the use of the souls of the dead. A certain number of these have been wrongly classed among the toys in the museums. Thus the toys imitating fruits, cited in Wilkinson, ii. 66, seem rather to be funerary offerings, and it is more than doubtful if we must reckon the small ivory image of a woman carrying an infant, cited among the toys in Budge, *Guide*, etc., p. 47, and (Room iii.), p. 178, as a *pre-historic* doll.

of a family having gone to really extraordinary expense for the funerary cult of a child prematurely removed by death. Lastly, the series of sarcophagi of the great priests (finds of Maspero and Grébault at Deir el-Bahari) show that children's coffins of this class were similar to those of the adult members of the family, and that their funerary destinies were conceived as the same in the life of the other world—an important fact to note in connexion with the beliefs regarding dead children.

7. Royal princes.—If we except the scenes in the harem and in the public life of the princesses of Amarna, and a few details of funerary archaeology, information concerning royal childhood has made little progress since the time of the collections of the earliest Egyptology (e.g. Wilkinson's *Manners and Customs*). Neither the temples nor the tombs have furnished any fresh instructive scenes on the matter, and papyri and inscriptions are practically dumb. Especially with regard to education or instruction, we are almost entirely ignorant of the early years of the royal children (the so-called moral teaching of Amenemhait I. to his son is merely a literary process); in a word, it is practically only the material aspect of this childhood that can be re-constructed.

Little is known about the early years of the royal princes. Most of the scenes and texts concerning them represent them chiefly as adults, beside the Pharaohs, in ceremonies or military operations. It is from some temple bas-reliefs, specially engraved to establish their claims to Divine origin, and to emphasize the fact that they were legitimate heirs to the kingdom, that we know the rites of their birth, in which the gods and goddesses played the part which was in reality played at court by the courtiers and the famous midwives of Egypt mentioned in Scripture (Ex 1¹⁵); e.g. at Deir el-Bahari for Hathepsitu, at Luxor for Amenhotep III., at Erment for Cæsarian. These details (cf. art. BIRTH [Egyptian], vol. ii. p. 646) find a valuable commentary in the popular tale of *Khufu and the Magicians*, in which, at the moment of birth, 'Isis placed herself before the pregnant woman, and Nephthys behind, while Hikit received the child' (cf., for the real commentary, a good detailed account in Maspero, *Contes populaires*, p. 38), and the massage performed by Knum ensured the strength of the little one.

The early infancy was passed in the harem (*khoniti*), as represented on the frescoes in the palace of Amarna, and it was probably when they were about four or five years old that the young princes went to live with their teachers in the special part of the palace called the *shapi*. From popular stories we know that the newly-born prince had nurses (*monait*), cradle-rockers, and coaxers (*khomu*), to bring him up. Paintings and statues of the Theban period show that these titles were afterwards court dignities, which were given to men also, and most frequently to very high officials. The stelæ of Abydos and the Qurneh frescoes have given us the picture of several dignitaries, men and women, fulfilling these functions, but without very exact details about their occupations. The usual theme—apart from the texts, or the enumeration of duties in the texts—includes care and education, representing the young prince on the knee of his governess or tutor. This is the conventional attitude by which the statues in the temples express the fact that the goddesses have brought up (in the mystic sense of the word) on their knees the young heir to the Egyptian crown (e.g. the bas-reliefs of Seti I. at Abydos). In a more real and also more poetic way the three statues of the royal tutor Sonmout (Berlin and Cairo museums) represent him tenderly lulling the little princess Nofriurê, at the age of two or three years, on his knee, or

in contending for the probability of progress from crude to refined types of religion, but, in the face of the evidence which it was easy for him to produce with regard to the condition of religion in earlier times and among the uncivilized nations of the world, it was impossible for the fiction of a religion as old as the Creation to maintain itself.

In passing it should be noticed that the strength and the weakness of Hume's essay on 'Miracles' can be properly appreciated only when it is remembered that, throughout the Deistic controversy, miracle was treated as the chief evidence of the Divine authorship of a revelation. From this point of view, the more startling the event the greater will be the stupor which it produces, and the higher its value as a credential. Unconscious of the dangers to faith involved in their procedure, the apologists degraded miracle to the level of portent. It was a blunder of which Hume was quick to take advantage. If Deist and apologist alike were willing to treat miracle as a naked sign of arbitrary power, it was not for the common enemy of Deism and Christianity to set them right. He was only taking as up the ordinary position of the time when he defined miracle as a violation of nature; and, when it is so regarded, with every adequate cause for its occurrence eliminated from consideration, it is undeniably plausible to contend that no amount of external evidence can outweigh the inherent improbability.

3. Writers with relations to Deism, but not properly Deists.—Some writers, commonly reckoned among the Deists, have been intentionally passed over in silence. It will be well, therefore, to add a few words of explanation why this course has been adopted. During the period under review, while the Deists were the most forward and active antagonists of orthodoxy, it was not unnatural that any writer who maintained unorthodox opinions should be reckoned as belonging to their camp. Yet obviously the classification is likely in some places to be inexact. It was so, for example, in the case of Lord Shaftesbury, the author of *Characteristics* (1711). It is no doubt true that there are certain points which he and the Deists have in common, but the superficial resemblances are more than counterbalanced by fundamental differences. He displays the same antipathy to priests, and employs the same kind of invective against the poisonous influence of superstition; but, while he thus directs his attack upon the same objective, the principles on which he bases his criticisms are very far from being those of the Deists. Their characteristic conception of a law of nature imposed upon His creatures by the Creator, and enforced by means of rewards and punishments, is absolutely alien from his system of thought. For him the ethical standard was determined by the dictates of an intuitive moral faculty, forming part of the essential endowment of human nature. Of this moral faculty the effectiveness would indeed be reinforced by theistic belief, but is not dependent on it, whereas in the Deistic system the sense of moral obligation is derived from the recognition by man of his relation to his Maker.

Since the existence of God was of comparatively little moment in Lord Shaftesbury's system, he cannot properly be styled a Deist; and in some ways he exhibited a positive antagonism to their mode of thought. For example, he raised a much needed protest against the undue prominence given to hedonistic considerations by both parties in the controversy. He found an appropriate object for his wit in exposing the shallowness of the conception by which ethics was degraded into an elaborate calculation of pains and pleasures. The pointed weapon of ridicule is effectively used in his hands. Unfortunately, in his references to religion his satire frequently degenerates into a sneer. The defenders of religion winced under his sarcasms, and retaliated by calling him a Deist. But there was little justification for the charge. The word 'Deism' would cease to have any definite connotation if it were made to cover systems so radically divergent as those of Shaftesbury and Tindal.

If there is little justification for ranking Shaftesbury among the Deists, there is even less for assigning a writer like Mandeville to their company. The Deist may not have been remarkable for any particular moral excellence, but at least he was eminently respectable. There is no reason to question the sincerity of his desire to further the cause of morality, and to lend his aid in raising a barrier against the encroaching tide of moral laxity. Such was not the purpose of Mandeville. He is cynical enough to set out on the title-page

of the *Fable of the Bees* (1714) the thesis that private vices are public benefits, and in his opening inquiry into the nature of moral virtue adopts the conclusion that it is the political offspring which Flattery has begot upon Pride. Intrinsically the book is as worthless as it is paradoxical, but it raised a laugh, and its sophistical arguments in favour of self-indulgence ensured its popularity in circles where every moral restraint was regarded with contemptuous indifference.

Leland, the contemporary historian and critic of Deism, devotes as much as a third of his work on the Deistical writers to a consideration of the works of Lord Bolingbroke. It is a clear indication of the high importance which was at the time attached to this attack on the claims of revelation. When Leland wrote, Bolingbroke's collected writings (with Life by D. Mallet), of which the one here most relevant is his *Letters on the Study and Use of History* (written in 1738), were newly published, having been issued posthumously in the year 1754. The effect of the book, however, was almost *nil*, and Dr. Johnson's sentence, in which he contemptuously described it as a blunderbuss which the author had not resolution enough to fire off in his lifetime, is a more accurate appraisal of it than Leland's elaborate criticism. The old sneers at priestcraft, the old arguments in favour of a purely rational religion, re-appear. But there was no new point to make; and Deism was too far gone in decay to be revived even by Lord Bolingbroke's name and his 'five pompous volumes.' In England, Deism was to all intents and purposes defunct, though about this time a kindred movement on the other side of the Channel was exhibiting fresh vitality under new forms.

4. The foreign movement.—Deism such as we have been describing was so native a product of English thought, with a form so markedly determined alike by the strength and the weakness of the English mind, that its transplantation to a foreign soil could not be accomplished without the most profound modification of its character. When the ideas to which the English Deists had first given expression were taken up by French exponents, new elements were introduced which gave to the resultant product a very different quality. Thus, what had been Deism in England became in France another movement, with a character and history of its own, which cannot properly be handled in this article. At the same time the history of Deism is not complete unless account be taken of the fact that it is the parent stock from which sprang the French movement of reaction against traditional belief.

It is significant that both Voltaire (†1778) and Rousseau were largely indebted to English sources for their inspiration. During the years which the former passed in England (1726–1729), he gathered impressions which he afterwards systematized and elaborated into a philosophy of religion. As a friend of Lord Bolingbroke he naturally came into close contact with men who, whether secretly or openly, sympathized with the Deists. The ideas which he derived from this intercourse were in keeping with the bent of his mind. Moreover, his peculiar abilities enabled him to give them a keener edge and a wider range than they had possessed in the hands of the English writers. In France the conceptions characteristic of Deism found a soil more favourable to their rapid development than England had ever afforded them. The logical French mind, impatient of compromise and qualification, insisted rigidly on the necessary consequences of abstract principles, where English conclusions had been influenced by numberless practical considerations. And, further, the con-

ditions of social, political, and ecclesiastical life in France were such as to accentuate the criticisms of those who were opposed in spirit to the prevailing order. Resentment against repression manifested itself in a sharper opposition to the unbending attitude of authority. In proportion as an external submission to rule was enforced, so was an internal passion for revolt stimulated, especially in the domain of religious thought. So marked was the opposition between the old and the new points of view, that Deism became almost at once identified with an anti-ecclesiastical movement. Instead of aiming at a transformation of the old theology into another pattern, as had been the object of the earlier English Deists, the French representatives of the movement advocated a general repudiation of theology and the substitution of an undogmatic religion in place of Roman Catholicism. To this end Voltaire applied the weapons of his caustic satire, and the Encyclopedists added the weight of their accumulated knowledge. Indeed, Diderot († 1784) and his school represent a further stage in the downward transition from Deism towards Materialism. With him even that residue of natural religion which Voltaire would have retained became a mere superfluity, resting on no secure foundation of reason, and therefore destined to disappear before the advance of intellectual enlightenment. See art. ENCYCLOPÆDISTS.

This tendency to a bare Materialism was to some extent checked by the influence of Rousseau († 1778), who was at once the product and the champion of a reaction against the stiffness and coldness of a cramped Rationalism. In the fact that he thus represented the protest of common sense against the bare negations of Materialism is to be found the explanation of his wide popularity. But the effect which he produced must not be overestimated. Whatever may have been the result of his political speculations in hastening the crisis of the Revolution, his influence upon religious thought was not more than evanescent. Though his genius galvanized for a time into fresh activity some of those ideas which had been the stock-in-trade of the Deistic writers, he could not restore to them the real vigour of life. Deism had had its day. The intellectual opposition to the supernatural element in Christianity was about to assume another form. A new criticism and a new apologetic were destined to arise, constructed upon lines determined by the new metaphysical theories of Kant.

5. Permanent results.—Controversies upon which the attention of thinking men has been focused can neither pass away without leaving some definite mark on subsequent theology, nor be appraised at their proper value unless the character and extent of their permanent results be taken into account. It will therefore be necessary to ask what lasting contribution was made by Deism to English theological thought. It is almost a matter of surprise to find on examination how comparatively scanty is the residuum which has stood the test of time. But something no doubt has survived. To some extent the Deists were successful in establishing their principle of the appeal to human reason, even while in their own application of it they showed little skill or power of discrimination. It is noteworthy that they called in, as arbiter of the dispute, the common sense of the ordinary man, and, as witness, the trained skill of the expert. Obviously, the critical questions which were raised could not be settled without thorough investigation by men who had devoted years of study to the data of these problems. A new class of Bible students arose who professed to approach their tasks with minds entirely unbiased by any dogmatic considerations. Whether

they were as free from prejudice as they themselves supposed, is open to question. At any rate the Deists gave an impulse to Biblical criticism, the benefit of which still makes itself felt. It has not been forgotten that the same methods of scientific inquiry must be applied to sacred as to profane history. What has now become a commonplace of theology was first insisted upon by the Deists. That they should have led the way in this direction is so much to their credit.

Again, the appeal to the common sense of those who make no claim to any professional knowledge of theology has remained markedly characteristic of English religion. The religious public, as it is called, is disinclined to divest itself of responsibility by seeking shelter behind the pronouncements of authority. Conscious of inability itself to undertake in detail the processes of criticism, it insists on seeing the results openly displayed. The debate between the champions of tradition and of innovation is not carried on behind closed doors, but in open court. The public desire to follow the argument and form for themselves an intelligent estimate of the issue. This feature also of our religious life is in great measure the outcome of the Deistic movement.

The Deistic controversy left no more important legacy behind it than the apologetic method of Bp. Butler († 1752). The *Analogy* (1736) may always be read with profit, but its true greatness cannot be rightly appreciated unless the argument be viewed in its proper setting as an answer to the Deistic attack on Christianity. What calls for remark is Butler's careful and guarded exposition of the principles of religious evidence in opposition to the exaggerated insistence by the Deists on certain aspects of the truth and their corresponding neglect of other equally important considerations. It is most interesting to observe how free he is from any undue bias against his opponents' point of view, how far he is ready to go with them, and how sincerely, unhesitatingly, and fearlessly he recognizes the validity of their appeal to reason, while brushing aside their pretentious claim to be the only 'Free-thinkers.' It is just because he is thus frank in his acknowledgment of the ultimate authority of human reason that he is able to insist with effect on the limitations imposed by ignorance, inseparable from our finite condition. He did an inestimable service to religion when he exposed with relentless logic the absurdity of the claim that all things in revelation should be made transparently intelligible to the human mind. It was another service of scarcely less value when he made men realize that revelation consisted *ex hypothesi* of a scheme composed of a large number of inter-related parts, not one of which can be legitimately criticized except in its full context. These were precisely the considerations which the Deists overlooked. If they have now become the truisms of theology, it is because Butler first expounded them as the necessary corrective to the crude speculations of Deism. See, further, art. BUTLER.

An allied but distinguishable reaction against the temper of Deism reveals itself in the idealistic philosophy of Bp. Berkeley († 1753), who, like his contemporary Butler, was moved to indignation at the unintelligent superficiality of the prevalent unbelief. To him it appeared that the decay of faith was in the main due to the general acceptance of a faulty metaphysic, inherited from Locke. The Christian verities were rejected on the plea that they did not approve themselves to the philosophic intellect. But the philosophers were themselves responsible for creating unnecessary intellectual difficulties. It was they who had raised the dust, through which, as they complained, they could not see. Berkeley directed his

criticism against the half-developed Materialism which was the orthodox metaphysic of the day. His rejection of Locke's conception of the real existence of extended matter was accounted paradoxical, and on that account chiefly attracted attention both favourable and unfavourable. But it is sometimes forgotten that this Immaterialism of Berkeley was only part of his system. It was the foundation on which he built. It led on to his conception of the world as the perpetual manifestation of the spiritual presence of God. Thus he delivered a powerful protest against the view that the evidence for the existence of God can be disclosed only through a long and intricate process of inference. In opposition to the commonly accepted cold mechanical outlook on the universe, he preached the doctrine of a continuous communication between the Divine and the human spirit through the medium of sensible experience. To him the material world was the language of God addressed to the spiritual ear, and charged with an infinite significance for those who would address themselves to the task of its interpretation. It was too high a conception to commend itself to the temper of the 18th century. Nevertheless, the impulse towards a religious idealism which Berkeley initiated has not been altogether without effect. His teaching, which originated in opposition to Deism, has remained to this day part of our theological heritage. See, further, art. BERKELEY.

The religious protest against Deism which found expression in the writings of Butler and Berkeley was carried further by Law and Wesley, but with a characteristic difference. The two bishops had met the Deists on the field of intellectual reasoning. This was not the method which commended itself to the judgment of the mystic and of the revivalist. They appealed from the intellect to the verdict of the religious consciousness. Perhaps the statement should be made with some qualification with respect to Law, since in the treatise which he composed against Tindal his mysticism does not yet appear.

In the *Case of Reason* (1731), Law appealed without scruple to the logic of intellect; moreover, he possessed the power of marshalling his arguments with skill and clothing them in apt language. Before the inscrutable mystery of the Infinite he prostrated himself in silent submission, and with a feeling of profound reverence yielded a willing obedience to the message of revelation. It is strange to find Law at this time referring to miracles as the proof of revelation. A little later he discovered a method of statement more congenial to his natural temperament. In the place of controversial argument he substituted the positive affirmations of the mystic's experience. In opposition to Tindal he had taken a low view of the range of human reason, and this position he consistently maintained, but in the writings of the mystics he found it stated that man possessed a faculty of spiritual intuition incomparably more efficacious than reason in the attainment of Divine wisdom. In Christian mysticism, Law discovered a system which afforded satisfaction to his religious instincts; and he strove to influence others in the same direction, by means of writings which are a strange compound of deep spiritual insight and fanciful imaginations. But in the 18th cent. the message of the mystic was *vox clamantis in deserto*. The seed fell on barren ground, where it had no opportunity of germinating.

Law founded no school of English mysticism. Though there were many who, like himself, recoiled from the irreligiosity of Deism, there were few ready to follow whither he led the way. He was before his time, and has perhaps more disciples at the present day than he had in his own lifetime.

The same recoil from Deism, but under yet another aspect, is illustrated by the life and work of John Wesley († 1791). Profoundly influenced by Law's example and ethical teaching, he differed widely from him in temperament, and was alike ignorant and impatient of the mystical tendencies to which the older man resigned himself. Emphatically a man of action, he gave expression to the protest of the practical religious consciousness against the religious impotence of Rationalism. It mattered little whether the Rationalism was of

the type preached by Tillotson or of that preached by Tindal. In either case it had proved miserably ineffective in stemming the tide of infidelity and immorality. Wesley came forward at the precise moment when there was a wide-spread and despairing consciousness of the utter sterility of mere argument about religion. Boldly discarding the discredited appeal to the intellect, he addressed himself to the ineradicable religious instincts of mankind, their sense of sin, their longing for forgiveness, the hopeless unrest of the soul to which no vision of God has come. In pressing home his appeal he touched the hearts of multitudes by means of those very Christian doctrines which the Deists had found too irrational for acceptance, and had made the butt of their shallow satire. The fall of man, the fact and the malignant influence of original sin, the offer of redemption, the mystery of the Atonement—these were the topics handled by the preacher round whom the crowds gathered in their thousands. There could not have been a more complete repudiation of the whole temper of which Deism was the expression. The stale arguments were allowed to drop into oblivion. There was a return to older methods of less intellectual pretensions. The proof of religion was sought no longer in the appeal to natural reason, but in the letter of Scripture and in the experience of daily life.

Thus the rise of Wesleyanism coincided with the extinction of Deism. Not that Deism disappeared because the problems which it had raised had received final and conclusive answers. On the contrary, many of these problems involve mysteries which, it is probable, will always remain inscrutable to the finite mind. It is no discredit to the apologists of the 18th cent. that in such cases they had no solution to offer. They had done all that could be expected of them. They had shown the alternative creed of the Deist to be weighted with difficulties as great as those which he hoped to escape by his rejection of Christianity. They had pointed to a way of reconciliation between the rights of reason and the claims of faith. It was not until this work had been accomplished that the Evangelical Revival could exhibit the undiminished spiritual energy latent in authoritative and traditional religion. Then began another stage of religious history, a period even more distracted with controversy than that which we have been passing in review. But the struggle was over new issues. Deism was forgotten.

II. PHILOSOPHICAL.—1. View of God's relation to the material and the moral world.—The word 'Deism,' besides serving as the designation of an historical religious movement, has been commonly used to describe a particular view of God's nature and of the dependence of the world upon Him. Between the two uses of the word a connexion exists, of which some notice will presently be taken, but it would be a mistake to suppose that philosophic Deism was necessarily the accepted creed of the Deists of the 18th century. Indeed, some who bore the name would at the present day be called Theists. But the distinction now made between Deism and Theism did not then exist. The two expressions were used indiscriminately. It is only in later times, since the study of the philosophy of religion has been prosecuted with greater attention, that to the word 'Deism' has been attached a more defined and exact connotation. We proceed to ask, What is the meaning conveyed by the word in this later and more abstract sense?

The great question concerning the relation of God to the world has received a vast number of different answers. To classify into distinct groups the various solutions proposed is no easy matter. It is difficult to draw lines of division, when the

gradations are almost imperceptible, though at the two extremities members of the same series may stand in conspicuous opposition to one another. But, since some form of classification is necessary, it has been found convenient to separate views as to the being of God into two divisions, according as they approximate to Pantheism on the one hand or to Deism on the other. With the second only are we here concerned. Let it be borne in mind that our subject of study is not a definite school of thought sharply outlined and admitting historical treatment. It is rather a vague inclination or bent of mind, which in varying degrees is continuously present in human thought, and occasionally, coming prominently to the front, becomes the dominant factor in religious and philosophic systems.

Deism approaches the ultimate problem of the universe with a self-satisfied confidence painfully out of proportion to the difficulty of the task of finding a solution. With little sense of reverence for the mystery that lies behind all outward appearances, it accepts an answer suggested by anthropomorphic analogies, and framed in accordance with uncritical prepossessions. Common sense admits no obstinate questionings as to the independent existence of the external world, nor does it care to inquire too curiously what may be the real character of human freedom. It rests content with the common assumptions of daily life. The Deist, adopting these assumptions as his starting-point, finds comparatively little difficulty in constructing his theory of God and the world. He is ready to acknowledge a Creator. In order to account for the existence of the material world, it is necessary to assume the existence of a First Cause, at whose command creation took effect and the cosmos entered on its life. But the Deist's conception of creation is essentially restricted. The fabric of the universe is supposed to stand to God in the relation which the instrument bears to its maker. The heavens are the work of His hands, just as the watch is the work of the watch-maker. As the craftsman determines the characteristic properties of his machine, the correlation of its parts, their positions and their functions, so is God conceived to have dealt with the world. He brought it into being and ordained its laws. He imparted to it once for all the energy which serves as the driving power of the stupendous mechanism. The Deist recognizes in God the ultimate source of matter and motion, and, consistently with this conception, admits the possibility of occasional interferences on the part of the Deity. But, though the possibility of such interference is granted, the probability is called in question. It seems more in accordance with the principles of Deism that Nature should be left to work itself out in obedience to laws originally given. Any suggestion of a deviation from the established order is resented, as though to admit it were to be wanting in due respect for the inviolable majesty of God's unchangeableness and the original perfection of His work. A perfect machine, it is supposed, would not require from time to time to be adjusted by its maker; nor would the Unchangeable introduce any later corrections into a creation which from the first reflected His omniscience and omnipotence.

Similarly based on anthropomorphic analogies, and subject in consequence to similar defects, is the Deistic conception of the relation of God to the moral world. He is the supreme Governor, the author of moral as of physical law, but as remote in the one region as in the other from the particular cases exhibiting the working of His laws. He is thought of as filling the part of legislator and judge to the universe of moral beings; and these analogies, derived from the organization of

human society, are treated as though they were entirely adequate not only to illustrate, but even to explain, His supreme authority. The moral law is assumed to be sufficiently well known by all for the practical purposes of life. Pains and pleasures, present and future, are attached respectively to its infringement and its observance. Men are automatically punished and rewarded, in strict accordance with their deserts. In the moral as in the physical world there is neither need nor room for the special interposition of the supreme Governor.

Whatever shortcomings such a view of the nature of God may have,—and they are both obvious and important,—yet in some respects it tallies with the promptings of the religious instincts of men. It is opposed to Materialism, avoiding the desperate necessity of ascribing to matter an independent eternal existence of its own. Nor is God reduced, as in Pantheism, to a mere abstraction, an impersonal substratum of the universe. He is a real person, standing over against the world and man. Human personality also is preserved. Man retains his freedom, and justice is done to his responsibility. As he sows so shall he reap, according to laws that admit of no exception. Obviously in these ideas there is much that is true, and the truth is of that positive kind to which appeal must be made in practical exhortation and the enforcement of ethical teaching. But with the truth is mingled much error. The consequent weaknesses of Deism are both theoretical and practical.

2. Defects in conceptions of Creation and Finite Existence.—Deism labours under the disadvantage of being a dualistic explanation of the world. Not indeed that it is explicitly so. The charge would be repudiated. But the repudiation means no more than that the Deist is unconscious of the fact, having been content to leave unexamined many of the conceptions with which he deals. Notably is this the case with the idea of Creation. The God of the Deist is, in fact, a demiurge who has shaped into a cosmos a matter essentially alien from Himself. And, though the Deist replies that, according to his teaching, matter is not shaped by God but called into being by His creative word, the answer is unsatisfactory. For this creation of an alien matter out of nothing presents, on examination, insuperable difficulties. There is nothing to bridge the gap between the Creator and His creation. Nor is any attempt made to find in the nature of God any motive towards the act of creation. Recourse is had to the conception of an entirely arbitrary and inexplicable act of power.

Equally lacking in depth is the Deist's view of the problem of finite existence. From his standpoint the words 'in God we live, and move, and have our being' are destitute of any real significance. For to all intents and purposes he conceives of the world as existing independently of the Deity. The essential dualism of the conception is disguised, not removed, by laying stress on the origination of one form of existence from the other. Whatever may have been the relation of the two at the moment of creation, the finite, as it now is, possesses a substantial independence of the Infinite. The apparent simplicity of the view is gained by the abandonment of any attempt to reach the conception of an underlying unity.

A further weakness of Deism is disclosed as soon as the relation of the moral law to the will of God becomes the subject of discussion. For it is precisely here that those analogies with earthly rulers on which the Deist relies break down and fail the inquirer at the most critical point of his investigation. For, if the analogy of legislation be pressed, then it will appear as though the moral law were determined arbitrarily according to the Divine

will and pleasure. Its necessity or inevitableness seemingly disappears. On the other hand, if the judicial function of the Supreme Governor be put in the forefront, and the moral law be regarded as existing in the reason of things, and requiring only to be enforced by the Divine power, then it would seem as though the freedom of God's action were limited by a rule superior to Himself. From this dilemma the principles of Deism offer no way of escape. If the externality of God in relation to the world, physical or moral, be assumed, then in some way or other limitations and restrictions are placed upon the Divine nature. In the one case, God is left confronted by an independent material world; in the other case, by an independent law of right and wrong. And the very essence of Deism lies in its assumption of God's externality.

Theoretic unsoundness is attended with practical deficiencies. Deism has not been without injurious effect on those who have adopted it as their creed. If it be admitted that man's highest spiritual life is attained in proportion as he rises to communion with God, then it must be confessed that Deism can never carry the soul up into this region. The appearances of the world, however intricate in design and prodigal of beauty, convey to the heart no message significant of the indwelling presence of God. The most that the Deist may legitimately do is to follow back a many-linked chain of inference to a point in the far past when God, at the moment of creation, was in contact with His world. In a universe so conceived, man feels himself left to his own resources. A cold tribute of perfunctory worship is all that he is likely to offer to a God whose arm is never stretched out in answer to prayer, whose ear is never open to the supplication of the penitent. Man learns to think that his welfare depends entirely upon the accuracy of his knowledge of those general laws by which the course of the world is determined, and upon his skill in adapting himself to them. There is stimulated in him a spirit of self-sufficiency and self-assertion as towards God, and a certain hardness and lack of sympathy towards his fellow-men.

Deistic premisses do not positively exclude the possibility of revelation, but create a strong prejudice against it. For revelation is a species of miracle, and open to all the objections which, in the mind of the Deist, bear against the miraculous. It is an interference with the regular course of the world. In some forms of Deism the idea of a Divine interposition is accepted without hesitation or sense of incongruity. But further consideration is likely to suggest the thought that the need for interference with the world is due to some original weakness of construction; and the Deist, in his anxiety to uphold the credit of the First Cause, is led to deny first the need for, and then the fact of, revelation.

Deism is a curiously unstable system of belief. It could hardly be otherwise, considering that the premisses from which it sets out are wanting in consistency and in definiteness. Beginning by assuming the unqualified correctness of a few of the truths which appeal to the religious instinct, it reaches at length a position in flagrant contradiction to fundamental religious beliefs. The utility of prayer and the possibility of communication between God and man are ideas which have always found a home in the unsophisticated religious consciousness; yet these are the ideas which Deism finally discovers to be incompatible with its teaching about the Divine nature. And, when these ideas have been repudiated, there follows the gradual encroachment of an irreligious temper, and the elimination from life of the effective power of religion. Though nominally belief in God be retained, it becomes wholly in-

operative—the furniture of the mind rather than the inspiration of the heart.

3. **Examples of Deistic systems.**—Deism in the sense which we are now investigating we have defined to be a tendency of thought. It is a tendency which for the most part has been counteracted by stronger forces. But occasional examples in the history of religion and philosophy prove that it is capable of gaining the ascendancy. Apart from the influence of revelation, the drift of ethnic religions has been in the direction of Polytheism and Pantheism rather than towards the opposite extreme of Deism. For men are swayed more easily by their emotions than by their reason, and to the feelings the colder system of Deism is less attractive than these other forms of error. The most conspicuous example of a religion in which Deistic forms of thought are paramount is Confucianism, which exhibits a characteristic combination of qualities and defects. In particular, there is a decorous recognition of heaven as the source from which man derives his nature, although, for the attainment of virtue, little importance is attached to the communication between God and man. Its ideal includes the observance of an exacting moral code, but does not rise above this level. Sin as an offence against God, and virtue as trustful dependence on His help, are conceptions that find no place in a system which is almost pure Deism.

Stoicism is another, but less complete, illustration of the working of the same tendency. The insistence on the law of nature, and on the universal order extending through the world, is a thoroughly 'Deistic' idea. So also, in several respects, are the ethical notions of the Stoics, their emphasis on the power of the will, and their doctrine of man's self-sufficiency. These indeed are points on which they set precedents followed in later times. For the 18th cent. Deists, familiarized through a classical education with the writings of the ancient Stoics, drew much of their inspiration from this source. On the other hand, Stoicism contained ideas irreconcilable with pure Deism. Its Pantheism, though far from being consistently developed to its logical issues, is sufficient to differentiate it from any system in which God is assumed to be personally distinct from the world. In ethics, its rejection of all utilitarian considerations is opposed to the characteristic temper of Deism. Thus, though there is a genetic relationship between Stoicism and English Deism, the offspring differed in some essential features from the parent.

Its marked preference for the Deistic explanation of the universe accounts in large measure alike for the strength and the weakness of Muhammadanism. No one will deny that the effect of the teaching of Islām is to produce in its adherents a very real and deep reverence for God, the all-powerful Creator and Ruler of the world. At the same time the oppressive sense of a great and unbridged gulf between God and man checks and thwarts the natural action of man's religious instincts. Great as is the regularity with which the prescribed forms of devotion are observed, the worshipper adores an infinitely distant God. The specifically Christian conception of freedom of access to the Divine throne is conspicuously absent. When petitions for particular benefits are offered up, they are addressed (at any rate in many parts of the Muhammadan world) to inferior powers rather than to God. This degradation of prayer is remarkable evidence of the obstacle which Deism opposes to the exercise of man's highest spiritual function, communion with his Maker.

After all, the classical example of the Deistic tendency is to be found in the 18th cent. Deists; and herein lies the justification for attaching to the same word an historical and an abstract sense.

In the writings of Toland, Collins, Tindal, and other historical Deists is contained the exposition of precisely those ideas which combine to make up Deism in the abstract. Not, indeed, that in any single one of these writers is Deism logically rounded off and cleared from all inconsistencies. Men seldom press their principles to the uttermost; nor were the Deists, with their lack of philosophical acumen, likely to be exceptions to the rule. Side by side with arguments which in effect exclude God's direct action on the world, they placed statements of belief which the most exacting Theist would find irreproachable. Gradually the logic of events disclosed the true implications of their principles, with the result that Deism was either repudiated in favour of a return to historic Christianity, or exchanged for avowed infidelity. See, further, art. THEISM.

G. C. JOYCE.

DELHI.—The name applied specially to the modern city of Shāhjahānābād on the right bank of the Jumna (lat. 28° 38' 58" N.; long. 77° 16' 30" E.), and generally to a collection of ruined cities, covering an area of about 45 sq. miles, in the neighbourhood. Classifying these cities from N. to S., we have (1) Firozābād of Firoz Shāh Tughlaq (c. A.D. 1360), adjoining modern Delhi on the south; (2) Indrapat or Indraprastha, associated with the earliest legends of the Aryan occupation of the Jumna valley, the foundation of which by Yudhishthira and his brothers, the five Pāndavas, is recorded in the Mahābhārata; the site was reoccupied by Humāyūn and Sher Shāh (c. 1540); (3) Sirī, fortified by Alā-ud-dīn (c. 1300); (4) Jahanpanāh, the space between old Delhi and Sirī, which was gradually occupied and ultimately connected with the cities N. and S. of it (c. 1330); (5) Old Delhi, or the Fort of Rāe Pithorā, the original Delhi of the Pathān invaders in the 12th century; (6) Tughlaqābād, built by Muhammad bin Tughlaq (c. 1320). Modern Delhi, or Shāhjahānābād, named after the Emperor Shāhjahān (1628-58), may be said to date from about 1650, the famous palace being first erected (1638-48), and forming the nucleus of the new city. The cities thus enumerated contain a vast variety of architectural remains, some of the greatest interest and beauty. Here it is possible to name only a few of those most closely connected with the religious beliefs of the successive occupants of this historic site.

In the first place, Delhi contains two of the famous inscribed pillars of the Emperor Asoka (q.v.), erected about 250 B.C. The inscriptions contain the code of moral and religious precepts promulgated by this great ruler. These pillars, one of which stands on the historic ridge, the other in the ruined city of Firozābād, were removed to Delhi in A.D. 1356 by Firoz Shāh Tughlaq, the former from Meerut in the United Provinces,

the other from Toprā in the Umballā district of the Panjāb. The pillar on the ridge was much injured by an explosion early in the 18th cent.; that at Firozābād is in an excellent state of preservation, and is the most interesting of all the Asoka pillars, inasmuch as it is the only one on which the invaluable Seventh Edict is inscribed. Another interesting Hindu relic is the iron pillar which stands near the Kutab Minār in Old Delhi. It was erected by a certain Rājā Chandra, and may be dated approximately A.D. 400. It is a marvellous example of the skill attained by the Hindu metallurgists of the time. Close by, the mosque of Qutb-ud-dīn was rebuilt out of the materials of one or more Jain temples. One cloister, with rows of finely carved pillars, remains in good preservation. The innermost court of this mosque, with its corridors and west end, was built in A.D. 1191, and the screen of arches, the glory of the building, was erected six years later. The splendid tower, the Qutb or Kutab Minār, named after its founder, was completed by Shams-ud-dīn Altamsh (1211-36), who also extended the great mosque. Much controversy has arisen regarding the purpose for which this tower was erected. Fergusson (p. 506) denies that it has any connexion with the great mosque at the south-east corner of which it stands. According to him, 'it was not designed as a place from which the muezzin should call the prayers, though its lower gallery may have been used for that purpose also, but as a tower of victory,—a Jaya Stambha, in fact,—an emblem of conquest, which the Hindus could only too easily understand and appreciate.' This view appears to be mistaken.

Cunningham (*Archæological Reports*, iv, p. ix) shows that it is distinctly called a *mazanāh*, or *muazzin's* tower, by the Syrian geographer Abulfida (A.D. 1273-1345), and he cites several examples of early mosques which have but one *minār* each. The inscriptions also prove that this was the purpose of its erection.

The lovely Alāi Darwāza, or gate of Alā, was built by Alā-ud-dīn Khilji (1295-1315). Close by is the beautiful tomb of Shams-ud-dīn.

'Though small,' writes Fergusson, 'it is one of the richest examples of Hindu art applied to Mahomedan purposes that Old Delhi affords, and is extremely beautiful, though the builders still display a certain inaptness in fitting the details to their new purposes. . . . In addition to the beauty of its details, it is interesting as being the oldest tomb known to exist in India. He [Shams-ud-dīn] died A.D. 1236.'

Among the other interesting and beautiful mosques, of which Delhi possesses such a large number, the following may be mentioned: the Kālā or Kālān Masjid, built in Firozābād about A.D. 1380, is interesting as an example of the early so-called Pathān style. The façade of the mosque of Sher Shāh in the Purāna Qila is, says Fanshawe (p. 228), 'quite the most striking bit of coloured decoration at Delhi, and has been satisfactorily restored. . . . The interior is extremely fine, the pattern in the pendentives below the dome being very effective.' 'The Jamī Masjid, or cathedral mosque of Shāhjahān, built in 1648-50, is,' says Fergusson (p. 600), 'not unlike, in plan, the Moti Masjid of Agra (q.v.), though built on a much larger scale, and adorned with two noble minarets, which are wanting in the Agra example; while, from the somewhat capricious admixture of red sandstone with white marble, it is far from possessing the same elegance and purity of effect. It is, however, one of the few mosques, either in India or elsewhere, that are designed to produce a pleasing effect externally.' This great mosque, built close to the palace, seems to have rendered it unnecessary to erect a private court chapel within its walls. When a Moti Masjid was added by Aurangzib, the building was small, and, though pretty, quite unworthy of the place, and illustrates the rapid decadence of Muhammadan ecclesiastical architecture after the time of Shāhjahān.

Delhi is equally rich in the number and variety of its sepulchres. Humāyūn, the second Mughal Emperor, lies in a stately tomb. 'In mere beauty,' says Fanshawe (p. 230), 'it cannot, of course, compare with the Taj at Agra, but there is an effect of strength about it which becomes the last resting-place of a Moghul warrior whose life was marked by many struggles and vicissitudes; and most people will probably prefer its greater simplicity to either the son's [Akbar's] tomb at Sikandra, near Agra, or the grandson's [Jahāngir's] tomb at Shadara, near Lahore.' The *dargāh*, or shrine, of Shaikh Nizām-ud-dīn Auliya and the other Chishtī shrines at Ajmir, the Kutab and Pakpattan, are the places most revered in all India by Muhammadans. His story is fully given by Fanshawe (p. 236), who believes that there is no ground for the popular legend which attributes the origin of Thuggee to him. He died at Delhi in A.D. 1324, and the buildings—the gate of which bears the date 1378—are mostly due to the Emperor Firoz Shāh Tughlaq. Round the resting-place of the saint are many beautiful and interesting monuments. That of Jahānārā Begam, the faithful daughter of the Emperor Shāhjahān, bears the touching epitaph: 'Let green grass only conceal my grave; grass is the best covering of the grave of the meek.' Close by is the tomb of the unfortunate Emperor Muhammad Shāh, who died in 1748, in whose time Delhi was captured and sacked by the ruthless Persian, Nādir Shāh. If not a triumph of design, its beautiful pierced marble screens are admirable. Near these are the earlier tombs of the poet Amīr Khusrū, who died in 1324, and of the historian Khondamīr—the latter not being now identifiable.

W. CROOKE.

DELIBERATION.—Deliberation is a complex mental state, preceding, and issuing in, choice or decision. It is a fundamental characteristic of personal consciousness, due to the fact that a mind furnished with experience is generally confronted with alternative possibilities. 'There is in the child a long and interesting genetic period before full-blown deliberation is born. This early dawning stage, before self-consciousness has arrived, and while the processes of decision are below the ideational level, has been called 'deliberative suggestion.' While life is still on the organic and impulsive level, co-ordinate sense-stimuli confront one another, and there is a corresponding conflict of motor-reactions.

Baldwin, in his *Mental Development* (p. 127), gives a good example of this primitive type of deliberation. A child of eight months, under his observation, formed the habit of scratching the face of its mother or nurse with its finger-nails, until, as a result, the close proximity of any face was a sufficient suggestion for it to give a violent scratch. To break the habit, the child's father slapped its fingers each time it scratched, and after a few experiences the habitual reaction was checked. When a face approached the child, it would grow solemn and quiet, and gaze at the face, hardly moving a muscle; then, after a trying period of balance, it would either suddenly scratch or turn away to something which its father provided as a counter-attraction.

Out of this organic and neural stage the higher, full-grown type of deliberation evolves. These instinctive and impulsive motor processes, with their corresponding emotional tones, are gradually registered in consciousness and furnish the basic memory-material for *real* deliberation. The alternatives now in conflict are more or less clearly envisaged, and in turn occupy the centre of the

mental stage, until one alternative dominates attention and is selected, though throughout life conscious deliberation is only rarely necessary. Organized, i.e. habitual, reactions determine a very large part of our choices, and, though we often delay action because of inhibitory tendencies, such delay is not necessarily deliberation. Much of our deliberation, again, does not rise to a clear cognition of alternative ends. Blurred images, fitful feelings, disconnected words, or a system of mental 'labels,' often stand for the act of deliberation, and we oscillate from one alternative to the other without a clear forecast of the grounds at issue, or the ends in view. Moreover, we are often relieved of the necessity to deliberate by the dynamic character of ideas. Many of the acts of a normal person are *ideo-motor*, that is to say, the idea itself is propulsive enough to sweep directly and unhindered into action. All ideas would thus produce action (1) if they were sufficiently propulsive, and (2) if they did not meet conflicting situations in the mind. It is this complex conflict of ideas, of reasons, of motives, of practical means, that forces deliberation upon us.

The inhibitory situation which blocks impulsive tendencies or *ideo-motor* action, and which involves indecision and deliberation, may be, and often is, the marginal, or fringe, consciousness that forms the background to the idea in full focus. We cannot tell why we do not act upon the idea which points us towards any end. We feel an indescribable restraint that checks our impulses and holds us from action. As W. James puts it:

'No matter how sharp the foreground-reasons may be, or how imminently close to bursting through the dam and carrying the motor consequences their own way, the background, however dimly felt, is always there; and its presence . . . serves as an effective check upon the irrevocable discharge' (*Princ. of Psychology*, ii, 529).

The period of hesitation, balance, or deliberation may be indefinitely prolonged; but usually, by processes which are largely sub-conscious, the 'reasons' for one alternative over the other, or for one possibility over the others, come into clearer focus, stay fixed in attention, and plainly dominate; and the mind settles into a decision.

The moral significance of this inward balance, this weighing of alternatives, is obvious. All higher ethical behaviour has its rise here. The person who *deliberates* is no longer at the mercy of the solicitation of instinct, impulse, or a sudden thought; for all these motor tendencies are now forced to run the gauntlet of well-organized inhibitions. Each idea must dominate, if it is to dominate at all, by finding its place in the complex whole of a formed consciousness by adjusting itself to the ground-swell of a fashioned character.

A genuine moral decision, a self-determined action, is arrived at only when the permanent core of the self has found expression; and that is ordinarily reached through serious reflexion and exhausting inner struggle, which is *deliberation* in its deepest significance.

RUFUS M. JONES.

DELICT.—Considerable difficulty exists in regard to the definition of the term 'delict' in Roman law and in systems of modern law founded on the Roman. The difficulties are not so great, however, as those which attach to the definition of 'tort,' the term which, on the whole, corresponds to it in English law. English lawyers have failed to produce a perfectly satisfactory definition of the latter term, and it is probable that it really represents, as Markby (*Elements of Law*, p. 347) says, a false

classification. Usage, due to historical accident and variety of jurisdiction, has excluded from the English term cases which in principle fall under it. The definition of 'delict' in General Jurisprudence ought to give the essential principle underlying the technicalities of particular legal systems.

Moyle (*Justinian's Institutiones*, lib. iv. pt. 1, note) says: 'A delict is usually defined as a violation of a *jus in rem* which generates an obligation remissible by the private individual who is wronged.' He finds fault with this definition, as admitting cases where the party injured is only entitled to recover damages. According to Moyle (*ib.*), true delicts possess three peculiarities: they give rise to independent obligations; they always involve *dolus* or *culpa*; and the remedies by which they are redressed are penal. Sohm (*Institutes*, Eng. tr.², 1901, p. 432), on the other hand, includes such non-penal actions under actions arising from delicts.

The above definition seeks to distinguish 'delict,' as generating an obligation remissible by the private individual, from 'crime.' This is to adopt Austin's distinction between civil and criminal injuries; for he holds that the distinction consists in a mere difference of procedure, viz. whether the offence is pursued at the discretion of the injured party or at that of the State (*Lectures on Jurisprudence*⁶, p. 405). Blackstone (iv. 5), followed by Holland (*Elements of Jurisprudence*¹⁰, p. 320), regards the distinction as turning on whether the wrong is one against individuals as individuals, or affects the whole community as a community. Again, some have regarded the very circumstance whether mere redress is given for loss suffered, or whether, on the other hand, a penalty is inflicted for wrong done, as the distinguishing feature between civil and criminal injuries. If the latter line of distinction be adopted, what Moyle considers an essential of all delicts would become the distinguishing characteristic of crimes as contrasted with delicts.

In English law, wrongs to property to which no ethical censure attaches are included among 'torts.' Pollock (*Law of Torts*⁸, p. 18), in order to maintain intact the features of *dolus* ('wrongful intention') or *culpa* ('negligence'), and consequent penal culpability, as essential ingredients in those torts that are delicts, regards the torts from which these features are absent as obligations arising, not *ex delicto*, but *quasi ex delicto*. This leads to the distinction between delicts and *quasi*-delicts. By some there is said to be no distinction in principle, delicts being those wrongs which were made actionable by the old civil law of Rome, *quasi*-delicts those which were made actionable by the legislation of the prætor. If, however, we take the instances given in the *Institutes of Justinian*,—a judge who, corruptly or through ignorance of law, has made a suit his own, and an innkeeper who is responsible for the loss of property of his guests,—we see a distinction perfectly analogous to that between contracts and *quasi*-contracts. As in some cases the law establishes a tie or obligation between the parties, the same as would have existed had there been a contract between them, so, in other cases, it establishes an obligation similar to that which would have arisen, had a delict been committed. The point of difference between a contract and a *quasi*-contract is that one is formed voluntarily by the person bound, the other is formed involuntarily. In like manner, in the case of a delict, there is voluntary action—action from which it is possible to abstain; in the case of a *quasi*-delict, the obligation arises from an act or position in regard to which the person bound has had no option. The judge must decide the suit. The innkeeper is bound by the act of the thief. There may or may not be *dolus* or *culpa*. It is true that, in the case of the corruptly decided suit, a voli-

tional element is present. The involuntary element arises from the law which forces on the judge the position of having to decide the suit. Yet this very case shows that *dolus* or *culpa* may be present in *quasi*-delicts. If this is the true point of distinction between delict and *quasi*-delict, it justifies the profound comment of Austin (styled by Pollock [*op. cit.* p. 18] 'perverse and unintelligent criticism'), which implies that there is no essential distinction from the point of view of legal classification between *quasi*-contract and *quasi*-delict (Austin, *op. cit.* p. 914). The only possible distinction must be that stated by Austin; that, in the one, the obligation arises from services rendered; in the other, from wrong done or services omitted.

GEORGE J. STOKES.

DELOS.—See AMPHICTYONY.

DELPHI.—See AMPHICTYONY, ORACLES (Gr.).

DELUGE.—I. Meaning of the term.—The word 'Deluge' (Lat. *diluvium*, Fr. *déluge*, 'a great flood') has been very generally used to denote the Bible Flood (Heb. *מַבּוּל*) recorded in Gn 6-9¹⁷. It is commonly understood to imply that the Noachian Flood, as the narrative naturally suggests, covered the surface of the whole world, and that all men and all terrestrial animals perished, excepting those provisionally saved in the Ark (see esp. 6⁷, 12 721-22 915).

II. Supposed confirmation of the Bible Deluge.—So considered, the Deluge formed, it was once believed, a very important epoch in the world's history.

1. Attention was called to the marked difference between the extinct species of animals which lived before the Deluge, and whose fossil remains are found in various geological strata, and those in existence at the present day; nor does it seem always to have been realized that this distinction is in itself an argument against the literal truth of the Bible narrative, according to which all species of animals should have survived, or God's purpose must have failed.

2. A more cogent proof of the general truth of the Bible story seemed to lie in the fact that Deluge stories, or stories in which a great Flood forms a more or less prominent part, are remarkably frequent in the folklore of the ancient literature of peoples scattered over the greater part of the world. It has been confidently argued that these all originated in the great universal Deluge, of which they were more or less obscure traditions handed down from their ancestors—Shem, Ham, and Japheth. Moreover, special stress was laid on the extraordinary accuracy with which the memory of certain details had in some cases been preserved (see below, IV. A. v.).

III. Reasons for not accepting a universal Deluge.—The belief in a universal Deluge has long been abandoned by well-informed writers.

1. It was found impossible thus to account satisfactorily for the various races of mankind and their distribution. Ethnological research suggested the existence of races altogether independent of the Bible system, who survived the Flood and were themselves descended from a pre-Adamite stock (see ANTEDILUVIANS).

2. But the most fatal objections are those that arise from a study of the natural sciences.

(a) Geology, as now understood, gives a very simple and credible account of the history of the world by natural agencies—shrinkage, gradual sinkings and upheavals, deposits by action of animalculæ and otherwise, the action of heat, water, and ice, etc., in which a Deluge finds no place. It is, in fact, absolutely

impossible, unless we may postulate a period in which the surface of the earth was so even that all the water possible at any given time could have covered it as one vast ocean. But even if this ever were so, such a Deluge would find its analogue, not in the Bible Flood, but in the 'deep' (*Abhôm*) of Gn 1².

(b) The study of comparative Zoology has abundantly proved that there is no definitely marked division between extinct species of animals and those of the present day which could be accounted for by such a break in the history of the animal world. In fact, the extinct species, as, e.g., the trilobite, ammonite, and ichthyosaurus, had died out countless ages before man appeared on the earth, and by the operation of natural laws which still prevail.

(c) The same also is true of plant life and its history. And in this connexion it may be observed that the Bible story, in contradistinction to the Akkadian (see below, IV. A. vi. (m)), says nothing of the preservation of vegetation, the greater part of which must have perished had the Flood lasted a year.

3. To the unscientific mind, however, the most striking difficulties are those which arise from the obvious improbabilities, or rather impossibilities, of the story of Genesis itself.

Most of us have from childhood, through the influence of pictures and toy-arks, been accustomed to imagine Noah's Ark as a great vessel with a huge raised hold in the middle. But there is nothing in the Hebrew *תֵּבָה* or in the Bible narrative to suggest anything of the kind. The Ark was rather a huge box with a closed door and dark windows, which had to be opened for its inmates to look out. There were no sails or oars, no sailors to navigate this strange structure or tell Noah what he wished to know. The box, nevertheless, floated safely across what one would naturally have supposed a stormy sea (see Gn 7¹¹, and cf. Akkadian story [V. A. 1.]), and that for presumably some hundreds of miles to the mountains of Armenia (Ararat). Large as this box was, it was infinitely too small to contain sevens of all clean animals, and pairs of unclean animals, as we now know them. But this is what the story requires, unless we are to suppose—a thing highly improbable in itself, and opposed to geological records—that there has been a very large evolution of species since that, geologically speaking, recent period. These animals, thus huddled up together, are tended and preserved for apparently a whole year with necessarily huge supplies of food of various kinds—animal and vegetable. In a word, four men and four women were able to do, under such conditions, without, it would seem, the slightest difficulty, what taxes the utmost skill and ingenuity of zoologists with such space and under such conditions as are possible in our Zoological Gardens. Imagine, for example, the hippopotamus or the seal a whole year without water, or the polar bear cooped up for a single year in the vitiated atmosphere of a 'room' in the Ark! But even these difficulties are hardly so bewildering to the imagination as those connected with collecting the animals and getting them into the Ark. If we attempt to realize the journeys necessary to the Tropics and the Arctic regions, to islands and continents, to marshes and mountains and seas, the difficulty of capturing all these animals alive, bringing them back and getting them into the Ark, we are forced to the conclusion that it was absolutely impossible, except by a series of miracles, of which the story in the Bible gives no hint. The whole is narrated in a simple childlike way by those who evidently did not see the difficulties, and obviously could not have seen them then as we see them now.

4. A further ground for not accepting as literally true the Bible Deluge story will be found by comparing it with parallel stories of similar origin which will presently be discussed. It will be sufficient to observe here that diverging accounts of any supposed event tend of themselves to cast suspicion on any one of them, unless that is obviously the source of the rest, which certainly cannot be proved of the Bible story.

5. To these difficulties may be added, in conclusion, the general difficulties in accepting as historically and literally true the early chapters of Genesis, of which the Deluge story forms a part. One who on scientific grounds rejects the literal truth of Gn 1, or on mythological grounds that of Gn 2, 3, would very naturally feel some hesitation in accepting the Deluge story, even if it presented no serious difficulties of its own.

IV. Explanations of Deluge stories discussed.—But, if such a Deluge as that described in the Bible is impossible, at least without a series of improbable miracles, how else explain the prevalence of that belief among so many and so far-separated peoples? An attempt to answer this question will form the chief subject of this article. It involves a complicated inquiry. The Deluge, or Flood, stories in question vary so greatly that a really adequate discussion would carry us beyond our necessary limits. The reader will grasp the full force of the

arguments given only if he studies for himself the stories as given by Andree and in other sources here referred to. The course now proposed is first to give the answers which have already been suggested, with such illustrations and comments as may help the student towards a satisfactory solution, and then to discuss separately some of the more important stories or groups of stories on mainly ethnological or geographical lines.

Speaking generally, then, the following five explanations have been given of the prevalence of Deluge, or Flood, stories among different races of mankind: that they are (A) traditions of the Bible Deluge; (B) traditions of independent, generally local, floods of greater or less extent; (C) pseudo-scientific explanations of natural phenomena or the like; (D) parts of cosmological systems; (E) Nature myths. In point of fact, comparatively few writers have adopted any one of these theories exclusively. Cheyne, for example, in his article 'Deluge,' in *EBR*², made a marked distinction between a Deluge proper—a supposed submersion of the whole world—and partial floods, which may have given rise to Deluge stories. Certainly few, whatever general theory of Deluge stories they may hold, would fail to recognize that the Chinese story, at any rate, is based on the tradition of a local flood.

A. *The traditional origin of Deluge stories.*—Is the belief that the many and various Deluge stories of different parts of the world had their common origin in the Flood described in the Bible, borne out by the stories themselves in detail and by what we may reasonably infer as to their history?

i. Andree lays special stress on the fact that there are many parts of the world where no Deluge story has yet been discovered, such as Egypt and Japan. There are others, such as Africa, where they are very rare. It is therefore, so far as our present knowledge goes, an exaggeration to say, with some writers, that the tradition of a Deluge of some sort is practically universal, or even, as Lenormant maintained (*Orig.* i. 489), among all except black races. On the other hand, it must frankly be recognized that Flood stories are very numerous, and that they are found among nations scattered far and wide over the world.

ii. Exceptions must be made of a large number of stories which have evidently a local origin.

iii. Account must be taken of the influence of missionaries in unconsciously, or even consciously, changing and developing folklore, and of the difficulty which the savage mind has in distinguishing clearly between old and new, and its frequent tendency to paint the old in new colours. It was the avowed policy of many missionaries to make Bible stories more acceptable by combining them with ideas with which their converts were already familiar. Moreover, the missionary, through whom the Deluge stories were in many cases originally communicated, was a prejudiced witness. He had a very natural wish to find confirmation of an event which he believed to be undeniably true, and which it seemed impiety to deny. No wonder if, without the least wish to deceive, he encouraged his heathen convert to give him the kind of information he desired, and, in reporting it, unconsciously assimilated it still more to the familiar Bible story. Andree (p. 111) has given an interesting example of the way in which natives were sometimes asked leading questions.

iv. That many of the Deluge stories current among uncivilized tribes were actually coloured by Christian influence becomes evident on examination of the stories themselves. For it will be found that—

(a) Those Biblical details on which so much stress is sometimes laid are often attached to a

story entirely unlike the Bible Deluge narrative, both in character and in purpose.

Thus the sending out of the raven and the dove by the old man who had found refuge from the Deluge in a boat on one of the Rocky Mountains (Déné Indians) is altogether meaningless, and yet, according to Petitot, it is almost exactly similar to the Bible incident, except that a fir-branch is substituted for the there unknown olive-branch. A still more interesting variation is found in a story as told by the South-American Macusi tribe, in which a rat sent out to investigate matters came back with an ear of maize in its mouth. Here the Biblical motive is combined with the common feature among Indian Deluge stories of sending out animals to *procure* land (see below, IV. *c*. (a)).

(b) The Deluge stories which thus resemble the Bible narrative in some of its details often betray their Biblical colouring by mixing up other familiar Bible stories, such as the creation of woman and the Tower of Babel.

When we read in the story of the Macusi just referred to that, when the Good Spirit created the first man, the latter fell into a deep sleep, and on waking up found a woman standing by his side, we are not surprised to hear the incident of the rat and the ear of maize. In a story of the Papagos, in Arizona, it is the hero of the Deluge, Montezuma, who, disregarding the warning of the Great Spirit, builds a house that should reach to heaven, which is destroyed before its completion by lightning from heaven. In the story of the Wasio, a Californian tribe, the slaves are compelled by their masters to build a temple as a place of refuge from any future Flood. When a great earthquake with a terrible rain of fire occurs, and the temple sinks up to its dome in the Tahoe Lake, the masters clamber in vain on to its top, from whence they are hurled by the angry god. Andree remarks here that the building of the temple is evidently a modern feature alien to the customs of the tribe, and certainly a domed temple is not a very ancient feature. That the purpose of the temple is not worship, but escape from the Flood, would seem to suggest an early adaptation of the Tower of Babel story. It would thus be a parallel to the story of the neighbouring Papagos, and to that of the Mandans (see IV. *A*. vi. (e)).

(c) Speaking generally, what have the appearance of traits due to Christian influence are found most frequently in those countries where Christian influence has been longest at work, especially on the American continent.

v. The argument from Biblical details in Flood stories is in any case hazardous, as it proves too much. We find details not given in the Bible narrative also repeating themselves in a most remarkable way in the legends of localities far removed from each other.

(1) The boat or raft of safety is frequently described as moored by a rope. A new element is sometimes introduced by some of the ropes not being long enough and the occupants of the boats being drowned (Finns [Lenormant, *Origines*, i. 455]). In one form of a legend of the Pelew Islanders, such was the fate even of the one surviving old woman, until the oldest of the gods in pity revived her. (2) Again, the Greek story of Deukalion and Pyrrha and the stones has an exact analogy in the story of the Maipuri, in which the coco-nuts thrown by the man over his head become men, those thrown by the woman, women. In the legend of other tribes on the Orinoco, as also of the Macusi, stones were thrown by the surviving man. In a Lithuanian story a rainbow was sent to the old couple to comfort them, and to advise them, if they would have offspring, to leap over 'the bones of the earth.' (3) The miraculous growth of the fish, a conspicuous feature of the Indian legend (see V. *D*. i.), has its counterpart in the cuttle-fish of the Thlinidite, which grew so large as to fill the whole house.

It is by no means easy to say how far features of this kind are actually borrowed from other stories, and how far they are the result of imagination and reason acting in similar fashion on different peoples. There is certainly no difficulty in supposing that the tying of the boat was introduced as the most natural thing for the survivors to do. On the other hand, the enigmatical phrase 'bones of the earth' combined with the consolation of the rainbow (Lithuanians), and a similar combination of the stones story with the rat and the maize-ear (Macusi, see above, IV. *A*. iv. (a)), suggest that both elements in either case were due originally to the influence of Christian teachers. We can readily understand how well-educated missionaries might, in drawing attention to the prevalence of Deluge stories, have instanced that of Deukalion, and how such a picturesque incident might have found its way into a popular folk-tale.

vi. The extraordinary variety in every detail in the different Deluge stories makes it improbable that all originated from one traditional story, as will best be realized by taking what might be regarded as the normal type and pointing out some of the variations which we find. Thus: (a) some god or gods, angry with the Antediluvians (b) usually on some specific ground, (c) determine to send a Deluge, but (d) give warning of it to some

one or more beings. (e) The latter, usually following Divine directions, construct some kind of boat or box, or adopt some other means of escape. (f) In this structure they preserve also the necessities of life, including domestic animals, more rarely pairs of animals generally. (g) Shortly after, (h) by rain or other means, (i) comes a Deluge. (j) When the Deluge subsides, (k) they land on some mountain or island, and (l) sometimes offer a sacrifice. (m) Future descendants of men (and sometimes of animals also) are reproduced, often in a miraculous way. (n) The survivors (or the chief of them) are translated to heaven.

This imaginary norm, from which, or from something like it, all the stories might naturally be supposed to have come, is obtained by putting together the features which are most frequently found. No story, in fact, gives them all. Even the Bible story has no translation of Noah (but see ANTEDILUVIANS). The Greek legends have no post-diluvian sacrifice, and the Indian story in its earliest forms gives no reason at all for the Deluge. But, apart from such omissions, we find variations, under each head, of almost every conceivable kind.

(a) The Deluge, though almost always the work of some god, is occasionally, among the North American Indians, ascribed to a malignant being, as the Black Serpent (Algonquins), an eagle (Pimas), or a raven (Hare Indians).

(b) (1) The Deluge is a punishment for sin, not only in the Bible, but among the Pelew and Fiji and Society Islanders, the Algonquins, and some others. (2) More frequently it results from the resentment of a god for some act of violence or personal injury, such as, rather frequently, the refusal of hospitality (Greek Deukalion story) or the slaying of a favourite. Thus, according to a Greek Flood story preserved by Nonnus, it was sent to put out a conflagration caused by Zeus for the murder of Dionysos by the Titans (Usener, p. 42). In a story of the Fiji Islanders it is the anger of the god for the slaughter of his favourite bird. The Dayaks of Borneo attribute a great Flood to the destruction and cooking of a boa constrictor. With the Hare Indians (N. America) it is the raven who brings about the Deluge to punish the Wise Man for having thrown him into the fire, though, curiously enough, the raven escapes with him on the raft. Even more original is the cause of the Deluge as reported from the Leeward Islands. A fisherman who had been fishing in sacred waters caught the hair of the sea-god as the latter was having a nap (Ellis, *Polynesian Researches*, ii. 58). (3) In the Transylvanian Gipsy story it is the punishment for the disobedience of a woman in eating a forbidden fish—a motive which may have originated from the Bible story of the Fall. In both these last stories the Deluge appears singularly unreasonable. In the latter the woman herself, who is alone responsible for the crime, is slain by the first flash of lightning; in the former, more unfairly still, the fisherman, his wife, and, according to some versions of the story, a few friends, are alone allowed to escape.

(c) The warning of the Deluge is generally made by revelation, sometimes directly (Genesis), sometimes by another god than the author of the Deluge (Akkadian), often through the medium of some animal, as the fish, which a later form of the story regards as an incarnation of Vishnu (Indian), by a wounded dog (Cherokees), or by llamas to a shepherd (Peru). The last two cases seem to have arisen out of the observed faculty that some domestic animals have of foretelling rain. The motive of the Indian story seems connected with an ancient mythological conception, which attached a peculiar sanctity to the fish. In a story of the

Pimas a warning is given three times in vain by an eagle (himself the cause of the Flood) to a prophet (Bancroft, *NR* iii. 78).

(d) Those who are permitted to escape vary very largely. Frequently it is one person only, as the old man in the Gipsy story referred to above, the god's son Szeuka (Pimas, see Bancroft, iii. 78), one woman (Borneo), or frequently a man and his wife (Darjiling, Himālayas), a brother and sister (Kolarians, East India), or two pairs (Andamanese). Less frequently a few friends or relatives are also saved, as in the Bible and in the Leeward Islands stories, where, however, accounts differ. Rarely we find a considerable number, including slaves (Akkadian). In a highly original story of Kabadi, in New Guinea, all the men escape by getting up into the peak of a mountain and waiting till the Deluge has subsided. In other stories they are all destroyed, and the Deluge is followed by a new creation (Kashmir). Especially was this the case where the purpose of the Deluge was the destruction of monsters (see *ANTEDILUVIANS*). In some American Indian stories it is an animal only that survives, such as the coyote (Wappo, etc., California); in a legend of the neighbouring Papagos, it is the coyote and the demi-god Montezuma, while the Thlinkits make the raven and his mother the sole survivors.

(e) While by far the most usual means of escape is by one or more boats or rafts, there are a few legends outside the Bible story in which a larger or smaller box or ark serves the purpose, as with the Banar of Cambodia and in some forms of the Greek Deukalion legend. Possibly this is the origin of the so-called 'Big Canoe,' a sort of sacred tub, which forms the centre of extremely curious ceremonies among the N. American Mandans, which are certainly connected with some old Deluge story (see G. Catlin, *O-Kee-pa*, London, 1866). Very frequently the refugees escape to a mountain, either by means of a boat or directly, and some very curious and graphic accounts are given of the straits to which the survivors were reduced, as the water came higher and higher.

Thus in a legend of the Ojibwas, Manabozho, when the waters have reached the mountain peak, gets up into the topmost branch of a fir-tree, where the waters gradually rise to his mouth, in which position he has to wait five days before he discovers a means of safety. In another story the survivors escape from the mountain peak in a coco-nut shell thrown down casually by a god as he was feasting (Lithuanians); and in yet another it is by a canoe which the survivor makes out of a piece of the sky (Sac and Fox Indians). In not a few stories the survivors escape by simply climbing up into a fruit-tree (Karens in Burma, Tupi in Brazil, Acawaies in British Guiana), or, more curiously still, by sheltering under a tree (Mundari of East India). In some Peruvian stories the mountain of refuge itself floats on the Deluge like a boat. Caves are, singularly enough, the place of refuge in a legend of the Mexican Chohula and of the Arawaks of British Guiana, and the hole of a monster land-crab serves the purpose in the story of the Uraus, a tribe of the Kolarian Indians. From a translation of a very remarkable bark pictograph of a tribe of the Algonquins, it would appear that the place of refuge was a turtle's back, which became identified with an island. But quaintest of all is the story of the Crees, in which the one surviving girl saves herself by catching hold of the foot of an eagle, which carries her to the top of a lofty mountain. In the Thlinkit story the raven and his mother escape in the skins of cranes; in that of the Papagos the coyote saves himself in a bamboo sealed with resin.

(f) Speaking generally, food for the future is provided in one of two ways, either by the survivors taking it with them, as in the Bible story, or by its being produced in some marvellous way afterwards. The preservation of animals, apart from their use for food and sacrifice, is very rare, not being found even in the Akkadian version, and is probably derived from the Bible story. Food is miraculously brought to the surviving brothers by two primeval parrots in a Peruvian story (cf. Elijah and the ravens); in another the survivors feed on fish, which they warm under their arm-pits (Tolowa in California).

(g) The Deluge in many stories comes without warning, as, it would appear, the necessary consequence of crime, e.g. the cooking of the fish and the serpent respectively in the Gipsy and Dayak stories already referred to. More frequently it is after a short interval of a day or so, not foretold beforehand. The 7th day of the Bible (Gn 7⁴⁻¹⁰), and probably of the Akkadian story also, has its parallel in a late version of the Indian story (see below, V. D. i. (3)).

(h) The physical causes to which the Deluge is assigned in different legends are numerous. Naturally enough it is generally rain, often with thunder and lightning. In a Sac and Fox Indian story the rain is said to have fallen in drops as large as a wigwam. Less frequently it is the incursion of a wave (Washo, California), or the pouring in of the water of the sea on to the land (Makah Indians of Cape Flattery). Sometimes it is the sudden melting of the winter snow, as when a mouse gnawed through the bag containing the heat and let it out (Chippewas). Sometimes the cause ascribed is very fantastic. A man accidentally lets fall and breaks the jar containing the water of the ocean which he had picked up out of curiosity (Haiti), and it is the same motive, with the same fatal consequences, that tempts the ape to remove the mat which covered the waters in a hollow tree through which they communicated with the ocean (Acawaies).

(i) In a Finnish story the Deluge is of hot water. According to a legend of the Quiché Indians, a deluge of resin followed one of water, and in some cases fire may be said to take the place of water, the conflagration story being in many respects analogous to the more usual deluge of water (Yuracares of Bolivia, Mundari of East India; cf. *artt. AGES OF THE WORLD*).

In extent the Deluge varies from an obviously local flood to a universal deluge. Very frequently everything is covered except a few lofty ranges such as the Rocky Mountains (Déné Indians). In one Australian legend the low island of refuge alone remained uncovered, when the lofty mountain on the mainland, on which the people had taken refuge, was submerged, this idea probably arising from a not uncommon notion that islands float.

(j) The duration of the Deluge is very seldom given, and, as the two Bible narratives differ both from one another and from the Akkadian (see below, V. A. i.), little importance need be attached to the fact that 40 days, in agreement with the Bible (J), is the duration of the Deluge according to some of the legends of the Polynesian Islands (see Max Müller in Preface to Gill's *Myths*). It is hardly likely that in all these centuries a single isolated detail should have been accurately preserved which had become obliterated in what were, *ex hypothesi*, comparatively early recollections of the fact.

(k) See under (e).

(l) This is an uncommon feature almost confined to the Semitic legends and some forms of the Deukalion story. In the most important Indian story the Deluge leads up to a very complicated and scarcely intelligible religious ceremony; but this belongs rather to the next head.

(m) The most striking example of this is the story of Deukalion and Pyrrha; but, as already pointed out (IV. A. v. (2)), it has its analogies and possibly its derivatives in a Lithuanian and in certain S. American Indian stories. A more remarkable proceeding is that of the surviving coyote, who, according to the Wappo Indians, planted feathers wherever the wigwams used to stand and they grew into men and women. A similar story is told by Bancroft (iii. 87) of some Californian tribes who relate that men were created

by the coyote and a feather which became an eagle. The Déné Indians sometimes asserted that the gods changed animals into men, but it is not explained where the animals came from. In a story of the Pimas Szeuka, the surviving son of a god, having slain the eagle which had caused the Deluge, restored to life those whom it had killed (Bancroft, iii. 78). The Indian post-diluvian rite was a complicated sacrificial ceremony by which Manu was apparently directed to produce both men and animals by an offering of clarified butter. But it is impossible here to distinguish primitive legend from later ritual and mystic accretions.

Where there is a single survivor, or only survivors of one sex, the re-peopling of the earth is frequently effected by union with some god or animal.

We have an example of the former in a story of the Pelew Islanders. In the story of the Orees the surviving maiden forms an alliance with the great eagle, through whom she has effected her escape. In a Peruvian story one of the surviving brothers seizes the parrot who has brought him food and she becomes his wife. In the Akkadian story the preservation of seed is almost a unique feature. The necessity of re-planting the earth, or at any rate of re-stocking it with cereals and vegetables, does not generally seem to have suggested itself.

(n) The apotheosis of the chief survivors is an important feature of the Babylonian story. There may possibly be a trace of it also in Gn 6⁹ (P; cf. Gn 5²⁴; see ANTEDILUVIANS).

If, then, the argument from the many existing Deluge stories were pressed, the most that it could with any reason be supposed to prove would be a purely colourless tradition of a Deluge or great Flood of some sort; but any such argument would have to be largely discounted, if not altogether neutralized, by facts to be considered under the next head.

B. Local inundations.—That this supposition will account for a very large number of Flood stories is obvious.

i. The Chinese Deluge story is merely an early tradition, though highly coloured, of such an inundation as has frequently taken place in the valley of the Hwang Ho (see V. E. ii., iii.).

ii. Such stories are especially frequent in volcanic districts subject to earthquakes and seismic waves, as in the Prince of Wales Peninsula (Bering Strait), Cape Flattery (Washington), or the Tahoe Lake in California. In a legend connected with the last-named place the inundation is expressly ascribed to a monster wave which burst over the land. In the story of Cape Flattery, the prairie which was flooded was certainly once submarine, and has an alluvial deposit of about a foot, as Swan argues, who gave the story in *Smithsonian Contributions to Knowledge*, vol. xvi. (quoted by Eells in *Amer. Antiquarian*, i. 70-72). In northern districts the Deluge is sometimes assigned to the melting of the snow (e.g. Chippewas), and very probably originated in a reminiscence of an exceptional inundation from such a cause. The same may be said of the Deluge stories of island peoples. The experience of high tides occasioned by storms would naturally make an impression upon the active imagination of a savage race, and occasion, or at any rate give a certain colour to, stories of this kind. Such tides are the common nightmare of a child living by the sea; and the normal savage is like a clever child only half awake. A more potent cause might be found in the submergence or appearance of islands through volcanic action.

iii. That so many Deluge stories obviously originated in purely local events makes it highly probable that this is the true explanation of many others, where the local cause has been obscured as a tradition, has then become a legend, and has finally passed into a myth, the tendency of the imagination being towards making the story more and more wonderful. Thus, what was originally

a local flood may become a universal Deluge, the surviving ancestors being a few single individuals out of the human race. What was quite natural is ascribed to the direct, and often quite miraculous, action of Divine Beings. How far any particular story can be thus explained must be considered on its own merits.

C. Explanations of natural phenomena.—How far did Deluge and Flood stories arise as a hypothetical explanation of observed facts or racial conditions?

(a) They often appear as a pseudo-scientific explanation of natural phenomena. The savage mind would naturally ask, How came the sea and land, mountains and valleys, and lakes and islands to be where they are and what they are? Whence differences of colour, language, and character? How came the fossils which are found upon the hills? To these questions they found an answer in the hypothesis of a great Deluge which left the fish turned into stone on the land (Eskimo [see Hall, *Life with the Esquimaux*, London, 1864, ii. 318], Leeward Islanders, Samoan Islanders); or formed a large lake (such as the Tahoe in California, or Dilolo Lake on the southern border of the Congo State); or caused men to seek refuge in distant lands, to divide and learn different languages (Twanas [Washington], Makah Indians of Cape Flattery, Thlinkits, Bella-Coolas); or left the red colouring on the Indians' skin (Crees). Sometimes the Deluge plays quite a subordinate part in a story which itself serves a different purpose.

A Deluge story of the Pelew Islanders is connected with a picturesque account of the origin of the red stripe on the head of the bird called the tarit (*Rallus pectoratus*). A Persian Deluge myth, among other motives, explains the saltness of the sea. In an interesting myth connected with Mangaisa (Cook Islands), the general purpose of which is to explain the origin of the coco-nut, the Flood is merely required to bring up the eel, out of whom the coco-nut grew, to the door of the maiden Ina's hut, whose pious duty it was to slay him. In fact, there is another version of the same myth in which there is no Flood at all (Gill, *Myths*, v. 77-81). Gill, who was for 22 years a missionary in the Hervey Group, had specially favourable opportunities of collecting stories uninfluenced by Christian teaching, as he obtained them direct from Tereaval, the last priest of the god Tiao, who took the double form of a shark and an eel. Incidentally also the Flood story given above accounts for the passage by which the water drains into the sea. In another legend, told by Gill, the chief object of the Flood was to put out the furnace in which Miru, the hag of the nether world, had designed to cook Ngaru. The Flood puts out the furnace and permits Ngaru to effect his escape.

It is very probable that to the same intelligent curiosity we must refer those many stories which seem to lead up to the origin of land, or at least of islands.

There is an old Indian legend according to which Vispu in his *avatara* as a boar brings up land from the bottom of the ocean (Muir, *Original Sanskrit Texts*, vol. I² [Lond. 1873], chs. I. and vi.). With this we may compare the legend that Rangi pulled up the island of Mangaisa out of the nether world. But there are several apparently analogous stories among the American Indians connected with a Deluge which occurs as an event, not as a primordial condition. In such stories some animal, a duck or beaver or fish, more often a musk-rat, dives down for earth and brings it up between its feet or in its mouth (Sas and Fox Indians, Chippewas, Ojibwas). Some have compared the curious sequel to the sending out of birds by Xisuthros in the later Babylonian story. But there the clay on the feet of the birds is a proof of the re-appearance of ground, on which, though still wet, the birds could walk, and it is a far less poetical variant of the dove and the olive branch. It is very unlikely that, as Andree thinks, the sending out of animals in the American Indian stories has any connexion with that Bible incident. More probably it is an ancient myth accounting for the origin of land among an originally seafaring people, which has become mixed up with later inundation traditions of a more local character.

(b) It seems probable that in some cases, among island and coast-land peoples, the Deluge story originated in the tradition of the early migration of the people. In such cases the ocean is itself the Deluge, and the island or coast-land the home to which they escaped. In some such way the Binnas account for their settlement in the Malay Peninsula. How easily traditions of such a kind could

pass into myths may be seen in many of these Deluge stories, in which comparatively recent events have become interwoven with them.

Thus a Deluge myth of Western Australia is connected with a quarrel between 'black' and 'white' races, and can have originated or taken its present shape only after the first English settlements in the country. In a Deluge myth of the Papagos, the Great Spirit, unable otherwise to tame Montezuma's rebellious temper, sent an insect into the unknown land of the East to fetch the Spaniards, who destroyed Montezuma, and people no longer worshipped him as god. Here Montezuma, an Aztec ruler, who was actually killed by the Spaniards in 1520, has become the demi-god hero of an ancient Flood myth.

D. Deluge stories explained as part of a definite cosmological system.—This has been incidentally touched upon under the last head. Some of the Deluge myths might certainly be so explained, e.g. that of Viṣṇu in his *avatāra* as a boar bringing up land from the bottom of the ocean. But in such stories the ocean is not so much a Deluge as the primeval Deep (cf. *ṣaṃ*, Gn 1²). As a rule, however, such conceptions are hardly of a kind to account for the general prevalence of Deluge stories. Moreover, the savage mind, at any rate, was essentially local and limited in its range, and comprised within its view very little beyond the horizon of its ordinary experience.

E. Deluge stories explained as Nature myths.—In this view some forms of the Deluge story, especially those of Palestine, Babylon, Greece, and India, are a mythical representation of some ordinary natural phenomenon of constant recurrence. Noah in his Ark is generally regarded by its exponents as a sun myth, but as regards the interpretation of the story there is a wide divergence of opinion.

1. Cheyne, for example (see art. 'Deluge,' in *EB*⁹), following Schirren and Gerland, suggests that the Deluge has been transferred from the sky to the earth. So understood, the progress of Noah in the Ark, like that of Zeus in his chariot, is a mythical interpretation of the course of the sun. But this would imply an incredible twist of the primitive imagination.

2. Uesener, on the other hand, who has written on the subject at very great length, makes the whole point of the myth lie in the *landing* of the Deluge hero, which represents the *rising* sun. He derives his argument partly from philology, but chiefly from comparative mythology. He explains Deukalion as 'the little Zeus'—a suitable name for the newborn sun, and he compares the many stories, such as those of Perseus and Oedipus, in which a child is thrown into the sea in a chest or otherwise, and whose landing gives rise to some cult, which he connects sometimes, rather curiously, with that of the sun. In fact, almost every legend which has for its theme any one traversing the sea in a marvellous manner, from Arion on his dolphin to the legend of Lucian's corpse, is made to serve his purpose. Uesener finds developments of the same idea in fairy tales, Christian legends, and many myths and religious customs, coins, etc., representing the sun-god, be it Dionysus or Saturn, in a ship. Strangest of all are the illustrations drawn from the legend of St. Christopher bearing the Infant Christ, and even an ancient picture of Christ's baptism. He lays great stress on the fact that the season of Baptism was called *Epiphaneia*, an emblem of rising light, and even directs attention to the fact that the water is depicted as stormy, seeing in this the idea that the water was conceived as lifting up the Christ. Similarly the Deluge might be regarded as lifting up the sun-god in the Ark, preparatory to his landing, i.e. rising. Such arguments as these hardly need serious discussion.

F. General conclusion.—Speaking generally, the comparative study of Deluge legends tends to make it more and more evident that, while a very large proportion of them certainly arose originally out of local events, these have always been highly coloured, and not infrequently quite transformed, by the imagination, which among more uncivilized races saw all Nature teeming with conscious life in manifold forms. Either in conjunction with such traditions, or sometimes independently of them, Deluge stories arose out of an inquisitive creative imagination, which first sought to explain the natural wonders of the present by even greater wonders in the past, and by a process of repetition changed the guesses of an earlier into the traditions of a later age. Like all folklore, such stories have a living interest to the student of psychology, but are of far less importance in the comparative study

of religion. It should be added that, though the common derivation of Deluge stories from the Bible Deluge can no longer be maintained, the Bible story and those related to it have had in various ways a wide and important influence upon a large number of them.

V. Groups of Deluge stories.—*A. SEMITIC.*—The Semitic Deluge story is found in three forms: (i.) that of the Akkadian tablets, (ii.) the Bible Deluge, and (iii.) the story as narrated by later Babylonian historians, esp. Berossus. It is now generally recognized by scholars of different schools that (i.) represents the most ancient form of the story, of which (iii.) is merely a variant, while (ii.) is a very different version of the old story adapted to an altogether different conception. The grounds on which this opinion is based are: (1) the belief that, though the date of the inscription upon the Akkadian tablets is probably about 660 B.C., it is a copy of a poem dating from at least 2000 B.C., as is confirmed by the mutilated fragment of another Babylonian Deluge story, discovered by Scheil at Abū Habbah (Sippara), the colophon of which points to a date for the inscription of 2250–2150 B.C. (see Ball, p. 43); (2) that the tablets belonged, roughly speaking, to the country from which the Israelitish people migrated; (3) that the story itself, in both its Biblical and Akkadian forms, is connected more nearly with the same region of the world than with Palestine (note the mountains of Nizir [Akkadian], Ararat [Bible]); (4) that the Akkadian story is based on the religious ideas of that country and the worship of the ancient gods of Babylonia, while that of Genesis is conceived in the spirit of the high morality and monotheism of the Jews.

1. THE AKKADIAN DELUGE STORY.—The Akkadian Deluge story, discovered by George Smith in 1872 among some monuments in the British Museum, was inscribed on the eleventh of twelve tablets, each containing one canto of an ancient epic poem. Each tablet is connected with a sign of the zodiac, and, as the eleventh is that corresponding to Aquarius, the Deluge story is particularly suitable.

The epic relates the adventures of a certain Gilgames, who is frequently identified by scholars with the Nimrod of Genesis. In order to seek a remedy for sickness, he pays a visit to his ancestor Sitnapīsti (Nuhnapishtim [Ball]) at the mouth of the river Euphrates, and Sitnapīsti gives him an account of the Deluge and of his own translation, of which the following is an abstract:

The gods in Šurīpakk, even then an old city, determine to send a Deluge. Ea, the lord of wisdom, reveals their purpose to Sitnapīsti, and bids him build a ship of certain dimensions, there bring the seed of life, and launch it. Sitnapīsti carries out these instructions, building it 120 cubits (?) high, of six storeys, and divided into seven parts, pouring over it several measures of 'pitch' both inside and out, and providing it with oars. Having celebrated a great sacrificial feast with oxen and sheep, beer, wine, oil, and grapes, he brings into the Ark stores of gold and silver, beasts of the field, man-servants and maid-servants, and the sons of his people ('all the craftsmen' [Ball]). Having done so, Sitnapīsti is bidden to enter and shut the door, and to await the Deluge that night. He appoints Buzur-sadi-rabi (Smith and Sayce ('Buzur bel,' Haupt and Ball)) his pilot, and waits in dread for the storm, which bursts forth next morning. The description of the storm and the consternation of the gods are thus graphically and forcibly described (87–111):

When the first light of dawn appeared,
There arose from the fountain of heaven a black cloud:
Rimmon in the heart of it thunders, and
Nebo and Merodach march behind;
The Thron-bearers march o'er mountain and plain.
The mighty Dibbarra (or Girra) wrenches away the beam;
Ninib goes on pouring out ruin.
The Anunaki (earth-spirits) lifted torches;
With their sheen they lighten the world.
Rimmon's violence reacheth to heaven;
Whatever is bright he turneth to darkness.

One day the Southern blast . . .
Hard it blew, and . . .

Like a battle-charge upon mankind rush (the waters).
One no longer sees another;
No more are men discerned in (described from) heaven.
The gods were dismayed at the flood, and
Sought refuge in ascending to highest heaven (*lit.* the heaven
of Anu);

The gods cowered like dogs; on the battlements [of heaven]
they crouched.

Ishtar seems like a woman in travail,
The loud-voiced Lady of the gods exclaims:
"Yon generation is turned again to clay!"

As I in the assembly of the gods foretold the evil.
A tempest for the destruction of my people I foretold.
But I will give birth to my people [again], though
Like fry of fishes they fill the sea."

The gods, because of the Anunnaki wept with her;
The gods were downcast, they sate a-weeping;
Closed were their lips' (Ball, p. 38 f.).

For 6 days and nights the storm rages, and abates on the
7th, when the waters begin to subside. Sînapišti weeps at the
sight of the corpses; he opens the window, however, and dis-
covers distant land. Thither the ship steers, and grounds
on Mt. Nizir. Here, after another 7 days' interval, Sînapišti
sends forth a dove, which finds no resting-place, and returns.
He then sends forth a swallow, which finds no resting-place, and
returns; then a raven, which, when it sees that the waters have
subsided, returns not. He then sends forth the animals to the
four winds of heaven, builds an altar, and offers sacrifices with
libations of wine, at which the gods collect like flies (?), while
the great goddess Ištar lights up the mighty bow (?).¹ The
account goes on to describe how, when Bel sees the ship, he is
filled with anger, and commands the gods that no one shall
come forth alive. Ea expostulates with him for having caused
a Deluge, and suggests in future other punishments, such as
wild beasts, famine, or plague. He declares that he did not
reveal the counsel of the gods, but only sent a dream to Atrahasis.
His pleas are so successful that Bel takes Sînapišti's
hands, and blesses him *and his wife*, and bids them be as gods,
and dwell at the mouth of the rivers.

Unfortunately, there are a large number of
lacunæ, and in many other passages the language
is very obscure; but the above may be taken as
fairly representing the general drift.

There can be little doubt that the text as we
have it is composite (see Sayce, *Higher Crit. and*
Mon. ch. iii.). The Deluge is ascribed first to the
gods of Šurippak collectively, then to the sun-god
(Šamaš), and, lastly, exclusively to Bel. The hero
of the Deluge is twice called Atrahasis instead of
Sînapišti. Moreover, a double version of Ea's
warning speech is given, and, lastly, Bel's counsel
to stop Sînapišti, etc., from leaving the ship is
clearly out of place after the sacrifice just recorded.
However precarious it may be, and indeed unneces-
sary, to attempt an exact analysis of the whole, it
is of some importance to realize that the Deluge
story was a popular one, and even in Babylon was
told in various ways. We have at least evidence
of one story in which Sînapišti is presumably
the hero, ending in the sacrificial thank-offering,
and another in which, after a quarrel among the
gods, the hero Atrahasis is translated. In addition
to the Akkadian Epic here given, a few other frag-
ments have been found containing more or less
divergent versions of the same story. The most
important of these—that discovered by Scheil, al-
ready referred to—consists of 37 lines. It repre-
sents some god as calling upon Rammān to bring a
flood on the earth, and Ea as interposing to save
Atrahasis (see Driver, *Genesis, in loco*; Ball, p. 43).

Before passing on to consider the Bible Deluge,
we must call attention to a few points in the Ak-
kadian story. (1) The recurrence of periods of
seven days' duration. The preparations appear
to have taken 7 days (cf. Gn 7¹ [J]), the ship being
completed on the 5th, and 2 days more being re-
quired for the sacrifice and embarkation. The
storm itself lasted 7 days, and there was another
interval of 7 days, while the Deluge was abating,
before sending out the birds, which were sent out
consequently, apparently on the 7th day, or, at
any rate, at no great interval (cf. the story of
Berossus, 'after some days').—(2) The dimensions

of the ship are uncertain. There are *lacunæ* in the
inscription where the directions are first given, but,
at any rate, the height and breadth are the same.
In describing the actual building of the ship, the
height (and, therefore, the breadth also) is 10 *sars*
(120 cubits [Sayce, Hommel]), but the length is not
given. It was, therefore, enormously larger than
the Bible Ark—4 times the height and over twice
the breadth (cf. Gn 6¹⁵ [P]).—(3) Those saved in the
ship included Sînapišti, his wife and slaves (male
and female), and the pilot and all his people; but
the mention of other relatives is at least doubtful.
—(4) Most important of all: Atrahasis and his wife
(but no others) are translated.

ii. THE BIBLE DELUGE STORY.—1. *Analysis*.—
The Bible Deluge story, like the Akkadian, is cer-
tainly composite, parts belonging to the compara-
tively late Priestly Code (P), and parts, speaking
generally, to the ancient Jahwist source (J).

The parts usually assigned to J* are: 6⁵⁻⁸ 7¹⁻⁵ 7-10
(in part [see below])¹² 16¹⁶. 17-4 22-23 32b-3a. 6-12. 18b. 20-22.
The parts usually assigned to P are: 6⁹⁻²² 7⁶. 11.
13-16a. 18-21. 24. 31. 2a. 35-5. 12a. 13-19 91-17.

2. *The J Deluge story*.—(a) *Its date*.—Though
the composition of J as a whole can hardly be
earlier than the 9th cent. B.C., it seems probable
that the Deluge story in its Hebrew form, though
not necessarily reduced to writing, is far older. It
preserves, at any rate, what appears to be a very
ancient custom, not otherwise known, by which
all clean animals were regarded as suitable for
sacrifice (Gn 8²⁰), whereas, according to Dt 12¹⁵. 22
15²², there is clearly a distinction intended between
certain domestic animals that were sacrificed and
wild game (*i.e.* clean animals) which it had been
the custom to eat, but which could not be sacrificed
—a distinction which is also implied in the story of
the deception of Isaac (Gn 27 [J.E]).

On the other hand, the Deluge was not a uni-
versal tradition among the Israelites, or, at any rate,
did not form part of a generally recognized his-
torical system: The tradition concerning Lamech's
sons (Gn 4¹⁹⁻²²) implies an unbroken history of civi-
lization; and, if the writer of this last section was
aware of the Flood tradition, he certainly did not
regard it as a universal Deluge. Many critics,
therefore, regard the Deluge story as a compara-
tively late insertion into the original cycle of J
traditions (see *Oxf. Hex., in loco*).

(b) A relation of some kind between J and the
Akkadian story is evident. The chief points of
similarity are the Divine decision to bring about a
Flood (Gn 6³⁻⁷) in consequence of man's sin (this
is implied in Ea's expostulation with Bel in the
Akkadian story); the warning by Divine agency
that the Flood was coming (7¹); the command to
build an Ark, implied in 6¹⁵ 7¹⁶; the periods of 7
days, though not so connectedly as in the Akkadian
story (7⁴. 10 8¹⁰. 12); the sending out of birds at
intervals; the sacrifice after the Deluge, and the
delight shown in it by Jahweh (8²⁰. 21). On the
other hand, it differs in the monotheistic character
of the whole story, and the necessary omission
of the petty quarrels of the gods; and in its infinitely
higher religious and moral tone (the occasion of the
Flood, Jahweh's wrath against man's sin, receives
an emphasis which we do not find in the Akkadian
story); the means of preservation, an ark or chest,
instead of a ship; † the Flood's duration of 40 days
instead of 7; the birds sent out—raven, dove, dove,
dove, instead of dove, swallow, raven; the incident
of the olive branch (but cf. Berossus); and the
omission of the apotheosis of Noah.

* For full analysis, see *Oxford Hex.*; Kautsch and Socin (quoted
in Usener, pp. 17-22); Driver, *Genesis*, 1904.

† Some assign v. 17a (afterwards corrected by redactor) to P.

‡ Ball argues from the dimensions that the Akkadian ship
was really a chest; but it had oars and a steersman, and was
launched and navigated.

¹ 'She lifted up the Great Gems' (Ball, p. 40, who explains:
'The Babylonian myth evidently regards the rainbow as the
great jewelled collar of Ishtar, held up arch-wise in heaven'
(see also p. 201)).

(c) At this point two important questions arise. (1) Is the Bible story derived from the Akkadian, *as we find it in the tablets?* Probably not. That there were several versions of the story current in Babylon is clear from the evidence of two stories combined in the Akkadian tablets, and by the evidence of the other mutilated fragments, as well as by the account of Berossus, which differs in some important particulars. The olive branch in the dove's mouth is the kind of picturesque detail which looks very ancient, and may have been original, and is to some extent confirmed by Berossus (see below, V. A. iii. 1, *b*, c). It has been suggested that the sending out of birds may have originated in the well-attested ancient custom of letting birds loose to ascertain the direction of land; but, while this is not altogether improbable, it must be admitted that such a purpose is not very evident in the Akkadian story, and is quite inadmissible in that of the Bible. On the whole, it would appear that the Bible story is derived from one that did not differ essentially from the Akkadian as we know it.

(2) Is the story of J a deliberate paraphrase of whatever form it was derived from, or was it the result of a gradual process of development? The subject is hardly capable of positive proof, but the probability seems in favour of the latter alternative. (a) If the story was, as seems likely, derived from Babylonia at an early date (note its anthropomorphic conception of Jahweh, Gn 7⁸ 82), it would, in all probability, have been handed on by oral tradition many centuries before it was written down, and, if so, would naturally have become gradually changed in the telling, as religious ideas developed from time to time. (b) We can thus best account for one of the most characteristic differences—the chest of the Bible left to drift by chance or at the Divine will, in the place of the purposely navigated boat of the Akkadian story. No doubt Lenormant was right in saying that the latter is a feature suitable to the story as told by a maritime people, such as the inhabitants of the Persian Gulf, whereas the Bible Ark points to a people wholly ignorant of navigation (*Orig.* i. 408, quoted by Andree, p. 8); but it seems unlikely that a writer in comparatively late times would have deliberately altered the ship into an ark, whereas such a change might naturally have come by degrees. Some writers have urged this difference as a proof of the priority of the Bible narrative; and even Cheyne, while very far from admitting such a view, suggested that possibly this particular feature may be more primitive—the conversion of the chest into a ship being due, if this be the case, to a rationalizing tendency (art. 'Deluge,' in *EB* 9). But such an argument cannot be considered as to any extent outweighing the strong grounds for the priority of the Akkadian story; and, after all, that the Bible Deluge should be in this, as it is in other respects, more marvellous than an early form of the story, is what we might naturally expect in a later stage of tradition.

(d) *Conclusion.*—We probably have in the J story a very early Israelitish tradition, either brought with the people from Babylonia at their first immigration, or obtained from that country through the frequent intercourse which we know to have existed from early times between the two peoples, but so modified as to have become, in the gradual course of transmission, a suitable vehicle for enforcing those great moral and religious truths which became the distinguishing features of the Israelites.

3. *The P version of the Deluge.*—(a) Compared with that of J, P has in addition the description and the dimensions of the Ark, the description of the Deluge as due to the breaking up of all the

fountains of the great deep, as well as the opening of the windows of heaven (7¹¹ 83), the stranding of the Ark on Mt. Ararat (84), and the rainbow (9¹²⁻¹⁶), together with statistical references to Noah's age, etc. P omits the sending out of animals and the post-diluvian sacrifice, substitutes one pair of all animals for 7 pairs of clean and one of unclean, makes the Deluge last 365 days instead of 61, and substitutes the elaborate covenant connected with the rainbow (9¹⁻¹⁷) and laws of blood for the simple promise of J based on the sacrifice (8³⁰⁻³²).

(b) The comparison with J and with the Akkadian Deluge raises a somewhat difficult question. Was P's story derived independently from Babylon during or shortly after the Exile, or was it, on the other hand, merely a revision of J's Deluge story; or, again, was it in some respects an independent version of the ancient story, belonging, like J's account, to ancient religious traditions?

Those who adopt either the first or third of these alternatives lay stress on the fact that so much of what is peculiar to P has its parallels in the Akkadian story, in which we find certain dimensions of the ship, its being tarred with pitch, the Deluge ascribed apparently to the sea as well as the rain-storm, and the rainbow (Sayce, Ball). But, on the other hand, it may be observed (a) that, as already pointed out, the actual dimensions of the Akkadian ship are enormously greater than those of P's ark, and, moreover, that the insertion of exact dimensions is exactly in accordance with the custom of P, as, e.g., in the dimensions of the Tabernacle and all its furniture; the resemblance, therefore, on this point, such as it is, may be merely accidental; (b) that the reference to the rainbow in the Akkadian story is at least doubtful, and is not admitted by several translators (e.g. Haupt); (c) that almost all the differences between the accounts of P and J may be explained by the general character of P; e.g., the picturesque story of the birds would have no interest for P, who omits all the most picturesque stories of Genesis. In any case, such an incident would be unsuitable in a Deluge which covered the highest mountains (7¹⁸) and lasted 365 days, though not in one of 61, in which the mountains were not necessarily covered at all. Again, the omission of the sacrifice of Noah accords with the omission of all the Patriarchal sacrifices—an omission which certainly suggests the inference either that P disbelieved in or held of no account sacrifices which preceded the law of Sinai. The omission of 7 pairs of every kind of clean animal is very possibly an example of the same spirit, as these animals were, according to J, intended for sacrifice (8³⁰). Lastly, the omission of such an anthropomorphism as 'Jahweh shut him in' in 7^{16b} is quite in character with P's usual practice. (d) As the present combined account of the Deluge is based on P's story, which appears to have been preserved almost intact, whereas some parts of J are obviously omitted (those, for instance, giving the warning of the Deluge and directions for building the Ark), it is quite possible that some general statement of the Ark's dimensions, a description of the pitch, rooms, etc., like the Akkadian story, and the incident of the rainbow, may originally have had a place in J's story. If this be so, P must have retained the latter, not because of its picturesque quality, but as the basis for a favourite theme, a Divine covenant (cf. 6¹⁸); on the other hand, the change of 61 to 365 days, the number of days in the solar year, though it does not agree with the three weeks of the Akkadian story, appears to be based upon some astronomical theory, and may be due to Babylonian influence of some kind. It may also be reasonably urged that the reference to 'the fountains of the great deep' really corresponds with P's ideas and nomenclature (cf. Gn 1⁹), and finds a

parallel in the post-exilic Is 24¹⁶. It is not likely, therefore, that it was originally derived from J.

It may, then, be considered not improbable that, in addition to J, P may have had access to some other version of the Akkadian story, but, if so, when and how it was derived is quite uncertain.

iii. THE DELUGE ACCORDING TO LATER BABYLONIAN ACCOUNTS.—1. *The story as given by Berossus.*—Berossus was a priest of Bel in Babylon about 300 B.C., who wrote a history of Babylonia (see art. BEROSUS). He claims to have copied out MSS of several authors which had been carefully preserved in Babylon for 15 myriads of years. Unfortunately, only a few fragments of his work have been preserved, which were copied by later authors. His Deluge story is given or referred to in three sources.

(a) It was copied by Alexander Polyhistor (a Milesian writer of the 1st cent. B.C.), whose work is also lost. Thence it was copied by Eusebius in his *Chronicon*; and, though the original of the *Chronicon* is also lost, it still exists in an Armenian tr., and it was also reproduced, probably *verbatim*, by Syncellus in his *Chronographia*.

(b) A Latin translation, based partly on the Armenian version, with the various readings of the Greek text of Syncellus, is given in Migne, *Chron. Eus.* I. ch. iii. (see also Müller, *FHG* ii. 501). It runs as follows:

'After the death of Ardates, his son Xisuthros reigned 18 *sars* (18 x 3600 years). During his reign occurred a great flood, of which the following account has been given. Kronos appeared to him in a dream and revealed to him that on the 15th of the month Daisios men would be destroyed by a flood, and he therefore ordered him to bury all existing MSS, beginning, middle, and end, in the sun-city of Sippara, to build a boat, to embark with his relatives and friends, to load it with food and drink, to put therein animals, birds, and quadrupeds, and to make all ready for a journey. He then asked whither the boat should go, and was told, "To the gods to pray [*v.l.* having prayed] for good to mankind." He was not disobedient, but built a boat of 5 stadia long and 2 stadia broad, and carried out all that had been commanded him, and embarked with wife, children, and relatives. When the flood came, and very soon had begun to subside, he let go some of his birds; but, when they found neither food nor place to settle, they came back to the ship. Xisuthros, after some days, let the birds go away again, and they returned to the ship with mud upon their feet. When they were let go for the third time, they returned no more to the ship. Then Xisuthros perceived that the land had appeared, and he broke open some of the joints of the ship, and ascertained that the ship had grounded on a certain mountain. He stepped out with his wife and daughter and the pilot, kissed the ground, erected an altar, offered sacrifice to the gods, and vanished together with those who had come out of the ship.' The narrative goes on to relate how a voice from the sky informed the comrades of Xisuthros that he and those with him had gone, on account of his piety, to dwell with the gods, and bade them recover the MSS, and adds in conclusion:

'Of this ship that stranded in Armenia a part still remained in the Kordyean mountains of Armenia, and some people scraped off the pitch from the ship and used it as amulets. They came to Babylon, dug up the MSS, and took them from Sippara; and they rebuilt Babylon, building many cities and re-founding temples.'

(c) This story appears to be an epitome of the Akkadian or one much like it:

(a) The name of Xisuthros (=Hasis-atra transposed from Atra-hasis) agrees with that of one of the versions of the Akkadian story. (b) The means of refuge, as in the Akkadian story, is a ship and not an ark. (c) As in the Akkadian, Xisuthros and others are immortalized. It differs, however, in (a) the prediction of the exact date of the Deluge, (b) the specific mention of relatives and friends as saved (a smaller number seems implied than in the Akkadian story), (c) the mud on the feet of the birds, (d) the stranding of the ship in Armenia, and (e) the apotheosis not only of Xisuthros and his wife, but also of his daughters and even of the pilot. Of these (c) and (d) are of special importance. The latter would seem to prove an ancient Babylonian tradition independent of the Akkadian story, and followed by P. Ararat being the regular name of Armenia in Assyrian monuments. Of the former it may be said at least that the story of the clay on the feet of the birds looks like the earlier analogue of the olive branch.

It should be added that the points of contact with the Bible story are not sufficiently striking to make it likely that the later Babylonian traditions were influenced by it. On the whole, then, the story of Berossus tends to confirm the view of

some variety in the Babylonian traditions of the Deluge.

2. *The Deluge story of Abydenus.*—An epitomized version of the same account, derived originally either from Berossus or from the source from which he derived it, comes to us through Abydenus, a later Babylonian historian, whose work, like that of Berossus, has also been copied both in the *Chronicon* of Eusebius (I. vii., also in *Præp. Evang.* ix. 12, p. 414) and in the *Chronographia* of Syncellus (p. 70).

It differs, however, (a) in making a double interval of three days before and between the sending of the birds, and (b) in the birds being sent only twice. Migne's attempt to get out of the text of Syncellus a third sending is hardly successful. At best it would require that it took place after they had returned with the clay.

3. *Reference to Berossus's Deluge story in Josephus.*—Josephus's account of the Deluge (*Ant.* I. iii. 5, 6) differs slightly from that of the Bible. He mentions that Noah, when the Ark rested on the top of a certain mountain of Armenia, opened it and saw a small piece of land. The dove was sent out 7 days after the raven, and only once returned, covered with mud and bringing an olive-branch. After waiting 7 days more, he sent forth the living creatures. These differences may be partly due to carelessness and to narration from memory, but the reference to the clay, at any rate, is taken from the account of Berossus, which he had seen, and probably other accounts also, for he goes on to say: 'All writers of barbarian histories make mention of this Flood and this Ark, among whom is Berossus the Chaldaean,' and he quotes from him the statement about the remains of the ship on the Kordyean mountains, and the use made of the pitch, in the same words as those used by Eusebius and Syncellus, who themselves refer to Polyhistor as their authority. This proves beyond a doubt that Polyhistor's story was derived from Berossus. Josephus's statement about the universality of the Deluge story may be taken as showing at least that the Deluge story was a common theme among ancient historians.

iv. ORIGIN OF THE SEMITIC DELUGE STORY.—

(a) There is nothing to suggest in this case that it formed part of a consistent mythological system.

(b) Being concerned with rain and water, the subject was clearly suitable for treatment in the Akkadian Epic in connexion with the rainy month; nor need we suppose it, therefore, connected with any special astronomical theories. (c) Its more or less mythological form, in which gods and goddesses play their part, finds its analogies in many Deluge and other stories throughout the world, in which natural events form the basis of, or become mixed up with, mythological details (see above, IV. C. (b)). (d) The frequency of Deluge stories arising out of natural inundations gives a *prima facie* probability that such an event was the origin of the tradition in this instance. (e) In both the Bible story and the Akkadian the Deluge is ascribed to natural causes: (1) an excessive rainfall; (2) somewhat more indefinitely, the rising of the sea. The first is obvious in both accounts. The second is definitely stated in P in the words 'all the fountains of the great deep were broken up' (Gn 7¹¹). The deep being regarded as being under the earth, such language would very naturally suggest an earthquake breaking up the ground and letting the deep burst forth. It seems implied also in the Akkadian story, which, if it does not, as some scholars maintain, expressly speak of the earth trembling, and the floods breaking out below the earth, at least describes such a terrific storm and tempest and invasion of waters as to imply a cyclonic wave rather than a mere overflowing of rivers. (f) The traditional resting-places of the ark, Ararat=Armenia (Bible

and Berossus), and Nizir = Rowandiz in the North-East of Babylonia (Akkadian), point to a definite region of the world. (g) Süs has pointed out with great force that the necessary conditions are fulfilled by supposing that the shores of the Persian Gulf were struck by an enormous volcanic wave, accompanied by a tremendous cyclone. The very great distance which such waves travel, and the fearful destruction of life and property which is often involved, have frequently been pointed out.

Thus the wave associated with the Backergunge cyclone in the delta of the Ganges reached a height of 45 ft. and destroyed more than 100,000 persons (*EB*⁹ xvi. 155). A wave caused by the eruption of Krakatoa (28th-28th Aug. 1883) reached 50 ft. (cf. the 15 cubits of P. Gn 7²⁰) and destroyed more than 36,000 lives. One wave reached as far as Cape Horn, 7818 geographical miles distant (*EB*⁹ xxviii. 639).

It can hardly be deemed improbable that a phenomenon of such a kind occurred on the coast of the Persian Gulf, then probably lying much further north than now, and that but few survivors escaped in boats to the more hilly regions, with what effects they could secure. We have, in an event like this, all that is needed for the growth of such stories as are preserved in the Akkadian Epic and the Bible Deluge.

It need hardly be added that the religious value of the Bible story does not lie in its improbabilities, which sometimes amount, as has been shown, to absurdities, but rather in the religious and moral lessons, of which the ancient tradition was made the vehicle, viz. that Jahweh hated and would punish sin, but would save those who were faithful and obedient, while the further thought is suggested in P, at least, that His mercy is a more abiding motive than His wrath.

B. THE GREEK DELUGE STORIES.—i. *Story of Deukalion and Pyrrha.*—This is by far the most important of the Greek Deluge, or Flood, stories. (a) Its most typical form is that given by Apollodorus (140 B.C.) in his *Bibliotheca*, I. vii. 2:

When Zeus determined to destroy the men of the age of copper, Deukalion, at the suggestion of Prometheus his father, constructed a chest (ἀρκαία), into which, having placed therein the necessities of life, he entered with his wife Pyrrha. Zeus sent a great rain, which flooded most parts of Greece, and destroyed all except those who escaped to the neighbouring hill-tops. The pair, after drifting in the chest for 9 days and nights, reached Parnassus, and, the Flood having somewhat abated, disembarked, whereupon Deukalion sacrificed to Zeus his protector. The latter sent Hermes to ask what he wished. He replied 'Children.' At the direction of Zeus they threw stones over their heads, and those which Deukalion threw became men, and those which Pyrrha threw, women. Then follows a derivation of the word λαός ('people') from λαός or λᾶς ('stone').

(b) This story evidently originated in a confusion of a myth with what may have been an ancient tradition. If Pandora, as Apollodorus had just asserted, was the first woman, and Prometheus first made men of earth and water, how could Deukalion be, as Apollodorus likewise states, king of Phthia, and who were the men who were nearly all destroyed? How, again, is the survival of any consistent with the story of the stones?

(c) (1) There seems to be an allusion to the story of the stones in Hesiod ('*Ἡσίοδος*, fr. 141, ed. Rzsch; see Usener, p. 32). (2) The earliest complete reference, however, to Deukalion's Flood is in Pindar, *Ol.* ix. 64-67, where he mentions how Pyrrha and Deukalion descended from Parnassus and founded of stones a race like themselves, and how the mighty waters which had overflowed the earth had been suddenly stopped by Zeus. Pindar evidently refers to it as a well-known story; otherwise, much of what he says would have been quite unintelligible to his readers. (3) The best-known form of the story, however, is that given by Ovid, *Met.* i. 155-415, the most curious feature of which is the fact that no mention is made of Deukalion and Pyrrha having been warned of the Deluge and commanded to build a ship. They appeared on the heights of Parnassus, where they had landed, and

invoked the gods of the mountain and Themis. Zeus, seeing this, and satisfied that they were good and pious people, stopped the Deluge. A full description is given of their trouble, and the story about 'the bones of the great mother' is given in detail. It should be noticed that here the means of refuge is a ship, not, as with Apollodorus, a chest. There are also several other more or less different versions of the Deukalion story. (4) According to Nonnus (see Usener, p. 38), a conflagration sent by Zeus (in anger at the Titans for murdering Dionysus Zagreus) was put out by a Deluge. This is very abruptly connected with the story of Deukalion and Pyrrha, who suddenly appear floating about in a chest (ἀρκαί); but we are not told how or where they got in, or where they landed. The Deluge ends by Poseidon splitting the rock with his trident, and making an escape for the water through the Vale of Tempe, thus connecting the Deluge with the north of Thessaly, whereas the older legends connect it with Photis in the south-east. (5) According to Hellanikos, Mt. Othrys was the place of landing. Aristotle, curiously enough, maintained that the waters of the Deluge flowed into Achelous. Others, such as Thrasybulus and Akestodorus, maintained that Deukalion and Pyrrha founded the sanctuary of Zeus at Dodona, and dwelt in the territory of the Molossi. Possibly here we have a local Flood tradition combined with the better known traditional story. Very late legends connect the landing of Deukalion with Mt. Athos, and even with Ætna.

ii. *Other Deluge stories current in Greece.*—1. According to a legend connected with Megaris, Megaros, its founder, was rescued from the Deluge, being guided in swimming through the water by the cry of cranes; hence was derived the name of Gerania.

2. The Oxygian Flood story, found only in quite late writers, such as Julius Africanus, is confined to Boeotia and Attica. Oxygus, its hero, was described as king, sometimes of Athens and sometimes of Thebes.

3. Dardanus was said to have escaped in a Flood from Samothrace or Arcadia (Dionysius of Halicarnassus), in a boat of skins made by himself (Lykophron), or with his sons, and to have founded the kingdom of Ida. This story was often brought into connexion with that of Deukalion.

4. An altogether different Flood story is referred to by Istros (see Usener, p. 46), who connects a great flood with the severing of Asia and Europe by the Hellespont.

iii. *Origin of the Greek stories.*—Speaking generally, the Greek Deluge stories form good illustrations of what appear to be the common causes of such legends (see above, IV. C). Several of them grew up as explanations of the founding of a city or temple, ascribed to a waif miraculously guided across the waters, and to this extent Usener is probably right in finding analogies to the Deukalion myth in such stories as those of Perseus and Oedipus. Other Greek Deluge stories are connected with special geographical features, such as the opening of the Vale of Tempe. All are local in character, and that one of them, from its antiquity and picturesqueness, should have found a permanent place, though often mixed with others, in Greek mythology is natural enough. And there is no reason why it too may not have originated from a local inundation, the story receiving such accretions of the picturesque and marvellous as are common in similar cases.

The occurrence of the chest instead of a boat is interesting in view of the same variation in the Semitic story, and might suggest the possibility that the Greek legend, as we find it in Apollodorus, was influenced in some indirect way by the Bible narrative. But there is a great difference between a chest,

holding only a couple of persons and such food as they required for 9 days, and the monster Bible 'Ark' with all its arrangements and contents. Moreover, the chest was not an uncommon feature in the wild stories of Greek legend.

iv. *The mixed Deluge story of the pseudo-Lucian.*—We have a real mixture of the Greek and Semitic Deluge stories in the story given in the *de Dea Syria* (Lucian, ed. Jacobitz, Leipzig, 1881, iii. 344f.). This version was connected with a hole in the ground over which the temple was built and into which the Deluge was said to have subsided.

According to this account, Deukalion, and his wife and children, were saved in a great chest (*ἀράραξ*). As he entered it, there came all kinds of animals, wild and tame, sows, horses, serpents, lions, etc., in pairs. He received them all, and there was great friendship between them, and they all sailed in one chest as long as the water prevailed. When the water had disappeared through the hole, Deukalion built an altar and the temple over it.

Usener certainly goes too far in saying that this is the Babylonian Deluge story with only the name Deukalion inserted from Greek legend. It contains several features from both, and, except that to Deukalion it gives a second name *Σκυῖα* (which, according to Buttman, is a corruption of *Σωῖα*, and is intended for Sisuthros, the Noah of Berossus), it bears a far closer resemblance to the Biblical than to the other forms of the Babylonian Deluge legend. *E.g.*, wild animals are preserved as well as tame; all in pairs; only Deukalion and his family escape; in a chest, not a boat (the last perhaps from the Greek story). That traditions of the Deluge ultimately derived from the Bible should have been current in Syria is likely enough, and there seems also evidence, in another tradition that the people was founded by Semiramis, of early intercourse with Babylon.

C. *PERSIAN DELUGE STORIES.*—i. A curious legend is contained in two fragments of the Yima songs preserved in *Vendidad* (*SBE* iv. 10 ff.). It is given in full by Usener, pp. 208–212, from the critical tr. of Geldner.¹

A council was held by the gods, in which Ahura Mazda decreed that a terribly severe winter would be followed by a great Deluge from the melting of the snow. Yima was directed to build an enormous fort foursquare, and to stock it with men and animals of all kinds. Yima carried out these instructions, but it is not actually said that the Deluge came.

Usener regards the whole story as an ideal picture of the future, the eternal city where men are to live in harmony and righteousness a life free from moral and physical evil, when the world is destroyed by the Deluge; but the passages which seem most ideal are among the prose portions, which Geldner regards as later insertions. It seems more probable that we have here also an example of the tendency to idealize what was originally a natural event.

ii. A second story is found in *Bundahishn*, vii. (tr. by E. W. West in *SBE* v. 25–28). Tištar, in the three forms of a man, a horse, and a bull, sends successive Deluges each of ten days' duration, and destroys all the noxious creatures on the earth. This is part of what is clearly an astrological myth describing the contest between good and evil, and accounting for lightning and thunder, the salt sea, and the origin of lakes and seas.

D. *INDIAN DELUGE STORIES.*—i. *The Fish Legend.*—(1) The oldest form of this typical Deluge story of India is preserved in the *Satapatha Brāhmaṇa*, i. 8. 1 (*SBE* xii. 216, tr. by J. Eggeeling; for other translations see A. Weber, *Ind. Streif.*, 1868, i. 9, *Ind. Stud.*, 1868, i. 161; Max Müller, *Hist. Skr. Lit.*, 1859, p. 425; J. Muir, *Orig. Skr. Texts*, i.² [1873] 181 ff.).

In the morning, Manu, when water was brought to him for washing, found a fish in his hands. The fish foretold the coming Deluge, and promised to save him if he would preserve it, first in a jar, then in a pit, and, when it had outgrown this, would take it to the sea. Manu was to build a ship, and enter it, and look out for his preserver. Manu did

as directed, and finally took the fish, which had then grown to an enormous size, to the sea. Then Manu entered the ship, and the Deluge came, which destroyed all living creatures. Meanwhile the fish approached Manu, who fastened the ship to its horn, and was so conveyed up to [or 'over'] the Northern Mountains. Manu was directed to tie the ship to a tree, and gradually to descend as the waters abate.

The rest of the story is concerned with a complicated and very unintelligible rite with clarified butter, by which a woman was first produced, and, by her means, offspring of men and cattle.

According to Weber, the final redaction of the *Satapatha* is only a little before the Christian era; but, as Eggeeling shows, it is a compilation of earlier treatises, and this particular story gives the impression, in its main features, of being ancient.

One special interest in the story lies in its curious points of resemblance and contrast to other Deluge stories. The warning of the Deluge by an animal, the fastening of the ship by a rope, the post-diluvian sacrifice, and the miraculous reproduction of men, have all their analogies; but they are not found, as here, in combination, and the towing of the ship by a fish is quite unique. The probability is, therefore, that this legend is of native growth.

Weber and, to a less extent, Muir see in the story a tradition of an original immigration of the race from across the Himalayas. They base their opinion on a rendering of the words given above in italics, 'over the Northern Mountains.' Eggeeling, however, renders 'up to,' and some writers suppose the story to have originated in an exceptional overflowing of the Ganges. The question is primarily one of textual criticism, the choice lying between the reading *abhi-dudrāva* (Eggeeling) and *ati-dudrāva* (Weber, etc.). The chief argument against an originally mythical origin of the story is that here also the tendency is to become more and more mythical, and if we reverse this tendency we can easily explain the story as having grown out of a natural inundation.

(2) A second version of the Indian story is that given in the *Mahābhārata* (quoted from tr. by H. Jacobi in Usener, p. 29; see also Muir, *op. cit.* i.² 196 ff.). The story has here assumed a more elaborate and marvellous form.

Manu is a prince among monks, renowned for his asceticism. Standing on one leg with his arms raised on high, and with head bent down and never blinking an eye, he practised terrible austerities, etc. The fish appeared to him as he was practising austerities by the shore. Of such virtue were they that the fish became many miles long, and yet Manu could carry it quite easily. The storm is very graphically described. In the end the fish reveals himself as Brahmā, and appoints Manu as creator of all things.

In this version there appears to be a confusion, not uncommon in similar myths, in the character of Manu as himself a descendant of former ancestors, and as the founder and creator of men and all things. In the older form of the story he is the first man, and never more than a man.

(3) A third version is found in the *Bhāgavata Purāṇa*, viii. 24. 7 ff. (for Eng. tr. see Hardwick, *Christ and other Masters*, new ed., Lond. 1863, vol. i. pt. ii. ch. iii. pp. 312–315; Muir, *op. cit.* i.² 208 ff.). According to Cheyne, this book cannot be earlier than the 12th cent. A.D. The story itself is mainly a development of that of the *Satapatha Brāhmaṇa*, with a mixture of the mythical and quasi-philosophical elements characteristic of the *Purāṇas*.

The Deluge took place during a sleep of Brahmā, when the strong demon Hayagrīva stole the Vedas. Hari took the form of a minute fish, and so finally revealed himself to Satyavratā, a devout king who lived only on water. The gradual growth of the fish is like that in the earlier legends, except that he outdid them by becoming, in his final form, a million of leagues long. The ark in this case was miraculously brought to Satyavratā, who, accompanied by the chiefs of the Brahmans, spent his time therein in singing hymns of praise and receiving Divine revelations. Finally, Hari slew Hayagrīva and recovered the Vedas. Satyavratā, instructed in all Divine and human knowledge, was appointed the 7th Manu. But, after all, the

¹ For a divergent interpretation of this Iranian material, see art. BLEST, ABOVE OF THE (Persian).

appearance of the horned fish was *māya*, or delusion, and 'he who shall devoutly hear this important allegorical narrative will be delivered from the bondage of sin.'

It is interesting to note that this version has several points of contact with the Bible story. (1) The Deluge is caused by rain as well as by the sea. (2) Seven days' warning is given of the Deluge. (3) It is sent because of the depravity of man. (4) Animals are preserved in the ark, (5) and these in pairs. Of these (3) is inconsistent with the beginning of the story, and is evidently an interpolation. The most probable explanation of them all is that they were due to Christian influence. Their appearance only in the latest version of the myth makes it impossible to use them as arguments to prove that the story itself is derived from the Bible story, or originated in the event which that story describes.

ii. *The Boar Legend*.—Another Deluge myth is given in Muir, *op. cit.* i.² 50f. It is one of the creation stories of the *Vishnu Purāṇa*.

It tells how the Divine Brahmā, awaking from his night slumber, and perceiving that the earth lay within the waters of the universal ocean, assumed the form of a boar, plunged into the ocean, and raised up the earth and placed it on the surface.

This is a creation myth, and has a curious analogy with some of the American Indian stories (see IV. C (a)).

E. CHINESE FLOOD STORY.—Accounts of this are found in the *Shu King* (especially ii. 4. 1; cf. also pref. 5, ii. 1. 17, 2. 1, 14, iii. 1. 1, v. 27. 8), the *Shih King* (iv. 3. 4. 1), and the writings of Meng-tsze (iii. 1. 4. 7, 2. 9. 3f.).

i. According to the *Canon of Yao* (*Shu King*, i. 3. 11, tr. Legge, *SBE* ii. 34f.).

'the Ti said, "Ho! (President of) the Four Mountains, destructive in their overflow are the waters of the inundation. In their vast extent they embrace the hills and overtop the great heights, threatening the heavens with their floods, so that the lower people groan and murmur! Is there a capable man to whom I can assign the correction (of this calamity)?"' Kihwān was appointed, and laboured unsuccessfully for nine years. The Ti afterwards resigned his throne to Yü, who had coped successfully with the inundation.

ii. The *Shu King* (ii. 4. 1) gives the account of Yü's work as follows (in Legge's translation):

'The inundating waters seemed to assail the heavens, and in their vast extent embraced the mountains and overtopped the hills, so that people were bewildered and overwhelmed. I [Yü] mounted my four conveyances [carts, boats, sledges, and spiked shoes] and all along the hills hewed down the woods, at the same time, along with Yi, showing the multitudes how to get flesh to eat. I opened passages for the streams throughout the nine provinces, and conducted them to the sea. I deepened the channels and canals, and conducted them to the streams, at the same time, along with Chi, sowing grain, and showing the multitude how to procure the food of toil in addition to flesh meat. I urged them further to exchange what they had for what they had not, and to dispose of their accumulated stores. In this way all the people got grain to eat, and all the States began to come under good rule.'

Elsewhere in the *Shu King*, Yü is repeatedly described as having determined the relations of land and water, and the *Shih King* declares that, 'when the waters of the Flood had become widespread, Yü caused the various regions of the earth world to appear: the great outlying realms received their limitations.'

According to these accounts, all these works were accomplished during a single journey. In fact, the accounts probably describe work gradually carried out through many ages, though possibly commenced by Yü. They were evidently intended to avert a constantly repeated and wide-spread disaster.

iii. *Origin of the story*.—Legge believed that the occasion of Yü's special work was an actual inundation of an alarming kind of the Hwang-Ho ('the sorrow of China'), which he puts in the 24th cent. B.C., whereas he ascribes this treatise to the 12th.

According to Meng-tsze (b. 372 B.C.), however, the tasks of Yü were carried out under far more difficult conditions.

'In the time of Yao, when the earth was not yet in ordered state, the masses of water flowed unchecked and flooded the earth. Flora was excessively luxuriant, and birds and other living creatures went about in enormous quantities. Grain could not grow. Animals pressed hard on man. . . . Yao alone concerned himself about this. He appointed Shün, who developed an ordering activity and gave Yi control of fire. Yi caused devastating conflagrations on the mountains and in the marshes, so that the animals fled and sought shelter. Yü divided the nine rivers. . . . Then it became possible for the folk of the Middle Kingdom to support themselves' (iii. 1. 4. 7). At this same period, moreover, serpents and dragons infested these deluging waters; but Yü, while appointing the rivers their courses, banished these monsters, the animals that had oppressed man vanished, and the plains of China became habitable for the human race (iii. 2. 9. 3f.).

It is by no means impossible that, as Legge held, these accounts all had their rise in a tradition of an extraordinary inundation by the Hwang-Ho; and in this connexion it is worthy of note that the great flood of 1851-53 is said to have cost some millions of lives, while it took 15 years to repair the damage and to confine the river within embankments. At the same time, it should not be forgotten that Grill, in his '*Zur chinesischen Flut Sage*' (*Festgruss an Roth*, Stuttgart, 1893, pp. 9-14), maintains that the story is based on a cosmogonic myth, devoid of connexion, even in its basal ideas, with the Bible account, and associated in form with experience of the frequent inundations of the Hwang-Ho; and, like von Gutschmid (*ZDMG* xxxiv. 192f.), he holds that Yü, to whom he denies any actual existence in history, was essentially a sort of demiurge, who helped to establish civilization on earth. It is open to question, therefore, at least on the basis of Meng-tsze's statements, whether this whole story is not to be regarded as a cosmogonic rather than as a Deluge story.

F. FOLKLORE DELUGE STORIES.—Under this general heading are included the numerous stories of peoples, mostly in a savage or semi-savage state, not included under previous headings. It is not necessary for the present purpose to make any general classification of them on either geographical or ethnological lines. It will be sufficient to point out a few facts bearing on the subject of this article.

i. One of the essential characters of these stories arises out of the fact that they are folklore. In the Deluge stories of Babylon, Greece, and India we have well-defined legends capable of being traced out more or less distinctly in their developments and ramifications. Though a few of the stories now under consideration have come to us in a written form more or less ancient, they are not literature in the same sense, but only stereotyped folk-tales. By far the greater number of these stories, however, are still, or were till recent years, in a fluid and formative condition. The imagination which has produced them is, or was till recently, still at work, and has been continually modifying them. It has already been noticed how both historical events and fancy-striking anecdotes, such as Bible stories, have in many cases become mixed with the early tale, nor is it possible to separate them with scientific accuracy. Not infrequently what is essentially the same story is differently told on different occasions, or at any rate is differently reported (Leeward Islands; see IV. A. vi. (d)).

ii. There are many difficulties in the way of getting trustworthy evidence. As already pointed out, the missionaries, by whom most of these stories have been reported, were frequently prejudiced witnesses (see IV. A. iii.), and, moreover, the stories in several cases were collected some time after the conversion of the people with whom they originated. These missionaries had to depend on their own memory or that of their converts, and it was only in quite exceptional cases that the

opportunity afforded to Gill was offered (see above, IV. C. (a)), of reporting from the evidence of one whose knowledge of heathen lore was both fresh and complete.

iii. Another striking fact is the irregularity in the distribution of these stories. For example, there are very few independent Deluge stories reported from Africa, a considerable number from the islands of the Pacific, and an extraordinarily large number from the continent of America. This is accounted for negatively by Andree on the ground that Deluge stories do not readily arise where, as in Africa, the inundation of the great rivers is an annual occurrence, which does not therefore impress the imagination. It may be noticed in this connexion that one of the most important exceptions is connected with a special local feature—the formation of the Dilolo Lake on the southern border of the Congo State (see Andree, p. 49). Again, the Deluge legend of the Masai in Uganda, to which attention has been lately called by Merker (see *Guardian*, 1906, p. 945), is so obviously parallel with the Bible Deluge that it cannot be regarded as independent. We find here the Ark, pairs of animals, birds sent out (a pigeon and a vulture [cf. the crow of the Lummi Indians and the humming-bird of a Mexican story]), and four (1) rainbows.

iv. It would appear that there must be some positive reason for the frequency of Deluge stories among the American Indians. George Catlin, in his *O-Kee-pa* (p. 2), stated that among 120 tribes there was not one which did not relate some distinct or vague tradition of a Flood, and, in fact, a very considerable number of these stories have been preserved. It certainly must be admitted that the idea of a Deluge impressed itself very readily on the Indian tribes, but how far this was due to their past experience as an island people, and how far to the psychological character of the race, is a question for the ethnologist or anthropologist rather than the student of comparative religion. This much at least can be said, that there is some reason for believing that several of these stories are of comparatively ancient origin.

(1) In the first place, there is abundant evidence to show that Deluge stories were current in Central and Southern America at the time of the Spanish occupation. (2) The common elements in the stories of neighbouring and related tribes in some cases point to an ancient tradition in which a characteristic feature has become rooted in the imagination. (a) Several of the tribes about Peru, though their Deluge stories differ widely in other respects, have the common feature of a floating mountain—a combination, it would seem, of the ark and the mountain of refuge. (b) In more than one Mexican legend men were turned by the Deluge into fish. (c) We have noticed that several tribes about the Orinoco and its neighbourhood have the common features of stones (or coco-nuts) thrown to produce men (see IV. A. v. (2)). (d) Of still greater interest is the curious feature already mentioned (IV. C. (a)) that land was produced after the Deluge, not by the water subsiding, but out of scattered grains of sand or earth springing up and growing like seeds. Thus in the story of the Ojibwas, after the loon has dived several times in vain, it is the musk-rat restored to life by the surviving Manabozho (who was standing up to his neck in water on the summit of a high tree) that dives and brings up the grains of sand between its toes. These Manabozho throws into the waters, and they grow into islands, which unite into mainland. In a story of the Sac and Fox Indians, another branch of the Algonquins, the survivor, seeing

that the Deluge would soon overwhelm the mountain on which he had sought refuge, built a canoe out of a piece of the blue sky. After sailing about some days, he sent out one of the largest fishes, which returned with its monster mouth full of earth, out of which he formed the dry land. In the story of the Chippewas (Montagnais), a related group, it is the northern diver that eventually returns to the canoe with clay on his webbed feet, after the beaver, otter, and musk-rat have failed. This the old man breathed upon, and it became a great island. (e) We find, again, in certain groups of tribes that a particular animal plays a prominent part, as the coyote among the Californians (Wappos, Papagos, etc.), the raven among those on the north-west seaboard of N. America (Thlinkits and Bella Coolas).

v. This prominence of animals is a very characteristic feature of the American Indian stories, and is by some believed to be connected ultimately with totem-worship, whereas in the stories of some other groups, such as those of the South Sea Islanders, a greater prominence is given relatively to what we should call the wonders or powers of Nature. Thus, according to Bancroft (iii. 87), the Californians describe themselves as having originated from the coyote.

Among the Algonquin tribes the black serpent is the enemy of man and of created beings, and sends the Deluge. Manabozho, in more than one story of this group, takes refuge on the turtle's back. In the stories of the Ojibwas his helper is usually the diver or the musk-rat. With the Hare Indians it is the raven who causes the Deluge in vengeance for being thrown into the fire; and it is the white owl who befriends the wise man by letting out the cattle which the raven had imprisoned. With the Cherokees it is a dog which foretells the Deluge; with the Peruvians the llamas reveal it to a shepherd. The Crees have it that an eagle rescued the one surviving maiden, and became by her the father of the new race. In a very original story of the Pimas (California), the god's son Zeuka, being angry with the eagle for having caused the Deluge, climbs up to its eyrie, slays it, and restores to life those whom it had killed (Bancroft, iii. 78).

vi. The general inference from a study of these folklore Deluge stories is that we have not to deal with mythological or cosmological systems, in which a Deluge occupied a part, but rather that these stories were the result of experience, tradition, imagination, and natural curiosity, acting sometimes separately, but more often in combination in different ways and different degrees.

LITERATURE.—The best general book, esp. for Deluge folklore, is R. Andree, *Die Flutsagen*, Brunswick, 1891, which contains a large and interesting collection of Deluge stories. Among the most important books referred to by Andree are H. H. Bancroft, *Native Races of the Pacific States*, 5 vols., London, 1876-76; A. Humboldt, *Sittes des Cordilleras et monuments des peuples indigènes*, Paris, 1868; W. Ellis, *Polynesian Researches*, 2 vols., London, 1829; W. W. Gill, *Myths and Songs from the S. Pacific*, London, 1876; E. Süss, *Das Antlitz der Erde*, 3 vols., Leipzig, 1883-85; F. Lenormant, *Les Origines de l'histoire d'après la Bible*, Paris, 1880. For a careful tabulation of Deluge stories, see M. Winternitz, 'Die Flutsagen des Altertums und der Naturvölker,' in *Mitteil. der anthrop. Gesell.* in Wien, xxxi. [1901] 305-338. Translations and comments upon the Akkadian Deluge story are given in *KIB* vi. 299 ff.; P. Haupt, *Der keilschriftliche Sinfthubricht*, Leipzig, 1881; A. H. Sayce, *Higher Criticism and the Monuments*, London 1894, ch. iii.; C. J. Ball, *Light from the East*, London, 1899, pp. 34-43. The most important Indian, Chinese, and Persian Deluge legends are given in *SBE*, ed. by Max Müller (see also references in this article). For Greek Deluge stories, apart from theories about them, the best work is H. Usener, *Die Sinfthubagen*, Bonn, 1899.

F. H. WOODS.

DELUSION.—Delusion in the popular sense simply means a mistaken belief. In the technical sense, however, it means a wrong belief which is maintained because of a defect in thinking. And that is the meaning which the word should always have; for there is manifestly an important difference, for example, between a mistaken opinion which may be held because of wrong information supplied or facts withheld, and one which is maintained owing to an error in reasoning. A delusion is a belief falsely believed—that is, believed be-

cause of a faulty mind. To stretch the point, an opinion, even if it is a good opinion, is delusional if it is not supported by facts. And that brings us to a distinction which is of some value—that there are beliefs which are demonstrably untrue and which are delusions; and there are beliefs which we cannot prove to be untrue, which may even be correct, yet are arrived at by a delusional process.

The delusional state of mind—the kind of thinking which is prone to delusion—very often results from some disease, of greater or less degree, acquired in adolescent or adult life, which warps the judgment by tampering with the brain's mechanism, upon which correct thinking depends. In the development of a mind to the level of a mature judgment, an enormous mass of experience contributes, and a very great part of our thinking rests upon obvious opinions which we never take the trouble to test. It is part of the misfortune of a delusional mind that it may begin to question such standard opinions—opinions which ought to be regarded as axioms, and upon which the whole fabric of our thought is based. For example, a man may have a doubt (and it has occurred, and much writing has been wasted in the exposition of it) as to whether two and two really do make four. Scepticism of this sort, when it goes far, is an exhausting mental process, and the mind that indulges in it is apt to suffer further trouble. It is a form of illness which may be called a wasting disease of the mind, as if a man were to consume his own skeleton and have neither backbone nor leg by which to stand erect. On the other hand, a great deal of delusion can be traced to a vice at the opposite extreme—a kind of mental indolence. A large number of people who have wits enough to think if they had energy to use them, believe things which they have no right to believe, and entertain opinions which do not harmonize with those which they have earned a right to entertain. In these cases, again, there is what we may call a sore spot in the mind—a place where friction occurs when the rational process is checked by superstition. It is always a source of mental weakness in a thoughtful man to reserve certain subjects and to neglect or refuse to discuss them. That, however, is not to say that there is no place in good thinking for reverence, or that a good mind will not continue in mystery. On the contrary, the essence of delusion is the being too certain, too quick to seize and hold a definite opinion. This is illustrated by a very constant quality of delusion—that it refuses to be guided by facts or modified by argument. There are some people whose minds are very hard to move; once they have formed an opinion—and such people form opinions about many things—they will not give up or even be shaken in their belief; and the reason is that it is one of their mental characteristics, due in part to brain conditions, to find changes irksome. We must also observe that there are certain beliefs which are essentially pleasure-giving; it is tempting to hold an opinion which seems fitting and good, and it is easy to retain, as convictions, some comfortable beliefs which have never been subjected to criticism; perhaps the majority of the delusions commonly entertained concern things which people like to believe and refuse to disturb, not on grounds of reason, but on grounds of feeling.

In insane delusions—by which we mean delusions which occur in insanity, and which are due to actual brain disease—the quality of unreasonableness is very marked. If an insane person insists that he is made of glass, he will not be disillusioned by a demonstration of the fragile nature of glass and of his own resistance to fracture; he will only report

that the kind of glass of which he is made is not the ordinary breaking kind; hence the common practice with such people on the part of those who have the care of them. And it is the best method for all delusional people, whether sane or insane; there is no use trying to argue with them; therefore change the subject, encourage reasonableness in general, and trust that in time, after a development of other parts of the mind, the 'patient' on coming back to the vexed question again will see it in a new light.

It need hardly be said that the subjects concerning which people are prone to express delusions are often mystifying even to the most expert thinker—electrical phenomena, facts connected with mesmerism or hypnotism, insanity, occult religious facts, and all sorts of novelties and new inventions.

From what has been said concerning the nature of delusion, it becomes clear that the subject is an important one, both in a theory of mind and in practical affairs; and it is instructive to try to determine the extent and the province of delusion in normal thought. To do so exhaustively is impossible; but it is easy to cite a few examples which will suggest, to any one who cares to pursue the subject, a great many more. There is, for instance, a very large group of what we may call natural illusions, which are inevitably and inextricably woven into the fabric of experience, and which, assumed as true, become delusions. In the strict sense, an illusion (*q.v.*) differs from a delusion in that it is an error in *sense-perception* rather than an error in thinking. And it is permissible to hold that delusion includes illusion; that all illusions, when accepted as true, are delusions, though only a few delusions are illusions. By natural illusion, then, is meant all that margin of error—and it is a large one—by which the senses, in their natural and normal activities, convey wrong information to the brain. For it is strictly true that things are not what they seem. It is usual, in this connexion, to enlarge upon visual errors, partly because these are obvious and admit of being proved. It is certain that the picture which the brain receives from the eyes does not correspond to the object looked at. Some of the delusions thereby suggested have been corrected. Every educated man, for example, refuses to accept the testimony of his eyes that the world is flat. Yet a great mass of visual error goes uncorrected; men and women take the picture suggested by the eyes to be true; and, as the error and its acceptance are natural and all but universal, the delusion passes muster in common thought. But, to appreciate the amount of error thus imported, we must not forget that all the other senses are similarly faulty. It is certain, and again capable of scientific proof, that errors of hearing are considerable. Not only do ears differ widely in individuals in their acuteness, but it is certain that no one hears correctly, that the sound-image accepted by the brain never corresponds to the 'pattern' of the sound-waves in the atmosphere. Yet the great majority of people hear enough for practical purposes with approximately the same error in the hearing of it, and, by tacit consent, the error is not regarded. A great fallacy similarly besets the sense of touch and the muscular sense, which gives us information concerning resistances—the hardness and density, weight and strength of things. And, if this is true of senses which supply to the mind data which can be to a large extent scientifically tested, it may be assumed to be equally true of the senses of taste and smell. We may even conjecture that, subtle and complex as these senses are, they are also occasionally illusional.

Before leaving this aspect of delusion, it is well

to advert to hallucination (*q.v.*). A hallucination, like an illusion, is a wrong sense-perception, but differs from it in that there is no outward object for the hallucination. A hallucination is a perception—most commonly of the eye or ear—which is purely and wholly subjective. If the mind accepts this fiction of the senses, there is obviously delusion. Hallucinations do not bulk largely in normal thinking; but they are frequent and important in mental disease.

In conclusion, we may refer briefly to common forms of delusion more in the sphere of thought. Perhaps the best example of all but universal delusion is the common belief in an absolutely free will. It would be entirely out of place here to regard the subject philosophically. Suffice it to say that it is obvious that sometimes one's will is not wholly free in the ordinary sense. Yet people invariably think and speak as if choices were always of their own making. This delusion is clearly necessary and salutary; without it both thinking and doing would come to a standstill. Another delusion, equally inevitable and necessary, is one which besets every thinking man, that is, that he believes he possesses a thinking organ which works correctly. Give two men exactly the same data and let them think out a conclusion: each believes, is bound to believe, that he is thinking correctly; yet in many cases the conclusions will differ; so there must be error somewhere. Finally, we may cite the very prevalent delusion that any thought can reach a final conclusion. Nearly every one feels, and a great many people believe, that a subject can be finished, that thought can reach and hold all there is to be known about it, and usually a statement of the conclusion is forthcoming. And, while it is obvious that no subject can be exhausted and no statement final, this delusion is also inevitable. These examples will suffice to illustrate the subject, and it only remains to add that a wise mind will take note of the inevitable margin of error in its own operations and perhaps discount it, yet not be daunted by it.

GEORGE R. WILSON.

DEMOCRACY.—See GOVERNMENT.

DEMOCRITUS.—A Greek philosopher (c. 460–c. 356 B.C.) whose importance lies in his being the pioneer of Materialism and the mechanical explanation of the universe.

1. Life and writings.—The birthplace of Democritus was Abdera in Thrace, a flourishing colony founded by the Ionian city of Teos. He must have been a fellow-citizen, and, if the received dates are approximately correct, a younger contemporary, of Protagoras. The accounts of his life which have come down to us are open to suspicion on various grounds. They dwell on his insatiable scientific curiosity, which impelled him to spend years in foreign travel. He is said to have visited Egypt in order to learn geometry from the priests, and to have held personal intercourse with Magi and Chaldeans in Persia and Babylonia. What amount of truth there is in these tales it is hard to say. Like Pythagoras, Democritus became to later ages a legendary figure, whose real attainments in mathematics, physics, and astronomy appeared less remarkable than his supposed skill in alchemy and magic. The list of his writings that survives shows him to have been a prolific author. The grammarian

Thrasyllus, in the time of Tiberius, arranged the collection in tetralogies, or sets of four—the same arrangement which he had adopted for the *Dialogues* of Plato. The lucidity and simplicity of Democritus' style are praised in antiquity by competent critics like Timon, Cicero, and Dionysius of Halicarnassus. He wrote in the Ionic dialect, hitherto almost exclusively employed by prose writers, although in his own lifetime it was being gradually superseded by Attic. The subjects treated were, to judge by their titles, chiefly Mathematics, Physics, Astronomy, Anthropology, and Ethics. We have fragments definitely stated to come from the *Kavón* and the *Kpatuvrḗria*, both dealing with the method of science, and from the *περί Εὐθυμίας*, an ethical treatise.

To his mathematical achievements there is unimpeachable testimony. Three of the thirteen tetralogies consisted of treatises on Geometry and kindred subjects, including Optics and Astronomy. From the title of one of them, 'On irrational straight lines and solids' (*περί ἀλόγων γραμμῶν καὶ στερεῶν*), it may be inferred that Democritus preceded Euclid in the investigation of irrationals—a problem which, as we know from Plato's *Theætetus*, was occupying the foremost geometers in the 4th cent. B.C. Similarly, Archimedes in his *περί τῶν μηχανικῶν θεωρημάτων πρὸς Ἐρατοσθένην ἐφόδος* (lately discovered at Constantinople, and published by Heiberg in 1907) assigns to Democritus no small part of the credit for two important theorems, namely, that the cone is one-third part of the cylinder, and the pyramid one-third part of the prism, having the same base and equal height. Democritus made the discoveries by means of mechanical methods; Archimedes afterwards supplied a rigorous geometrical proof. The investigation by means of mechanics involved a partial anticipation of the infinitesimal calculus (see Heath's *The Thirteen Books of Euclid's Elements*, Cambridge, 1908, iii. 366–368, 4, ii. 40).

It is not, however, from the meagre fragments remaining that we derive our best information as to the doctrines Democritus taught, but rather from the criticism of opponents, especially Aristotle and Theophrastus, who gave to his works the attention they deserved. Aristotle in his scientific treatises is evidently much indebted to Democritus, and, though he often dissents from his conclusions, invariably speaks of him with respect and admiration. Plato, it is true, never mentions him by name, yet from various passages in the *Dialogues* it is obvious that not only was he acquainted with the system of the Atomists, but even regarded Democritus as the type and representative of all those tendencies which he himself most actively combated.

2. Leucippus.—Democritus can hardly claim to have originated the system which he taught. There seems no valid ground for doubting the statement that Leucippus preceded him in laying the foundations of Atomism, which they both afterwards developed in common.

The metaphysical basis of Leucippus' doctrine, as stated by Aristotle, presumed the Eleatic paradox that reality or real being is One, not Many, immutable and eternal, not transient and diverse: whence the Eleatics deduced that our world of manifold and fleeting appearances is not that which truly exists. As all the earlier Greeks, from Thales downwards, in their search for a primary substance were unconsciously endeavouring to frame a conception of matter, the permanent substratum of the outer world, the Eleatic paradox is only another way of stating that matter alone is, where by 'matter' is meant the Full, not the Empty, or, in modern parlance, that which has mass. Empty space, then, if it is not matter, is

non-existent; the world is a continuous indivisible *plenum*. Leucippus, if he is to be credited with originating the Atomistic doctrine, altered this conception by opposing extension to mass as the fundamental postulate. The extended as full and the extended as empty, the *plenum* and the *vacuum*, or matter occupying space and space unoccupied by matter, were in his view equally real. The Eleatics were right in asserting the one, but wrong in denying the other. By introducing real space and the geometrical forms of bodies as spatially determined, Leucippus destroyed the Eleatic One and reverted to pluralism. But he had still to meet the subtle arguments from infinite divisibility, by which Zeno of Elea had disproved the possibility of motion and of multiplicity. Since these arguments could not be refuted, nothing remained but to postulate indivisibles (*άτομοι, άτομα*) as the ultimate constituents of corporeal reality—things in space (*Ar. Phys.* i. 3. 187a, 1-3). The sum of existence, then, includes empty space as well as the atoms or indivisible particles of matter in space. Both matter and space are eternal, infinite, and homogeneous throughout. The only differences which single atoms present are differences of shape, from which must follow differences of magnitude. But fresh differences are introduced when single atoms come to be grouped and arranged in what we call individual things. There then arise differences of order and position of the atoms in space; for, to use a familiar illustration, A differs from N in shape; AN is not the same as NA, the order is different; nor is Ξ the same as H, the position is different. Aristotle (*Metaph.* i. 4. 985b, 13 ff.) in giving this account admits that he is substituting, for the precise Ionic terms *ἰσχυρὸς* (fashion), *διαθιγῆ* (inter-contact), *τροπή* (turning), his own equivalents *σχήμα* (figure, shape), *τάξις* (arrangement, order), *θέσις* (position). It will be obvious, upon reflection, that these three kinds of difference are merely spatial relations posited and presupposed by the very conception of space as extended in three dimensions.

Here seems the proper place to deal with a controversial question of great difficulty: of the three differences between atoms (shape, order, position), only one (shape) relates to single atoms. That size must go with shape as a property of the single atom seems certain: e.g. atoms of fire are described as the smallest as well as the most mobile. But no good authority attributes to Leucippus or Democritus any utterance implying that weight was a fundamental property of the atom, although Epicurus, when he revised the original doctrine of the Atomists, expressly derived weight as well as magnitude from shape, and, as is well known, deduced from their weight the tendency of free atoms to fall. Later authorities not unnaturally confused the Atomic doctrine of Leucippus and the revised version of Epicurus. But the opinion has now gained ground that Leucippus and Democritus put forward no positive views as to weight being a fundamental property of a free or isolated atom, or as to the direction and force of the motion originally inherent in a free atom.

3. Developments of Atomism.—(a) *Relativity of sensible qualities.*—We have given in outline the theory which Democritus adopted and developed. When compared with the rival systems of Empedocles and Anaxagoras, it is seen to be decidedly superior in simplicity and logical coherence. These other systems also resolve the universe into matter in motion; but, in the resolution proposed by the Atomists, qualitative changes in things result from quantitative changes in their constituent elements, and all proceeds uniformly by a law of

natural necessity. Each of these two positions calls for further elucidation. The conception of a permanent substratum, or primary matter, to the early Greek thinkers, involved two attributes. It was, they thought, at once indestructible and immutable; in other words, the sum of matter in the universe remains quantitatively and qualitatively constant amid all the change and variety of Nature. How this result was secured by the Eleatics has already been shown. Empedocles and Anaxagoras took another way, maintaining a plurality of elements qualitatively constant. The four elements of Empedocles—earth, water, air, fire—and the infinity of seeds assumed by Anaxagoras are alike in this, that they possess as fundamental and inalienable the qualities perceptible to sense. But these attempts to shape the conception of matter were attended by insuperable difficulties, so long as the sensible qualities of derivative bodies were ascribed to the original elements (whether four or an infinite number) out of which these bodies were compounded. In fact, on the theory of Anaxagoras, the distinction between original and derivative forms of matter vanishes, for there must be as many primary substances as there are varieties of sensible qualities.

This difficulty the Atomists solved by distinguishing the fundamental properties of matter as such from all other sensible qualities. In principle the distinction is the same as that made by Locke between primary and secondary qualities. The changing qualities of sensible things, such as colour, flavour, odour, temperature, cease then to be attributes of matter as such; and Democritus expressed this by saying: 'By custom there is bitter and sweet, hot and cold, and colour; in reality nothing but atoms and void' (*Sext. adv. Math.* vii. 135; Diels, 55 B, 9 [i.² 388]). It would, however, be misleading to characterize these secondary qualities as subjective: they lose nothing of objective validity because the mode in which they produce their effects has become explicable. To take the first pair of qualities in the citation from Democritus—sweet and bitter. It is an acknowledged fact that wine, which normally tastes sweet, is bitter to the jaundiced patient, and we may infer from Plato's *Theætetus* that Protagoras had called attention to this and similar facts. Now the Atomistic doctrine declares wine, like all other sensible bodies, to be merely a complex of atoms of such and such a shape, size, and position, and containing such and such a proportion of *vacuum*. As such, each body produces a certain effect upon all other similar bodies, including the human organs of taste. That effect, again, must partly depend upon the constitution of those organs, and on their permanent or temporary, common or individual, qualities. But, whereas Protagoras emphasized the divergence of the effects under different conditions, and left out of sight its possible causes, the Atomistic theory took account of both. It allowed a relative value to the divergent perceptions, while at the same time it maintained the objective validity of that which produced them—in other words, the structure of perceptible material bodies and the essential properties of the matter out of which they were constituted. Viewed in this light, an enigmatical utterance attributed to Democritus by the Epicurean Colotes becomes perfectly intelligible. If Democritus said that an object does not possess one kind of quality more than another (*τῶν πραγμάτων ἕκαστον εἰδὼν οὐ μᾶλλον τοῖον ἢ τοῖον εἶναι*—*Plut. adv. Col.* 4, p. 1108 F; Diels, 55 B, 156 [i.² 413]), we may be sure that he was speaking of the secondary qualities, and not of the properties of matter as such. The atoms have no secondary qualities. Thus colours, flavours, odours, tem-

perature, have no objective existence *per se*; they, at all events when perceived, are relative to the percipient. To one who held this view the task of science was immensely enlarged, at the same time that it became more definite. The problem was to advance from the known to the unknown, to determine precisely how the motion of atoms in the void produced the totality of changes, and the variety of changing qualities perceived by sense. No wonder that, unaided by the apparatus of modern science, the explorer from time to time regretted the futility of results attained, and confessed with a sigh:

'Truth lies in the deep' (Diog. Laert. ix. 72. 6; Diels, 55 B, 117 [i.² 407]). 'We perceive, in fact, nothing certain, but such things only as change with the state of our body, and of that which enters it, and which resists it' (Sext. *adv. Math.* vii. 136; Diels, 55 B, 9 [i.² 388]).

No less important is the part played in the system by the conception of causation. A fragment of Leucippus lays down the axiom that 'nothing comes by accident, but everything from a cause and under stress of necessity' (Aet. i. 25. 4; Diels, 54 B, 2 [i.² 350]). In such unequivocal terms did he state the universal law of causation, and to this principle his successor consistently adhered. For all that happens in Nature a sufficient explanation was furnished by kinematics and mechanics; there was then no need of any supplementary hypothesis, whether of design on the one hand or of arbitrary spontaneity on the other. It was enough to assume motion as an inherent attribute of matter—an ultimate fact for which no derivation was required. The motions of the atoms were as eternal as the atoms themselves, and were necessary; that is, in the unending series of movements each followed upon and was determined by definite antecedents. Granted that atoms moving in space come into collision, the whole history of the universe becomes an application of mechanical laws. Colliding atoms suffer pressure and impact, unite in groups, and break away from such unions; and thus arises all change, the succession of all events: the birth and destruction alike of particular things and of the infinite worlds are but moments in this succession.

(b) *Cosmogony*.—The direct outcome of Atomic motion must be the production of our world and of all the individual things in it, for these are given in experience. As to the process by which this goal is reached, our information is sadly defective. Of one thing we are certain—that Leucippus and Democritus had no recourse to external forces, such as the attraction and repulsion which Empedocles personified as Love and Strife, or the *voûs* of Anaxagoras. A late epitomator writes of Leucippus:

'The worlds arise when many atoms are collected together into the mighty void from the surrounding space and rush together. They come into collision, and those which are of similar shape and like form become entangled, and from their entanglement the heavenly bodies arise' (Hippol. *Ref.* i. 12; Diels, 54 A, 10 [i.² 345]). Another account gives fuller details: 'Many atoms of manifold shapes cut off from the infinite are borne into a vast void, and there collecting set up a single vortex movement, in which they collide and are whirled in all directions, so that separation is effected and the like atoms come together. And, as they become too numerous to revolve with equal velocity, those which are light are, so to speak, sifted out, and fly off towards the outer void; and the rest remain together, and, becoming entangled, join their orbits with one another, and form in the first place a spherical mass. This becomes a sort of shell, including in itself atoms of all kinds; and, as these through repulsion from the centre are made to revolve, the enclosing shell becomes thinner and thinner, the adjacent atoms being attracted as soon as the vortex overtakes them. In this way the earth was formed as the portions brought to the centre coalesced. And, again, even the outer shell grows larger by the influx of atoms from outside, and incorporates with itself whatever it touches. And of this some portions are locked together and form a mass which was at first damp and miry, then dried as it revolved with the universal vortex, and afterwards took fire and formed the substance of the stars' (Diog. Laert. ix. 82; Diels, 54 A, 1 [i.² 343]).

In this effort of the scientific imagination several

points deserve notice. The doctrine of innumerable worlds or cosmical systems becomes clearer when we consider that matter and space are supposed to be infinite, and any place where atoms meet may become the kernel or nucleus of a world, provided that a vortex motion is thus set up, and in consequence a sufficient aggregation of matter crystallizes, so to speak, around a centre. As, moreover, the atoms are infinitely various in shape, the worlds formed from them will display the greatest diversity; though it may also happen that some of them are absolutely alike. Again, the principle of 'like to like,' common to most of the Greek physicists, receives some sort of explanation from the assumption of a vortex. As, on the beach, pebbles of like size and shape are collected by the tide, as the winning-fan sifts and separates grain (Sext. *adv. Math.* vii. 117; Diels, 55 B, 164 [i.² 415]), so the cosmical vortex plays the same mechanical part in bringing together homogeneous particles, that is, atoms approximately alike in size and shape. Thus Democritus is able to bring his notion of our world into tolerable harmony with popular opinion. It floats in the void, surrounded by its revolving shell of tightly compressed atoms—the vault of heaven; the space between this outer envelope at the circumference and the solid earth at the centre is filled with air in which the stars move. The earth presents a flat surface above and below, round horizontally like a quoit or tambourine, and so broad as to support itself on the air.

We may note the influence of Anaximander, with whom probably originated the old Ionian theory of infinite worlds, and of Anaxagoras (*q.v.*), who postulated a rotatory movement to effect separation of unlike and aggregation of like. Democritus can hardly be credited with original contributions to astronomy; but he welcomed the novel doctrines of Anaxagoras which had so startled his contemporaries. He held the sun to be a red-hot mass, but regarded it and also the moon as originally the nucleus of a separate system, which had been entangled in the vortex-motion of our world and subsequently ignited. The oceans were formed when, under the influence of wind and solar heat, the smaller particles were forced out of the earth, and ran together as water into the hollows. In relative size the central earth exceeds the sun, moon, and stars; yet the latter must have been accorded considerable dimensions if Democritus accepted the Anaxagorean assumption of plains, mountains, and ravines upon the moon's face (Aet. ii. 25. 9; Diels, 55 A, 90 [i.² 367]).

This cosmology is vitiated through and through by the undue importance it gives to our planet. The geocentric hypothesis still retained its sway over the philosopher, who tells us:

'There are infinite worlds, differing in size; and in some of them there is no sun and moon, in others the sun and moon are larger than in our world, or there are several suns and moons. The worlds are unequally distributed in space; here there are more, there fewer; some are waxing, some are in their prime, some waning; coming into being in one part of the universe, ceasing in another part. The cause of their perishing is collision with one another. And there are some worlds destitute of moisture and of living creatures. In our world the earth was born before the stars; the moon is nearest to the earth, the sun comes next, fixed stars are furthest off. The planets themselves are at unequal distances from us. A world is in its prime so long as it is able to absorb fresh matter from without' (Hippol. *Ref.* i. 18; Diels, 55 A, 40 [i.² 360]).

In the words of an enthusiastic admirer (Gomperz, *Griechische Denker*, i.² 295), we seem to be listening to a modern astronomer who has seen the moons of Jupiter, has recognized the lack of moisture on the moon, and has even caught a glimpse of nebulae.

(c) *Psychology*.—All particular things, and amongst them the four so-called elements—earth, water, air, fire—are aggregates or atom-complexes:

and their character is determined by the shape, order, and position of their component atoms. Atmospheric air plays its part, but the most important is fire, because the most mobile, being composed of atoms exceedingly fine, smooth, and round. Fire-atoms are the moving principle of organic bodies, the soul being a sort of fire or heat, while mental activity is identical with the motion of these fiery particles. Upon this foundation is constructed a materialistic psychology, which in turn determines the epistemology and ethics of Democritus. Such a doctrine invites comparison with the speculations of Heraclitus and Anaxagoras, the former of whom regarded soul as an exhalation fed by vapours from the warm blood. The *pois* of Anaxagoras, whether by this he meant simply intelligence, or some sort of mind-stuff, was supposed to be diffused throughout the universe; and similarly the theory of Democritus tends to destroy any fixed line of demarcation between organic and inorganic in Nature. For, according to him, fiery soul-atoms are taken in from outside. Owing to their great mobility, they are constantly liable to escape from the animate body, and this tendency is counteracted by the process of respiration, which checks the escape of imprisoned soul-atoms by a current of air, and continually renews them. In sleep or in a swoon there is less resistance: more of the fiery atoms escape, and mental activity is proportionately diminished; while death itself is the result of their entire dispersion in the surrounding air. Since all qualitative change in things is reduced to, and explained by, quantitative changes of atoms and atomic motions, no exception can be made in dealing with psychical activities and the phenomena of mental life. Sensation, thought, and all other functions of the soul are in reality movements of the soul-atoms, produced in accordance with the mechanical laws of pressure and impact. This principle is rigorously carried out, and its consistent application is a characteristic feature of Atomistic psychology. It is most obvious in the theory of sensation, which Democritus in part inherited from Empedocles. Contact between object perceived and perceiver is the indispensable condition of all perception, so that all the various senses are in the last resort modes of one—*viz.* touch (*Ar. de Sensu*, iv. 442a, 29).

When, as in the case of sight, hearing, and smell, the perceptible object is at a distance, Democritus, like Empedocles, supposed that particles of external things found their way into the pores of the sensory organs. It is true that, according to Empedocles, the pores or passages through which the particles travelled were never absolutely empty, for, on his view, the universe was a *plenum*; whereas Democritus supposed the particles thrown off to move, like all atoms, through empty space; but this hardly affects the general likeness between the two theories. The introduction of atoms in certain ways, through the organs, to the soul answers to the introduction of effluxes (*dropoal*) through the pores, which Empedocles maintained. The atom-complexes thus given off resemble the external objects themselves. Democritus called them *dekeia*—an Ionic term for which Aristotle substituted *εἰδωλα*. What we perceive, then, is in a manner in the soul; but the soul itself must consist of matter capable of being affected mechanically by it, that is, capable of the impact, reaction, movement, *ἀλλοίωσις*, which is the essence of perception.

The sensory organs thus become passages for instreaming atoms. Take vision. The eye is a moist porous organ—seeing results when the image of an object is mirrored in the pupil. So much we are told on excellent authority; but how

it comes about that the pupil receives, or, if it is a mirror, reflects, this image, is a point on which neither the criticisms of Aristotle and Theophrastus nor the later accounts of Aetius and Alexander Aphrodisiensis throw much light. In fact, it remains doubtful whether the efficient cause is the emanation from the visible object or the air which has received a certain impression, comparable to that of a seal upon wax, from this emanation. The suggestion that in seeing nearer objects the former, in seeing distant objects the latter, is the proximate agent, although ingenious, lacks all authority. Colour, the proper object of vision, as explained above, is not a primary quality of bodies, but is relative to the perceiver. The visible thing is composed of colourless atoms of given shape arranged in a certain order and position, and, when it is said to have colour in virtue of its atomic structure and the movements of its atoms, this really means that it is capable of exciting a particular effect in the sensory organ—the eye. Democritus assumed four primary colours—white, black, red, and green (*χλωρόν*)—and derived all other shades of colour from the mixture of the primary four in definite proportions. From this it follows that the numerous bodies which cannot be classed as having one or other of the primary colours must be of a composite nature; they must, that is, include in their composition other than merely homogeneous atoms. Thus, referring white to smooth and red to round atoms, he must have assumed, in the structure of gold and bronze, the presence both of smooth and of round atoms, since he declared the colour of these metals to be a mixture of white and red. This theory of colour seems to have been carefully elaborated, to judge by the summary and criticisms of Theophrastus (*de Sensu*, 49 ff.). The crudeness of his assumptions is obvious: whiteness is supposed to be due to smooth, blackness to rough atoms, redness is caused by heat, and the atoms of fire are supposed to be spherical.

In the treatment of hearing and its correlative object, sound, of which speech or vocal sound is the leading type, Democritus agreed in the main with his contemporaries. As emanations (*δεκελα*) from visible bodies are the stimulus of vision, so the sounds (*φωναί*) which stimulate the organ of hearing are particles or atom-complexes thrown off by the sonant body, and conveyed by the medium of the air to the ear, and through it to the soul. The stream of atoms given off by a sonant body sets the atoms of the air in motion, and, joining itself with these according to similarity of shapes and sizes, makes its way into the body. The orifice of the ear is the chief, but not the sole, entrance for such a current. In making the current affect not the ear alone, but other organs of the body, Democritus showed decided originality. He may have meant no more than that the whole body is sympathetic to the operation of hearing. Probably the purity of sounds was made to depend on the similarity, the pitch and volume on the magnitude, of their constituent atoms. The process by which the sound-atoms themselves and the air broken up by them are, as it were, sorted so that similar shapes and sizes come together must be understood as purely mechanical.

If a theory of emanations from bodies at a distance be employed to explain seeing and hearing, no difficulty will be encountered in applying it to the sense of smelling. The rapid diffusion of perfume is a familiar fact, and it is easily inferred that a finer matter is given off by odorous bodies in the form of an attenuated stream of atoms, which reaches the nostrils. Theophrastus complains of the omission to connect a distinctive quality of the various odours with the atomic

configuration of their particles; but Democritus probably regarded this connexion as easily deducible from the similar connexion between atomic configuration and distinctive quality in the kindred region of tastes, with which he dealt very fully. Thus, he referred an acid taste to atomic shapes which are angular, winding, small, and thin; the sweet to shapes which are spherical and not too small; the astringent to shapes large and with many angles. The bitter is composed of shapes, small, smooth, and spherical, with hooks attached to the spherical surface; the saline of large shapes, in many cases not spherical, but in some cases also not scalene, and therefore without many flexures; the pungent is small, spherical, and angular, but not scalene.

With this the theory of sensation is complete.

All senses have been resolved into modes of touch, which must, therefore, have been for Democritus the primary sense, as it was for Aristotle. But of touch itself as a physiological function he could give no detailed investigation. Pressure, impact, and motion—purely physical conceptions—are employed by the Atomists without misgiving, as if they had not realized the true nature of the physiological process. The relations between realities of every kind were reducible to the purely mechanical form. The interaction involved in sense-perception could not differ from the action of any atomic bodies whatsoever upon one another, for this contact is the necessary and universal condition, and contact between *perceptiens* and *perceptendum* only a special case. Sensation itself is the movement set up when spherical soul-atoms have thus been brought into contact with the atoms of an external object, or the atom-complexes (*δεκτα*) emanating from them. On this theory, then, sensory facts have nothing to distinguish them from the larger total of physical facts; nor can there be a fundamental difference between sensation and intellect. Aristotle expressly testifies that Democritus made no such distinction (*ταὐτὸ λέγει ψυχὴν καὶ νοῦν* [*de Anima*, i. 2. 404a, 28, 31; cf. 405a, 9]). There is no evidence that he put to himself Aristotle's question, What is the faculty by which the data of sense are combined and distinguished, by which we are conscious of our mental acts, by which we imagine and remember? All our information is that, while the soul-atoms were divided or distributed over the entire body, he located certain mental functions in certain parts of the frame; e.g. the separate sensations in the sensory organs, and, further, according to some doubtful authorities, intelligence in the brain, anger in the heart, appetite in the liver. Such statements are not in themselves incredible, on the assumption that, in different parts of the body, soul-atoms of distinctive size and mobility are apt to be associated and massed together; but the partial anticipation of Plato's tripartite division of soul is open to suspicion, and on such points Aetius and pseudo-Hippocratican writers of the 2nd cent. are not to be trusted.

What, then, is thought, and how does thinking come about? It must be analogous to sensation in so far as it is a movement of soul-atoms stimulated by an external cause; the latter is not far to seek, when we reflect on the familiar fact of the similarity between a sensation and the corresponding idea. Emanations from external objects (*εἰδωλὰ ἐξωθεν προσπίοντα*) must then be postulated for the latter as for the former. The same causes acting upon soul-atoms in the same mechanical fashion accounted for dreams, visions, and hallucinations. So far from rejecting these mental processes as illusory, Democritus seems to have based upon them some sort of divination or mantic. The emanations which excite these abnormal processes must be

supposed to be of a finer texture than those of ordinary sensation or thought.

(d) *Epistemology*.—What, then, is the relation between sensation and thought—in other words, what contributions does Democritus make to the theory of knowledge? The *locus classicus* is a passage preserved by Sextus (*adv. Math.* vii. 138; Diels, 55 B, 11 [i. 2 389]). It was taken from a work entitled 'The Canon,' which presumably discussed the process of inference from the known to the unknown, and laid down rules for induction. The passage runs as follows:

'There are two forms of knowledge, the genuine and the obscure. To the obscure belong all these: sight, hearing, taste, smell, touch; the other form, genuine knowledge, is altogether distinct from this. . . . 'In what follows,' says Sextus, 'Democritus ranks the genuine form above the obscure, and adds [to follow the restoration of the text by Diels]: "When the object becomes too minute for the obscure form of knowledge to see, or hear, or taste, or smell, or touch it, when greater precision is required, then the genuine knowledge comes into play, as the possessor of a more precise organ of discrimination."'

This means that thought can reach that which is inaccessible to sense. The Atomic theory, as it shaped itself in the mind of the philosopher, is a proof, for neither the atom nor space is sensibly perceived. Moreover, the geometrical forms and the whole of geometrical science, to which Democritus gave as loyal a support as Plato himself, being inseparable from space, have the same rational origin. It is true that he made no fruitful application of geometry to physical research, but the same may be said of the Pythagoreans, of Plato, and of all who preceded Galileo. Further, it is easy to see why the Atomists preferred thought to sense, though both have essentially the same object—corporeal things and material processes, atoms and atomic movements. Thought was to them mental intuition, an affection which registers, so to speak, more delicate movements due to complexes of minuter atoms. The senses do not extend far enough; the mental vision describes the atom, but the bodily eye cannot. The senses, being unaffected by the finer atomic movements, desert us at the point where the minutest bodies and the most delicate processes require investigation.

(e) *Ethics and religion*.—The scanty fragments which have come down to us under the name of Democritus include a mass of moral reflexions. Much of it is undoubtedly spurious, and the task of sifting the grain from the chaff has not yet been accomplished with success. Though little of scientific value has been preserved, the outlines of a definite view of life stand out clearly. In form these utterances bear the stamp of the scattered moral reflexions attributed to Heraclitus and the Pythagoreans, the single exception known to us being the treatise *περί Εὐθυμίας*, which made some advance to a definition of the ethical end. The treatise apparently opened with a description of the miserable condition of the majority of mankind, distracted by inordinate desire and superstitious terror, vainly striving for a multitude of objects without finding in any of them permanent satisfaction. As the goal of moral endeavour, Democritus proposed what he himself called tranquillity or cheerfulness (*εὐθυμία*) and well-being (*εὐεστώ*). Such composure or peace of mind he compared to an unruffled calm at sea (*γαλήνη*). Other terms for this ethical end occur in the fragments, such as *ἀσταβία*, *ἀταραξία*, *ἀδαντασία*, *ἀρμονία*, *εὐμμερία*; but it is not certain whether they were ever used by Democritus himself. His main tenet, repeatedly enforced in a variety of ways, is that true happiness, this inestimable tranquillity, does not depend on anything external, on wealth or goods of the body, but on uprightness and intelligence. Moderation and contentment, purity of deed and thought, are its distinctive marks; education is the best means to it.

The question arises whether this ethical teaching (of which, after all, we know so little) is intimately connected with the physical doctrines of the Atomists, so as to form part of one system. On this opinions are divided. Some deny all connexion, and are inclined to regard Democritus, not as the systematizer, but as the eager inquirer, who disperses his energy over a multitude of subjects, and lays the foundation of separate unrelated sciences. Again, it has been suggested that the contemplation of an infinite universe impressed Democritus with a just sense of the pettiness of man and the futility of the ends which ordinary men pursue. But this conjecture is just as improbable as the popular conception of him as the 'laughing philosopher,' provoked to merriment by the incongruity of all around him. Others, taking the distinction between genuine and obscure knowledge as their text, draw a parallel between the preference of thought over sensation, and the similar preference of tranquillity over violent and exciting pleasure. As sensations are atomic movements, so also are feelings, whether pleasurable or painful, and desires. Aristippus had called pleasure a smooth, and pain a rough or violent motion. To Democritus the distinction is not so much qualitative as quantitative; it is in minute and delicate movements of the finest matter, which are imperceptible to sense, that thought and the joys of thought consist.

The views of Democritus about religion are very imperfectly known. A fortunate accident has preserved in the pages of Sextus Empiricus (*adv. Math.* ix. 19; Diels, 55 B, 166 [i.² 415]) his curious belief in superhuman beings, and from other sources he is known to have maintained the possibility of divination from dreams and from the inspection of the liver and other organs of the sacrificial victim. There is nothing in these beliefs which is not in harmony with the principles of atomistic physics, although development in this direction is at first sight somewhat startling. To take divination by victims first. According to Cicero (*de Divin.* i. 57 [131]), the changes to be foretold by an inspection of the entrails were such as affected public health or the prospect of the harvest. The limitation to such cases proves that the symptoms examined and reported upon were such as were due, in the belief of Democritus, to natural causes. Dreams, whether of the ordinary or of the prophetic kind, were, on the atomistic hypothesis, due to images or εἰδῶλα presented in sleep. Emanations from all possible objects flit about continually; amongst them there may be some which reflect the mental condition or even the opinions and designs of other men. Information then obtained in dreams of this sort is a matter of inference, just as when in waking hours the condition and intentions of others are inferred from their looks. The data, however, are less trustworthy, and hence the interpretation of dreams is often erroneous. Emanations, it will be seen, can thus be satisfactorily employed to explain what is unusual and abnormal.

As to the popular theology, it could not be accepted by any of the early Greek thinkers, least of all by Democritus. The interference of Homer's deities in the course of natural events was utterly at variance with speculations which, if they agreed in nothing else, all tended to establish the reign of law and the inevitable sequence of phenomena. If nothing exists but atoms moving in void, if every event is inexorably determined by natural necessity, Divine agency and design in Nature are alike excluded. Democritus was true to this principle, and incurred the censure of Aristotle because he refused to see in the beauty and order of the universe, and more especially in the adaptation of means to ends in the structure of animals and plants, any evidence of design. It remains, however, for the philosopher to explain how the belief in gods arose. Democritus in part ascribed it to man's terror at the awe-inspiring phenomena of Nature—thunder and lightning, eclipses of the sun and moon, comets, earthquakes, and the like. In the popular belief the gods were certainly regarded as the causes of natural phenomena, and, so far, as personifying natural forces. But this was not all; in part the faith of the multitude rested on actual evidence of sense, observations which there was no

reason to doubt, even if they had been misunderstood. To meet this case, Democritus introduced as a *vera causa* beings differently constituted and in some respects superior to man. He may have been prompted by the common Greek notion of dæmons (δαίμονες), found, e.g., in Hesiod, as something intermediate between men and gods; or it might even be said that he degraded the gods to the rank of dæmons. He assumed, at all events, that there are in the surrounding atmosphere beings who are similar to man in form, but surpass him in size, strength, and longevity. Streams of atoms would emanate from them as from all other external objects, and, coming in contact with the sensory organs, might render these beings visible and audible to men. The popular belief in their divinity and immortality was a gratuitous assumption; in truth, they are not indestructible, but merely slower to perish than man. Of these beings and their images there were two species—one kindly and beneficent, the other destructive and harmful. Hence Democritus is said to have prayed that he might meet with such images as were kindly and beneficent.

The atomistic doctrine which, as mentioned above, supposed an entire dispersion of soul-atoms to take place at death, left no ground for inferring the survival of individual existence. The instinctive fear of death is once or twice referred to in the fragments, and generally as something unreasonable. With the interest of a modern man of science, Democritus appears to have investigated cases of resuscitation of persons apparently dead, and to have decided that, however violent the injury received, life during the swoon or trance cannot have been altogether extinct (*Procl. in Kemp.* ii. 113, 6 [Kroll]; Diels, 55 B, 1 [i.² 384]). We have no evidence that he or any of his school were active in denouncing and opposing superstition. One of his works bears the title *Περὶ τῶν ἐν Ἀΐδου*, but the sole reference extant to belief in a future life is the passing allusion:

'Some men do not understand that a mortal nature is subject to dissolution, and, being conscious of the evil in life, painfully spend all their days in troubles and fears, inventing lies about the time after death.'

4. Historical importance.—The doctrine here presented in outline was never popular in antiquity, or rather it may be said to have fallen into disrepute. This was due in part to the fact that Democritus avoided dialectical discussions, so dear to the Greeks from the time of the Sophists. Yet Aristotle, his keenest critic, praised him for his empirical method of research, and agreed that it was better to deal with things in the concrete (φυσικῶς ζητεῖν) than to reason from vague abstract premises to conclusions which did not exactly fit the facts of the case (λογικῶς ζητεῖν). The great prominence given after the time of Socrates to ethics and the practical side of life was another reason why Atomism failed to attract public attention. Few names of adherents have come down to us, hardly enough to be called a school. Epicurus (q.v.) absorbed in his own system what he thought fit, leaving one fundamental doctrine—that of natural necessity—to his rivals, the Stoics. Here the genuine doctrine of Democritus vanishes, or re-appears only in those criticisms of Aristotle's which, as Lasswitz has shown, formed, to some of the keener intellects among the schoolmen, a rallying-point from which to question or even ultimately to undermine the authority of the Stagirite. The loss of Democritus' writings was, in Bacon's opinion, the greatest which antiquity had sustained; and, after Galileo's experiments had opened a new era in physical research, this appreciation of empirical methods was triumphantly vindicated.

The chief service which Democritus rendered to

philosophy lay in the rigid consistency with which he worked out his crude Materialism. His merits in this respect are best seen by comparison with the Ionian hylozoists who preceded, and the Stoic pantheists who followed, him. So long as material reality is endowed with sentience or reason, the problem of Materialism is not adequately conceived, nor are its difficulties properly faced. The Atomists saw clearly what they had to do, namely, to show how out of matter, which is neither sentient nor intelligent, but merely obeys mechanical laws, it is possible to derive organic bodies which both feel and think. The difficulty of the task was not removed by this clear conception of its nature. There is a gap in the deduction, which no ingenuity can bridge over. The formation of an image on the pupil and the visual sensation contemporaneous with it remain wholly distinct: the physics of Democritus may explain the first, but not the second. Ever so correct a theory of the mechanism of local movements in the animal still leaves the phenomena of purpose and volition as mysterious as ever, as Aristotle pointed out. The resolution of secondary qualities, as they are called—colour, sound, temperature, odour, etc.—into effects of atomic movements on the percipient was a great step in advance; but Democritus did not realize all its consequences. Modern psychology has shown that the same analysis can be applied to primary

qualities, and the seeming solid bodies of the Atomists' external world replaced by groups of tactile sensations; while, further, it asserts that these states of consciousness are our primary data of immediate reality. Thus Materialism, if worked out consistently, is apt to lead out of itself to Phenomenalism or Subjective Idealism, or in some other direction.

DEMONS AND SPIRITS (Introductory; African and Oceanian).—Although a rough distinction may be drawn between demons and spirits by considering the former as malevolent and the latter as benevolent, actual study of the subject soon shows that there is, to the primitive mind, no clear line of demarcation between the two allied classes. Their modes of operation are identical, and the same being may often be either beneficent or maleficent, as circumstances may dictate, though some are normally kindly disposed towards man, while others are almost or quite invariably hostile to him. The very terms 'spirit' and 'demon' are colourless. The former word signifies simply 'breathing,' 'breath' (see artt. BREATH, SPIRIT), while the latter (*dæmon*) originally denoted either 'apportioner' or, less probably, 'apportionment,' 'destiny,' being connected with Gr. *dalaon*, 'divide,' 'apportion,' and Eng. *time* (Boisacq, *Dict. étymol. de la langue grecque*, Heidelberg, 1907 ff., p. 162; cf. also ARYAN RELIGION, vol. ii. p. 54*). The term 'demon' has, moreover, suffered a complete transformation of meaning in *malum partem*, for originally, as will be clear from the 'Greek' section of this art., it had a good connotation, which was changed into an evil one when Christianity condemned the deities and spirits of paganism (see, further, 'Christian' section below)—a change quite analogous to that by which the Avesta *dæva*, 'demon,' is the precise etymological equivalent of the Skr. *deva*, 'god.'

Again, both demons and spirits—to retain for the nonce their somewhat artificial contrast—must be carefully distinguished from souls or ghosts (cf. artt.

SOUL, ANCESTOR-WORSHIP, and the 'Egyptian' section below). This comes out very clearly among the Melanesians,¹ with whom 'it is most important to distinguish between spirits who are beings of an order higher than mankind, and the disembodied spirits of men, which have become in the vulgar sense of the word ghosts. . . . They [the Melanesians] themselves make a clear distinction between the existing, conscious, powerful, disembodied spirits of the dead, and other spiritual beings that have never been men at all' (Codrington, *Melanesians*, Oxford, 1891, p. 120 f.).

The *vui*, or spirit, thus contrasted with the *tindalo*, or ghost, was defined as follows to Codrington by a native of the Banks Islands:

'It lives, thinks, has more intelligence than a man; knows things which are secret without seeing; is supernaturally powerful with *mana*; has no form to be seen; has no soul, because itself is like a soul';

and in Omba, Lepers Island, the definition of *vui* is as follows:

'Spirits are immortal; have bodies, but invisible; are like men, but do not eat and drink, and can be seen only by the dead' (Codrington, 123, 170).

That, despite this assignment of a purely spiritual nature to the *vui*, they should often be regarded practically as in human form, and even as sometimes dimly visible (*ib.* 151 f.), is by no means surprising when we remember that it is well-nigh impossible for man at any stage of civilization to escape entirely from anthropomorphism (*q.v.*).

This distinction between spirits and ghosts is, however, much easier to make in theory than in practice, and Taylor's words regarding the New Zealanders (*Te Ika a Maui*², London, 1870, p. 108)

¹ A very similar distinction may be found in Greek between *θεοί*, *δαίμονες*, and *ψυχές*, the two latter classes corresponding respectively to the Melanesian *vui* and *tindalo* (cf. Usener, *Götternamen*, Bonn, 1896, p. 248 f.).

—'Maori gods are so mixed up with the spirits of ancestors, whose worship entered largely into their religion, that it is difficult to distinguish one from the other'—may be applied to more than one people (cf. also, for Africa, Schneider, *Relig. der afrikan. Naturvölker*, Münster, 1891, p. 113).

But, if demons and spirits must be distinguished from ghosts or souls, an equally clear line must be drawn between them and gods—although it is true that confusion of demons and spirits with gods is frequent, exactly as demons and spirits are often confounded with souls or ghosts. There is, nevertheless, this difference between the two kinds of confusion, that, whereas demons and spirits are, strictly speaking, distinct from souls and ghosts in that the *vui* 'were never men, and have not the bodily nature of a man' (Codrington, 124), the difference between demons and spirits as contrasted with gods appears to be one of degree rather than of kind, so that demons and spirits may be, and very often are, elevated to the rank of gods. On this point Jevons writes as follows (*Introd. to the Hist. of Religion*, London, 1904, pp. 173, 175):

'For the savage, supernatural beings are divided into three classes—the gods of his own tribe, those of other tribes, and spirits which, unlike the first two classes, have never obtained a definite circle of worshippers to offer sacrifice to them and in return receive protection from them. This last class, never having been taken into alliance by any clan, have never been elevated into gods. . . . On the one hand, the community originally drew its god from the ranks of the innumerable spiritual beings by which primitive man was surrounded; and, on the other hand, the outlying, unattached spirits, who were not at first taken into alliance, and so raised to the status of gods, may ultimately be domesticated, so to speak, and made regular members of a pantheon.'

The relations of demons and spirits to that phase of primitive religion properly known as Animism (*q.v.*) are peculiarly close, so that Tylor (*i.*³ 426) declares:

'It is habitually found that the theory of Animism divides into two great dogmas, forming parts of one consistent doctrine; first, concerning souls of individual creatures, capable of continued existence after the death or destruction of the body; second, concerning other spirits, upward to the rank of powerful deities.'

Whether, however, Animism actually furnishes, as was once fondly supposed, a complete explanation of the origin of religion, or whether it was even the earliest form of religion, seems open to grave doubts (cf. the views of various scholars recorded by Schmidt, 'L'Origine de l'idée de Dieu,' in *Anthropos*, iii. [1908]); and the theory is scarcely supported in Melanesia, where so accurate an observer as Codrington can say (p. 123):

'There does not appear to be anywhere in Melanesia a belief in a spirit which animates any natural object, a tree, waterfall, storm, or rock, so as to be to it what the soul is believed to be to the body of a man. Europeans, it is true, speak of the spirits of the sea or of the storm or of the forest; but the native idea which they represent is that ghosts haunt the sea and the forest, having power to raise storms and to strike a traveller with disease, or that supernatural beings, never men, do the same.'

It must also be borne in mind that, while spirits are very frequently believed to inhabit trees, rivers, rocks, and the like, there are many spirits to which no such specific habitat is assigned. In other cases the abode, even in a tree, river, or rock, may be but temporary—a phenomenon which is especially characteristic of dream-demons, disease-demons, and the like.

There is, furthermore, a close connexion of demons and spirits with the great type of religion known as Fetichism (*q.v.*), which may roughly be defined, with Tylor (*ii.* 144), as 'the doctrine of spirits embodied in, or attached to, or conveying influence through, certain material objects,' the fetich itself being a material, or even animal (cock, serpent, bear, etc.), or natural (river, tree, etc.), object in which a spirit is believed to take up its abode, either temporarily or permanently. To quote Tylor (*ii.* 145) again:

'To class an object as a fetich, demands explicit statement that a spirit is considered as embodied in it or acting through it or communicating by it, or at least that the people it belongs to do habitually think this of such objects; or it must be shown that the object is treated as having personal consciousness and power, is talked with, worshipped, prayed to, sacrificed to, petted or ill-treated with reference to its past or future behaviour to its votaries.' Cf., however, the well-founded objection of Jevons, pp. 166-169, to the scientific use of the word 'fetich' at all, since it 'may mean one thing to one person and another to another, because it has no generally accepted scientific definition.'

Nevertheless, however vague the term 'fetich' may be, it is at least clear that the idea of spirit-habitation which it conveys is closely connected, in its development, with the forms of religion associated with amulets (see CHARMS AND AMULETS, vol. iii. p. 398^a) and idols (see IMAGES AND IDOLS).

Generally speaking, a spirit is regarded, unless properly propitiated, as malevolent and maleficent more often than as benevolent and beneficent; in other words, to revert to the common, though lax, phraseology, demons are more numerous than spirits. At first sight this state of belief is analogous to that which gives more prominence to malignant than to benignant deities, because the benevolent gods are already good and need no propitiation, while every effort must be made to appease and to propitiate the malevolent ones. Such, however, does not seem to be the real psychology in the case of demons and spirits. The true ground for the predominance in number and in importance of malevolent over benevolent spirits appears to be well outlined by Jevons (p. 177), who finds the explanation in the fact, already noted, that the spirit is unattached to any clan or community, whereas a god is connected with one or another clan. The spirit is, therefore, much in the position of an unattached ghost; and, as to the primitive mind, with its intense concept of kinship—whether real or artificial—all that is not akin is hostile, a spirit thus unattached, and consequently unakin, would naturally tend to be regarded as hostile and malevolent. It must be remembered, too, that the qualities ascribed to the spirits reflect in great measure the qualities of their worshippers (cf. Schneider, 106); for instance, the Kioko of Portuguese West Africa hold that each spirit has his own district, which he jealously guards, being deeply angered by the intrusion of any neighbouring spirit (*ib.* 150). Spirits also possess other traits still more human, so that, among the African Bambara, the spirits 'have sex, males and females are found among them, they have children, and some, if not all, even believe them to be clothed' (Henry, in *Anthropos*, iii. 702); while in Loango we find a specific 'mother of spirits' named Bunsu, who has peopled the whole land with spirits, who in their turn have begotten others (Schneider, 132 f.); and the Australian Urabunna and Warramunga believe that the black-snake totem ancestor begot spirit children who now live in water-holes and in gum-trees along the bank of the creek (Spencer-Gillen^b, p. 162, cf. also p. 301).

It is comparatively seldom that the primitive mind makes a clear discrimination between good and evil spirits so far as to distinguish them by special epithets, as do the Africans of Benguela (Schneider, 135); and the very fact that the names applied by the Malays of Passumah Lebar to good spirits (*deva*) and to evil spirits (*jinn*) are of Skr. and Arab. origin respectively (Waitz-Gerland, *Anthropol. der Naturvölker*, Leipzig, 1860-72, v. i. 166) betrays the late date of this nomenclature (cf. also Tylor, *ii.* 319).

In the regions under consideration, belief in demons and spirits is especially characteristic of Africa (as is shown at once by the fact that 'fetichism' is *par excellence* the type of African

religion¹), where it maintains itself side by side with ghost-worship. In Oceania, on the other hand, the two types of religion are mutually exclusive. In Polynesia, Australia, and Micronesia, spirits are practically unworshipped as compared with ghosts, while in the Ellice Islands and the Union Group (Tokelan) the reverse is the case (Waitz-Gerland, v. ii. 139-142, 194-199); and in Melanesia.

'religion divides the people into two groups; one, where, with an accompanying belief in spirits, never men, worship is directed to the ghosts of the dead, as in the Solomon Islands; the other, where both ghosts and spirits have an important place, but the spirits have more worship than the ghosts, as is the case in the New Hebrides and in the Banks Islands' (Codrington, 123).

Naturally, the same effect may be ascribed by primitive man to different causes. Thus, among the Orang Kubu of Sumatra and the Mintira of the Malay Peninsula, disease is caused by spirits (Waitz-Gerland, v. i. 181; *Journ. Ind. Archipel.* i. 307), whereas in Africa generally and in Melanesia (Schneider, 116, 125, 152; Codrington, 194) disease is more commonly due to malignant ghosts—although here, too, the vague distinction between ghosts and spirits, already noted, often renders uncertain any precise determination of the cause of disease (cf. Tylor, ii. 125 ff., where further examples will be found; and see art. DISEASE AND MEDICINE). The same statement holds true of possession (or obsession) by spirits and ghosts. Sometimes, as normally in Melanesia, it is the shades of the departed, rather than the *vui*, that cause the phenomena comprised under the category of possession (Codrington, 218-220); while, along the shores of Blanche Bay, New Britain, all this is caused by the *inal*, a being which is evidently a spirit, not a ghost (Meier, 'Der Glaube an den *inal* und den *tutana vurakit*,' in *Anthropos*, v. [1910] 95 ff.; see, further, both for ghost- and for spirit-possession, Tylor, i. 98, ii. 123 ff.); and in the vast domain of magic (*q.v.*) it will be found that both ghosts and spirits are among the powers controlled by magicians.

As regards the places of abode of demons and spirits, the words of Brun (in *Anthropos*, ii. [1907] 728) with reference to the African Malinke, a Mandingo stock, may serve as applicable to almost any people among whom this type of religion prevails:

'Dans la pensée des Malinkés, notre planète est peuplée d'une multitude d'esprits. Les uns résident dans des lieux déterminés, fleuves, rivières, montagnes, blocs de rochers; d'autres dans certains arbres. Le grand vent et le tonnerre sont produits par les esprits. Dans presque tous les villages, il y a un grand arbre dans lequel réside l'esprit protecteur du village.' Among the Polynesians, in like manner, Ellis (*Polyn. Researches*, London, 1832, i. 827-830) records deities (who may, however, originally have been ghosts) of the sea, air, valleys, mountains, precipices, and ravines.

It is, indeed, this very type of Nature-spirit which has in great part given rise to the theory of Animism (cf. Tylor, ii. 205 ff., and, for Polynesia especially, Waitz-Gerland, vi. 295-298). To give a complete list of such spirits would be to catalogue almost every object both in inanimate and in animate Nature—a task that would be not merely enormous, but, for the present purpose, useless, since the underlying principles are everywhere the same, and the varying details do not materially affect the cardinal doctrine involved. It will be quite sufficient, therefore, to note a few of the more prominent classes of Nature-spirits in Africa and Oceania by way of examples of the whole type.

(a) *Animals*.—Along the Slave Coast, Danhgbi, the python spirit, receives divine homage, as do crocodiles and, in Togo, leopards (the latter may, however, be the abodes of ghosts rather than of

¹ It must, however, be noted that Nassau regards all the spirits worshipped in W. Africa as originally ghosts ('Spiritual Beings in West Africa,' in *Journ. Amer. Geograph. Soc.* xxxii. [1901] 889-400, xxxv. [1903] 115-124).

spirits; see ANIMALS, vol. i. pp. 509 ff., 520 f.), and among the Mandingo reverence is paid to serpents as divine (cf. *ib.* vol. i. p. 525 f., and art. SERPENT-WORSHIP). Yet here, too, as just noted, the difficulty of accurate distinction between spirits and ghosts confronts us, and the animal is more usually the home of the latter than of the former (cf. Tylor, ii. 7 f., 229, 378 f.; see also above, vol. i. p. 493 f.); and we must also remember that animals are often held to be god-homes, and that there are still other factors which go to make up the complex system of animal-worship (see art. ANIMALS, TOTEMISM).

(b) *Water-spirits*.—Attention has been called in art. BRIDGE to the wide-spread belief in deities and spirits believed to be resident in rivers, and the same thing is, of course, true of larger bodies of water, such as lakes, as in the Banks Islands (Codrington, 186). To this category belongs the African Fugamu, at once the deity of the Rembo Ngoyai (a tributary of the Ogove) and the teacher of the smith's art, while dreaded demons dwell in the falls of the Congo, and the Kafirs fear the water-demons Ikanti and Uhili (Schneider, 131, 133, 137, 151 f.; Kidd, *Essential Kafir*, London, 1904, p. 10, inclines to regard the Kafir demons as ghosts rather than as spirits); thus, as Tylor sums up the matter for Africa (ii. 211; cf. also i. 108-110, ii. 209 ff.),

'In the East, among the Wanika, every spring has its spirit, to which oblations are made; in the West, in the Akra district, lakes, ponds, and rivers received worship as local deities. In the South, among the Kafirs, streams are venerated as personal beings, or the abodes of personal deities, as when a man crossing a river will ask leave of its spirit, or having crossed will throw a stone; or when the dwellers by a stream will sacrifice a beast to it in time of drought, or, warned by illness in the tribe that their river is angry, will cast into it a few handfuls of millet or the entrails of a slaughtered ox.'

(c) *Forests and trees*.—Forests and trees likewise are the abodes of spirits. The New Britain belief in the *inal*, which, in the form of an owl, has its usual home in a tree, has already been noted, and a similar belief prevails in Melanesia (Codrington, 186 f.). For a like reason the Wanika reverence the coco-nut palm (Schneider, 159), while the Bambara also are among the many African peoples that believe trees to be tenanted by spirits (Henry, in *Anthropos*, iii. 703; for further examples, where ghosts, totems, etc., are also factors, see Jevons, ch. xvi.; Tylor, i. 475, ii. 215 ff.; and art. TREES).

(d) *Mountains*.—The African Malinke believe that the mountain at Kita is the home of malevolent spirits (Brun, *loc. cit.*), and throughout Oceania there was an abundance of mountain- and rock-spirits, some of which must, however, be reckoned as ghosts (see Waitz-Gerland, vi. 295-297, where may be found a general survey of Nature-spirits in the Pacific islands). The extent to which mountain-spirits may be specialized is well illustrated in the list of the dread deities of the volcano Kilanea, in Hawaii, thus recorded by Ellis (iv. 248 f.):

Kamoho-aril ('king Moho,' or 'king vapour'), Ta-poha-i-tahiora ('explosion in the place of life'), Te-au-a-te-po ('rain of night'), Tane-hetiri ('husband of thunder'), Te-ahi-ta-ta-ta ('fire-breathing child of war')—all these being brothers; Makore-wawahi-was ('fiery-eyed canoe-breaker'), Hiata-wawahi-lani ('thunder-rendering cloud-holder'), Hiata-nohu-lani ('heaven-dwelling cloud-holder'), Hiata-taarava-mata ('quick-glancing-eyed cloud-holder'), Hiata-hoi-te-pori-a-Pele ('cloud-holder embracing [or, kissing] the bosom of Pele'), Hiata-bu-enaena ('red-hot mountain-holding [or lifting] clouds'), Hiata-tarelia ('wreath-encircled cloud-holder'), and Hiata-opio ('young cloud-holder')—all these being sisters of the great goddess Pele.

Prominent among the distinctly good spirits are those whose special function it is to act as guardians. From this class we must, of course, exclude the 'separable soul,' such as the *okra*, or *kra*, of the Tshi and the *luwo* of the Ewe, which is a second soul, created together with the individual whom it is to guard throughout his life (see art. SOUL); and we must also once more essay the fair

less easy task of distinguishing guardian spirits from guardian ghosts. To the latter class seem to belong such supernatural guardians as the Zulu *ama-tongo*, the Bantu *mizimi* and *ombwiri* (Schneider, 139 ff., 152; Hartland, art. BANTU, vol. ii. p. 360*), and the Tahitian *oramatua* (Waitz-Gerland, vi. 316); yet there are also cases where the guardian is believed to be a spirit in the strict sense of the term. Such appears to be the case in the Gold and Slave Coasts (Jevons, 165 f.; see also his whole ch. xiv.), and in Samoa and other Polynesian islands the guardian spirit was expressly declared to be a god (*aitu*), not a ghost (*varua*; see the examples collected by Waitz-Gerland, vi. 317 ff.). For further details, see artt. TOTEMISM, TUTELARY GODS.

Another important class of spirits is formed by those of prophecy, their functions being to a large extent shared, as is perfectly obvious, by ghosts. As examples of this kind of beings we may refer to a spirit dwelling in an enormous stone near Kita (Brun, *loc. cit.*), the Matabele Makalaka (Schneider, 144), and the *inal* of Blanche Bay (Meier, in *Anthropos*, v. 96 f.; cf. also Tylor, ii. 131 f.). These spirits may simply be consulted, as at Kita, or they may enter into an individual, producing a state of ecstasy, as at Blanche Bay (see artt. ORACLE, POSSESSION). Again, it is to the agency of spirits that primitive man attributes a large proportion of his dreams (Tylor, ii. 189-191, 411; see also art. DREAMS), especially those of an erotic or nightmare character, while ordinary dreams of persons, animals, and things would normally be ascribed rather to the action of souls, whether of the living or of the dead. That demons and spirits are important factors in causing disease has already been noted (above, p. 567*).

The presence of demons and spirits is normally revealed solely by intangible manifestations which the primitive mode of thought can explain only through the agency of such supernatural beings, as in the case of disease, dreams, many natural phenomena, and the like; but a demon or spirit is also often regarded as sufficiently tangible to leave footprints in ashes or similar substances strewn where it may be thought likely that he will come; and animals are frequently believed to be able to perceive spirits which the duller vision of men cannot discern (Tylor, ii. 196-198). Beneficent spirits, when present, are, of course, gladly entertained, and are even constrained to remain; but there is, naturally enough, a determined effort to get rid of maleficent demons. All these operations of invitation or of expulsion are part of magic (*q.v.*), and come to the front especially in case of disease (see art. DISEASE AND MEDICINE), or, from the more ethical and ritual side, in the ceremonies associated, for example, with the scapegoat in ethnic religions (see AZAZEL and SCAPE ANIMALS).

There is one class of beings that may perhaps be regarded as on the border-line between spirits and ghosts, though inclining rather to the latter category. One or two peoples preserve a tradition that they have conquered their present territory by invasion and subjugation of a former tribe of entirely different nature, and are convinced that this vanquished tribe still survives in spirit form. It is generally held that we have here one of the sources of the folk-belief in fairies, brownies, kobolds, dwarfs, giants, and the like (cf. Tylor, i. 385 ff.; *CF.* pp. 21 f., 429). To this class belong the Maori *patu-paerehe*, who lived chiefly on the tops of lofty hills, while the *taniwha* had their homes in river-holes or under cliffs, etc., where they caused such calamities as land-slips and the like (Tylor, pp. 153-157). Similar beings, explicitly called *vai*, or spirits, are believed to dwell in the New Hebrides and Banks Islands, where 'they have been seen

of late in human form, smaller than the native people, darker, and with long straight hair' (Codrington, 152 f.).

The cult rendered to demons and spirits may be discussed very briefly, for it differs in no matter of principle from that of the gods themselves. As Jevons (p. 175 f.) says,

'The method by which the negro of Western Africa obtains a *suhman* [a tutelary deity of an individual] is an exact copy of the legitimate ritual by which a family obtains a family god. . . . All over the world these private cults are modelled on, derived from, and later than, the established worship of the gods of the community. The difference between the private cult of one of these outlying, unattached spirits and the public worship of the community's gods does not lie in the external acts and rites, for these are the same in both cases, or as nearly the same as the imitator can make them. . . . The difference lies first in the division which this species of private enterprise implies and encourages between the interests of the individual and of the community, at a time when identity of interest is essential to the existence of society, and when the unstable equilibrium of the small community requires the devotion of every member to prevent it from falling.' (For a detailed study of the spirit-cult of a specific African tribe, see Henry, 'Le Culte des esprits chez les Bambara,' in *Anthropos*, iii. 702-717.)

LITERATURE.—There seems to be no special treatise on this subject, so that the material must be gleaned from the writings of missionaries and travellers in Africa and Oceania (in the older works much care is needful in distinguishing, where such distinction is possible, between spirits and ghosts or gods), from works on the regions under consideration (such as those of Waitz-Gerland and Schneider, quoted in the art.), and from general studies on Comparative Religion. Particular interest still attaches to the chapters (xi.-xvii.) on 'Animism' in Tylor, although the animistic theory is subjected to sharp criticism by many scholars of eminence.

LOUIS H. GRAY.

DEMONS AND SPIRITS (Assyr.-Bab.).—Among the ancient Assyrians and Babylonians, as among the modern Arabs of Mesopotamia, superstition was rife, and a firm belief in all kinds of demons and *jinn* was current in every class of society. The Semitic element, when it entered Babylon, took over from the Sumerians much of their folk-lore, and it is for this reason that so many of the Assyr. words for ghouls, hobgoblins, and vampires bear their Sumerian origin patently; and out of this amalgamation sprang the elaborately developed system of magic in vogue during the later Assyr. and Bab. empires. This art provides the magician with all possible means for combating hostile devils and spirits.

The unseen enemies of mankind fall naturally into three classes. The simplest form—that of the disembodied spirit or ghost—is probably universal. The second—always supernatural—differs from gods by reason of its low order, and, as Robertson Smith says of the *jinn*,¹ is mentioned by the name of its class and not by a personal name, save in such cases as Namtar and the like, who are properly gods. Lastly, there is the half-human, half-supernatural creature, born of human and ghostly parentage—some awful monstrosity sprung from a *succuba* or *incubus*. These, too, are known by a class-name and have no individual title, whereas the higher order of this element in religion, the demi-god, is always a personality.

1. Ghosts.—We may examine, then, first in order the disembodied spirit, the ghost of a man or woman, which for some reason or other returns to this world. The Assyr. word in use is *edimmu*.² This *edimmu* was supposed to come back to earth for many reasons; it became hungry and restless, if its descendants ceased to pay it due rites or offer sacrifices on which it might feed; or it obtained no resting-place in the world of shades underground, if its earthly body remained unburied. The Assyr. ideas of Sheol were probably much the same as those of the ancient Hebrews. When a man died, his body was duly buried in the earth, and the spirit then inhabited the under world, 'the House of Darkness, the seat of the

¹ *Rel. of Sem.* 2, 1894, p. 126.

² See Hunger, *Becherwahrungung bei den Babyloniern*, Leipzig, 1903.

god Irkalla . . . the house from which none who enter come forth again.¹ Here its food was dust and mud, doubtless eked out by the libations and offerings which percolated through the earth from the mourners' sacrifices. The blood of animals slaughtered at the grave-side trickled through to reach the hungry spirit in the under world, and hence the belief in such sacrifices. But, if the attentions of descendants towards an ancestor should cease on earth, and the spirit thus was deprived of its food, it was then driven by stress of hunger to come back to earth to demand its due. How it succeeded in breaking loose from that bourn whence no traveller returns is difficult to understand, unless we suppose that there was a dual conception of ideas arising from a confusion between the grave as the actual habitation of the dead man, and Sheol as the place of shades; probably the primitive beliefs of savages in regard to ghosts were never very definite in details, and ideas of such incorporate and invisible beings must necessarily have been indeterminate. For example, Ishtar, when she descends to the under world, threatens to break down the door of Hades:

'I will smite the door, I will shatter the bolt,
I will smite the threshold and tear down the doors,
I will raise up the dead, that they may devour the living,
And the dead shall outnumber those that live.'²

Yet in another Assyr. tablet the return of spirits from the grave is thus described:

'The gods which seize (upon man) have come forth from the grave,
The evil vapours have come forth from the grave,
To demand the payment of rites and the pouring of libations
They have come forth from the grave.'³

The word 'vapours' or 'winds' here requires some explanation. The reference is probably to the transparency of the spirits: when the spirit of Ea-bani is raised from Hades at the instance of his friend, the Bab. hero Gilgamesh, his shade rises 'like the wind' through an opening in the earth made by the god Nergal.⁴

Similarly, another incantation, although it confuses ghosts with demons, refers to the return of hostile spirits:

'The evil spirit, the evil demon, the evil ghost, the evil devil, from the earth have come forth; from the pure abode unto the earth they have come forth; in heaven they are unknown, on earth they are not understood.'⁵

In the instance of the *utukku*-wraith of Ea-bani being raised, like Samuel at En-dor, the text continues with a speech of the ghost, describing the under world to Gilgamesh:

'The man whose corpse lieth in the desert (thou and I have often seen such an one), his spirit resteth not in the earth; the man whose spirit hath none to care for it (thou and I have often seen such an one), the dregs of the vessel, the leavings of the feast, and that which is cast out into the street are his food.'

The name of the necromancer in Assyrian—*mušellu edimnu*, 'raiser of the ghost'—is pertinent here, to show that the belief in such wizardry was accepted.⁶

Besides the unfed ghost, however, there was also the spirit of the unburied body to haunt mankind. According to Assyr. ideas, which tally in great measure with those of modern savages, if the bones of the dead were removed from the tomb, the spirit at once became restless, and was compelled to roam about the world. Ashurbanipal, giving full credence to this belief, in his invasion of Elam carries away the bones of the kings of Elam from the tombs, and causes the rites paid to them to cease, that their spirits may have no rest.⁷ Furthermore, unless the body was buried, the spirit of the dead man never reached its resting-

place in the under world; and there are long catalogues of all possible classes of ghosts to be exorcized, identified by the reason of their return to earth:

'Whether thou art a ghost that hath come from the earth . . . or one that lieth dead in the desert, or one that lieth dead in the desert uncovered with earth . . . or a ghost unburied, or a ghost that none careth for, or a ghost with none to make offerings (to it), or a ghost with none to pour libations (to it), or a ghost that hath no posterity' (or, 'that hath no name').¹ Or, if through some accident the man had died an untimely death and had not been given due burial, the same thing would happen:

'He that lieth in a ditch . . . he that no grave covereth . . . he that lieth uncovered, whose head is uncovered with dust, the king's son that lieth in the desert or in the ruins (or waste places), the hero whom they have slain with the sword.'² Those who died prematurely became ghosts also, those who perished of hunger or thirst in prison, or had not 'smelt the smell of food,' dying of want, or had fallen into a river and been drowned, or had been overcome by storm in the plains,³ those who died as virgins or bachelors of marriageable age,⁴ and women who died in travail, or while their babes were yet at the breast.⁵

This last ghost, the wraith of the woman dying in childbirth, is universal. Doughty relates that the Arab women explained the hoot of an owl as the cry of a woman seeking her lost child, she having been turned into this bird.⁶ Among the Malays a woman who dies thus becomes a *langwayar*, or flying demon, which the rest of the tribe prevent from wandering by putting glass beads in the mouth of the corpse, a hen's egg under the armpits, and needles in the palms of the hands.⁷ The original *langwayar* was supposed to be a kind of night-owl like the Lilith of Rabbinic tradition, and is therefore similar to the ghost of which Doughty speaks.⁸

Now, if any one of these disembodied spirits returned to earth, it was likely to attack any mortal who had been in some way connected with it on earth. To have shared food, water, unguents, or clothes with any one in this world rendered a patron or friend liable to a visitation from the ghost of his dead beneficiary, demanding similar attentions after death; nay, even to have eaten, drunk, anointed oneself, or dressed in company with another was reason enough for such a ghostly obsession. The living man exorcizes, through his priest, all these forms of ghost in the Assyr. incantations, threatening them that no rites shall be paid them until they depart:

'(Whatever spirit thou may be), until thou art removed,
Until thou departest from the man, the son of his god,
Thou shalt have no food to eat,
Thou shalt have no water to drink.'⁹

Many of the medical tablets give elaborate prescriptions of drugs and ceremonies to be employed 'when a ghost seizes on a man.' Others give the ritual for laying a ghost which has appeared; and in this case the magician repeats long formulæ of all possible ghosts, thereby showing, as is necessary in this magic, that he knows the description of the spirit with which he is dealing:

'A brother's ghost, or a twin, or one unnamed, or with none to pay it rites, or one slain by the sword, or one that hath died by fault of god or sin of king.'¹⁰

The fear of the obsessed man is apparently that the ghost will draw him from this world to the other, for he states in his incantation:

'O ye dead folk, whose cities are heaps of earth, whose . . . are sorrowful, why have you appeared unto me?
I will not come to Kutha [the under world]! Ye are a crowd of ghosts: why do ye cast your enchantments upon me?'¹¹

Even looking upon a corpse rendered a man liable to attacks from the ghost, and such an act demanded a long ritual to free him.¹

Were any further evidence required that the ancient Assyrians firmly believed in the possibility of visible ghosts, we have only to turn to an omen-tablet in the British Museum (K. 8693) which gives a list of the events to be expected if a ghost appears in the house of a man. But enough has been said on the disembodied spirits to show that the Assyrians were convinced of their existence, and had even reduced them to exact classes and species.

2. Unhuman spirits.—The second kind of demons, those entirely unhuman, for whose creation mortals are not directly responsible, existed among the Assyrians, as among other Semites, in innumerable hordes. The first of them is the *utukku*. This word is used, once at least, for the wraith of the dead man returning to earth (in the incident of Ea-bani quoted above from the Gilgamesh Epic), but elsewhere it appears to have a far wider meaning than a simple ghost, and we shall probably not be far wrong in considering it for the most part as the equivalent for a devil. It lurked in the desert, the common home of many Semitic devils, lying in wait for man; or it might have its home in the mountains, sea, or graveyard; and evil would befall him on whom it merely cast its eye.² Another, less well known, is the *gallû*, apparently sexless,³ and this is used as a term of abuse in classical Assyrian, Sennacherib calling the hostile Babylonians by such a name.⁴ The *rabîsu* is a lurking demon, which sets the hair of the body on end.⁵ The *labartu*, *labazu*, and *ahhazu* are a triad frequently found together, the first-named having a whole series of incantations written against her. She was a female demon, the daughter of Anu,⁶ making her home in the mountains or cane-brakes of the marshes; and children were particularly exposed to her attacks. To guard them from her, the tablets inscribed with incantations against her include an amulet to be written on a stone and hung round their necks, and the inscription runs:

"'Labartu, [daughter] of Anu,' is her first name;
The second, 'Sister of the [gods] of the streets';
The third, 'Sword that splitteth the head';
The fourth, 'Wood-kinder';
The fifth, 'Goddess of awful mien';
The sixth, 'The trusted and accepted of Irnina,'
The seventh, 'By the great gods mayest thou be exorcized;
with the bird of heaven mayest thou fly away.'"⁷

Of the other two of this triad the *ahhazu* is apparently combated in the medical texts.⁸ Of the *labazu* practically nothing is known.

Two others are mentioned in the cuneiform tablets—the *šedu* and the *lamassu*, the former being the name for either a guardian deity or an evil spirit. As evil, it is found in an exorcism which begins, 'Spirit (*šedu*) that minisheth heaven and earth, that minisheth the land, spirit that minisheth the land, of giant strength, of giant strength and giant tread.'⁹ In this quality of evil the surrounding Semitic nations borrowed the word from Assyria—the Hebrews under the form *shedim*, the Arameans as *shēda*; but it had also its beneficent side, thus approximating to the idea of a guardian angel. With the *lamassu*, which appears always as a kindly spirit, it is appealed to

at the end of invocations, both being frequently called upon to be present after the evil spirit has been cast out.¹

In addition to the Assyrian demons specified by separate class-names, there are the 'Seven Spirits,' now well known from the following incantation:

'Seven are they! Seven are they!
In the Ocean Deep, seven are they!
Battering in heaven, seven are they!
Bred in the depths of the Ocean;
Nor male nor female are they,
But are as the roaming wind-blast,
No wife have they, no son can they beget;
Knowing neither mercy nor pity,
They hearken not to prayer or supplication.
They are as horses reared amid the hills,
The Evil Ones of Ea;
Guzatû to the gods are they,
They stand in the highway to befoul the path.

Evil are they, evil are they!
Seven are they, seven are they,
Twice seven are they!²

'From land to land they roam,
Driving the maid from her chamber,
Sending the man forth from his home,
Expelling the son from the house of his father,
Hunting the pigeons from their cotes,
Driving the bird from its nest,
Making the swallow fly forth from its hole,
Snatching both oxen and sheep.
They are the evil spirits that chase the great storms
Bringing a blight on the land.'³

'They creep like a snake on their bellies,
They make the chamber to stink like mice,
They give tongue like a pack of hounds.'⁴

These seven spirits are undoubtedly the same as those mentioned in Lk 11⁴⁴, and in a Syriac charm.⁵ They are exorcized under the name of 'seven accursed brothers.' They are described in this charm as saying: 'We go on our hands, so that we may eat flesh, and we crawl along upon our hands, so that we may drink blood.' Their predilection for blood is shown in the Assyrian incantation:

'Knowing no mercy, they rage against mankind,
They spill their blood like rain,
Devouring their flesh (and) sucking their veins.'⁶

To them eclipses were due; just as the modern Semite believes that he must frighten away the evil spirits from the darkening sun or moon,⁷ so did the ancient Assyrian ascribe such a phenomenon to spirit influence. These seven spirits are said to have attacked the moon-god; and Bel, hearing what they had done, sent his servant Nuzku to take counsel with Ea against them:

'O my minister, Nuzku!
Bear my message unto the Ocean Deep,
Tell unto Ea in the Ocean Deep
The tidings of my son Sin, the Moon-god,
Who in heaven hath been grievously bedimmed.'⁸

Ea heard the message which Nuzku brought, and bit his lip in grief; he summoned his son Marduk and conveyed to him the tidings of the moon-god. [After this the tablet becomes mutilated.] When an eclipse did occur, it was held that man might be susceptible to its concomitant evils; many, indeed, are the prayers made to avert the baneful influence:

'In the evil of an eclipse of the moon which in such and such a month on such and such a day has taken place, in the evil of the powers, of the portents, evil and not good, which are in my palace and my land.'⁹

3. Semi-human demons.—The third class of spirit—a goblin of semi-human parentage—must be reckoned the most interesting of the three; and the evidence for belief in such a monster is well-

attested among the Semites. We must first discuss the triad called *lilû*, *liltu*, and *ardat lilû*. The second is obviously the feminine counterpart of the first, but it is not so easy to discern what is the difference between the two last. These two—the *liltu* and *ardat lilû*—are both female demons, the femininity of the latter being especially emphasized by the word *ardatu*, which always has reference to the woman of marriageable age. The *ardat lilû* seems to have assumed the traditional functions of the Heb. Lilith (obviously the same word as *liltu*), who was Adam's second wife during the period of Eve's separation; and ever since that time the class of *succubæ* known by the same name have been reckoned as the ghostly wives of unmarried men. The Assy. *succuba*, the *ardat lilû*, was forced by her desire to roam abroad by night until she found a mate. In a tablet giving a list of demons and spirits we read of the '*ardat lilû* that hath no husband, the *liltu* that hath no wife'¹ (the second being the male equivalent of the first); and in another we find mentioned 'the man whom an *ardat lilû* hath looked upon, the man with whom an *ardat lilû* hath had union.'²

The Arabs believe in the same possibility. Sayce quotes as an instance that 'about fifteen years ago there was a man in Cairo who was unmarried, but had an invisible *ginn* as wife. One day, however, he saw a woman and loved her, and two days later he died.'³ The present writer met with the same form of belief at Mosul, and, while discussing *jinn* and spirits with some of the Arabs on the mound of Nineveh, was told by one of them that he knew a man who was visited by night by a beautiful woman-spirit, who had already borne him three children.⁴ The Babbis attest the same belief in their stories of Lilith having borne to Adam devils, spirits, and *lilûn*⁵ and they held that men might have children through a *mešalliance* with a demon, and, although these might not be visible, yet they would crowd round their father's death-bed, waiting for his demise to hallow him as their parent.⁶

Besides these demons, various diseases were personified in the same way. We find exorcisms against sickness beginning thus:

'Fever unto the man, against his head, hath drawn nigh,
Disease (*namtaru*) unto the man, against his life, hath drawn nigh,

An evil spirit against his neck hath drawn nigh.'⁷

Or another:

'The evil fever hath come like a deluge, and
Girt with dread brilliance; it fliteth the broad earth.'⁸

The Ninth Tablet of the series 'Headache' is similar:

'Headache roameth over the desert, blowing like the wind.'⁹

The Plague-god, *Namtar*, is best known from the story of the Descent of Ishtar into Hades. He is the 'messenger of Allat, the queen of Hades,' and, when Ishtar reaches the under world, he is sent by his mistress to smite the goddess with disease.¹⁰

Another spirit of Pestilence is *Ura*, and with this demon are connected the little amulets of inscribed clay,¹¹ written to avert evil from the house, just as the modern inhabitant of the Near East affixes Arabic charms to his walls¹² (see also CHARMS AND AMULETS [Assyr.-Bab.]).

DEMONS AND SPIRITS (Buddhist).—Demon-worship enters largely into the daily life of Eastern peoples. In India, where Buddhism arose, the popular religion, both Buddhist and Brahmanical, in common with that of Easterns generally, has concerned itself less with the prospects of happiness in a future life and the 'higher truths' of the religion than with the troubles in the present life supposed to arise from evil spirits, who everywhere infest the atmosphere and dwellings, and are regarded as the cause of all sickness and misfortune. The higher dogmatic religion and the arrangements for the future life are handed over largely to the priests; but the people themselves take an active and anxious part in counteracting the machinations of the evil spirits, of whom they live in perpetual dread.

Buddhism from its very commencement appears to have accepted the Hindu mythology, with its evil and good spirits, as part of its theory of the universe. Śākyamuni himself seems to have taken over from the Brahmanical teachers of his time, amongst other tenets, the current belief in the gods and demons of the Indian pantheon, and he is represented in the more authentic early texts as referring to these beings as objects of fixed belief. He also accepted the current Brahmanical view that, like all other living things, they were impermanent and ultimately subject to death and endless re-birth, many of them having in previous existences been men. Thus, the gods and demons, being incapable of saving themselves from death and the misery of re-birth, could not be expected to save man; and so Buddha declared that their worship was one of the things which are not profitable and therefore unnecessary, and that he himself as 'the Perfectly Enlightened One,' or the Buddha, was superior to all divinities. Nevertheless, as these gods and demons were still believed to be capable of doing harm as well as good to man, though they could not effect his spiritual salvation, they continued more or less to be objects of popular worship even in early Buddhism, as is seen in the most ancient monuments.

Whether Buddha himself seriously believed in these divinities may be doubted. Yet the earliest texts agree in ascribing to him the statement that he descended from 'the heavens of the 33 gods,' in order to save mankind. Moreover, in the early Jātaka tales of his imaginary previous existences, he claimed to have been one or other of the gods in former times, mentioning himself 4 times as Brahmā (the most exalted of all at the epoch of Buddha), 20 times as Śakra or Indra, 43 times as a tree-god, and once as a fairy. In his *sūtras*, or sermons, the god Brahmā is referred to as one of the most frequent of his auditors. And the culminating episode of Śākyamuni's career—the attainment of Buddhahood at Gaya—is universally represented as a personal struggle with Māra, the Satan of the Buddhist world, and his daughters, Desire, Unrest, and Pleasure. This event is regarded by Buddhists generally not as an allegory, but as an actual bodily temptation and a conflict with manifested evil spirits.

The Buddhist pantheon thus had for its nucleus the polytheistic Brahmanical one, which embodied a physiocracy, or worship of the personified forces of Nature. It soon, however, became much more extensive: (1) by the creation of new deities and spirits of a special Buddhist type, personifying abstract conceptions of that religion; and (2) by the wholesale incorporation of much of the contents of the aboriginal pantheons of those peoples outside India over which Buddhism extended its conquests as a 'world-religion.' In this way the Buddhist pantheon has become the largest in the world, especially in its array of demons and spirits.

The distinctively Buddhist demons and spirits of Indian Buddhism, while generally modelled on the type of the Brahmanical, are specifically different from these in their functions, in their appearance as pictured and sculptured, and in their outward symbols. They range from the modes of their prototype Rudra (Śiva) in his destructive mood, through the *asuras*, or Titanic demons, to the *rākṣasas* and *piśāchas*, the most malignant fiends. To these classes may be relegated most of the non-Brahmanical spirits mentioned in the early Buddhist texts or figured in the early sculptures. Some of these supernatural beings, although unknown to Brahmanical texts, may have been local Indian spirits, not necessarily Buddhistic, e.g. the famous she-devil Hārītī. Māra, the personified Evil Principle and tempter of man, presents a close analogy to the Satan of the Bible, although he was not a fallen angel in the literal sense; nor was he, like Ahri-man of the Persians, an antagonist of equal power. Though unknown by that name to the Brahmans, he is manifestly a form of the Indian god of death, Yama (Skr. *mar*, 'to die'), and in other aspects he resembles the god of sensuous desire (*kāma*).

As Buddhism extended its range outside its monastic order and became a religion of the people, it gave greater prominence to these supernatural beings, in which the people implicitly believed, and began to create special divinities of its own. These new divinities and demons it figured in special conventional attitudes, with characteristic symbols, which at once distinguished them from the Brahmanical; and the laity were made familiar with the conventional appearance of the leading ones by means of the frequent sacred plays and masked dances. These various spirits are not classed in any definite systematic order in the Indian Buddhist texts, but they are often enumerated as follows:

(a) *Celestial Bodhisattvas*, of a divine or demoniacal Śaivite type, e.g. Avalokita, and Vajrapāṇi. (b) *Nāgas* and *Mahoragas*, snake-like or dragon beings, resembling clouds, living in the sky or under water, their maidens assuming siren-like shapes, often evil spirits: e.g. Muchilinda, who shielded Śākyamuni under the Bodhi tree at Gaya. (c) *Yakṣas*, genii often friendly to man; e.g. the *yakṣa* Vardhana (= 'Increase'), who was the guardian of Buddha's family and tribe at Kapilavastu. (d) *Aśuras* (lit. 'ungodly' spirits), giant demons, headed by Rāhu, the personified eclipse. (e) *Rākṣasas*, ogre-fiends capable of assuming siren-like forms; *daityas*, *kumbhāṇḍas*, *piśāchas*, and *pretas*, or starveling ghosts, spectres, vampire-ghouls: e.g. Piṅgala. (f) Malignant fiends of hell and the soil.

Many of these evil spirits, like the *daemones* of the Greeks, might become friendly and good genii to their human votaries. The exorcizing or coercing of the actively harmful amongst these evil spirits, by means of certain *sūtras* spoken by Buddha or stereotyped sentences culled therefrom, seems to have been practised from very early times, possibly even from Buddha's own day. The right-hand disciple of Buddha, Maudgalyayana, is generally credited in the early scriptures with having exorcized evil spirits in this way; and the recital of such *sūtras*—the so-called *Paritta*, or '*Pirit*' service—is the most favoured and popular way of combating sickness and misfortune at the present day amongst the 'Southern' Buddhists; whilst in 'Northern' Buddhism such procedure is still more widely developed.

In later times the Indian Buddhist pantheon—itsself an offshoot of the Brahmanical, and living side by side with it—continued to develop along lines similar to those taken by its parent. Thus, in the extreme pantheistic phase it evolved a supreme primordial Buddha-god existing from everlasting to everlasting, the Adibuddha (q.v.). The rise of the devotional spirit, with its craving for personal deities to whom intimate prayer could be addressed—the *Bhakti* phase, resulting in the introduction into Brahmanism of Śiva, Viṣṇu, Kṛṣṇa, Rāma, and others, with their female

energies (*śaktis*)—was echoed in Buddhism by the creation of a host of celestial Bodhisattvas, male and female, e.g. Mañjuśrī and Tārā. These were able and willing to assist those who invoked them as personal gods (*vidam*); and some of them (e.g. Mañjuśrī) were fiendish in type. Similarly, with the innovations of *Yoga* and the degraded Tantra developments, certain sections of the Buddhists kept pace with these by parallel movements which added to the Buddhist pantheon.

The extreme Tantrik phase termed *Kālachakra*, or 'Wheel of Death,' about the 10th cent. A.D., introduced a rampant demonolatry, with exacting priestly rites, into a religion which in its origin was largely a protest against worship and ritual of every kind. The majority of these demons were monstrous 'king-devils' of the most hideous Śaivite type, with their equally repulsive spouses. The chief were Vajra-bhairava, Saṃvara, Hayagrīva, and Guhya-kāla. Their function was to be tutelaries (*vidam*) to guard their human votary against the attack of the swarms of minor demons, whilst they themselves were to be gained over to perform these friendly offices by the coercing power of Buddhist spells. Certain of them were also specially selected as 'defenders of the faith' (*dharma-pāla*), and also as guardians of particular monasteries and particular sects.

At the present day, such extravagant demonolatry prevails to a greater or less extent throughout the Mahāyāna (or 'Great Vehicle') form of Buddhism in China, Korea, and Japan; but most of all in Tibet (see 'Tibetan' art. below) and Mongolia. The demonolatry of the 'Southern' Buddhists in Burma, Ceylon, and Siam is of the earlier and less rampant type.

L. A. WADDELL.

DEMONS AND SPIRITS (Celtic).¹—*Introductory*.—In the case of Celtic countries it is not always easy to draw a clear line of distinction between the beneficent and the maleficent types of those supernatural beings that cannot be counted in the ranks of definite individual gods and goddesses. There are, indeed, imaginary beings in Celtic folk-lore that are predominantly of a maleficent disposition; but the majority of these beings are, like human beings themselves, of mixed character. The term 'demon' in English has acquired a precision of meaning, as applied to maleficent supernatural beings, which makes it a difficult term to employ in describing the conditions reflected in the religion and folk-lore of the Celts. Again, the term 'spirits,' so far as the facts of Celtic folk-lore are concerned, must be used in a somewhat wide sense, and, in some measure, its use is bound to overlap that of 'demon,' since it is difficult, in the folk-lore of Celtic countries, to draw very clear lines of distinction between the different types of beings which the Celtic imagination has created. The clearest and broadest line of demarcation, perhaps, that would meet the case would be that separating the actual living beings, both animal and human, which people the visible tangible world of everyday life on the one hand, and, on the other, those unreal beings which are imagined as living normally a life hidden from view in those localities and recesses of the earth which easily lend themselves to concealment (such as caves or hollows, or some supposed subterranean, sub-lacustrine, or sub-marine region), or in islands of the sea (actual or

¹ Cf. throughout, art. CELTS and COMMUNION WITH DEITY (Celtic).

imaginary), or in some wild and inaccessible tract of land, or in the depths of a great forest. Further, the lives and actions of these imaginary beings are pictured as being governed by conditions that may be summarily described as magical—conditions entirely at variance with the facts of human experience, but which have, none the less, occasional points of resemblance to those of ordinary existence. Moreover, the beings which are imagined as living under these abnormal conditions are thought of as endowed with abnormal powers; hence, in the Celtic world, they are viewed as equipped with various forms of magic skill, and are thereby specially associated with those human beings who are thought to have similar endowments. Nor is it always easy to distinguish, among these beings of the Celtic Other-world, (a) those which may be regarded as survivals from primitive Animism, such as the animate 'spirits' of inanimate things; (b) those which are ancient spirits of vegetation; (c) those which are beings imaginatively considered necessary as dwellers in a hypothetical Other-world; and (d) those which are exclusively regarded as the souls of departed human beings. In all parts of the Celtic world, as in other countries, there are ghost-stories, wherein the ghost is viewed as that of a particular human being; but very often the relationship of a ghost to an individual man or woman, whose soul it was, sinks into the background of the story, and the ghost is made to act like some other type of imaginary supernatural being. The various types, both in form and character, often merge into one another.

Again, one of the characteristics of the Other-world of the Celts, which may be said to follow as a corollary from its contrast with the normal world, is that the beings supposed to people it do not, like those of the actual world, keep their own forms, but undergo various transformations. Hence it is not always possible to distinguish clearly between those of animal and those of human form, inasmuch as those of one form may pass into a form that is usually characteristic of the other, and, along with the change of form, there may also be a change of character or disposition. Consequently a being which might appear as a demon, in the English sense of the term, at one time, might at another conceivably be represented in some other form as a benign spirit. In some degree, perhaps, the absence of definiteness of character¹ in question may be the reflexion in Celtic folk-lore of certain human types, which are not unknown in Celtic experience, where qualities that are in the highest degree laudable are combined with others that are glaringly out of harmony with them, as, for example, the combination of a highly temperate and devout life with constant unpunctuality or frequent remissness in the keeping of promises and engagements. The inhabitants of Celtic countries have not, as a rule, been sorted out, during a process of severe and relentless moral drilling, into distinct and fixed ethical classes to the same extent as the inhabitants of some Teutonic lands; and the prevalent ethical conditions in Celtic society are naturally in some degree reflected even in Celtic folk-lore.

Another point, again, which deserves consideration is that, in Celtic folk-lore, the beings whose normal home is the Other-world are far from being rigidly confined to that region, but are represented as coming to view in the actual world either by day or by night—in current folk-lore preferably by night. They are regarded as appearing either

singly or in groups; and those to whom they appear may see them either as solitary spectators or in company with others. They are also represented as entering into various dealings with normal human beings, and among the relations included in folk-lore narrative is that of inter-marriage. Further, just as the beings of the Other-world may enter this world, the men of this world may enter the Other-world, whether by invitation, accident, or invasion. Many Celtic legends, such as *Tochmarc Étaíne* ('The Betrothal of Étaíne') in Irish, and the story of *Pwyll, Pendefig Dyfed* ('Pwyll, Prince of Dyfed'), in Welsh, are largely based upon belief in inter-relations between the two worlds of the type in question. Christian teaching and the spread of education have done much to assimilate the Celtic consciousness, in the matter of belief in imaginary beings, to that of advanced civilization; yet enough of the ancient psychological attitude of the native Celtic mind still exists to enable one to form a fair estimate of the extraordinary hold which this belief must have had upon the mind in ages further back.

1. Celtic demons and spirits in antiquity.—A large number of the names of Celtic deities that have survived (for the most part on inscriptions) are names which occur but once, and consequently they may be regarded as probably the names of local deities or local tutelary spirits. Sometimes the name is clearly identical with that of some town, river, or mountain (see the present writer's list of 'Ancient Celtic Deities,' in *Trans. Gaelic Soc. of Inverness*, 1906); in other cases, the origin of the name is unknown. About two hundred and sixty names, which occur only once on inscriptions, have come down to us, and there were at one time, doubtless, many more. Along with these individual names there existed others of grouped supernatural beings, such as (a) the *Bacucei*, of whom Cassian (*Conlat.* vii. 32. 2) says:

'Alios ita eorum corda quos ceperant inani quodam tumore videmus inficisse, quos etiam Bacuceos vulgus appellat, ut semetipsos ultra proceritatem sui corporis erigentes nunc quidem se in quodam fastus gestusque sustollerent, nunc vero velut adclines ad quendam se tranquillitatis et adfabilitas statum communes blandosque submitterent, seseque velut inlustres et circumspicabiles omnibus aestimantes nunc quidem adorare se potestates sublimiores corporis inflexione monstrarent, nunc vero ab aliis se credenter adorari et omnes motus quibus vera officia aut superbe aut humiliter peraguntur experient.

(b) The *Castæci* or *Casteci* are known to us only from an inscription from Caldas de Vizella (*CIL* ii. 2404: 'Reburrius lapidarius Castæcis v.l. [s] m.'). and similarly (c) the *Icotii* or *Icotias* are mentioned on an inscription at Cruvières, Dép. Gard (*CIL* xii. 2902: 'Icotiis'), while (d) the *Dusii* are mentioned by three writers, who all appear to view them as maleficent. The word *dusios* in Celtic probably meant an unclean demon or *incubus*, but the root of the word is not improbably cognate with that of the Greek *δῆς* (where *θ* stands for an original *dh* which would become in Celtic *d*), and suggests that, at one time, the character of these beings was regarded as beneficent or neutral.

The passages relating to the *Dusii* are the following: Augustine (*de Civ. Dei*, xv. 23): 'Quosdam daemones, quos Dusios Galli nuncupant, assidue hanc immunditiam et temptare et efficere, plures talesque adseverant, ut hoc negare impudentiae videatur.' Similarly, Isidore (*Or.* viii. 11, 103): 'Piosi, qui Graece Panitae, Latine Incubi appellantur. . . . Saepe improbi existunt, etiam mulieribus, et earum peragunt concubitus, quos daemones Galli Dusios vocant, quia assidue hanc peragunt immunditiam'; *ib.* 104: 'Quem autem vulgo Incubum vocant, hunc Romano Faunum Ficarium dicunt.' Further, Hincmar (*de Divortio Lotharii*, l. 664, ed. Sirm.) says: 'Quaedam etiam feminae a Dusis in specie virorum, quorum amore ardeant, concubitus pertulisse inventae sunt.'

(e) The *Ifes* are a group of male gods, whose name occurs on an inscription at Dormagen, in the region of Düsseldorf (*Corp. Inscr. Rhenanarum* [*CIR*] 292: 'Ifibus Marcus et Atius v.s.l.l.m.'). that were clearly regarded as beneficent. (f) The *Nervini* or *Nervinae* were probably a tribal group

¹ In the case of the Welsh fairies, for example, the elements of beneficence and maleficence, as the folk-lore stories about them show, are curiously blended in their characters. They are represented as being at times helpful to man, at other times as mischievous and vindictive (see Rhys, *Celtic Folklore*, vol. I. *passim*).

of beneficent deities or spirits that were connected with the tribe of the Nervii. In one case we have, as the name of a group of deities that were regarded as beneficent, the plural of one of the most widely diffused of Divine names in the Celtic world, namely (g) *Lugoves*, the plural of *Lugus*.

This plural form occurs on the following inscriptions: (1) at Osma, in the territory of the Celtiberi (CIL ii. 2818): 'Lugovibus sacrum I(ucius) L(ucius) Urcio collegio auctorum d(onom) d(edit)' ; (2) at Avenches, in the territory of the Helvetii (CIL xii. 5078): 'Lugoves' ; (3) at Bonn (CIL 466): 'Domesticiis [Lugovibus] . . .

Other beneficent spirits are (h) the *Di Cascae*, who are mentioned on inscriptions as follows:

(1) At Lorsch (CIL 1386): 'Cas[s]ibus pro sa[ute] dd[omi]norum duorum nn[ost]rorum' ; (2) at Ober-Klingen, in Hesse-Darmstadt (CIL 1398): 'Cassibus vota fecerunt) Macellu[s] Faustinu[s] n[er]it[o] p[ro]suerunt' ; (3) at Landstuhl, Pfalz (CIL 1779): 'Diss[ic]ie Cassibus Matuinus v.s.l.m.' ; (4) at Neustadt, on the Hardt: 'Dis Cassibus Castus Taluppe v.s.l.m.'

Another group of beings that corresponded to the type in question was that of (i) the *Di Silvani*, to whom, along with their female counterparts the *Silvane*, there is a reference on an inscription at Barcelona (CIL ii. 4499: 'D[is] d[e]abus) Silvanis M. Antonius Cr[isp]iens v.s.l.m.'). This is the only certain instance of a group of male gods of this name. By far the most common groups of supernatural beings mentioned on inscriptions in connexion with Celtic districts are (j) the *Matres* and (k) the *Matronae*, while there are smaller groups of (l) *Proxinae* and (m) *Iunones*. These 'Mothers' and 'Kinswomen' seem to have been regarded as the protecting deities of various localities; and their worship appears to have been prevalent, not only among the Celts, but also in certain Teutonic tribes (see an article by the present writer on 'Celtic Goddesses' in *CeR* for July 1906, and art. CELTS, vol. iii. p. 280). These goddesses probably represent a very early phase of Celtic religion, and are to be regarded as more akin to groups of spirits (possibly corn-spirits) than to the individualized deities of a later stage. There is a remarkable parallel to them in one of the current Welsh names for a type of beneficent fairy, namely, *Y Mamau*, 'the Mothers,' used in some parts of S. Wales as a name for the fairies in the expression *Bendith y Mamau*, 'the blessing of the Mothers,' and also found in the name of a well-known hill of the Clwydian range, *Y Foel Famau*, 'The hill of the Mothers.' Cf. art. DEM MATRES. To the foregoing may be added (n) the *Niskai* ('water-nymphs') mentioned on the Amélie-les-Bains tablets (COMMUNION WITH DEITY [Celtic], vol. iii. p. 748*).

2. Demons and spirits in mediæval times.—From the foregoing account it will be seen that, in the Celtic countries of antiquity, a belief was held, not only in certain individual gods and goddesses, both local and non-local, bearing names of their own, but also in groups of supernatural beings, who, by the very fact that they were nameless, may be regarded as beings in a sense on a lower plane than the named deities, and so may be fitly included, for the most part, in the category of demons and spirits. How far they may have been considered as the indwelling spirits of inanimate things, or as the spirits of vegetation, or as the souls of dead ancestors, animal or human, it is impossible to say. The Celts, like other nations of antiquity, doubtless believed in the existence of spirits of human beings, which were, in some mysterious way, connected with the breath, the name, and the shadow. Like the Greek *eidô* and the Latin *umbra*, the Welsh term *ysgawd* ('shadow'), for instance, was used for the soul. The more usual Welsh word, however, for the soul is *enaid*, a derivative of the root *an-*, 'to breathe.' In mediæval Welsh this term is constantly used in the sense of 'life,' but the meaning 'soul' is also frequent. There are traces, too (Rhys, *Celt. Folk-*

lore, iii. 601-604), of a belief that the soul might take on the bodily form of some animal, such as a lizard. In the Middle Ages, Christianity had introduced, both into Goidelic and into Brythonic speech, certain terms of Greek and Latin origin, such as *Ir. diabol*, Welsh *diafl* (in a later form *diafol*), from *diabolus*; together with such forms as *Ir. demun*, 'demon,' and Welsh *cythraul*, the latter being derived from Lat. *contrarius* through **contralius* (where *l* has been substituted for *r* by dissimilation). The *Ir. spiorad* (older *spírut*), 'spirit,' and the Welsh *ysbyrd* of the same meaning, both come from Lat. *spiritus*. At the same time other terms of native origin for the supernatural beings of folk-lore survived, such as *Ir. síde* and *aes síde*, 'the fairies,' whence the term *ban síde* ('banshee'), which means literally 'woman-fairy.' The oldest Welsh term used in mediæval Welsh for a fairy is *hud*, together with its derivative *hudol*, in the same sense, for a male fairy and *hudoles* for a female fairy. *Hud* also means 'magic,' and this use of the same term for both fairy-land and magic well illustrates the inseparable connexion, for the Celtic mind, of magic with the Other-world.

In Irish legend there are many allusions to the *síde* (as, for instance, in *Sérlighe Conculaind* ('The Sick-bed of Cúchulainn' [Windisch, *Ir. Texte*, Leipzig, 1880-1905, i. 214 f., 227]); and in *Tochmarc Étaíne* ('The Betrothal of Étaíne' [ib. pp. 120, 131]). In one passage of the latter a fairy domicile (*síd*) is definitely associated with *Brig Léith*, 'the hill of Liath(mac Celtchair)', the Irish counterpart of the Welsh Llwyd, son of Kiloeed, a famous magician, twice mentioned in the *Mabinogion*, and once by the Welsh 14th cent. poet, Dafydd ab Gwilym. In the *Book of Armagh*, the *síde* are called 'dei terreni,' and they appear to have been regarded as dwelling either in hills or on islands such as *Mag Mell*. In the latter case, one of the means of journeying to them was in a ship of glass. Some of the fairies were regarded as male (*fer-síde*), but they were more often regarded as female (*ban-síde*). The legendary characters, *Irish* (*Tochmarc Étaíne*, in Windisch, *Ir. Texte*, p. 121 f.) and Manannán mac Lir (*Sérlighe Conculaind*, 225), were associated with them, and, in the latter story, two of their kings bear the names Fáilbe Find and Labraid. When pictured as women, they were represented as being clothed in white raiment. In the story of Condlia Caem (given in Windisch, *Ir. Gram.*, Leipzig, 1879, pp. 118-120) they are described as wishing to carry off mortal men into their land of perpetual youth, or to marry mortals; thus Étaíne, a fairy princess, married Eochaid Airem, and was carried back later on to fairy-land by Mider, a prince of the fairies. The connexion between the *síde* and the Tuatha Dé Danann of Irish legend is very obscure.

In Irish legend there was one native term for a supernatural being which was apparently always of maleficent import, namely, *siabrae* (*Leabhar na hUídhre*, 113^b 41, 114^a 12, 115^a 32). This word is undoubtedly the phonetic equivalent of the Welsh *hwyfar*—a term no longer used except in the Welsh original of Guinevere, namely, *Gwenhwyfar*, a name which must originally have meant 'the white phantom.' This appellation would suggest that *hwyfar* had not originally in Welsh the connotation of malignity, which *siabrae* seems to have acquired in Irish.

In mediæval Welsh the name *hud* in the sense of 'fairy' is applied in the *Black Book of Carmarthen* (Poem xxxiii. l. 17) to Gwyn, son of Nudd (*Gwyn*=*Ir. Find*; *Nudd*=*Ir. Nuada*); and his mistress is said to be Creudriliad, the daughter of Lludd (the Welsh original of Geoffrey of Monmouth's Cordelia, daughter of King Lear). In the story of *Kulhwch and Olwen*, Gwyn is represented as fighting every first of May until the Day of Judgment with Gwythyr for the hand of Creudriliad. In the poetry of Dafydd ab Gwilym, which reflects the current Welsh folk-lore of the 14th cent., Gwyn is regarded as in some sense the leader of the 'fairies,' since they are called by the poet *Tylwyth Gwyn* ('the family of Gwyn') in two passages. The Welsh picture of fairy-land given by the poet by no means represents it as a 'land of eternal youth,' since among its dwellers are mentioned *guraichod* ('hags'), nor can it be said that the picture given of its inhabitants suggests their beneficent character.

The expression *Y Tylwyth Teg* ('the fair family') for the fairies is found in the poems of Dafydd ab Gwilym (middle of 14th cent.), and the term itself would seem to imply that, in the main, their disposition was originally viewed as beneficent and their appearance pleasing, though the poet describes the colour of one of them as brown (*gwynau*). At the same time the allusions to them in Dafydd ab Gwilym well illustrate the statement made at the beginning of the article, that it is difficult to assign a hard and fast type of character to several of the beings of the Celtic Other-world. For example, the

term *pegor*, used for 'a pygmy,' and for the fabulous dwellers in submarine regions (*Bl. Book of Carmarthen*, Poem v. l. 4)—a term found also in Dafydd ab Gwilym (Poem lxx.)—is one of a neutral type; and so is *corr*, 'a dwarf'—a word which occurs several times in the *Mabinogion*. In some cases a *corr* is represented as acting in a brutal and churlish manner (as in the story of *Geraint and Enid*), but in the story of *Peredur* the narrator appears to view the dwarf and his wife sympathetically. The name of the mythical tribe called the *Coraniaid*, in the story of *Lludd and Llewelys*, probably means 'the pygmies,' and they are certainly represented as intellectually acute but morally malicious.

Side by side with these beings of neutral or variable disposition, Welsh folk-lore in the Middle Ages, like that of Ireland, deals with certain types of beings that can only be regarded as 'demons' in the ordinary English sense. The term *ellyll*, for example, appears to be nowhere used in Welsh literature in a good sense.¹ In the Welsh triads (*Oxf. Mab.*, 1887, pp. 305, 306) there are references to *ellyllon* (pl. of *ellyll*), called 'the three forest-demons of the Isle of Britain' and 'the three stag-demons of the Isle of Britain,' but the precise significance of these names is not explained. In some of the instances given, the word *ellyll* is followed by a personal name, as in the phrase *ellyll Gwidawl* ('the demon of Gwidawl'). It is possible that, originally, the term *ellyll*, in expressions such as these, may have denoted a person's 'familiar spirit.' In Dafydd ab Gwilym, *ellyllon* are represented as 'wry-mouthed' (*mingeimion*), as haunting dingles, and as being foul and ill-grown. This picture of them is implied in the description of the owl as *ellylls adar* ('the female demon of birds'). The same writer has another term for a certain kind of goblin or ghost, namely *bubach*—a term which clearly implied an object of terror. He calls his shadow, for instance, 'a goblin (*bubach*) in the form of a bald monk,' while, further, he uses the verb *bubachu* in the sense of 'to frighten as a ghost.' A term used for a kind of female demon by Dafydd ab Gwilym and others is *Y Ddera* (probably meaning originally 'the red one,' *dera* being phonetically equivalent to *Ir. derg*, 'red'). For ghosts, too, the term *gwyllt* appears to be used by this poet (e.g. in Poem clix.), but the more usual mediæval term is *gwyllon*. This term appears to have been used for 'the ghosts of the dead' (*Bl. Book of Carmarthen*, Poem i. l. 35). The departed spirits of warriors seem to have been proverbially associated, even in mediæval Wales, with the Caledonian forest (*ib. l. 36*; also, *ib. Poem xvii. l. 57*). In a Welsh mediæval poet, Llywarch ab Llywelyn (*Mycerion Archaeology*, Denbigh, 1870, p. 212a), there is an allusion to *gwyllt Kaldan* ('the ghost of Caledonia'), as if this were a proverbial expression, and, when Arthur is represented as making an expedition (in the story of *Kuhvach and Olwen*) to the 'wild land of hell,' he is described as going to the North.

The abodes of the supernatural beings here described are, in the main, located in *Annwfn* or *Annwn*—a term most probably derived from *an*, 'not,' and *dwfn* (cognate with *Ir. domun*), 'the world.' The dominant conception of *Annwfn*, therefore, was as a kind of magical counterpart of this world, and the Welsh mind in the Middle Ages associated with it the idea of illusion and want of substantiality. Dafydd ab Gwilym, speaking of a mirror as fragile and perishable, says of it that it was constructed by fairies (*hwdolion*), and other references by him of the same type point in a similar direction. Hence, *Annwfn* appears to have meant 'a world which is no world.' *Annwfn* was usually regarded as being located beneath the earth, but certain poems of the *Book of Taliesin* (14th cent.) appear to regard it as consisting of a cluster of islands, to which Arthur journeys in his ship *Prydwen*. One poem in the same MS calls it 'Annwfn beneath the world' (*is chyd*), and in keeping with this is the description of it by Dafydd ab Gwilym as 'the deep land of Annwfn,' to which the Summer is said to have gone during the months of Winter. According to the story of *Pwyll, Prince of Dyfed*, *Annwfn* was divided into kingdoms, whose boundaries were sometimes streams, as in the upper world. Interrelations and inter-marriage were conceived as possible between the beings of the two worlds, and the boons of human civilization, at any rate in the form of swine, were thought to have come into the actual world from *Annwfn*. The relations, however, between the two worlds were not always necessarily amicable, and, just as heroes from the actual world might make expeditions into *Annwfn*,

¹ In the current folk-lore of some Welsh districts it appears that even an *ellyll* can be conciliated and made to bestow prosperity, if the candle is left burning on going to bed (Wirt Hikes, *British Goblins*, p. 16).

so beings from *Annwfn* might make raids upon this world. Such a raid appears in mediæval Welsh to have been called *gormes* (lit. 'an overflow,' then 'oppression'). Certain raids of this kind are suggested in various parts of the *Mabinogion*; for example, in the carrying away of the infant Pryderi, in the raid upon Teyrnon's foals, in the narrative of Manawyddan and the mice, and in the story of *Lludd and Llewelys*, as well as in the stealing of Mabon, son of Modron, from his mother. In these raids certain fabulous packs of hounds took part, which are sometimes called *Cwn Annwfn* ('the dogs of Annwfn'), and, by Dafydd ab Gwilym, *Cwn gormes* (Poem xlii.). There appear to be no beings of the vampire type among the supernatural beings of Irish and Welsh mediæval legend, but in Breton stories the werewolf (*bisclavaret*) seems to have played a part even in mediæval times.

3. Demons and spirits in Celtic lands to-day.—In the remoter parts of Ireland, Scotland, Wales, and Brittany there is still a considerable survival of the older psychological attitude, especially in the sphere of the emotions, towards the supernatural beings of which Celtic folk-lore treats. The teaching of Christianity, whether by Roman Catholics, Anglicans, Presbyterians, or other religious denominations, for example, as to the lot of the dead, runs entirely counter to the belief in ghosts that are free to wander at random among the living; nevertheless, the fear of ghosts is a very real terror to many people, after nightfall, in Celtic as in other countries. So far as the period of daylight is concerned, the older frame of mind may, with the exception, perhaps, of the inhabitants of the least progressive Celtic regions, be said to have been completely modified through education and experience. With the advent of darkness, however, this older frame of mind tends to assert itself in consciousness—not, perhaps, so as to produce beliefs which their holder would regard as justifiable, but to a sufficient extent to perturb the emotions, especially in the presence of some uncanny or weird-looking object. In Ireland and the more secluded parts of the Highlands and Islands, there has been, on the whole, less of a breach of continuity with mediæval times than in Wales; and the same may be said of Brittany. Hence the beliefs of the Middle Ages form substantially the ground-work of the present-day attitude towards demons and spirits as it prevails in those regions. The Isle of Man, too, may be regarded as belonging, in the main, to the same psychological zone as Ireland. In the latter it is the 'Fairies' still, as in the Middle Ages, that are the chief supernatural beings of the type here considered; but, side by side with them, there subsists, in Ireland as elsewhere, the belief in the re-appearance of the ghosts of the departed, and also in the appearance of fabulous creatures, such as the *Puca*, the *Leprechaun*, the Water-bull, the Water-horse, and the like (see T. Crofton Croker, *Fairy Legends*). As to Gaelic Scotland, there is abundant material for the student of the modern Celtic mind in Campbell's *Tales of the W. Highlands*.

These tales describe such beings as the *glashan* (the *Manx glashyn*), which was a hirsute sprite that rebelled against clothing, and, in this respect, resembled the *grinnach*, a similar sprite from Skippiness. One of the tales (no. 100) describes an underground world of giants, and an earlier tale (no. 98) similarly points to a belief in gigantic beings. Another tale (no. 38) speaks of a monstrous being called *Rithidh MacCallain*, 'who had one hand growing out of his chest, one leg out of his haunch, and one eye out of the front of his face.' Other tales describe fairies, sleeping giants, flying ladies, mermaids, brownies, and the like, while not a few of the stories speak of such beings as the Water-horse or Water-kelpie (sometimes transformed into a man), the Water-bull, the Water-bird called the *Boobrie* (said to inhabit the fresh-water and sea lochs of Argyllshire), dragons (thought to haunt Highland lochs), and the Water-spirit called the *Vougha*. The Water-bull is generally

represented as the foe of the Water-horse and the friend of man. There are also stories of demons appearing as goats and dogs. It will readily be seen how this mass of Gaelic folk-lore has been coloured by the geographical conditions of the Western Highlands, and what is here true of the folk-lore of the Highlands is true of the folk-lore of all Celtic countries. In the Isle of Man the same essential beliefs are found as in the Western Highlands. The island had her fairies and her giants, her mermen, her brownies, her Water-bulls, and her Water-kelpies or Water-colts. The Water-bull (*tarroo ushtey*) haunts pools and swamps, and is the parent of strangely formed beasts and monsters. The Water-kelpie has the form of a grey colt, and wanders over the banks of the streams at night. The Manx name for a giant is *foavor* (from the same root as the Ir. *fomhor*). For a brownie the Manx name is *fenodyree*, and this being appears to resemble the Welsh *ellyll* in being a hairy and clumsy creature. There are also in Manx folk-lore beings called *glaishtig* and *glaisrig* respectively, the former being a she-goblin, which takes the form of a goat, while the latter is described as a female fairy or a goblin, half-human, half-beast. The nearest approach to a vampire in Celtic folk-lore is the Water-colt, which is thoroughly vicious, and sucks the blood of maidens. Possibly to the Water-colt should be added certain Welsh fairies said to eat infants (Rhŷs, *Celtic Folklore*, ii, 673).

In Wales, the firm stand made against all forms of superstition by the strong Protestantism of the country, especially since Nonconformity has penetrated into every corner of the Principality, has, to a very great extent, shattered to pieces the mental attitude towards the Other-world which we find so clearly represented in the *Mabinogion* and in *Dafydd ab Gwilym*; but in remote districts, such as the Lleyn district of Carnarvonshire and the Welsh parts of Pembrokeshire, as well as in the more secluded portions of other counties, the old spirit still prevails among the unlettered, and not a few people retain a kind of working belief in the beings that may be roughly classified as demons and spirits. The spirits of the dead (called *bwganod* and *ysbrydion*) are still feared in such districts,¹ and tales concerning them abound. Every uncanny-looking portion of a lane has its ghost, and from caves they are rarely absent. Fairies are still known in most regions of Wales as *Y tylwyth teg*, but the term *Annwn* has gone out of use, except in the expression *Cwm Annwn*, 'the dogs of Annwn.' In Pembrokeshire, fairies were even in the 19th cent. supposed to attend the markets at Milford Haven and Laugharne. For ghosts the term used in some districts is *bwgan*, while in others the terms in use are *bwci* and *bwbach*. It is not improbable that one old term was *buga*, which is found in the Welsh name of the town of Usk in Monmouthshire—*Brynbuga*; while, in Glamorganshire, the name seems to take the form *bica*, found in the farm name *Ty Fica* ('the house of Bica'). The Welsh word *coblyn*, used especially of the sprites that are thought to haunt mines, is merely a modification of the English 'goblin'; while *pucca* is simply the English *Puck*—a name found as that of the glen of *Cwm Pucca*, a part of the vale of the Clydach in Breconshire. *Ellyllion* are still thought to haunt groves and valleys, and *bwyd ellyllion* ('demons' food') is the Welsh name for the poisonous toad-stool, just as *menyg ellyllion* ('demons' gloves') is a name for the foxglove. The term *ellylltan* ('demons' fire') is also used for 'the will-o'-the-wisp.' In the Lleyn district of Carnarvonshire a certain fiery apparition is said to take the form of 'a wheel within a wheel of fire.' The relation of fairies, sprites, and goblins with human beings are described in various folk-lore tales, for which the reader may consult the works of Sir John Rhŷs and Wirt Sikes (see Literature at end of art.).

Among the names used for certain of the supernatural beings here under consideration are *Bendith y Mamau*, 'the mothers' blessing'; *Gwagedd Annwn*, 'elfin dames'; *Plant Annwn*, 'elfin children'; *Plant Rhys Ddafn*, 'the children of deep Rhys'; *Gwraeth y Rhibyn*, a kind of Welsh banshee; *Cyhyraeth*, a kind of dreadful and doleful moan in the night, proceeding from an invisible source; *Tolaeth*, the imitation of some earthly

sound, such as sawing, singing, or the tramping of feet; *Cwm y Wybr* (also known as *Cwm Annwn*), dogs that haunt the air; *Aderyn y Corph*, a bird which appears as a foreteller of death; *Toeth*, a phantom funeral; *Y Fad Felen*, the yellow plague; and *Nallt y nos*, a night-fiend.¹ Among the forms which the Welsh imagination has assigned to spectres have been a fiery ball, a black calf, an ass, a dog, a round ball, a roaring flame, a bull, a goose, a mastiff, a gosling. One type of female demon is described as being 'a hideous creature with dishevelled hair, long black teeth, long, lank, withered arms, leathern wings, and a cadaverous appearance.' The appearance of this being was always regarded as an omen of death. In Welsh folk-lore, as in that of the Gaelic world, there are stories of water-monsters, more especially of the *afanc*, which is usually regarded in Wales as a kind of crocodile, but which was originally, in the opinion of Sir John Rhŷs, a kind of monster in human form, as is suggested by the Irish cognate *abhae*.

In Wales, as elsewhere where a belief in demons and spirits is found, certain effective barriers could, it was thought, be placed to their malevolence and capacity for mischief. One check to them was piety, others were the possession of a black-handled knife (iron being a source of great terror to fairies), the turning of one's coat inside out, the pronunciation of the Divine name, the crowing of a cock, change in one's place of residence, and—last but not least—a barrier of furze, through which, on account of its prickly nature, it was thought that fairies and similar beings could not penetrate. In Brittany substantially the same conceptions of demons and spirits prevailed as in Wales; but, while Welshmen have to a great extent abandoned the attitude of intellectual assent to the legends in question, the more conservative Breton, with his closer attachment to mediæval conditions, is still often haunted by them, and probably will be for a long time to come. In Wales, it is not impossible that, before very long, these ancient relics of primitive belief will be things of the past; but in the remoter parts of Ireland and Scotland they will probably linger on for many generations.

DEMONS AND SPIRITS (Chinese).—The two words *kwei shen* (variously translated 'demons and spirits,' or 'demons and gods'—the variation indicating a vexed question in the tr. of Chinese religious terms) together make up a binomial phrase such as does duty in Chinese for a general term, and may be taken as denoting all the inhabitants of the spiritual world, the various objects of religious worship and superstitious fear.

The spiritual world lies very near to the average Chinaman. Signs of his belief in its influence on his daily life are frequent; and it gives one at times a shock of surprise to find, as may happen in a casual conversation, that one's interlocutor—a well-read scholar or shrewd merchant—holds firmly by conceptions of it which are to oneself grotesque. Its nomenclature is fairly extensive, but not precise. Nor is it easy to describe the spiritual world in any very orderly or consistent fashion. Allowance must be made not only for differences in local superstitions, but also for the intermingling of diverse strains of thought in the more generally

¹ There is no trace in the Welsh literature or folk-lore of any belief that the dead bodies themselves rise from their graves and haunt the living.

¹ In Carnarvonshire one particularly malevolent type of demon is called *Y Bodach Glas*, 'the blue goblin.'

diffused religious conceptions. While it is possible that Chinese religion started from a pure monotheism, we have no record of any such time. In the most ancient books the worship of Shang-ti is accompanied by the worship of natural objects, of the spirits of ancestors, and of the worthies of former times. All these elements have been continued and developed.

In the popular religion of to-day, the worship of spirits immanent in, or in some vaguely conceived way connected with, natural objects, takes a much larger place than can possibly be taken by the worship of Shang-ti, confined as this is to the Emperor. The number of such spirits is, strictly speaking, indefinite. In virtue of the spiritual efficacy connected with it, anything—rock, tree, living creature—may become an object of worship. No extraordinary feature in the object is necessary to call forth this religious observance—a whole town has been known to go after a common viper found in a bundle of firewood. Among the commonest signs of the recognition of such spiritual powers bound up with natural objects are the votive tablets frequently seen suspended from the branches of trees, and the small pillars which are erected alongside graves and inscribed to the spirit of the soil, in acknowledgment of his property in the site of the grave. Some such acknowledgment is due to the local genius, on any interference with what is supposed to be under his control. It is a moot question whether the spirit of the soil is one only, identified with Hou-t'u, one of the ministers of Huang Ti (2698 B.C.), or whether there are not, rather, at least in the popular mind, many local geni.

Alongside of such spirits, and at the lower end of the scale of spirits hardly to be distinguished from them, are the supernatural beings called *hsien*, *yao*, *kuei*, *ching* ('fairies,' 'elves,' 'goblins,' 'sprites'), of various kinds, harmless, or, more usually, mischievous and malevolent. Every locality has its own traditions with regard to such beings. In Swatow the morning watch is not sounded because of a 'kelpie' (*yao-ching*) in the harbour, which on hearing the watch-drum was wont to carry off any early-stirring inhabitant. Of living creatures it is said that in the south of China the serpent, and in the north the fox, are those round which belief in supernatural powers has mostly gathered. In general it is said that birds and animals when they grow old become sprites (*ching*). The fox, for instance, increases in supernatural qualities with increase of years, and possesses different powers at fifty years of age or a hundred or a thousand. Even of trees it is said that by long absorption of the subtle essences of heaven and earth they become possessed of supernatural qualities.

Besides these supernatural beings, and wholly impersonal, are the maleficent influences called *sha*. They move, like physical forces, in straight lines, and can be warded off in various ways, as by earthenware figures of lions set on the roof of a house or in other positions of vantage, or by a stone or tile placed at a road-end and inscribed with the 'Eight Diagrams' (see COSMOGONY, etc. [Chin.]), or with words intimating that, as a stone from the Thai mountain, it will resist the evil influences.

According to Chinese etymology, the word *kuei*, 'demons,' is connected with a word of similar sound meaning 'to return,' and a *kuei* is accordingly defined as the spirit of a man which has returned from this visible world to the world invisible. 'Alive a man, dead a *kuei*' is a proverbial saying. In such use of the word *kuei* we must remember that nothing derogatory is implied, and that 'departed spirit' rather than 'demon' is the proper translation. There seems to be no possibility of making consistent with themselves the various popular Chinese views

of the spiritual nature of man and his state after death: to determine, e.g., the relation of the *kuei* to the three souls which each man possesses, according to Taoist teaching, or, according to another theory, to the twofold soul which dissolves at death into its component parts. In any case, existence in some fashion after death is assumed. Whether such existence is necessarily or in all cases immortal, it is not easy to determine. Taoism may teach an eternity of punishment; but, on the other hand, there is a word *chi*, which means the death of a *kuei*.

Kuei (manes) are to be honoured in the appropriate way; and, as otherwise evil may be expected from them, fear has a large place in present-day ancestral worship. Each family worships the *manes* of its own ancestors. *Manes* otherwise unprovided for are placated by public rites, particularly by 'the feast of desolate ghosts,' the '*kuei* feast,' on the 15th of the 7th moon. All *kuei* are more or less objects of dread; but in particular the *kuei* of a wronged person may be expected to seek revenge ('the wronged ghost impedes the murderer's steps'), and the *kuei* of evil men are evil *kuei*. According to one popular representation, the other world is for the Chinaman at least a replica of the Chinese Empire with similar social gradations, however, allotted otherwise than in this upper world; and mourning relatives may be comforted by a soothsayer's assurance that the meritorious deceased has been appointed by Yü Ti a mandarin of such and such a grade in the shadowy double of this or that Chinese city. Moreover, however difficult to work in consistently with other views, the doctrine of transmigration holds a large place in a Chinaman's theory of the relation between the unseen world and this.

While a *kuei* is, strictly speaking, a departed spirit, it is hardly to be supposed that all the innumerable *kuei* imagined to be active in this world or as retributive executioners in the infernal regions are of this origin. Perhaps what we might distinguish as ghosts and demons are alike called *kuei*. The Chinese generally are obsessed by the fear of *kuei*. These are supposed to abound everywhere, and to be specially active at night. Any untoward happening or uncanny sound—particularly any sound that is thin and shrill—is ascribed to them. Many houses are reported to be haunted by *kuei* because of misfortunes befalling their inmates. There are appropriate ceremonies for the placating of offended *kuei*, who in such cases are addressed euphemistically (e.g. *Shêng jên*, 'Sagely person'); and they can also be controlled by charms of Taoist origin.

The spiritual world is peopled from the human race not only by 'departed spirits' but by inhabitants of another grade called *hsien*. This name is applied not only to the fairy-like beings mentioned above, but also to those of mankind who 'by a process of physical or mental refinement' have raised themselves to the rank of immortals.

Finally, as in ancient times sages and worthies were worshipped as tutelary spirits (e.g. Hou-t'u), so has it been in later times. 'The gods (*shên*) of to-day are the men of ancient times' is a common proverb. Thus the Chinese pantheon has been filled with canonized worthies (such as Kuan Yü [A.D. 219], canonized as Kuan Ti, god of war; and the magician Chang, canonized as Yü Ti, who is practically the chief god of the Taoist religion); and not only with such, but also with an ever-increasing number of gods of all kinds and grades. 'The pope does not canonize on so large a scale as the Emperor of China' (Legge, *Rel. of China*, p. 184). These are the idols of China whose temples and images are everywhere to be seen.

While the multiplication of deities and the pervasive dread of demons are mainly connected with

the Taoist strain in Chinese religion, the influence of Buddhism has been potent in its development. 'The religion of Taoism was begotten by Buddhism out of the old Chinese superstitions' (Legge, *op. cit.* p. 201). Directly Buddhist elements are also of course present. *Shen, kuei, hsien, fo* ('gods,' 'demons,' 'genii,' 'Buddhas') are the four orders of beings superior to man; and, to instance from both the upper and the nether regions, Kuan Yin, the Goddess of Mercy, and Yen Wang, the King of Hades, are both of Buddhist extraction.

One extraordinary feature of the Chinese view of the spiritual world is the power believed to be exercised over its inhabitants by the Taoist priesthood, and specially by the Taoist pope, the spiritual successor (by the soul's transmigration) of Chang Tao-ling (A.D. 34). Demons and spirits unobedient to ordinary Taoist spells are subject to him; and from him protection against them may be purchased. In a case reported to the present writer, a merchant in Chao-Chow-fao, whose house was haunted by a spectre, went several days' journey to see the pope, and for \$200 purchased relief from the spectre's presence; for \$300 he might have had it recalled altogether from the world of men.

Mention should be made of demon possession, where the subject is possessed by a demon causing disease or madness, and of spirit-mediums inspired by an idol-spirit and who utter oracles in his name.

As an illustration of the incoherence of the whole spiritual system of the Chinese, it may be noted that, while the Emperor is the source of canonization, the exposition of the seventh maxim of the Sacred Edict not only brands Buddhism and Taoism as heretical, but pours scorn on their pretensions and superstitions, and casts doubt on the existence of Yü Ti himself.

Giles, *Strange Stories from a Chinese Studio*, London, 1880; F. W. Baller, *The Sacred Edict*, Shanghai, 1892; J. L. Nevius, *Demon Possession and Allied Themes*, Chicago, 1897. P. J. MACLAGAN.

DEMONS AND SPIRITS (Christian).—I. IN THE EARLY CHURCH TO COUNCIL OF CHALCEDON (A.D. 451).—It is stated by Origen (*de Princip., proem.*) that the Primitive Church did not lay down any definite doctrine with regard to the nature of the angels. The Church, however, he tells us, asserts their existence and defines the nature of their service as ministers of God for the purpose of promoting the salvation of men (*ib.*). Other early writers are not equally reticent. Some information concerning good and evil spirits may be gained even from the earliest Christian writers.

1. Apostolic Fathers.—(a) *Clement of Rome*, exhorting those to whom he writes to zeal and well-doing, points his readers to the example of the whole host of God's angels who stand by, ministering to His will (*Ep. i. ad Cor. xxiv. 5*).—(b) In *Ignatius* we find the statement that the heavenly beings (*επουράνια*), including the *δόξα τῶν ἀγγέλων*, will receive judgment if they believe not in Christ (*Smyrn. 6*). There is a further reference in *Trall. 5*, where Ignatius claims to be able to understand the heavenly things, and the dispositions of the angels.—(c) In the *Letter of the Smyrnaeans on the Martyrdom of Polycarp*, it is stated that the martyrs 'gazed with the eyes of their heart on the good things reserved for those that endure, but already shown to them by the Lord; for they were no longer men, but already angels' (*Mart. Polyc. ii.*). It is also said in the same chapter

1 It should be noted that in the longer recension the latter passage is amplified in a manner consistent with the more developed doctrine of pseudo-Ignatius (cf. *Ap. Const. viii. 12*), while the former passage is omitted as possibly inconsistent with his doctrine.

that they were condemned to their torture that the devil might, if possible, bring them to a denial, for he had tried many wives against them (cf. also the Prayer of Polycarp, *ib. xiv.*).—(d) Passing to *Hermas*, we find that, in answer to his inquiry as to the nature of the six young men who are building, he is informed that they are the holy angels of God who were created first, and to whom the Lord delivered all His creation, to increase and to build it and to be masters of all creation (*Vis. iii. 4*). The doctrine of guardian angels is also taught by *Hermas*. Each man has two angels, one of righteousness and one of wickedness. He deals with this question at some length, and states that good works are inspired by the angel of righteousness, evil works by the angel of wickedness (*Mand. vi. 2*).—(e) In a quotation from *Papias*, preserved by Andreas Cæsariensis (c. A.D. 520), we find an obscure reference to the work of the angels:

'To some of them (*ἐπαθὺ τῶν ἀγγέλων*) He gave also to rule over the ordering of the earth, and He charged them (*ἐπαγγέλλεν*) to rule well.' The words in the first brackets are, in Routh's opinion, the insertion of Andreas (cf. *Reliq. Sacr.*, 1814-18, i. 14, and the notes, where a further passage is quoted from Cramer).

2. The Apologists.—We find a number of passages in the writings of Justin, Tatian, Athenagoras, and Irenæus bearing on the subject.

(a) *Justin*.—The most important of these is the well-known passage in 1 *Apol. § 6*, where, in refuting the charge of atheism, Justin says:

'But both Him (sc. the Father) and the Son who came forth from Him and taught us these things, and the host of the other good angels, who follow and are made like unto Him, and the prophetic Spirit we worship and adore.'

The insertion of the angels among the Persons of the Trinity is unique, and is possibly to be explained by the fact that we frequently find 'angel' as a title of the Son (Tixeront, *Hist. des dogmes*, i. 243). With this passage should be compared the *Dial. c. Tryph. § 128*, in which the existence of angels is asserted and their relation to the Logos discussed. In 2 *Apol. § 5*, Justin defines the functions of the angels, stating that 'God committed the care of men and all things under heaven to angels whom He set over these' (*ἐταξεν*). He then accounts for the existence of evil in the world as the result of the transgression of angels, who had 'transgressed the Divine appointment (*τάξιν*), and by sinful intercourse with women produced offspring who are demons.' These demons 'subdued the human race to themselves' and 'sowed among men all manner of wickedness.' He proceeds to identify the demons who were the offspring of the fallen angels with the heathen gods. Justin is the earliest authority for the cultus of angels (cf. the first passage quoted above, *σεβόμεθα καὶ προσκυνούμεν*). To the passages already quoted may be added *Dial. c. Tryph. § 88*, in which the free will of the angels is asserted, and § 57, where it is said that, of the three men who appeared to Abraham, one was the Logos and the other two angels.

(b) *Tatian* denies the material nature of demons, asserting that their constitution (*σύνθεσις*) is spiritual, as that of fire or air. He also states that their nature is incapable of repentance (*Orat. 15*, cf. 12, 20). The ministry of angels in the government of the universe is also alluded to by the writer of the *Ep. to Diognetus*, vii.

(c) *Athenagoras* defines the office of the angels as being that of exercising the providence of God over things ordered and created by Him. God has the general providence of the whole; particular parts are assigned to angels (*Apol. 24*). In the same chapter he writes at some length of the fall of certain of the angels, and identifies the giants mentioned by the Greek poets with their illicit offspring. He speaks of one angel in particular (Satan) who is hostile to God, and discusses the difficulty of this belief. He states that Satan is

a created being like other angels, and is opposed to the good that is in God. In another passage he asserts that it is the demons who incite men to worship images, being eager for the blood of sacrifice, these images having no particular relation to the persons they represent (*ib.* 26; see further reference to the work of the angels at the end of ch. 10).

(d) The writings of *Irenæus* contain a large number of passages dealing with the angelology of the Gnostics, which he refutes. He is himself of opinion that the angels are incorporeal beings (*adv. Hæc.* iii. 22), and, in opposition to the Gnostics, states that the Christian does (*facit*) nothing by their invocation (ii. 49. 3). He alludes to the fall of the angels, and refers to the domination of Satan and the deliverance of man from his power (iii. 8. 2; cf. also v. 21, § 3, and 24, §§ 3, 4).

3. **Greek Fathers.**—The doctrine of good and evil spirits was greatly developed by the Alexandrian writers *Clement* and *Origen*. In the writings of the latter, especially his commentaries on Scripture, numerous references are to be found to the functions of angels and demons. The notion of the guardian angel, already noted in *Hermas*, is here especially developed. He assigns to each nation its guardian spirit, basing this view upon his exegesis of Dt 32^{6c}, where he follows the text of the LXX (ἐκτίσεν θεὸς ἑθνῶν κατὰ ἀριθμὸν ἀγγέλων θεῶν). But God reserved Israel to Himself for His own inheritance, appointing the angels as guardians of the nations. The power of these angels was broken by Christ at His coming, and hence they were moved to anger, and in turn stirred up persecution against the preachers of the gospel (*Orig. in Joh.* xiii. 49). Origen understands literally the 'angels of the churches' of the Apocalypse; he boldly (*audacter*) refers to the angels of churches as their invisible bishops ('per singulas ecclesias bini sunt episcopi, alius visibilis, alius invisibilis; ille visui carnis, hic sensui patens' [*hom.* xiii. in *Luc.*, ed. Lommatsch, v. 131]). Each individual has also his guardian angel, to whom is entrusted the soul of the believer when received into the Church by baptism. By him it is protected from the power of the devil; but, if it falls, it loses the protection of its guardian and comes under the power of an evil angel. The angels present the prayers of the faithful to God, rejoice at their progress, correct their failings, and intercede for them before the throne of God. He states, however, that they should not be worshipped or invoked (*c. Cels.* v. 5). *Clement* appears to have some doubt as to whether individuals possess guardian angels in the same sense as nations and cities possess them (*Strom.* vi. 17). But in other passages he lays stress on their work of intercession for men (*cf. Strom.* v. 14, vii. 12, and iv. 18, vii. 13). Under the influence of Neo-Platonic ideas, the Alexandrian Fathers assert that there is a double activity—a higher dealing with spiritual things, a lower with the material order; and that in both of these the angels of God are employed. Origen clearly expresses the view that the world has need of angels, who are placed over animals, plants, and elements (*hom.* xiv. 2 in *Num.*).

The following passages in Origen may also be consulted: *de Princip.* i. 5, § 1, *c. Cels.* iv. 29, v. 4, 5, 48, 58, viii. 31, 32, 34, *de Orat.* 6, 23, 81, in *Levit.* hom. ix. 8, in *Num.* hom. xi. 4, xx. 3, in *Exek.* hom. xiii. 1, in *Ps.* xxxvii. hom. i. 1, in *Luc.* hom. xii. xxiii.

4. **Later Greek writers.**—There are a number of references in the Cappadocian Fathers to the nature and functions of angels. Concerning their nature there appears to have been some difference of opinion. (a) *Basil* held that their substance (*οὐσία*) was ethereal spirit or immaterial fire (*de Spir. Sanct.* § 38).—(b) *Gregory Nazianzen* is doubtful (*Orat.* xxxiv. 16).—(c) *Gregory of Nyssa*

declares them to be entirely spiritual (*in Orat. Dem.* hom. iv.).—(d) Many references are contained in the writings of *Chrysostom*. He asserts that their nature is superior to ours, but cannot be accurately comprehended by us (*de incomprehensibili Dei Natura*, v. 3). They are possessed of an incorporeal nature (*ἀσώματος φύσις*), and he rejects on this account the earlier interpretation of Gn 6² (*in Gen.* hom. xxii. 2). According to Basil, the sanctity of the angels is due to the activity of the Holy Spirit (*op. cit.* § 38). They are less liable to sin than we are (*δυσκλῆτοι*), but not incapable of it (*ἀκλῆτοι*). This is proved by the fall of Lucifer, whose sin was envy and pride. These Fathers assign guardian angels to individuals, churches, and nations. Basil is, however, of opinion that the guardian angel is driven away by sin 'as smoke drives away bees and a bad odour doves' (*hom. in Ps.* xxxiii. 5). *Gregory of Nyssa* is the only Greek Father who follows *Hermas* in the view that every man has both a good and a bad angel as his constant companion (*de Vita Moysis*). Angels are described as overseers (*ἐπόροι*) of churches. *Gregory Nazianzen* addresses a special farewell to these *ἐπόροι* on his departure (*Orat.* 32, *sub fin.*; cf. Basil, *Ep.* ii. 238). They are the guides (*παίδευτοί*) of the just, and lead them to eternal blessedness (*Bas. de Spir. Sanct.* xiii.; *Chrys. in Ep. ad Coloss.* hom. i. 3, 4). It would appear that *Cyril of Jerusalem* was of opinion that certain of the fallen angels had obtained their pardon (*Cat.* ii. 10; cf. also Basil, in *Ps.* xxxii. 4; *Gregor. Nyss. contra Eunom.* hom. x.; *Greg. Naz. Orat.* xxxiv. 81; *Joh. Chrys. in ascens. Dom.* 1, *de laud. S. Paul.* *Ap.* hom. ii. sermo 43, in *Gen.* hom. iv.).

5. **Latin Fathers.**—(a) We find in *Tertullian* a number of references to spirits, good and evil. Like Origen, he connects the ministry of angels with the sacrament of baptism. According to this writer, the baptismal water receives its healing properties from an angel (*de Bapt.* 4). Furthermore, the actual purification effected in baptism is due to a spirit who is described as 'angelus baptismi arbitrer', who prepares the way for the Holy Spirit ('non quod in aquis spiritum sanctum consequamur, sed in aqua emundati sub angelo, spiritui sancto praeparamur' (*ib.* 5, 6)). Marriage which has received the blessing of the Church is announced by the angels and ratified by the Father (*ad Uxor.* ii. 9). The angels, looking down from heaven, record the sins of Christians; for example, when they are present in the theatre, where the devil is working against the Church (*de Spectac.* 27). A more detailed account of the work of the angels and demons will be found in *Apol.* 22, where they are stated to be spiritual substances. *Tertullian* alludes to the fall of the angels, corrupted of their own free will, from whom sprang the race of the demons. Of the former, Satan is the chief. They are the source of diseases and all disasters. They delude men into idolatry in order to obtain for themselves their proper food of fumes and blood. Both angels and demons are ubiquitous; both are also winged. These spiritual agencies are invisible and not to be perceived by the senses. On the question of the bodily forms of the angels, see *de carne Christi*, 6.—(b) The concern of the angels in human affairs is referred to by *Firmilian* in a letter to *Cyprian* (*Ep. lxxv. inter Cyprian.* 1; cf. *Euseb. HE* v. 23).—(c) The doctrine of *Lactantius* is peculiar. Before the creation of the world, God produced a spirit like to Himself (the Logos); then He made another being in whom the disposition of the Divine origin did not remain. This being, of his own will, was infected with evil, and acquired for himself another name. 'He is called by the Greeks *δαίμονος*, but we call him *criminator*, because he reports to God the faults to which he

entices us' (cf. the Jewish appellation, *Satan*, שָׂטָן, 'the accuser'; Lactant. *Divin. Institut.* ii. 9).

At this point some MSS of Lactantius insert a passage which is regarded by the best authorities as spurious, and in which the origin of the devil and the ministry of angels are treated in a Manichean fashion. Here it is stated that, before the creation of the world, God made two spirits, themselves the sources of creation—the one, as it were, the right hand of God, the other, as it were, His left hand, and eternally opposed to each other. These two spirits are the *Logos* and *Satan*. The fall of the angels and the origin of the demons, who are divided into two classes, are described in ii. 15, and in the same passage the latter are identified with pagan deities (cf. also *Epitome*, 28; *Instit.* iv. 8; and, on the devil, iii. 29, vii. 24–26).

(d) Later Latin Fathers, such as Ambrose and Jerome, were of opinion that the angels were created before the material world (cf. Ambrose, *de Incarnat. Dom. Sacr.* 16; Jerome, in *Ep. ad Tit.* 12). Some difference of opinion exists among them about the interpretation of Gn 6², Jerome appearing to regard the spirits as possessed of bodies (cf. in *Ezech.* 28¹⁶); Ambrose, on the other hand, agrees with Hilary in the statement that they are 'spirituales et incorporeales' (cf. Ambros. in *Luc.* vii. 126; Hilary in *Ps.* cxxxvii.). The sin of Satan, according to Jerome and Ambrose, was pride (cf. Ambros. *de Virgin.* i. 53, in *Ps.* 118, serm. 4. 8, 7. 8, 16. 15). The views of the Latin Fathers with regard to guardian angels are similar to those which we have already encountered in the writings of the Greek Fathers. Numerous references to this subject will be found in their commentaries and homilies, where it is stated of nations, churches, and communities that each possesses its guardian angel.

See esp. Jerome in his com. on Ec. 5⁹, where he says that 'the things which are said pass not into the wind, but are straightway carried to the Lord, a praesenti angelo qui unicuique adhaeret comes.' Other references will be found in Jerome, in *Dan.* 7⁸, Mic. 6¹⁻², the last-named passage being of special interest. See also Ambros. in *Ps.* 118, serm. 3. 6, and Hilary, in *Ps.* lxxv. 13, cxxxii. 6, cxxxiv. 17.

Jerome is among the earliest of Latin writers to call attention to the diversity in the orders of spirits, comparing the angelic hierarchy with the organization of the officials of the Empire (cf. esp. *adv. Iovin.* ii. 28, *adv. Ruf.* i. 23). Ambrose has a passage which bears upon the cultus of the angels, whom he appears to place on a level with the martyrs, and whose invocation he warmly recommends (*de Viduis*, ix. § 55).—(e) Already in Eusebius a distinction is found between the worship (σέβειρες) due to God alone and the honour (τιμῶντες) paid to the angels (*Præp. Ev.* vii. 15; cf. also *Dem. Ev.* iii. 3, *Præp. Ev.* xiii. 13).—(f) Finally, for this period the writings of Augustine may be consulted, especially the *de Civ. Dei*, in which the angels play no small part. They form the heavenly City of God, and this part of the Holy City assists that other part here below: 'hanc [sc. Civitatem Dei] angeli sancti annuntiaverunt qui nos ad eius societatem invitaverunt civesque suos in illa esse voluerunt' (x. 25). The angels minister alike to Christ, the Divine Head of the mystical Body, who is in heaven, and to the members of the Body who are on earth. Thus it is in the Church that the angels ascend and descend according to the words of Scripture.

'This is what happens in the Church: the angels of God ascend and descend upon the Son of Man, because the Son of Man to whom they ascend in heart is above, namely the Head, and below is the Son of Man, namely the Body. His members are here; the Head is above. They ascend to the Head, they descend to the members' (*Enarr. in Ps.* xlv. 20).

Augustine states that the angels are spirits of an incorporeal substance, 'invisibilibus, sensibilis, rationalis, intellectualis, immortalis' (cf. *ps.-August. de Cognit. veræ vitæ*, 6). The designation 'angel' refers to the office, not to the nature, of these spirits (*Enarr. in Ps.* ciii. serm. 1. § 15). Angels received at their creation, from the Holy Spirit, the gift of grace, and it is possible that, in the case of those who did not fall, they received also the assurance of perseverance (*de Civ. Dei*, xii. 9. 2, xi. 13). Augustine refuses to identify the 'sons of

God' (Gn 6) with the angels (*ib.* xv. 23). The sin of the fallen angels was pride. The fall of Satan occurred at the very beginning of his existence, and the good angels have enjoyed the vision of the Word from the first moment of their creation (*de Gen. ad Lit.* ii. 17, xi. 21, 26, 30). The office of the evil angels is to deceive men and to bring them to perdition (in *Ioan.* tract. cx. 7). They occupy themselves with the practice of divination and magic (c. *Academ.* i. 19, 20). But the power of these evil spirits is limited; God employs them for the chastisement of the wicked, for the punishment of the good for their faults, or even for the purpose of testing men (*de Trin.* iii. 21, *de Civ. Dei*, xi. 23. 2). Augustine asserts that the good angels announce to us the will of God, offer to Him our prayers, watch over us, love us, and help us (*de Civ. Dei*, vii. 30, x. 25; *Ep.* cxl. 69). They are even entrusted with the care of unbelieving nations (*Enarr. in Ps.* lxxxviii., serm. i. 3). He also, like Origen, affirms that to them is committed the charge of the material world, 'iubente illo cui subiecta sunt omnia' (*de Gen. ad Lit.* viii. 45 ff.). It should, however, be noted that Augustine does not assign a guardian angel to each individual.

It has been suggested that this is due 'to his doctrine of predestination, which precludes the constant ministration of a particular guardian angel, though it leaves room for the ministry of angels as mediators between God and the faithful' (Turmel, quoted by Kirsch, *Communism of Saints in the Ancient Church*, Eng. tr., p. 246 f.). It may be mentioned in support of this view, that Cassian, the great opponent of the doctrine of predestination, following Hermas, attributes the choice between the good and evil angelic counsellors to man's free will (Cassian, *Collat.* vii. 17; cf. also vii. 12, 18).

Augustine does not favour any cultus of the angels: 'honoramus eos caritate non servitute' (*de Vera Relig.* iv. [110]). They do not desire our worship, but rather that with them we should worship their God and ours (*de Civ. Dei*, x. 25). With regard to the order of the angelic hierarchy and the signification of the titles attributed to the angels, Augustine declares himself to be entirely ignorant, and appears to discourage speculation on this subject (*Enchir.* 15; *ad Orosium*, 14). (See Tixeront, *Hist. des dogmes*, ii. 372–376; Kirsch, *op. cit.* pt. iii. ch. 5.)

Conclusion.—The evidence of the passages cited above may be summarized as follows. The earliest Fathers of the Church, acquainted with the angelology and demonology of Scripture and of Jewish apocalyptic literature, all affirm or imply the existence of spirits good and evil. At a very early period, as we can see from the writings of Hermas, the doctrine of good and evil angels appointed to watch over individuals and institutions had already been adopted, and we may trace a steady development of this doctrine in the writings of both the Greek and the Latin Fathers, while it is probable that later speculations on this subject were greatly influenced by the writings of Origen. Opposition to Gnostic speculation led earlier writers to insist on the fact that angels and demons were created beings, while some writers refuse to allow to the former any part in the work of creation. Difference of opinion seems to have existed as to the nature and constitution of angels and demons, though the majority of writers appear to have regarded them as incorporeal spirits. A further difference is seen in the exegesis of Gn 6¹⁻². The earlier writers more usually identify the 'sons of God' with angels; later writers frequently reject this interpretation. The legend of the fall of the angels, and the person of Satan especially, led later writers to indulge in speculation as to the problem of evil and the relation of evil spirits to God. It would appear that the majority at least of later writers held the view that angels were capable of sinning, being possessed, like men, of free will. There are some traces of the beginnings

of a cultus of the angels which, according to some authorities, may be traced back as far as Justin Martyr, and which appears to be clearly taught in the writings of Ambrose. It is probable, as may be gathered from Irenæus, that the dangers of the cultus became apparent during the Church's struggles with Gnosticism. During this period we find very little about orders or numbers of angels. This subject, as well as the dedication of a church by Constantine to the archangel Michael, will be best discussed in the next section.

II. FROM THE COUNCIL OF CHALCEDON TO A.D. 800.—During this period we have especially to observe two points: (1) the development of the cultus and invocation of the angels, and (2) the elaborated and systematic doctrine regarding the orders of spirits.

1. Cultus of angels.—We have already noted a passage in the writings of Justin Martyr which possibly implies a cultus of the angels, and another in Ambrose where their invocation is directly recommended. On the other hand, Irenæus appears definitely to oppose both invocation and worship, and a writer so late as Augustine explicitly teaches that they should find no part in Christian worship. The statements of Origen have led some authorities to regard him as favourable, though there are passages in his writings where the cultus is explicitly condemned. To the authorities cited we may add canon 35 of the 4th cent. Council of Laodicea, in which Christians are forbidden 'to forsake the Church of God, and go away and name (ὀνομάζειν) angels, and to form assemblies, which is unlawful' (Hefele, *Hist. Conc.*, Eng. tr. ii. 317). But the passage is of doubtful meaning, and it should be observed that Dionysius Exiguus renders ἀγγέλους by *angulos*. The canon goes on: ἐλ τις οὖν εὐρεθῇ ταύτῃ τῇ κεκρυμμένῃ εἰδωλολατρείᾳ σχολάζων, ἔστω ἀνάθεμα. This canon was known to Theodoret, who refers to it twice (*Ep. ad Col.* 2^o 3rd). In the former of these passages he states that this disease (πάθος) is still to be found in Phrygia and Pisidia.

This view is supported by certain inscriptions discovered in that neighbourhood, among which may be included the following: Ἀρχάγγελε Μιχαὴλ ἐλέησον τὴν πόλιν σου καὶ τὴν ἀσπὶν αὐτὴν ἀπὸ τοῦ πονηροῦ †: 'Archangel Michael, have mercy on thy city and deliver it from evil' (for these inscriptions, see Dom Leclercq's art. in *DACL*, s.v. 'Anges,' col. 2086).

In the latter passage, Theodoret again quotes the canon of Laodicea, as forbidding prayer (εὐχέσθαι) to angels. One other passage in this writer may be referred to, viz. *Græc. Affect. Cur.* 3, where, in answer to the pagan objection that Christians also worship other spiritual beings besides God, he answers that Christians do indeed believe in invisible powers, but do not render to them worship (σέβας, προσκύνησις). He states that these beings are incorporeal and, unlike the pagan deities, sexless, and that they are employed in worshipping God and furthering the salvation of man. The evidence of Theodoret with regard to the cultus of angels and churches dedicated to them is supported by Didymus (*de Trin.* ii. 7-8), who says that churches are to be found in both towns and villages, under the patronage of angels, and that men are willing to make long pilgrimages to gain their intercessions. The earliest historic reference to the dedication of a church to an angel is to be found in Sozomen (*HE* ii. 3), where it is stated that Constantine erected a church, called the Μιχαήλιον, not far from Constantinople. The reason of the dedication was that the archangel Michael was believed to have appeared there. In the West we find instances of the dedication of churches to the archangel Michael at least as early as the 5th cent. (see *DACL*, vol. i. col. 2147). St. Michael is the only angel of whom we find a commemoration in the calendar before the 9th century. Various festivals of this angel are to be found in different

calendars, but they appear in all cases to be the anniversaries of dedications of churches. This was the case with the festival of the 29th of September, still observed in the West, which commemorated a church, long since destroyed, in the suburbs of Rome on the Via Salaria (Duchesne, *Christian Worship*, 276). Five masses for this festival (then kept on the 30th, not the 29th) are found in the earliest Roman service-book, the Leonine Sacramentary (ed. Feltoe, pp. 106-108). In the prayers contained herein are found clear references to the invocation and cult (*veneratio*) of angels.

In the Second Council of Nicea (A.D. 787), which dealt with the iconoclastic controversy, the question of the nature of the angels was discussed. At this Council a book, written by John, bishop of Thessalonica, was read, in which the opinion was advanced that angels were not altogether incorporeal and invisible, but endowed with a thin and ethereal or fiery body. In support of this view John quotes Basil, Athanasius, and other Greek Fathers. He expresses the same view with regard to demons, and states that Christians both depict and venerate angels. These views appear to have met, on the whole, with the approval of the Council, which sanctioned the custom of depicting angels and venerating their images (Conc. Nic. ii. act. v.). By the action of this Council it would appear that the cultus of the angels, which had originated before the beginning of the period under consideration as a private devotion, and had met with considerable opposition from various ecclesiastical writers, formally received the sanction of the Church, and may henceforward be regarded as part of the *doctrina publica*.

2. Orders of spirits.—We must now turn to the consideration of the angelic hierarchy. We have seen, in the earlier period, that occasional references were made to this subject by some Fathers, but that a writer so late as Augustine had not only declared his ignorance of the subject, but had apparently discouraged speculation thereon.—(a) The first writer who definitely elaborated the subject was *pseudo-Dionysius* (c. A.D. 500), and his detailed classification and description of the spiritual hierarchy may probably be regarded as the basis of all subsequent speculation both in the East and in the West. The outline of his scheme is as follows. He divides the celestial hierarchy into three orders (τάγματα), and further subdivides each of these into three. Thus the first order comprises: (1) θρόνοι, (2) χερουβίμ, (3) σεραφίμ; the second: (4) κυριότητες, (5) ἐξουσίαι, (6) δυνάμεις; and the third: (7) ἀρχαί, (8) ἀρχάγγελοι, (9) ἄγγελοι. It is impossible here to enter into any detailed description of the theory of the Areopagite concerning the functions of the angelic hierarchy. It may suffice to state that it is a hierarchy of illumination, the highest rank being nearest to God, the lowest nearest to man. Cf. esp. *de Celest. Hier.* 10, § 2: 'Now all angels are interpreters of those above them. . . the most reverend, indeed, of God who moves them, and the rest in due degree of those who are moved by God.' It would appear that the members of each triad are on an equality with each other, being distributed into a first, middle, and last power. In this manner Is 6th is interpreted, where it is stated that the seraphim cry one to another, 'indicating distinctly, as I think, by this, that the first impart their knowledge of divine things to the second' (*ib.*).

(b) In the West the classification of the Areopagite is closely followed by *Gregory the Great*, who affirms the existence of nine orders of angels, viz. Angeli, Archangeli, Virtutes, Potestates, Principatus, Dominationes, Throni, Cherubim, Seraphim (*in Evang.* lib. ii. hom. xxiv.). In the same work a number of other passages occur dealing with the ministry of angels, the explanation of

the names and the offices of the different orders of angels, and the manner in which we may profit by the imitation of the angels, together with certain other points of lesser interest. References to evil spirits will be found in the same author (cf. *Moral. iii. passim*).

(c) Finally, *John of Damascus*, who in his writings so frequently shows traces of the teaching of the Areopagite, follows the latter in his classification of the celestial hierarchy (*de Fid. Orth.* ii. 3). In the same passage he gives a description of the angels, in which he defines a number of points which, as we have seen, had been matters of controversy, both before and during the period under discussion. The definition is as follows:

'An angel, then, is an intellectual substance, always mobile, endowed with free will, incorporeal, serving God, having received, according to grace, immortality in its nature, the form and character of whose substance God alone, who created it, knows.'

It may be said that at the close of this period something like a general agreement had been reached about the nature and functions of spirits, good and evil, and it remains only to discuss some further elaborations which we encounter in the mediæval period.

III. FROM A.D. 800 TO THE REFORMATION.—During the mediæval period, speculations concerning the nature of good and evil spirits are constantly to be found in the writings of the schoolmen. These, for the most part, consisted in the application of mediæval dialectic to the statements of Scripture, the opinions of Augustine, and the schematization of the Areopagite, whose works had been translated by John Scotus Erigena, and obtained great popularity throughout the West (Bardenheuer, *Patrology*, Eng. tr. 1908, p. 538). It is impossible here to enter into details about the nature of these speculations, and it seems most convenient to illustrate their general trend from the writings of certain representative theologians. In spite of the diversity of opinion, it should be observed that the first canon of the Fourth Lateran Council (A.D. 1215) made certain clear and definite statements with regard to spiritual beings, and their relation to God, without apparently, however, terminating the disputes of later theologians on this matter. It is stated that

'God is the Creator of all things, visible and invisible, spiritual and corporeal, who of His own omnipotent power *simul ab initio temporis utramque de nihilo condidit creaturam, spiritualement et corpoream, angelicam videlicet et mundanam, ac deinde humanam quasi communem ex spiritu et corpore constitutam*. The devil and other demons were created, indeed, good by God, and became bad of their own accord (*per se*). Man sinned by suggestion of the devil.'

As we have said, this decree appears to have failed to produce unanimity of opinion among the schoolmen, and the subject remained, as Harnack remarks, 'the fencing and wrestling ground of the theologians, who had here more freedom than elsewhere' (*Hist. of Dogma*, Eng. tr., vi. 186). But on many points we discern a general agreement. Thus, with regard to guardian angels, all held that each man from his birth possessed a guardian spirit, and that this applied also to sinners, while some asserted this even of Antichrist himself. Evil spirits, on the other hand, tempt and incite men to sin, though it should be observed that even the power of the devil was held to be subject to the limitation that he cannot affect the free will or spiritual knowledge of man, but can approach him only through his lower nature (so Albertus Magnus, *Summæ Theol.* pt. ii. tract. 6; see also Bonaventura, in *Sent.* 2, dist. 11, quest. 1, and Alb. Mag. *ib.* tract. 9). But the question of the substance, essence, endowments of grace, peccability, modes of cognition, and individuation of the angels, as well as certain other problems, still remained in dispute.

(a) *Peter Lombard* († 1164), the first systematic

theologian of the West, devotes ten sections of the second book of the *Sententiæ* (dist. ii.-xi.) to the subject of good and evil spirits. In his teaching he follows the Areopagite, and deals, among other things, with the questions of the nature, creation, free will, fall, and peccability of angels, and the relation of demons to magical arts; he also discusses the question whether Michael, Raphael, and Gabriel are the names of orders or of individual spirits, and whether each man has a good and bad angel assigned to him; and concludes with a discussion as to the possibility of progress of the angels in virtue.

(b) In the numerous references to good and evil spirits contained in the writings of *Bernard*, two passages are especially worthy of notice. The first is contained in the *de Consideratione* (v. 4), where the angels are described as

'cives [Jerusalem matris nostrae] . . . distinctos in personas, dispositos in dignitates, ab initio stantes in ordine suo, perfectos in genere suo, corpore aetherios, immortalitate perpetuos, impossibiles, non creatos sed factos, id est gratia non natura, mente puros, affecta benignis religionis pios, castimoniam integros unanimitate individuos, pace securos, a Deo conditos, divinis laudibus et obsequiis deditos, hæc omnia legendo comperimus, fide tenemus.'

In the long passage which follows we find a disquisition on the angelic hierarchy, which closely follows that of the Areopagite. In the second passage (serm. v. in *Cant.* § 7), Bernard enumerates some points which he feels unable to resolve:

'The Fathers appear to have held various opinions on such matters, nor is it clear to me on what ground I should teach either opinion, and I admit my ignorance; neither do I consider a knowledge of these things to conduce to your progress.'

The points in dispute refer to the nature of the bodies of the angels: it is asked whether their bodies are part of themselves, as is the case with men, or assumed for purposes of revelation. On guardian angels, see in *Ps.* 'qui habitat,' serm. xii. 2; serm. vii. in *Cant.* § 4; on the devil and evil angels, see in *Ps.* 'qui habitat,' serm. xiii.; *de Gratia et Libero Arbitrio*, cap. vi. § 18.

(c) *Anselm*, who may justly be regarded as the pioneer of speculative theology in the Middle Ages, is probably the first Western writer to apply with any fullness the processes of the Aristotelian dialectic to the traditional teaching of the Church about good and evil spirits. These play a somewhat important part in his remarkable system, especially in the elaborate arguments of the *Cur Deus Homo*, where it is suggested that man was created for the purpose of completing the number of the angels, which had been diminished by the fall of the devil and his companions. This opinion Anselm rejects, saying that the human race is made for itself and not merely to replace individuals of another nature (*Cur Deus Homo*, i. 18). In the long discussion which follows concerning the number of the angels, and whether the number of the elect will exactly correspond with the number of those that fell, Anselm admits a diversity of opinion, and concludes that it is permissible to hold any view that is not disproved by Scripture. Cf. also *de Casu Diaboli*, cap. 4, where the cause and manner of the Fall are discussed. On the angels, cf. *de Fide Trin.* 3.

(d) In order to present a clearer view of the Scholastic doctrine of good and evil spirits, it will be best to give here a brief summary of the teaching of *Thomas Aquinas* on this subject, where we probably find it in its most developed form. This is contained in the 'Tractatus de Angelis' which is comprised in *Questiones* l. to lxi. of *Pars prima* of the *Summa* :—

Angels are altogether incorporeal, not composed of matter and form; exceed corporeal beings in number just as they exceed them in perfection; differ in species since they differ in rank; and are incorruptible because they are immaterial. Angels can assume an aerial body but do not exercise

the functions of life. Thus they do not eat *proprie*, as Christ did after His resurrection. Angels can be localized, but cannot be in more than one place at the same time. The substance of angels is not pure thought, because, in a created being, activity and substance are never identical. Similarly the *esse* of angels is not pure thought. They have no sensory cognition. Their cognition is objective—not, however, through determinations in the object, but through innate categories. The cognition of the higher angels is effected by simpler and fewer categories than is that of the lower. Angels by their natural powers have knowledge of God far greater than men can have, but imperfect in itself. They have a limited knowledge of future events. The angels are possessed of will, which differs from the intellect in that, while they have knowledge of good and evil, their will is only in the direction of the good. Their will is free, and they are devoid of passion. The angels are not co-eternal with God, but were created by Him *ex nihilo* at a point in time (this is strictly *de fide*); their creation was not prior to that of the material world (the contrary opinion is here permitted). The angels were created in a state of natural, not supernatural, beatitude. Although they could love God as their Creator, they were incapable of the beatific vision except by Divine grace. They are capable of acquiring merit, whereby perfect beatitude is attained; subsequently to its attainment they are incapable of sin. Their beatitude being perfected, they are incapable of progress.

Concerning evil spirits, Aquinas' teaching is briefly as follows. Their sin is only pride and envy. The devil desired to be as God. No demons are naturally evil, but all fell by the exercise of their free will. The fall of the devil was not simultaneous with his creation, otherwise God would be the cause of evil. Hence there was some kind of interval between the creation and the fall of the demons. The devil was originally the greatest of all the angels; his sin was the cause of that of the other fallen angels, by incitement but not by compulsion. The number of the fallen angels is smaller than that of those who have persevered. The minds of demons are obscured by the deprivation of the knowledge of ultimate truth; they possess, however, natural knowledge. Just as the good angels, after their beatification, are determined in their goodness, so the will of the evil angels is fixed in the direction of evil. The demons suffer pain, which, however, is not of a sensory character. They have a double abode—hell, where they torture the damned, and the air, where they incite men to evil.

(e) The foregoing will give some idea of the teaching of the scholastics on the nature of spirits in its developed form. Many other questions were raised which it is impossible to discuss here; but one further instance may be given, *viz.* the speculation as to the manner in which angels hold communication with each other. This matter is treated by Albertus Magnus and Alexander of Hales. This communication is effected immediately, and the speech of the angels is described by Albertus Magnus as 'innuitio,' by Alexander of Hales as 'nutus' (cf. Alb. Magn. *Sum. Theol.* 2, tr. 9, quest. 35, m. 2; Alex. Hal. *Summa*, pt. ii. quest. 27, m. 6).

(f) Finally, we may quote one 14th century authority, namely, Tauler († 1361), who, though, like his contemporaries, he follows the Dionysian classification of spirits, yet expresses himself with much reserve about the nature and character of angels. The following passage is contained in his sermon on Michaelmas Day:

'With what words we may and ought to speak of these pure spirits I do not know, for they have neither hands nor feet,

neither shape nor form nor matter; and what shall we say of a being which has none of these things, and which cannot be apprehended by our senses? What they are is unknown to us, nor should this surprise us, for we do not know ourselves, viz. our spirit, by which we are made men, and from which we receive all the good we possess. How then could we know this exceeding great spirit, whose dignity far surpasses all the dignity which the world can possess? Therefore we speak of the works which they perform towards us, but not of their nature.'

With regard to the development of the cultus of the angels during this period, the following observations may suffice. Dedication of churches to angels and especially to St. Michael became far more common, both in the East and in the West. With regard to festivals of angels we find special offices in the mediæval breviaries by which the unofficial cultus of the angels obtained formal recognition. The names of individual angels are encountered in many litanies, and, finally, the cultus of the guardian angels received official sanction when a feast in their honour was instituted (October 2nd) after the Reformation. No doubt the introduction into the formal liturgy of the Church lingered behind the practice of popular devotion, in this as in other matters.

In conclusion, we may remark that, at the Reformation, Protestant theologians retained their belief in good and evil spirits; even maintaining that the former intercede for mankind, but forbidding any invocation. This belief, based on Scripture, underwent considerable modification in the 18th cent., which witnessed many and various attempts at rationalization in different directions. The beginning of the 19th cent. was marked by a revival among Protestants of the belief in angels expressed 'in a philosophic and idealizing sense' (Hagenbach, *Hist. of Doctrines*, iii. 193, 334 f.). It may be said that among modern writers of this school the whole subject has ceased to excite any interest either speculative or practical. In the Roman Church we cannot detect any change in belief or practice concerning the existence of good and evil spirits, though we may point to certain indications of a tendency to discount the subtleties of mediæval speculation on the subject (Liebermann, *Instit. Theol.* lib. iii. cap. 2, art. 1, in vol. iii. p. 280). In the Anglican Church the belief in angels has the fullest liturgical recognition, though the subject is hardly dealt with in her formularies. The invocation of angels was defended by some of the Caroline divines: the practice of dedicating churches to angels has remained unbroken. In the Book of Common Prayer the 29th of Sept., still known in the Roman calendar as the 'Dedicatio Sancti Michaelis Archangeli,' has become the feast of St. Michael and All Angels.

The comparative lack of interest felt in the whole question of the existence and nature of good and evil spirits may be explained by reference to the fact that, while belief in the existence of such spirits is generally accepted by Catholic theologians, there is still to be found a strong reaction from the excessive speculation of scholasticism.
